AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the numbers of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam*. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

IHSAN ABBAS, American University, Beirut. 553.
Z. ABRAHAMOWICZ, University of Cracow. 723, 767.
AZIZ AHMAD, University of Toronto. 6.
S. MAQBUL AHMAD, University of Kashmir, Srinagar. 938.
M. MÜNIR AKTEPE, University of Istanbul. 277, 837.
J. P. ALATA, Paris, 252.
MARIE M. ALEXANDRESCU-DERSCA BULGARU, University of Bucarest. 278.
HAMID ALGAR, University of California, Berkeley. 41, 301, 486, 1222.
[J. ALLAN, London.] 684.
J. W. ALLAN, Ashmolean Museum, Oxford. 357.
A. ALPARSLAN, University of Istanbul. 225.
P. A. ANDREWS, University of Cologne. 601, 637, 1220, 1261.
R. ARNALDEZ, University of Paris. 99, 513, 579, 614, 844, 894, 1263.
[T. W. ARNOLD]. 353, 549, 1230.
ʿABD AL-KARĪM AL-ASHTAR, University of Damascus. 1257.
the late E. ASHTOR, Hebrew University, Jerusalem. 557, 967.
NURHAN ATASOY, University of Istanbul. 19, 761.
M. ATHAR ALI, Aligarh Muslim University. 1214.
A. S. ATIYA, University of Utah, Salt Lake City. 95.
[FR. BABINGER, Munich]. 32, 171, 283.
J.-L. BACQUÉ-GRAMMONT, Centre National de la Recherche Scientifique, Paris. 32, 35.
EVA BAER, University of Tel-Aviv. 17, 18, 993.
M. A. BAKHIT, University of Jordan, Amman. 594.
[W. BARTHOLD, Leningrad]. 24, 31, 136, 247, 300, 314, 384, 397, 400, 852.
[R. BASSET, Algiers]. 367, 379, 540.
M. CAVID BAYSUN, University of Istanbul. 273.
A. F. L. BEESTON, University of Oxford. 120.
[M. BEN CHENEB, Algiers]. 345, 373, 517, 807.
R. BENCHENEB, Paris. 1030.
Mme M. BERNAND, Centre National de la Recherche Scientifique, Paris. 242.
[H. BEVERIDGE]. 74.
A. BIRKEN, Hamburg. 776.
E. BIRNBAUM, University of Toronto. 836.
A. D. H. BIVAR, University of London. 223, 231.
W. BJÖRKMAN, Uppsala. 770.
J. R. BLACKBURN, University of Toronto. 1242.
A. J. E. BODROGLIGETI, University of California, Los Angeles. 539.
[TJ. DE BOER, Amsterdam]. 579.
the late TH. BOIS, Paris. 147, 447, 470, 479, 486.
B. J. BOLAND, Oegstgeest, Netherlands. 715.
S. A. BONEBAKKER, University of California, Los Angeles. 322, 841, 902.
P. N. BORATAV, Centre National de la Recherche Scientifique, Paris. 5, 246, 270, 953.
J. BOSCH-VILÁ, University of Granada. 587, 632, 683.
C. E. BOSWORTH, University of Manchester. 1, 31, 37, 46, 47, 48, 59, 76, 102, 108, 182, 184, 243, 247, 251, 264, 280, 283, 287, 312, 353, 357, 359, 360, 361, 364, 375, 378, 385, 389, 391, 392, 497, 498, 501, 502, 521, 539, 542, 551, 581, 631, 649, 656, 685, 692, 698, 765, 769, 859, 897, 939, 954, 1028, 1156, 1258, 1259.
CH. BOUYAHIA, University of Tunis. 498.
G. BÖWERING, University of Pennsylvania, Philadelphia. 547.
the late J. A. BOYLE, University of Manchester. 300, 376, 498.
[H. H. BRĀU]. 541.
YU. BREGEL, Hebrew University, Jerusalem. 274, 582.
MARTHA L. BRILL, Paris. 24.
[C. BROCKELMANN, Halle]. 584.
K. L. BROWN, University of Manchester. 761.
J. T. P. DE BRUIJN, University of Leiden. 167, 176, 583, 835, 1027, 1105.
[F. BUHL, Copenhagen]. 1156.
R. BULLIET, Columbia University, New York. 1157.
R. M. BURRELL, University of London. 576, 646.
J. BURTON-PAGE, Church Knowle, Dorset. 233, 785, 889, 1258.
CL. CAHEN, University of Paris. 22, 73, 104, 254, 272, 821, 865, 1029, 1159.
J. CALMARD, Centre National de la Recherche Scientifique, Paris. 372, 665, 676.
G. CAMPS, University of Aix-en-Provence. 757.
the late M. CANARD, University of Algiers. 106, 820.
MEHMED ÇAVUŞOĞLU, University of Istanbul. 116.
NIHAD M. ÇETIN, University of Istanbul. 694.
P. CHALMETA, University of Madrid. 377, 782.
D. CHEVALLIER, University of Paris. 798.
J. W. CLINTON, Princeton University. 649, 957.
D. COHEN, University of Paris. 525.
[G. S. COLIN, Paris]. 652, 1203, 1207.
R. CORNEVIN, Académie des Sciences d'Outre-Mer, Paris. 253, 279, 281, 287, 753.
[A. COUR, Constantine]. 49, 528.
PATRICIA CRONE, Oxford. 23.
F. DACHRAOUI, University of Tunis. 1244.
the late L. CH. DAMAIS, Paris. 228.
A.-M. DELCAMBRE, Paris. 23, 25, 127, 639.
the late G. DEVERDUN, Paris. 655.
A. DIAS FARINHA, Institute of African and Oriental Languages, Lisbon. 367.
A. DIETRICH, University of Göttingen. 252, 787, 820, 1168.
[E. DIEZ]. 296.
F. TH. DIJKEMA, Leiden. 225.
HICHEM-DJAÏT, University of Tunis. 351.
B. DJURDJEV, University of Sarajevo. 32.

E. van Donzel, Netherlands Institute for the Near East, Leiden. 809.
A. J. Drewes, University of Leiden. 763.
W. Eagleton, Department of State, Washington. 1214.
R. M. Eaton, University of Arizona, Tucson. 550.
R. Y. Ebied, University of Sydney. 369, 514.
A. Elayed, University of Tunis. 916.
N. Elisséeff, University of Lyons. 125, 593, 898, 922, 927.
the late L. P. Elwell-Sutton, University of Edinburgh. 201, 502, 657, 819, 839.
J. van Ess, University of Tübingen. 385, 936.
T. Fahd, University of Strasbourg. 101, 235, 399, 693, 860.
Ravan Farhadi, Kabul. 73.
[H. G. Farmer]. 937.
Suraiya Faroqhi, Middle East Technical University, Ankara. 1171.
[G. Ferrand, Paris]. 945.
C. V. Findley, Ohio State University, Columbus. 1086.
K. Fischer, University of Bonn. 549.
H. J. Fisher, University of London. 359.
the late H. Fleisch, Université St-Joseph, Beirut. 645.
Barbara Flemming, University of Leiden. 28, 194, 651, 1106.
A. D. W. Forbes, University of London. 588, 771, 847, 849, 850, 852, 938, 1123.
G. S. P. Freeman-Grenville, Sheriff Hutton, Yorks. 105, 107, 223, 247, 278, 656, 1031, 1158.
F. Gabrieli, University of Rome. 710.
J.-C. Garcin, University of Aix-en-Provence. 99, 515, 519.
L. Gardet, Paris. 238.
H. Gaube, University of Tübingen. 10, 593.
E. Gellner, University of London. 715.
I. Gériès, University of Haïfa. 1227.
the late S. D. Goitein, Institute for Advanced Study, Princeton. 339.
M. Tayyib Gökbilgin, University of Istanbul. 263, 269.
L. Golvin, University of Aix-en-Provence. 221.
G. Goodwin, London. 256, 274, 366.
the late H. L. Gottschalk, Salzburg. 953.
A. G. Gould, University of California, Los Angeles. 284.
O. Grabar, Harvard University, Cambridge, Mass. 299, 344.
R. Gramlich, University of Freiburg-im-Breisgau. 1029.
W. J. Griswold, Colorado State University, Fort Collins. 729.
[A. Grohmann, Academy of Sciences, Vienna]. 71, 345, 391, 895.
A. H. de Groot, University of Leiden. 248, 250, 283, 309, 678, 764.
U. Haarmann, University of Freiburg-im-Breisgau. 50, 55.
Abdul-Hadi Hairi, Meshed. 25, 62, 311, 1088, 1090.
A. Hadj-Salah, University of Algiers. 806, 917.
H. Halm, University of Tübingen. 527.
the late L. Hambis, Collège de France, Paris. 39.
A. Y. al-Hassan, University of Aleppo. 973.
J. A. Haywood, Lewes, Sussex. 204, 962, 1107.
G. Hazai, Academy of Sciences, Budapest. 126, 136, 373.
[B. Heller, Budapest]. 234, 714, 813, 833.
C. J. Heywood, University of London. 40, 271, 313.
D. R. Hill, Great Bookham, Surrey. 530, 862, 973.
R. Hillenbrand, University of Edinburgh. 1154.
M. Hinds, University of Cambridge. 1164.

P. 137b, AL-**ISKANDARIYYA**, *add to Bibliography*: Numerous pieces of information about the working of the port of Alexandria are given in the *Minhādj* of al-Makhzūmī, in the parts translated and commented upon by Cl. Cahen, *Douanes et commerce dans les ports méditerranéens de l'Égypte médiévale*, in *JESHO* (1965), reproduced in idem, *Makhzūmiyyāt*, Leiden 1978. Furthermore, the author called al-Nuwayrī, Muḥammad b. Ḳāsim, author of the *Ilmām al-aʿlām*, should be clearly distinguished from his homonym, the celebrated author of the *Nihāya*. The *Ilmām*, written in regard to the attack. on Alexandria by Peter of Cyprus in 1367 and from which come the extracts studied in the articles of Combes cited in the *Bibl.*, has now been edited by A.S. Atiya in 4 vols. in the Ḥaydarābād Series, 1968-72.

P. 322b, **KAʿBA**, *add to Bibliography*: G. R. Hawting, "*We were not ordered with entering it but only with circumambulating it.*" Ḥadīth *and* fiqh *on entering the Kaʿba*, in *BSOAS* xlvii (1984), 228-42.

K

CONTINUATION

KHEMSHIL [see KHEMSHIN].

KHEMSHIN (other designation, Khemshili), a numerically small group of Muslim (Sunnī) Armenians who had been converted from Christianity in the beginning of the 18th century. In the U.S.S.R. (population 629, according to the 1926 Soviet census), they now inhabit the Black Sea coast near the Turkish border. In Turkey they live in compact settlements along the Fïrtïnï and Ḳaradere rivers (Bash Khemshin) and in the mountains not far from Hope (Hope Khemshin). The traditional economy is based on sheep and goat herding, and related activities. The Khemshin dialect (like the Erzurum, Cilicia and Istanbul dialects) is part of the western dialect group of the Armenian language. The Khemshin have been, to a great extent, assimilated by the Turks, nor have they been listed in either the 1959 or 1970 Soviet censuses). (R. WIXMAN)

KHĒRLA, a fortress of mediaeval India, lying to the south of Mālwa and east of Khāndesh [*q.vv.*], and in the extreme northern part of Berār [*q.v.*], just to the south of the headwaters of the Tāptī River. It is in fact some 50 miles west of modern Deogaṛh; in British India it fell within the Central Provinces, now Madhya Pradesh.

The foundation of the fortress is attributed to a Rādjput *rādjā*, the last of whose line is said to have been killed by a commander of the Dihlī Sultans, perhaps in the time of ʿAlāʾ al-Dīn Khaldjī; but the fortress as it stands today is Islamic in construction. During the revolt of the Deccan in the latter years of Muḥammad b. Tughluḳ, it fell into the hands of a local Gond dynasty. In the early 9th/15th century, the Gond ruler Narsingh was made subject to the ruler of Mālwa, Hushang b. Dilāwar Khān Ghūrī (808-38/1405-35), appointed to Mālwa by the Tughluḳids. It now became a subject of discord and covetousness between the rulers of Mālwa and the Bahmanī sultans of the northern Deccan [see BAHMANĪS]; thus in 831/1428 Hushang suffered a crushing defeat at Khērla at the hands of Aḥmad Shāh Bahmanī. Forty years later, in 871/1467, there was again fighting over possession of Khērla between Maḥmūd Shāh Khaldjī of Mālwa (840-73/1436-69) and the Bahmanī Muḥammad Shāh III Lashkarī, but Maḥmūd managed to retain Khērla and possibly northern Berār as far as Eličpur [*q.v.* in Suppl.]. In 994/1586 the Mughal governor of Mālwa, Aʿẓam Khān, attempted to take over Berār; he failed to capture Khērla, but plundered the capital Eličpur before being repelled by the combined forces of Khāndesh and the Niẓām-Shāhīs of Aḥmadnagar [*q.v.* and NIẒĀM-SHĀHĪS]. Berār subsequently came under Mughal rule, and the *Āʾīn-i Akbarī*, tr. Blochmann and Jarrett², Calcutta 1939-48, ii, 237, lists Khērla as a *sarkār* of the *ṣūba* of Berār with a revenue of 17½ million *dams*.

KHIḌĀB (A.), a term denoting the dyeing of certain parts of the body (and especially, in regard to men, the beard and hair) by means of henna [see ḤINNĀʾ] or some similar substance. It is still used in this sense today, but is used moreover for the items of make-up and cosmetics employed by modern women; the reader may find under MARʾA information about those items of cosmetics used by women attached to the traditional usages. (ED.)

KHIDĀSH (or Khaddāsh, cf. Wellhausen, 509; his real name was probably ʿAmmār or ʿUmāra b. Yazīd) one of the leaders of the early Hāshimiyya movement in Khurāsān. Having played a part unacceptable to the ʿAbbāsids in the formative stages of their *daʿwa* in Khurāsān, the official ʿAbbāsid propaganda later obliterated as much as possible of his memory, minimised his part in the *daʿwa* and presented him as a heretic. This propaganda succeeded to such a degree that his life and achievements are hardly mentioned in the Arabic sources and doubt was even cast as to his real name. Consequently, orientalist scholarship, in those few cases when it mentions him, is highly influenced by this. Wellhausen, with his unusual historical instinct, was the first to understand his significance in the ʿAbbāsid *daʿwa*, and B. Lewis also mentions his role as one of the first emissaries of the Hāshimiyya in Khurāsān [see ʿABBĀSIDS]. Cl. Cahen and Lewis both tend to accept at least some of the accusations of the ʿAbbāsid propaganda, namely that he was a Khurramī, and they raise doubts as to whether Khidāsh was an ʿAbbāsid emissary at all (Cahen, *Point de vue sur la révolution ʿAbbāside*, 324-5). However, with the discovery and publication of the anonymous source *Akhbār al-ʿAbbās* (ed. Dūrī and Muṭṭalibī under the title *Akhbār ad-dawla al-ʿabbāsiyya*), a fresh study is possible, based on new material which permits a reconsideration of the already-known traditions about him.

According to the ʿAbbāsid tradition, Khidāsh was a nickname derived from *kh-d-sh* "to tear apart", "to scratch" because "he has torn religion to pieces" (*khadasha al-dīn*) (Ṭabarī, ii, 1503; Balādhurī, *Ansāb*, f. 292b). This is a clear indication of the efforts made on the part of the ʿAbbāsids to blacken his name, especially after his death. In another tradition, however, Ṭabarī says that it was Khidāsh who adopted this name whereas his real name was ʿAmmār or ʿUmāra b. Yazīd (ii, 1588, cf. *Ansāb*, f. 292a, *inf.*; Ibn al-Athīr, *Kāmil*, Beirut 1965, v, 144). As far as the

name is concerned, Khidāsh is not an uncommon name in Arabic, derived from the third form of the verb *kh-d-sh* (cf. Lane's *Lexicon* and *LA*, s.v. and *Aghānī*, xix, 52 and index). It is quite possible that the ʿAbbāsids added their interpretation to the name later, when already there existed a tradition according to which the Prophet disliked the name Khaddāsh. (Ibn Wahb, *Djāmiʿ*, Cairo 1939, 97, cf. Kister, "*Call yourselves by graceful names*", in *Lectures in memory of Prof. Martin M. Plessner*, Jerusalem 1975, 12). However, whether Khidāsh was his name or not, it does not make much difference to the fact that his activities in Khurāsān for over eight years as head of the Hāshimiyya [*q.v.*], caused so much trouble to the ʿAbbāsids that his memory was almost completely obliterated from the records of the ʿAbbāsid *daʿwa*.

In order to understand the enigmatic personality of Khidāsh, one must remember that in the early phases of the *daʿwa* the contacts between the centre of its activity in Khurāsān and the parallel centre in Kūfa were, for security reasons, very weak. The same considerations necessitated extreme caution in the contacts between the Khurāsānis and the ʿAbbāsid *Imām* in Ḥumayma. Although the sources say that the propagandists in Khurāsān acted in the name of the ʿAbbāsids, it is highly improbable that Umayyad intelligence failed to uncover this connection or to discover the identity of the *Imām* until the very end. The contents of the *daʿwa* teachings were extremely ambiguous throughout, and its propagandists spoke in general terms about the rights of *Ahl al-bayt* (cf. al-ʿImrānī, *al-Inbāʾ*, ed. Samarrai, Leiden 1973, 571 l. 18) a term which was accepted to mean the family of the Prophet (cf. M. Sharon, *The ʿAbbāsid daʿwa re-examined*, 9, n. 23). Thus through most of its phases, the *daʿwa* in Khurāsān was, in fact, nothing but an extension of the Hāshimiyya of Kūfa. It is thus highly possible that even the leaders did not known what exactly were the essential ideas that differentiated their activities from those of the other Shīʿis in Khurāsān, and especially those in Nīshāpūr and its environs.

The only information about Khidāsh supplied by Ṭabarī and Balādhurī is as follows. After Asad b. ʿAbd Allāh al-Ḳasrī had killed several of the first propagandists of the *daʿwa* in Khurāsān, headed by Abū ʿIkrima, and had severely punished some of the others, another leader was sent from Kūfa to Khurāsān. The new leader was Abu 'l-Ḥusayn Kathīr b. Saʿd. As he was an uneducated man (if the term *ummī* in Ṭabarī's account is to be understood thus), Khidāsh was able to overcome him and assume the leadership (Ṭabarī, ii, 1503, *Ansāb*, f. 292a).

In another tradition there is some more and rather different information about Khidāsh. According to this tradition, it was Bukayr b. Māhān, one of the veteran adherents of the Hāshimiyya who, in 118/736 sent ʿAmmār b. Yazīd to Khurāsān as a "leader of the Shīʿa of Banu 'l-Abbās" (*Wāliyan ʿalā shīʿati bani 'l-ʿabbāsi*). He resided in Marw and changed his name to Khidāsh (a custom common to the early adherents of the *daʿwa*, who for reasons of secrecy, used to adopt new *kunyas* once initiated into the movement [see ḲAḤṬABA]. He began making propaganda for Muḥammad b. ʿAlī, in which he was very successful. According to another tradition in the *Ansāb*, it was Muḥammad b. ʿAlī who nominated him. Sometime later, however, Khidāsh changed his original propaganda and "turned away from the *Imām*'s instructions and began to teach improper and disgraceful ideas. Therefore, the adherents of Muḥammad b. ʿAlī fell upon him and killed him. Some say that it was Asad b. ʿAbd Allāh al-Ḳasrī that killed and crucified him" (Balādhurī, *Ansāb*, f. 292a). The "disgraceful ideas" according to Ṭabarī (*loc. cit.*) were those of the Khurramiyya [*q.v.*]. His execution by Asad took place, according to Ṭabarī, in 118, during the governor's second term of office (ii, 1588-9; Wellhausen, 510). Although these traditions reflect clearly the later ʿAbbāsid distortion of the information about Khidāsh, it is possible, however, to build the following picture, from the combination of the above narrations with the information transmitted in the *Akhbār*. Khidāsh's predecessor as the leader of the Hāshimiyya in Khurāsān, Kathīr b. Saʿd, led the movement in Marw from *ca.* 108/726 for three years until *ca.* 111/729. It was probably in that year that Khidāsh arrived from Nīshāhpūr, a centre of Hāshimī activity, and took over. For at least seven years, until his execution in 118/736, he was the leader (*ṣāḥib*) of the Hāshimiyya there (Ṭabarī, ii, 1589, l. 2) and the one responsible for creating its sound organisation, as Wellhausen rightly observes. He was the first to achieve a real and enduring success and to gain wide support among both Arabs and *mawālī*. The lists of the leaders of the *daʿwa* in his time show people from Tamīm, Rabīʿa, Azd and other Arab tribes, including Sulaymān b. Kathīr of Khuzāʿa, who was later to replace him (Wellhausen, 514, Ṭabarī, ii, 1586-7, *Akhbār*, 216-22). There is no neutral evidence whatsoever that he was Khurramī, though Wellhausen, Cahen and Lewis tend to accept ʿAbbāsid traditions which attributed to him Khurramī and Mazdakite theories (this tradition is presented in its complete form by al-Nāshiʾ al-Akbar, ed. J. van Ess, Beirut 1971, 32-5, cf. Wellhausen, 515-18; Cahen, *Point de vue . . .*, 324-5). Cahen, however, points out that many people who fell out of favour were accused of *zandaḳa*, and this is clearly true of Khidāsh; a tradition which presents him as a Christian from Ḥīra should be understood also as representing the same trend (*Ansāb*, *loc cit.*). From a unique tradition in the *Akhbār*, we know exactly the nature and content of his propaganda, and this also explains why the ʿAbbāsids later hated him. This tradition speaks of a group of Khidāsh's adherents in Nīshāpūr, called the Khālidiyya after its leader, a certain Abū Khālid. The group acted against the ʿAbbāsids from the very beginning of their reign, and in the time of Abū Djaʿfar al-Manṣūr changed its name and became the Fāṭimiyya. They argued that, since after the death of Ibrāhīm al-Imām [*q.v.*] a new *imām* was not nominated in the way of *waṣiyya*, the *imāma* must return to the ʿAlids, now already represented by the descendents of Fāṭima (*Akhbār*, 403-4).

From the statement that the Khālidiyya-Fāṭimiyya continued the former Khidāshiyya, it is clear that Khidāsh as a Hāshimī leader furthered the cause of the ʿAlids.

Having worked for a while in Nīshāpūr, Khidāsh seized the opportunity of the growing activity of the Hāshimiyya in Marw in order to move there in 111/730, and being intellectually superior to Kathīr b. Saʿd, he was able to depose him and take over the leadership of the movement there. For the Hāshimiyya of Marw, both his leadership and ideology were congenial. After the death of Abū Hāshim, the original Hāshimiyya continued in general terms to support the cause of the House of the Prophet, which became more and more identified with the Fāṭimid ʿAlids. This development disturbed Muḥammad b. ʿAlī, and on one occasion he is said to have warned one of his early emissaries to Khurāsān, the Kūfan leader Abū ʿIkrima, about the ʿAlid leaders in Nīshā-

pūr, whose names include one Abū Khālid al-Djawālikī (*Akhbār*, 204, cf. Ibn. Khaldūn, *ʿIbar*, ed. Būlāḳ, iii, 101). His influence in Khurāsān, however, was too slight to act against Khidāsh, and he may have had to give his tacit approval to the latter's position. Khidāsh built a strong centre in Khurāsān which was completely independent and detached from both Kūfa and Ḥumayma.

During the seven years of his activity, the ʿAlid cause gained wide support there, while the ʿAbbāsid *Imām* was kept completely in the shade. Khidāsh spoke in favour of *al-Raḍī min Āl Muḥammad* or *al-Ḳāʾim min ahl al-bayt*, slogans which were common to all the ʿAlid adherents in Khurāsān and the early *daʿwa*.

Khidāsh's independent ideas, which were inconsistent with the aims and aspirations of the ʿAbbāsid *Imām*, are explicitly indicated in *Taʾrīkh al-Khulafāʾ*, ed. Griaznevitch, ff. 252b l. 18-253a l. 6, and especially in a unique note on the margin of the manuscript, f. 253a, which is the key for an understanding of the whole problem. It runs as follows: *Khidāsh, radjulun intaḥala maḳālatan bi-Khurāsāna wa-intasaba ilā l-ḳāʾimi min ahli bayti rasūli allāhi fa shtubiha ʿalāʾ l-shīʿati amruhu.*

Muḥammad b. ʿAlī understood that the new independent centre in Khurāsān had to be connected *directly* with him and not through Kūfa, but as long as Khidāsh was alive this was impossible, and it was difficult even after Khidāsh's death in 118/736.

The new leader, Sulaymān b. Kathīr, went to see the *Imām* in Ḥumayma in 120/739, but this meeting led to a crisis. Muḥammad b. ʿAlī tried to reproach the Khurāsānī for accepting Khidāsh's wrong ideas, but Sulaymān and the Khurāsānī could not see what was wrong in pure ʿAlid-Hāshimī ideology, and for over five years the relations between Khurāsān and the ʿAbbāsid *imām* were almost non-existent (Ṭabarī, ii, 1640, 1727, 1769, Balādhurī, f. 292b).

Only in 126/744 were relations restored, and the centre in Khurāsān acknowledged the leadership of the new *Imām*, Ibrāhīm b. Muḥammad (Muḥammad died in 125/743). Sulaymān welcomed Bukayr b. Māhān in Marw and sent money with him to the *Imām* (Ṭabarī, ii, 1869, Balādhurī, *loc. cit.* This improvement in the atmosphere was due to the great crisis in the Shīʿa that followed in the wake of the collapse of Zayd b. ʿAlī's revolt in Kūfa in 122/740 and the execution of his son Yaḥyā in 125/743. The messianic expectations of the Shīʿa which were connected with these two were replaced by the usual feelings of sorrow and repentance after their death. This feeling was especially acute in Khurāsān, where black garments were worn everywhere as a sign of mourning for the dead ʿAlīds and where newborn children were named Zayd and Yaḥyā after them (Masʿūdī, *Murūdj*, Beirut 1965, iii, 212-13). This was also the moment when a new leader was needed to avenge their blood. The circumstances were, therefore, ripe for coming to terms with the ʿAbbāsid *imām* and for turning the *daʿwa* into an ʿAbbāsid one. Even so, this change was not easily accepted. Not only did the pro-ʿAlid Khidāshiyya continue to exist under a new leader, but also (as Balādhurī reports, *Ansāb*, f. 305a), Muḥammad the son of Sulaymān b. Kathīr was himself an adherent of the Khidāshiyya who was opposed to the transference of the movement in Khurāsān to Abū Muslim. Because of the activities of Khidāsh we can now understand that it was not until 126/744 that the *daʿwa* in Khurāsān was changed from a purely ʿAlid one to an ʿAbbāsid one. But the ʿAbbāsids, even after reaching power, knew, as al-Manṣūr is reported once to have said, that "the love for the Āl Abī Ṭālib in the hearts of the people of Khurāsān is mixed with the love for us" (*Fragmenta*, ed. De Goeje, 246).

KHIDĀSH B. **ZUHAYR** AL-**AṢGHAR** B. RABĪʿA B. ʿAMR B. ʿĀMIR B. ṢAʿṢAʿA AL-ʿĀMIRĪ, *mukhaḍram* poet who is said to have attacked Ḳuraysh because his father had been killed in the War of Fidjār [*q.v.*]; it is possible that he himself took part in this struggle, and it is precisely in the chapter devoted to this war that the *Aghānī* (ed. Beirut, xxii, 70 ff., cf. iii, 219) cites him at greatest length, since several pieces of his are given there, one of them considered as a *ḳaṣīda munṣifa* (see Ch. Pellat, in *Mélanges Marcel Cohen*, 279-80), but he boasts there of a victory of the Hawāzin over Ḳuraysh which seems to be an invention. All the same, it is not impossible that these verses, and also a *ḳaṣīda* in praise of Ḳuraysh (*Aghānī*, xxii, 76), where allusion is made to Muḥammad's presence amongst the combattants, were written at a later date and by another poet. Khidāsh was still a pagan at the Battle of Ḥunayn [*q.v.*]. Ibn Sallām (*Ṭabaḳāt*, 119-22) classes him in the fifth *ṭabaḳa* and cites a certain number of his verses. An edition of his *dīwān* has been put together and is being prepared in Baghdād.

KHIDHLĀN (A.), nomen actionis from the root *kh-dh-l*, "to leave in the lurch", a technical term in Islamic theology, applied exclusively to Allāh when He withdraws His grace or help from man. The disputes regarding it first appear in connection with the quarrel over *ḳadar* [*q.v.*]. A starting point is found in Sūra III, 154/160: "but if He abandon you to yourselves (*yakhdhul-kum*), who will help you after Him? Let the faithful therefore trust in God". On this al-Rāzī observes: "The Companions deduce from this verse that belief is exclusively a result of Allāh's help (cf. John, vi, 65), while unbelief is a result of His *khidhlān*. This is obvious, as the verse points out that the matter is entirely in God's hands".

A more detailed exposition is given by Ibn Ḥazm (iii, 50 f.) "Right guidance and assistance consist in God's preparing (*taysīr*) the believer for the good for

which He has created him; while *khidhlān* consists in His preparing the *fāsiḳ* for the evil for which He has created him. Linguistic usage, the Ḳur'ān, the force of logic, and the attitude of the *fuḳahā'* and those in the past who handed down traditions and of the Companions and Successors as well as of those who came after them and of the whole body of Muslims with the exception of those whom God has led astray as regards their intelligence, namely such as belong to the followers of slanderers and outcasts, like al-Naẓẓām, Thumāma, al-ʿAllāf and al-Djāḥiẓ, are all unanimous". Then follows this reasoning: Allāh has given man two forces, hostile and opposed to one another, *tamyīz* (power of discrimination) and *hawā* (passion, desire). When Allāh protects the soul, *tamyīz* prevails by His help and power. But when He leaves the soul to itself (*khadhala*), He strengthens the *hawā* with a strength which amounts to leading astray (*iḍlāl*).

Khidhlān is therefore, according to Ibn Ḥazm, the opposite of *hudā* and *tawfīḳ* and the conception approaches that of *iḍlāl*. The Muʿtazilīs (as already indicated by Ibn Ḥazm's words) see in it a contradiction to Allāh's justness: according to them, Allāh does not urge a man to evil. In their terminology, *khidhlān* therefore means the refusal of divine grace (*manʿ al-luṭf*), while, according to the Ashʿarīs, *khidhlān* is "the creation of the ability to disobey".

KHIDĪW, Khedive, title of the rulers of Egypt in the later 19th and early 20th centuries, deriving from Persian *khidīw*, *khadīw* "lord, prince, ruler". The use of the Arabic form of the title *khidēwī* "khedival" is associated with Ismāʿīl Pasha [*q.v.*], *wālī* or viceroy of Egypt 1863-79, even though his predecessors, ʿAbbās I Pasha (1848-54) and Saʿīd Pasha (1854-63) used it unofficially on occasion. Certain government departments, in particular the Department of the Interior, even under Ismāʿīl's grandfather, Muḥammad ʿAlī the Great (1805-49), founder of the dynasty, were known as *dīwān al-khidēwī*. In a way, it was a unique title among the vassals of the Ottoman Sultan, which the ambitious viceroy of Egypt sought precisely in order to set himself apart and above so many other governors and viceroys of Ottoman dominions. Closely related to his efforts to render his rule more secure within his family was Ismāʿīl's ambition to acquire the more formal accoutrements of sovereignty in relation to his master in Istanbul and the European powers. After lavish gifts in Istanbul, the distribution of outright bribes to influential courtiers and vast expenditure in supplying troops to help his sovereign suppress a rebellion in Crete, the title of *khidīw* was formally conferred by the Sultan upon Ismāʿīl in a *firmān* issued on 8 June 1867, two years before the formal opening of the Suez Canal. From a mere *wālī*, viceroy of the Sultan in Egypt, Ismāʿīl assumed a rank which elevated his standing to a position closer to royalty. A more important concession which Ismāʿīl received along with this title was the virtual independence of Egypt and her right to enter into special treaties and agreements governing posts, customs and trade transit. These provisions were to give Ismāʿīl freedom in the financial, administrative and judicial arrangements of the country. The title remained in use until 1914, and was assumed by Ismāʿīl's son Tawfīḳ Pasha (1879-92), and Tawfīḳ's son ʿAbbās II Ḥilmī (1892-1914) [*qq.v.*]. When soon after the outbreak of the Great War Egypt was declared a British Protectorate and ʿAbbās II was deposed, his successor, his uncle Ḥusayn Kāmil, assumed the title of Sultan of Egypt.

KHIḌR BEG, Ottoman scholar and poet of the 9th/15th century, and the first *ḳāḍī* of Istanbul. The unique source for his biography is the Arabic original of *al-Shaḳā'iḳ al-nuʿmāniyya* by Tashköprüzāde who, however, distorts the chronology of an otherwise convincing account of his career by an implausible anecdote which would place his first important appointment as late as the beginning of the reign of Meḥemmed II (*ca.* 855/1451). Disregarding this, and an equally suspect interpolation made by Medjdī in his translation of the work in which his mother is identified as the daughter of the legendary Turkish jester, Naṣr al-Dīn Khwādja (Nasreddin Hoca), the details of his life are as follows: He was born in Sivriḥiṣār, where his father, Djalāl al-Dīn, was *ḳāḍī*—though the fact that the latter was, also, known as Amīr ʿĀrif would suggest that he was a dervish rather than a member of the learned profession—and a source used by Brockelmann dates the birth to 1 Rabīʿ al-Awwal 810/6 August 1407. He completed his studies in Bursa under the famous scholar Mollā Yegān, whose daughter he married, and is then said to have returned to Sivriḥiṣār as a teacher. He acquired such a reputation for learning that he was appointed to the *madrasa* of Meḥemmed I in Bursa with an increase in stipend, and certain of his pupils here were subsequently to become scholars of great eminence. Next he taught at the *madrasa* of Bāyezīd I in Bursa, again with an increased stipend, and in addition was appointed *ḳāḍī* of Inegöl. From here he moved to the newest of the two *madrasas* in the Üč Sherefeli mosque in Edirne, and thence to Yanbolu (in present-day Bulgaria) as *ḳāḍī*. After the conquest of Istanbul in 857/1453, he was appointed its first *ḳāḍī*, in which post he remained until his death in 863/1458-9. He is buried in the Zeyrek quarter of Istanbul (*ʿOthmānlı mü'ellifleri*, i, 290), where he also built the mosque later attributed to a certain Ḥādjdjī Ḳadın (*Ḥadīḳat al-djawāmiʿ*, i, 86). His three sons, Yaʿḳūb Pasha, Müftī Aḥmad Pasha and Sinān Pasha, were also notable scholars, the latter being the author of the famous *Taḍarruʿāt*.

Although Khiḍr Beg is reputed to have introduced the versified chronogram into Ottoman literature, very few of his Turkish poems have survived (Sehī, 39) and his reputation rests on three poems in Arabic. The first, a didactic *ḳaṣīda* in the *basīṭ* metre on the creed, is known as the *Nūniyya* and has been the subject of several commentaries, most notably that by his pupil Khayālī (Ḥādjdjī Khalīfa, ii, 1348; Brockelmann, II, 229, S II, 321). Another *ḳaṣīda*, also a *nūniyya* dealing with the creed, but in the *wāfir* metre, is usually known as the *ʿUdjāla layla aw laylatayn* (Brockelmann is incorrect in saying that he translated this into Persian). Finally, there is a *mustazād*, in a Persian variety of the *hazadj* metre, which was greatly admired and attracted imitations for over a century (ʿAlī, *Künh*, v, 230-1; Aḥmed Pasha, *Dīwān* ed. Ali Nihat Tarlan, Istanbul 1966, 357). Bursalı

Meḥmed Ṭāhir mentions a translation into Persian of the *Maṭāliʿ* which he made at the request of Sulṭān Meḥemmed II, the work in question probably being the *Maṭāliʿ al-anwār*, on logic, by Sirādj al-Dīn Maḥmūd al-Urmawī (Ḥādjdjī Khalīfa, ii, 1715).

Bibliography: Tashköprüzāde, *al-Shaḳāʾiḳ al-nuʿmāniyya*, Arabic text in margins of Ibn Khallikān, *Wafayāt al-aʿyān*, Būlāḳ 1299, i, 151-5; Medjdī's Turkish translation (Istanbul 1269, 111-4) omits many important details. Bursalı Meḥmed Ṭāhir, *ʿOthmānlı müʾellifleri*, Istanbul 1333, i, 290; Ḥusayn Aywānsarāyī, *Ḥadīḳat al-djawāmiʿ*, Istanbul 1281, i, 86; Edirneli Sehī, *Hesht bihisht*, Istanbul 1325, 39; Muṣṭafā ʿĀlī, *Künh al-akhbār*, Istanbul 1285, v, 229-32; Süheyl Ünver, *Hızır Bey Çelebi, hayatı ve eseri*, Istanbul 1945. The biography given in the entry for Khiḍr Beg in von Hammer's *Geschichte der osmanischen Dichtkunst*, Pest 1836, i, 142, is actually that of his son, Sinān Pasha.

(J. R. Walsh)

al-KHIḌR ḤUSAYN [see al-khaḍir b. al-ḥusayn].

KHIḌR-ILYĀS (in Turkish, Hıdrellez), is the name, in Turkish tradition, of a popular festival in the spring and celebrated on the 5-6 May, this date being considered as marking the beginning of the season of summer, extending from then till 7 November (*Kasım*). The two dates correspond respectively with the feastdays of St. George (23 April) and St. Demetrius (26 October).

Khiḍr (Tkish. Hızır) also symbolises in Turkish tradition the renewal of vegetation in the spring. It is believed that, when this personage shows himself upon the face of the earth, the dry vegetation becomes green again as he passes; that he leaves a green impression on the hands which he touches; and that he brings abundance, fertility and happiness. Another feature of his legendary personality is that he comes to the aid of beings in distress, and in particular, of those in danger of drowning in the sea or lost in the desert. In regard to Ilyās, beliefs and traditions are somewhat rare. In the written literary texts and in oral tradition they are limited to allusions to his supernatural aid to beings in distress on land or sea, a power which he shares with Hızır; according to certain beliefs, Ilyas is the master of the seas, and Hızır that of the land, but others hold the inverse of these attributions (see *Halk bilgisi haberleri* = *HBH*, i (1930), 182; *Gediz*, No. 73 (1944); O. Bayatli, *Bergama'da efsaneler, âdetler*, Istanbul 1941, 54; Ewliyā Celebi, *Seyāḥat-nāma*, iii, 90; Yazıdjıoghlu, *Muḥammediyye*, lith. Istanbul 1312/1894-5, 77; Sadettin Nüzhet, *Turk şairleri*, i, 57; in one poem the popular poet of the 17th century Ḳaradjaoghlan calls him "guardian of the seas, mounted upon a grey horse"; in the Oghuz epic *Dede Ḳorḳud* he is likewise described as a horseman). Ilyās is further mentioned in beliefs which explain the name *Hıdrellez*. It is generally held that each year, on the night of 5 May, these two beings, both of them immortal after having drunk from the "Water of Life", come to meet together on the earth. Their meeting place is often pictured as a spot by the sea shore. According to a local belief of Balıkesir (*HBH*, i, 181), they are two brothers. A legend recorded at Halkalı near Istanbul tells how they were two lovers. Hıdr a youth and Ellez a girl; for long they were unable to come together again, but at last met on the night of 5 May, and then both died of joy from their reunion (Ali İmer, *Halkalı'da Hıdrellez*, in *Türk folklor araştırmaları*, No. 96 (1957)).

Hıdrellez is a festival the greater part of whose ceremonies are reserved for women and girls. They comprise three main sequences: (1) On the night of 5 May, various practices are performed and rites observed in order to ensure the fulfillment of divers vows, such as abundance, prosperity, happiness in general, or more specifically, the acquisition of a house, the birth of a child, etc. (2) Early the next morning, there takes places the "drawing from the divinatory pitcher". The previous evening, there are placed in the pitcher, to the accompaniment of appropriate rites, various small objects belonging to women and girls who wish to ask Fate about their future destiny; the pitcher is then placed under a rosebush during all the night. In the morning, a young girl draws out the objects in the pitcher one after the other, and woman recites the "divinatory quatrain", which is interpreted in regard to the future fate of the owner of the corresponding object. (3) On 6 May, there is an outing to go and eat, in groups of relatives, neighbours and friends, in the countryside, usually by some sanctuary. Games and amusements, including swings, the preferred pastime for this festival, are organised.

The festival and its attendant ceremonies are normally limited to two days only. Nevertheless, they form a sequence of seven weeks in the ʿAlawī villages of a mountainous region in the province of Kırklarelı. During the month which precedes the day of Hidrellez, the ceremony of "drawing from the divinatory pitcher" takes place every Thursday evening. The seventh Thursday is called "the day of Nazari", when a communal meal is eaten, prepared from the meat of sacrified animals. On this same day, the children, carrying flowers and willow branches, search out, and organise for themselves, communal meals by a sanctuary; they also carry out other rites which are, moreover, to be connected with those aimed at summoning rain [see istisḳāʾ]. On returning to the village, they throw their crowns of flowers and leaves into the river (Etem Utük, *Yukarı Kanara köyünde Nazari şenlikleri*, in *Türk folklor araştırmaları*, No. 267 (1971)).

Boratav, *Ḥızır*, in *İA*; idem, *Türk folkloru*, Istanbul 1973, 122, 270-4; Kemal Güngür, *Anadolu'da Hızır geleneği ve Hıdrellez törenlerine dair bir inceleme*, in *Türk etnografya dergisi*, No. 1 (1956), 56-76. (P. N. Boratav)

KHIḌR KHĀN, founder of the "Sayyid" dynasty which ruled at Dihlī from 817/1414 to 855/1451. His designation as a *sayyid* is traced in the near-contemporary *Taʾrīkh-i Mubārak Shāhī* firstly to a remark hagiologically attributed to the Ṣūfī Djalāl al-Dīn Bukhārī, and secondly to his own excellent character, and has been accepted by later historians like Niẓām al-Dīn Aḥmad, Badāʾūnī and Firishta; but this has been regarded as dubious by modern British and South Asian historians. The other near-contemporary source, Bihāmad Khānī's *Taʾrīkh-i Muḥammadī* (compiled or revised in 842/1438-9) is silent on the point. While false genealogies are quite common in Indo-Muslim history, Khiḍr Khān's selection by Tīmūr [*q.v.*] as his "deputy" in Dihlī suggests that he may have been regarded as *sayyid* in his lifetime, since Tīmūr's regard for *sayyid*s is well documented.

Khiḍr Khān was the son of Malik Sulaymān, an adopted son of Mardān Dawlat, the *iḳṭāʿ-dār* of Multān under Sulṭān Fīrūz Tughluḳ [*q.v.*]. Sulaymān Malik succeeded to that *iḳṭāʿ* after the death of Malik Shaykh, Mardān's son, and Khiḍr Khān was assigned the *iḳṭāʿ* in succession to his father. In 798/1396 he lost the *iḳṭāʿ* during his strife with Sārang Khān,

When Tīmūr invaded India in 801/1398-99, he took refuge in Mēwāt, but later entered Tīmūr's service, and was appointed governor of Dihlī and *iḳṭāʿ-dār* of Multān and Deopālpūr. However, it was not until 817/1414 that he finally took possession of Dihlī. He regarded himself a vassal of Tīmūr, and later of the latter's son S̲h̲āh Ruk̲h̲ [*q.v.*], whose names were recited in the *k̲h̲uṭba* and inscribed on the coinage. He obtained S̲h̲āh Ruk̲h̲'s permission in 820/1417 to affix his own name also on the coinage; he chose for himself not the title of *sulṭān*, but that of *rāyat-i aʿlā*, suggesting presumably that he was a standard-bearer of the Tīmūrids.

His reign of seven years, until his death in 823/1421, was full of campaigns undertaken by himself and by his able and loyal *wazīr* Tād̲j̲ al-Mulk which extended the frontiers of his authority and re-united Pand̲j̲āb with Dihlī. Punitive expeditions were organised against rebellious nobles, especially the Türkbačas; there were also several expeditions against Hindu *rād̲j̲ās* such as those of Katahr and Gwāliyār [*q.vv.*] in order to collect taxes and tribute. Near-contemporary chronicles regard him as a kind and benevolent ruler who brought to Dihlī and the other areas which he governed relief from the economic sufferings and insecurity which had continued since the invasion of Tīmūr.

(Aziz Ahmad)

KHILʿA (pl. *k̲h̲ilaʿ*), "robe of honour," also called *tas̲h̲rīf* (pl. *tas̲h̲ārīf* and *tas̲h̲rīfāt*). Throughout much of the Middles Ages, the term *k̲h̲ilʿa* did not designate a single item of clothing, but rather a variety of fine garments and ensembles (*ḥulla* or *badla*) which were presented by rulers to subjects whom they wished to reward or to single out for distinction (hence the alternate name *tas̲h̲rīf* "honouring"). These robes, the most common of which was the *ḳabāʾ* (see LIBĀS), were normally embellished with embroidered bands with inscriptions known as *ṭirāz* [*q.v.*] and were produced in the royal factories (*dār al-ṭirāz*).

(i) *Origin of the custom.*

The custom of bestowing garments of honour in the Near East is very ancient. The Patriarch Jacob singled out his favourite son Joseph from amongst his brothers by giving him a *ketōnet passīm* (Gen. xxxvii, 3) which was a ceremonial or royal robe (see commentary of E. A. Speiser, *Genesis*, Anchor Bible, Garden City 1964, 290). Joseph was later similarly honoured by Pharaoh, who had him dressed in garments of linen (Gen. xli, 42). Herodotus reports that the Egyptian king Amasis sent to Croesus of Lydia as a royal gift a corselet of linen embroidered with gold thread and cotton with the figures of animals woven into the fabric (*Hist.*, iii, 47).

This custom had a most important precedent in Islam with Muḥammad's gift of the *burda* [*q.v.*] which he was wearing to the poet Kaʿb b. Zuhayr (Ibn al-At̲h̲īr, *Kāmil*, Cairo 1301, ii, 133-4). The very word *k̲h̲ilʿa* denotes the action of removing one's garment (A. *k̲h̲alaʿa*) in order to give it to someone (*TA*, v, 322). L. A. Mayer has suggested that this was "originally more a promise of personal security (*amān*) than a token of distinction" (*Mamluk costume*, 56), but this is an overstatement.

(ii) *Development of the custom in Islam.*

The term *k̲h̲ilʿa* does not appear until ʿAbbāsid times, when the practice became so institutionalised that the bestowal of garments of honour was an almost daily occurrence. Members of the caliphal entourage came to be known as *aṣḥāb al-k̲h̲ilʿa* "those who wear the *k̲h̲ilʿa*". The presentation of a robe of honour was a standard mark of investiture. Such was the case for an heir-apparent (see e.g. Masʿūdī, *Murūd̲j̲*, vii, 365), a vizier (e.g. Hilāl al-Ṣābiʾ, *Taʾrīk̲h̲ al-Wuzarāʾ*, ed. Amedroz, Beirut 1904, 176), or a provincial governor (e.g. Ṭabarī, iii, 2194). The bestowal of *k̲h̲ilaʿ* and other gifts to favourites was an occasion for poetical compositions and was noted by historians (e.g. Ibn al-Fuwaṭī, *al-Ḥawādit̲h̲ al-d̲j̲āmiʿa*, ed. M. D̲j̲awād, Bag̲h̲dād 1351).

In the heyday of Fāṭimid rule in Egypt, the new *haute bourgeoisie* found itself with the means to emulate—after a fashion—many of the luxurious practices of the aristocracy. Anomg these was the custom of bestowing *k̲h̲ilaʿ* upon friends and relations (Y. K. Stillman, *The importance of the Cairo Geniza manuscripts for the history of medieval female attire*, in *IJMES*, vii (1976), 582).

The Mamlūks with their strong military psychology and a marked penchant for heraldic symbolism, standardised the *k̲h̲ilaʿ* in accordance with the class of the wearer and his rank within that class. The three major classes of *k̲h̲ilʿa* wearers were the military (*arbāb al-suyūf*), the civil service (*arbāb al-aḳlām*), and the religious scholars (*al-ʿulamāʾ*). Maḳrīzī, drawing upon the *Masālik al-abṣār* of al-ʿUmarī, describes in detail the great variety of *k̲h̲ilaʿ* worn by these three important classes of Mamlūk society (*K̲h̲iṭaṭ*, ii, 227-8; tr. by Mayer, in *Mamluk costume*, 58-60). A special official, the *Nāẓir al-K̲h̲āṣṣ* (Keeper of the Privy Purse) oversaw the *k̲h̲ilaʿ* in the Great Treasury (*al-k̲h̲izāna al-kubrā*) which contained only robes of honour (*ibid.*). In addition to garments, the Mamlūk military *tas̲h̲rīf* could consist of arms, such as gold-ornamented swords, and a horse from the sulṭān's own stable (*min al-iṣṭabl*), fully outfitted with saddle, bridle, and caparison (*kanbūs̲h̲*).

Money or other valuables were also given as part of the *k̲h̲ilʿa*/*tas̲h̲rīf* (e.g. Abu 'l-Fidāʾ, *al-Muk̲h̲taṣar min Taʾrīk̲h̲ al-bas̲h̲ar* [*Annales Moslemici*] v, ed. J. J. Reiske, Copenhagen 1794, 294). In the Ottoman Empire, a sum of money was sometimes given in place of the robe of honour. This monetary gift was called *k̲h̲ilʿet behā* ("the price of a *k̲h̲ilʿa*"). It specifically referred to money distributed to Janissary

officers upon the accession of a sulṭān (C. Barbier de Meynard, *Dictionnaire turc-français*, Paris 1881, i, 709), so that this term is to a large extent synonymous with that of *djulūs aḳčesi* "accession payment".

Robes of honour were given on all sorts of occasions and for a variety of reasons. Thus, there was the *khilʿat al-niyāba* or *kh. al-istiḳrār* (robe of appointment), the *kh. al-wizāra* (robe of viziership), the *kh. al-riḍāʾ* or *kh. al-riḍā* (robe of pardon), and the *kh. al-ʿazl* (robe of dismissal—with honour of course). The *kh. al-ḳudūm* was given to a guest from afar, while the *kh. al-safar* was given upon his departure. A sulṭān might give a *kh. al-ʿāfiya* (robe of health) to a favourite who had recovered from an illness (Mayer, *Mamluk costume*, 61-2, and the sources cited there).

The custom of bestowing robes of honour remained widespread throughout the Muslim world until recent times. In 19th century India a *khillaut* (also *khelat*, *khilut*, *killut*) might consist of anywhere from a minimum of five articles to as many as one hundred and one (Mrs. Meer Hassan Ali, *Observations on the Mussulmauns of India*², London 1917; repr. Karachi 1974, 148-50; see also Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*², London 1903, repr. London 1968, 483-4).

Buckler, *Two instances of Khilʿat in the Bible*, in *Journal of Theological Studies*, xxiii (1922), 197 ff.; M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks*, Paris 1923, pp. lxxxvii-xcv; Y. K. Stillman, *Female attire of medieval Egypt*, unpublished diss., University of Pennsylvania, Philadelphia 1972, 16-8, 93-6. The most detailed survey of *khilʿa* is to be found in L. A. Mayer, *Mamluk costume*, Geneva 1952, 56-64 *et passim*.

(N. A. STILLMAN)

KHILĀFA [see KHALĪFA]

KHILĀFA, KHILĀFAT MOVEMENT, a politico-religious movement in British India, manifesting itself in the years after the First World War. On the one hand, it had its roots in Pan-Islamism, which came to the fore about 1900. On the other hand, is was stimulated by nationalism [see ḲAWMIYYA. In Muslim India and Pakistan]. Turkey's defeat in the First World War spelt serious danger to the position of the Ottoman Sulṭān-Khalīfa. Would his power remain great enough to protect Islam? Would the Holy Places of Islam remain under his sovereignty (or at least suzerainty)? Arab nationalism posed a threat, and Greece, France and Italy wanted to rob him of extensive territories in Thrace and Asia Minor.

In September 1919, when rumours about the coming treaty of Sèvres were rife, the Khilāfa movement was organised. Khilāfa conferences met in several cities in Northern India, and a Central Khilāfa Committee constituted itself at Bombay. Seth Chotani, a wealthy merchant, became its president. Prominent leaders were Muḥammad and Shawkat ʿAlī (the "ʿAlī brothers"), Abu 'l-Kalām Āzād, Dr. Anṣārī and Ḥasrat Mohani. An important part was played by the *ʿulamāʾ*, organising themselves in the Djamʿiyyat al-ʿUlamāʾ-i Hind. Their most influential leaders were ʿAbd al-Bārī (of Farangī Maḥall) and Maḥmūd al-Ḥasan (of Deoband). In January 1920, a Khilāfa deputation presented an address to the Viceroy. It stated that "the preservation of the Khilāfa as a temporal no less than a spiritual institution" was "the very essence" of their faith, and that this meant full Muslim control over the Arabian peninsula, the Khalīfa's wardenship over the Holy Places and the integrity of the Ottoman Empire—claims which, by the way, constituted a check on Arab nationalism and the ambitions of the Sharīf Ḥusayn of Mecca. Another deputation, headed by Muḥammad ʿAlī, went to Europe and had two (unsuccessful) interviews with members of the British Government in March 1920.

The Khilāfa movement started as a communal movement and met with mass approval within the Indian Muslim community (only among upper-class Muslims was there a marked tendency to hold aloof from it). Large funds were collected, partly by petty contributions. But it also got the support of the Indian National Congress. Thereby the Khilāfatists became more and more involved in the nationalist movement, which entered upon its first non-cooperation campaign (1920-2). Gandhi became a member of the Central Khilāfa Committee and issued a Khilāfa Manifesto in March 1920. The Khilāfatists, however, accepted Gandhi's creed of non-violence only conditionally: if it did not bring success, they would have to resort to *djihād* and *hidjra*. The former seemed possible in connection with an Afghān invasion; the latter was actually performed in the summer of 1920. Some 30,000 *muhādjirīn*, most of them coming from Sind or the Pandjāb, crossed the Afghān border, but about 75% of them came back, disillusioned by their reception in Afghānistān. These aspects of the Khilāfa movement had an adverse effect upon Hindu-Muslim relations, which were vital to its nationalist character. Gandhi's suspension of non-cooperation in February 1922, constituted a severe blow in this respect; Indian Muslims felt betrayed by the Hindus after bearing the brunt of the nationalist battle.

No less deadly blows came from the Turks. The nationalist government at Ankara succeeded in restoring Turkey's position. The Khilāfatists supposed that Kemāl Pasha was acting on behalf of the Sulṭān-Khalīfa, but this proved to be an error. In November 1922, the Sultanate in Turkey was abolished and the Khalīfa lost all temporal power; he was "Vaticanised" (a condition which the Khilāfatists had declared to be incompatible with his office). Khilāfa leaders tried to explain away the fact, but their followers left them. The movement wholly collapsed when in March 1924 the Ottoman Khilāfa was abolished. Some leaders, like Abu 'l Kalām Āzād and Dr. Anṣārī, remained in the Congress; others found their way back to the Muslim League, which up to 1919 had been the political organisation of Indian Muslims. Other leaders again, like the ʿAlī brothers, tried to save the Khilāfa organisation, but to direct it towards communalist goals. It grew into an instrument to further Muslim interests as opposed to Hindu ones, but even in this form, the organisation had lost all significance by 1928.

Bibliography: Among the contemporary accounts the most important is P. C. Bamford, *Histories of the non-co-operation and Khilafat movements*, Delhi 1925 (confidential publication of the Govt. of India). Materials concerning the movement can be found in Afzal Iqbal, ed., *Select writings and speeches of Maulana Mahomed Ali*, Lahore 1944 (containing among other things an unfinished autobiography of the author). In many books, the movement is treated as an episode in the nationalist struggle, *e.g.* A. Aziz, *Discovery of Pakistan*, Lahore 1964, and R. C. Majumdar, *History of the Freedom movement in India*, iii, Calcutta 1963. The most recent monograph is A. C. Niemeijer, *The Khilafat movement in India, 1919-1924*, The Hague 1972.

KHILĀṬ [see AKHLĀṬ].

KHILDJĪ. [see KHALDJĪ].

KHINALUG (self designation: Kättitturdur; Russian, Khinalug [from the *aul*-Khinalug]), a people of the eastern Caucasus. Khinalug is a numerically small ethnical group, which forms an independent branch of the Northeastern Ibero-Caucasian language group. According to the 1926 Soviet census, there were (ethnically) 105 Khinalugs, and linguistically 1,540. The Khinalugs are Sunnī Moslems of the Shāfiʿī rite.

The Khinalugs inhabit the *aul* Khinalug on the upper right arm of the Kudial-chay, in the Mount Shakhdagh area of Konakhkend rayon (Azerbaidjan S.S.R.). The Khinalug traditional economy was based on sheep-raising (transhumance system) and horticulture.

The Khinalug language is purely a vernacular, and Azeri is used as the literary language; the Khinalug are in fact being culturally and linguistically assimilated by the Azeris.

C. d'Encausse, *Une république soviétique musulmane: le Daghestan, aperçu démographique*, in *REI*, xxiii (1955), 7-56; Geiger, Halasi-Kun, Kuipers, Menges, *Peoples and languages of the Caucasus*, The Hague 1959; S. A. Tokarev, *Etnografiya narodov SSSR*, Moscow 1958. (R. WIXMAN)

KHINZĪR (A., fem. *khinzīra*, pl. *khanāzīr*) or *khinzīr barrī* designates, amongst the pachyderms, all suidae or porcines belonging to the palaearctic zone, without any distinction between the pig (*khinzīr ahlī*), domesticated since farthest antiquity, and the wild boar, *Sus scrofa* (*khinzīr waḥshī*), its feral relative, frequenter of wooded slopes and dense scrub in the valley bottoms.

The word *khinzīr* (Hebrew *khizīr*) is to be attached to the root *Kh. Z. R* with the idea of "having small eyes", and has no link with the root *Kh.N.Z.R* which implies the idea of bulk, mass; this at least is the general opinion amongst philologists, but a coming-together of both ideas is not to be excluded. Without being everywhere in current usage, *khinzīr* is known to all arabophone populations; however, the term *ḥallūf* (pl. *ḥlālīf*, *ḥlālef*; cf. Berber *ilf*, pl. *ilfan*) is preferred to it in the Maghrib, whilst the Touaregs keep for the animal its name *aẓubara* / *taẓubarat* (pl. *iẓubaraten* / *tiẓubaratin*). Even within the porcine species, whilst the sow and the wild sow have no special name except for the feminine derived normally from the masculine (*khinzīra*, *ḥallūfa*), the boar is called *khanzuwān* and the wild boar, whether under three years old, a three-year old, a four-year old or an old boar, is called *ratt* (pl. *rutūt*) and *ʿufr* / *ʿifr* (pls. *ʿifār*, *aʿfār*). In the Maghrib, where the wild boar is common in the mountain massifs, it is differentiated from the pig which is freely raised by some Berber groups by the expressions *khinzīr djabalī* "mountain pig" and *ḥallūf al-ghāba* "forest pig"; an old boar is called, according to the places, *shīṭī* / *shīṭī*, *shnikhrī*, *bū ḍarwa* and *bū ḍriwa*. The young of suidae, piglets or young wild boars, have retained almost everywhere in the Islamic world their classical name of *khinnaws* (pl. *khanānīs*) in the form of dialectical deformations *khannūs*, *khannūsh*, *khanshūsh* and *khantūsh*; in the Maghrib we have also the diminutive *ḥlīlef*. From the anatomical point of view, the suidae are distinguished by a long muzzle, a snout in the case of the pig and a shaggy head in the case of the wild boar, and Arabic underlines these features by a series of evocative terms like *khurṭūm*, *kammāra*, *zanfara* / *zanfūra*, *khannāfa* / *khannūfa*; in the wild boar, its defensive tusks, the snout's powerful weapon, are called *zalzūm* / *zalẓūm* and *khandjal* (pl. *khanādjil*), a probable deformation of *khandjar* "dagger", i.e. having a curved blade.

In Ḳurʾānic law, suidae are included in the same divine anathema as monkeys (V, 65/60) [see ḲIRD], and since their flesh involves the major impurity (*nadjas al-ʿayn*), no Muslim can eat it (Ḳurʾān, II, 168/173, V, 3/4, XVI, 115/116). This food prohibition inherited from the Old Testament (Lev. xi, 17; Deut., xiv, 8) was abolished by Christ for Christians (Matt. xv, 17-20; Mark, vii, 15-23). In Islam, the prohibition of eating pig meat implies *ipso facto* the illegality of buying it or of raising the animal, whose presence near a person praying renders void the prayer; only the use of its bristles for making footwear is tolerated. These bristles are provided by Christian pig breeders who obtain them by scalding the beasts in boiling water after they have been slaughtered, whence the saying *akrah min kirāhat al-khinzīr li 'l-māʾ al-mūghar* "showing more aversion than the pig for boiling water".

Al-Djāḥiẓ, although admitting the excellence of the pig's flesh, which had pride of place on the tables of the Caesars and the Persian Emperors (*Ḥayawān*, i, 234, iv, 40), is careful to point out, in regard to the animal and its behaviour, its most unattractive habits, aiming perhaps at justifying the strict terms of the Ḳurʾānic prohibition. It is omnivorous, though not really coprophagous (*djallāla*), but it devours on occasion excrement. It consumes snakes, like the porcupine, certain raptors, the cat and the Purple Gallinule (*shahmurk*). Its zeal to prolong the act of copulation (*Ḥayawān*, ii, 52, iii, 186, 354, 400, 496, 525, iv, 50) suggested scornful sayings like *aṭyash min ʿufr* "more flighty than a boar" and *akbah min khinzīr* "more vile than a pig". The sight of a pig squelching in the mire or a wild boar wallowing in mud (*manḳaʿa*), present in everyone's mind, did not lessen the obloquy heaped on the species, without even having to recall the legend current about its base origin. This legend (*Ḥayawān*, v, 347-8, vii, 204) stated that Noah, distressed when in the Ark by the pestilence left by the evacuations of the pair of cats which Jehovah had created out of the lion's sneeze in order to end the great spreading of rats in the ship, appealed once again to the Almighty, who sent down to him, out of an act of defecation of the elephant, a pair of pigs (or wild boars), who soon set to work gorging on the filth; from this hardly credible mode of generation arose the Arabic definition of the suidae, *al-fīl abu 'l-khinzīr* "the elephant is parent to the pig". Like the monkey, in popular belief the hog was considered to be the metamorphosis of an impious person expiating the divine punishment; according to al-Damīrī (*Ḥayāt*, i, 304), there was a tradition current that Christ himself had changed a group of hostile Jews into swine. The comparison of the pig, as of the monkey, with a hated person or persons, has always been one of the sharpest insults, and one which the Spanish Muslims used for the Christians, who, as elsewhere in Islam, raised pigs for food consumption.

At the side of this generally unfavourable view of the suidae, some Arabic writers were able to note and observe the qualities peculiar to the species, by way of rehabilitation: the mother's attachment for its young, its endurance of bad weather, the ease of keeping and raising it, the speed by which it grew fat and its sociable temperament; al-Ḳalḳashandī (*Ṣubḥ*, ii, 48-9) goes so far as to say that, by way of emulation, horses put on flesh when one keeps them

in the neighbourhood of pigs. The fact was noted by E. Reclus (*Nouvelle géographie universelle*, Paris 1884, ix, 190) that in many stables in Fārs there was the custom of keeping horses in the company of piglets and that a most close affection grew up between the two very different creatures. On the Christians' farms, the pig rivalled the cock in the role of waking people in the morning, since its cries for its food allowance could be heard from the earliest hours of the day (*Ḥayawān*, ii, 294-5).

The ancient empirical forms of medicine attributed curative virtues to various organs of the pig. Thus its liver was an antidote against the venom of reptiles and soothed colics; its dried and powdered gall sprinkled on haemorrhoids made them go down; inserted in the nostrils, this last soothed coryza; a bone carried as a talisman secured against the quartan ague; and an ointment of its lard rubbed on the body gave protection against all evil and against maleficent spirits. Numerous other beneficial properties were attributed to its blood, urine and dung, as well as to the wild boar's tusks (see al-Damīrī, *op. cit.*, i, 306, and in the margins, al-Ḳazwīnī, *ʿAdjāʾib*, ii, 224-6).

Arabic cynegetic literature is poor in material relating to hunting the wild boar in particular and to the dangers involved in this. It was considered to be a dangerous beast because of its bad temper and its depredations, so that battues for its destruction were held by local rulers and officers; it was hunted with the lance, hunting spear, bow and sabre on these occasions. In Syria, the farmers preferred to let the lion roam on the fringes of their lands rather than try to exterminate it, since it was a sure protection against the possible nocturnal ravages of herds of pachyderms through their crops (*Ḥayawān*, iv, 49). Kushādjim [*q.v.*] simply recommends that a person on foot charged by a wild boar should feign death, face downwards on the ground (*Maṣāyid*, 215). In the 6th/12th century, the valiant lord of Shayzar, Usāma b. Munḳidh, tells in a realistic fashion of his perilous encounters with the black beast which, in his time, abounded in the Orontes lowlands (*K. al-Iʿtibār*, Princeton 1930, 202, 223-4). ʿĪsā al-Asadī (7th/13th century), in his encyclopaedia of hunting *al-Djamhara fī ʿulūm al-bayzara* (Escurial ms., Ar. 903, f. 162a), advises farmers that, in order to ward off the depredations of wild boars, they should cause to boom out in the middle of the night a big cauldron, emptied and placed upside down, and with a drum skin stretched over its mouth; a bunch of hairs should then be flicked between the fingers with an alternating movement of the two hands. He also gives directions for making a trap (*ḥuḳna*), roofing over the mouth of a conical hole dug in the normally-used pathway of the animals (*op. cit.*, ff. 303b-304a). Finally, a century later, the Mamlūk Ibn Manglī, completing al-Asadī, brings to bear the fruit of his experience for anyone wishing to measure his strength against the savage beast, whether on foot or mounted (*Uns al-malaʾ bi-waḥsh al-falāʾ*, B. N. Paris ms. Ar. 2832, ff. 17b-18b, and annotated tr. F. Viré, in the press). The arms which he recommends for fighting with it are the double-edged sabre (*ḳilidjūrī*) and the arrow with a flat-edged head (*yāsidj*), which the attacker should plunge right into the animal's forehead or pierce with them its paws. If the hunter is thrown to the ground by the beast's charge (*ḥamla*), he should flatten himself on the ground and strike upwards with a slashing motion in order to cut the tendons of one of the beast's limbs. He should also lie in wait for the moment when the beast turns round in order to spit it with a backwards action and rip it open. Another secret of success is perfect mastery of one's mount, which must not take the bit and bolt when it sees the attacking beast. With a lance or hunting spear, the best way is to gouge out one of the beast's eyes, which cannot then survive this wound. Finally, Ibn Manglī records that, according to the ancients, the best talisman against the wild boar's viciousness is to carry a crab's claw hung on the arm.

At the present time, in the mountainous regions of the Maghrib, where the wild boar is sometimes abundant, hunting it is used as a tactical means of training for troops practising firing in the countryside, and the dead victims are left on the ground for wild carnivores.

The term *khinzīr* plus other terms is also used to designate several other wild animals which have a long muzzle: the potamocherus (*Potamochoerus porcus*) of Africa is therefore called *khinzīr al-nahr* ("wild boar of the river") or *khinzīr al-māʾ*, wrongly identified by Kazimirski with the hippopotamus [see FARAS AL-MĀʾ in Suppl.]; the two other African suidae, the phacocherus (*Phacochoerus aethiopicus*) and the hylocherus (*Hylochoerus meinertzhageni*) are lumped together under the name *khinzīr abū ḳarnayn* because of their highly-developed defensive tusks; with its long snout for grubbing up ant-hills, the orycterops (*Orycteropus afer*) is called *khinzīr al-arḍ*; whilst the dolphin and the porpoise are called *khinzīr al-baḥr* "sea pig". Finally, in pathology, the plural *khanāzīr* denotes scrofulous growths on the neck.

(F. VIRÉ)

AL-**KHIRAḲĪ**, ʿUMAR B. AL-ḤUSAYN AL-BAGHDĀDĪ (d. 334/946), better known under the name of Abu 'l-Ḳāsim al-Khiraḳī, was one of the first and most celebrated of Ḥanbalī jurisconsults. He was first guided into the *madhhab* of the *Imām* Aḥmad by his father Abū ʿAlī al-Khiraḳī (d. 299/912), who was himself a pupil of Abū Bakr al-Marwadhī (d. 275/899). He also knew Aḥmad's two sons, Ṣāliḥ (d. 266/880) and the *shaykh* ʿAbd Allāh (d. 290/903).

On the eve of the arrival of the Shīʿī Būyids in Baghdād, al-Khiraḳī left the ʿIrāḳī capital as a *muhādjir* seeking refuge in Damascus, where a Ḥanbalī school was already taking root. He died there soon after his arrival there, in 334/945, although the exact date of his death is not known. He was buried in the cemetery of the Bāb Ṣaghīr, at the side of the martyr's tombs (*Ḳubūr al-shuhadāʾ*), and his tomb became a place of pilgrimage. Ibn Baṭṭa visited it when he passed through Damascus, and it still existed in Ibn Kathīr's time (*Bidāya*, xi, 214).

Shams al-Dīn al-Nābulusī (d. 797/1394-5), in his résumé of the *ḳāḍī* Abu 'l-Ḥusayn's *Ṭabaḳāt al-ḥanābila*, 332, tells us, on the basis of a report going back to Muwaffaḳ al-Dīn Ibn Ḳudāma, that al-Khiraḳī had denounced publicly in Damascus a "reprehensible practice" (*munkar*), whose nature is not otherwise specified; because of this, he was condemned to be flogged and died as a result of his wounds. However, this version of his death does not seem to be given by his other biographers.

Al-Khiraḳī's only work which has come down to us is his famous *Mukhtaṣar*, the first précis of Ḥanbalī *fiḳh*, which was to enjoy a considerable success and to contribute to the education and formation of numerous generations of legal scholars.

It is said that he wrote numerous other works whose titles are not specified and which have all

been lost. He had left his personal library in Baghdād in the care of a friend in the Darb Sulaymān, before leaving for Syria. A fire there destroyed it (*Bidāya*, xi, 214).

Ibn Kathīr remarks, *loc. cit.*, that the *Mukhtaṣar* was written when the Black Stone was in the hands of the Carmathians. In fact, al-Khiraķī tells us in the *Mukhtaṣar*, iii, 383, when describing the Pilgrimage rites, that "The pilgrim must kiss the Black Stone if it is in its proper place". It is well-known that this last was carried off in 317/930 and restored in 339/950; one may accordingly conclude that the *Mukhtaṣar* was put together between 317/930 and 334/945, after the death of Abū Bakr al-Khallāl (d. 311/923).

Abū Bakr ʿAbd al-ʿAzīz b. Djaʿfar (d. 363/974), called Ghulām al-Khallāl, gave out that he did not follow the views of the *Mukhtaṣar* on 60 questions (*masʾala*). The *ķāḍī* Abu 'l-Ḥusayn, in his *Ṭabaķāt*, ii, 76-118, returns to this problem and enumerates 98 points of divergence between the two scholars, whilst defending that doctrine which he deems the best.

A large number of commentaries were written on the *Mukhtaṣar*, of which three became especially celebrated, sc. those of Ibn Ḥāmid (d. 403/1011), of the *ķāḍī* Abū Yaʿlā (d. 458/1066) and of Muwaffaķ al-Dīn Ibn Ķudāma (d. 620/1223). The first two have been lost, but the third, known under the title of *al-Mughnī*, has been published in Cairo by Rashīd Riḍā (12 vols., 1341-8/1922-30). But there were also many other commentaries, and no text of Ḥanbalism was so much commented upon. The *shaykh* Badrān, in his *Madkhal*, 214, states that 300 commentaries still existed in the time of Yūsuf b. ʿAbd al-Hādī (d. 909/1503), a Ḥanbalī known as a historian of Damascus.

Various disciples are known to us of al-Khiraķī, including the following: (1) ʿAbd al-ʿAzīz b. al-Ḥārith Abu 'l-Ḥasan al-Tamīmī (d. 371/981), prolific author and founder of a famous line of legal scholars (*Ikhtiṣār*, 342); (2) Abu 'l-Ḥusayn Samʿūn (d. 387/998), one of the most famous preachers of his generation and a Ṣūfī master (*ibid.*, 350-3); (3) ʿAbd Allāh b. Baṭṭa (d. 387/998), even though he does not mention al-Khiraķī amongst the authorities upon whom he based his credo (*ibid.*, 346); and (4) Abū Ḥafṣ al-ʿUkbarī (d. 387/998), considered one of the best-informed scholars of Ḥanbalism.

KHIRBAT AL-BAYḌĀʾ, an early Arab structure in the Syrian Desert. Khirbat al-Bayḍāʾ or Qaṣr al-Abyaḍ is situated about 100 km. southeast of Damascus, looking out to the east over the Ruḥba, a fertile depression in the middle of the southeastern Syrian *ḥarrāt*. It is a structure set out as a square, 60 m. × 60 m. At every angle and in the centre of each side, except for the eastern one, there are circular towers. The eastern side contains the gate, giving on to a courtyard of *ca.* 43 m. × 43 m. This courtyard is surrounded on the other sides by ranges of rooms, 7.6 m. deep and *ca.* 5.0 m. (type *a*), 6.5 m. (type *b*), 7.6 m. (type *c*), and 5.8 m. (type *T*) wide, forming the schema *c-a-b-a-T-a-b-a-c*. All these rooms were living quarters. On the eastern side there were two small rooms flanking the entrance and four long rooms, which must have served as store-rooms. On the southern and northern sides the rooms were articulated into two groups with the schema *c-a-b-a* and *a-b-a-c* respectively. Entrance from the courtyard was given by doors in the *b*-rooms, whence doors led to the *a*-rooms and further doors led from there to the *c*-rooms. On the western side were two groups of rooms following the schema *a-b-a* which were also accessible through doors in the *b*-rooms. Thus we have on three sides of the courtyard two groups of rooms separated by isolated room of the *T*-type. The residential character of the building is attested by the organisation of the rooms, together with the abundant mural decoration especially on the lintels. First impression suggest that Khirbat al-Bayḍāʾ was another example of the genre of Umayyad palaces. Closer investigation, however, reveals this identification to be impossible. It lacks many elements shared by Umayyad palaces, principally the *bayt*-organisation of the rooms, the peristyle, brick and vaulted construction, and stucco decoration. Both the decoration and the technique of construction demonstrate an ambitious local Syrian craftsmanship. The decoration shows this craftsmanship to be working with oecumenical patterns of the 5th and 6th centuries A.D. The relations of this local craftsmanship can be more closely determined. Masonry comparable with that of Khirbat al-Bayḍāʾ is found in northeastern Syria, not in the neighbouring Ḥawrān. Equally, the decoration is not Ḥawrānian in type, but resembles closely the ornament found in the region northeast of Ḥamā. This suggests that Khirbat al-Bayḍāʾ is not an Umayyad structure but was built in the 5th and 6th century by one of the Arab rulers, clients to the Byzantine state.

KHIRBAT AL-MAFDJAR, popularly known as Ķaṣr Hishām, is the modern name for the ruins of an unfinished Umayyad mansion in the Wādī 'l-Nuwayʿima, north of Jericho. The ruins comprise three separate buildings: a palace proper, a mosque and a bath attached to a hall. On the east side of this complex stood a colonnaded forecourt with an ornamental pool at its centre. Additional architectural remains lie north of these buildings, but have not yet been excavated. Foundations of a wall, found north of the site, suggest that the buildings were originally surrounded by a walled estate, comprising cultivated land, agricultural settlements and perhaps a game preserve. A complex irrigation system, developed already in Roman times and based on three neighbouring springs—ʿAyn al-Sulṭān, ʿAyn al-Nuwayʿima and ʿAyn al-Duyūk, provided the water for the residential buildings as well as for the cultivation of the land. The modern name of the site, meaning "a place where water springs from the earth", attests to the abundance of water in this area.

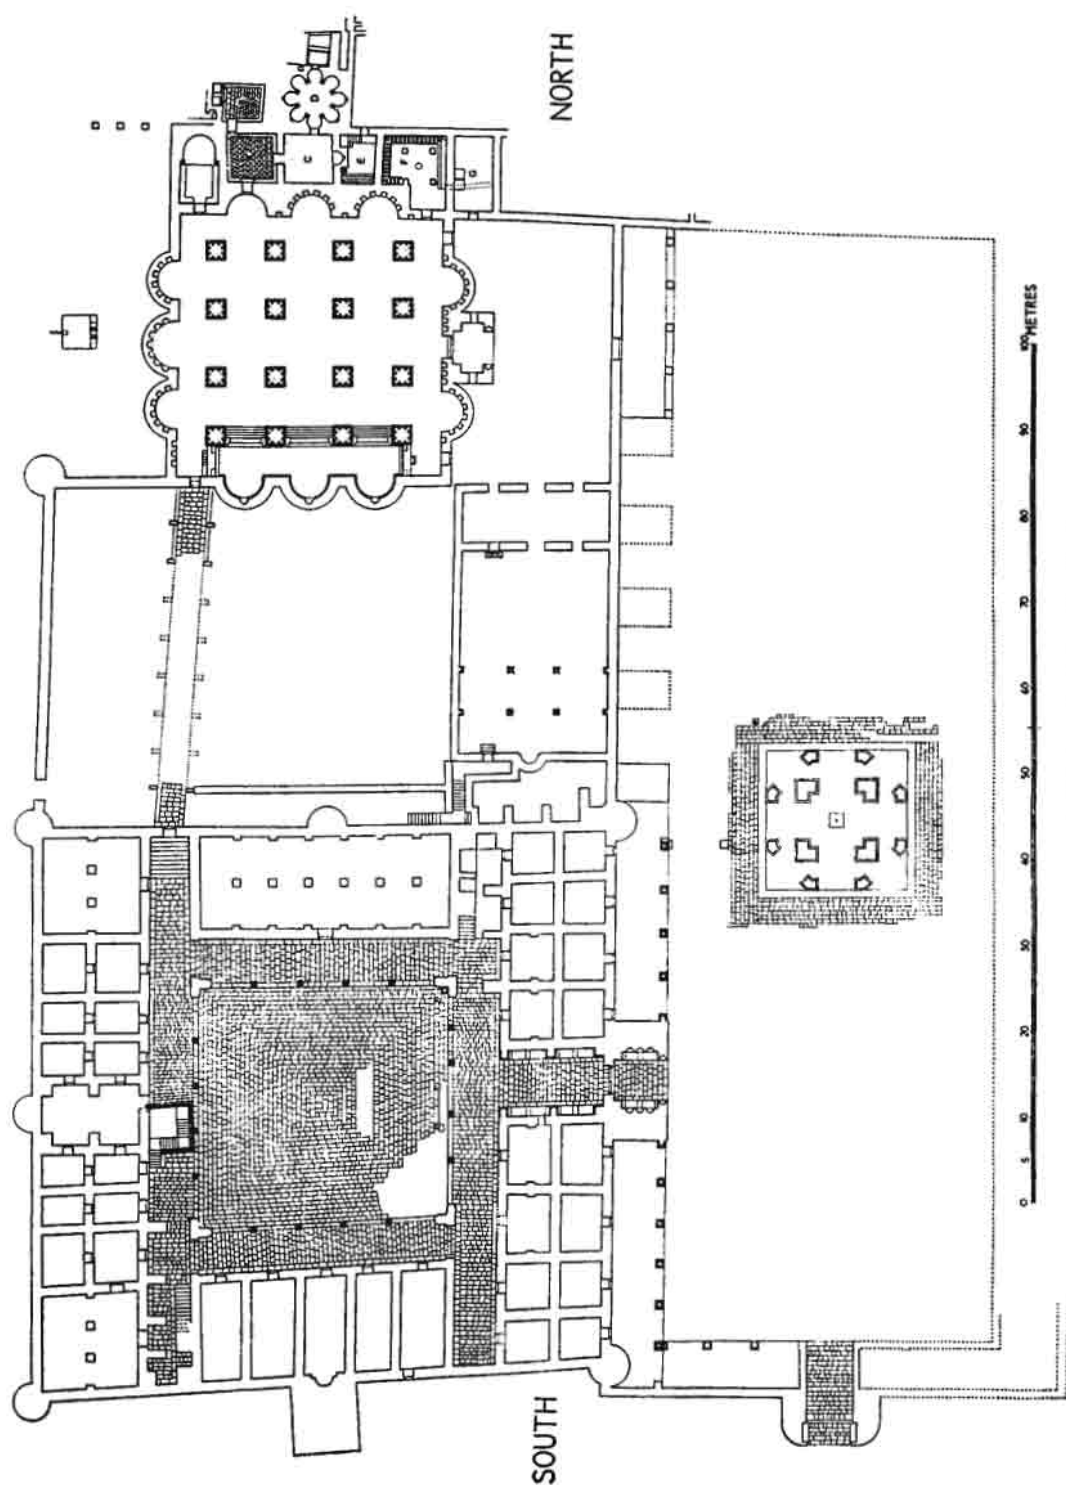
The site, which has not yet been identified with any place mentioned in written sources, was first visited and described by Captain Ch. Warren and Mr. F. J. Bliss on behalf of the Palestine Exploration Fund (*Survey of Western Palestine*, iii, 1883, 211-12;


Fig. A Khirbat al-Mafdjar. Plan (after Hamilton)

PEFQS, 1894, 177-81). Our main knowledge, however, derives from the excavations conducted between 1935 and 1948 by the Department of Antiquities of Palestine, under the direction of R. W. Hamilton with D. C. Baramki as field director. Their finds which appeared first as preliminary reports in the *Quarterly of the Department of Antiquities of Palestine*, were later published by Hamilton (*Khirbat al-Mafjar, an Arabian mansion in the Jordan valley. With a contribution by Dr. Oleg Grabar*, Oxford 1959).

1. *Architecture.*—A glance at the plan of Khirbat al-Mafdjar reveals some remarkable irregularities and a somewhat awkward relation between the main units of the building complex (Fig. A). The walls of the square, two-storeyed palace, which was by far the largest part of the whole complex, are of uneven length (the south and west walls, 67.28 m. externally; the north wall, 67,21 m.; the east wall, 63,86 m.), its façade is asymmetrical, and there are further oddities in its inner division. However, the plan of the palace conforms to those of other Umayyad castles. A three-quarter round buttress-tower stood at each of the four corners and a semi-circular one in the middle of the west and north walls. In the middle of the southern wall only there was a square tower—presumably the base of a minaret—and another rectangular porch-tower faced the entrance in the east. The rooms of the palace were arranged around a central porticoed court. They were generally not connected, although along the west side of the palace they were arranged in communicating pairs, one behind the other, with a group of five intercommunicating rooms in the centre. The central room in the south was provided with a niche, probably a *miḥrāb*, flanked by two colonnettes. The northern wall had a single elongated hall with a row of six piers down the centre. Six pairs of parallel wall piers suggest that this hall was divided by lateral arches into two times seven bays. In the centre of the western portico, but not aligned with the axis of the central room, three flights of stairs descended to a small forecourt preceding a *sirdāb*, a small room supplied with cold water and intended for refreshment. A balustrade around the top of the staircase clearly blocked the direct access to the central room.

At a distance of about seven metres from the north-east corner of the palace and aligned with its eastern wall stood a mosque (23.6 m. × 17.1 m.). It could be reached in two ways: either by a staircase which descended from the first floor of the palace and led to a door in the *ḳibla* wall, or by three doors in its northern wall. The door in the *ḳibla* wall, next to the *miḥrāb*, was probably used by the owner of the palace and his close attendants exclusively, while the openings in the northern wall were presumably used by the public.

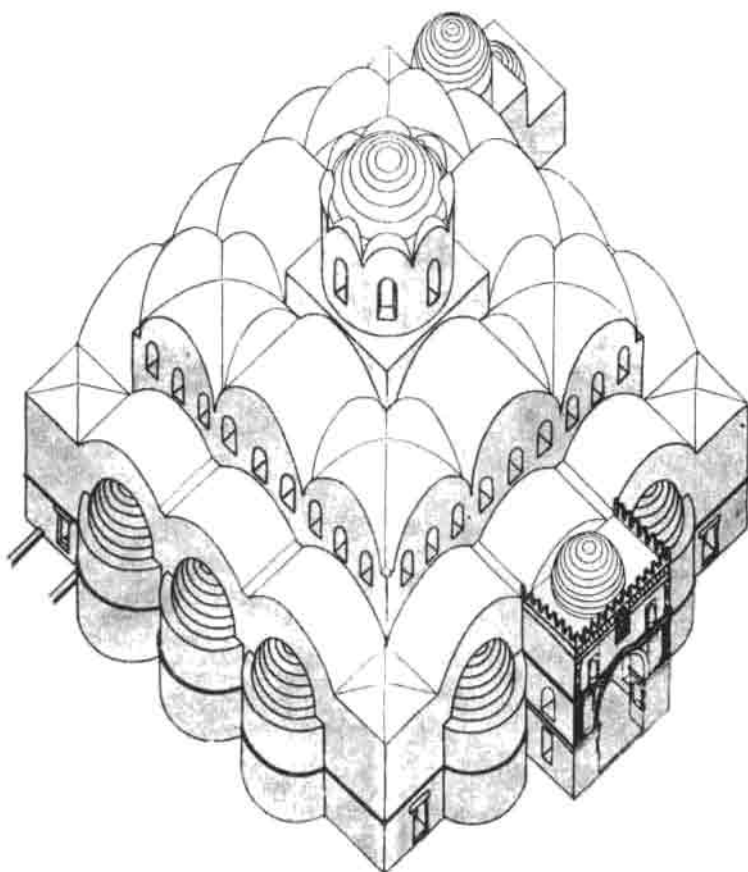
The mosque was preceded by a small courtyard or vestibule, which had three additional openings in its northern wall. The *miḥrāb* was flanked by two cylindrical columns and was covered with white plas-


Fig. B "Bath Hall". Revised isometric reconstruction (after Hamilton).

ter which remained undecorated. In front of the *miḥrāb* the excavators found the fallen remains of two arcades composed originally of three arches each. These arcades must have sheltered a strip of slightly more than 10 m. of the enclosure. The construction of the mosque was probably never finished, for the walls nowhere stood more than three courses high, and the excavators found no traces of a floor.

About 40 m. north of the palace are the ruins of a second large building complex which was separated from the palace by an open area. A wall and a buttress tower enclosed the area on the side aligned with the western palace wall, and the mosque bordered it on the east. A paved and originally covered passage crossed the open space, connecting the palace with the northern buildings. The dominant feature of this complex was a square hall (north wall, 30.28 m.; south wall, 30.33 m.; west wall, 30.42 m.; east wall, 29.79 m.). The north, south and west sides each had three horse-shoe shaped exedrae, while a stately entrance porch, flanked by similar exedrae, occupied the eastern wall. Two additional entrances were found at either end of this wall. Each of the eleven exedrae was flanked by a pair of engaged columns, whose bases stood about a metre above the floor. Between and inside these exedrae were small rectangular niches which stood about 1.10 m. above floor-level and were covered by arched heads. Square pilasters with three-quarter round shafts at their corners supported the roof and divided the hall into nine central bays and an ambulatory. The piers were interconnected by stone-built arches carrying intersecting walls which rose high enough to provide room for windows. According to Hamilton's reconstruction (Fig. B) (*Mafjar*, 67-91, Pl. CV and *Levant*, 63 and Fig. 1 for revised isometric restoration), the four corner bays were square and had cross-vaults, while the axial naves were rectangular and barrel-vaulted. The central bay was raised above the rest and carried a dome over a cylindrical drum which was also pierced with windows. Except for the four compartments at the corners, the bays of the ambulatory were barrel-vaulted. The spacing of the piers was such that the central nave, connecting the porch with the central apse in the west, like the main north-south axis, was wider than the other passages (5.50 m. to 5.60 m. as against 4.40 m. to 4.60 m. for the flanking aisles and 2.50 m. to 3.36 m. for the aisles closest to the walls).

Along the southern wall of the hall, and including its three exedrae, there was a pool. It was bordered by a barrier built between the four southern piers of the hall and continued at either end in a right angle towards the wall. This pool, the floor of which was at about the same level as the rest of the hall, was apparently not included in the original plan of the hall and only added subsequently.

The main entrance into the hall was by way of a monumental porch (8.45 m. wide) in its eastern façade. This porch was entered by an arched opening with stepped and undercut crenellations at the top edge. It was covered by a dome resting on pendentives carrying its high drum. Within the porch was a pair of arched recesses, and there was another part of niches in the jambs of the entrance arch. A doorway connected the porch with the main hall.

Attached to the hall at the north-west corner was a small, originally domed, room with a semi-circular apsis, the *Dīwān*, used apparently for private audiences. There were extensive latrines at the north-eastern corner (F). In the centre of the northern wall there was the bath proper, comprising two rectangular rooms (A, B) with benches along the walls (and two tanks in room B), and two additional rooms (C, D). Their floors, built over hypocausts, were heated by a furnace in the stoke-hole (E). The first room (C) was nearly square with a single niche in the east, while the other, a circular originally doomed chamber, was surrounded with eight horse-shoe shaped niches, one containing the door to room (C). These two were the more temperate and the hotter *caldaria* respectively, while the first two chambers may have served as waiting rooms or vestiary (A) and *frigidarium* (B).

The rooms of the *ḥammām* are remarkably small and could be reached from the large hall through chamber (A) only. There was no direct connection between the bath and the disproportionally large latrines.

2. *Decoration*.—Apart from the mosque, which was never finished, and the ground floor of the palace, the buildings at Khirbat al-Mafdjar were lavishly decorated. There were mosaic floors at the *sirdāb*, the hall adjoining the bath, and the *dīwān*. The façade, the porches and the walls of the hall and the *dīwān* were covered with stone and stucco panels respectively. The walls of the upper floor of the eastern wing of the palace, and of the bath hall, showed remains of paintings; figural sculptures, many of them nearly life size, were placed in niches or arcades at different parts of the buildings. The mosaics were of natural stone in a rich colour scale of red, brown or yellow, bluish, grey and white grades. While those in the *sirdāb* are technically of mediocre quality, the mosaics in the hall and *dīwān* are extremely fine. There are forty-two carpets altogether (thirty-eight in the hall and four in the *dīwān*). They are partly adapted in size and pattern to the architectural superstructure, and their placement appears to have been guided by the purpose and function of these buildings (Pl. Ib). The majority of these patterns show geometric or abstract designs and interlacings which are enriched by stylised floral devices. In the centre of the Hall a radiating rosette pattern accentuates the main axis and "reflects" the central dome above it (Panel 17 in Hamilton's chart, *Mafjar*, 328, Fig. 258). Roundels containing concentric interlacings decorate the floors of the four corner bays which were apparently cross-vaulted. There is a continuous mosaic panel in each of the outer corridors (Nos. 1, 2, 3 in Hamilton's chart). The rectangular panel between the entrance porch and the central rosette, in its composition and ornament, leads towards the central axis of the Hall. Finally, the design in the central apse (No. V in Hamilton's chart) is distinguished from the other apses by a large rosette in its interior and a semi-rosette at its base (Pl. IIa). The pavement includes only two figural designs: one at the base of the central apse, representing a citrus fruit, a branch and a knife; and the other in the dais of the *dīwān* showing a fruit-bearing tree flanked to the right by a pair of gazelles and to the left by a lion attacking a gazelle (Pl. IIb).

Together with Ḳaṣr al-Ḥayr al-Gharbī [*q.v.*], Khirbat al-Mafdjar provides the richest accumulation of early Islamic architectural decoration so far known. Apart from stone—and occasionally marble—the artists made abundant use of plaster for elaborating the interior and exterior of the mansion. This technique, not used in Syrian architecture until later Umayyad times, had the advantage of being comparatively cheap, and its flexibility allowed it to be used for life-size sculpture. Moreover, it could be painted, and since it lent itself to modelling in a wide variety of forms, these stucco carvings must have contributed to the impression of richness and sumptuousness of the buildings.

Generally speaking, two groups of motifs predominate in the architectural surface decoration of Khirbat al-Mafdjar. The first, and largest one consists of vegetal elements, such as acanthus leaves, full and half palmettes, vine garlands, flowers and fruit. The other comprises geometric elements and various abstract designs. Pure geometric compositions, however, are comparatively rare. In general they appear together and interwoven with vegetal designs, such as interlaced roundels, or roundels alternating with rectangles filled with rosettes, or diamond-shaped units filled with rosettes and palmette leaves respectively (Hamilton, *Mafjar*, Pl. XLIII, 2). In most of the plaster ornaments the geometric units are interrupted and combined in such a way that the resulting patterns completely conceal their original rigid construction (Balustrade panels from Palace, Hamilton, *Mafjar*, Pl. LIX, 13, 14 and pp. 245-61, Figs. 185-210. The same principle was used in the mosaic pattern).

Wall paintings were found in two areas only: in the rooms of the east wing on the first floor of the Palace, and in the "Bath Hall". Painted on plaster, in both fresco and tempera, hardly any of these paintings were found *in situ*, and all that has remained are fragments. Since we know so little about Umayyad painting, this situation is all the more deplorable. Professor Oleg Grabar has studied these fragments and found that in subject matter, style and iconography the fragments in the Palace differed from those in the "Bath Hall". In the north part of the eastern wing of the Palace Sasanian textile motifs predominated. In addition to floral ornaments, such as heart-shaped leaves, rosettes, lotus and palmette designs, a pattern of interlacing circles with a simurg painted within each of the roundels could be reconstructed. In the rooms to the south the excavators found architectural and figural remains as well as painted imitations of marble. The style is less homogeneous than in the north part; yet the Roman-Byzantine tradition is most conspicuous. The paintings in the "Bath Hall", which originally decorated the walls and piers above the level of the window-sills, were less spectacular and more limited in subject matter. Their main purpose was to emphasise the architectural setting of the construction; in particular, the groups of three niches in the clerestory were richly painted (Hamilton, *Mafjar*, Pl. XIII and p. 73, Fig. 33, for restored sketch). At the floor level all the apses were plastered white. The only exception was apse V in the centre of the western wall, whose archivolt was decorated with meandering bands which enclosed panels with various fruits (including pomegranates), vegetables in a bowl, etc. Another panel with painted fruit and rosettes covered an arch which had spanned a western aisle of the northern ambulatory, south of the *Dīwān*. The importance of this fragment lies in the affinities of its rosettes to the type of rosette which is repeatedly depicted in the mosaic floor of the same Hall, particularly in front of the main apse, in the ambulatory and in the main panel between the entrance porch and the large central medallion (Pl. Ib).

Khirbat al-Mafdjar abounded in monumental sculpture of various human and animal forms. Although none of the statues were found *in situ*, they were evidently concentrated in three areas: the Palace porch and entrance, the porch leading to the "Bath Hall", and the *Dīwān*. The human statues included an almost life-size princely figure, generally interpreted as a caliph, which came from a niche surmounting the entrance to the "Bath Hall" (Fig. C and Pl. Va), male and female entertainers (Pl. Vb) and miscellaneous figures connected with courtly pleasures. A quick glance at these statues reveals that they were sculptured in a remarkably homogeneous style: they are rendered frontally, in nearly identical conventionalised postures, and their rigidity and lack of movement gives them an impressive monumentality. The men and women are plump and heavily built, and the semi-nude female bodies show folds of abundant flesh on the thorax and above the girdle. The caliph is clad in a long coat trimmed with Iranian-type pearls, worn over wide trousers, and holds a short sword; the girls wear pleated skirts that close from right to left and are held on the hips by a twisted cord. With slight variations the hair of the figures is identically modelled: parted in the centre and rendered in parallel grooves (caliph and some of the busts), or rows of snail curls. The hair of the women is dressed in three heavy twists which are covered with a rosette in the centre, and on the forehead forms small ringlets which descend at either side and terminate in cork-screw curls (Pl. IIIb). The rendering of the faces is generally identical. The brow forms one plane with the forehead and the flattened bridge of the nose, and abuts at a sharp angle on the plane of the eye sockets. The pupil of the eye is pierced or drilled, and the mouth curves downward slightly and has a drilled hole in each corner. There is little, if any, modelling in the faces.

The eyes of the figures from the Palace entrance, like those of the caliph, are modelled in a different style from those of the women from the bath porch of the *Dīwān*. In the first group the eyes are encircled by a heavy unbroken band representing the eyelids, and the brows are marked by a grooved line; the eyelids of the other figures are more smoothly sculptured, and the brows are painted (Pl. IIIb).

There were various animal figures at the Palace entrance. Rams or mountain sheep decorated the front of the "Bath" porch and the bottom of its drum, and about a hundred partridges (Pl. IIIa) were found in the *Dīwān* and the "Bath" porch. On the whole the animals were more delicately modelled than the human figures.

3. *Interpretation of structures and decorations*.—Our knowledge of the purpose for which Khirbat al-Mafdjar was built, and of the actual function of its different units, is based primarily on interpretations of its architectural features and decorations. The irregular plan of the whole complex seems to imply that it was not conceived as a single unit and was built in consecutive stages. The function of most of the rooms of the Palace, except the little mosque, or *muṣallā*, and the underground *sirdāb*, is uncertain. The discovery of numerous wall paintings in the upper storey, in contrast to the lack of decoration observed in the ground floor rooms, is generally explained by the fact that the upper floor was reserved for the living quarters and private rooms of the owner of the mansion. This seems to be confirmed by the only painting which could be fully reconstructed, the textile pattern with the simurg and the interstitial heart-shaped four-petaled rosettes, which came from a room in the northern part of the east wing. This pattern would have been appropriate for a princely dwelling, as its Sasanian prototype figures on the garb of Khusraw II at the bas reliefs of Ṭāḳ-i Bustān and in similar royal Sasanian representations.

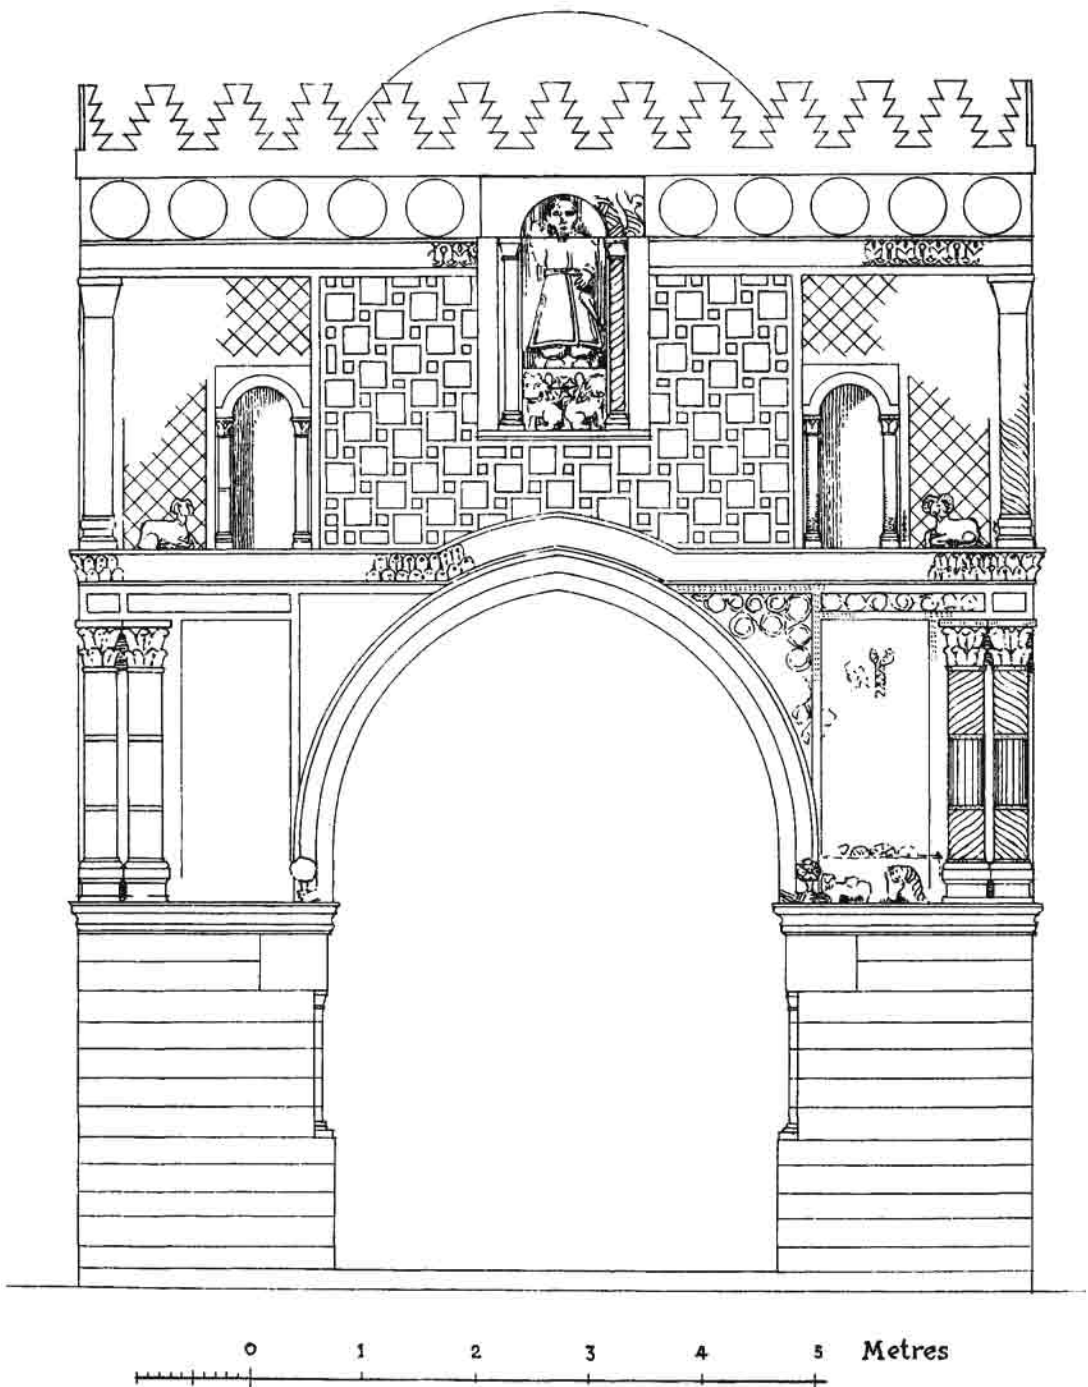
Scholarly opinions vary as to the purpose and function of the "Bath Hall". In relating it to the bathrooms proper and the Roman tradition of public baths in Palestine and other provinces of the Roman empire, Creswell and Hamilton interpreted the Hall as


Fig. C "Bath Hall". Porch façade (after Hamilton).

a *frigidarium* which, according to Hamilton, served also as a vestiary or *apoditerium*. He saw an indication of these functions in the niches along the walls, which he interpreted as a repository for the bather's clothes. Hamilton was aware of the abnormal size of the Hall, which he believed to represent an "architectural response to some specialized requirements" (*Mafjar*, 47). A more specific function was suggested by Grabar, who suggested that the Hall should be related to the Roman *triclinia* and considered as a place for ceremonial entertainment, and for other customary Arab and Sasanian activities, such as dancing or banqueting (*Islamic art and Byzantium*, in *Dumbarton Oaks Papers*, xviii (1964), 76-7). A fresh study of the architectural peculiarities, decorative features and iconography of the Hall and a re-evaluation of these ideas has led Professor R. Ettinghausen to point out that in contrast to the more private character of the Palace, the "Bath" Hall was conceived as the representational part of the mansion. First, it could be entered from the outside by a distinctively ornamented monumental porch and two additional doors next to it. Aside from the caliphal statue, the front and inside of the porch carried figural sculptures of definite princely associations particularly appropriate for a princely abode, such as male and female entertainers, as well as animals alluding to the royal hunt. Secondly, the official character of this building becomes further evident if one follows Ettinghausen's discussion of the central axis of the Hall. This aisle, which connects the porch with the western wall opposite, focuses on a central apse which in its artistic rendering differs from the remaining exedrae of the ambulatory. Originally attached to a cross-shaped voussoir, there was a stone chain ending in a cylindrical device hanging from the apex of its semi-dome. There were seven, and not five niches in the lower wall of the apse, and a pair, instead of a single niche, decorated the upper level of the exedrae. The arched heads of these niches had a horse-shoe and not a semi-circular profile, and were supported by colonnettes missing in the other recesses. Moreover, while all the exedrae in the ambulatory were plastered white, the archivolt of the central apse was painted with a meander pattern with perspective frets and different vegetal designs.

The exceptional rendering of the central apse, which must have been viewed by every visitor entering from the main porch, is explained by Ettinghausen in relation to its function. According to his interpretation it served as a throne recess or place of honour where the owner of the mansion sat at official occasions and in compliance with royal Sasanian practice, with his royal headgear suspended over his head.

Aside from the symbolic "hanging crown"—in Umayyad times transformed into a "hanging" *ḳalansuwa*—the royal character of the throne recess is further brought out by the huge half rosette in the pavement at the base of the apse, a motif which in Sasanian iconography had royal connotations. According to Ettinghausen it was not selected at random but rather in conformity with the Sasanian iconographic tradition, in order to emphasise the princely sections of the mansion.

By applying the principle that a "given imagery is related to the situation or activity that took place in or near the particular spot" (*From Byzantium*, 35-6), Ettinghausen further uses the mosaic panel with the knife, citrus fruit and leafy branch in front of the main apse (Hamilton, *Mafjar*, 336-7) to explain one of the other functions of the "Bath" Hall. First, since Khirbat al-Mafdjar was an agricultural estate, this picture may be interpreted as an offering or present to the owner of the estate, or possibly as a symbol for a tax paid in the form of a highly-esteemed fruit grown in the plantations. Second, the fact that the only figural mosaic in this Hall depicts a fruit which had to be peeled with a knife in order to be eaten, appears to indicate that one of the purposes of this Hall was feasting and banqueting.

Assuming that the "Bath" Hall was built for public audiences, the *Dīwān* or small apsidial room in its north-western corner (Fig. 1) was probably built as a private audience chamber. The interpretation of its function has again been based on the iconography of its decoration—the figural mosaic pavement on the raised dais (Pl. IIb), and the stucco ornaments of the dome in front of it (Pl. Ic). Accordingly, it has been pointed out that the lion preying upon a gazelle to the right of the fruit-bearing tree was probably meant to demonstrate the caliphal power, while the two eating gazelles to the left alluded to a peaceful caliphal reign—the *Dār al-Islām* versus the *Dār al-Ḥarb*, the Abode (or Realm) of Islam versus the Abode of War (*From Byzantium*, 45-6).

The mosaics in the *Dīwān* are based on ancient oriental concepts and symbolism. The winged horses and the pendentives of the cupola (Pl. IIIc), on the other hand, represent an Iranian, particularly Sasanian, motif. They are beasts which figure on seals, textiles and silver vessels as the royal mount of ascension and symbolise the semi-divinity of the Sasanian king. Their representation on the cupola provides additional proof of the princely character of the chamber which, like in other parts of the mansion, is expressed in the iconographic language of Sasanian Iran.

4. *Who built Khirbat al-Mafdjar?*—So far it has not been possible to connect the buildings at Khirbat al-Mafdjar with one single prototype. The combination of a villa, a private bath and a multifunctional hall is Roman. The buildings reflect primarily Byzantine tradition, while the mosaics and most of the paintings in the palace are rooted foremost in the local Syro-Palestinian tradition. The remaining decoration—particularly the stucco sculpture and ornament—is inspired in style and technique by Eastern, Iranian and probably Central Asian prototypes. The imagery in particular is applied in accordance with Sasanian concepts of princely dwellings. It represents an apparently conscious adaptation of royal Sasanian art which was combined with architectural elements of Roman and Byzantine derivation in order to meet best the demands and aspirations of the Umayyad owner of the mansion.

The identity of the owner and builder of Khirbat al-Mafdjar has not yet been established conclusively. On the basis of certain graffiti with the name of Hishām which were found in the débris of the palace, it has been assumed that Khirbat al-Mafdjar was built during the caliphate of Hishām, between the years 105-25/724-43. More recently, however, Hamilton tried to prove that although the mansion was built at the time of Hishām, it was owned and occupied by his nephew, al-Walīd b. Yazīd. Hamilton's arguments are rather intricate. Yet it is true that in its architectural concept the palace, and particularly the Throne and Banqueting Hall, would have suited the taste of a personality like al-Walīd II.

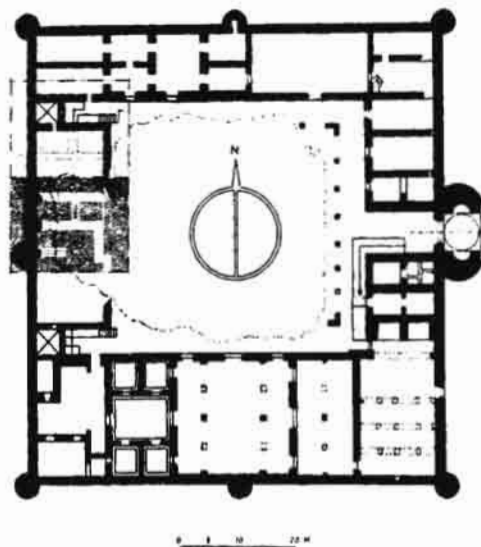
KHIRBAT AL-MINYA, in mediaeval times known as Minya or ʿAyn Minyat Hishām, is the name for the ruins of an apparently unfinished Umayyad mansion about 230 m. west of the northern end of Lake Tiberias. The ruins were excavated in 1932 by A. E. Mader and between 1936-9 by A. M. Schneider and O. Puttrich-Reignard. During July-August 1959 the western section of the palace was excavated by O. Grabar in collaboration with the Israel Department of Antiquities.

The building consists of an irregular rectangular enclosure (66.40 m. × 73 m. × 72.30 m.) facing the four cardinal points. Like other Umayyad castles it has round towers at the corners, a semi-circular


Khirbat al-Minya. Ground plan.

tower in the centre of three of the walls, and a gateway salient about 3.70 m. north of the centre of the eastern wall. The rooms which surrounded the originally porticoed court differ in size and arrangement. They comprise a mosque in the south-east corner, a three-aisled basilical hall flanked by a unit of five rooms in the south, and residential quarters in the north.

As against the simple unpretentious decoration of the mosque, the domed gate-way chamber and the southern rooms must have been richly decorated. Marble panels covered the dadoes of the walls. Coloured and gilt glass mosaics decorated the summit of the dome, and stone mosaics combined with glass cubes and set in geometric carpet-like patterns on the floor of the five southern rooms indicate the official, representational character of this section. Another well-preserved floor mosaic was discoverd in 1959 in the western part of the mansion.

A fragmentary inscription with the name of al-Walīd on a marble slab which had been used as a sill when the gateway was rebuilt centuries later supports an attribution of Minya to al-Walīd I (86-96/705-15). However, the palace was apparently used throughout the Umayyad period. Moreover, the stratification established in the western part of the site, and the ceramics found in the excavation in 1959, have shown that the site was settled in the later Mamlūk period when it served as an important commercial post between Damascus and Cairo. It was abandoned at an uncertain date, but later temporarily resettled.

KHIRĶA, "rough cloak, scapular, coarse gown". The assumption of such a cloak as symbol of embarking on the mystical path is mentioned as early as the 3rd/8th century (by Ibn Ḥarb and al-Muḥāsibī; see Massignon, *Lexique*). It is the equivalent of the handclasp (*muṣāfaḥa*) by means of which the spiritual director (*murshid*) transmits to the initiate (*murīd*) the blessing inherited from the Prophet. It can also be replaced, or accompanied, by other rites with the same significance; the handing-over of a rosary (*sibḥa*), of the text of a litany (*wird* [*q.v.*]) belonging to the mystical order (*ṭarīḳa* [*q.v.*]) which is receiving the novice. Its value as "the garment of piety", external and internal (according to Ḳurʾān, VII, 26), this latter implying humility and detachment from worldly standards, is further stressed when the *khirḳa* becomes, as with the Darḳāwa [*q.v.*], a cloak made up of pieces sewn together (*muraḳḳaʿa*).

Staring from its original technical sense, the word *khirḳa* has been broadened to designate the initiation as such, becoming a synonym for "transmission" (*tanaḳḳul*), "embarkation on the way" (*akhdh al-ṭarīḳ*) and "covenant" (*ʿahd*, *bayʿa*). Thus the Ṣūfīs came to speak of the *khirḳa khiḍriyya* "investiture by al-Khiḍr" [see AL-KHAḌIR] to describe those cases, numerous in the history of Muslim mysticism, in which some contemplatives are said to have received spiritual direction directly from the powerful and mysterious person who, in the Ḳurʾān (XVIII, 64-81), shows a wisdom superior to the prophetic law.

In fact, the two methods of spiritual transmission, sc. attachment to the chain (*silsila*) of spiritual masters and spontaneous illumination coming from the bestowal of a special grace, existed side-by-side at all stages of the history of Ṣūfism. Abu 'l-ʿAbbās al-Mursī, the disciple of the *imām* al-Shādhilī (d. 656/1258), was to derive his arguments for demonstrating the superiority of the *ṭarīḳa* founded by his master, from the fact that the latter did not rest on the transmission of the *khirḳa*, but on "a spiritual direction (*hidāya*) in which God was able to attach certain of his disciples directly to Muḥammad His prophet" (cited by P. Nwiya, in *Ibn ʿAṭāʾ Allah et la naissance de la confrérie šāḏilite*, Beirut 1972, 31).

The word *khirḳa*, followed by a noun complement,

may serve to define various categories or degrees of initiation to the mystical path. Thus *khirḳat al-irāda* "the robe of free-will" means, according to al-Suhrawardī, "he whom one asks personally, of his own free-will, from the *shaykh*, having full knowledge ... of counting on passive obedience to whatever thing he will be condemned to by accepting", whilst the *khirḳat al-tabarruk* "cloak of blessing", is that which is "given officially by the *shaykh* to those whom it seems to him useful to introduce to or guide along the mystical path, without their giving an exact accounting of the significance of the act of investiture" (*ʿAwārif*, quoted by E. Blochet, in *L'Esotérisme musulman*, Louvain 1910, 153). Other authors speak, in more general terms, of the "cloak of Ṣūfism", *khirḳat al-taṣawwuf*, always insisting on the close connection created by this act of investiture between the disciple and his spiritual master, who penetrates the most intimate thoughts and needs of the initiate and becomes "his real father" (Aḥmad Ḍiyāʾ al-Dīn al-Nakshabandī al-Mudjaddidī al-Khālidī, *Mutimmāt Djāmiʿ al-uṣūl wa-karamāt al-awliyā'*, Cairo 1328, 100). Finally, the act of investiture with the "cloak of nobility", *khirḳat al-futuwwa*, originally conferred by the ʿAbbāsid caliphs and then later by the Ayyūbid sultans of Syria and Egypt, was one of the features marking out the chivalric orders of the Islamic world before they spread into Christendom.

(J.-L. Michon)

KHIRḲA-YI SHERĪF, one of the mantles attributed to the Prophet Muḥammad, called Khirḳa-yi Sherīf or Khirḳa-yi Saʿādet was preserved at the Topkapı Palace in Istanbul. It was brought to Istanbul by Muḥammad Abū Numayy, son of the *Sherīf* of Mecca, together with the key of Mecca and other Islamic relics, after the conquest of Egypt in 923/1517 by the Ottoman ruler Selīm I.

This black mantle, 1.24 cm. long with wide sleeves and a cream-coloured woolen lining, was kept in a throne made for Murād IV by the father of Ewliyā Čelebī, Derwīsh Ẓillī Meḥmed, the head jeweller of the palace. The throne, which resembled a canopied tent, lost its function in Maḥmūd II's time when lattice work doors were made. Today the *Khirḳa-yi Sherīf* is protected by being wrapped in seven silk velvet cloths, embroidered with gold thread; these in turn are protected by a gold box with a double lid, which is given further protection by being placed in a gold casket that was made in the era of ʿAbd al-ʿAzīz. This is then placed on a silver table in the silver throne.

The *Khirḳa-yi Sherīf* had a special function in Ottoman customs and ceremonies. In one of the late Ottoman chronicles (ʿAṭāʾ, *Taʾrīkh*, i, 93 cf. *Ḥirḳa-i Şerif*, in *İA*, by K. Kufralı) the author refers to the *Khirḳa-yi Sherīf* and says that a room was built named the Khāṣṣ Oda [*q.v.*] to protect the sacred relics when Selīm I brought them to the palace. It is not really possible to accept this statement as fact, because there is no other source of the same century or subsequent ones that mentions it until the 19th century. In fact, this room is most probably the Khāṣṣ Oda built by Meḥemmed II. No information about the mantle is known before Aḥmed I's time; his *imām*, Muṣṭafā Ṣafī Efendi, refers in his *Zübdet al-tewārīkh* (Topkapı Sarayı, R. 1304, f. 128a) to the mantle, and says that Aḥmed I had a shelf made above his throne in the Khāṣṣ Oda and had the mantle put on it. We also learn that Aḥmed I started the ceremony of dipping a part of the mantle into water, thus making the latter holy; this custom was later changed into dipping the fastenings and then in Maḥmūd II's reign, to placing scarfs on it. We also learn from the *Zübdet al-tewārīkh* that the Khāṣṣ Oda did not contain all the relics in Aḥmed I's time. This room, with its 10th/16th century tiles, was repaired by Maḥmūd II, when a new fireplace was built, the decorations of the dome and upper parts of the walls were redone, and the whole apartment assigned to the keeping of the relics.

There were forty *Khāṣṣ Odalı*s—the men in charge of the Privy Chamber—who did the work of guarding the *Khirḳa-yi Sherīf*. The duties of the *Khāṣṣ Odalı*s were to sweep the area, dust the Ḳurʾāns and other books, burn incense on special nights, sprinkle rose water, clean and polish the gold and silver objects, etc. (İ. H. Uzunçarşılı, *Osmanlı sarayı teşkilatı*, Ankara 1945, 325). The "silver" water carriers, thus named because they carried the water in silver containers, washed the floors of the building (*idem*, 455). In the corner of the wall, where there was a gate that opened into the third courtyard, there was a pounding stone used to grind up incense; on the other side of the same wall was a well where the sweepings were disposed of. Four of the *Khāṣṣ Odalı*s stayed on duty at night and read the Ḳurʾān (*ibid.*, 32). The guarding of the *Khāṣṣ Oda* was the duty of *Aghas*, whose spell of duty lasted for a period of 24 hours before being relieved.

All the Ottoman Sultans believed firmly in the sanctity of the *Khirḳa-yi Sherīf* and tried to remain near it; Aḥmed I took it with him wherever he went (*ibid.*, 256). Fındıklılı Meḥmed Agha, a *Khāṣṣ Odalı* of the reigns of Muṣṭafā II and Aḥmed III, speaks at length about the *Khirḳa-yi Sherīf*. According to him, Muṣṭafā II took the mantle with him in a private wagon to Čataldja where he went for Ramaḍān, had it kept in a special room and visited it ceremonially on the 15th of Ramaḍān. He also took it with him when he went to Edirne (*Nuṣret-nāme*, ed. İ. Parmaksızoğlu, Istanbul 1966, ii, 45), and when the revolt that ended his reign took place, he tried to escape to Edirne with the mantle (*ibid.*, ii 183). Aḥmed III was also keen on keeping the mantle with him. When he went to the Tersāne Bāghčesi to spend the summer of 1127/1715, or to the Wālide Sulṭān's seaside palace to spend the winter, and when he held a circumcision festivity for one of his sons, the mantle always figured prominently in what had to be taken with him (*idem*, 213, 338-9, 397).

Ewliyā Čelebī writes about Murād IV's sword-girding ceremony, after which he went to the *Khirḳa-yi Sherīf* at the *Khāṣṣ Oda*, paid humble respect to the mantle and then prayed (Ewliyā Čelebī, *Seyāḥat-nāme*, i, 227). We also learn from Fındıklılı Meḥmed Agha that, when Muṣṭafā II learned that he was going to succeed to the throne, he went to the *Takht Odası* (*Khāṣṣ Oda*), prayed in front of the *Khirḳa-yi Sherīf*, and then put on suitable robes in order to take the oath of allegiance (*Nuṣret-nāme*, i, 4). Subsequently, he visited the *Khirḳa-yi Sherīf* every Friday (*ibid.*, i, 32). Aḥmed III's eldest son, Süleymān, after he finished reciting the Ḳurʾān, held a ceremonial session in the *Tersāne Bāghčesi* in front of the *Khirḳa-yi Sherīf*, according to Fındıklılı (*ibid.*, ii, 388). It had an even greater importance in war-time. A good example of this is the Egri campaign of Meḥemmed III, which was

going very badly, but was finally turned into victory when Saʿd al-Dīn addressed his people and Meḥemmed III put on the mantle. The spirit of battle was kindled, and this turned the tide of the war (Orhan Şaik Ökyay, *Katip Çelebiden seçmeler*, Istanbul 1968, 59). Muṣṭafā II took the *Khirḳa-yi Sherīf* on all of his campaigns in order to reinforce the courage of the army (*Nuṣret-nāme*, i, 143, 166, 167, 174, 183, 186, 190, 199; ii, 280, 300). We know from this same source that Aḥmed III took the *Khirḳa-yi Sherīf* and the *Sandjaḳ-i Sherīf*—the flag of the Prophet which was only unfurled for a holy war—with his army in order to raise the morale of the men (*Nuṣret-nāme*, ii, 290).

When the sultan took his oath of allegiance, the *Khirḳa-yi Sherīf* was not forgotten. When a sultan died, the *Dār al-Saʿāde Aghasī* carried the news to the crown prince and took him to the deceased. He was then joined by the *Silāḥdār Agha*, who took him to the *Khāṣṣ Oda* (Djewdet Pasha, *Taʾrīkh*, i, 236; Uzunçarşılı, *op. cit.*, 186). The oath of allegiance of the *Ṣadr-i Aʿẓam* or Grand Vizier, the *Sheykh al-Islām*, the *Dar al-Saʿāde Aghasī*, and the high officials of the Enderūn, was also taken there (Djewdet, iv, 237; Uzunçarşılı, 187; *Nuṣret-nāme*, ii, 187-9).

During the third week of Ramaḍān, a visit to the *Khirḳa-yi Sherīf* was also customary. Even after the sultans ceased to reside in the Topkapı Palace, the *Khirḳa-yi Sherīf* remained on the Palace premises, either in its own room or at the *Sofa Köshkü*. On such visits as these on the 15th of Ramaḍān, the sultan would open the silver throne, the seven wrappings and the gold casket with a golden key, take the mantle out, dip its fastening into a bowl of water and then put drops of this water into vessels filled again with water, which in turn would be given away as presents. This custom was abolished by Maḥmūd II, who chose to touch the mantle with some specially-prepared scarves with poems inscribed on them, and these were then distributed as gifts for his guests. At the end of the visit, during which the Ḳurʾān was recited continuously, the mantle was put away by the sultan himself. This custom had however been abolished by the end of the sultanate.

One other mantle of the Prophet was brought in 1027/1617-18 by Shükr Allāh Efendi. It was believed that this mantle was sent to Uways al-Ḳaranī by the Prophet. Presumably it was preserved by Shükr Allāh Efendi and his son at his house in the Eski ʿAlī Pasha quarter of Istanbul. Their mansion was rebuilt by Maḥmūd II, and a mosque was built opposite it in 1851 by ʿAbd al-Medjīd. In this mosque, named that of the *Khirḳa-yi Sherīf*, the mantle was displayed to the public every year by the Queen Mother on the 15th of Ramaḍān. Today, it is possible to visit it there between the 15th of Ramaḍān and the *Laylat al-Ḳadr*.

(Nurhan Atasoy)

AL-**KHIRRĪT** b. Rāshid al-Nādjī, partisan of ʿAlī b. Abī Ṭālib who fought in his ranks at Ṣiffīn [*q.v.*], but who rebelled against him when the first results of the arbitration were known after having accepted, it appears, the principle of arbitration. He was chief of the Banū ʿAbd al-Bayt b. al-Ḥārith b. Sama b. Luʾayy (most usually called the B. Nādjiya, after the name of ʿAbd al-Bayt's mother), who had only recently been converted to Islam, where they had not kept their original Christianity. He informed ʿAlī of his intention to disregard the results of the arbitration, which implied the caliph's deposition; ʿAlī advised him to reflect a while before taking action, but al-Khirrīt, oblivious to the arguments raised, withdrew with his followers into the Sawād of Kūfa; al-Masʿūdī even accuses him, together with 300 of his fellow-tribesmen, of abjuring Islam. It is difficult to establish the chronology of events, but these events probably took place after the battle of al-Nahrawān [*q.v.*], in which the rebel took no part, contrary to what certain coincidences might lead one to expect; it is certainly tempting to compare and to assimilate al-Khirrīt's action to that of the Khāridjīs when one takes into account, in particular, the tradition according to which his group killed in the Sawād a Persian convert to Islam but spared the life of a Jew, circumstances which are analogous to those of the *istiʿrāḍ* [*q.v.*] of the Azāriḳa [*q.v.*].

ʿAlī sent after him Ziyād b. Khaṣafa, who finally caught up with him at al-Madāʾin, where, after vainly trying to reason with him, he gave battle. The rebels fled in the course of the following night and headed for al-Ahwāz, where their ranks were swollen by a certain number of malcontents from Kūfa and of local people, who doubtless discerned here a way of avoiding taxation. At this point, in order to bring them to reason, ʿAlī sent Maʿḳil b. Ḳays al-Riyāḥī at the head of a more numerous force, and gave orders to ʿAbd Allāh b. ʿAbbās, the then governor of Baṣra, to send as reinforcements a substantial contingent under the leadership of Khālid b. Maʿdān al-Ṭāʾī. The rebels were soon put to flight by the government troops, who pursued them to the Persian Gulf shores. In a decisive battle, al-Khirrīt was killed fighting, and his companions made prisoner. These events probably took place in the early months of 38/658.

According to the accounts given, Maʿḳil b. Ḳays freed the captive Muslims and also the apostates, who for a second time abjured the Christianity to which they had returned; only one refused, it is recorded, and had his head chopped off. The Banū Nādjiya who remained Christian, numbering 500, were on the other hand led into captivity. Maṣḳala b. Hubayra, ʿAlī's *ʿāmil* in the *kūra* of Ardashīr Khurra, whose centre was at Sīrāf, now intervened. Affected by the entreaties of the captive men, women and children, he purchased them for a sum of 300,000 *dirhams* (al-Masʿūdī) or 200,000 only (al-Ṭabarī), of which he sent only part to ʿAlī. He freed the prisoners without having asked them to contribute to the purchase money, and then, when pressed by the caliph to hand over all the money, he though it more expedient to take refuge with Muʿāwiya, who entrusted to him important official posts.

KHITA [see KARĀ KHITĀY]

KHITĀN (A.), circumcision. The term is used indifferently for males and females, but female excision is particularly called *khifāḍ* or *khafḍ* [*q.v.*]. In the dual, *al-khitānāni* are "the two circumcised parts" (viz. that of the male and that of the female), and according to tradition "If the two circumcised parts have been in touch with one another, *ghusl* is necessary" (Bukhārī, *Ghusl*, bāb 28; Muslim, *Ḥayḍ*, trad. 88; Abū Dāwūd, *Ṭahāra*, bābs 81, 83).

Some words connected with the root *kh-t-n* denote the father-in-law, the son-in-law, the daughter-in-law (*khatan*, *khatana*), or marrying (*khutūna*). Some of these words must have belonged to the primitive Semitic language, as they occur also in the same or cognate forms in North-Semitic languages.

Circumcision must have been a common practice in early Arabia. It is mentioned, not in the Ḳurʾān, but in old poetry and *ḥadīth*, and the ancient language also has special words for "uncircumcised", sc. *alkhan*, *aḳlaf*, *aghlaf* and *aghral* (Hebrew *ʿarel*).

In *ḥadīth* it is said that Ibrāhīm was circumcised in his 80th year (Bukhārī, *Anbiyāʾ*, bāb 8; Muslim, *Faḍāʾil*, trad. 151). This tradition is based on the Biblical report. Ibn Saʿd has preserved a tradition according to which the patriarch was already circumcised at the age of 13 (*Ṭabaḳāt*, i/1 24). This tradition is apparently a reflex of the practice of circumcision in the first centuries of Islam. We may confront it with the statements concerning Ibn ʿAbbās' circumcision in *ḥadīth*. According to some traditions (Aḥmad b. Ḥanbal, i, 273) he was 15 years old when Muḥammad died. In other traditions it is said that he was already circumcised at that time (Bukhārī, *Istiʾdhān*, bāb 51; Aḥmad b. Ḥanbal, i, 264, 287; Ṭayālisī, Nos. 2639, 2640).

Circumcision is mentioned in *ḥadīth* in the story of the Emperor Heraclius' horoscope (Bukhārī, *Badʾ al-waḥy*, bāb 6). Heraclius read in the stars the message of "the king of the circumcised". Thereupon an envoy of the king of Ghassān arrived who reported the news of Muḥammad's preaching of Islam. This envoy appeared to be circumcised himself and he informed the Emperor of the fact that circumcision was a custom prevalent among the Arabs.

It is further recognised in *ḥadīth* that circumcision belongs to pre-Islamic institutions. In the traditions which enumerate the features of natural religion (*al-fiṭra*), circumcision is mentioned together with the clipping of nails, the use of the toothpick, the cutting of moustaches, the more profuse length of the beard etc. (Bukhārī, *Libās*, bāb 63; Muslim, *Ṭahara*, trad. 49, 50; Tirmidhī, *Adab*, bāb 14, etc.). In a tradition preserved by Aḥmad b. Ḥanbal (v, 75) circumcision is called *sunna* for males and honourable for females.

There are differences between the several *madhhab*'s concerning rules for circumcision. Instead of giving a survey of the different views it may be sufficient to translate the passage al-Nawawī in his commentary on Muslim, *Ṭahāra*, trad. 50 (ed. Cairo 1283, i, 328) has devoted to the subject, also because it contains a description of the operation:

"Circumcision is obligatory (*wādjib*) according to al-Shāfiʿī and many of the doctors, *sunna* according to Mālik and the majority of them. It is further, according to al-Shāfiʿī, equally obligatory for males and females. As regards males it is obligatory to cut off the whole skin which covers the *glans*, so that this latter is wholly denudated. As regards females, it is obligatory to cut off a small part of the skin in the highest part of the genitals. The sound (*ṣaḥīḥ*) view within the limits of our school, which is shared by the large majority of our friends, is that circumcision is allowed, but not obligatory in a youthful age, and one of the special views is that the *walī* is obliged to have the child circumcised before it reaches the adult age. Another special view is, that it is prohibited to circumcise a child before its tenth year. The sound view according to us, is that circumcision on the seventh day after birth is *mustaḥabb* (recommendable). Further, there are two views regarding the question whether in the 'seventh day' the birthday is included or not".

The treatment of circumcision has not a prominent place in the books of law (see e.g. al-Ḳayrawānī, *Risāla*, 161, 305). More important, however, is the value attached to it in popular estimation. "To the uneducated mass of Muslims" says Snouck Hurgronje "as well as to the great mass of non-Muslims, both of whom pay the greatest attention to formalities, abstention from pork, together with circumcision, have even become to a certain extent the criteria of Islam. The exaggerated estimation of the two precepts finds no support in the law, for here they are on the same level with numerous other precepts, to which the mass attaches less importance" (*De Islam*, Baarn 1912, 30; *Verspr. Geschriften*, i, 402; cf. iv/1, 377). In Java circumcision is generally considered as the ceremony of reception into Islam and therefore sometimes called *njelamakéselam* ("rendering Muslim"). Apart from this term many other words denoting circumcision are used on Java (*op. cit.*, iv/1, 205-6). In Atcheh circumcision of infidels only is considered as the ceremony of reception into Islam (Snouck Hurgronje, *The Achehnese*, i, 398).

The importance attached to circumcision appears also from the tradition according to which Muḥammad was born circumcised (Ibn Saʿd, *Ṭabaḳāt*, i/1, 64). In North Africa a child born with a short foreskin is considered as a blessing (Doutté, *Merrâkech*, Paris 1905, 353).

At Mecca, where the rite is called *ṭahār*, children are circumcised at an age of 3-7 years, girls without festivities, boys with great pomp. On the day preceding that on which the rite will be performed, the boy, who is clad in heavy, costly garments, is paraded through the streets on horseback, several footmen walking on both sides in order to prevent him from falling and to refresh him by means of a perfumed handkerchief. He is preceded by men with drums and *duff*s who accompany the *dhikr*s sung by others. Nearest to the boy goes an elderly black handmaid of his father's, bearing on her head a brazier burning with charcoal, resin and salt. The second part of the procession is formed by the boy's poorer comrades, equally on horseback. The procession passes through the main streets during the time of *ʿaṣr* and comes back to its starting-point a little before sunset. The female members of the family pass the evening with their friends; the party is enlivened by female singers.

Next morning, at sunrise, the barber performs the operation. The foreskin is pressed together by means of a thong, the boy lying on his back, while his mother tries to divert his attention by sweets. A plaster is applied to the wound which usually is healed in a week. The operation is followed by a breakfast for the nearest relatives. It is to be observed that

Ḥaḍramīs who still cling to their native customs, circumcise their children on the 40th day after birth (Snouck Hurgronje, *Mekka*, ii, 141 ff.).

In Egypt, boys are circumcised at the age of about five or six years. Before the operation the boy is paraded through the streets. Often the train is combined with a bridal procession in order to lessen expenses; in this case the boy and his attendants lead the procession. He is dressed as a girl, in a gorgeous manner. The kerchief is used to cover a part of his face in order to avert the evil eye. As in Mecca he is preceded by musicians. The foremost person of the procession is usually the servant of the barber (who performs the operation), who bears his *ḥaml*, a case of wood of a semi-cylindrical form, with four short legs; its front is covered with pieces of looking-glass and brass, and its back with a curtain. It is to be noted that the Copts also circumcise their boys (Lane, *Manners* and *customs of the modern Egyptians*, ch. on Infancy and Education).

D'Ohsson in his *Tableau de l'empire othoman*, Paris 1787, i, 231 ff., describes circumcision as practised in Turkey under the heading "Circoncision, *sunneth*", a designation which is also reflected in the word *sunnetdji* for the barber who performs the operation. It takes or took place in the presence of the *imām* of a mosque who accompanies the ceremony with prayers for the preservation of the child, who is usually 7 years old when he is circumcised. Plate 20 of d'Ohsson's work shows children dressed for the ceremony, and plate 21 adorned victims which are slaughtered at this occasion. Parties for relatives, friends and poor people as well as the procession are also mentioned.

The circumcision of the imperial princes used to give occasion to the displaying of great pomp. Long before the appointed day intimation was sent to the high dignitaries of the empire, sometimes even to the other courts of Europe. D'Ohsson gives a translation of Mūrād's III letter of invitation to the dignitaries on the occasion of the circumcision of the crown-prince.

In North Africa children are circumcised at ages varying between the 7th day after birth and 13 years, by the barber who makes use of a knife or a pair of scissors. According to Dan, as cited by Doutté, *Merrâkech*, 351, at Algiers a stone knife was used for the operation. It reminds us of Joshua v. 2 ff. where it is said that the Israelites at their entering the Holy Land were circumcised by means of stone swords or knives; some populations of the Dutch Indies also use a stone knife for the operation (Wilken, 212). In North Africa as well as in Egypt often several boys are circumcised together, the father of the richest bearing the expenses of the ceremony. A. Janssen (*Coutumes des Arabes au pays de Moab*, 363-4) has observed that the Bedouins organise collective circumcisions every two years, as an economy measure; hence the children's ages vary considerably (see also al-ʿUzayzī, *Ḳāmūs al-ʿādāt*, Amman 1973-4, ii, 232, s.v. *ṭ-h-r*). It should be noted here that in most Arabic dialects, the term for circumcision and its accompanying rites is taken from the root *ṭ-h-r*, implying the idea of purity; this practice is therefore popularly felt as a purificatory rite.

On Java, circumcision of boys is often combined with the *khatm-* or *kataman*-ceremony. On the different designations of circumcision used in this part of the Archipelago, cf. Snouck Hurgronje, *Verspreide Geschriften*, iv/1, 206. The age at which boys are circumcised varies in the different parts of Java; among the conservative populations it is higher (14-15 years) than in circles which are in closer touch with Muslim law (10 years or younger). Before the preparations begin, the boy is taken to the tomb of his father or ancestors, where flowers and incense are offered and prayer is performed. Then a portico (*tarup*) is made before the house or *pendopo*, and a small room (*kobongan*) is prepared where the operation is to take place. In or before this room several objects and dishes are placed which have a symbolical or ritual meaning. These preparations are concluded by a religious meal at which several dishes are offered to several categories of awe-inspiring beings. Festivities such as *wayang*, *tayuban*, *djagongan* precede or follow the ceremony. The *djagongan* always takes place in the preceding night and follows upon *kataman*, the recitation of some chapters of the Ḳurʾān by the boy. On the day preceding circumcision, a procession is held in which the boys are either conducted by their relatives, or are placed in a kind of cars which have the forms of *naga*s or other animals. They wear the bridegoom's dress, and are hung with gold and diamond ornaments, the visible parts of the body being besmeared with *borèh*. It occurs also that the boy wears the *ḥādjdjī*'s dress. Just as in North Africa, poor parents have their sons circumcised together with those of well-to-do people, who bear the expenses.

The boy has to keep quiet for some days before and after the operation and to abstain from hot dishes as well as to beware of any action which is considered to be unlucky in this time. Before the operation he is bathed with the recitation of a great many prayers and formulas. Then he is placed on the lap of an elderly person, usually a *santri* who has many children, a circumstance which is expected to exercise a wholesome influence on the boy's marriage. For further details see Snouck Hurgronje, *Verspreide Geschriften*, iv/1, 205 ff.

In Atcheh, boys are usually circumcised by the *mudêm* (probably = *muʾadhdhin*) at the age of 9 or 10 years, immediately after finishing their Ḳurʾān study. The operation (for details see Snouck Hurgronje, *The Achehnese*, i, 399-400) consists in a complete circumcision; in some parts of Java it is rather an incision. The boy here also has to diet himself. In Atcheh the ceremony is not usually accompanied by festivities. But in many cases the latter take place in consequence of vows connected with circumcision. The father of the boy vows, e.g., to arrange a *Rapaʾi*-performance or to visit a sacred tomb. In this case the boy, dressed as a bridegroom, is conducted to the tomb, sometimes on horseback, where his head is washed and a religious meal given.

Circumcision is a rite practised by many peoples, primitive peoples of the present time as well as those mentioned in ancient literatures, the Egyptians, the Arabs, the Israelites, the Edomites, Moabites and Ammonites (see Jeremiah, ix, 25).

In the Indonesian Archipelago it was already practised before the rise of Islām in that part of the world (cf. G. A. Wilken, *De besnijdenis bij de volken van den indischen Archipel*, in *BTLV*, Ser. iv, vol. x, 166, 180-1 = *Verspreide Geschriften van G. A. Wilken*, iv, 206, 220). The facts mentioned above may be arranged in certain groups.

a. Among many peoples females as well as males are circumcised. We must consequently start from the view that the rite was not originally applied to one of these classes to the exclusion of the other.

b. The rite is sometimes repeated (Wilken, *op. cit.*, 207). In the Muslim world we have the in-

stance of Malayans who in their country were not circumcised in the way prescribed by religious law and who submit to the operation a second time when arriving at Djidda for the pilgrimage (Snouck Hurgronje, *Mekka*, ii, 312).

c. Children are circumcised at ages varying between the 7th day after birth and the 15th year. It is consequently a rite which may take place in any period of childhood and which is often indeed combined with other rites peculiar to childhood such as the first cutting of the hair (*ʿaḳīḳa*, cf. Doutté, *Merrâkech*, 351), the filing of teeth, the conclusion of the study of the Ḳurʾān. As we have seen above, there are linguistic features pointing to a relation between circumcision and marriage. These features, valuable as matter-of-fact evidence, are supplemented by reports of travellors. In Central Arabia, it is said (e.g. Batanūnī, *Riḥla*, 213), there are tribes among which the operation is applied to adult young men, in a painful and dangerous way; the bride of the patient stands opposite him during the operation; if he utters a cry of pain the projected marriage is abandoned (Snouck Hurgronje, *Mekka*, ii, 141). In spite of doubts about the authenticity of such information, the relation between circumcision and marriage appears also from the Javanese custom of placing the boy who is operated, on the lap of a *santri* who has many children (see above and Wilken, *op. cit.*, 225).

d. Another group of characteristics is evidence of a relation between circumcision and the transition into a tribal or religious community, e.g.: the boy's being conducted to the tomb of his father or of one of his ancestors (see above); the circumcision of several boys at one time (cf. also Wilken, *op. cit.*, 220); the value attached to circumcision as the ceremony of reception into the Muslim community; cf. the Old Testament designation of circumcision as the "token of the covenant" (Genesis xvii; see also Wilken, *op. cit.*, 227).

e. Many accessory rites express the intention to avert danger: the boy's being dressed as a girl, the use of the handkerchief, the burning of charcoal and salt; the drums and *duff*s; the recitation of *dhikrs* and prayers; possibly the displaying of charity and the slaughtering of victims may also be viewed in this light.

Ethnologists put forward various interpretations for the phenomenon of circumcision: as a surgical operation meant to prevent phimosy and to help fecundity; as a religious rite connected with fertility or reception into the community; and as a rite of passage. The viewpoint expressed by Van Gennep in his *Rites de passage*, Paris 1909, seems to account for many of the features of circumcision mentioned above. It accounts for the fact that children are submitted to the operation at ages varying between the seventh day after birth and the beginning of the manly age or the time of marriage; that females as well as males are circumcised; that the rite is sometimes repeated; that it shows a deeply-rooted connection with marriage; that it is considered as the act of reception into a religious community; that it is sometimes preceded by a bath; that processions take place, which show a striking similarity with bridal processions; and so on.

(A. J. Wensinck)

KHIṬAṬ (A.), pl. of *khiṭṭa*, the various quarters of the newly-founded early Islamic towns which the Arab-Islamic chiefs laid out (root *kh.ṭ.ṭ*) for the population groups which they attracted thither or for their respective leaders. Historical-administrative concerns led fairly quickly to the appearance of a literary genre which consisted of a description of the historical topography of these *khiṭaṭ*. This happened in regards to Baghdād, and one finds chapters of this nature in the "geographical" works of Ibn al-Faḳīh al-Hamadhānī, and also in the introduction to the biographical history of the city by al-Khaṭīb al-Baghdādī. However, the genre developed most of all in Egypt, aided by its strong particularist feeling. It is already discernible for al-Fusṭāṭ in two chapters of the *Futūḥ Miṣr* of Ibn ʿAbd al-Ḥakam, and is expanded in the History of the *Ḳāḍīs* of Egypt and in a separate opusculum, now lost, of al-Kindī and also, a generation later, in another lost opusculum by Ibn Zūlāḳ. The foundation of Cairo caused an expansion of these studies, as is apparently already discernible with Ibn Zūlāḳ's work and with a treatise from the mid-Fāṭimid period, now lost, by al-Ḳuḍāʿī. An apparently much more important work was written two centuries later by Ibn ʿAbd al-Ẓāhir, the biographer of Baybars, Ḳalāwūn, and al-Ashraf. All this literature culminated in the monumental work, the only one of its kind preserved for us (apart from the citations from the earlier works included within it), of al-Maḳrīzī, *al-Mawāʿiẓ wa 'l-iʿtibār fī khiṭaṭ Miṣr wa 'l-Ḳāhira*. In fact, the contents are arranged not according to quarters but by categories of buildings, at the same time comprising a description and history of everything connected with them. The title of Maḳrīzī's book was utilised later, because of its fame, in the survey conducted in the same spirit but adapted to modern Egypt, by ʿAlī Pasha Mubārak, and in a more flexible form, in the geographical-historical description of the whole of Syria by Kurd ʿAlī.

KHITĀY [see al-ṣīn].

KHIṬBA (A.), "demand in marriage", whence "betrothal", i.e. the mutual promise of marriage which in certain legal systems can form the first stage of marriage proper (cf. the *sponsalia* of ancient Roman law). But is this promise considered as entailing an obligation in Islamic law? In other words, does betrothal give rise to legal consequences?

According to Muslim authorities, the *khiṭba* does not involve a contract. It is true that it involves an offer and an acceptance, but before the acceptance is made, it is merely a demand in marriage and does not form a legal act.

The Mālikīs, apparently uniquely, give more importance to the betrothal than the Ḥanafīs or even the Ḥanbalīs, but the principle remains that the act of betrothal does not involve a legal obligation. However, betrothal can only take place when there are no nullifying factors present which would prevent a valid marriage; every impediment to marriage is an impediment to betrothal. The parties to a *khiṭba* are on the one hand, the man making the demand in marriage, and on the other, the woman, who may be represented by her *walī* [see nikāḥ]. Yet if betrothal does not in principle involve any legal obli-

gation and is not a legal act, certain effects nevertheless follows from it:

1. The right of seeing the woman. Certain authorities state that the fiancé has this right, even if looking at her is accompanied by sexual desire. Ibn Rushd specifies that this right should be limited to seeing the face and hands only (*Bidāya*, ii, 3); others extend the right, but they never go so far as to admit the possibility of the couple being left alone (*khalwa*), which is the right to be alone with each other away from all indiscreet looks.

2. The right of priority. Betrothal gives the fiancé a right of priority, in that once a woman is betrothed to a man, that woman cannot be sought in marriage by another man; but this right is only sanctioned by the Mālikīs.

Dissolving of a betrothal. Either of the two parties can end the state of betrothal unilaterally. The only problem is that of disposal of presents which have been exchanged, and which are subject to the rules of donation. However, in various Islamic countries, part of the dowry is paid over at the time of betrothal, and this must in all cases be given back. Finally, there remains one problem: can one award damages to the victim of an unjustifiable breaking-off of betrothal? Although certain modern Islamic authorities are endeavouring to introduce an obligation to pay an indemnity for damages in the case of an ill-founded breaking-off, the action for damages is not an absolute right. Even so, many Islamic countries have been compelled to adopt the solutions of western law, since on the plane of practical law, betrothal is of no legal concern except in case of its being dissolved.

KHIṬṬA ("piece of land marked out for building upon"), a term used of the lands allotted to tribal groups and individuals in the garrison cities founded by the Arabs at the time of the conquests. The lay-out of these cities everywhere followed the kinship organisation of the conquerors, who were distributed in tribal quarters around a centre housing the Friday mosque and the *dār al-imāra*. The smallest unit of the *khiṭaṭ* was the *dār*, in the case of prominent individuals often a sizable estate (usually known as *ḳaṭīʿa*), otherwise a modest plot of land occupied by one or several families. Next came the quarter based on the smallest political unit of the tribe (what is often known as the *ʿashīra* in Arabic sources, "clan" or "subtribe" in modern literature); these quarters usually had their own mosque, and how small the unit in question tended to be is indicated by the fact that the tribe Kinda, which was strongly represented in Fusṭāṭ, Damascus and Ḥimṣ in addition to Kūfa, had at least twelve such mosques in the latter city. Finally, there was a larger quarter reflecting the tribe proper, often endowed with its own *djabbāna*, a piece of unbuilt land serving, *inter alia*, as a meeting place and a cemetery. In Syria, where the Arabs settled in existing cities, the tribal quarters were less self-contained and possessed neither mosques nor *djabbānas* of their own.

The *khiṭaṭ* served as military and administrative units from the start, but their small size was impractical and amalgamation of the tribal groups began already with the foundation of Kūfa, which was divided into sevenths, to be continued under Muʿāwiya when Baṣra was divided into fifths, and other settlements into quarters. Every such new division was placed under an officially appointed leader, the *raʾs al-rubʿ* or *raʾs al-khums*, who was selected from among the chiefs of the larger tribal groups represented in the division, and who was responsible for the command of the division in war and the maintenance of law and order within it in peacetime. The lesser groups continued to serve as military and administrative subdivisions under their own leaders. The entire range of tribal chiefs (the *ashrāf* of the Umayyad period) served as the link between government and subjects in the Sufyānid system of indirect rule, *ashrāf* and governor coming together in the latter's *madjlis* where information, orders and requests were exchanged, accompanied by a traditional display of generosity. The *raʾs al-rubʿ* / *raʾs al-khums* in turn passed on information, orders and gifts in his own *madjlis*, and the process was repeated in the *madjālis* of the lesser chiefs until we reach the smallest political unit reflected in the *khiṭaṭ*.

The erosion of the tribal ties in the Marwānid period rendered the system obsolete; the *ashrāf* disappeared from the political scene, while the *khiṭaṭ* survived only as place-names. The larger quarters and fifths, on the other hand, persisted until the end of the Umayyad period, physically as military divisions, now housing regiments rather than tribal groups, and morally as categories for the definition of factional loyalties. When the ʿAbbāsids came to power these too disappeared, and the allotments in Baghdād (known as *ḳaṭāʾiʿ* rather than *khiṭaṭ*) were made on the basis of geographical provenance, not tribal affiliation.

KHĪWA, on the western bank of the Amu Daryā, site of the last capital of the khānate of Khwārazm, subsequently called the khānate of Khīwa. Its origins are bound up in the history of Khwārazm [*q.v.*].

Khīwa was the third capital, after Gurgāndj (385-515/995-1221) and Kāth [*q.vv.*]; the latter was the capital during the 8th/14th century, in which period, with Khīwa, it was governed by the Čaghatay, and Gurgāndj (subsequently called Urgenč) by the Golden Horde. After the restoration of unity (under the rule of the Shaybanids) in the 9th/15th century, the capital was again established at Urgenč, but neither this dynasty, nor the Djuči branch of the Özbeg dynasty that succeeded it, was in a position to restore stability in the region; brigandage increased, and the closure of the commercial routes which crossed the land hastened, at the same time, its economic decline and its relative isolation.

During the second half of the reign of ʿArab Muḥammad (1013-32/1603-23), which perhaps coincided with the drying up of the left branch of the Amū Daryā, the capital was transferred to Khīwa, and it was then that the khānate of Khʷārazm began to be called the khānate of Khīwa. Little is known of the early history of this town; archaeological remains enable us to date its foundation between the 6th and 8th centuries of the Christian era; it is mentioned by the Arab geographer al-Iṣṭakhrī in the 4th/10th century. The inhabitants of Khīwa were distinguished from the other Khʷārazmians by the fact that they were Shāfiʿīs rather than Ḥanafīs.

The khānate was composed of various feudal districts (*begliks*) somewhat loosely linked together, and their chiefs (*ḥākim*) recognised the sovereignty of the *khān* of Khīwa. The degree of unity of the khānate depended on the personal power of the *khān*; it is relevant, in this regard, to make special mention of ʿAbd al-Ghāzī Bahādūr Khān (1054-73/1643-63) whose *History of Khīwa* has survived and is available to us. After the conquest of Mashhad by Anūsha, at the end of the 11th/17th century, the sovereigns of Khīwa took the title of *shāh*.

The dynasty of the Özbegs was followed by that of the Čingizids, which occupied the throne of Khīwa until 1804, but real power was concentrated in the hands of the *Inaḳ* (tribal chief) of the tribe of the Ḳungrāt [*q.v.*]. The 18th century saw an acceleration in the process of disintegration, when to the effects of internal strife there were added the fruitless attempts at conquest made by Peter the Great in 1717, and by Nādir Shāh in 1153/1740, while invasions by nomads and attacks from the Turcoman Yomuts were particularly violent between 1153 and 1184/1740-70; however, in 1184/1770, the *Inaḳ* Muḥammad Amīn defeated the Turcomans, restored relative prosperity to the region and undertook the construction of a new city on the foundations of the old. In the course of this reconstruction, which lasted seventy years, a number of remarkable architectural monuments were erected, including the palace of Tashkaul (1832), the mausoleum of Pakhmavan Shakhtuda (1835) and the *madrasa* of Allāh Ḳulī Khān (1835), which are still standing today

Under the *Inaḳ* Iltüzer, who became the first Ḳungrāt *shāh* in 1804, the khānate attained its greatest territorial extent of the modern period, stretching from the mouth of the Sīr Daryā on the Aral Sea as far as Ḳalʿa-i Mawr on the Kushk; this sovereign frustrated an attempt by Bukhārā at annexing the oasis of Merv, and he improved his relations with the Turcomans who became the first line of defence of the khānate. His successor, Muḥammad Raḥīm Khān, who was the most powerful *khān* of the 19th century, made a number of successful forays into the territory of the Ḳazaḳs, subdued the Ḳarā Ḳalpaḳs and ravaged Khurāsān.

Although it had repelled an attack by the Russians in 1839-40, Khīwa was forced to accept their economic and diplomatic demands, which had the result of reinforcing the Russian presence which was already showing itself in Central Asia. The conflict which broke out with Bukhārā and the Turcomans further enfeebled the already divided State, and in 1873 the Russians were able to take possession of the entire territory without striking a single blow. The peace treaty gave them the right bank of the Amū Daryā and made the *khān* of Khīwa a vassal of the Tsar.

The Turcomans continued their struggle against the Khānate and in 1918, the *khān* Isfandiyār (1910-18) was assassinated at the instigation of Djunayd Khān, the Turcoman chieftain, who reduced the new sovereign, Saʿīd ʿAbd Allāh (1918-20) to the status of a puppet. After an initial failure in 1918, the Soviets waited until 1920 before putting an end to the khānate of Khīwa and on the 26 April 1920, the People's Republic of Khʷārazm was proclaimed, with a government of young Khīwans. On 5 September 1921, this was replaced by the Soviet Socialist Republic of Khʷārazm, controlled by the Bolsheviks, and in November 1924, it became the *oblast'* of Khʷārazm in the Soviet Socialist Republic of Uzbekistan, with Khīwa as provincial capital (*rayon*); between 1918 and 1924, there was a considerable movement of resistance to the Soviets, led by Djunayd and supported by the deposed *khān*.

The Soviets did nothing to assist the development of the town. Although it is a centre for cotton-growing and has brickworks, dairies and a carpet-weaving industry, modern Khīwa no longer plays a vital role in the economic or political life of the Uzbek S.S.R.

(W. BARTHOLD - [M. L. BRILL])

KHIYĀBĀNĪ, SHAYKH MUḤAMMAD (1879-1920), Persian religious scholar and political leader. Born in Khāmna, Ādharbāydjān, the son of a merchant, Khiyābānī received his early education there and then moved to Dāghistān in the Caucasus, where his father lived. After returning to Tabrīz, he studied *fiḳh*, *uṣūl*, and Ptolemaic astronomy, and soon became a *mudjtahid* leading public prayers in two central mosques. Responding to the Iranian constitutionalists, Khiyābānī joined the Social Democratic Party and also became a leading member of the Ādharbāydjān Provincial Council which played a decisive role in the deposition of the anti-constitutionalist Shāh Muḥammad ʿAlī (1907-9). Khiyābānī was then elected to the second Parliament, where he rejected the 1911 Russian ultimatum and condemned the Persian government which, on the British recommendation, was willing to compromise. The Parliament rejected the ultimatum but the Regent, Nāṣir al-Mulk, dissolved Parliament and accepted the ultimatum, leading Khiyābānī to denounce this action in a long speech before the people of Tehran. He then fled to Russia, and later on returned to Tabrīz secretly. After the two Anglo-Russian treaties (1907 and 1915) there remained little room for the existence of Khiyābānī and his party. Suddenly, however, the 1917 Russian Revolution broke out and the Soviets withdrew the claims the Tsars had made against Iran. At this point, Khiyābānī and his friends re-established the Democratic Party and founded *Tadjaddud*, a newspaper which published Khīyābānī's speeches and articles. Among Khiyābānī's targets of attack were the British South Persia Rifles and the existing Persian régime as being submissive to foreigners. Before the end of the War, Ottoman troops invaded Tabrīz, arrested Khiyābānī, and imprisoned him in Riḍāʾiyya, but after the War he returned to Tabrīz. In 1919 the British signed an agreement with the Wuthūḳ al-Dawla which gave them control of the Iranian army, finances, and customs. Under the influence of Khiyābānī and others, the treaty was not passed in Parliament. The Wuthūḳ al-Dawla then suppressed Khiyābānī's party and resigned. Khiyābānī rose against the government (now in the hands of Mushīr al-Dawla) and in April 1920 he declared his province Āzādistān ("home of freedom"). Mushīr al-Dawla appointed Mukhbir al-Salṭana (Mahdī Ḳulī Hidāyat) governor of Ādharbāydjān, and the latter put an end both to the six-month old movement and to Khiyābānī's life.

Khiyābānī has been described as a rebel, and his movement as a separatist one. Khiyābānī's attachment to the Soviets has also been a matter of controversy. However, he has been widely recognised as a national hero, whose murder was lamented by poets such as Bahār, ʿĀrif, Ṣafwat, and Āgāh.

(Abdul-Hadi Hairi)

KHIYĀLA [see KHAYL].

KHIYĀR (A.), a legal term meaning the option or right of withdrawal, i.e. the right for the parties involved to terminate the legal act unilaterally. This option is always included in the legal act, and in this case, the act does not irrevocably bind its authors. The word *khiyār* implies a choice on the part of the holder of the right of option, who may either confirm the act or render it void; the legal act containing an option is not void in origin, but its validity is nevertheless precarious and subject to confirmation. The act giving rise to an option corresponds in western law to an act liable to a suspensory or resolutory condition, according to the nature of the option.

Options (*khiyārāt*) may be either conventionary or legal in nature.

1. Conventionary options. Included amongst these, there is first of all the conditional option, *khiyār al-sharṭ*, which is extremely important. This is the clause by means of which, in certain legal acts (in particular, contracts), one of the parties, or both of them, reserves the right to annul or to confirm, within a specified time, the legal act which they have just drawn up. This clause is undeniably equivalent to a purely potestative suspensory condition. The decision of the one confirming or rejecting the act does not have to be justified. The lawyers of the four schools adopted this institution without difficulty. The other conventionary option is the one called by the jurists that of designation (*khiyār al-taʿyīn*). It can only be inserted into alternative obligations, and allows the one making the stipulation to make his final choice between the different objects of one and the same obligation. Thus there are only two conventionary options, one common to all four schools and the other peculiar to the Ḥanafīs and Mālikīs.

2. Legal options. On the other hand, legal options, in which the law automatically grants the options without the parties having to stipulate them, are very numerous. Some Muslim authors number them at seventeen. Fraud, injury, hidden defects, eviction, and many other deeds, are only to be sanctioned in Islamic law by means of option. In the *fiḳh* treatises, only a brief allusion is made to legal options, apart from the option in the case of a latent defect making the agreement void (*khiyār al-ʿayb* or *khiyār al-naḳiṣa*). The option of sight (*khiyār al-ruʾya*) presents a problem. It is rejected by the Shāfiʿīs, and there exists concerning it as many different doctrines as schools of legal opinion; see Ibn Rushd, *Bidāya*, Cairo 1952, ii, 154. Some countries have introduced the principle of the option of sight into their new civil codes: Egypt (art. 419), ʿIrāḳ (arts. 517-23), Syria (art. 389) and Libya (art. 408). *Khiyār* is also to be found in Imāmī law (Persian civil code arts. 396-457). In the *fiḳh* treatises, there is no systematic exposition of the idea of option, although certain modern jurisconsults have tried to remedy this.

It should finally be noted that the system of options is not peculiar to patrimonial law. There exist also options in family law, e.g. in the case of incompatible marriages, or when a minor still below the age of puberty has been married by a *walī* other than her own father or grandfather; when the minor reaches his majority, he can choose between maintaining the marriage in being or dissolving it.

KHIYĀR (in theology) [see IKHTIYĀR].

KHIZĀNA [see MAKTABA]

KHIZĀNE-I ʿĀMIRE [see KHAZĪNE].

KHLOṬ [see KHULṬ].

KHŌDJA in the strict sense is the name of an Indian caste consisting mostly of Nizārī Ismāʿīlīs and some Sunnīs and Twelver Shīʿīs split off the Ismāʿīlī community. In a looser sense the name is commonly used to refer to the Indian Nizārīs in general including some minor communities like the Shamsīs in the area of Multān and some Mōmnas in northern Gudjarāt. The history of Nizārī Ismāʿīlism on the Indian subcontinent, especially in the early centuries, is largely obscure because of a lack of reliable sources. The Khōdja religious literature [see SATPANTH] contains some highly legendary accounts of the activity of Nizārī *dāʿīs*, mostly unreliable chronological data, and bare lists and genealogies of the *pīrs* and their descendants. On the basis of this material a few comprehensive historical accounts have been written since the 19th century by Khōdjas and members of the related Imām-Shāhī community.

It is unknown if any of the Ismāʿīlī communities existing in India before the split into the Nizārī and Mustaʿlawī branches in 487/1094 subsequently joined

the Nizārīs. Khōdja tradition makes one Satgur Nūr, also called Nūr al-Dīn, the first *dāʿī* who, coming from Daylamān, was active in Pāṭan, Gudjarāt. Dates ascribed to his activity vary widely. According to one version he was sent by the *imām* al-Mustanṣir (427-87/1036-94) in order to preach for his son Nizār; according to another, by the *imām* al-Ḥasan ʿalā dhikrihi ʾl-salām (557-61/1162-6). He is alleged to have converted the Hindu king Siddharādja Djaysimha (d. *ca.* 1143). Yet his place in the lists of *pīrs* would seem to put him in the first two centuries of Islam, and he is even identified with the *imām* Muḥammad b. Ismāʿīl. His shrine at Nawsarī appears to date from about the end of the 18th century. His historicity has been doubted. Evidence for the presence of Nizārīs in Gudjarāt in the first half of the 7th/13th century is too vague to be trusted. Most early Nizārī activity rather appears to have been centred on Sind.

The beginnings of the Nizārī *daʿwa* in Sind are connected by tradition with the *pīr* Shams al-Dīn, though the previous *pīr*, Ṣalāḥ al-Dīn, who is also called the father of Shams al-Dīn, is mentioned to have already been sent from Alamūt to India. Legend, on the other hand, identifies Shams al-Dīn variously with Shams-i Tabrīzī, the spiritual guide of Djalāl al-Dīn Rūmī, or with the first post-Alamūt *imām* Shams al-Dīn Muḥammad who, it is alleged, turned the imāmate over to his son Ḳāsim-Shāh in order to come to India. While most of the religious poetry ascribed to him names Ḳāsim-Shah as the contemporary *imām* and thus would place him around the turn of the 7th/13th century, several dates mentioned in the poetry for his activity are in the first half of the 6th/12th century. A legendary account of his meeting with the Ṣūfī saint Bahāʾ al-Dīn Zakariyyāʾ of Multān (d. 665/1266) appears to be without historical foundation. His lifetime thus cannot be dated with any degree of certainty. He is described as having been active in Multān and Uččh in Sind and his shrine is located in Multān. The community of the Shamsīs claims to have been converted by him to Nizārī Ismāʿīlism. They live in Multān, Rāwalpindi and elsewhere in Pandjāb and are mostly goldsmiths.

The next two *pīrs* on the traditional lists, Naṣīr al-Dīn and Shihāb (also Ṣāḥib) al-Dīn, are said to be the son and grandson of Shams al-Dīn. It is likely, however, that some minor figures were omitted. There is no information on their activity except that they worked clandestinely. Shihāb al-Dīn was succeeded by his son Ṣadr al-Dīn who is credited with the conversion of the Khōdjās from the Lohanas, a Hindu caste. He is also said to have given them the name Khōdja, derived from the Persian *khwādja*, master, which corresponds to the Hindu term *thakur* used in addressing Lohanas and Khōdjās, as the Lohanas are considered Kshatriyas. Death dates given for him range from 770/1369 to 819/1416. The latter date seems more reasonable. Ṣadr al-Dīn, according to tradition, also laid the foundation for the communal organisation of the Khōdjas by building the first three *djamāʿat-khānas* (assembly and prayer halls) and appointing their *mukhis* (leaders). The centre of his activity was Uččh and his shrine is not far from it near Djetur.

Ṣadr al-Dīn was succeeded as *pīr* by his son Ḥasan Kabīr al-Dīn of whom a short vita was included by ʿAbd al-Ḥaḳḳ Dihlawī (d. 1052/1642) in his hagiographical work *Akhbār al-akhyār*. His appearance in a list of *shaykhs* of the Suhrawardī order reflects the close links of Nizārī Ismāʿīlism with organised Ṣūfism throughout this period. According to the *Akhbār al-akhyār* he traveled widely before settling down in Uččh and converted many Hindus. The death dates mentioned for him range from 853/1449 to 895/1490. Most accurate are probably those giving 875/1470 or 876/1471. His shrine is outside Uččh. As Kabīr al-Dīn's successor, his brother Tādj al-Dīn was appointed by the *imām*. He was opposed by some of the numerous sons of Kabīr al-Dīn who were also quarreling among themselves. After Tādj al-Dīn's return from a visit to the *imām*, they accused him of embezzling the tithes for the *imām* and he is said either to have died of the shock or to have committed suicide, probably not very long after his brother's death. His grave is in Jhun in Sind. After his death Imām Shāh [*q.v.*], son of Kabīr al-Dīn, vainly tried to gain the allegiance of the Khōdjas in Sind. After a visit to the *imām* in Persia he settled in Gudjarāt, where he succeeded in converting numerous Hindus, mostly of peasant communities. Legend maintains that he converted Maḥmūd Begṛā, sultan of Gudjarāt, who gave his daughter in marriage to Imām Shāh's son Nar Muḥammad. Imām Shāh died in 919/1513 in Pīrāna, a town founded by him, where his shrine is located. Although he is not recognised as a *pīr* by Khōdja tradition and according to some accounts seceded from the Ismāʿīlī community, it appears more likely that the schism occured only under his son and successor Nar (Nūr) Muḥammad Shāh. The latter at an unknown date demanded that the *imām*'s tithe should no longer be sent to Persia but be turned over to himself, claiming that his father Imām Shāh had been the *imām* and that he was his successor. The majority of his followers accepted his orders and came to form the separate Imām-Shāhī community while a minority remained faithful to the Ismāʿīlī *imāms*.

The Khōdja lists of *pīrs* name after the *pīr* Tādj al-Dīn the *Pandiyāt-i jawānmardī*, a book of religious admonitions attributed to *imām* al-Mustanṣir II, in place of a person. According to tradition, the *imām* decided in view of the dissension in the *pīr*'s family after Tādj al-Dīn's death not to appoint any *pīr*, but instead to send the book as guidance for the faithful. There is, however, reason to assume that the book reached India only around the middle of the 10th/16th century, probably after the Imām-Shāhī secession. It may have been sent at that time with a view to easing the leadership crisis resulting from the schism. Only one *pīr* mentioned in some of the lists after the book was active in India, sc. *pīr* Dādū. He is said to have been sent by the *imām* from Persia to Sind with the mission of stopping the conversion of Ismāʿīlīs to Sunnism. He was forced to leave and settled first with some followers from Sind in Navanagar (Djamnagar) in Gudjarāt. In 1584 he moved to Bhudj where he died in 1593. An important role in reorganising the community and the prayer is ascribed to him.

After the end of the line of *pīrs* the *imāms* came to be represented at the local level in India by *wakīls* and *bāwās*. This development evidently reflects an attempt of the *imāms* to gain more direct control over the Indian communities. However, some local families of *sayyids*, i.e. descendants of the *pīr* Kabīr al-Dīn, retained much influence. Most important among these were the Kadiwala *sayyids* of Sind. Their ancestor, Sayyid Fāḍil Shāh, was active in Kaḍi around the middle of the 17th century. In Sind the family resided in Rali and after 1780 in Tando Muḥammad Khān. Shrines of early members of the family are located near these two places. Other members are known as authors of extant gnans. Two sons of Fāḍil Shāh, *pīr* Mashāyikh and Ḥasan *pīr*, played a

major role among the Mōmnas in northern Gudjarāt. Mashāyikh (d. 1108/1697 in Aḥmadābād) actively endeavoured to suppress Hindu practices in the community and cut his allegiance to the Ismāʿīlī *imāms*. His extant works espouse strictly Islamic practices and reflect Sunnī and Ithnā ʿAsharī tendencies. He is said to have cooperated with Awrangzīb in his wars against the Shīʿī rulers of Bīdjāpūr. His followers later quarreled whether he was a Sunnī or a Shīʿī. His brother Ḥasan remained loyal to Ismāʿīlism and became the saint of the Nizārī Mōmnas. In addition to his mausoleum in Thanapipli near Djūnāgaṛh, Khōdjas and Nizārī Mōmnas in 1717 built a shrine in his honour in Ganod in Gudjarāt.

The Khōdjas were active in the commerce between India and East Africa at least since the 17th century, and in the 19th century, especially after the ʿUmānī sultan Sayyid Saʿīd transferred his capital to Zanzibar in 1840, they came to settle in large numbers on the island and later in mainland East Africa. The coming of the Agha Khān [*q.v.*] Ḥasan ʿAlī Shāh to India in 1840 led to an aggravation of earlier conflicts in the Khōdja community about the rights of the *imām*. In 1866 the judgment of Sir Joseph Arnould in a law suit brought against the Agha Khān by excommunicated members of the Bārbhai party fully upheld his rights and authority, and the dissidents definitely separated from the community as Sunnī Khōdjas. Later dissidents seceding in 1877 and 1901, formed Ithnā ʿAsharī Khōdja communities in Bombay and East Africa.

For Khōdja religious doctrine, see ISMĀʿĪLIYYA and SATPANTH.

(W. MADELUNG)

KHŌDJA EFENDI, SAʿD AL-DĪN B. ḤASAN DJĀN B. ḤĀFIẒ MUḤAMMAD IṢFAHĀNĪ (1536-99), a famous Ottoman shaykhül-Islām, statesman, and historian.

Life. He was born in 943/1536-7 in Istanbul, and died there on 12 Rabīʿ I 1008/2 October 1599. His grandfather, one of the notables who had joined Sultan Selīm I after the battle of Čāldirān, had served Selīm I as *ḥāfiẓ*, and his father Ḥasan Djān had been an intimate courtier to the same sultan. Saʿd al-Dīn studied under prominent scholars, entered the *ʿulamāʾ* career and became assistant (*mülāzim*) to the *mufti* Ebu 'l-Suʿūd [see ABU 'L-SUʿŪD] at the early age of twenty (963/1555-6). Soon after, he was appointed, with a salary of 30 aspers, to the Murād Pasha *madrasa* in Istanbul. In Shawwāl 971/May-June 1564 he was appointed, "with forty", to the *madrasa* of Yīldīrīm Khān in Bursa, and one year later was promoted to the *khāridj* rank. After another promotion in Dhu'l-Ḥidjdja 977/May 1570 he rose, in Ramaḍān 979/January-February 1572, to the rank of professor at one of the eight courtyards (*ṣaḥn*) attached to the Fātiḥ Mosque in Istanbul. When the preceptor (*khōdja*) of Prince Murād died, Saʿd al-Dīn was appointed in his place (Muḥarram 981/May 1573) and sent to Manisa. This was the beginning of a long period of prosperity and influence for Saʿd al-Dīn, who was henceforth known as Khōdja or Khōdja Efendi. When his pupil became sultan as Murād III, he followed him to Istanbul as *khōdja-i sulṭānī* (8 Ramaḍān 982/22 December 1574). As the sultan's trusted adviser, he soon became influential in politics, even in foreign affairs such as the establishment of relations with England. When Meḥemmed III succeeded to the throne in 1595, it was to Saʿd al-Dīn that he was expressly referred to for advice, the decree saying that "consultation (*meshweret*) should be held with Khōdja Saʿd al-Dīn in all matters of appointing viziers and religious officials". Although Saʿd al-Dīn, in Murād III's special *medjlis-i meshweret*, had strongly advised against the "Long War" with Austria begun in 1593, it was he who backed up the wavering sultan Meḥemmed III, especially in the Eğri (Erlau) campaign. In the great *meshweret* on 20 October 1596 it was Saʿd al-Dīn who with his courage carried all with him, prevailing on the timid sultan to stand fast and eventually win the battle of Ḥāč Ovasī (Mezö Keresztes). After this triumph, Saʿd al-Dīn fell into disgrace over the appointment of the next Grand Vizier; on 9 Djumādā II 1005/28 January 1597 his opponents at court brought about his dismissal from the office of preceptor. Expressly ordered to refrain from intervention in state affairs, Saʿd al-Dīn remained in disgrace for 14 months. As soon as he could, in March 1598, the sultan fully rehabilitated Saʿd al-Dīn and raised him, against some resistance, to the office of *shaykh ül-Islām*, together with that of sultan's preceptor. This earned him the title *Djāmiʿ al-Riyāsatayn*. At this time Saʿd al-Dīn took the inefficacy of Saturdji Meḥmed Pasha as *serdār* on the Hungarian front as an opportunity to state his views: he drew up a memorandum, outwardly directed to the Commander, but obviously meant for his opponents at court and later circulated as a piece of *inshāʾ* (it was published by Naʿīmā in his official history). It voices the sense of impending misfortunes that threatened the Ottomans, and justifies, in the matter of *meshweret*, what Saʿd al-Dīn had done and was considering his duty: not to "meddle" with matters of state, but to render services to it. In 1599 this meant persuading both the sultan and his mother to pay out of their treasuries the funds needed for the next campaign. After a successful term of office as *mufti*, he died during prayer in the Aya Ṣofya Mosque.

As an eminent *ʿālim*, Saʿd al-Dīn distinguished himself, even more than for his learning, for his practical ability and political far-sightedness. Between 1579 and 1599 the preceptor of two sultans, the hero of Ḥāč Ovasī "was the main voice directing the state's domestic and foreign policies" (H. Inalcık, *The Ottoman empire*, London 1973, 97). When the new Head Astronomer, Taḳī al-Dīn, had convinced him of the necessity of revising Ulugh Beg's *Tables*, Saʿd al-Dīn at once persuaded the sultan to issue the *fermāns* necessary to establish an observatory in Galata (1577) This project was short-lived; the *shaykh ül-Islām* Ḳāḍīzāde Aḥmed Shams al-Dīn, an enemy of Saʿd al-Dīn, managed to have it destroyed already in 1580 (A. Adnan-Adıvar, *Osmanlı türklerinde ilim*, Ankara 1943, 84-6; A. Suheyl Ünver, *Istanbul rasathanesi*, Ankara 1969, 35, 51-4, 61-2). But Taḳī al-Dīn's attachment to Saʿd al-Dīn is apparent in the grateful

dedications to him of several of his astronomical works. The Khōdja attracted writers and younger scholars of growing fame, some of whom worked as his assistants (Nishāndjīzāde, Nādirī) or were his protégés (Loḳmān); even Muṣṭafā ʿĀlī, his severest critic, dedicated a book to him. The charge of nepotism and favouritism which was brought against him, especially by ʿĀlī, does perhaps deserve closer inspection within the framework of the times. Of his five sons one died before him; two became *shaykh ül-Islām* and two were *ḳāḍī ʿaskers*; three of his grandsons were *shaykh ül-Islam* (Ş. Turan, art. *Saʿd-ed-Dīn* in *İA*; I. H. Danismend, *Osmanlı devlet erkânı*, 119).

Works. Although he did write poetry, he was essentially a prose writer. He translated Arabic and Persian works into Turkish (see Turan's article in *İA*). His fame as a writer rests on his *Tādj al-tawārikh* begun under Selīm II and dedicated to Murād III in 982/1575. As a carefully-written history, based on critical examination of a number of named sources, the work rightfully superseded the older chronicles. It deals with the history of the Ottomans from their beginnings to the death of Selīm I. In it Khōdja Saʿd al-Dīn displayed his celebrated powers of eloquence, but he was not showy or pompous, as has sometimes been alleged, indeed, the clarity of his exposition was not lost on contemporaries and later writers. While it is true that his *Tādj* abounds in Arabisms and Persianisms, he could often be simplicity itself: indeed, the contrasts are great and have only been disregarded to some extent because Saʿd al-Dīn is habitually classed among the writers of "ornamented prose". On the many MSS. of the *Tādj*, see F. Babinger, *Die Geschichtschreiber der Osmanen und ihre Werke*, Leipzig 1927, 125-6; M. Aktepe, *Hoca Sa'dedin Efendi'nin Tâcü't-tevârih'i ve bunun zeyli hakkında*, in *TM* xiii, 106-10; Turan, art. in *İA*; B. Flemming, *Türkische Handschriften*, i, Wiesbaden 1968, 105-6. The work was printed in two volumes at Istanbul in 1279/1861. Based on this edition, a modernised version in Latin script by İ. Parmaksızoğlu has begun to appear in 1974. The book found early recognition in the West, and parts of it have been translated; see Babinger, *GOW*, 126. A continuation of the *Tādj al-tawārikh* is Muṣṭafā Ṣāfī's (d. 1025/1616) *Zubdat al-tawārīkh*. An abridgement is the first part of Ḥasan Bey-Zāde's [*q.v.*] *History*. Şolaḳzāde (d. 1067/1657) and Djizyedārzāde (d. 1208/1794) made extensive use of the *Tādj*.

Saʿd al-Dīn's *Selīm-nāme*, a collection of anecdotes based on the recollections of his father Ḥasan Djān, was printed together with the *Tādj al-tawārīkh* (ii, 221-401).

Bibliography: ʿAṭāʾī, *Dhayl al-shakāʾiḳ*, Istanbul 1268/1851-2, 429-31; F. Babinger, *EI*¹, s.v.; of the works cited above, Turan's article has the fullest bibliography. (B. Flemming)

KHODJA ELI [see ḳodja eli]

KHODJAEV (Faizullah Khodja) (1896-1938), Bukhāran revolutionary and nationalist, was born in Bukhārā the son of a wealthy merchant. In 1907 he went with his father to Moscow, where he received a Russian education. In 1913 he joined the so-called Djadīd Muslim reformist movement [see djadīd], which was opposed to the feudal régime of the Amīr. In 1917 he became a member of the newly formed Young Bukhāran Party and in December left for Tashkent with the avowed object of working for the overthrow of the Amīr. By 1920 he had become leader of the Young Bukhārans. He declared himself in favour of the *Sharīʿa* remaining the basis of the new republic of Bukhārā, at the foundation of which he aimed, but this was, and still is, pronounced a mistake by the Communist Party of Russia. On the final overthrow of the Amīr's régime in September 1920, Khodjaev became a member of the Communist Party and was constituted head of the newly created Peoples' Soviet Republic of Bukhārā. He vigorously opposed the counter-revolutionary Basmačī movement led by Enwer Pasha, the Turkish ex-Minister for War. For this and other services to the Bukhāran people, he was awarded in 1922 the Order of the Red Banner. Visiting Berlin in 1922, Khodjaev became active in trying to establish economic relations with European countries. This policy was seen as aiming at the economic independence of Bukhārā and in 1923 incurred the serious disapproval of the Central Asian Bureau of the Communist Party, to the setting up of which Khodjaev had always been opposed. In the same year, however, he took part in the 12th Party Congress in Moscow as delegate of the Bukhāran Communist Party. On the delimitation of the Central Asian Republics in 1924, the greater part of the former khānate of Bukhārā was embodied in the Uzbek SSR, of which Khodjaev was in 1925 appointed President of the Council of Peoples' Commissars, a post which he retained until his downfall in 1937, when he was dismissed from office and arrested. He was later indicted on a number of charges which included those of plotting against the Soviet state for the independence of Turkestan, of secretly aiding the Basmačis, and of being a British agent. While much of the indictment was probably based on fabricated evidence, there is little doubt that, as he himself admitted during the trial, Khodjaev was aiming at the national independence of Turkestan. He insisted, however, that he was not actuated by anti-Russian or anti-Bolshevik feelings. He was executed in 1938. Excluded from the list of other Central Asian personalities posthumously rehabilitated between 1955 and 1957, Khodjaev was not rehabilitated until 1966 on the occasion of the 70th anniversary of his birth. Although he was then said to have made "errors of a nationalist character", he was described as "a prominent revolutionary". The long biographical introduction to the edition of his selected works published in 1970 is wholly laudatory, refers only briefly to his differences with the Party authorities and makes no mention of his downfall, trial and execution.

KHODJAND [see khudjand].

KHŌĪ, Khūy, Iranian town (population in 1951: 49,000), situated in long. 45° 02′ E., lat. 38° 32′ N., in the *shahristān* of the same name in the *ustān* of West Ādharbāydjān; the Kurdish district of Quṭūr is included in the *shahristān* of Khōī.

The town lies at an elevation of 1040 m./3,444 ft., in a plain known locally as *Khōī čukūrī* ("the Khōī depression"), because all the surrounding areas are at a higher elevation. The mountains surrounding the Khōī plain protect the city from the cold winter winds (the Harāwīl range along the Turkish frontier to the north-west averages over 11,000 feet), and consequently Khōī has a warmer climate than either Tabrīz or Riḍāʾiyya. Minimum winter temperature is —14° C/6.8 F; summers are very hot with hot southerly winds. The economy of the region is partly pastoral, partly agricultural; crops include grain, pulses, tobacco, apricots and cotton. The region has a mixed population of Sunnīs and Shīʿīs whose first language is either Turkish or Kurdish (the name Khōī is said

to mean "salt" in Kurdish, and certainly salt-mines are still worked in the area). In the *bakhsh* of Shāhpūr there are several Christian villages.

In ancient times, Khōī acquired commercial importance by virtue of its location on the silk-route. In Ṣafawid times, the proximity of Khoī to the Ottoman frontier made it a town of great strategic importance; in 920/1514 Shāh Ismāʿīl I suffered a decisive defeat at the hands of the Ottoman sulṭān Selīm I on the plain of Čāldirān [*q.v.*], some 70 miles north-west of Khōī. In Ḳādjār times the strategic value of the town continued because of its proximity to the Russian frontier; the ruins of the walls built by General Gardane early in the 13th/19th century at the request of Fatḥ ʿAlī Shāh are still visible. More recently, Khōī saw fierce fighting between nationalist and royalist forces prior to World War I.

Bibliography: ʿAlī Razmārā (ed.), *Farhang-i djughrāfiyā'ī-yi Īrān (Intishārāt-i dā'ira-yi djughrāfiyā'ī-yi sitād-i artish)*, iv, Tehran 1330sh./1951, 200-1; Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 86-7; Le Strange, *Lands*, 166; Mahdī Āḳāsī, *Ta'rīkh-i Khōī*, Tabrīz 1350sh./1971. (R. M. Savory)

KHOḲAND, Arabic orthography, Khwāḳand, later written Khuḳand (which is given a popular etymology, *khūḳ* + *kand* = town of the boar), a town in Farghāna [*q.v.*], where see also for the other spellings and the foundation of an independent Özbeg kingdom with Khoḳand as capital in the 12th/18th century. The accession of the first ruler of this Miñ dynasty, Shāhrukh, was followed by the building of a citadel; another citadel later called Eski Urda was built by his son, ʿAbd al-Karīm (d. 1746). ʿAbd al-Karīm and his nephew and successor Irdānā Bī are several times mentioned in the history of the Atalīḳ Muḥammad Raḥīm, afterwards Khān of Bukhārā (d. 1759, see BUKHĀRĀ); Muḥammad Wafā Karmīnagī, *Tuḥfat al-Khānī*, Asiatic Museum Ms. c. 581b, especially fols. 33b, 145b). When the Kalmuck empire was destroyed and the frontiers of the Chinese empire advanced up to Farghāna (1758), Irdānā also was forced to acknowledge Chinese suzerainty; the Chinese records on this matter are cited by J. Klaproth, *Magasin Asiatique*, i (1825), 81 ff. from the *Tai ts'ing yi t'ung či*. Irdānā later was a member of a coalition of Muslim rulers of Central Asia, which applied to Aḥmad Shāh Durrānī [*q.v.*], the ruler of Afghānistān, for help against China. The alliance had no further results, although Aḥmad Shāh in 1763 appeared in Turkestan at the head of an army and occupied the territory between Khoḳand and Tāshkend (at the same time an invasion of the land of the Ḳarā-Ḳirgiz was made from Khoḳand, Klaproth, *op. cit.*, 83), but he had soon to retire again on account of the claims of his enterprises in other directions. ʿAbd al-Karim's grandson, Nār Būta Beg (probably reigned 1188-1213/1774-98, cf. L. Zimin in *Protokolī Turk kružka lyub. arkheologii*, xviii, 102, and Walidow, *ibid.*, xx, 112 f.), was also nominally under Chinese suzerainty. To the early years of this reign belongs the journey of the Russian sergeant, Filipp Yefremov, who was taken prisoner by the Ḳirgiz in 1774 and sold in Bukhārā and 1782 returned to Russia via India and England. According to his *Travels* (F. Yefremov, *Stranstrovaniye v Bukharii, Khivye, Persii w Indii*[2], St. Petersburg 1794, 59 f.), Nārbūta was already entitled Khān "by the Chinese", was allied with China and at enmity with Bukhārā. No mention is made of prominent buildings in the capital (the Medrese Mīr was built in the reign of Nārbūta); on the other hand, a high pillar (apparently a minaret), said to be over 280 feet high in the market-place in Marghīnān, is described. According to Filipp Nazarov (see below), this "tower" was visible for a distance of 50 versts (over 30 miles).

Nārbūta's two sons, ʿĀlim and ʿUmar, are the real founders of the state and city of Khoḳand as we later know it. The chronology of these reigns (1212-1237/1798-1822) is not sufficiently established; even the year in which ʿĀlim was assassinated and ʿUmar raised to the throne is variously given in the sources. According to the *Ta'rīkh-i Shāhrukhī* (ed. Pantusov, 106) ʿUmar died in the year 1237/1821-2 (in the cyclic reckoning the year of the horse = 1822 is given); according to Nalivkin (Russ. original, 101; French tr., 124), which here follows another source (the *Muntakhab al-Tawārīkh* of Ḥakīm Khān), ʿĀlim was not murdered till the spring of 1232 (i.e. 1817, not 1816, as in Nalivkin); on the other hand Nalivkin himself in another passage (Russ. orig. 185; French tr. 228) puts the building of the chief mosque of Khoḳand by ʿUmar Khān in 1231/1816. The Russian interpreter Filipp Nazarov, who was in Khoḳand in the winter of 1813-14, calls the ruler of Khoḳand Amir Walliami (*Zapiski o nyekorotīkh narodakh Srednyey Azie*[1], St. Petersburg 1821, 50 ff. This is probably for *Walī al-Niʿamī*, not *Walī Miyanī*, as in Klaproth, *op. cit.*, 43. The ruler at this time was only 25 years of age; this statement can only refer to ʿUmar, not to the much older ʿĀlim; according to ʿAbd al-Karīm al-Bukhārī also (ed. Schefer, 102), this embassy and the cause of it (the murder of the Khoḳand envoy by a Russian soldier in Petropavlovsk) both took place in the reign of ʿUmar Khān. According to ʿAbd al-Karīm, 99, ʿĀlim had already been killed in 1224/1809, which cannot be right, as we have a document of his dated Djumādā I, 1225/June 1810 (*Protokolī Turk kružka, lyub. arkh.*, iii, 165 f.). The change of ruler must therefore have taken place between 1810 and 1813.

In the oldest known document of his reign, dated 1213/1798-9, ʿĀlim still regards himself as the representative of an unnamed Khān; later he appears as an independent ruler with the title *Khān* or *Amīr*; after the conquest of Tāshkend, his power was as great as that of the Amīr of Bukhārā. In ʿUmar's reign in 1814 (so Nazarov; not so late as 1819, as in Nalivkin, Russ. orig. 110 f.; French tr. 134 f.), the town of Turkistān with the parts of the Ḳirgiz steppes belonging to it was incorporated in the kingdom of Khoḳand. ʿUmar thereupon took the title of *Amīr al-Muslimīn*. There were several wars with Bukhārā regarding the possession of Ura Tübe in the reigns of both ʿĀlim and ʿUmar, and the town indeed remained a bone of contention between the two states right down to the Russian conquest.

ʿUmar's domestic policy was quite different from that of his predecessor. Like many other Central Asian rulers, ʿĀlim had made up his mind to break the power of the Özbeg families and therefore surrounded himself with mercenary troops from the highlanders of Ḳarātigin, Darwāz and other lands (*Ta'rīkh-i Shāhrukhī*, 42 f.). The war against the nobles was, as frequently elsewhere, combined with a war on the religious classes, especially the dervish orders. The historians on this account describe ʿĀlim as a godless tyrant (*ẓālim*); on the other hand they praise the piety and justness of ʿUmar, who was put on the throne by ʿĀlim's murderers. ʿUmar built the present chief mosque of Khoḳand, which was also used as a *madrasa* and therefore is known as the Madrasa-yi Djāmiʿ. ʿUmar was also fond of poetry and wrote poems himself under the pseudonym (*takhalluṣ*) of *Amīr*; verses by the Khān himself, his officials

and favourites were collected in a special anthology (afterwards printed) entitled *Madjmūʿat al-shuʿarāʾ* by M. Hartmann in *MSOS*, vii, Westas. Stud., 87 ff. It was probably ʿUmar who founded the town of Shahr-i Khān (west of Andīdjān); the great canal, led to it from the Ḳarā Daryā, Shahr-i Khān Sāy, completely altered the irrigation of Farghāna.

ʿUmar's son and successor, Madali (properly Muḥammad ʿAlī), was 12 at his accession (according to others 14). During the first half of his reign, the khānate of Khoḳand reached its greatest power and extent. In the south the districts of Ḳarātigīn, Darwāz, and Kulāb, which now belonged to Bukhārā, were all conquered; in the north-east taxes were levied on the Ḳarā Ḳirgiz, on the Great and on a part of the Central Horde of Ḳazak Ḳirgiz; the Khān's representatives even appeared among the tribes of the Great Horde which led a nomadic life on the other side of the Ili [*q.v.*]. The rebellion of Khodja Djahāngīr in Kāshgharia (1826), which received support from Khoḳand, met with no success; nevertheless, the officers of the Khān were allowed by the Chinese government to collect taxes in the "six towns" (*altī shahr*): Aḳsū, Ush Ṭurfān, Ḳāshghar, Yangishahr, Yārḳand and Khotan. Like Khoḳand, where one of the largest *madrasas* bears the name of Madali Khān, Tāshkend attained considerable prosperity; from 1835 the *Beglerbegi* of Tāshkend was given the administration of all the northern provinces of the kingdom, and a memorial of this period is the great Beglerbegi Madrasa. The excavation of the great Khān Harīḳ canal in the region of Tāshkend also belongs to this period (*Protokoli Turk kruzhka, lyub. arkh.*, iii, 175).

In spite of the great extent of his kingdom, the authority of the Khān was not firmly established; his vicious life and cruel rule had aroused general discontent. Naṣr Allāh, *amīr* of Bukhārā, is said to have been asked by people in Khoḳand itself to put an end to his rule. The Khoḳand army was completely defeated; the capital itself was taken by the enemy (for the first time since the foundation of the kingdom); Madali was killed while trying to escape (1258/1842). The conquerors were driven out again in the same year and Shīr ʿAlī, a cousin of ʿĀlim and ʿUmar, was placed on the throne; but down to the Russian conquest, domestic peace was never restored for any length of time. The reigns of Shīr ʿAlī (1842-45) and his sons Khudāyār (1845-58 and 1865-75) and Mallā (1858-62) and several short-lived rulers were a period of continual confusion and bloody fighting, notably between the Özbegs of the Ḳïpčaḳ tribe and the "Sarts", i.e. the native population. Khudāyār, who was still a minor, was raised to the throne by Musulmān Ḳul, the chief of the Ḳïpčaḳ; the Ḳïpčaḳ drove the Sarts out of their houses in the capital and took possession of the canals in the country; the Sarts were only allowed the water necessary for their fields on payment of a fixed sum. In 1269/1852 Musulmān Ḳul was overthrown by Khudāyār and put to death; the land again passed to the Sarts. Mallā then relied on the support of the Ḳïpčaḳ and restored to them the lands taken by the Sarts. All this warfare, internal and external was waged with great ferocity; after Khudāyār's capture of Ura Tübe in 1264/1848, a tower of skulls (*Kelle minār*) was built from the heads of the slain enemy. Banished pretenders usually took refuge in Bukhārā, and taking advantage of these dissensions, the Mangit Khān of Bukhārā Naṣr Allāh was able to advance as far as Khudjand [*q.v.*] in 1275/1858.

In spite of all this, the khānate retained its former extent down to the Russian conquest of the later 19th century. Russian forces had been in contact with troops from Khoḳand since 1850 on the upper Syr Daryā, and in the north-east of the khānate between the Ču and Ili rivers since 1860. All these regions were under the *Beglerbegi* or governor appointed by the Khān for Tāshkend (see above), who was also responsible for the maintenance of agriculture; the governor Mīrzā Aḥmad (1853-8) is said to have organised irrigation works from the town of Turkestān or Azret to the Ču valley. In 1864 Tāshkend fought off a Russian attack, and immediately afterwards, a Khoḳandī force attacked the town of Turkistān, by then Russian-held. Subsequent Russian intervention was facilitated by the conflicting interests of the Iranian townspeople or Sarts and the nomadic Ḳïpčaḳ elements of the rural areas, mentioned above, and also by the discords between the Central Asian khānates. The ruler of Bukhārā Muẓaffar al-Dīn b. Naṣr Allāh was invited to secure Tāshkend for himself, when that town seemed likely to fall to the Russians; but in 1865 the Russians captured Tāshkend, whereupon the Khān of Bukhārā marched on Khoḳand, occupying Khudjand and Khoḳand and forcing Khudāyār of Khoḳand to acknowledge the suzerainty of Bukhārā. In 1866, as part of the operations against both Khoḳand and Bukhārā, General Romanovski advanced up the Syr Daryā, thereby driving a wedge between the two khānates. After the fall of Khudjand, Khudāyār came to terms and agreed to become a Russian vassal and to pay an indemnity.

Thus began the last phase of the khānate's nominally independent existence. Despite all the internal dissensions and intrigues, the economic condition of the khānate seems to have been prosperous enough, with flourishing local textile, carpet-weaving and other crafts; according to a Russian observer in 1867, the town had a population of 80,000, with 15 *madrasas* and several hundred mosques. Traditional Muslim learning was, indeed, far from moribund in all three of the Central Asian khānates in this the last phase of their existence. During this period, several buildings were erected in the town of Khoḳand, including the palace or *urda* of the Khān, and the *madrasas* of Ḥākim Āyīn and Sulṭān Murād Beg, built by the Khān's mother and brother.

Until 1875, it seems to have been the Imperial Russian government's intention to retain the khānate in a similar status to those of Bukhārā and Khīwa. But disturbances within the khānate, and attacks on Russian-held territory, continued, and in 1875 there was a popular rising against Khudāyār Khān led by his kinsman Pūlād Khān, and the former regions of the khānate then annexed by Russia, such as Khudjand and Kuraminsk, joined the revolt. A Russian invasion inevitably led to the capture of Khoḳand by General Von Kaufman. The Treaty of Marghilān was made with the new Khān, Naṣr al-Dīn b. Khudāyār, by which all the territory of Khoḳand on the right bank of the Syr Daryā was ceded to Russia. But fighting nevertheless continued in the eastern part of the khānate, until Russia finally occupied the whole of the khānate, deposed the line of the Miñ Khāns and annexed all their lands to Russia. The imposition of direct rule over the khānate was especially important to Russia at this time, because Khoḳand's eastern frontier marched with Kāshgharia or Chinese Turkestan, then controlled by the rebel Yaʿḳūb Beg [*q.v.*], himself a Khoḳandī who had fought against the Russians at the capture of Aḳ-Masdjid (Kyzyl-Orda) on the middle Syr Daryā in 1853, and was not surprisingly hostile to Russia. As part of the Governor-Generalship of Russian Turkestan, Khoḳand now

became an *oblast* under the ancient name of Farghāna. In the 1898 administrative re-organisation, Khoḳand became a *uezd* of the *oblast* of Farghāna. The town of Khoḳand itself continued to be the chief town of the region, with 11,636 inhabitants in 1911, but with the newly-founded town of New Marghilān, later Skobolev, as the governor's seat.

The Muslim peoples of the former khānate played a major rôle in the anti-Russian rebellions of 1916, when the Imperial government attempted to call up non-Russians for labour service in the war. In the following year, it was the focus of the Muslim movement for the autonomy of Turkestan as the Tsarist régime broke up, and in December 1917, the Fourth Extraordinary Regional Muslim Congress met in the town of Khoḳand and declared the autonomy of Turkestan. Early in 1918, however, the Tashkend Soviet declared the government set up in Khoḳand under Muṣṭafā Čakayev to be counter-revolutionary, and in February 1918 Red Army forces attacked the town of Khoḳand, which was defended only by a hastily-raised Muslim militia, captured it, and conducted a savage massacre in which several thousands of the inhabitants were killed. After this, Muslim desires for self-determination in the region were expressed by the guerilla activities of the Basmačis [*q.v.*].

Under the Soviets, Khoḳand forms a *rayon* or district of the Fargana *oblast* of the Uzbek SSR. It is now an important centre for light industry, in which silk and linen manufactures are prominent. The palace of Khudāyār is now the town's museum. The population in 1970 was 133,000.

KHOKARS, a powerful hill-tribe inhabiting the Jehlum area in the north-west of the undivided Panjab. The Khokars were a dominant race of the province at the time of the first Muslim invasion of the Indian sub-continent; their origins are as shrouded in mystery as those of any other Panjab tribe, but that they were originally Hindus seems hardly open to question.

The earliest mention of the Khokars occurs in Ḥasan Niẓāmī's *Tādj al-ma'āthir* which refers to an insurrection of the tribe under their chiefs named Bakan and Sarki. The next contemporary chronicle to contain a reference to the Khokars is Minhādj-i Sirādj's *Ṭabaḳāt-i Nāṣirī*, which says that they were encouraged by Malik Khusraw, the last Ghaznawid ruler of Lāhawr, to rise against their Djammū overlords. History also records a military contact near Lāhawr between the Khokars and a force of the fugitive Djalāl al-Dīn Khwārazmī in 620/1223.

Extending their sway beyond their traditional stronghold in the country between the Jehlum and the Chenab, the Khokars held a considerable area east of the Beas. In 647/1250 they were masters of most of the upper part of the Panjab, but they are no more heard of until the reign of Sulṭān Muḥammad Tughluḳ when they again created disturbance. Yaḥyā Sirhindī's *Ta'rikh-i Mubārakshāhī* describes the seizure of Lāhawr in 797/1394 by the Khokar chief Shaykhā and his long-standing feud with Sārang Khān, governor of Dipālpur, resulting in the former's defeat.

The Khokars played a significant role in offering resistance to the invading hordes of Tīmūr in India. After Shaykhā's arrest by Tīmūr in 801/1398, the Khokars disappear from history, but his son Djasrat, who escaped from Samarḳand, whither Tīmūr had taken him as a prisoner, emerges later in 823/1420 as a force to reckon with. For more than twenty years, this indefatigable Khokar warrior proved to be the cause of constant worry to the Sultans of Dihli. In 845/1441, Sulṭān Maḥmūd Shāh conferred Dipālpur and Lāhawr on Bahlūl Lōdī and charged him to chastise Djasrat, but the wily Khokar came to terms with Bahlūl and urged him to oust the Sayyids and occupy Dihli. However, Djasrat was murdered in 846/1442 by his queen, a daughter of Bhim Deo, Rādjā of Djammū, because her father had been put to death by him. After Djasrat, the Khokars were left leaderless, and coupled with the rise of the Lōdī power in the Panjab, the Khokar ambitions finally came to nought.

Scholars and historians have often confused the Khokars with the Gakkhars, a totally distinct tribe, settled in the same province. Firishta in all probability means Khokars when he describes the Gakkhars as a race of wild barbarians, devoid of religion or morality, practising polyandry and female infanticide. Similarly, in his article, *A history of the Gakkhars*, in *JASB*, xl/1 (1871), I. G. Delmerick has attributed the achievements of the Khokars to the Gakkhars. As a matter of fact, the Khokars were spread all over the central districts of the Panjab centuries before the Gakkhars acquired a foothold in the Salt Range, to which they remained traditionally confined (cf. H. A. Rose, *The Khokars and the Gakkhars in the Punjab history*, in *The Indian Antiquary*, xxxvi (1907), 1-9).

KHOMAYR [see KHUMAYR].

KHOSRAW [see KHOSREW, KHUSRAW, KISRĀ].

KHOSREW BEG, sandjaḳ beg of Bosnia, was born in Serez (Macedonia) *ca.* 885/1480. His mother, the princess Seldjūḳ, was a daughter of Sultan Bāyazīd II [*q.v.*], his father Ferhād being a South Slav

from Herzegovina (C. Truhelka has shown that "Radivoj, the brother of the Sultan's son-in-law", to whom the people of Ragusa [*q.v.*] sent gifts, was Ferhād's brother). Taking part in Sultan Süleymān's campaign against Belgrade (927/1521), Khosrew Beg was appointed *sandjaḳ beg* of Bosnia on 13 Shawwāl/15 September of the same year, a fortnight after the conquest of the city. Having stayed four years in Sarajevo, he was removed from office because he failed at the siege of Yayče. Some six months later he returned to his post, which he kept until he died, over sixty years old, in 948/1541, except for an interruption of a few years (1533-6), during which he was at Belgrade *sandjaḳ beg* of Semendria.

Distinguishing himself by his successful campaign, Khosrew Beg was nick-named *Ghāzī*; even today he is well-known among the Bosnian Muslims by the name of *Gazi Husrev-beg*. Due to his military activities, Turkish power spread widely in Bosnia, Dalmatia and Slavonia (Obrovač, Yayčel, Banğaluka, Požega, Klis, GorJan).

His campaign brought Khosrew Beg great riches which he spent on enlarging Sarajevo. During his governorship, the city grew into an important centre. Three charters of foundation (*waḳfiyye*) attest his activities: two (938/1531 and 944/1537) for the Khosrew Beg mosque (*Begova džamija*) next to which was erected the mausoleum (*türbe*) in which he was buried, and one (943/1537) for the *Kuršumlija medresa*. The *Begova džamija* is one of the most outstanding specimens of Islamic architecture in Yugoslavia, and an imposing monument of the Turkish period in Sarajevo. The *waḳf* founded by Khosrew Beg has been of great importance for the city of Sarajevo and for the cultural life of the Muslims in Bosnia and Hezergovina in general. Up to the 20th century, many public buildings were erected with its revenues. It still exists, but much property was lost in the 11th/17th century, especially at the great fire in 1697 when Prince Eugene of Savoy made his breakthrough at Sarajevo. In course of time, many estates belonging to the *waḳf* were lost, including recently at the land-reform in Yugoslavia after 1918.

In the charter of foundation of the *medrese*, Khosrew Beg ordered a library to be attached to the school. During the governership of Topal ʿOthmān Pasha in Bosnia (1861-9), the library was separated from the school, and the books were transferred in 1864. After 1867 books and documents from other libraries and institutions were brought to this library, known as *Gazi Husrev-begova biblioteka*. In 1963 it held 6,456 Arabic, Persian and Turkish manuscripts, and many have been added since. There are also *ca.* 3,500 documents of the Turkish period, 400 charters of foundation and 84 registers (*sidjill*) of the *ḳāḍī*s of Sarajevo.

Other monuments in the town for which Khosrew Beg was responsible include a *khānaḳāh*, a *ḥammām*, a *bedesten* of 90 stalls and the Ṭashlī Khān, a caravanserai provided with 60 lodgings.

There are numerous references to Ghāzī Khosrew's military activities in the *Diarii* of Marino Sanuto, where he appears under the name of "Usref Beg".

(B. Djurdjev and J.-L. Bacqué-Grammont)

KHOSREW, Mollā, a famous Ottoman jurist, whose real name was Meḥmed b. Farāmurz b. ʿAlī. According to one statement he was of Turkoman (tribe of Warsaḳ) descent and born in the village of Ḳarghīn (half way between Sīwās and Toḳat); according to others, however, he was of "Frankish" descent and the son of a "French" nobleman who had adopted Islām. According to Saʿd al-Dīn his father was of Romaic (*Rūm*) descent. Khosrew became a pupil of the famous disciple of Taftazānī, Burhān al-Dīn Ḥaydar of Herāt (cf. *Isl.*, xi, 61 and Saʿd al-Dīn, *Tādj al-tawārīkh*, ii, 430), and received a teaching post in the Shāh Malik *medrese* in Adrianople; in 848/1444 he became *ḳāḍī* of Adrianople and later *ḳāḍīʿasker* of Rumelia. On the death of Khiḍr Beg [*q.v.*], the first *ḳāḍī* of Constantinople, he succeeded him and was at the same time *müderris* at the Aya Ṣofya. Feeling hurt at Mollā Kurānī [*q.v.*] being promoted over him, he went to Bursa in 867/1462 and built a *medrese* there. In 874/1469 he returned to Istanbul by command of the Sulṭān, became *Shaykh al-Islām* and died there in 885/1480. His body was taken to Bursa and buried in the court of the mosque founded by him. He also founded a mosque in Istanbul, which bears his name (cf. Ḥāfiẓ Ḥusayn, *Ḥadīḳat al-djawāmiʿ*, i, 201; J. von Hammer, *GOR*, ix, 87, No. 428).

Mollā Khosrew was a celebrated jurist, many of whose pupils became famous in after life. He also attained a wide reputation as an author. His two most important works are the often-annotated *Durar al-ḥukkām fī sharḥ Ghurar al-aḥkām* on the principles of legal practice, written in 877-83/1473-7 (printed at Cairo 1294 and 1305), also a dogmatic work *Mirḳāt al-wuṣūl fī ʿilm al-uṣūl* (printed at Cairo 1262 and Istanbul 1304). On other works by him, cf. von Hammer, *GOR*, ii, 589 ff. and Brockelmann, II, 226-7.

(with specimens of his work); Bursalı Meḥmed Ṭāhir, *ʿOthmānlı müʾellifleri*, Istanbul 1333, 292-3 (with indication of some autographs); Brockelmann, *loc. cit.*; Rifʿat, *Dawḥat al-mashāyikh*, Istanbul N.D., 8-9.

(F. Babinger)

KHOSREW PASHA, Bosniak (?-1041/1632), Ottoman Grand Vizier. Bosnian in origin, Khosrew was taken into the palace service and rose to the office of *silāḥdār*. When, in Muḥarram 1033/October-November 1623, the dissident (*zorba*) *oda bashi*s of the Janissaries demanded the replacement of their *agha* by someone not of the corps, Khosrew passed out of the *enderūn-i humāyūn* to become *Yeñičeri aghasī*.

The state was at this time going through a critical period: the dominance of the Janissaries in internal affairs had reached new heights with the execution of ʿOthmān II (Radjab 1031/May 1622); Ābāza (Meḥ-

med) Pasha [*q.v.*] was in revolt in Erzurum; and the Ṣafawid Shāh ʿAbbās I was soon to take Baghdād (Rabīʿ I 1033/January 1624). In Shaʿbān 1033/May 1624 Khosrew Agha, as *agha* of the Janissaries, left Istanbul with the *ḳapīḳulu* soldiery in the train of the Grand Vizier Čerkes Meḥmed Pasha [see MUḤAMMAD PASHA ČERKES], who had been given the command against Ābāza Pasha. Khosrew is mentioned as having fought courageously in the victory over Ābāza's forces near Kayseri in Dhu 'l-Ḳaʿda 1033/September 1624. When Čerkes Meḥmed died in winter quarters in Tokat (Rabīʿ II 1034/January 1625), Khosrew and the *bashdefterdār*, Bāḳī Pasha, wrote to the capital urging the appointment of the *beglerbegi* of Diyārbekir, Ḥāfiẓ Aḥmed Pasha [*q.v.*] as his successor, an action Khosrew came to regret on learning that he himself might have been considered for the office. Though he was soon after given the rank of vizier, he is said by Pečewī, then with the army, not to have been able to overcome his disappointment and to have hoped that Ḥāfiẓ Aḥmed might fail in the subsequent campaign against Baghdād (Pečewī, *Taʾrīkh*, ii, 403, 405).

In Ramaḍān 1034/June 1625 Khosrew and the forces which had wintered in Tokat joined the army under Ḥāfiẓ Aḥmed to march against Baghdād. The ensuing siege of that city, which lasted for nearly eight months (Ṣafar-Shawwāl 1035/November 1625-July 1626), was unsuccessful, but Khosrew again distinguished himself by his bravery, especially when the Ottomans were near to rout in the third of the battles (Ramaḍān 1035/June 1626) with a relieving force of some 30,000 soldiers under Shāh ʿAbbās himself. (For an undated imperial decree sent to Khosrew during this siege, see Ferīdūn Beg, *Munshaʾāt al-salāṭīn*, Istanbul 1264-5, ii, 89-90).

Following the failure at Baghdād, both Ḥāfiẓ Aḥmed Pasha and Khosrew Agha were dismissed (Rabīʿ I 1036/December 1626), though neither was disgraced. Summoned to the capital by the sultan, Murād IV, Khosrew arrived in Radjab 1036/March-April 1627 and was made a *ḳubbe* vizier (and thus Pasha). The inability of the new Grand Vizier, Khalīl Pasha, to counter the renewed threat from Ābāza Pasha in 1627 led to the former's dismissal. The sultan is said to have placed great trust in Khosrew Pasha's courage and in his ability to control the army (Pečewī, ii, 409); and in the consultation over the choice of a new Grand Vizier the arguments of the *Shaykh al-Islām* Yaḥyā Efendi that it was time to try a new face and that Khosrew's unparalleled reputation for valour made him the best man for the post silenced the other ministers. Because there were viziers senior to him, notably the *ḳāʾim maḳām* Radjab Pasha [*q.v.*], he was not made Grand Vizier immediately but was first appointed governor of Diyārbekir and sent to İzmit, where the imperial seal was delivered to him on 1 Shaʿbān 1037/6 April 1628. In his letter of appointment he was charged first with subduing Ābāza Pasha, then with marching against the Ṣafawids; and he was also given wide discretion in the making of appointments and the administration of affairs generally (see Ferīdūn Beg, ii, 90-5, for the *berāt*).

Having made careful preparations for the campaign against Ābāza, Khosrew moved towards Tokat. Through harsh measures against wrongdoers and those whom he regarded as having failed in their duty, he succeeded in establishing strict discipline in the army. He reached Tokat on 28 Ramaḍān 1037/1 June 1628, where he remained for some seven weeks before a report that Ābāza, concerned by desertions from his forces, was seeking aid from Shāh ʿAbbās spurred him to move quickly against Erzurum. His considerable reputation for bravery persuaded increasing numbers of Ābāza's followers to desert to him, a tendency which he further encouraged by treating the deserters well. Ābāza had laid siege to Ḥasanḳale but returned to Erzurum on hearing of Khosrew's advance. At the suggestion of the governor of Ḥasanḳale, Khosrew advanced on Erzurum at great speed with a picked force, arriving before Ābāza could complete his preparations (29 Dhu 'l-Ḥijja 1037/30 August 1628). During the siege which followed, Khosrew again encouraged desertions by promises of pardon and employment in the army. Recognising the impossibility of resistance, Ābāza surrendered on terms on 23 Muḥarram 1038/22 September 1628, and Khosrew thus brought to an end a problem which had bedevilled the state for some six years. A Ṣafawid force coming to Ābāza's aid was surprised and defeated by the governor of Ḳars, its commander, Shamsī Khān, being captured and sent to Khosrew. Having decided not to winter in the field, Khosrew returned to Istanbul with both Ābāza and Shamsī Khān in his train and made a triumphal entry into the city on 12 Rabīʿ II/9 December. Ābāza, pardoned in accordance with the terms of the surrender, was appointed governor of Bosnia.

Though Khosrew fell ill in the spring of 1629, he recovered and was appointed commander for the campaign to retake Baghdād. He left Üsküdār on 18 Dhu 'l-Ḳaʿda 1038/9 July 1629 and arrived in Mosul on 1 Djumādā I 1039/17 December 1629. An unusually hard winter, with continuous heavy rains and even snow, caused severe flooding over a large area and created great difficulties for the army. On 13 Djumādā II/28 January 1630 the army left Mosul for Baghdād. Having suffered considerable losses of men and matériel in the crossing of the flooded river Zāb, Khosrew convened a *dīwān* in which it was decided that to besiege Baghdād in the present conditions was impossible and that the time would be better spent in a pre-emptive attack on the ruler of Ardalān [*q.v.*], Khān Aḥmad, who might otherwise threaten their rear. As the army advanced, many of the Kurdish *begs* submitted to Khosrew. Reaching the district of Shahrizūr, Khosrew was persuaded to rebuild the fortress of Gulʿanbar, built by Sulaymān I and subsequently destroyed by Shāh ʿAbbās. The work was begun on 1 Shaʿbān 1039/16 March 1630 and took some fifty days to complete. During the stay at Gulʿanbar, Khosrew sent a force to take the fortress of Mihribān, on the road to Hamadhān. The garrison surrendered, but the Ottoman force was then attacked by a Ṣafawid army under the *khān-i khānān*, Zaynal Khān. In the ensuing battle the Ottomans, with some difficulty, won the day (22 Ramaḍān/5 May). Moving further east, the Ottomans sacked the palace of Khān Aḥmad at Ḥasanabād and, on 27 Shawwāl/9 June, reached Hamadhān, which had been evacuated by the Ṣafawids. They laid waste the city, and, with the intention of marching on Ḳazwīn, advanced to Darguzīn, which they also sacked. It was there decided that an attack on Ḳazwīn would prove both difficult and ultimately pointless and that it was past time to return to the main aim of the campaign, the recovery of Baghdād which was now some sixty stages distant. The army departed from Darguzīn on 10 Dhu 'l-Ḳaʿda 1039/21 June 1630 and marched towards Baghdād, meeting serious resistance only from the ruler of Luristān, sent against them by Shāh Ṣafī, whom they overcame on the plain of Čamkhāl, near Nihāwand, on 3 Dhu 'l-Ḥijja/14 July. Reaching the environs of Baghdād in early Septem-

ber, Khosrew began on 28 Ṣafar 1040/6 October 1630 what proved to be a fruitless siege of the city. Five days after an unsuccessful full-scale assault on 3 Rabīʿ II/9 November it was decided to withdraw. During the course of the siege Khosrew had been persuaded by the local Arabs to garrison the fortress at Ḥilla; and leaving a sizeable force there, he departed with the army for Mosul, where he arrived on 7 Djumādā/I/12 December. While the army dispersed for the winter, Khosrew, in ill-health, prepared to winter in Mosul.

When the news that the Ottomans had abandoned the siege of Baghdād reached Kurdistan and the Shāh, an army under Khān Aḥmad attacked the Ottoman garrison at Dertenek. The defenders fled to the newly-built fortress at Shahrizūr (Gulʿanbar) which was subsequently attacked by a large army under Khān Aḥmad and the Ṣafawid *khān-i khānān*; news of their advance caused the Kurdish *begs* to switch their allegiance to the Ṣafawids. The garrison at Shahrizūr evacuated the fortress, but subsequently engaged the Kurdish-Ṣafawid army in battle, only to be heavily defeated; three of the Ottoman commanders reached Mosul on 18 Djumādā I/23 December and were put to death by Khosrew. The victors meanwhile destroyed Gulʿanbar. A Ṣafawid army under Shāh Ṣafī then laid siege to Ḥilla, which they succeeded in taking despite stout resistance. The loss of Shahrizūr and the siege of Ḥilla persuaded Khosrew to retire to the relative safety of Mārdīn. Having made arrangements for the repair of the fortifications at Mosul, he left on 18 Djumādā II/22 January 1631 and arrived in Mārdīn on the 29th/2 February. (For further details of the Hamadhān/Baghdād campaign from the Ṣafawid side, see Iskandar Beg Munshī, *Dhayl-i Taʾrīkh-i ʿālam-ārā-yi ʿAbbāsī*, ed. Suhaylī Khwānsārī, Tehran 1938, 39 ff.)

From Mārdīn a request was sent to the capital for men (in particular a large force of Tatars), money and supplies for another campaign against Baghdād in 1631. In Dhu 'l-Ḳaʿda 1040/June 1631 Khosrew moved to Kočḥiṣār, a short distance to the southwest of Mārdīn, where he spent the summer months awaiting the arrival of the Tatars, several thousand of whom had set out in the spring, and trying to decide on his course of action. When he finally determined to move towards Mosul (Ṣafar 1041/September 1631), heat, fatigue and disease had so affected the army that it was urged that the campaign be abandoned until the following year. Khosrew had little choice but to agree and retired toward Diyārbekir where he entered winter quarters on 3 Rabīʿ II/29 October.

By this time, however, he had already been replaced as Grand Vizier by Ḥāfiẓ Aḥmed Pasha, the decision to do so having been taken in Istanbul on 29 Rabīʿ I 1041/25 October 1631. Naʿīmā (*Taʾrīkh*, iii, 76-9) lists a number of underlying reasons for his dismissal, chief among them his excessive dependence upon, and consequent currying of favour with, the troublesome elements in the army (*zorbas*), this in turn leading to instances of oppression and malfeasance (see also ii, 441-3, where Naʿīmā gives details of Khosrew's securing the dismissal of a *Yeñi-čeri kātibi* who had been appointed with specific instructions from the sultan to end the abuses in the enrolment of Janissaries and to prevent improper entries in the registers of the corps). The decisive factor, however, appears to have been his failure to retake Baghdād despite a substantial investment of men and resources. When the news of his dismissal reached Diyārbekir (21 Rabīʿ II/16 November), the army immediately protested, threatening to kill the messenger who had brought the news and urging Khosrew to remain until they could make representations to the capital on his behalf. Khosrew calmed them, however, accepted his dismissal and left Diyārbekir (26 Rabīʿ II/21 November), surrendering the imperial seal in the vicinity of Malaṭya. A recurrence of gout forced him to halt in Tokat, where he was to remain until his death.

Khosrew Pasha's dismissal became the focus of a serious rebellion in the capital, incited, it is said, by the vizier Radjab Pasha, who coveted the Grand Vizierate. Those involved were the *ḳapiḳulu* who had been recalled from Diyārbekir for the winter and a number of individual *zorbas* who, having built up their own followings and made themselves virtually independent in various parts of Anadolu and Rūmeli, had agreed to attempt to restore Khosrew to the Grand Vizierate and had converged on the capital. Demandding the deaths of seventeen leading men identified as those who had brought about Khosrew's dismissal, the rebels succeeded in assassinating Ḥāfiẓ Aḥmed Pasha, who was replaced by Radjab Pasha (19 Radjab 1041/10 February 1632: Pečewī, ii, 420, wrongly cites the execution, not the dismissal, of Khosrew as the cause of this rebellion). Deeply angered by these events, Murād IV held Khosrew to be the cause and determined on his execution. Appointing Murtaḍā Pasha to the governorship of Diyārbekir, he charged him secretly with putting Khosrew to death. Despite opposition from the people of Tokat as well as Khosrew's followers, this end was accomplished when Khosrew ordered an end to resistance and accepted his fate. The news of his death, which became public knowledge in the capital on 19 Shaʿbān 1041/11 March 1632, provoked yet another serious rebellion, forming part of the general disorder which obtained until Murād IV was able decisively to assert his authority in June of the same year.

Though Khosrew Pasha is credited in the sources with considerable personal bravery and with taking great pains in the preparation of his campaigns, these qualities are overshadowed by what is regarded as his excessive severity, even bloodthirstiness, to demonstrate which numerous examples are given. On this aspect of his character Naʿīmā remarks: "He had no hesitation in putting to death men whose execution neither the *sharʿ* nor reason required, who perhaps did not deserve so much as a rebuke" (iii, 77). His success over Ābāza Pasha, a considerable achievement, is seen as having made him arrogant and headstrong, qualities which fitted ill with his relative inexperience. In the accounts of the Hamadhān/Baghdād campaign he is faulted from the military point of view for having allowed himself to be persuaded by the Kurds to rebuild Gulʿanbar and by the Arabs to garrison Ḥilla, since neither was defensible unless Baghdād were taken, and both projects, though each in a different way, were distractions from that basic aim. In contrast to the generally unfavourable impression of him, and especially of his character, which emerges from the sources, however, one might note the apparently spontaneous protest by the army at his dismissal; the attempt by the people of Tokat to defend him; and, while allowing for the selfish ends of some of those involved, the strong reactions aroused in Istanbul first by his dismissal and then by his execution. These events suggest that he was, perhaps, more widely admired, even at the end, than the sources, and particularly Naʿīmā, would lead one to believe.

KHOSREW PASHA, DĪVĀNE or DELI, Ottoman governor and vizier, and elder brother of Lala Muṣṭafā Pasha [*q.v.*]. He was a Janissary of Bosnian origin, but became a deserter at the outset of his career, and for several years lived an adventurous life, as evoked by ʿĀlī in his *Kunh al-akhbār*. He returned to grace at an unknown date, and then became food-taster (*čashnigīr*) at the Palace, intendant of the corps of guards (*ḳapudjī*) and then equerry to the sultan. His conduct during the Čāldirān campaign gained him the governorship (*beglerbeglik*) of Ḳaramān on 25 August 1514. He took part in the conquest of Diyārbakr in 1515, in the Egyptian campaign of 1516-17, and in the suppression of the Ḳızılbash revolt of Shāh Welī in 1520 and that of Djānbirdī Ghazālī [*q.v.*] in the following year.

At the beginning of 1521 he became *beglerbeg* of Anatolia, and then of Diyārbakr at the death at the end of that same year of Bıyıḳlı Meḥmed Pasha [*q.v.*]; he was to remain for ten years in this post at Āmid, with responsibility for watching over the security of the frontiers with Ṣafawid Persia and for consolidating Ottoman authority in the Kurdish principalities which had recently rallied to the Porte. During the winter of 1531-2, his disputes with Ulama Pasha, a Ṣafawid refugee who had been made commander-in-chief of the troops in eastern Anatolia and was at that time in favour with the Grand Vizier Ibrāhīm Pasha, led to his dismissal. In 1532 he became governor of Anatolia for a second time, and took part in the "German" campaign of that same year. Trace is then lost of him until he turns up as *sandjaḳ begi* of Aleppo and then *beglerbeg* of Damascus in 1534, and charged with various military duties during the "campaign of the two ʿIrāḳs". Whilst the Ottoman army was wintering at Baghdad in 1534-5, the sultan nominated him as *beglerbeg* of Egypt in place of Khādim Süleymān Pasha [*q.v.*].

Khosrew Pasha's brief tenure of office in Cairo (February 1535-December 1536) was marked by such an enormous increase in the revenue from Egypt (*irsāliyya* [*q.v.*]) that the Porte had suspicions about the legality of the means used to collect it. A commission of enquiry was unable to prove his guilt, but he was nevertheless dismissed from his office. In fact, the evidence on his administration in Diyārbakr and in Egypt reveals a brutal, largely unscrupulous and highly mendacious official, but also a remarkably efficient one. The Ottoman chroniclers of Egypt (Yūsuf, Meḥmed b. Yūsuf al-Khallāḳ and ʿAbd al-Karīm b. ʿAbd al-Raḥmān) stress moreover the unusual prosperity and security which the land enjoyed under his rule.

He was replaced at Cairo by the powerful vizier Khādīm Süleymān Pasha, whose previous ten years' tenure of the governorship he had endeavoured to denigrate in the eyes of the Porte, evoking in Khādīm Süleymān Pasha a tenacious hatred against him. For the third time, Khosrew Pasha became *beglerbeg* of Anatolia at the beginning of 1537, and then of Rumelia in June 1538. His services during his tenure of these offices (the Moldavian campaign of 1538 and the capture of Castelnuovo in 1539) led the sultan to appoint him as fourth vizier in 1541, Khādīm Süleymān Pasha being Grand Vizier and Rüstem Pasha [*q.v.*] second vizier. It seems very probable that the latter's ambitions were the cause of the ruin of the other two. As the sultan's son-in-law and enjoying the support of his influential mother-in-law Khürrem Sulṭān, Rüstem was able to rouse against each other very skilfully the old enemies Khādīm Süleymān and Khosrew in such a way that they came to blows in the sultan's presence in 1544 and were both deprived of office for this affair. Rüstem Pasha then became Grand Vizier. In despair at having lost his offices and powers, Khosrew Pasha allowed himself to starve to death in this year, one of the very rare cases of suicide amongst Ottoman officials of this period.

(J.-L. BACQUÉ-GRAMMONT)

KHOSREW PASHA, MEḤMED (?-1271/1855), Ottoman Grand Vizier, educated in the Palace and raised to the post of head *čukhadār* on the accession of Selīm III [*q.v.*] in 1203/1789. He entered the service of Küčük Ḥüseyn Pasha, a protagonist of military and naval reform, who became Admiral (*Ḳapudan-i deryā*) in 1206/1792. In 1215/1801 Khosrew sailed with the fleet to Egypt, where he commanded a force of 6,000 and co-operated with the British in the recapture of Rashīd and the defeat of French forces. In recognition of his services he was soon afterwards appointed *wālī* of Egypt.

In Egypt he attempted to establish the *niẓām-i djedīd* [*q.v.*] army and disband the irregular *bashi bozuḳ* troops imported from Rumelia for the war against the French. When he attempted to stop their pay, the *bashi bozuḳ* forces rose in revolt and defeated Khosrew's own troops. Then Ṭāhir Pasha attacked Khosrew, forcing him to withdraw to Damietta and declared himself *wālī* of Egypt. Shortly afterwards, Ṭāhir was murdered, leaving Muḥammad ʿAlī [*q.v.*] and the Mamlūks real masters of Egypt. In Rabīʿ al-Awwal 1218/July 1803, the Mamlūks defeated Khosrew near Damietta and threw him into prison. On his release by Muḥammad ʿAlī 8 months later, he was removed from the governorship of Egypt.

His next appointment was as *wālī* of Diyārbekir (1218-19/1803-4), followed by various governorships in Rumelia. He was active in the Russo-Turkish war which broke out in 1221/1806 as *wālī* of Silistra and military commander on the Danube front. In recognition of his services, he was appointed *Ḳapudan-i deryā* in Dhu 'l-Ḥidjdja 1225/January 1811 and commanded the Ottoman fleet in the Black Sea until the conclusion of a peace in Ramaḍān 1227/September 1812. He was dismissed in 1233/1818, and afterwards served in a number of provincial governorships. As *wālī* of Erzurum he was appointed military commander (*serʿasker*) in the east, with instructions to pacify rebellious Kurdish tribes whose activities had led to a clash with Persia. However, his mishandling of the affair led to a rebellion by the former *mutaṣarrif* of Bāyezīd, while the Persians, taking advantage of the situation, captured Bāyezīd, Erdjīsh and Bitlīs. The Porte transferred him to the governorship of Ṭrabzon, and in Ṣafar 1237/September 1821 appointed in his place the former Grand Vizier Meḥmed Emīn Raʾūf Pasha.

With the outbreak of rebellion in the Morea, Khosrew Pasha was again appointed *Ḳapudan-i deryā* (Rabīʿ al-Ākhir 1238/December 1822) and detailed to

pursue the rebels in the Aegean. For this purpose, he constructed a fleet of shallow-draught vessels, suitable for pursuit in shallow waters, and attempted to cut off sea communications between Morea and the islands, at the same time victualling Ottoman troops on the Greek mainland. However, during the siege of Missolonghi (1240-1/1825-6), rivalry often broke out between Khosrew and Muḥammad Alī's son Ibrāhīm Pasha [*q.v.*], who was commanding an Egyptian force on the Sultan's behalf. Ibrāhīm and Muḥammad ʿAlī sought Khosrew's dismissal from the admiralty and were eventually succesful. He was instead appointed *wālī* of Anadolu (Anatolia).

Khosrew, however, retained the confidence of Maḥmūd II, who recognised him as a protagonist of military reforms and as being instrumental in introducing European tactics to the fleet. In 1242/1827 the Sultan therefore appointed him *serʿasker* of the newly formed army, the *ʿasākir-i manṣūre-yi muḥammadiyye*, where he also began to introduce European tactics and training techniques. His influence in the capital increased after the outbreak of war with Russia in 1243/1828, when he engineered the dismissal of the Grand Vizier Selīm Meḥmed Pasha and the appointment of his own former slave and nominee, Rashīd Meḥmed Pasha. He also secured a commandership on the front for his former slave Khalīl Rifʿat Pasha, and the dismissal of the *serʿasker* on the Russian front, Agha Ḥüseyn Pasha. Meanwhile, the Russians crossed the Balkans and advanced on Edirne. Khosrew advised the Sultan to seek a peace, at the same time taking extraordinary measures to prevent panic in Istanbul, to the extent even of executing certain advocates of surrender. This, and the unpopularity of his westernising measures in the army, almost provoked a popular revolt. He was present at the peace negotiations in the presence of the French, English and Prussian ambassadors. His influence was now at a height, and he used it to remove his rivals from positions in the government, replacing them with his own slaves, and to have the former Grand Vizier, Selīm Meḥmed Pasha, dismissed from the governorship of Rumelia.

During the Russo-Turkish war, Muḥammad ʿAlī had made excessive demands to the Sultan and was now threatening ʿAkkā. At this point, Mahmūd placed the matter in the hands of Khosrew who, in Dhu 'l-Ḳaʿda 1247/April 1832 appointed Agha Ḥüseyn commander of the army in Anatolia. After Muḥammad ʿAlī's victory and advance on Istanbul, Khosrew invited military instructors from Europe, among them the famous Von Moltke. During this period he had the complete confidence of the Sultan, and his responsibility for the security of the capital and the fact that he advanced many of his numerous personal slaves to positions in the government, further increased his influence. By marrying his own men to the Sultan's daughters, he insinuated his way into Palace circles.

However, in Shawwāl 1252/January 1837, two of his own protégés, Khalīl and Saʿīd Pashas, secured his dismissal as *serʿasker*, while in Rabīʿ al-Awwal 1253/June 1837, his great rival Muṣṭafā Reshīd Pasha became Foreign Minister. Khosrew was retired on a pension. His absence from public affairs did not last long. In Dhu 'l-Ḥidjdja 1254/March 1838, he received the chairmanship of the Reform Committee (*medjlis-i wālā*) and presided over the councils which met in his villa to discuss the Egyptian question.

A further deterioration of affairs in Egypt and the death of Maḥmūd II in 1255/1839 caused a grave crisis in the empire. It was at this juncture that Khosrew literally seized power, by grabbing the Imperial Seal from the Grand Vizier, Raʾūf Pasha, during the funeral of Maḥmūd II, and declaring himself Grand Vizier. This led to the defection of his rival, the *Ḳapudan-i deryā*, Aḥmed Fevzī Pasha, who sailed with the fleet to Muḥammad ʿAlī in Egypt, with the intention of returning with Egyptian troops and deposing Khosrew. Muḥammad ʿAlī for his part, demanded Egypt and Syria for himself and the dismissal of Khosrew. Neither plan succeeded. Khosrew remained in his post, but the Foreign Minister, Muṣṭafā Reshīd Pasha, seized the initiative and, partly no doubt to win the sympathies of the European powers over the Egyptian question, had the famous *Khaṭṭ-i Sherif* of Gülkhāne proclaimed, marking the beginning of the *Tanẓīmāt* [*q.v.*] era. Khosrew was still Grand Vizier, but Muṣṭafā Reshīd Pasha now had the sympathies of the Palace and was able to press for his dismissal and the reinstatement of Raʾūf Pasha. He then had Khosrew tried and convicted for bribery by the Supreme Council of Judicial Ordinances (*medjlis-i wālā-yi aḥkām-i ʿadliyye*) and exiled in Djumādā 'l-Ūlā 1256/July 1840 to Tekirdaği.

In the following year, the Sultan ʿAbd al-Medjīd permitted his return to Istanbul, where a change in government permitted his return to power. In Ṣafar 1262/January 1846, he was appointed *serʿasker*, in which position he removed his predecessor Riḍāʾ Pasha's nominees and replaced them with his own men. During this period of office, he opened the Military School at Küčük Taḳsīm. However, later in the same year, he was removed from office, and the new Grand Vizier, Muṣṭafā Reshīd Pasha, took care to prevent his further rise to power. He died, at the age of more than ninety, on 13 Djumādā 'l-Ākhira 1271/3 March 1855.

Bibliography: see article *Ḥusrev Paşa* by Halil Inalcık in *İA*, of which the foregoing is a summary. (Ed.)

KHŌST, Arabic spellings Kh.w.st or Kh.wāst, the name of various places in Afghānistān. The most likely etymology for the name is that given by G. Morgenstierne in his *An etymological vocabulary of Pashto*, Oslo 1928, 98: that it is an Iranised form *hwāstu, cf. Skr. *suvāstu*- "good site" (which became the place-name Swāt [*q.v.*] in the North-West frontier region of Pakistan).

The mediaeval Arabic and Persian geographers mention what appear to be two places of this name in northern Afghānistān. Those of the 4th/10th century mention Khasht as a town on the upper Herī Rūd on the borders of Ghūr and Gharčistān (cf. Ibn Ḥawkal², 457, tr. 441, and Muḳaddasī, 349), and this is apparently the Khōst mentioned three centuries or so later by Ḳazwīnī, *Āthār al-bilād*, ed. Wüstenfeld, 244, as a town of Ghūr; see Le Strange, *Lands of the eastern Caliphate*, 410, 417.

Distinct from this seems to be the Khōst further north near Andarāb and on the borders of Badakhshān, the district which the *Ḥudūd al-ʿālam* (end of the 4th/10th century) refers to as (?) Yūn, cf. tr. Minorsky, 109, 340-1, perhaps the Khuwāsht of Yāḳūt, *Buldān*, ed. Beirut, ii, 398, and the Kʿwat-sit-to of Hsüan-Tsang, see Marquart, *Ērānšahr*, 241. It is frequently referred to in Tīmūrid and early Mughal times. In 884/1479 we hear of one Mīr ʿAbd al-Ḳuddūs being given the governorship of Khōst, "one of the most important districts in Badakhshān and Ḳunduz" (*Taʾrīkh-i Rashīdī*, ed. and tr. Elias and Ross, tr. 103). One of Bābur's wives, Māham, apparently came from here; his daughter Gul-rang was born here, and he visited it on various occasions, see the *Bābur-nāma*, tr. Beveridge, index.

In modern times, the most important region bearing the name Khōst is that comprised within the modern Afghan province of Pakhtia, lying to the south of the Sefīd-Kūh range in the basin of the Kaitu, an affluent of the Kurram river which drains eastwards to the Indus; hence the ethnic and tribal connections of Khōst with the regions of Kurram, Kohat and northern Waziristan on the modern Pakistani side of the Durand Line have always been close. Khōst now forms an important forestry region of Afghānistān, and in the southern, sub-tropical zone, dates, citrus fruits, etc. are grown; recent Afghan governments have made considerable agricultural investment here (see J. Humlum *et alii*, *La geographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 101, 105, and J. C. Griffiths, *Afghanistan*, London 1967, 119-20). In the 1920s, Khōst was the epicentre of a conservative, traditionalist Pathan rebellion against the tentative reforms of King Amān Allāh, which seriously weakened the ruler's position and damaged the economic health of the country (March 1924-January 1925) (see W. K. Fraser-Tytler, *Afghanistan*³, London 1967, 204-6; V. Gregorian, *The emergence of modern Afghanistan, politics of reform and modernization, 1880-1946*, Stanford 1969, 282-4; L. Dupree, *Afghanistan*, Princeton 1973, 449, 459, 479).

Finally, the *Imperial gazetteer of India*, iii, 138, vi, 306, mentions a Khōst in Balūčistān, the site of a small coalfield, 35 miles east of Quetta.

(C. E. Bosworth)

KHOTAN, a town of the People's Republic of China, in the autonomous region of the Uyghurs. The town, and the territory which depends on its resources as an oasis, lie between the desert of Taklamakhan and the massif of Kuen-luen on the one hand, and the Kara-Kāsh and Yörüng-Kash rivers on the other. The kingdom of Khotan became known to the Chinese world in about 125 B.C., following the mission of Khang K'ien, under the name Yu-t'ien. The name represented by this transcription seems to have had no connection with the town of Yotkan. Although numerous archaeological relics have been found at that site, Yotkan cannot correspond to Yu-t'ien. In fact, according to Pelliot (*Notes on Marco Polo*, 412, s.v. "Cotan"), Yu-t'ien corresponds to *'Odan, with the variant *'Odon arising from the transcription Yu-tuen given by Hiuan-tsang (*ibid.*, 409); the name encountered in the Khotanese texts is just a transcription of the Chinese Yu-t'ien under the form Yüttina, while documents of the 4th century in Kharoshtī script give the form Khotana (L. G. Gercenberg, *Khotanosakskiy yazik*, 10). Yotkan is a ruined pre-Islamic cemetery, approximately 8 km. west of the town itself.

In fact, the kingdom of Khotan was not really known to the Chinese until after the conquest of the Tarim basin, carried out by Han Wu-ti (140-87 B.C.), in the years following 110 B.C. and through the reconquest by the later Han between 73 B.C. and *ca.* 170 A.D. Little is known of the history of the ruling dynasty and the name of the town is always transcribed Yu-t'ien in the Chinese sources. From the latter we learn that the population of the kingdom reached a total of 50,000. All that we can say is that this population spoke a language of Iranian type, which has become known as a result of discoveries made at the beginning of the 20th century and which has been deciphered principally by Lüders, Sten Konow and H. W. Bailey. It now seems that the Khotanese spoke a dialect of the Saka language.

It was in the course of the first centuries A.D. that the kingdom of Khotan received Buddhism. According to the Tibetan tradition, which agrees in some points with the account given by Hiuan-tsang, Buddhism was introduced to Khotan by a Kashmiri monk called Vairocana, during the reign, almost certainly legendary, of king Vijayasambhava (E. Zürcher, *The Buddhist conquest of China*, in *Sinica Leidensia*, xi, Leiden 1972, 340-1). This assessment is confirmed by the fact that one of the oldest dated Buddhist monuments is from 269 A.D. (A. Stein, *Sand-buried ruins of Khotan*, 1902, 405).

In the 7th century, Hiuan-tsang writes in his *Memoirs* (Watters, *On Yuan Chwang's Travels*, ii, 299): "We arrive in the kingdom of K'iu-sa-tan-na. (*Note:*) In Chinese, this signifies "Breast of the Earth"; it is the formal name used in the region. The local language uses the expression "Kingdom of Huan-na". The Hiong-nou call it Yu-touen; the Hou (Iranians), Ho-tan; the Indians, K'iu-tan. Formerly they (the Chinese) called it Yu-t'ien; it is an incorrect form". (On this passage, cf. Pelliot, *Notes on Marco Polo*, 409-17).

Thus, in the T'ang period, the polite and literary form is "Gostana" or "Gaustana", difficult to interpret according to Pelliot; the local language used the expression Xuân-nâ (Ḫuana ?), this name faithfully rendering the name which appears in the Khotanese texts under the form Hvatāna, Hvamna, and Hvam; the nomads of the north would have pronounced it *'Odan or *'Odon, a name which is found much later in Syriac, translated from Persian, in the story "*The History of the Patriarch Mar Yaballahâ and the monk Rabban Sâumâ*, published by Chabot (Paris 1895, 22), where the latter identifies the town of "Lôtôn" with Khotan. In fact "Lôtôn" is an erroneous form from the Persian original, where the *lām* has appeared as a result of confusion with the initial *ālif*, whence we deduce the correct form "Odon" proposed by Pelliot fifty years ago, while Budge (*The monks of Kûblâi Khân*, London 1928, 138) and Montgomery (*The history of Yaballaha III*, New York 1927) have retained the form "Lôtôn". This form appears in the works of Kāshgharī (Brockelmann, 251), with "Odon" and "Khotan". Finally, the Iranians would have pronounced it Ho-tan (Xuât-tan) which assumes an original *Ḫwatan, precursor of the Khotan of the Muslims, while the Indians would have pronounced it K'iu-tan (*K'iut-tan) which presuppose a form Khutan or Khotan. The land was known to the Tibetans under the name of Li-yul, "land of Li", although they knew the town under the name of Hu-ten, which is just a transcription.

In the T'ang period, the kingdom of Khotan was bounded to the south by the Kuen-luen, while in the east its territory touched that of Kroraina (Niya, Čerčen and the Lob-Nor region), and in the west that of Kāshghar (Khyesa) which stretched from the Pamirs and T'ien-shan to Maralbashi and beyond. The language used throughout the Khotan region was Saka-Khotanese, which was related to the Tadjik vernacular of the Pamirs, of which no ancient evidence has yet been recovered, to the language of Kāshghar in the west and north, of which some traces have been recovered at Tumshuk (the Turkish name of a site whose ancient name has disappeared), and in the east to the language spoken in Kroraina, of which apparently no relics remain.

The kingdom of Khotan at that time had a large population which had, no doubt under the influence of Buddhism, lost all interest in expansion and showed an extreme aversion to matters of war; Hiuan-tsang noted that the Khotanese were remarkable

craftsmen with a considerable taste for literary pursuits, also for music and dance. The region was the centre of a considerable commercial activity, being placed on the southern branch of the Silk Route, which was in use throughout antiquity and the Middle Ages; through the Khotanese texts we possess accounts of the travels of officials to Kashmir and Kansu, which permit us to gain an acquaintance with the geography of Central Asia, in particular the names of towns; thus we find that Kāshghar is Kyesa, Niya is Niña, Čerčen is Ysabaḍā parrūm, Urumči is Yirrūmcinā, Turfan is Tturpanā, Leou-lan is Raurata, Yumen kouan is Kviyikye, etc.

The dynasty of the kings of Khotan in the T'ang period (7th-10th centuries), the family name of which was apparently Vija (preferable from Viśa) was in existence before that time, for the history of the Suei (83, 5b) mentions, according to Pelliot (*op. laud.*, 419) a king called Vijayavikrama; under the T'ang, the dynasty is known to us from a list which can be reconstructed from the texts of the History of the T'ang and which can be partially cross-checked by reference to the names preserved in the Khotanese texts; a certain number contained in the latter cannot be placed with certainty in this list; these are: Viṣanakhan, Viṣakirti, Viṣavikram and Viṣasagrama. On the other hand, there are some that can be dated, in particular the last kings of the dynasty: Viṣasambkhava (912-966), Viṣaśura (967-977) and Viṣadarma (978-982) (Gercenberg, *op. cit.*, 12). It was shortly afterwards that the kingdom of Khotan was conquered by recently-converted Muslim Turks; the kingdom of Khotan was henceforward to be one of the collection of Turkish states in the region which constituted Turkestan.

The town of Khotan, unlike Kāshghar and the northern part of the Tarim basin, is not mentioned by the *Ḥudūd al-ʿālam* in the description of the Turkish tribes (§ 13, p. 96) in the section of the Yaghmā of eastern Turkestan, but in that of China (§ 9, p. 85). As the *Ḥudūd al-ʿālam* dates from the year 372/982-3, it may be supposed that in about the year 980, when king Viṣadarma, was alive, Khotan and its territory formed a sort of enclave between the region of Kāshghar which was occupied by the descendants of Satuḳ Bughrā Khān (died 344/955-6) and the territories belonging to China and Tibet; the king of Khotan, according to this source (p. 85), styled himself "Ruler of the Turks and the Tibetans" (*ʿaẓīm al-Turk wa 'l-Tubbat*).

A little later, Gardīzī, who was writing after 431/1040, reports (according to Barthold, *Otčet o poiezdkie v Srednyaya Aziya, 94*) that even the town of Kai (?), situated at fifteen days' march from Khotan in the direction of China, was under the domination of Toghuzghuz Turks (cf. *Ḥudūd al-ʿālam*, 255). According to Gardīzī, the inhabitants of Khotan were Buddhists, but he mentions a Muslim cemetery to the north of the town (*ibid.*, 255, n. 3), and in the town itself two Christian churches, although no documentary evidence of this has been found. As regards the Muslim world, Gardīzī shows us that in the first half of the 5th/11th century, Muslim proselytism was already actively exercised in Buddhist circles, and it is possible that the implanting of this group was a contributory cause of subsequent events.

At the beginning of the 5th/11th century, the Turkish rulers of Kashghār had become very powerful (Barthold, *12 Vorlesungen*, Berlin 1935, 79 ff., particularly 88-90), and had founded the dynasty of the Ḳarākhānids (see ILEK-KHĀNS). The son of Bughrā Khān Hārūn, himself the grandson of Satuk Bughrā Khān, who called himself Ḳadir Khān Yūsuf and reigned in Kāshghar from about 401/1010, decided, for reasons unknown to us, to conquer the territory of Khotan. Seeing that he died in 423/1032 (Ibn al-Athīr s.a.), it is likely that the conquest of Khotan was accomplished sometime between the years 1013 and 1032, for we possess money struck in his name at Kāshghar and at Yarkand from 404/1013-14 onwards (A. Markov, *Inventarniy katalog*, etc., 192 ff.). On the conquests of Khotan, cf. Barthold, *Turkestan*², 281, n. 2.

Later, Khotan, like Kāshghar, passed under the authority of the Ilek-Khāns [*q.v.*], and subsequently under that of the Ḳarā-Khiṭāy [*q.v.*]. After these events, the crisis arising in Central Asia as a result of the expansion of the Mongol empire led the Kharāzm-Shāh to make an agreement with Küčlüg, who had deposed and expelled his father-in-law, the Gür-Khān of the Ḳarā-Khiṭāy, and a partition of the western sector of the Ḳarā-Khiṭāy empire took place, between the two rulers, giving to the Khʷārazm-Shāh the territory to the east of the Syr-Daryā as far as the heights of Kāshghar and of Khotan (Barthold, *Turkestan*², 356-7); after his succession to the throne, Küčlüg, who had married the daughter of the Gür-Khān, a Buddhist fanatic, undertook a fierce persecution of Islam in the regions under his authority, particularly in Khotan, after his agreement with the Khʷārazm-Shāhs [*q.v.*]. According to Djuwaynī (tr. Boyle, 65-6, 70-3), Küčlüg persecuted the Muslims cruelly and crucified the *Imām* ʿAlā' al-Dīn Khotanī at the door of his *madrasa* in Khotan. In the time of Ḥaydar Mīrzā [*q.v.*], nothing more was known of this martyr; even his tomb was unknown (*Ta'rīkh-i Rashīdī*, tr. E. D. Ross, 218, and ch. xlii). Thus there was no indigenous historical tradition at Khotan, or if there was, the texts have been lost. Arabic and Persian geographical literature provides us with only the most meagre of information; the real situation is misrepresented by al-Samʿānī (f. 189b) and by Yāḳūt, who followed al-Samʿānī in his own writing (ii, 403).

Under the reign of Ögedey, Djuwaynī (tr. Boyle, 517) reports that "the lands between the banks of the Amū-Daryā and the frontiers of Khitāy were placed under the orders of the Chief Minister Maḥmūd Yalavač and of his son Masʿūd Beg; those included Transoxania, Turkestan, Otrār, the land of the Uyghurs, Khotan, Kāshghar, Djand, Khʷarazm and Farghāna". Rashīd al-Dīn (*Djāmiʿ al-tawārīkh*, tr. J. A. Boyle, *The successors of Genghis Khan*, New York-London 1971, 94), also writes as follows: "The Ḳa'an (Ögedey) placed all the lands of Khiṭāy under (the orders of) Maḥmūd Yalavač, and (the region of) Besh-Balīḳ and Ḳarā Khodjo, with the territory of Uyghuristān, Khotan, Kāshghar, Almalīk, Qayalīḳ, Samarḳand and Bukhārā as far as the banks of the Oxus under (the orders of) Masʿūd Beg, the son of Yalavač". In the remainder of his work, he makes no further mention of Khotan; nevertheless, under the year 1253, Barthold (*12 Vorlesungen*, 184) writes as follows: "After the re-establishment of order, the frontiers of his government (sc. of Masʿūd Beg) were extended further: to him were subjected Transoxania, Turkestan, Otrār, the land of the Uyghurs, Khotan, Kāshghar, Djand, Khʷārazm and Farghāna". After the death of Mengü (Möngke) in 1259, a conflict arose between Ḳubilay [*q.v.*] and his younger brother Ariḳ-böge in the course of which a cousin of Ariḳ-böge, the Čaghatayid Alugu, took to himself the entire area entrusted to the authority of Masʿūd Beg; the latter appealed to Ariḳ-böge who gave him full authority to dispossess Alugu, but in the course of his mission he

went over to the side of Alugu who died *ca.* 1266. As Arik-böge had been eliminated during this period, Kubilay appointed in his place another Čaghatayid, Barak, who took possession of part of the former possessions of his grandfather Čaghatay, but Barak was compelled in his turn to submit to Kaydu, grandson of Ögedey, who sought to reconstitute the territory given to him by Čingiz Khān. (Barthold, *12 Vorlesungen*, 184-6). Finally, a more or less stable equilibrium was established between Kubilay and Kaydu, so much so that according to a passage of Marco Polo (ed. Yule-Cordier, i, 188; ed. Hambis, Paris 1955, 62-3), it is reported that in the 1270s Khotan was under the authority of the Emperor of China, while Yarkand depended on Kaydu.

While Central Asia was the object of partition between great powers, it is nevertheless certain (Barthold, *12 Vorlesungen*, 188-9) that a number of indigenous dynasties survived as vassals, especially at Khotan. In reference to these last, Barthold mentions some Persian verses of which the date is unknown, which were composed in honour of the sulṭan of Khotan, Munmish-Tegin, the last words being quoted in Turkish (*cāndān bizī ey shah kigüyād Turk "yavlak karī bolmish Munmish Tāgin"*. Barthold (*op. cit.*, 195) also mentions the fact that Djamāl Karshī, in the appendices (*Mulḥaḳāt*) to his translation of an Arabic dictionary of the 4th/10th century, devotes considerable space to the town of Khotan, giving a brief description and a list of some persons native to the place. Again according to Barthold (*op. cit.*, 195), Muḥammad Ḥaydar (*op. cit.*, tr. Ross, 301) writing in Kāshgharia, distinguished according to his own terms, four classes at Kāshghar and at Khotan; first—*tümen*, the peasantry; second—*kawčin*, the army; third—*oymak*, the nomads (who were entitled to a certain quantity of grain, textile goods, etc.); and fourth—the class of the officials and the *ʿulamāʾ*.

Much later, it seems that Khotan shared the fate of other towns in the Tarim basin, in particular of Kāshghar and other towns in the same region; in the 18th century it was a part of the state established by the Khōdjas, who defeated the descendants of Čaghatay, and were compelled to submit to the domination of the Djungar, and later, in *ca.* 1760, to that of the Manchus who eliminated the Djungar. Later still, in the seventh decade of the 19th century, Khotan was obliged to accept temporary domination by Yaʿkūb Beg and after the death of the latter in 1877 to submit once again to the Manchus. With regard to a historical work completed on 11 Shaʿbān 1311/24 February 1894 in Khotan and dealing with events subsequent to 1280/1863, cf. *Bull de l'Acad.* (1921), 209; cf. also the chapter on the Khōdjas of Khotan in *Taʾrikh-i emeniyye*, ed. Pantusov, 161 ff. The principal source for the history of this region is provided by reference in the Chinese dynastic histories and in other works concerning the autonomous region of the Uyghurs itself, which have appeared in Chinese from the 18th century to the present day. It is there that the documentation concerning the town of Khotan is found.

The town itself, like all those in the Tarim basin, has known a variety of activities, but the silk industry which has continued from the Han period to the present day is the principal activity. At the time of writing, the industrialisation of the region is being developed by the People's Republic of China, although it is not possible to assess what progress is being made; it seems that the Chinese government is concentrating there on the search for raw materials. There is no certainty about the population figures; according to Kornilov, *Kashgariya*, Tashkent 1903, 273, the population amounted to only 15,000; according to E. and P. Sykes, *Through deserts and oases of Central Asia*, London 1920, 216, the population was 50,000.

KHOTIN (in Ottoman Turkish usage Khōtīn; in modern Turkish and in Romanian, Hotin; Polish Choczim and variants; German Hwthyn (15th/century), Chotim, Chotin, Chotczyn, etc.; Italian (18th/century) Cucino; and other forms): a fortress and town on the right (formerly Moldavian) bank of the Dnestr (Turla), 20 km. south of Kamenets Podolsk (Kamaniče [see KAMĀNIČA]). Khotin is now (since the end of World War II) in the Ukrainian S.S.R., and forms the administrative centre of the *rayon* of the same name in the *oblast* of Černovits (Cernauti, Czernowitz).

Khotin, which occupied an easily-defensible site at the point where the important mediaeval trade route from the Baltic to Constantinople crossed the Dnestr, was from the mid-14th to the late 18th century a military stronghold and commercial entrepôt of some importance. The region of Khotin, which was, in the 16th and 17th centuries, disputed between Poland and Moldavia, had attracted Ottoman attention as early as the reign of Meḥemmed II, and in the 16th century Muslim merchants frequented the route via Khotin to Poland. Khotin was besieged unsuccessfully by ʿOthman II in 1030/1621; thereafter it was restored to Moldavian control, and is so described by Ewliyā Čelebī, who visited it in the retinue of Melek Aḥmed Pasha in 1658 (*Seyāḥat-nāme*, v, 124-5). In 1084/1673 Khotin was occupied by the Poles, but it was regained by the Ottomans in the following campaign season (Silaḥdār, *Taʾrīkh*, Istanbul 1928, i, 628 ff.). The Ottoman occupation of Podolia in 1083/1672 carried the frontiers of the Empire beyond the Dnestr, but with the retrocession to Poland of Podolia, and the evacuation of Kamaniča in 1110/1699, Khotin became the most important Ottoman fortress in the region of the upper Dnestr; this importance was to increase in the course of the 18th century, as the conflict with Russia became ever more acute.

Khotin was occupied by the Russians in 1713; on its return to the Ottomans in 1125/1714, the old fortifications were rebuilt and increased in height by more than a half, as part of a general strengthening and rebuilding programme, which was supervised by a special commission sent from Istanbul. The contemporary Moldavian historian Cantemir described the Khotin of this period as the most elegant and well-fortified town of Moldavia, praise which is echoed in an Ottoman description of the town written at the same time. Also in 1125/1714, Khotin and its surrounding districts were removed from the jurisdiction of Moldavia and reorganised as an *eyālet*, as part of the strengthened Ottoman frontier defences along the right bank of the Dnestr, becoming, in the words of a German observer, "die einzige Vormauer der Moldau".

The 18th century stronghold of Khotin consisted of the medieval *ič kalʿe* and the more extensive new outer works encircling the old fortress on three sides.

In the outer walls were four gates: their names are variously given as the Istanbul (or Jassy) gate, the Temeshvar gate, the Water Gate and the Ukraine or Bender gate. Within the outer fortress were two baths, two principal mosques and, near the Istanbul gate, a *bezestān*. Inside the Istanbul gate, on the right, lay the barracks of the artillery and the supply-train, the residences of their *aghas*, and the headquarters of the *defterdār*. On the left was a large and well-constructed reserve granary. Further towards the *ič ḳalʿe* were situated another bath, the office of the *yeñičeri aghasi*, and the barracks of the Janissaries of the fortress. Higher up, towards the old fortress, was situated the *serāy* of the *pasha* of Khotin, and the mosque of the *wālide sulṭān*. Khotin was, however, yet again occupied several times by Russian forces in the course of the 18th century: in 1152/1739 (by Münnich) and again in 1183/1769 (by Galitsin). In 1788 Khotin was occupied by an Austrian force; later, after the conclusion of the Peace of Jassy, Khotin was restored for the last time to Ottoman rule. After 1806 it remained in Russian hands, except for the period 1918-47 when the territories south of the Dnestr formed part of Romania.

al-KHUBAR, a town on Saudi Arabia's Persian Gulf coast (26° 17′ N, 50° 12′45″ E). The name is most likely a colloquial plural derived from the word *khabrāʾ*, meaning "a small pond formed by rain".

The first permanent settlers on the spot were members of the tribe of al-Dawāsir who landed in 1341/1923 after fleeing the island of al-Baḥrayn in fear of British reprisal following clashes with Shīʿī elements. ʿĪsā b. Aḥmad al-Dawsarī is generally regarded as the first settler of al-Khubar. Other tribesmen who landed at nearby al-Dammām a few weeks earlier subsequently moved to al-Khubar. Prominent among the early inhabitants were Muḥammad b. Rashīd and his brother ʿĪsā, Ḥusayn Bū Surayḥ, Khālid b. Mībar and his brother Nāṣir, Saʿd b. Muḥammad and Ṣāliḥ b. Djumʿa (author's father). The settlers built huts of palm fronds along the sea shore. For two decades the village depended on small-scale pearling and fishing for its survival. No more than 20 boats left the village each pearling season; the crews came partly from the village, but mostly from nearby oases. In the early 1930s ʿĪsā b. Aḥmad returned to al-Baḥrayn with a group of the villagers, mostly crew members of his pearling fleet.

Al-Khubar remained a small fishing and pearling village covering an area of less than 0.5 km.² until 1935. In that year the California Arabian Standard Oil Company (later the Arabian American Oil Company) built a pier at al-Khubar to support the early oil well-drilling at nearby al-Ẓahrān. In 1357/1938 a storage and shipping terminal was built at al-Khubar, and barges started carrying Saudi Arabian oil to the refinery of the Bahrain Petroleum Company (Bapco); this marked the beginning of the export of Saudi Arabian oil. The importance of al-Khubar port has diminished since 1369/1950, when a deep-water pier began operating in al-Dammām; the al-Khubar harbour facilities now accommodate only fishing fleets and coastal ships. The city itself, however, now covering an area of 8 km², thrives as one of the most active business centres on the Kingdom's Gulf coast, second only to al-Dammām. Commercial enterprises that were given their original impetus by the oil industry now flourish independently, supported by both the public and private sectors of the economy. With modern office buildings and living quarters, with stores displaying merchandise from all over the world, and with substantial job opportunity, al-Khubar attracts foreign communities of various nationalities.

(ʿAbdallah S. Jumʿah)

KHUBAYB b. ʿAdī al-Anṣārī, one of the first martyrs of Islām. The main features of his story common to all versions are as follows: After the battle of Uḥud [*q.v.*] (on the chronology of which, see below) a small body of ten of the Prophet's followers was discovered and surrounded between Mecca and ʿUsfān by 100 (or 200) Liḥyānīs who belonged to the Hudhayl. The leader of the hard-pressed little band, ʿĀṣim b. Thābit al-Anṣārī (according to others, the leader was al-Marthad), proudly refused to yield. He and six others were killed whereupon Khubayb, Zaid b. al-Dathina and a third surrendered; the latter fell a victim to his stubbornness and the two former were taken to Mecca and sold. Khubayb fell into the hands of the Banu ʾl-Ḥārith b. ʿĀmir b. Nawfal b. ʿAbd Manāf, who on the expiry of the sacred period, took him out of the Ḥaram to al-Tanʿīm, bound him to a stake and killed him with lances (*ṣabr^an*) in revenge for al-Ḥārith, whom Khubayb had killed in the battle of Badr. Before he was tied to the stake, Khubayb asked for time to perform two *rakaʿas*, which became a *sunna* for martyrs, comparable to the last prayer of Christian martyrs. Khubayb is said to have recited two verses at the stake to the effect that he as a Muslim martyr cared nothing about the treatment of his body as Allāh was able to bestow his blessing even upon his severed members. *Ḳunūt* formulae uttered by him besides these verses have also been handed down in which he appealed to Allāh for vengeance on his enemies. Those present are said to have shown great trepidation at this curse of the dying man; it is related that Abū Sufyān hurriedly pressed the little Muʿāwiya to the ground to protect him from the consequences of the ill-omened words; and Saʿīd b. ʿĀmir used to fall into long swoons whenever he thought of the scene.

A comparison of the accounts shows discrepancies and idealising features. Before his death ʿĀṣim prayed to Allāh asking him to communicate news of the event to his Prophet in Medina, which actually happened.

His corpse was protected by a swarm of bees so that the enemy could not reach it and later it was carried away by a deluge of rain. According to al-Wāḳidī, 155, however, Muḥammad received news of the event at the same time as that of Biʾr Maʿūna; and according to Ibn Hishām, 641, it was not ʿĀṣim, but Khubayb, who prayed to Allāh asking him to cause Muḥammad to be informed. According to al-Zuhrī and ʿUrwa (see the latter's brief account in al-Wāḳidī, 156) the ten men were sent out as a *sariyya* to spy upon the Meccans; according to Ibn Hishām, 638, al-Wāḳidī, 157 and Ibn Saʿd, ii/1, 39-40, iii/2, 33-4, ten teachers of religion, who were on their way to a tribe to instruct them, were treacherously placed at the mercy of the enemy by their guides. This story is too much like that which has been woven round the drama of Biʾr Maʿūna, which happened at the same time. Al-Wāḳidī, 227, tells us under the year 628 that Khubayb was not yet at that time a prisoner among the Meccans. The only certain chronological statement that can be made is that the event took place after the battle of Uḥud, as ʿĀṣim fought there. In the official *Sīra*, the incident is recorded under the name *Yawm al-Radjīʿ* and put by Ibn Hishām in the year 3 and by al-Wāḳidī in the year 4.

The figure of the protomartyr Khubayb lent itself readily to embellishment. The daughter of al-Ḥārith (according to others Māwyis, a client of Hudjayr b. Abī Ihāb), in whose house he was kept a prisoner, saw him one day eating grapes, although these could not possibly be obtained in Mecca. When his martyrdom approached, he asked for a knife with which to remove the hair on his privy parts (as was usual in such cases); the woman sent a little boy with it to him, but became terrified at the thought of his possible revenge; when Khubayb noticed her terror, he calmed her with the assurance that no such cruelty need be feared from him. The verses above mentioned, which he is said to have uttered at the stake, have grown in Ibn Hishām to a whole poem. The same author (644 ff.) gives the elegies uttered over him. For how his corpse was taken from the Ḳuraysh and swallowed up by the earth, see Ṭabarī, i, 1436-7 = *Iṣāba*, i, 862.

Bibliography: al-Zuhrī's or Abū Hurayra's tradition in Aḥmad b. Ḥanbal, *Musnad*, ii, 294 ff., 310-11, and in al-Bukhārī, *Djihād*, bāb 170; Ibn Isḥāḳ's version, 638 ff., goes back to ʿĀṣim b. ʿUmar b. Ḳatāda; al-Wāḳidī, tr. Wellhausen, 156 ff. (cf. 226-7) compiled the whole story from various sources; Ibn Saʿd, iii/2, 33-4; al-Diyārbekrī, *Taʾrīkh al-Khamīs*, Cairo 1203, i, 454 ff.; Ibn Ḥadjar, *Iṣāba*, i, 860 ff.; Ibn al-Athīr, *Usd al-ghāba*, ii, 111 ff.; Caetani, *Annali dell' Islām*, Anno 4, § 7, 8; Anno 6, § 2; Ṭabarī, i, 1431 ff., who gives the two main versions; Ibn al-Kalbī-Caskel, tab. 77, on his genealogy. (A. J. Wensinck)

KHŪBMESĪḤĪS, the members of an obscure heretical movement in 11th/17th century Istanbul that preached the superiority of Jesus to the Prophet Muḥammad. The term derives from Persian *khūb* "good, virtuous", and *mesīḥ* = Messiah". Some description of their tenets is to be found in Paul Rycaut's *The present state of the Ottoman Empire*, London 1668, 129. Rycaut attributes to the Khūbmesīḥīs a belief in Jesus as "God and Redeemer of the World", and says that it is "principally maintained amongst the gallants of the Seraglio". Although adherence to the doctrine was liable to bring death, and its followers commonly practised secrecy, they might be recognised by the white turbans they wore. According to Rycaut, in addition to designating a member of the movement, the term Khūbmesīḥī entered general usage as a description for anyone of mild and affable disposition. The accuracy of this information in all its points is not to be assumed; many of the statements of Rycaut on religious matters are demonstrably erroneous. The Khūbmesīḥī movement presumably found its inspiration in the teaching of Ḳābiḍ, executed in Istanbul in 934/1527, after some delay, for alleging that the spiritual rank of Jesus was superior to that of the Prophet. Rycaut makes no mention of Ḳābiḍ, however, nor do any of the sources on Ḳābiḍ (e.g. Ibrāhīm Pečewī, *Taʾrīkh*, Istanbul 1283/1866, i, 124-6) attribute to him the foundation of the Khūbmesīḥī movement.

Bibliography: Given in the text.

(Hamid Algar)

KHUBZ (A.) generic term (nomen unitatis: *khubza*) meaning bread, whatever the cereal employed, e.g. corn [see ḲAMḤ], barley [see SHAʿĪR], rice [see RUZZ] etc., and whatever the quality, the shape and the method of preparation. There exists nevertheless, in literary Arabic and, to a greater degree in the various dialects, a certain number of metaphors and of specific terms which cannot all be mentioned in this brief article, and the ellipsis of the word *khubz*, in expressions denoting a particular type, causes the semantic range of the fundamental notion to be appreciably enlarged: thus *khamīr* for *khubz*un *khamīr*un "leavened bread", *faṭīr* for *khubz*un *faṭīr*un "unleavened bread" etc. The baker is called *khabbāz* (but in Morocco this is known only in its feminine form *khabbāza*; see below), or *farrān* "oven-worker" (which however in Morocco means a communal oven), and a bakery is called *makhbaz* or simply *furn* "communal oven" (in technical usage corresponding to *kūsha* "lime-kiln" etc.). All these terms apply to precise cases which will be summarised later.

The economy of ancient Arabia was such that the Arabs could not make bread the basis of their diet [see GHIDHĀʾ, i], so that the expression *ākil al-khubz* "bread-eater" was a laudatory epithet implying considerable affluence (al-Djāḥiẓ, *Bukhalāʾ*, ed. Ḥādjirī, 211). Nevertheless, the nomads occasionally ate a *ṭulma* ("flat bread", for *khubz*u *ṭulmat*in), that is a kind of pancake cooked on a heated stone, or a *malla* ("hot ash", for *khubz*u *mallat*in) also called *malīl*, a thicker loaf cooked under ash according to a process similar to that described by A. Jaussen (*Coutumes des Arabes au pays de Moab*², Paris 1948, 63) in talking of *ḳorṣ*: on arrival at the halting place, the Bedouin kneads flour with water and salt (if he has got it), but without adding yeast, and makes a sort of pie which he cooks in ash, turning it frequently to prevent burning. E. Laoust (*Mots et choses berbères*, Paris 1920, 89-90) has collected in Berber (where bread is called *aghrum*) a text which refers to some very similar practices.

For their part, the sedentary people, who were familiar with the whitest flour (*ḥuwwārā*) and bread of the finest quality which they cooked in an oven (*tannūr*), did not eat it regularly. They used to crumble it, however, to make a broth (*tharīd*) which the Prophet placed above all other foods (al-Bukhārī, *kitāb al-aṭʿima, bab* 27) and it is known that, according to the tradition, Hāshim [*q.v.*] owes his name to the fact that he crumbled (*hashama*) bread to make broth; this economical dish was highly thought of for a long period after Islam.

The conquest of several nations which produced corn in abundance increased in the various classes of society, and in varying degrees, the consumption of

bread, which was from that time considered, with nuances, "the subsistence of the land-dwellers, the basis of nourishment and the prince of foods" (al-Djāḥiẓ, *Bukhalā'*, 114) and city-dwellers who did not offer it to their guest unstintingly are taken to task (*ibid.*, 182). The *Kitāb al-Bukhalā'* (see index, s.v. KHUBZ) provides interesting details regarding wheat-bread and its use, but in general it gives a picture of an affluent class, whose members were in a position to own a slave charged with the functions of a waiter or of a majordomo rather than a baker, but called *khabbāz* because of the importance attached to bread (*ibid.*, 48).

The same work (108), while giving valuable information on the refined standard of cuisine then practised, shows that bread was never eaten alone, and that it was incorrect to offer it dry, (*khubz*ᵘⁿ *kafār*ᵘⁿ). In the more affluent circles, it did not constitute the most substantial part of the diet and was rather used for dipping or was eaten from side-plates, while in poorer families and from a very ancient period, it was always accompanied by some condiment (*udm*) designed to make it palatable; in the present day, a term taken from the root *ʿd w*: *ʿadū*, or *dj w z* "to fan": *djwāz, jwāz, dwāz*, clearly expresses this idea; however, the interested parties probably do not take into account the imbalance which they create in thus adding lipids to the proteins and glucoses contained in bread. It should be stressed however that not everyone was in a position to eat it regularly, and even today, it still constitutes a rare luxury for certain particularly impoverished populations; for the more affluent, the basis of the diet is often, in many regions, boiled rice, ground corn (*burghul*) or kuskus (see KUSKUSŪ).

Since the classical period and, to a large extent, to the present day, there have existed various categories of bread which can be reduced to the following, while it may be noted that the dialectical vocabulary, extremely variable and rich, deserves to be the object of a linguistic-geographical study, whose ethno-sociological results could yield useful information:

— in Iraq, rice cultivated in the region of Baṣra was used probably by a limited number of bakers (among whom a popular poet, al-Khubz'aruzzi [*q.v.*] was to become famous) to make a bread which was quite cheap and accessible to the poorer classes, as well as to those who lived an ascetic life-style (cf. Ibn Baṭṭūṭa, ii, 5); in the other regions where it was cultivated, notably in Palestine and Egypt, rice was more often consumed in other forms (see M. Canard, *Le riz dans le Proche-Orient*, in *Arabica*, vi/2 (1959), 122 ff.);

— white bread, made with pure wheat-flour (*ḥuwwārā*) was in general confined to the more affluent families, but it seems to have been in widespread use in a number of countries, such as Palestine and Egypt; physicians actively recommended it, although it was less nutritious than

— bread of coarse-ground flour (*khushkār* and vars.) which was consumed by people of less means;

— bread made from common wheat, perhaps mixed with a little barley-flour;

— semolina bread (*samīdh/samīd*);

— barley bread, more coarse, mention of which appears frequently in the ḥadīth; ascetics judged it to be sufficient, but many poor families even today, must be content with it; in North Africa, *kesra*, and in the Near-East, *ḳurṣ*, are often nothing more than pancake of barley-flour, pure or mixed with a little wheat-flour;

— to this list it is appropriate to add the bread manufactured, in times of hardship, with flour of maize, millet or sorghum (*dhura*) or even of some wild plant, such as *sameḥ* in Jordan.

Apart from various pastries based on wheat-flour, bread was presented, with variations on which we cannot dwell here, in two principal forms;

— *ruḳāḳ*, very thin, was cooked on a slab of iron (or later, of stone) heated on a hearth or a brazier. This slab, called *ṭābaḳ/ṭābil* in the Middle Ages, is still in use in the Near East where it is convex and bears the name *ṣādj*; in the Maghrib, similar baking is not unknown, but a type of earthenware casserole is more often used, and bread thus prepared is called *marḳūḳ* or *maṭlūʿ* (cf. E. Laoust, *op. laud.*, 89 for the Berber world);

— *raghīf*, or (from Persian) *djardaḳ/djardhaḳ* is a round bread (*muḥawwar*) quite thick and cooked in an oven. But there is a distinction there between the domestic and the communal oven. The former (*tannūr*; currently *ṭābūn/ṭābūna*) has the form of an upturned jar without a base or of the frustrum of a cone open in the upper part; it is heated by means of embers placed inside and the raw dough is spread on the sides, on the outside (see Beaussier and Dozy, *Suppl.*, s.v. *ṭābūn*). In certain regions there is also still to be found a *tannūr* dug into the earth, while in Jordan (Jaussen, *Moab*, 63) *ṭābūn* refers to a small construction in which is placed a sort of cooking-pot, surrounded by embers to cook the dough in the interior. In encampments the oven is replaced by a pottery plate (*ghannāy* or *ḥammāṣ* in Tunisia) which is heated on a brazier (*kānūn*) or even, on occasion, by heated stones.

As for the communal oven (*furn*, *kūsha*) it is found in various parts of the towns as well as in the villages, and it is there that individuals normally cook their bread for consumption at home. Until recently, in the Maghrib at least, it was considered dishonourable to buy one's bread outside, and the kneading of the dough, an essentially feminine occupation, was the duty of the mistress of the house or of a servant. On a large wooden tray (*ḳaṣʿa/gaṣʿa*), the housewife put, sometimes with a little bran, flour of corn or of barley or of both, or even of semolina, in quantities sufficient to provide food for several days, added yeast and salt, then poured in hot water and kneaded the dough which she then cut into pieces and left to rise on a tray in a warm place. A journeyman baker (*ṭarrāḥ* in Morocco) went round the houses, took the trays, imprinted on each piece a distinctive mark and took it all to the bakehouse.

The baking done, the baker came and handed over to each family the tray and the bread belonging to it. The wages of the baker consisted of a piece of bread which he baked and sold to his profit; in al-Andalus, this bread was called *poya* (and vars.) and this term has survived under the form *pīwa/pūya/būya*, in some regions of Morocco and of Algeria to designate the salary of the baker, even after it became the practice to pay him in cash (see W. Marçais, *Textes arabes de Tanger*, Paris 1911, 242-3; this work contains, pp. 2-39, 127-51, an extremely vivid text relating to the journeymen and the bakers, notes and a bibliography.)

Thus there were no real bakeries, and there was no *sūḳ* reserved for the making and the sale of bread. However, foreigners, individuals and bachelors were able to obtain it, either from certain women who kneaded extra pastry in order to sell the surplus bread in the streets, at a price fixed by the *muḥtasib*, or from bakers or retailers; in fact the *farrān* sold not only the small amounts of bread that they had

received in wages (for they were in principle forbidden to mix the pieces of dough to make large loaves; cf. E. Lévi-Provençal, *Séville musulmane*, §§ 115, 148), but also the bread which they made on their own account. The authors of works of *ḥisba* [*q.v.*] especially al-Saḳaṭī (G. S. Colin and E. Lévi-Provençal, *Un manuel hispanique de ḥisba*, Paris 1931, 26-32 and *passim*; Spanish tr. P. Chalmeta, in *al-And.* (1968 ff.), §§ 53-67 and *passim*), enumerated in detail the frauds committed by these bakers, in such matters as the mixing of flours of different qualities (and even the addition of white earth), as well as malpractices in the baking and in the weighing of the bread, and also the rules of hygiene which were to be observed by the bakers and the traders who, in particular, were not allowed to work at professions such as those of the butcher or the fishmonger. (cf. Ibn ʿAbd al-Raʾūf, ed E. Lévi-Provençal, *Trois traités hispaniques de ḥisba*, Cairo 1955, 89-90; French tr. R. Arié, in *Hespéris-Tamuda*, i/2 (1960), 201-2). In spite of these precautions, the quality was not always high, and bread sometimes contained gravel and other impurities (cf. M. Talbi, in *Arabica*, i/3 (1954), 299).

The price of bread, sold by weight and not by the loaf, was fixed by the *muḥtasib*, but it varied enormously, and it is the price of corn which provides the most convenient basis for estimating the cost of living; we confine ourselves to referring to E. Ashtor's fundamental work, *Histoire des prix et des salaires dans l'Orient médiéval*, Paris 1969, and to the article ṬĀḤŪN for all matters relating to the different types of flour.

As in other civilisations, bread is treated with great respect. It is always broken and it should never be cut with a knife. A crumb which falls to the ground is picked up, raised to the lips and swallowed; a piece of bread found on the road is put, for the benefit of some destitute person, in a place where it will not be trodden on and soiled. And even though it does not constitute, strictly speaking, the basis of the diet, it is given in the Arabic dialects names which refer to life and to subsistence; *ʿaysh*/*ʿish*, *maʿīsha*, *kūt*, etc. And it is not absolutely certain that the magical purposes that it served have totally disappeared.

However, the situation described above has now been perceptively modified in the sense that, in the towns at least, it is from the bakeries that the population buys the bread that it needs; but if the making of bread has borrowed from the West certain modern processes, anyone can still easily obtain *khubz ʿarabī* prepared and presented as in ancient times. Also, in the countryside the tradition is still alive.

(CH. PELLAT)

AL-KHUBZAʾARUZZĪ (many possible vocalisations), ABU 'L-ḲĀSIM NAṢR B. AḤMAD B. AL-MAʾMŪN, popular poet of Baṣra, who probably died in 327/938. He made rice bread (*khubz aruzz*) in a shop at the Mirbad [*q.v.*], where his biographers show him as surrounded by a circle of admirers who were especially attracted by his *ghazal* verses on boys, these being his speciality. It does not seem that he should be included in the list of those poets whose belligerence involved them in contests and controversies, nor does he seem to have been inclined, like so many of his compatriots, to attack the honour of others; because of this last fact, al-Masʿūdī's information that he had to flee into Arabia in order to avoid the vengeance of one of the Barīdīs [*q.v.*] is dubious. This same author states that his verses, set to music, were sung everywhere, but except in error, the *Aghānī* cites none of them. At all events, his *Dīwān*, put together by his friend Ibn Lankak [*q.v.*], must have spread considerably beyond the confines of his native town and even of Baghdad, where he lived for some time. This is confirmed by the fact that this illiterate (*ummī*) poet was highly appreciated by a person who held fast to the classical tradition like Ibn Sharaf [*q.v.*], who attributes to him "ingenious shafts of wit and subtle inventions, in a closely-knit form and a chaste style, with no superfluities". The judgments of the biographers and anthologists confirm this appreciation, which the extant fragments of his work do not however seem entirely to justify; but the complete *Dīwān* must have been much richer and must have had enough originality to have stimulated the jealousy of a certain "great poet", thus referred to briefly by Ibn Sharaf.

(CH. PELLAT)

KHUDĀ BAKHSH, a notable bibliophile of Muslim India, the founder of the celebrated Oriental Public Library, at Patna, Bihar, India. He was born in 1824 at Chapra, and received his education in the University of Calcutta. After obtaining his degree in law, he began to practise as a lawyer at Patna at the age of twenty-six. He soon achieved considerable success in his profession, and was appointed a public prosecutor, which post he held for many years. In 1894, he was invited to serve as the Chief Justice of the High Court at Hyderabad, Deccan. On his retirement in 1898, he lived a quiet life at Patna, where he died in 1908 and was buried in the precints of the library he had founded. In recognition of his public services, the order of C.I.E. was conferred on him in 1903 by the British Government of India.

Khudā Bakhsh had inherited his passion for collecting rare Arabic and Persian manuscripts from his father. When his father died in 1876, he left him a collection of 1,400 manuscripts, with the behest to make it into a *waḳf* as soon as circumstances should permit him to do so. He continued to make substantial additions to it, till the number of manuscripts had reached 4,000 in 1891, when the collection, along with the building which accommodated it, was made into a public trust. The *waḳf*-deed was duly executed on 29 October 1891, and the library was formally opened by the Lieutenant-Governor of Bengal and Bihar. It was given the name of the "Oriental Public Library", though the people have

often persisted in calling it the "Khudā Bakhsh Library" after the name of the generous donor.

A new era in the history of the Library opened in 1903, when it was visited by Lord Curzon, then Governor-General and Viceroy of India. He was deeply impressed by its literary treasures, and ordered that a suitable new building be erected to accommodate them. He also discussed plans for the proper preservation and safe-keeping of the manuscripts; and at the same time he directed Dr. E. Denison Ross, then Principal of the Calcutta Madrasa, to make suitable arrangements for the proper cataloguing of the manuscripts.

Twenty-eight volumes of the catalogue have so far (1970) been published, in addition to two Supplements and an Index. The work of cataloguing is still in progress. The library at present contains 4,232 Arabic and 4,238 Persian manuscripts, in addition to a number of printed books in Arabic, Persian, Urdu, Hindi, English, French, German, Latin and other languages.

Khudā Bakhsh was survived by his son Ṣalāḥ al-Dīn Khudā Bakhsh, Barrister-at-Law. Like his father, he too was a legal practitioner, but found time to write a number of essays and papers on Islamic history and civilisation, which have been collected in book form. He also translated into English some of the works of Alfred von Kremer and Joseph Hell, and was accordingly characterised by D. S. Margoliouth as an "interpreter of Indian Islam to Europe and of European Orientalism to India". He was a liberal and a modernist in his social and religious views.

Bibliography: V. C. Scott O'Connor, *An eastern library*, Glasgow 1920; Salah-ud-Din Khuda Bakhsh, *My father, his life and reminiscences*, Calcutta 1909; information supplied by the present Librarian. (SH. INAYATULLAH)

KHUDĀBENDE [see ULDJAYTU]

KHUDĀWAND (P), God, lord, master. There is no established etymology for this word and no Middle or Old Persian antecedent. It is used in Ghaznawid times in the sense of lord or master (cf. Abu 'l-Faḍl Muḥammad b. Ḥusayn Bayhaḳī, *Tārikh-i Bayhaḳī*, ed. ʿAlī Akbar Fayyāḍ, Mashhad 1971, 23, 435, and *passim*). In documents and letters belonging to the Saldjūḳs and Khʷārazmshāhs it is used as a term of address to the sultan, usually with some qualifying word or phrase such as *khudāwand-i ʿālam* "lord of the world" (cf. Muntadjab al-Dīn al-Djuwaynī, *ʿAtabat al-kataba*, ed. Muḥammad Ḳazwīnī and ʿAbbās Iḳbāl, Tehran 1950, 4; Bahāʾ al-Dīn Muḥammad b. Muʿayyad Baghdādī, *al-Tawassul ilā 'l-tarassul*, ed. Aḥmad Bahmanyār, Tehran 1937, 139, 341). *Khudāyagān-i ʿālam* and other similar combinations are also found in the same sense. *Khudāwand*, with or without a qualifying phrase such as *walī niʿam*, is also used as a form of address to government officials (civil and military) and to patrons in general. Muḥammad b. ʿAbd al-Khāliḳ al-Mayhanī in his manual on the art of the secretary, *Dastūr-i Dabīrī*, written in 575/1180, mentions *khudāwand-i ʿālam*, *khudāwand-i djahān*, *khudāyagān-i djahān and khudāwand-i walī-niʿam* among the forms of address accorded to the sultan (ed. Adnan Erzi, Ankara 1962, 13, 15). He also includes *khudāwand* among the titles of the *wazīr* (*ibid.*, 16).

The terms *khudāwand-i aʿẓam*, *khudāyagān-i ʿālam* and similar combinations are common in Djalāʾirid, Aḳ Ḳoyunlū and Ḳarā Ḳoyunlū documents. The derivative term *khudāwandagār* is common as an honorific for *wazīrs* and commanders under the Saldjūḳs of Rūm (A. Z. V. Togan, *Umumî türk tarihine giriş*, Istanbul 1946, 329) and in Ottoman usage (I. Beldiceanu-Steinherr, *Recherches sur les actes des règnes des sultans Osman, Orkhan et Murad I*, Munich 1967; H. Inalcık, *İA*, art. *Pâdişâh*). See also E. Quatremère, *Histoire des sultans Mamlouks de l'Égypte*, Paris 1837-45, i, 64 ff., and F. Taeschner, *Die Werke der Familie Dai Qaraǧa Beg in Brussa*, in *Isl.* xx (1932), 175).

(A. K. S. LAMBTON)

KHUDĀWENDIGĀR (P.) "lord, owner, master"; in Ottoman usage, it was used as (1) the title of Murād I, and (2) the name of the *sandjaḳ* and province of Bursa.

1. The title *Khudāwendigār* was used for commanders and viziers during the Saldjūḳ period (Ḥasan b. ʿAbd al-Muʾmin al-Khōyī, *Ghunyat al-kātib wa-munyat al-ṭālib fī rusūm al-rasāʾil wa-madjmūʿ al-faḍāʾil*, ed. N. Lugal-Adnan S. Erzi, Ankara 1963, 4-5; M. C. Şahabettin Tekindağ, *İzzet Koyunluoğlu Kütüphanesinde bulunan Türkçe yazmalar*, in *TM*, xvi 1971, 134-5). As an attribute, the term was used for mystics like Djalāl al-Dīn Rūmī and Ḥādjdjī Bektāsh (Eflāḳī, *Manāḳib al-ʿārifīn*, ed. Tahsin Yazıcı, Ankara 1959, i-ii, index). The word became widely used, especially after its usage as a title for the Ottoman sultan Murād I (761-91/1360-89) (Ferīdūn, *Münsheʾāt al-selāṭīn*, Istanbul 1274, i, 100, 103-4, 105-9, 112, 163, 166; M. Tayyib Gökbilgin, *XV-XVI asırlarda Edirne ve Paşaeli livası*, Istanbul 1952, 172), but the early Ottomans historians (e.g. ʿĀshıḳpasha-zāde, Neshrī, Orūč, Bihishtī) do not mention this title. In 9th/15th century documents, when referring to the reign of Murād I, the phrase *Khudāwendigār zamanında* is used without mentioning the Sultan's name (H. Inalcık, *Hicri 835 tarihli Sûret-i defter-i sancak-i Arvanid*, Ankara 1954, 154; *Ḳānūn-nāme-i Sulṭānī ber mūceb-i ʿörf-i ʿOthmānī*, ed. H. Inalcık and R. Anhegger, Ankara 1956, 77, 81; Çağatay Uluçay, *Saruhanoğulları ve eserlerine dair vesikalar*, Istanbul 1946, ii, 44, 48). The 10th/16th century historians accord Murād I the title of *Khudāwendigār*. Also, Murād I was sometimes addressed as *Ghāzī Khünkār* (Gökbilgin, *op. cit.*, 175) and it has been argued that the word *khünkār* is a variant form of *Khudāwendigār* (for the form *khundkār* used in a document of 848/1444, see Halil Inalcık, *Arvanid livası*, 9). On the evidence of the documents, the term *khudāwendigār* was used for the successors of Murād I from Bāyezīd I to Selīm I (Ferīdūn, *op. cit.*, i, 118, 124, 149, 151-2, 154, 165, 187, 290, 304, 373, 377; A. Nimet Kurat, *Topkapı Sarayı Müzesinde bulunan Altınordu, Kırım ve Türkistan hanlarına ait yarlık ve bitikler*, Istanbul 1940, 49-50). As applied to these Sultans, it had the same meaning as the terms *pādishāh* and *khudāwend* (*Ḳānūn-nāme*, Veliyüddin Efendi Library, no. 1970, ff. 15b, 16a; Tekindağ, *op. cit.*, 135, n. 3); but in the 11th/17th century, it was applied to Murād I exclusively (Ewliyā Čelebi, *Seyāhat-nāme*, Istanbul 1314, 14).

2. The use of Khudāwendigār as a name for the province of Bursa started after its conquest when Orkhān gave the town, together with its surrounding lands, to his son Murād as a *sandjaḳ* (Neshrī, *Djihān-numā*, ed. F. Taeschner, Leipzig 1951, 56; ʿĀshıḳpasha-zāde, *Taʾrīkh*, Istanbul 1915, 43). However, there is no record in the contemporary sources that this name was used during the reign of Murād I (cf. Kātib Čelebi, *Djihān-numā*, Istanbul 1145/1732, 656). At this early period, Bursa was the capital of the Ottoman leader, himself called the *emīr-i kebīr*, and the province was therefore called after him *beg sandjaghı* (see H. Inalcık, *Bursa şeriye sicillerinde Fatih Sultan Mehmed'in fermanları*, in *Belleten*, liv,

698, 702; M. Akdağ, *Türkiye'nin iktisadi ve içtimai tarihi (1558-1589)*, Ankara 1971, ii, 284, 309). The oldest document relating to the region and calling it Khudāwendigār is the *Khudāwendigār liwāsi taḥrīr defteri* dated 892/1487 (Başbakanlık Arşiv Genel Müdürlüğü Tapu Defteri no. 23). From this date onwards, the term *Khudāwendigār sandjaghi* was sometimes used instead of "the *sandjaḳ* of Bursa" (M. Akdağ, *op. cit.*, ii, 310; H. T. Dağlioğlu, *xvi asırda Bursa (1558-1589)*, Bursa 1940, 31, 41 and *passim*). The *Khudāwendigār sandjaghi* in the *eyālet* of Anatolia was organised as a separate province in the 19th century. This province consisted of the *sandjaḳs* of Karahisar-ı Sahib, Kütahya, Bilecek, Erdek, and Biga in 1846-7; it was reduced to a mere *mutaṣarrıflıḳ* in 1860, but restored to the status of a province again in 1861-2. Khudāwendigār, according to the provincial organisation regulation of 1864, consisted of Kütahya, Kocaeli, Karesi, Karahisar-i Sahib and the central *sandjaḳ* of Khudāwendigār itself (Vecihi Tönük, *Türkiye'de idâri teşkilât*, Ankara 1945, 110, 128, 130, 164).

KHUDJAND(A), a town and district in Central Asia, now the town and *oblast* of Leninabad in the Tadzhik SSR, the town lying in 40° 17′ lat. N. and 69° 37′ long. E. The mediaeval town was strung out along the left bank of the middle Sīr Daryā at the southernmost bend of its course and at the entrance to the Farghāna valley. It lay in the ill-defined borderlands between the Transoxanian districts of Īlāḳ [*q.v.* in Suppl.] and Ushrūsana [*q.v.*], and was generally reckoned as being connected administratively with one or other of these two in the early middle ages. Its destinies were, however, frequently linked with those of the region of Farghāna [*q.v.*] to the east, the frontier between the two districts being marked, according to the *Ḥudūd al-ʿālam* (372/982), tr. 115-16, by the town of Wāthkath or Wān Kath.

At the time of the Arab invasions of Transoxania, there was a local ruler or *malik* of Khudjand, apparently dependent on the ruler of Farghāna. The town was captured by the Arabs in 103-4/722, when anti-Arab elements of the Soghdians who had retreated thither were dislodged by Saʿīd b. ʿAmr al-Ḥarashī's troops, with a savage massacre of the besieged (Ṭabarī, ii, 1439 ff.; Barthold, *Turkestan down to the Mongol invasion*[3], 189; H. A. R. Gibb, *The Arab conquests in Central Asia*, London 1923, 62-3). It must nevertheless have been speedily lost to the Arabs shortly afterwards when the local rulers of Soghdia were joined by the Ḳaghan of the Western Turks or Türgesh, Su-lu, and the Arabs temporarily expelled from most of Transoxania. Not surprisingly, the people of Khudjand joined those of Farghāna, Ushrūsana, Čaghāniyān, etc. in supporting the rebellion of Rāfiʿ b. al-Layth during the years 190-3/806-9, according to Yaʿḳūbī.

The geographers of the 3rd-4th/9th-10th centuries now describe Khudjand and its district as a fertile and prosperous one, with many orchards and vineyards, although the town had to import grain from Farghāna and elsewhere. Ibn Ḥawḳal states that Khudjand had a *ḳuhandiz* or citadel with a prison; a *madīna* or inner city; and a *rabaḍ* or outer city, where the local ruler's palace, the *dār al-imāra*, lay. As befitted a frontier region, the inhabitants were warlike and generous. Furthermore, the town was an important centre for river navigation along the Sīr Daryā. This same author describes the district of Khudjand as extending southwards towards Washgird and Čaghāniyān, sc. to the Buttamān Mts. separating the basins of the upper Sīr Daryā and the upper Oxus. The only other town of the Khudjand district was Kand or Kand-i Bādhām "Kand of the almonds", so-called for a local product, almonds; this was presumably on the site of the modern village of Kan-i Badam, some 40 miles from Khudjand-Leninabad, visited by the American traveller E. Schuyler in the mid-1870s en route for Khoḳand (see Ibn Ḥawḳal, tr. Kramers-Wiet, ii, 457, 489; Le Strange, *The lands of the Eastern Caliphate*, 479; Barthold, *Turkestan*[3], 157-8, 164-5; Schuyler, *Turkistan. Notes of a journey in Russian Turkistan, Khokand, Bukhara, and Kuldja*, London 1876, ii, 3-4). A considerable number of *ʿulamāʾ* bearing the *nisba* of "al-Khudjandī" are mentioned by e.g. Samʿānī, *Ansāb*, ed. Hyderabad, v, 53-6, and Yāḳūt, *Buldān*, ed. Beirut, ii, 348; most notable of these is the mathematician and astronomer Abū Maḥmūd Ḥāmid al-Khudjandī, d. 390/1000 [*q.v.*].

Khudjand was a place of importance under the Ḳarā-Khānids or Ilek Khāns [*q.v.*], and in the early years of the 5th/11th century, from 406/1015-6 onwards, Arslan Khān Muḥammad b. ʿAlī, originally ruler in Talas, minted coins there (see R. Vasmer, *Zur Münzkunde der Qarāḫāniden*, in *MSOS*, Westas. Studien, xxxiii (1939), 90-1, and E. von Zambaur, *Die Münzpragungen des Islams, zeitlich und örtlich geordnet*, i, Wiesbaden 1968, 110). In the mid-5th/11th century it was the frontier town between the eastern khānate of Kāshghar and Balāsāghūn under the sons of Ḳadir Khān Yūsuf and the western one of Transoxania under Shams al-Mulk Naṣr b. Tamghač Khān Ibrāhīm. It was also at Khudjand that in 531/1137 the Ḳarā Khiṭāy invaders won a victory over the Ḳarā-Khānid Maḥmūd b. Muḥammad.

During the period of the Mongol invasions, Khudjand was in 617/1220 stubbornly defended after the fall of Samarḳand by the governor Temür Malik against a besieging force of 20,000 Mongol troops and 50,000 pressed levies, and after abandoning the citadel, he sailed away down the river and eventually reached Khwārazm (E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1910, i, 277-8; Djuwaynī-Boyle, ii, 92-4). In the next century, under the Čaghatayids, the *ulus* of the important Djalāyir tribe in the Khāns' following was the district around Khudjand, until in 778/1376, after the revolt of the Djalāyirs, they were disbanded by Tīmūr and dispersed from the region (Barthold, *Four studies on the history of Central Asia*, ii. *Ulugh Beg*, 9, 26). Bābur, in the period of his struggles in Farghāna against the kinsmen who were his rivals for power, used Khudjand as a centre for operations in 903/1497-8; he has given an enthusiastic description of the walled town or *ḳurghan* of Khudjand and its many amenities (*Bābur-nāma*, tr. Beveridge, 7-8, 89-92).

It was the connections of the Mongols and their epigoni in Central Asia with their kinsmen in northern China which stimulated mentions of Khudjand in the Chinese annals of the 14th century, e.g. as Hu-ch'an

in the *Yüan-shi*, and an early 14th century Chinese map shows it as Hu-jan; mediaeval Chinese travellers call the Sīr Daryā the Ho-ch'an or Hu-k'ien "river of Khudjand", following Arabic usage of such terms as *Nahr Khudjand* or *Nahr al-Shāsh* for that river (cf. Bretschneider, *op. cit.*, ii, 54-5).

After being under Özbeg rule, Khudjand became part of the Khānate of Khoḳand at the beginning of the 19th century, but in 1842 was captured by the Mangit Khān of Bukhārā, Naṣr Allāh b. Ḥaydar (see F. H. Skrine and E. D. Ross, *The heart of Asia, a history of Russian Turkestan and the Central Asian khanates*, London 1899, 215-16). In May 1866 Khudjand fell to the Russian armies of General Romanovski after a bloody siege of eight days, in which 2,500 of the defending Khoḳandī force were killed, and the town was then used as a base for the final reduction of the Khānate of Khoḳand (see *ibid.*, 251-2; Schuyler, *op. cit.*, i, 312 ff., 339, 354; R. A. Pierce, *Russian Central Asia 1867-1917, a study in colonial rule*, Berkeley and Los Angeles 1960, 23-5, 34-5). In 1875 the Russian garrison in Khudjand was for a while besieged there by a rebellious faction in the Khānate of Khoḳand, and it was this revolt in Khoḳand which led to the final annexation of the Khānate by Russia [see KHOḲAND]. Under Tsarist rule, Khudjand eventually became part of the Samarḳand *oblast* of the Governor-Generalship of Turkestan.

Under the Soviets, Khudjand was in 1936 re-named Leninabad, and this name was also given to the northern *oblast* of the Tadzhik SSR. It is now the second most important industrial and cultural centre of the Republic after Dushambe (the Stalinabad of 1929-61), with manufactures of cotton, silk and footware, food processing, and with orchards and vineyards outside the town. The population in 1970 was 103,000 (see *BSE*², xxiv, 513-5).

(C. E. BOSWORTH)

AL-**KHUDJANDĪ**, ABŪ MAḤMŪD ḤĀMID B. AL-KHIḌR, astronomer and mathematician, originally from Khudjand in Transoxania. He lived under the protection of the Buwayhid Fakhr al-Dawla (366-87/976-97) and died in 390/1000.

From amongst his mathematical works, there has survived in Cairo the manuscript of a treatise on geometry. We know that he was concerned with the resolution of equations of the third degree by geometrical methods and that he demonstrated, in an imperfect manner, that the sum of two cubed numbers cannot be another cube. Naṣīr al-Dīn al-Ṭūsī (*K. Shakl al-ḳaṭṭāʿ*, Istanbul 1891, 108-20) affirms that Abu 'l-Wafāʾ al-Būzadjānī [*q.v.*], Abū Naṣr Manṣūr b. ʿAlī b. ʿIrāḳ [*q.v.*] and al-Khudjandī are the three authors to whom are attributed the discovery of the sine law called by the latter the "astronomical law" (*ḳānūn al-hayʾa*), because of its frequent use in astronomy, and he gives the proof which he offered of this law (cf. C. Schoy, *Behandlung einiger geometrischen Fragepunkte durch muslimische Mathematiker*, in *Isis*, viii (1926), 260-3). However, P. Luckey, in his *Zur Entstehung der Kugeldreiechtsrechnung*, in *Deutsche Mathematik*, v (1940-1), 416, 418-9, rejects al-Khudjandī's part in this in principle, because we are concerned here with a person whose outstanding work was in the field of practical astronomy.

Al-Bīrūnī, in his *Taḥdīd nihāyat al-amākin*, in *RIMA*, viii (1962), 107, states that al-Khudjandī was "unique in his age" (*awḥad zamānihi*) for the construction of astrolabes and other astronomical instruments. Some manuscripts have been preserved of his treatise *Fī ʿamal al-āla al-ʿāmma*, in which is described a universal instrument (*al-āla al-ʿāmma* or *al-shāmila*) to be used in place of the astrolabe or quadrant. He constructed an armillary sphere and other instruments, and must have worked on theoretical questions concerning the laying out of the plan of an astrolabe, since Abū Naṣr Manṣūr gives two methods of al-Khudjandī's for determining the position of the circles of the azimuth on the astrolabe by the intersection of the equator and the *muḳanṭarāt* (*Risāla fī madjāzāt dawāʾir al-sumūt fī 'l-asṭurlāb*, in *Rasāʾil ilā 'l-Bīrūnī*, Hyderabad 1948, 3-9). His most important work in the sphere of astronomical instruments was the sextant called *al-suds al-fakhrī* (sc. dedicated to Fakhr al-Dawla) which he made in order to determine the obliquity of the ecliptic. He described this instrument and the observations which he was able to make with it in his *Risāla fī 'l-mayl wa-ʿarḍ al-balad* (ed. L. Cheikho, in *Machriq*, xi (1908), 60-8). Al-Bīrūnī gave a detailed analysis of this in his *Taḥdīd*, 101-8, which is said to be based on the *Maḳāla fī taṣḥīḥ al-mayl* of al-Khudjandī (probably to be identified with the R. *fī 'l-mayl* cited above). This sextant had a diameter of 40 *dhirāʿ*s or cubits (al-Bīrūnī: 80 cubits) constructed at Ṭabrūk near Rayy and set down on the plan of the meridian; it was surrounded by walls and covered over by a roof, part of which was vaulted (*ṭāḳ*) and with an aperture 3 spans (*shibr*) in diameter (al-Bīrūnī: one span) coinciding with the centre of the sextant. With this instrument it was possible to take the height of the sun; the sun's light threw a circle on to the sextant and, in order to determine the centre, al-Khudjandī used a circle of the same radius which had two perpendicular diameters which he placed on the circle thereby lit up. Al-Khudjandī asserted that the sextant was his own invention, and he boasted that, by using it, he could make calculations down to the very second. Similar instruments seem to have been employed in the observatories of Marāgha (founded before 660/1261-2) and at Samarḳand (built in 823/1420).

With this *suds al-fakhrī*, al-Khudjandī observed the meridian height of the sun at the summer and winter solstices of the year 384/994; the procedure involved consisted in making observations on two consecutive days at the time of the solstice and in determining, by interpolation, the exact moment of the passing of the sun into the solstice. He was able to do this in the month of June, but clouds prevented him from repeating the procedure in December, so that the exactness of the whole operation was somewhat affected. His observations were made in the presence of a group of leading scholars who drew up a report. The result was: $\varepsilon = 23° 32' 19''$ ($21''$ according to al-Bīrūnī in *al-Ḳānūn al-Masʿūdī*, Hyderabad 1954, i, 364), a value which, compared to those worked out by the Indian astronomers (24°) and Ptolemy ($23° 51'$) justified al-Khudjandī's belief in a progressive reduction in the obliquity of the ecliptic. Al-Bīrūnī, who believed that ε was a constant (*Taḥdīd*, 107-8, 116; *Ḳānūn*, i, 364) emphasises that al-Khudjandī told him verbally that the aperture of the vault by which the sun's rays came in had been displaced downwards by a span before the observations regarding the winter solstice were made, so that it did not coincide exactly with the sextant's centre. This fact may explain the decrease in the value of ε in relation to other determinations made roughly around the same time.

Al-Khudjandī made other observations; he fixed the latitude of Rayy at $35° 34' 39''$ (al-Bīrūnī, *Taḥdīd*, 86-7, 99, 238; *Ḳānūn*, ii, 612), and he asserted that he had observed the planets for Fakhr al-Dawla by

means of armillary spheres and other instruments (*R. fi 'l-mayl*, 62). The final result of this work was the compiling of *al-Zīdj al-fakhrī*. An incomplete copy in Persian of a *zīdj*, preserved in the Majlis Library in Tehran (ms. 181) may be based on al-Khudjandī's observations; the period of the tables of average movements is 600 of the Yazdagirdī era, sc. about two centuries after al-Khudjandī's death (see E. S. Kennedy, *A survey of Islamic astronomical tables*, in *Trans. Amer. Philos. Soc.*, N.S., xlvi (1956), 133, No. 60).

KHUDJISTĀN, a small town or village of mediaeval Islamic Bādghīs [*q.v.*], lying to the northeast of Harāt in modern Afghānistān, and described by the mediaeval geographers as being mountainous, possessing agricultural lands and having warlike inhabitants (Iṣṭakhrī, 268-9; Ibn Ḥawḳal[2], 441, tr. Wiet. 426; *Ḥudūd al-ʿālam*, 104, 327; Yāḳūt, ii, 404; Barbier de Meynard, *Dict. géogr., hist. et litt. de la Perse*, 197). Although within a Sunnī region, Khudjistān itself was one of the last centres for the Khawāridj in eastern Iran, and the population are described as Khāridjīs and extremists (*shurāt wa-ghulāt*).

Its main claim to fame is that it gave birth in the 3rd/9th century to Aḥmad b. ʿAbd Allāh al-Khudjistānī. He was a commander in Muḥammad b. Ṭāhir's army, but after the fall of the Ṭāhirid capital Nīshāpūr to Yaʿḳūb b. Layth in 259/853, he made a bid for independent power in Khurāsān, with a base of power in Harāt and Ṭukhāristān, against the Ṣaffārids, until he was killed by one of his own *ghulāms* in 268/882. Worthy of note is the detail that Khudjistānī was allegedly launched on his career as a condottieri through hearing the martial poetry of a local author, Ḥanẓala of Bādghīs, who must have been one of the very earliest writers of verse in New Persian (Niẓāmī ʿArūḍī, *Čahar maḳāla*, ed. Browne, 26-7, revised tr. 27-9, cf. G. Lazard, *Les premiers poètes persanes (IXe-Xe siècles)*, Tehran-Paris 1964, i, 17-8, 53).

Vasmer, in *Numismatische Zeitschr.*, N.F. xxiii (1930), 116-18; C. E. Bosworth, in *Cambridge history of Iran*, iv, ed. R. N. Frye, Cambridge 1975, 116-8.

(C. E. Bosworth)

KHULDĀBĀD, a town in the northwestern part of the former Ḥaydarābād state, now in Maharashtra state of the Indian Union, and situated in lat. 20° 1′ N. and long. 75° 12′ E; it is also known as Rauza (sc. Rawḍa). It is 14 miles from Awrangābād and 8 from Dawlatābād [*q.vv.*], and a particularly holy spot for Deccani Muslims, since it contains the tombs of several Muslim saints and great men, including the Niẓām-Shāhī minister Malik ʿAnbar [*q.v.*]; Niẓām al-Mulk Āṣaf Djāh, founder of Ḥaydarābād state [*q.v.*]; and above all, of the Mughal Emperor Awrangzīb [*q.v.*], who died at Aḥmadnagar in Dhu 'l-Ḳaʿda 1118/March 1707 and was buried at the *rawḍa* or shrine of Shaykh Zayn al-Ḥaḳḳ, and of his son Aʿẓam Shāh. After Awrangzīb's burial, the place was called Khuldābād, the monarch's posthumous name being *Khuld-makām* "He whose abode is eternity" (see *Cambridge hist. of India*, iv, 302).

KHULʿ [see ṬALĀḲ].

KHULḲ [see AKHLĀḲ].

KHULM, a town of northern Afghānistān lying in the lowland region to the south of the upper Oxus at an altitude of 1,400 ft./450 m. and in lat. 36° 42′ N. and long. 67°41′ E.; it is situated some 30 miles/50 km. to the east of modern Mazār-i Sharīf and, according to the mediaeval Islamic geographers, two *marḥalas* or 10 *farsakhs* to the east of Balkh [*q.v.*]. It further lies on the Khulm River which flows down a narrow valley from the Hindu Kush past the town of Haybak and then Khulm itself until it peters out short of the Oxus. It is possible that this river is the Artamis of the Greek geographers.

The mediaeval geographers describe Khulm as the centre of a flourishing agricultural district, with luscious fruits, and as enjoying a healthy climate; the *kharādj* or land-tax was levied on the extent of irrigated land. The grapes and other fruits of Khulm were still the subject of much praise by the Scottish traveller Alexander Burnes in the early 19th century. The road from Balkh eastwards into Badakhshān and to Andarāba and the silver mines of Pandjhīr also passed through Khulm (see Le Strange, *The lands of the Eastern Caliphate*, 427, 432; *Ḥudud al-ʿālam*, 108).

Regarding the pre-Islamic history of Khulm, it has been conjectured that Khulm is the Aornos mentioned by Arrian as conquered by Alexander the Great in the winter of 330-329 BC (cf. Pauly-Wissowa, i/2, 2659). The Buddhist Chinese traveller of the early 7th century, Hiuen-Tsang, seems, however, to mention it as the kingdom of Hu-lin, whose chief town had over 10 Buddhist monasteries with more than 500 monks (see T. Watters, *On Yüan Chwang's travels in India*, London 1904, i, 106, 109). In the period of the Islamic conquests in Central Asia, it is mentioned at various times in the course of warfare, e.g. in 90/708-9 when Ḳutayba b. Muslim [*q.v.*] made his final attack on the Hephthalite leader Ṭarkhān Nīzak (Ṭabarī, ii, 1205-6, 1219, with mention of the *shiʿb Khulm* "defile or valley of Khulm"), and in 119/737 when Asad b. ʿAbd Allāh al-Ḳasrī was endeavouring to expel from Ṭukhāristān the united forces of the Turkish Khāḳān Su-lu of the Western Türgesh, the rebel al-Ḥārith b. Suraydj and the local princes of the Oxus valley principalities and of Soghdia, and the Khāḳān endeavoured in vain to take the town (Ṭabarī, ii, 1603, 1615). Once pacified, the district was settled by Arabs of Tamīm, Ḳays, Azd and Bakr (Samʿānī, *Kitāb al-Ansāb*, ed. Hyderabad 1382-6/1962-6, v, 180). Khulm also figures in the tax-assessment for Ṭukhāristān in the time of ʿAbd Allāh b. Ṭāhir's governor-

ship (years 211-12/826-8) under the sum of 12,300 dirhams per annum (Ibn Khurradādhbih, 36, cf. Marquart, *Ērānšahr*, 218); and in the fighting around Khulm in the later 3rd/9th century between the Ṣaffārids and other contenders for power in Khurāsān, the condottieri Aḥmad b. ʿAbd Allāh al-Khudjistānī [see KHUDJISTĀN] in 268/881-2 defeated ʿAmr b. Layth's ally Abū Ṭalḥa Manṣūr b. Sharkab near the town (Ibn al-Athīr, vii, 209). Culturally, Khulm was of sufficient note to produce, according to Samʿānī, *Ansāb*, v, 180-3, a well-known poet, Kaʿb b. Aḥmad, and several legal and theological scholars.

We hear little of Khulm under the rule of the successive Turkish and other dynasties of eastern Iran like the Saldjūḳs and Tīmūrids, but it was clearly within these centuries that the Turkicisation of these lands south of the Oxus took place, so that in modern Afghānistān, the population of the region is largely Uzbek.

In the period after Nādir Shāh, sc. in the later 12th/18th century, the region came under the control of a local ruler of Uzbek stock, Ḳilīdj ʿAlī Beg of Khulm. He held, according to Elphinstone, the title of *Ataliḳ* from the Durrānī kings of Kābul and paid deference to them, but was left virtually independent in return for protecting the northern borders of Afghānistān against Uzbek incursions from beyond the Oxus. It was because of these depredations that the seat of government for the Khulm region was in the early 19th century transferred from Khulm to Tash Ḳurghan 4 miles/6 km. to the south, and this has become the site of the modern town of Khulm. Various British travellers visited it at this time. W. Moorcroft (1824) mentions that the tyrannical Muḥammad Murād Beg, ruler of Ḳunduz and much of the region north of the Hindu Kush, had compelled the inhabitants of Khulm proper to transfer to his own capital of Ḳunduz. Old Khulm certainly now fell into decay, whilst New Khulm or Tash Ḳurghan flourished. Concerning population, Elphinstone (1809) estimated that Old Khulm contained about 8,000 houses, and Burnes (1832) that New Khulm had some 10,000 inhabitants. Subsequently, the sons of Ḳilīdj ʿAlī Beg reigned from Khulm over an area comprising Khulm, Haybak, Ṭalaḳān, Andarāb and Mazār-i Sharīf as vassals of Muḥammad Murād Beg, but in the early 1850s Dōst Muḥammad of Kābul [*q.v.*] succeeded in bringing Badakhshān and the Uzbek principality of the Khulm district under his own control, and henceforth it formed part of the dominions of the kings of Kābul.

Present-day New Khulm-Tash Ḳurghan forms part of the Afghān province of Samangān, within which it and Haybak are the main towns, Khulm, however, being the more populous of the two (population estimated by Humlum at 30,000 in *ca.* 1950); both towns benefit by being on the main road from Kābul to Mazār-i Sharīf and the Russian frontier.

KHULṬ, the classical form of the name of a tribe of northwestern Morocco pronounced Khloṭ (but ethnic, Khulṭi). The Khloṭ came into North Africa with the invasions of the Banū Hilāl in the 5th/11th century, and formed part of the "mixed" Arab people known as the Djusham; according to Ibn Khaldūn and other historians, the Khloṭ allegedly belonged to the Banu 'l-Muntafiḳ. The Djusham spread throughout the central Maghrib, settled there and took part in all the wars which desolated Barbary. After the Almohad conquest, they vainly tried to rebel, and not long afterwards, the Banū Ghāniya [see IBN GHĀNIYA] had little trouble in engaging them as their auxiliaries after the capture of Bougie [see BIDJĀYA]. The Almohad caliph al-Manṣūr, once victorious over his enemies, punished their allies and accordingly transported to the oceanic shores of Morocco the Djusham and Riyāḥ Arabs. The latter were established in the Hibṭ and the Gharb, and the first group in the Tāmesnā (Shāwiya), depopulated since the extermination of the Berghawāṭa [*q.v.*] by the Almoravids.

Under al-Manṣūr's successors, the intrigues of the Almohad *shaykh*s found excellent support in the two component groups of the Djusham, the Khloṭ and the Sufyān, whose jealousies yet further aggravated the internecine conflicts. In 621/1224 the Khloṭ espoused the cause of the pretender al-Maʾmūn against the caliph al-ʿĀdil, who was supported by the Sufyān. In 625/1228, al-Maʾmūn was proclaimed caliph; in 630/1233 his son al-Rashīd succeeded him, but because of their misdeeds and violence, he was obliged to take strong measures against the Khloṭ chiefs, who then rebelled and took the side of the pretender Yaḥyā b. al-Nāṣir. The Sufyān, now reconciled with al-Rashīd, attacked the Khloṭ on the banks of the Umm al-Rabīʿ and a frightful carnage ensued. The Khloṭ sought vengeance by proclaiming as caliph the Andalusian pretender Ibn Hūd, but al-Rashīd pursued them, drove them back, and captured and then executed their chiefs (635/1237-8). Much weakened and browbeaten into obedience, they took part in the caliphs' expeditions, but their rivalry with the Sufyān was in no way extinguished and proved fatal to the Almohads. In 646/1248, at the siege of Tamzesdekt against the Zayānid pretender Yaghmorasen, this rivalry brought about the caliph al-Saʿīd's death and the Almohads' defeat.

The Marīnid sultan Abū Thābit treated the Khloṭ harshly for their violence (707/1308), but he took advantage of their assistance in order to destroy the power of the Riyāḥ. They were then settled on the former's lands, in the Azghār and the Hibṭ, and formed part of the *makhzan* [*q.v.*] of the Moroccan sultans, made marriage alliances with these rulers and provided for them provincial governors, ambassadors and advisers. They subsequently passed into the service of the Banū Waṭṭās and gave no support to the Saʿdids, who at first held them at arm's length despite the importance of the tribe which, according to Leo Africanus, could put 12,000 cavalry and 50,000 infantry into the field. However, the Khloṭ's important part in the Moroccan victory of Wādī 'l-Makhāzin against the Portuguese gave them entry in part at least to the *makhzan* of the Saʿdids. At the time of the latters' decadence, the marabout pretender al-ʿAyyāshī [*q.v.*], who sought to compel them to march against the Christians of Larache, was unable to bring them to obedience and was assassinated by them (1048/1638-9). Under the ʿAlawids, the Khloṭ took the side of the petty princelings of northern Morocco who had made themselves in-

dependent under the cover of waging holy war. Mawlāy Ismāʿīl and his successors, after first reducing them to submission, deprived the Khloṭ of their status as a *makhzan* tribe and favoured the establishment in their region of heterogeneous elements, the Ṭlīḳ and Badāwa groups, who inevitably afflicted and reduced the power of the former occupants of the land.

Bibliography: Michaux-Bellaire and Salmon have provided the most complete information about the habitat, ethnography, administrative organisation, political position and the splits among the Khloṭ in their article *Tribus arabes de la vallée du Lekkous*, in *AM*, iv-vi (1905-7). (A. Cour)

KHUMĀRAWAYH B. AḤMAD B. ṬŪLŪN, second Ṭūlūnid ruler of Egypt and Syria. He was born in Sāmarrā in 250/864 and, after the abortive rebellion of his brother ʿAbbās [*q.v.* in Suppl.] against Aḥmad b. Ṭūlūn [*q.v.*], was designated heir-apparent as early as 269/882. In an unprecedented act in the history of Muslim Egypt, the popular Khumārawayh came to power upon the death of his father on 10 Dhu 'l-Ḳaʿda 270/10 May 884 without the caliph's sanction, but rather with the general approval of the military and civil authorities of the Ṭūlūnid régime. His brother ʿAbbās was forced to pay homage to his rule, and was assassinated under obscure circumstances only a few days after Khumārawayh's accession. Khumārawayh reigned for twelve years; on 28 Dhu 'l-Ḳaʿda 282/18 January 896 he was killed, a victim to a palace cabal, by one of his own slaves.

Khumārawayh inherited both a stable and wealthy polity from his father—the treasury is said to have contained ten million dīnārs, thanks to Ibn Ṭūlūn's far-sighted internal and external economic policy—and also an unresolved struggle with the court of Baghdād. Since he had come to power only through his father or rather through his father's generals, the caliph regarded him as an usurper. Immediately upon receiving the news of Ibn Ṭūlūn's death, al-Muwaffaḳ, the ruler of the eastern half of the ʿAbbāsid empire and strong man in the Baghdād court, broke off the negotiations which had led to the *de facto* recognition of Ibn Ṭūlūn as governor of Egypt and Syria. One of Ibn Ṭūlūn's foremost generals, Aḥmad b. Muḥammad al-Wāsiṭī, then changed sides and urged al-Muwaffaḳ to attack Khumārawayh and reconquer Egypt, exploiting Khumārawayh's lack of political and military experience (al-Kindī, 234, ii, 4-5). Two generals of the caliph with al-Muwaffaḳ's sanction now invaded Ṭūlūnid Syria: Isḥāḳ b. Kundādj, the governor of Mosul whom al-Muwaffaḳ had appointed "legal" governor of Egypt and Syria in 269/882-3, and Muḥammad b. Dīwdād Abi 'l-Sādj of Anbār. The defection of the Ṭūlūnid governor of Damascus and finally the appearance of Aḥmad b. al-Muwaffaḳ (the future caliph al-Muʿtaḍid) leading an ʿIrāḳī army challenged Khumārawayh's control over Syria even further. In Shawwāl 271/February-March 885 (Grabar, 68) Aḥmad's troops met the Egyptians under Khumārawayh's command in the tragi-comic Battle of the Mills (*al-Ṭawāḥīn*) in southern Palestine. Both Aḥmad and Khumārawayh ignominiously fled from the battlefield; the military decision in Khumārawayh's favour was secured by the capable and courageous Ṭūlūnid general Saʿd al-Aysar. After his victory he went to Damascus and rebelled, though unsuccessfully, against the humiliated Khumārawayh. Khumārawayh's long-term strategy of achieving a rapprochement with the ʿAbbāsid court is reflected in the exceptional clemency with which he treated his ʿIrāḳī prisoners of war. In the following years his realm was considerably extended. He beat decisively, though with inferior forces, Ibn Kundādj, who submitted to him and brought areas as far east as Ḥarrān (Grabar, 75) under Khumārawayh's control. The Djazīra became part of the Ṭūlūnid lands when its governor Ibn Abi 'l-Sādj sought Khumārawayh's protection. On Khumārawayh's own initiative, Yāzmān of Ṭarsūs finally accepted Ṭūlūnid sovereignty over Cilicia.

In Radjab 273/December 886 al-Muwaffaḳ and Khumārawayh eventually came to terms. Khumārawayh discontinued the public slandering of al-Muwaffaḳ in the sermons of Egypt and formally acknowledged ʿAbbāsid sovereignty. In return he was granted the *de jure* governorship of both Egypt and the lands of Syria (al-Shaʾmāt) for thirty years for himself and his progeny (*wulduhū*). Thus not only his own succession, but also the dignity of his family, were recognised by the caliph. The time limit imposed, however, clearly shows that the caliph regarded the Ṭūlūnid rule over Egypt and Syria to be temporary and revocable, unlike the privileges granted to the Aghlabids [*q.v.*] of Ifrīḳiya. Unfortunately, the financial provisions of this first treaty between Khumārawayh and al-Muwaffaḳ are not recorded in the sources. Syria now became an integral part of the Ṭūlūnid domains; in the provincial capitals of the Shaʾmāt, Ramla/Filasṭīn, Ḥimṣ, Ḥalab and Anṭākiya, new mints were set up.

In Radjab 279/October 892 al-Muʿtaḍid, the son of al-Muwaffaḳ, succeeded al-Muʿtamid as caliph. In a new treaty he readily confirmed these arrangements with Khumārawayh. The annual tribute to be paid by Khumārawayh as vassal to al-Muʿtadid was fixed at a rate of presumably 300,000 dīnārs, supplemented by 200,000 dīnārs to be paid for each preceding year of his rule. The sources are vague and inconsistent on these crucial figures. Khumārawayh lost the territories east of the Euphrates, Mawṣil, Diyār Rabīʿa and Diyār Muḍar around al-Rāfiḳa, where coins had been struck on his behalf before 279/892. The important and prestigious *ṭirāz*-manufactures of Fusṭāṭ and Alexandria remained under the control of the caliph. Ṭūlūnid coins bore his along with Khumārawayh's name.

Khumārawayh's limited autonomy made him susceptible to honours bestowed upon him by the caliph, the most exalted and highest sovereign of the Muslim community. In 279/892, through the mediation of his closest adviser, al-Ḥusayn Ibn al-Djaṣṣāṣ al-Djawharī, he arranged for one of the great political marriages of mediaeval Islamic history. He offered his daughter Ḳaṭr al-Nadā to the caliph al-Muʿtaḍid's son ʿAlī, but the caliph took her as a bride for himself. It remains unclear whether or not this marriage, which entailed an exorbitant dowry of one million dīnārs, was a calculated device on the part of the caliph to wreck the finances of his dangerously wealthy and powerful vassal. The splendid nuptials of Ḳaṭr al-Nadā lived on in the memory of the Egyptians well into the Ottoman period, as is recorded in the chronicles and the folk-literature.

Khumārawayh's frivolity and generosity are well attested in the sources. He had sumptuous palaces and gardens built for himself and his favourites. To his contemporaries, his awesome blue-eyed palace lion epitomised his prodigality. He was said to ride no horse more than once. Becker (*Beiträge*, ii, 191) connects his addiction to luxury and debauchery with his status as heir to the capable and successful founder of a dynasty. "Rule was something self-evident to him, something given. He liked to exercise it, but shied from the burdens which were indispensable for

it". When Khumārawayh was murdered in 282/896, the treasury was empty. All the wealth Ibn Ṭūlūn had amassed had been squandered within a few years. In Khumārawayh's rule the *dīnār*'s worth sank to one third of its former value (Hassan, 245). Under Khumārawayh's sons Djaysh and Hārūn who succeeded him in rapid sequence, the political and financial demise of the Ṭūlūnid state was still further accelerated. In 292/905 ʿAbbāsid troops sacked Ibn Ṭūlūn's new city of al-Ḳaṭāʾiʿ and brought back for thirty years direct ʿAbbāsid rule to Egypt.

Khumārawayh's military prowess was notable. After the disaster of al-Ṭawāḥīn he showed strategic skills and astounding personal bravery; he is said to have killed the rebellious Saʿd al-Aysar with his own hands. He could rely on the multi-racial army of his father, composed mainly of Turkish, Greek and Sudanese military slaves and some, mainly Greek, mercenaries; he strengthened its force with numerous fresh soldiers from Turkestan. Yet in contrast to his father, he lacked undisputed authority over the military. He tried to compensate for this with overly-generous special distributions that further undermined the precarious finances of the state.

Possibly under ʿAbbāsid influence (al-Muʿtaḍid had his own élite body of military slaves, *al-mukhtārūn*), Khumārawayh established a corps d'élite, *al-mukhtāra*, composed of unruly Egyptian Bedouins of the Eastern delta, on whom he bestowed various privileges. By converting these tribesmen into a loyal and efficient bodyguard he reasserted control and brought back peace to this strategic region between the centres of Egypt and Syria. Significantly enough, there seem to have been no Turks among Khumārawayh's *mukhtāra* soldiers; he seems rather to have used them to offset the predominant influence of his own Turkish entourage. One thousand Negroes formed a less highly privileged special contingent within the *mukhtāra*.

Already under Khumārawayh, the civil administration of Egypt passed gradually into the hands of the Madhārāʾī family who later, during the ʿAbbāsid intermezzo and under the Ikhshīdids, directed the finances of the country. ʿAlī b. Aḥmad al-Madhārāʾī began his illustrious career by bringing under his control the *barīd*, the intelligence and communications service. Khumārawayh's relations with the religious establishment of Egypt were strained; his libertinism and frivolity made him the target of harsh attacks both in contemporary and later historiography.

Khumārawayh's prodigal rule encouraged a rich life. Few traces of his splendid architectural and cultural monuments and the minor arts are preserved. His patronage of scholarship and poetry is well known; the grammarian Muḥammad b. ʿAbd Allāh b. Muḥammad b. Muslim (d. 329/944) was his protégé and the teacher of his sons. Al-Ḳāsim b. Yaḥyā al-Maryamī (d. 317/929) wrote encomia to celebrate Khumārawayh's triumphs on the battlefield.

Bibliography: See *EI*¹ s.v. (Sobernheim). Among the Arabic sources the contemporary historian Ibn al-Dāya [*q.v.*] must be ranked first; fragments of his chronicle of the Ṭūlūnids are preserved in Ibn Saʿīd's *al-Mughrib fī ḥulā 'l-Maghrib*; as far as Khumārawayh is concerned, this important text unfortunately only contains a few remarks on his appointment as heir-apparent, see Ibn Saʿīd, *Fragmente aus dem Mughrib*, ed. K. Vollers, in *Semitistische Studien*, i (1894), 74 ll. 4 ff.; al-Kindī, *K. al-Wulāt*, ed. R. Guest, Leiden/London 1912, 233-41; C. H. Becker, *Beiträge zur Geschichte Ägyptens unter dem Islam*, Strassburg 1902-3, ii, 180-98; Z. M. Hassan, *Les Tulunides. Grabar, *The Coinage of the Tulunids*, New York 1957, 59-78; Rainer Glagow, *Das Kalifat des al-Muʿtaḍid billāh (892-902)*, Diss. phil. Bonn 1968, 22-3, 61-7, 70-3.

(U. Haarmann)

KHUMAYR (pronounced locally Khmīr, in French Kroumir), an element of the population which has given its name to a mountainous massif extending along the north-west littoral of Tunisia. The Djebel Khmīr, or Kroumirie, forms part of the administrative district of Djenouba, which covers an area of 3,000 square km. and has a population of 255,000, of whom 225,000 are peasants (census of May 1966).

The massif of the Khumayr, a Tunisian extension of the Atlas range, consists of a series of contrasting sandstone flexures running along a south-west - north-east axis. The two extremities of the massif, separated by the cultivated limestone depression of Ghazwān, present palpable differences in spite of the overall unity. The western Kroumirie has its highest point at Djebel Ghorra in an altitude of 1,202 m., and the eastern Kroumirie, very difficult of access in spite of its modest altitudes, reaches a height of 1,014 m. at Djebel Bīr which dominates Aīn Draham. Everywhere the contrasting forms of rockstrata, deeply furrowed anticlinals and sheer synclinals, give a wild aspect to a landscape covered by a forest 47,000 hectares in area. Of the trees 70% are cork-oak, 20% are zean oak, and 10% other species, including the wild olive. Often the undergrowth consists of fern. Other species have recently been introduced, notably the parasol pine (*bunduḳ*). The level of rainfall in Kroumirie is the highest in Tunisia, with an average of 1 m. per year and a maximum of 1,575 m. at Aīn Draham. In spite of the abundant rain and relatively plentiful falls of snow, the massif suffers from shortage of water. Springs are certainly numerous, but they are dispersed over a wide area and their output is feeble. Some springs even dry up in summer.

In ancient times, the massif of the Khumayr did not escape penetration by the Romans. Three routes crossed it: in the longitudinal axis, the road from Carthage to Hippo Regius (Bône, now called Annaba) via Hippo Diarrhytus (Bizerta), in the transverse axis the road from Simittu (Chemtou) to Thabraca (Tabarka), of which numerous traces have been discovered, and the road from Vaga (Béja) leading to the same destination via Trisipa. Thabraca, originally a Carthaginian market-town, and from the 4th century one of the richest dioceses in Africa, was the centre for the export to Rome of the products of the massif, timber for building and wild animals, as well as oil, wheat and minerals. "A city of luxury, where art has its place alongside commerce" (P. Gaukler, *Mosaïques*, 155), Thabraca has given us some very fine mosaics.

It is curious that throughout the mediaeval period, the massif of the Khumayr has gone unnoticed by the historian. The silence of our sources is complete. It is only in modern times, and in contemporary times in particular, that it has begun to play a historical role, appearing at the same time as a place of refuge and of resistance, escaping almost completely the power of the Tunisian authorities.

The Khumayr had cordial and profitable relations with the colony of Genoese fishermen established since 947/1540 on a rocky island of 40 hectares in area separated from Tabarka by a channel 500 metres wide. They were acutely affected when this islands was unexpectedly attacked and forcibly recovered by

ʿAlī Pasha in 1153/1740 (Ibn Abi 'l-Ḍiyāf, *Itḥāf*, ii, 124). In 1183/1769-70, the Khumayr gave asylum to the pretender ʿUthmān al-Ḥaddād, who was ultimately captured and executed (*ibid.*, ii, 165). In 1260/1844 they gave their support to another pretender, who claimed to be a descendant of ʿUthmān Bey. The latter also was captured through a trick and beheaded (*ibid.*, iv, 78-9; ed. A. Abdesselem, 116-7). In 1282/1865, ʿAlī Bey, at the head of the military mission (*maḥalla*) responsible for the levying of taxes, bled the region of Béja white, but did not dare venture into the massif, which was subject to tax only within agreed limits (Ibn Abī al-Diyāf, *op. cit.*, vi, 55, 65). However, the mountain-people were not involved in the insurrection of 1864—they did not feel that it concerned them—nor in the troubles of 1867-8.

It was in 1881 that they came abruptly to the fore. The Khumayr were in the habit of pillaging their neighbours, including those in Algeria. Seeing that the Caīd of Tabarka, to whom they were theoretically answerable, had no control over them, the French authorities, in the context of a complex policy which had the effect of setting various powers in competition with one another, decided to act. They set in motion the process which culminated in the establishment of the protectorate over Tunisia. On 24 April 1881, the French Army of Algeria marched into Tunisia; two days later they occupied Kef without a battle; on 13 May it was the turn of Aīn-Draham, and the following day the French routed the Khumayr at Ben Mtir after a number of fierce skirmishes.

Regarding the origins of the inhabitants of the massif, we have no precise and reliable information. The name Khumayr does not appear in any mediaeval text. In the period when Ibn Khaldūn was writing, that is to say, the 8th/14th century, the region between Béja and the sea was inhabited by Hawwāra Berbers, by that time completely arabised, with whom there had been blended various elements of Arab descent, notably the Hudhayl (*ʿIbar*, vi, 288-9; tr. de Slane, *Berbères*, i, 279).

The Khumayr pose an insoluble puzzle to the historian. They only make their appearance in the 19th century, and even for this period there are only scraps of information in the archives, when they pillage their neighbours, or when the *maḥalla*s try in vain to force them to pay taxes. Who are they? They themselves say that they are Arabs, and it is true that there is an oasis in the Yemen called Khumayr (Yāḳūt, ii, 390, iii, 406) and there is a Ḳaḥṭānid tribe which bears the name Banū Khamr (Ḳalḳashandī, *Nihāya*, 247), of which Khumayr could be a diminutive. Legend would also have us believe that they are the descendants of a certain Khumayr b. ʿUmar, an eminent companion of the conqueror of the Maghrib, ʿUḳba b. Nāfiʿ. A descendant of Khumayr, Sīdī ʿAbd Allāh Abu 'l-Djimāl, is supposed to have died, worn out by *djihād*, in the heart of the massif, on a small plateau about 5 km. south-west of Aīn Draham. The mausoleum raised to him in this place perpetuates the legend and unites the Khumayr in an almost total veneration for their patron saint and presumed ancestor. According to another tradition, the Khumayr originally lived in the south of Tunisia and were ruled by the Shābbiyya of al-Ḳayrawān. In the 18th century they were forced to emigrate towards the north, occupying the massif to which they gave their name.

The Khumayr are divided into a number of segments. The most important in the eastern Kroumirie are the Awlād ʿUmar, the Ḥwāmdiyya, the Awlād Ibn Saʿīd, the Saʿādiyya, the Urāhniyya, and the Twādjniyya in the region of Tabarka; the Salūl, the Hudhayl, the Awlād Musallim, the Khrāysiyya, the Djdāydiyya, the Djwābliyya, the Mlāykiyya, the Awlād Mūsā, the Awlād Hilāl, the Ḥumrān, the Dabābisa, and in particular the ʿAṭāṭifa in the region of Aīn Draham; the Gwādiyya, the Tbāniyya, and the Shiḥiyya in the region of Fernana. In the western Kroumirie, there are found the Banū Māzin, the Awlād ʿAlī, the Khzāra, the Mrāsin, and the Washtāta. It would be futile to attempt to distinguish between Berbers and Arabs among these tribes. The population of the massif is in fact the result of an immense and long-term ethnic fusion, dating back to the mediaeval period if not further, a fusion which was doubtless accelerated by the infiltration of the Banū Hilāl in the mid 5th/11th century, and of the Sulaym at the start of the 7th/13th century. Let it be stated explicitly that the local Arabic dialect contains no traces of Berber, and that sometimes the nomadic tent is found incongruously pitched on the mountain itself.

The geographers of the Middle Ages show little interest in the massif of Kroumirie in its own right. Their main concern is to describe the itineraries. The first, Ibn Ḥawkal, who visited the Maghrib in the mid-4th/10th century, tells us that the main highway (*al-djādda*) from Tunis to Tabarka passed through Béja (*Ṣūrat al-arḍ*, 76). Al-Bakrī, who was writing in the mid 5th/11th century, tells us that from Béja one would reach Tabarka in three stages, passing through Bāslī and Darna (*Masālik*, 56-7/120-1). Al-Idrīsī (mid-6th/12th century) mentions two routes from Tunis to Tabarka, the one passing through Bizerta, and the other branching off after Béja. (*Nuzha*, 84-5). It is clear that this road system follows the routes inherited from ancient times.

We have no precise information regarding urban settlement in the massif during the Middle Ages. It is only just possible to follow the evolution of Tabarka. We have seen that it was a very prosperous place in ancient times. In the 4th/10th century, according to Ibn Ḥawkal it was nothing more than "an unhealthy village" (*ḳarya wabīʾa*), infested by scorpions, its only claims to importance being the movement of ships between it and Muslim Spain and its status as a customs station (*op. cit.*, 76). In the 5th/11th century al-Bakrī noted that impressive ruins of ancient monuments were still to be seen at Tabarka, and that the place enjoyed a certain prosperity on account of the activity of its port. In the 6th/12th century, according to al-Idrīsī, it was nothing more than a fortress (*ḥisn*), thinly populated and surrounded by gangs of Arab bandits, men with respect for neither law nor religion. Finally, at the start of the 16th century (Leo Africanus, *Description de l'Afrique*, 549) it was nothing more than "an abandoned port".

Today, Tabarka (population 4,000), is a port of modest size whose primary function is the export of cork from the massif of Kroumirie, 3-4,000 tons per year. There is also fishing and the limited exploitation of coral, and the town has profited, albeit on a relatively minor scale by comparison with other regions, from the growth of tourism in Tunisia. The most important settlement on the massif is Aīn Draham, at an altitude of 800 m., a summer resort and a centre for boar-hunting; Fernana, at 275 m., is principally a market-centre; Babouche is little more than a frontier-station controlling the border-crossing into Algeria; at Oued El-Lil, near the hamlet of Ben Mtir, there was constructed in 1955 a dam with a capacity

of 73 million cubic m. to produce Hydro-electric power and to provide Tunis with water. Another dam, at Oued El-Kebir, is in the process of construction. In spite of efforts at re-organisation, settlements continue in the main to be scattered, according to the location of wells and agricultural small-holdings. Huts and shacks built of branches have not yet disappeared

In fact, the massif of the Kroumirie, dependant on a silvo-pastoral economy, is impoverished. The standard of living of the inhabitants is the lowest in Tunisia. The most important source of income is provided by the extraction of cork. The cultivation of tobacco is also moderately profitable. The breeding of cattle, sheep and goats, in which the methods used have not evolved at all in the course of time, provides only a mediocre income. Attempts at improving the cultivation of trees, by introducing apple, pear, and cherry-trees to the area, have yielded only very limited results. Products of local craftsmanship—Kroumirie carpets in white, black and beige; wooden kitchen-utensils; embroidery—are not much in demand outside the region and provide employment for a very small number. Finally, let it be added that the hot and sulphurous springs of Bordj al-Ḥammām, much appreciated from the earliest times for their medicinal properties, have led to the establishment in 1966 of a modern spa resort, built presumably alongside the ruins of the ancient baths and given the name Ḥammām Bourguiba. Enlarged in 1973, this resort is attracting an ever-growing Tunisian clientèle.

(M. TALBI)

KHUMBARADJI, bombardier, grenadier (Persian *khumbara* "explosive projectile, grenade, mortar bomb", etc.), a term used in the Ottoman military organisation. The bombardiers in the Janissary corps and the *Khumbaradji* unit in the Djebedji corps are thought to have been first introduced in the 9th/15th century. The *Khumbaradjis* were of two types, the *ulūfeli* ones, who were paid, and the *tīmār*-holders, who formed the majority of them and who served in the fortresses. The *Khumbaradjis* were neglected until the beginning of the 12th/18th century. Khumbaradjī Aḥmed Pasha [see AḤMED PASHA BONNEVAL] was appointed by Maḥmūd I in 1144/1731 to reorganise the Khumbaradjis; under his reorganisation, 301 soldiers from Bosnia were registered as paid *ulūfelis*, and thus a separate corps of bombardiers was formed. Each 100 soldiers became an *oda*, and each *oda* was to have 1 captain (*yüzbashī*), 2 *ellibashīs*, and 10 corporals (*onbashīs*) (*Taʾrīkh-i Sāmī-Shākir Ṣubḥī*, Istanbul 1198, 58 a-b). In the Ayazma palace at Üsküdar, there were constructed a barracks and a factory for the Khumbaradjī corps, and later, their numbers increased to 601, half of whom were *ulūfelis* and the other half *tīmār*-holders (for the activities of Khumbaradjī Aḥmad Pasha, see also Başbakanlık Arşiv Genel Müdürlüğü, Cevdet tasnifi, Askeri kısım, no. 45137; for the number of *Khumbaradjis* on the strength at 8 Ramaḍān 1152/December 1739, see Cevdet tasnifi-Askeri kısım, no. 37485). The *Khumbaradji* corps, which expanded until 1160/1747, was neglected thereafter, but in 1197/1783, during the reign of ʿAbd al-Ḥamīd I, there were attempts to improve it again (Djewdet, *Taʾrīkh*, Istanbul 1309, iii, 85; İ. H. Uzunçarşılı, *Kapıkulu ocakları*, Istanbul 1944, ii, 125-6). During the reign of Selīm III, when the army was organised on western lines, the *Khumbaradjī* corps was also included in the plan of reform. According to the decree of 1206/1792, the *Khumbaradjī* corps, whether paid or *tīmār*-holders, were to be concentrated on Istanbul and the names of those absent were struck from the pay rolls. Also, there were to be 10 *Khumbaradjī* soldiers and five assistants (*mülāzim*) for each *Khumbara*, so that the whole corps would comprise 500 *Khumbaradjī* soldiers and 250 assistants. Out of every 10 soldiers, one was to be considered as the *khalīfe*, and the other 9 as his aides (*yamaks*); out of every 5 *Khumbaradjis* one was to be an officer with the title of *ser-khalīfe*, and the most notable among the officers was to be *odjak ketkhüdāsī*, another *čāwūsh*, and another *ʿalemdār* or standard-bearer; beside the chief bombardier (*Khumbaradjī-bashī*), who was responsible for the soldiers' discipline, there was to be appointed a superintendent (*nāẓir*) from among the state officials (Enver Ziya Karal, *Selim III'ün hatt-ı humâyunları Nizâm-i cedit* (*1789-1807*), Ankara 1946, 45-6; for the text of the regulation relating to the bombardiers' corps, see Djewdet, *Taʾrīkh*, vi, 356-8). The barracks for their training were built at Hasköy on the Golden Horn shores in Istanbul. A more detailed ordinance for the *Khumbaradjis* was prepared and put into effect in 1211/1797 (Cevdet tasnifi, Askeri kısım, no. 40887). In the move-

ment to dethrone Selīm III, the *Khumbaradjis* sided with the rebels, but when the Janissary corps was abolished in 1241/1826 during the reign of Maḥmūd II, they supported the government action (Djewdet, *op. cit.*, xii, 157; Esʿad, *Üss-i ẓafer*, Istanbul 1293, passim). When a new army was established under the title of the *ʿAsākir-i Manṣūra*, the *Khumbaradjī* corps was reorganised and retained within it (Luṭfī, *Taʾrīkh*, Istanbul 1290, i, 159), but was included in the artillery division and was to be headed by the *Topdju-bashī* (later by the *Topkhāne-i ʿāmire müshirliği*). There was one *Khumbara* regiment (*alay*), with two battalions (*taburs*) in existence in 1248/1832 (Başbakanlık Arşiv Genel Müdürlüğü, Kâmil Kepeci tasnifi, no. 6744), and four years later, 109 cavalrymen and 229 foot soldiers, a total of 338 soldiers (Kâmil Kepeci tasnifi, no. 6750).

KHUMM [see GHADĪR AL-KHUMM]

KHUNĀṢIRA, an ancient fortified settlement situated some 60 km. to the south-east of Aleppo and 100 km. to the north-east of Ḥamāt, on a route through the desert—on the fringes of which it lies—connecting Aleppo with Baghdād. The foundation of the place is attributed to Khunāsir(a) b. ʿAmr of the Banū Kināna (Ibn al-Kalbī-Caskel, Tab. 290 and ii, 349), but it is probably older than this. Yāḳūt (s.v.), who cites also al-Khunāṣir b. ʿAmr, the representative of Abraha al-Ashram, may be echoing a later legend. In the Umayyad period, this chef-lieu of the *kūra* of al-Aḥaṣṣ owed its fame to the fact that ʿUmar b. ʿAbd al-ʿAzīz had a stronghold constructed there in which he frequently resided (al-Masʿūdī, *Murūdj*, v, 343 = § 2188; Ibn Shaddād, *al-Aʿlāḳ al-khaṭīra*, ed. D. Sourdel, Damascus 1953, i/1, 28; Ibn al-ʿAdīm, *Zubdat al-ḥalab*, ed. S. Dahhān, Damascus 1951, i, 42, 46). Ibn Ḥawḳal (*K. Ṣūrat al-arḍ*², 179, tr. Kramers-Wiet, Beirut-Paris 1964, 176), describes the role played by al-Khunāṣira at a time when the state's power had become relaxed and the routes in the interior of Syria were uncertain, so that travellers from Aleppo to Baghdād preferred to journey through the desert where they could enjoy, for a price, the protection of the Bedouins. In 515/1121 it was captured and destroyed by Baldwin II, who carried off to Antioch the gates of the citadel (Ibn al-ʿAdīm, ii, 201), after which the place was abandoned (N. Elisséeff, *Nūr al-dīn*, Damascus 1967, i, 179). Nevertheless, there still exists a place there called today Khanāṣir.

KHUNĀTHA bint Bakkār b. ʿAlī b. ʿAbd Allāh al-Maghāfirī, wife of Mawlāy Ismāʿīl, sultan of Morocco (1082-1139/1672-1727). She was highly versed in literature and the religious sciences and acted as an adviser to her royal spouse. In 1143/1731, during the reign of her sons Mawlāy ʿAbd Allāh, she performed the Pilgrimage; and at Mecca, she bought buildings and established them as *awḳāf*, in particular, a house in the Bāb al-ʿUmra, one of the gates of the Holy House, which she placed at the disposal of students. The memory of her sumptuous pilgrimage was commemorated by the *shaykh* Abū ʿAbd Allāh Muḥammad b. ʿAlī al-Ḥusaynī al-Shāfiʿī al-Ṭabarī, *imām* of the Maḳām Ibrāhīm, in a splendid poem. She died at Fās in Djumādā I 1159/May-June 1746 and was buried in the mausoleum of the Shorfa in Fās al-Djadīd.

Her writings include a letter addressed to the people to calm their fears over the neighbouring Turks, and a commentary on the *Iṣāba* of Ibn Ḥadjar al-ʿAsḳalānī.

KHUNDJĪ, Faḍl Allāh b. Rūzbihān (860-927/1455-1521), Persian religious scholar and political writer, who as a staunch Sunnī fiercely opposed Shāh Ismāʿīl, left Iran and fled to Uzbek Transoxania.

Khundjī's background, both on the side of his father (of the famous Rūzbihān family, cf. Rūzbihān al-Baḳlī) and of his mother (of the Ṣāʿidī family), made him a member of the wealthy and influential *ʿulamāʾ* of Fārs who were important as *soyūrghāldārs* and who enjoyed the high esteem and the protection of the Aḳ-Ḳoyunlu rulers. Khundjī received an exceptional scholarly training; in his native Shīrāz he studied under the great Shāfiʿī Djalāl al-Dīn Dawānī [*q.v.*], the author of the *Akhlāḳ-i Djalālī*. Dawānī's preoccupation with political thought is likely to have influenced Khundjī's own interest in a practical application of the norms of the *sharīʿa* in a post-Mongol, Sunnī state, as his sophisticated manual of government, *Sulūk al-mulūk*—which he wrote shortly before his death on the suggestion of the Uzbek ruler ʿUbayd Allāh Khān in Bukhārā—attests. He was introduced to Ṣūfism by Djamāl al-Dīn al-Ardistānī, a follower of the Suhrawardiyya *ṭarīḳa*. With him he travelled to Egypt and Palestine and he devoted a *manāḳib* biography to him which has not, however, come down to us. Khundjī himself joined the Djahriyya order, an offshoot of the Naḳshbandiyya, possibly only after he had left Ādharbāydjān and Iran and had settled at the Uzbek court. Khundjī represents the typical intellectual Ṣūfī of his time, for whom *taṣawwuf* is an indispensable item in the academic curriculum. He wrote a commentary on the *Waṣiyyat-nāma* of ʿAbd al-Khāliḳ al-Ghudjuwānī [*q.v.*], one of the great precursors of the Central Asian Naḳshbandiyya. Khundjī eulogised Khwādja Bahāʾ al-Dīn Naḳshband and extensively quoted his doctrines; he sought and cherished the friendship of the disciples of the famous Naḳshbandī popular leader

Kh^wādja ʿUbayd Allāh Aḥrār [*q.v.*], who had dominated religious and political life in Transoxania in the second half of the 9th/15th century. At the same time, Khundjī fiercely opposed any excess and abuse in mysticism, particularly the doctrine that man can acquire divine attributes through *fanāʾ*. For him, such exaggerated mysticism was as much *irtidād*, apostasy, as the pernicious *ghuluww* of Shāh Ismāʿīl I. Khundjī's paramount concern in all his writings is the protection of the revealed *sharīʿa* from any infringements. In his sharp differentiation between types of mysticism, one is reminded of Ibn Khaldūn's *Shifāʾ al-sāʾil ilā tahdhīb al-masāʾil*; an influence from Ibn Khaldūn on Khundjī cannot be ruled out. Khundjī also severly attacked the semi-pagan religious practices of the nomadic Uzbeks, such as the institutionalised pilgrimage to the tombs of local saints; however, he does not seem to have been very successful with these admonitions.

It was from the well-known Mamlūk historiographer and polyhistorian al-Sakhāwī [*q.v.*] that Khundjī owed his initiation into the sciences of *ḥadīth*, i.e. the discipline for which he acquired particular fame in his century. In Uzbek Central Asia, he became known as the "paragon of the traditionalists" (*sanad al-muḥaddithīn*). He studied law, theology, the Arabic sciences and *ḥadīth* with al-Sakhāwī in Medina; his proficiency is attested by the very complimentary *tardjama* which al-Sakhāwī, who was normally very critical of his students and compeers, included in his biographical dictionary of 9th/15th century celebrities. Among Khundjī's writings on tradition, one might mention an Arabic *risāla* on the big fire in Medina in 886/1481, *Hidāyat al-taṣdīḳ ilā ḥikāyat al-ḥarīḳ* (ed. Muḥammad Dānishpazhūh, in *Yādnāma-yi īrānī-yi Minorsky*, Tehran 1969, 77-113), which is a methodically exemplary study based on *ḥadīth*.

Khundjī began his public career at the court of the Aḳ Ḳoyunlu Yaʿḳūb b. Uzun Ḥasan, whose attention he had attracted in 892/1487 with a copy of his lost—possibly panegyrical—work *Badīʿ al-zamān fī ḳiṣṣat Ḥayy b. Yaḳẓān*. He served as a *kātib* in Yaʿḳūb's *dīwān*, and dedicated to him and his unfortunate son Baysonḳor his chronicle of the Aḳ Ḳoyunlu house, the carefully-composed *Taʾrīkh-i ʿālam-ārā-yi amīnī* (partial translation by V. Minorsky, *Persia in A.D. 1478-1490—An abridged translation of Faḍlullāh b. Rūzbihān Khunjī's Tārīkh-i ʿĀlamārā-yi Amīnī*, London 1957; full edition under preparation by John Woods, Chicago). In this work, which is the most important single narrative source on the history of the later Aḳ Ḳoyunlu rulers, Khundjī presents himself as an active courtier, who probably participated in the cabal to overthrow Yaʿḳūb's first minister ʿĪsā of Sāva who had tried to re-islamise the fiscal system of the state, thus endangering the *soyūrghāls* of Khundjī's affluent *ʿulamāʾ* relatives. The most significant passages of this chronicle are his diatribes against Ismāʿīl's grandfather and father, Shaykh Djunayd and Ḥaydar [*qq.v.*], whose self-styled religious authority he reviled in vitriolic language.

After Ismāʿīl's accession to power in 907/1501, he fled in 909/1503 to Kāshān, where he wrote his refutation of Ibn al-Muṭahhar al-Ḥillī's treatise *Kashf al-ḥaḳḳ wa-nahdj al-ṣidḳ wa 'l-ṣawāb*, entitled *Ibṭāl nahdj al-bāṭil wa-ihmāl kashf al-ʿāṭil* (partial edn. and German tr. by I. Goldziher, *Beiträge zur Literaturgeschichte der Šīʿa und der sunnitischen Polemik*, in *SBWAW*, lxxviii (1874), 475-86). There he questions the originality and consistency of Imāmī *fiḳh* and *uṣūl al-fiḳh*, and disqualifies Shīʿī dogmatics as a bad reproduction of Muʿtazilī (that is, in itself reprehensible) *kalām*. A hundred years later, the Shīʿī Ḳāḍī Nūr Allāh Shushtarī (d. 1019/1610), a victim of Djahāngīr's anti-Shīʿī religious policy, again wrote a refutation of Khundjī's treatise. Khundjī's book has had a lasting influence on Shīʿī-Sunnī polemics in the Arab lands, even in the 20th century. Khundjī, who himself held the *ahl al-bayt* in high esteem and wrote poems in praise of the twelve *imāms* (see the text in Muḥammad Amīn Khundjī, *Faḍl Allāh b. Rūzbihān Khundjī*, in *Farhang-i Īrān-zamīn*, iv (1335/1956), 178-9) and, on the occasion of a pilgrimage to Mashhad in the company of Shaybānī Khān [*q.v.*], of the eighth *Imām* ʿAlī Riḍā (see Khundjī, *Mihmān-nāma-yi Bukhārā*, ed. Manūčihr Sutūda, Tehran 1341/1962, 336-8), accused the Ithnā-ʿAsharī theologians of placing more emphasis on the slander and cursing of the Prophet's Companions, and the *shaykhayn* Abū Bakr and ʿUmar in particular, than on the due veneration of the immaculate family.

On his flight to the east, which also took him to Tīmūrid and later Uzbek Herāt, Khundjī passed through Ṭūs, where he was inspired, as he describes in a touchingly impressionistic and intimate account, by the decaying ruins of al-Ghazālī's tomb in the solitude of the steppe (*Mihmān-nāma* 352). Al-Ghazālī was Khundjī's revered model whom he quotes extensively. On this occasion Khundjī pledged that he would make an effort to emulate the great master and bring to the land of Khurāsān, in this age of great calamity, a revival of the orthodox religious sciences. He came to Bukhārā, to the court of Shaybānī Khān, the successful Uzbek ruler, who had ended Tīmūrid rule in Transoxania and Herāt and had conquered most of western Khurāsān. He gained access to and was to dominate the scholarly *madjālis* in which the Khān, himself a cultured man, had scholars discussing questions on religion, particularly on the compatibility of certain policies with the *sharīʿa*, e.g. the issue whether it was permissible for the Muslim Uzbeks to eat the meat of animals slaughtered by their semi-pagan Ḳazaḳ enemies. Khundjī compiled at the court before 916/1510, perhaps at the suggestion of the ruler himself, the unique "guest-book of Bukhārā" (*Mihmān-nāma-yi Bukhārā*, see above; partial German tr. by Ursula Ott, *Transoxanien und Turkestan zu Beginn des 16. Jahrhunderts—Das Mihmān-nāma-yi Buḫārā des Faḍlallāh b. Rūzbihān Ḫungi—Übersetzung und Kommentar*, Freiburg 1973) as a token of gratitude to his host and friend Shaybānī Khān. This work defies any formal classification. Its beautiful language and style evidences his literary talent. We find here, in a loose, more or less chronological sequel, passages on tradition, refreshingly natural descriptions of the scenery of Turkestan in spring and winter, surprisingly personal and autobiographical sketches (Khundjī tells us, unusually, much about himself, e.g. his fits of hypochondria), and straightforward narrative passages. In the latter he e.g. gives an account of the manners of the Ḳazaḳs, the cousins and at the same time the most dangerous enemies of the Uzbeks to their north. He devotes special attention to Shaybānī Khān and to his nephew ʿUbayd Allāh Khān, who much later was to lead the Uzbek federation back to political power.

The impelling idea of the *Mihmān-nāma* was the effort to drive Shaybānī Khān into attacking and exterminating the Shīʿī heresy from Iran and reviving the legal order of the *sunna* in Iranian homeland. He unsuccessfully opposed the scheme of defeating the Ḳazaḳs in the rear of the Uzbeks first, before marching against the Ṣafavids, whose deeds Khundjī denounced—in a familiar *topos*—as even more abomi-

nable than the unbelief of the Franks, who were *kuffār ab origine*. He expatiates on the apocryphal *ḥadīth* of Ḥārith, both in the *Mihmān-nāma* (95-107) and in a separate *risāla*: Ḥārith, the prototype of Shaybānī Khān, saved the true doctrine of Islam from a heretic tribe which slandered and vilified the companions of the prophet and the four orthodox caliphs, an unconcealed allusion to Shāh Ismāʿīl, the foe, and his damnable creatures, the Ḳizilbāsh [*q.v.*]. Khundjī's concept of history is remarkable. He regards the Uzbeks as another manifestation of the nomadic migrations from Inner Asia to the Muslim East, destined to overwhelm Iran and ʿIrāḳ and to bring back justice to these lands, just as the Saldjūḳs had done. He praises the legendary past of the Uzbeks and predicts a glorious future for them. He elevates Shaybānī Khān, beyond the bounds of conventional encomium, to appear as a *mudjaddid* of his age.

The catastrophe of Marw in 916/1510, when Shaybānī Khān was slain in battle by the Ṣafawid army, shattered Khundjī's dreams. His advice had proved fatal for his protector and sovereign. Taking into account the vulnerable personality of the author, which shines through so often in the autobiographical passages of the *Mihmān-nāma*, this turn of events must have had drastic effects on Khundjī. He passed the following two years in hiding in Samarḳand which had returned to the rule of the Tīmūrid Bābur, Ismāʿīl's half-hearted ally. In 918/1512 Khundjī suddenly re-appears delivering an eloquent sermon in Samarḳand (cf. Zayn al-Dīn Maḥmūd Wāṣifī, *Badāʾiʿ al-waḳāʾi*, ed. A. N. Boldyrev, Moscow 1961, i, 45 f.), which had been recaptured by the Uzbeks under ʿUbayd Allāh Khān.

Fulfilling a vow made at the tomb of Shaykh Aḥmad Yasawī in the hour of greatest affliction, ʿUbayd Allāh commissioned Khundjī to compile, as a guide for a righteous Sunnī ruler, the *Sulūk al-mulūk* (ed. Muḥammad Niẓāmuddīn, Hyderabad/Dn. 1386/1966). In form this didactic work displays features of the Mirror for Princes books; in its topics and in the arrangement however, it belongs to the tradition of the manuals of government, such as al-Māwardī's *al-Aḥkām al-sulṭāniyya*. It represents a highly intelligent attempt to harmonise the norms of the *sharīʿa*, as developed in the first centuries of Islam, with the realities of a tribal confederation, the body-politic of which is nomadic and Turkish, and not Islamic. Khundjī gives the prescriptions and legal interpretations both according to the Ḥanafī *madhhab* of the Turkish Uzbeks and his own, Persian, Shāfiʿī *madhhab*. He carefully juxtaposes lengthy passages on the legal norms, with numerous quotations from the *ḥadīth* and the canonical textbooks, with highly realistic and sober opinions on the present state of affairs. This can be observed in his treatment of taxation; he appears to equate certain aspects of the canonical *zakāt*-duties with the prevailing Mongol *tamghā*-imposts. Even more significant is his chapter on the *djihād*. He took his lesson from the catastrophe of Marw. No longer does he call for *djihād* against the Ṣafawids at all costs, lest the blood of innocent subjects of Ismāʿīl be shed. He even concedes (and thereby joins the mainstream of traditional Sunnī polemics) that the Twelver Shīʿī doctrine does allow for the observance of the precepts of the *sharīʿa*, such as legal marriage contracts, the call to prayer etc. We do not know to what degree Khundjī's enlightened doctrines were taken up by ʿUbayd Allāh, an energetic and pious ruler, who despite the bitter polemics on both sides, kept religious issues largely out of his long controversy with the Ṣafawids over the possession of Khurāsān. His fame lived on at least in Central Asia; the increasing isolation of Transoxania from the Sunnī central lands probably accounts for the little influence which his writings—particularly the *Sulūk al-mulūk*, which was explicitly directed to a broad audience of Sunnī rulers—exercised outside the Uzbek domains. An effect on political thought in Mughal India is more likely, yet remains to be investigated.

KHUNZAL (self designation, Khunzami; Russian designations, Khunzalī, Gun(d)zalī, Gunzebi, Gunzibtsī, Enzebi, Nakhad; other designations, Khunzeb, Gunzeb), a numerically small people of the eastern Caucasus. Khunzal forms with Bezheta, Dido, Ginukh and Khvarshi [*qq.v.*], the Dido division of the Avar-Andi-Dido group, of the north-eastern Ibero-Caucasian languages.

According to the Soviet census, in 1926 there were, ethnically, 106 Khunzals, and 129 claiming Khunzal as their mother tongue; in 1933 (estimation by Grande) there were 616 Khunzals. The Khunzals inhabit four *auls* on the upper course of the Avar Koysu in the Tliarata district of the Dāghistān A.S.S.R. They live in the highest and most inaccessible part of mountainous Dāghistān. This isolated position has protected the Khunzals from exterior influences, and they have maintained to a great degree many of the patriarchal customs. The Khunzals are Sunnī Muslims of the Shāfiʿī rite. The economy has remained traditional: raising sheep with a transhumance system, agriculture on terraces, and handicrafts (especially leather work).

Khunzal is a purely vernacular language, and the Khunzals use Avar as their first literary and second spoken (sometimes first) language, having Avar as the language in primary education. Russian is the second literary language. They are in fact being culturally and linguistically assimilated by the Avars.

KHURĀSĀN, today the north-easternmost *ustān* or province of Persia, with its administrative capital at Mashhad [*q.v.*]. But in pre-Islamic and early Islamic times, the term "Khurāsān" frequently had a much wider denotation, covering also parts of what

are now Soviet Central Asia and Afghānistān; early Islamic usage often regarded everywhere east of western Persia, sc. Djibāl or what was subsequently termed ʿIrāḳ ʿAdjamī, as being included in a vast and ill-defined region of Khurāsān, which might even extend to the Indus Valley and Sind. Thus the Armenian geography traditionally attributed to Moses of Khoren depicts Khurāsān as stretching from Gurgān and Ḳūmis in the southeastern Caspian region to Badakhshān and Ṭukhāristān on the upper Oxus and Bāmiyān in the Hindū Kush (see J. Marquart, *Ērānšahr*, 47 ff.).

Topographically, Khurāsān in the modern, restricted sense is dominated by a zone of mountain ranges running roughly NW-SE, a continuation of the Alburz chain, and connecting that chain with the Paropamisus and Hindū Kush ranges of northern Afghānistān; in a district such as that of the Kūh-i Bīnālūd to the north of Nīshāpūr, these mountains rise to 11,200 feet. To the north, open steppes and deserts run down through the Soviet Turkmenistan SSR to the Caspian Sea and the Amū-Daryā basin. To the south, there lies an extensive region of landlocked deserts and salt flats, such as the Dasht-i Kawīr, the Dasht-i Lūṭ and the Hilmand basin of Sīstān, but within this region is situated an important upland zone, that of Ḳāʾin and Birdjand, the early Islamic province of Ḳūhistān [*q.v.*], one massif of which, the Kūh-i Mūminābād, rises to 9,100 feet. There is thus considerable topographical diversity, but only in the more northerly mountain zone do adequate rainfall, perennial streams and accessible wells permit a relatively flourishing agricultural and pastoral economy; here, the population is quite dense for Persia. Elsewhere, and especially in the more southerly parts, there is usually an oasis pattern of life, with much dependence on wells and on *kārīz*s or *ḳanāt*s. Also, until the time of Riḍā Shāh Pahlawī at least, there was a substantial minority of nomads in Khurāsān, composed mainly of Göklen and Yomut Turkmens, and some Hazāras, Taymūrīs and Balūč. (See for the geographical, topographical and demographic background, Admiralty handbook, *Persia*, London 1945, and *Cambridge history of Iran*, i, ed. W. B. Fisher, Cambridge 1968, chs. 1, 2, 5, 18, 19; and for the historical geography of the older period, Marquart, *op. cit.*, Le Strange, 382-432, and *Ḥudūd al-ʿālam*, tr. Minorsky, § 23).

The present population of Khurāsān is very mixed. There is of course the still-important Iranian substratum, but there are extensive other groups, such as Turkmens, Kurds, Balūč, Arabs, and Taymūrīs and Hazāras from Afghanistan. The presence of these varied races is a concomitant of Khurāsān's strategic position as a bastion facing Inner Asia and as a corridor between the steppes and the civilised, settled lands of the Middle East. Pressure on Khurāsān by the Inner Asian nomads has been intermittent from the earliest known times till the later 19th century, when permanent political frontiers were established and the free movement of peoples thus impeded. Khurāsān was therefore the gateway through which Alexander the Great passed to Bactria and India, and conversely, that by which Turkish peoples from the Saldjūḳs onwards and then the Mongols entered Persia. The result has been an ethnic commingling in Khurāsān, especially as the rulers of Persia, whether Persian, Arab or Turkish, have, in pursuance of their historic task of defending their northeastern frontiers, at various times planted colonies of auxiliaries and guards; for political reasons, colonies of peoples like Lurs were settled there as late as the reign of Riḍā Shāh Pahlawī. Nevertheless, whilst the basically Iranian ethnic and linguistic nature of northern Khurāsān at least has been overlaid, this process has not gone so far as in a Turkicised province like Ādharbāydjān; the Ḳāʾin and Birdjand region, in particular, is still predominantly Persian.

In Sāsānid times, Khurāsān was one of the four great provincial satrapies, and was governed from Marw by an Ispahbadh (MP form *Spāhpat*; [see ISPAHBADH]). Yaʿḳūbī, *Taʾrīkh*, i, 201, enumerates as comprising Khurāsān under the Sāsānids the following districts: Nīshāpūr, Harāt, Marw, Marw al-Rūdh, Fāryāb, Ṭālaqān, Balkh, Bukhārā, Bādghīs, Abīward, Gharčistān, Ṭūs, Sarakhs and Gurgān. In times of military expansion, Sāsānid arms pushed beyond Marw; thus Ṭabarī, i, 819, says that Ardashīr Bābakān extended his power over Khʷārazm and Ṭukhāristān. In fact, many local princes must have remained as Sāsānid feudatories, holding offices like those of *marzbān*s or frontier wardens; many of these achieved temporary independence when the Sāsānid monarchy collapsed under the Arab onslaught. To the immediate east of Sāsānid Khurāsān lay the lands of their enemies, the powerful northern branch of the Hephthalite confederation, with its centres in Bādghīs and Ṭukhāristān; Balādhurī, *Futūḥ*, 405, mentions that there was ruling over Harāt, Bādghīs and Pūshang a local potentate, called by him the *ʿaẓīm* or "mighty one", who must have been a Hephthalite chief. The ancient pattern of hostilities between the rulers of Persia and the Hephthalites was to be taken up by the Arab governors of Khurāsān in the Umayyad period (see further, HAYĀṬILA).

It was at Marw that the last Sāsānid Emperor, Yazdagird III, made his stand before his betrayal by the local *marzbān* Māhūya and his murder in 31/651. Meanwhile, the Arabs had already appeared in Khurāsān. During ʿUmar's caliphate, forces from Baṣra penetrated as far as Ṭabasayn in the Great Desert, and a determined attack on the province was made in the following reign of ʿUthmān when ʿAbd Allāh b. ʿĀmir b. Kurayz [*q.v.*] was governor of Baṣra (sc. from 29/649 till 35/655). An expedition eastwards was mounted by the men of Kūfa under Saʿīd b. al-ʿĀṣī, travelling along the northern route between the Alburz and the central deserts, and another one by the Baṣran army under ʿAbd Allāh b. ʿĀmir and his lieutenant al-Aḥnaf b. Ḳays, approaching via Kirmān and Ṭabasayn, a route which was for long preferred as an easier and safer route than that of the modern highway and railway connecting Tehran and Mashhad. It was the Baṣran army which made most progress, and in 31/651-2 reduced Nīshāpūr to obedience, receiving the submission of local rulers and former Sāsānid governors in most of the other towns of Khurāsān. In the following year, the last great stronghold of the Sāsānids, Marw al-Rūdh, fell to al-Aḥnaf after fierce fighting, but the local *marzbān*, Bādhām, was confirmed in his office and possessions there in exchange for a relatively light tribute. The permanent pacification of Khurāsān was, however, a protracted process. Local potentates frequently rebelled against Arab control and appealed to outside powers like the Hephthalites, the Western Turks or Türgesh, the Soghdians, and even the Chinese Emperors (who claimed a vague sovereignty over Central Asia, and with whom certain Sāsānid pretenders took refuge). In particular, the civil war between ʿAlī and Muʿāwiya meant a relaxation in Khurāsān of Arab control, which had subsequently to be re-imposed by ʿAbd Allāh b. ʿĀmir (re-appointed governor of Baṣra and the east by Muʿāwiya from 41/661 to 44/664)

and his generals. Thus an important expedition was sent against Sīstān and Zābulistān under ʿAbd al-Raḥmān b. Samura, in the course of which Kābul was reached, and according to Balādhurī, *Futūḥ*, 409, Balkh was restored to obedience and the great Buddhist shrine of Nawbahār despoiled.

A period of stronger Arab rule came with the appointment in 45/665 of Ziyād b. Abīhi as governor of Baṣra and the east. During the Umayyad age, authority over the extensive provinces of Khurāsān and Sīstān (within which were included at times, as noted above, such distant regions as Transoxania, Farghāna, eastern Afghānistān, Makrān and Sind) was exercised in the first place by the governors of Baṣra, for Baṣran troops, and especially the men of the North Arab or Ḳaysī tribes of Tamīm and Bakr, were prominent in the overrunning of the eastern Persian lands, though in the governorship of al-Muhallab b. Abī Ṣufra (78-82/697-702), considerable numbers of that governor's fellow-tribesmen of the Yamanī Azd were settled in Khurāsān. Since the turbulent province of ʿIrāḳ always demanded the personal presence and attention of the governors of Kūfa and Baṣra, the latter appointed deputies in Khurāsān and often in Sīstān also; and all these appointments tended to reflect policy trends and personal ascendancies at the heart of the caliphate in Syria. In Ziyād's time, attempts were made, against strong resistance from the local peoples and from the Hephthalites, to reduce Ṭukhāristān to obedience. This was achieved by al-Rabīʿ b. Ziyād and his son ʿAbd Allāh, in the case of Balkh and the lands up to the Amū-Daryā, in the years after 51/671, but the Hephthalite threat was not finally removed till the governor Ḳutayba b. Muslim captured and killed their leader Ṭarkhān Nīzak in 91/710 and took as a hostage the Turkish *Yabghu* (in the Arabic texts, *Djabbūya*) of Ṭukhāristān. But even after this, Arab rule was far from secure. The Arabs made Marw their military centre, and by the end of the 1st century A.H. were beginning to settle down permanently in the Marw oasis and probably to intermarry with the indigenous Persian population. But their solidarity in the face of external threats from enemies like the Türgesh and Soghdians was adversely affected by the tribal divisions and feuds between the Ḳays faction, numerically superior and generally dominant, and the Yamanīs, and also by the fact that control by the caliphs was difficult to exercise from distant Damascus. See for events in Khurāsān during the Umayyad period, Marquart, *Ērānšahr*, 47-70; Wellhausen, *Das arabische Reich und sein Sturz*, Eng. tr. *The Arab kingdom and its fall*, esp. ch. 8; Gibb, *The Arab conquests in Central Asia*; Spuler, *Iran*, 5 ff.; M. A. Shaban, *Islamic history A.D. 600-750 (A.H. 132)*, Cambridge 1971; idem, *The ʿAbbāsid revolution*, Cambridge 1970; and idem, *Khurasan at the time of the Arab conquest*, in *Iran and Islam, in memory of the late Vladimir Minorsky*, ed. Bosworth, Edinburgh 1971, 479-90.

The last decades of Umayyad rule were characterised by tribal warfare amongst the Arabs, which, amongst other things, delayed the consolidation of Arab control across the Amū-Daryā in Transoxania; noteworthy in this connection is the prolonged revolt in Ṭukhāristān from 116/734 onwards of al-Ḥārith b. Suraydj [*q.v.*]. Large numbers of Arab troops continued to reach Khurāsān, so that according to the historian Ibn Aʿtham al-Kūfī, there were 40,000 Muslims in Khurāsān by 112/731. The last Umayyad governor there, Nasr b. Sayyār al-Kinānī (120-30/738-48) [*q.v.*], was faced latterly by the spread of the ʿAbbāsid *daʿwa* or revolutionary movement from its centre at Marw under a political adventurer of consummate skill, Abū Muslim [*q.v.*]. This movement had been organised, from the caliphate of Hishām onwards, under local *naḳībs* or representatives of the ʿAbbāsid family in Marw, until Abū Muslim took over the leadership there in 128/746, apparently drawing his prime support from the older-established Arab settlers in the district, those whom Ṭabarī and the anonymous author of the *Taʾrīkh al-khulafāʾ* edited by Gryaznevich call the *ahl al-taḳādum* (see Shaban, *The ʿAbbāsid revolution*, 155-8). By 130/748 Abū Muslim was undisputed master in Marw and Nasr b. Sayyār had been forced to flee towards the west.

Since Khūrāsānī support was so decisive in the rise of the ʿAbbāsids, the province enjoyed considerable favour from the early ʿAbbāsid Caliphs; cf. the encomium of the Khurāsānīs as "our party, our helpers and the people of our *daʿwa*" in a *khuṭba* or oration pronounced at Hāshimiyya by al-Manṣūr and reported by Masʿūdī, *Murūdj*, vi, 203 ff., and the similar sentiments quoted from Ibn Ḳutayba in Muḳaddasī, 293-4. Khurāsānian guards and officials, the *Abnāʾ al-Dawla*, continued to be the mainstay of the régime till towards the middle of the 3rd/9th century, when there began the wholesale adoption of slave troops as the nucleus of the Caliphal army and household [see GHULĀM]. Many Khurāsānīs migrated westwards into ʿAbbāsid service, such as the Barmakī family from Balkh [see BARĀMIKA]; this process was accentuated when al-Maʾmūn, the former governor in Marw, achieved the caliphate in 198/813 with the support of the Persian east against his brother al-Amīn.

The Ṭāhirids [*q.v.*] governed Khurāsān for the ʿAbbāsids, as faithful servants of the caliphs rather than as autonomous rulers, for some fifty years (205-59/821-73). They were of arabised, Persian *mawlā* stock, one member of whom had been secretary to an ʿAbbāsid *dāʿī* or propagandist in Khurāsān, Sulaymān b. Kathīr al-Khuzāʿī. Ṭāhir Dhu 'l-Yamīnayn was one of al-Maʾmūn's generals, and was in 205/821 appointed governor of Khurāsān and the east. The Ṭāhirids were strenuous supporters of Sunnī orthodoxy and the established Perso-Islamic social hierarchy against Shīʿī and older Iranian religious movements in the Caspian provinces and Transoxania, and also against heterodox currents of Persian socio-religious protest which were racking the Persian countryside at this time (see G. H. Sadighi, *Les mouvements religieux iraniens au IIe et au IIIe siècle de l'hégire*, Paris 1938). Under the Ṭāhirids, Khurāsān blossomed economically and culturally. We find ʿAbd Allāh b. Ṭāhir (213-30/828-45) showing his concern for his province's welfare by his commissioning a book on water rights and the regulation of *ḳanāts*, the characteristic means of irrigation throughout much of Khurāsān; this *Kitāb al-Ḳunī* was, according to the Ghaznawid historian Gardīzī, still in use two centuries later. Whereas in the early Islamic period Khurāsān had been economically and culturally backward compared with western Persia (cf. E. Herzfeld, *Khorasan: Denkmalsgeographische Studien zur Kulturgeschichte des Islams in Iran*, in *Isl.*, xi (1921), 107-74), its agricultural prosperity now increased; according to Yaʿḳūbī, *Buldān*, 308, tr. 138, the *kharādj* or land tax of Khurāsān under the Ṭāhirids amounted to 40 million dirhams a year. It benefited from commercial traffic connecting ʿIrāḳ and Baghdād with Central Asia and the fringes of the Indian world, and a luxury product like the edible earth of Nīshāpūr was, according to Thaʿālibī, *Laṭāʾif al-maʿārif*, 192, tr. Bosworth, 132, exported all over the

Islamic world, including to Egypt and the Maghrib. Above all, Khurāsān derived much advantage from the transit trade in Turkish slaves, which were a regular component of the annual tribute forwarded to the caliphs by the early ʿAbbāsid governors, the Ṭāhirids, and later, the Sāmānids, and which often fetched high prices; Ibn Ḥawḳal[2], ii, 452, tr. ii, 437, says that he saw more than once in Khurāsān slaves sold for 3,000 dīnārs. (Further on the Ṭāhirids, see Bosworth, ch. 3, *The Ṭāhirids and Ṣaffārids*, in *Cambridge history of Iran*, iv, Cambridge 1975, 90-106).

The Ṣaffārid adventurer from Sīstān, Yaʿḳūb b. Layth, overthrew Ṭāhirid rule in Khurāsān, entering their capital Nīshāpūr in 259/873, and in the ensuing years, Khurāsān was fought over by various contending generals, until the Sāmānid *amīr* Ismāʿīl b. Aḥmad [*q.v.*] defeated ʿAmr b. Layth in 287/900 and incorporated Khurāsān into the Sāmānid dominions. Under what is described in the sources as the beneficent rule of the Sāmānids, Khurāsān continued to be within the mainstream of Sunnī religious orthodoxy and culture. It had become already under the Ṭāhirids a vigorous centre of Arabic literature and of Sunnī legal and religious scholarship. There is a large representation of Khurāsānī scholars in such literary biographical works as Thaʿālibī's *Yatīmat al-dahr* and the continuations of Bākharzī and Iṣfahānī. Khurāsānī theologians and traditionists were prominent in Sunnī, especially Shāfiʿī and Ashʿarī, learning, and in such theological and philosophical movements as those of the Muʿtazila and Karrāmiyya [*qq.v.*]. The extremist Shīʿī Ismāʿīlī sect had pockets of support in the east, and Khurāsānī ascetics and mystics played important rôles in the development of Ṣūfism. It is, of course, well-known that Khurāsān and the eastern Iranian world in general had a crucial part in the renaissance of the New Persian language and its literature from the 3rd/9th century onwards; see Browne, *LHP*, i, 445 ff., and Rypka *et alii*, *History of Iranian literature*, 133 ff.

As the Sāmānid amīrate disintegrated in the later 4th/10th century under external attack from the north and internal revolt by unruly Turkish generals, Khurāsān passed under the rule of the Turkish Ghaznawid dynasty [*q.v.*]. In 384/994 the founder of the line, Sebüktigin, had been given the governorship of Balkh and the eastern parts of Khurāsān, and in 388/998 his son Maḥmūd consolidated his power in the whole of the province, which was to remain under Ghaznawid control for forty years. The riches of Khurāsān did much to finance the successful Ghaznawid war machine, but the financial exactions of Ghaznawid officials and a series of disastrous famines made the Sulṭāns' rule there unpopular. Hence Nīshāpūr and the other towns were not averse during the period 428-31/1037-50 from surrendering to the incoming Oghuz nomads led by the Saldjūḳ family; and the Saldjūḳ victory at Dandānḳān [*q.v.* in Suppl.] in 431/1040 sealed the fate of Ghaznawid rule over those parts of greater Khurāsān to the west of Badakhshān and the central Afghān mountain massif.

Under the Saldjūḳ Sulṭāns, Khurāsān was an important province of their empire, even though the founder Ṭoghrïl Beg soon moved his capital westwards from Nīshāpūr to Ray and Iṣfahān. Khurāsān and the east were initially ruled by Ṭoghrïl's brother Čaghrï Beg Dāwūd, whose son and grandson Alp Arslan and Malik Shāh were to raise the Saldjūḳ empire to its apogee. In general, firm rule brought peace to the towns of Khurāsān. This was temporarily ended in the uncertain years after Malik Shāh's death in 485/1092—the local historian of Bayhaḳ or Sabzawār, Ibn Funduḳ, comments on the recrudescence of sectarian strife and the activities of the para-military *ʿayyār* groups in the town—but stability returned under the long reign of Sandjar, who was firstly governor in the east and then Sulṭān for a total of over sixty years. The intellectual and cultural vitality of Khurāsān remained unimpaired, and four of the original nine *madrasas* or colleges founded by the great Vizier Niẓām al-Mulk were, according to his biographer Subkī, in towns of that province, sc. in Nīshāpūr, Balkh, Harāt and Marw. One effect of the Oghuz migrations into Persia was the arrival of Turkmen groups in northern Khurāsān, where suitable pasture was to be found for their flocks. These nomads remained an unassimilable element of Saldjūḳ Khurāsān, until neglect of their interests by the central government drove them into revolt towards the end of Sandjar's reign, leading to the Sulṭān's own capture by the Oghuz and effective deposition in 548/1153.

In the decades preceding the Mongol invasions, post-Saldjūḳ Khurāsān was held by various Oghuz tribal leaders and by former Saldjūḳ generals, and was then fought over by the Ghūrids and Khwārazm-Shāhs [*qq.v.*], until the Shāh ʿAlāʾ al-Dīn Muḥammad finally overthrew his Ghūrid rivals in the opening years of the 7th/13th century. (See, for the history of Khurāsān in the Ghaznawid and Saldjūḳ periods, Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, part II and III, and idem, in *Cambridge history of Iran*, iv, ch. 5, v, ch. 1).

The Mongol hordes of Čingiz Khān, driving the Khwārazm-Shāh Djalāl al-Dīn before them, appeared in Khurāsān in 617/1220, and seized control of its towns. Whilst not all of the notorious massacres of the Mongols may have been perpetrated at the original surrender of some towns, but at the time of subsequent revolts, Marw and Nīshāpūr, which resisted fiercely in 618/1221, suffered appallingly. Ibn al-Athīr, xii, 256, places the number of dead in Marw at 700,000, and Djuwaynī, tr. Boyle, i, 163-4, has the figure of 1,300,000 for the Marw oasis as a whole. Even allowing for statistical exaggeration, the Mongol invasions undoubtedly devastated Khurāsān to a far greater degree than the Oghuz incursions of the 5th/11th century had done, as is amply demonstrated in the accounts of European and Muslim travellers and geographers of the following period of the Il-Khānids, e.g. those of Marco Polo, Ibn Baṭṭūṭa, Ḥamd Allāh Mustawfī, etc. As well as the population losses and destruction of settlements, the increased proportion of Turkish and Mongol nomads in the province accentuated the existing trend from Saldjūḳ times towards pastoralisation and the decline of agriculture; moreover, the arbitrary Mongol system of taxation bore especially heavily on cultivators and landholders, according to I. P. Petrushevsky, in *Camb. hist. of Iran*, v, ch. 6. Certainly, Khurāsān never recovered its cultural and intellectual position within Persia as a whole; the Il-Khānids made their centre in western Persia, and Djibāl, Ādharbāydjān and ʿIrāḳ became the foci of political activity and artistic and literary life. The towns of Khurāsān continued to suffer from the warfare between the Il-Khānids and the Čaghatayids, and a place like Harāt only became a major centre with the florescence of the Tīmūrids in the 9th/15th century.

After the death of the Il-Khānid Abū Saʿīd in 736/1335, various local dynasties arose in Persia, including in Khurāsān the Karts or Kurts and the Sarbadārids [*qq.v.*]. The Karts arose in Harāt during the 7th/13th century, and successive rulers with the

title of *malik* or king retained power there till the deposition by Tīmūr of the last ruler, Ghiyāth al-Dīn Pīr ʿAlī, in 791/1389. The Sarbadārs stemmed from Bayhaḳ, and in the middle years of the 8th/14th century they held this region of western Khurāsān, extending to Dāmghān and even holding Nīshāpūr temporarily, till they too were extinguished by Tīmūr in 783/1381. Tīmūr made his own capital at Samarḳand in Transoxania, but his son Shāh Rukh became governor of Khurāsān for his father in 799/1397 and ruled there for fifty years until his death in 850/1446-7. Towns like Harāt and Marw were rebuilt, and a considerable degree of prosperity restored; and under the Tīmūrid prince Ḥusayn b. Manṣūr b. Bayḳara (875-911/1470-1506) [*q.v.*], Harāt and Khurāsān enjoyed a period of political stability and of brilliant cultural and artistic life.

In the early 10th/16th century, Khurāsān was overrun by the Özbeg chief Muḥammad Shaybānī Khān and his hordes, but three years later, in 915/1510, the Ṣafawid Shāh Ismāʿīl I killed the Khān and incorporated Khurāsān into the Ṣafawid dominions. The Ṣafawids were, however, unable to hold Balkh, and lost it permanently in 922/1516. Warfare with the Özbegs remained endemic in northern Khurāsān, with the possession of frontier towns like Marw oscillating between the two powers. Noteworthy in the Ṣafawid period—one in which Persia became in majority a Shīʿī land—was the rise in importance of the great shrine of the *Imām* ʿAlī al-Riḍā [*q.v.*] at Mashhad, originally the village of Sanābād, where both the eighth *Imām* of the Shīʿa and the Caliph Hārūn al-Rashīd were buried. The shrine was already splendidly ornamented in Il-Khānid times, as Ibn Baṭṭūṭa noted (*Riḥla*, iii, 77-9, tr. Gibb, iii, 582-3), and was increasingly enriched by the Tīmūrids and Ṣafawids. Shāh ʿAbbās I endeavoured to encourage the Shīʿī pilgrimage to Mashhad, since the holy places of ʿIrāḳ, such as Nadjaf and Karbalāʾ, were often in Sunnī, Ottoman hands. In the comparatively peaceful period of Ḳādjār rule, Mashhad gradually attained its modern position as the principal city of Khurāsān.

With the resurgence of tribalism and the political upheavals of the 12th/18th century, Mashhad became Nādir Shāh's capital, and he made his military redoubt in the massif of Ḳalʿat-i Nādirī in northern Khurāsān, but after Nādir's death in 1160/1747, the eastern parts of Khurāsān passed for a while into the control of the Durrānī Afghān chief Aḥmad Shāh [*q.v.*], and by 1163/1750, Balkh, Harāt, Mashhad and Nīshāpūr were all in his possession. But the blind, half-Ṣafawid grandson of Nādir, Shāh Rukh, had meanwhile been raised to power in Khurāsān, and remained there as nominal ruler at least till his death in 1210/1796.

Once Āghā Muḥammad Ḳādjār had made firm his power over the whole land of Persia, control over Khurāsān was fully restored to the central government, now installed in Tehran. But the depredations of the Özbegs and other Turkmens continued to make life in northern Khurāsān chronically insecure; the progress of commerce and agriculture was inhibited, and many Persians were carried off and enslaved by raiders from the Central Asian amirates. These causes of friction were only ended by the Russians' virtual annexation of Khīwa in 1873 and the crushing of the Tekke Turkmens at Gök Tepe in 1881. After this last victory, the Persian government was not strong enough to withstand Russian pressure, and the Russians annexed the Marw oasis in 1884. Relations with the amīrs of Afghānistān had meanwhile continued to be bad, with contention over possession of Harāt. The town was besieged in vain by the Persians in 1838, and Nāṣir al-Dīn Shāh fought a brief war with Britain in 1856-7 over a temporary Persian seizure of Harāt. After this, overt Persian attempts on these districts of western Afghānistān ceased, though disputes over the demarcation of the boundary between Khurāsān and Afghānistān were not finally settled till the definitive demarcation of the whole boundary as far south as Sīstān in 1934-5.

Khurāsān and the provincial capital Mashhad are now fully connected with Tehran by a metalled road, a railway and air services. The present population of the province (1966 census) is 2½ millions, with Mashhad now the third largest city of Persia with 409,000 inhabitants.

Bibliography: This is largely given in the article, but note for the earlier period the flourishing genre of local histories, e.g. of Bayhaḳ, Nīshāpūr, Balkh and Harāt (see Storey, i, 353 ff.). The political and social history of the province must be largely extracted from such general works as the books of Spuler, *Iran* and *Die Mongolen in Iran*, Sykes' *History of Persia*, the relevant chapters of the *Cambridge history of Islam*, i, and above all, the published and forthcoming volumes iv-viii of the *Camb. hist. of Iran*. For the 19th and early 20th centuries, the works of European, mainly British, travellers, officials, consuls, etc. are a prime source, e.g. those of J. B. Fraser, C. Metcalfe MacGregor, the Hon. G. C. Napier, the Hon. G. N. Curzon, C. E. Yate, P. M. Sykes, W. Ivanow, etc.

(C. E. Bosworth)

Banū **KHURĀSĀN**, the dynasty which, taking advantage of the anarchy initiated in Zīrid Ifrīḳiya by the Hilālī invasion, governed Tunis 454-522/1062-1128 and 543-554/1148-59. When leaving Ḳayrawān to take refuge in al-Mahdiyya (449/1057), the Zīrid al-Muʿizz b. Bādīs had left Ḳayrawān and Tunis in the protection of a Ṣanhādjī chieftain Ḳāʾid b. Maymūn. The latter seems to have exercised no authority at Tunis, which was probably evacuated by the Ṣanhādja, regrouping at al-Mahdiyya or in Ḥammādid territory, and independent. Ibn Khaldūn states that it fell prey to a Hilālī *amīr*, a son-in-law of al-Muʿizz b. Bādīs, ʿĀbid b. Abi 'l-Ghayth who reduced the inhabitants to slavery; this episode, undated, seems to have been no more than an isolated raid of which the effects were short-lived. According to the same author, a mercenary leader, Ḳahrūn b. Ghannūsh, who became governor of Tunis, was banished from there because of his bad administration; subsequently he made a stronghold for himself in the arches of the aqueduct at Manzil Daḥmūn, a refuge of brigands which the Tunisians succeeded in destroying with the aid of the Riyāḥid *amīr* Muḥriz b. Ziyād. One imagines the Tunisians paying ransoms and tribute to the nomads, the rulers of the plains, but wishing to be protected against these marauders.

In the West, the Ḥammādid principality, still intact, and indeed reinforced by the downfall of the Zīrid state, passed into the hands of an energetic, far-sighted sovereign, al-Nāṣir (454/1062). His power was quickly consolidated by the rallying to his side of Sfax and Ḳasṭīliya. It was only to be expected that Tunis should have considered doing the same thing, and accordingly a delegation of Tunisian *shaykhs* went to the Ḳalʿa to ask the Ḥammādid prince to choose them a governor. According to Ibn ʿIdhārī, al-Nāṣir, prudently no doubt, contented himself with advising them to choose for themselves a *shaykh* who would govern them whilst he confined himself to observing them, taking his time to study

the situation (*yaḳūmu bi-amrihim khalāla mā yanẓuru ilayhim*); they chose one of the leaders of their own community but he refused, and it was then that ʿAbd al-Ḥaḳḳ b. ʿAbd al-ʿAzīz b. Khurāsān took power in the name of al-Nāṣir. According to Ibn Khaldūn, ʿAbd al-Ḥaḳḳ was appointed by the Ḥammādid immediately following the reception of the embassy of the Tunisian *shaykhs*. This historian, who makes no mention of the election of a Tunisian *shaykh*, proposed initially by al-Nāṣir, seems to have condensed his account of events; possibly there was a second deputation which returned with the designation of the Khurāsānid, or even with the governor in person.

Abū Muḥammad ʿAbd al-Ḥaḳḳ b. ʿAbd al-ʿAzīz b. Khurāsān, a native of Tunis, was quite probably, says Ibn Khaldūn, of Ṣanhādjī origin; without this affirmation one would have to postulate for him a Khurāsānī descent; in Tunisian dialect, Khurāsān became Khrīsān (the cupola of Sīdī Bū Khrīsān).

He bore only the title of *shaykh* and ruled the city assisted by a council of *shaykhs*, a kind of senate partaking, no doubt, of the nature of the Berber *djamāʿa*. Nothing more is known of the institutions, certainly of a rudimentary nature, of this oligarchic republic. ʿAbd al-Ḥaḳḳ showed himself a good administrator, knowing how to assert himself and gain the sympathy of the population. To put an end to the brigandage of the Hilālī Arabs, he had the wisdom to agree to pay them an annual tribute (*itāwa maʿlūma*); this *modus vivendi* probably made conditions favourable for the exploitation of neighbouring lands, for the provision of food supplies, for industry, and commerce.

The Ḥammādid suzerainty seems to have been no more then nominal; besides, al-Nāṣir was occupied warding off the Hilālī peril and in 457/1064-5, at Sabība, he suffered a defeat as great as that of the Zīrid at Ḥaydarān in 443/1052. Tamīm b. al-Muʿizz b. Bādīs took advantage of his cousin's defeat to attack Tunis (458/1065-6); after a siege lasting fourteen months, ʿAbd al-Ḥaḳḳ submitted to him and recognised his suzerainty, but the authority of the Zīrid of al-Mahdiyya seems to have been exercised in Tunis no more than had been that of the Ḥammādid of Ḳalʿa. ʿAbd al-Ḥaḳḳ governed for a further thirty years until his death (488/1095). His son ʿAbd al-ʿAzīz succeeded him. One may suppose, on the basis of an inscription on the foundation of a mosque dated Ramaḍān 485/5 Oct. - 3 Nov. 1092 where he is called *al-shaykh al-adjall* (the most venerable *shaykh*) that before his father's death he bore at least some of the authority. In addition, the frieze on the cupola of Sīdī Bū Khrīsān says that this mausoleum was built in Djumādā II 486/29 June - 27 July 1093 by "the victorious power" (*al-sulṭān al-manṣūr*) Abū Muḥammad ʿAbd al-ʿAzīz and Abu 'l-Ṭahir ʾIsmāʿīl, both of them sons of *shaykh* ʿAbd al-Ḥaḳḳ b. ʿAbd al-ʿAzīz b. Khurāsān; from this we may suppose that at this date, ʿAbd al-Ḥaḳḳ, doubtless aged and sick, had handed over the reins of government to his two sons. It seems that ʿAbd al-ʿAzīz, whom Ibn Khaldūn accuses of "a feeble spirit", at least to a certain extent shared power with his brother Ismāʿīl.

Tunis must have broken with the Zīrid of al-Mahdiyya, since the sources state that Tamīm attacked and took it again in 491/1097-8.

The epitaph has survived of *shaykh* Abū Muḥammad ʿAbd al-ʿAzīz b. ʿAbd al-Ḥaḳḳ b. Khurāsān who died on 5th Muḥarram 499/17th Sept. 1105, also that of the *amīr* Abu 'l-Ṭāhir Ismāʿīl b. ʿAbd al-Ḥaḳḳ b. Khurāsān, who died on 12th Radjab 500/8th March 1107; so the latter must have reigned from 5th Muḥarram 499 to 12th Radjab 500 with the title of *amīr*. Had he seized power? Had he aimed a blow at the power of the council of elders? Whatever the explanation, his nephew Aḥmad b. ʿAbd al-ʿAzīz put him to death and his son Abū Bakr b. Ismāʿīl fled to Bizerta.

Aḥmad b. ʿAbd al-ʿAzīz b. ʿAbd al-Ḥaḳḳ b. Khurāsān showed himself a dictator, abolishing the authority of the *shaykhs*, many of whom were exiled to al-Mahdiyya and elsewhere, and he sought the favour of the jurists with whom he liked to surround himself. He built the *Ḳaṣr* (palace) of the Banū Khurāsān, surrounded Tunis with ramparts and obtained from the Hilālī Arabs a guarantee to watch over the safety of travellers. Ibn Ḥamdīs wrote a panegyric of this prince, considered by Ibn Khaldūn the most remarkable of his family.

In 510/1116-17, he was obliged to submit to ʿAlī the Zīrid of al-Mahdiyya who sent an army to besiege Tunis, but in 514/1120-1 it was al-ʿAzīz the Ḥammādid of Bougie who laid siege to Tunis and imposed this suzerainty upon it. Finally, in 522/1128, a general of the Ḥammādid Yaḥyā b. al-ʿAzīz attacked Tunis. Aḥmad b. ʿAbd al-ʿAzīz went out of the city, surrendered and was banished, with all his family, to Bougie where he died. Tunis was entrusted to Ḥammādid governors who continued to rule there until 543/1148-9.

There followed for the Tunisians a period of anarchy; they were threatened simultaneously by the Normans—already masters of Djerba (530/1135), of Tripoli (541/1146), of Gabès (whose chieftain, a usurper, recognized them in about 541/1146-7), of al-Mahdiyya, of Sousse and of Sfax (these three taken in the same year, 543/1148)—and by the Ḥammādids of Bougie who were making preparations to subjugate them unconditionally; in addition, they were harassed by Muḥriz b. Ziyād, the Riyāḥid *amīr* of La Malga (al-Muʿallaḳa, between Tunis and Carthage). They took as their chief the *ḳāḍī* Abū Muḥammad ʿAbd al-Muʾmin, son of the *imām* Abu 'l-Ḥasan. With his approval, they made an astonishing *volte-face*, deciding to appoint Muḥriz b. Ziyād as their king. In reply to their invitation, the Riyāḥid approached Tunis; the *ḳāḍī* and the *shaykhs* came in procession to meet him; but a cry taken up by the crowd, "No obedience to an Arab or a Ghuzz (sc. a Turcoman)", caused the enterprise to fail. It seems that the ruling class, having acted out of realism or for the defence of their own interests, were foiled by public opinion. Muḥriz b. Ziyād made his way back to La Malga where he was joined by the *ḳāḍī* who had been chased out of Tunis.

In order to put an end to the civil war, the Tunisians decided on a restoration of the Banū Khurāsān. A deputation went to Bizerta to fetch Abū Bakr b. Ismāʿīl b. ʿAbd al-Ḥaḳḳ who was hauled up at night over the city walls of Tunis in a wicker basket. This secret entry, which is not adequately explained by the closure at night of the city gates, suggests that the population was not unanimous in the decision to adopt him as *amīr*. Seven months later he was betrayed by his brother's son, ʿAbd Allāh b. ʿAbd al-ʿAzīz who seems to have had him drowned. ʿAbd Allāh b. ʿAbd al-ʿAzīz b. Ismāʿīl b. ʿAbd al-Ḥaḳḳ remained in power for about ten years. He killed the *ḳāḍī* Abu 'l-Faḍl Djaʿfar b. Ḥalwān, his son and the son of his sister Ibn al-Bannād, fearing lest they conspire against him with the Arabs, doubtless with Muḥriz b. Ziyād.

Nevertheless, it was thanks to a unit commanded by Muḥriz b. Ziyād, which had penetrated into Tunis,

that the inhabitants, under siege by Abū Muḥammad ʿAbd Allāh, son of the Almohad caliph ʿAbd al-Muʾmin, made a successful sortie and forced the enemy to retire. On the last day of Djumādā I 552/ 10th July 1157, ʿAbd Allāh b. ʿAbd al-ʿAzīz reported to the archbishop of Pisa the victory which he had just won over the Maṣmūda, in a letter preserved in the archives of Pisa confirming the verbal terms of a commercial treaty between Pisa and Tunis.

He was succeeded by his nephew ʿAlī b. Aḥmad b. ʿAbd al-Azīz b. ʿAbd al-Ḥaḳḳ b. Khurāsān (in about mid-February 1159). But five months later (about mid-July 1159), Tunis was laid under siege by a formidable army and fleet under the caliph ʿAbd al-Muʾmin, and surrendered. A deputation of twelve (or seventeen) *shaykhs* went to ʿAbd al-Muʾmin to ask for peace. After an initial refusal, and long equivocation, he accepted. In the list of these *shaykhs*, unfortunately incomplete, we notice nine names: three brothers, the Banū ʿAbd al-Sayyid, Hāshimī *sharīfs* (the epitaph of another member of this line, dating from 528/1113, is qualified by *faḳih* and *imām*), and two sons of Manṣūr Ismāʿīl and their paternal cousin; so we are dealing here with an oligarchy, and, once more, it is making terms with the enemy. In fact, ʿAbd al-Muʾmin promised to respect the lives, families and goods of the *shaykhs* who had come to negotiate, in return for their readiness to surrender, but he made the same guarantees to the other inhabitants of the city and environs only after they had handed over to him half of their goods.

The last of the Khurāsānids, ʿAlī b. Aḥmad, had not only to surrender half of his goods, but also to accept exile in Bougie; once these conditions were accepted, he left Tunis that same day, but died on the road.

Tunis has kept some relics of the Banū Khurāsān, sc. the mosque of the Djāmiʿ al-Ḳaṣr (*ca.* 499/1106), which probably adjoined their palace (no longer in existence), and not far from Sīdī Bū Khrīsān street, a *Ḳubba*, their funeral mausoleum in the centre of a necropolis excavated by S. M. Zbiss, to whom we owe the establishment of an epigraphic musuem and the publication of a number of tomb-inscriptions of the men and women of this family.

Bibliography: exhaustive references in H. R. Idris, *La Berbérie orientale sous les Zīrīdes*, i-ii, Paris 1962, index, 842. (H. R. Idris)

KHURĀSĀNĪ, Ākhūnd Mullā Muḥammad Kāẓim (1839-1911), a distinguished Shīʿī *mudjtahid* of Iran; born in Ṭūs, he received his early education in Mashhad, pursued traditional studies including natural philosophy in Tehran in 1860, and moved to Nadjaf in 1861 for further studies. He studied under Mīrzā Ḥasan Shīrāzī, the then sole *mardjaʿ-i taḳlīd* of the Shīʿī world. After the latter's death (1894), Khurāsānī was recognised as the legitimate successor to Shīrāzī. He proved to be a resourceful teacher, lecturing daily before more than 1,000 students of *uṣūl al-fiḳh* and producing as graduates of his courses some 120 *mudjtahids* (Mahdī al-Mūsawī, *Aḥsan al-wadīʿa*, i, Nadjaf 1968, 147-8). He established three religious (*ibid.*, 148) and some modern schools in ʿIrāḳ (ʿAbd Allāh al-Fayyāḍ, *al-Thawra al-ʿIrāḳiyya al-kubrā sana 1920*, Baghdād 1967, 82 ff.). Since 1906 Khurāsānī's name has been associated with the Persian Constitutional Revolution as one of its most influential supporters. He and two other *mudjtahids*, Ṭihrānī and Māzandarānī, issued numerous *fatwās* and manifestos, sent many telegrams, wrote many letters to responsible authorities in Persia and Turkey, and organised two uprisings. Led by Khurāsānī, the Persian *ʿulamāʾ* of ʿIrāḳ intensified their campaign after Muḥammad ʿAlī Shāh's abrogation of the constitution in 1908, and in a *fatwā* they declared that obedience to the Shāh and the payment of taxes to his government were un-Islamic (Aḥmad Kasravī, *Tārīkh-i Mashrūṭa-yi Īrān*, Tehran 1951, 730) and strongly condemned their clerical opponent Shaykh Faḍl Allāh Nūrī (*ibid.*, 528). Khurāsānī's activities were not favoured by ʿAbd äl-Ḥamīd II of Turkey. Thanks to the Young Turks' Revolution of 1908, however, there appeared a degree of mutual co-operation between the *ʿulamāʾ* and the Turks, and Khurāsānī openly supported the Turkish Revolution. He even threatened to dethrone ʿAbd al-Ḥamīd upon the latter's counter-revolution in 1909 (Sayyid Muḥammad Ḥasan Nadjafī Ḳūčānī, *Siyāḥāt-i sharḳ*, Mashhad 1972, 474-6).

Living in an Ottoman province, ʿIrāḳ, Khurāsānī and other Persian constitutionalists seem to have been led to an agreement of expedience with the Young Turks. We see Khurāsānī, for instance, sanctioning the Pan-Islamic policy of the Young Turks (*RMM*, xiii (1911), 385-6) and at times, despite his being a Shīʿī *mudjtahid*, calling the Ottoman sultan "caliph" (*al-ʿIrfān*, i (1909), 240-1; Niẓām al-Dīn-Zāda, *Hudjūm-i Rūs bi-Īrān*, Baghdād 1913, 45). In support of the sultan, he also declared a holy war against the Italian invasion of Libya in 1911 (*al-ʿIlm*, ii (1911), 246-7, 290-7, 338-42). In return, Khurāsānī appealed to the sultan to interfere in favour of the Persian constitutionalists: once in 1909 when he was successfully working towards the dethronement of the foreign-backed Shāh (*al-ʿIrfān*, i (1909), 240-1), and another time when, upon the Anglo-Russian invasions of Iran in 1911, the deposed Shāh vainly attempted to regain his throne (*Hudjūm-i Rūs*, 45-6). In both cases Khurāsānī, leading many of his supporters, set out for Persia to mobilise the masses; the first uprising was stopped because of the Shāh's downfall (*al-ʿIrfān*, i (1909), and iv (1912), 36-40), and the second one was postponed because of Khurāsānī's sudden death (*Hudjūm-i Rūs*, 58-67).

Despite the allegation concerning Khurāsānī's ties to the Oudh Bequest (Maḥmūd Maḥmūd, *Tārīkh-i rawābiṭ-i siyāsī-yi Īrān va Ingilīs*, Tehran 1953, vi, 1741-5), he does not seem to have favoured the British. Since the Russian troops were suppressing the Persian Revolution and the British were thought to have supported it, Khurāsānī sent delegates to the British Consulate in Baghdād seeking co-operation (Abdul-Hadi Hairi, *Shīʿism and constitutionalism in Iran: a study of the role played by the Persian residents of Iraq in Iranian politics*, Leiden 1977), though this proved useless because of the British commitment to the 1907 Convention. From then on, we see Khurāsānī in an equal opposition to the two powers. He expressed his deep mistrust in the Shāh, and paid no attention to the intercession of the two powers under whose pressures the Shāh had to promise the re-establishment of the Persian constitution; Khurāsānī only insisted upon the deposition of the Shāh and the declaration of a genuine constitutional régime (Hairi, *Why did the ʿUlamāʾ participate in the Persian Constitutional Revolution of 1905-1909?*, in *WI*, xvii [1976-7].

AL-**KHURAYMĪ** [see ABŪ YAʿḲŪB AL-KHURAYMĪ]

AL-**KHŪRĪ**, FĀRIS (1875?-1962) a Syrian politician, a Christian, who played a very important role over a period of almost half a century. Born in a Lebanese village on the slopes of Mount Hermon, he studied at Ṣaydā then at the school in Beirut which was later to become the American University, while also working as a teacher. When family affairs took him to Damascus in 1899, he took up residence in the Syrian capital, learned Turkish and French and was employed as an interpreter in the British consulate. His political career began in 1909 when he joined the Committee of Union and Progress. As legal adviser to the municipality of Damascus (1910-38) he was elected a member of the municipal council of the town in 1914, took part in 1918 in the Council of State which met in Istanbul, participated in the creation of the Arab Academy, and then occupied a number of important political offices: Minister of Finance in 1920, of National Education in 1926, President of the Chamber of Deputies in 1943 and then from 1946 to 1949, and President of the Council of Ministers in 1944-5 and in 1954-5. At the same time, he was President of the Bar of Damascus (1920-36), for a short time Professor of Law (1922), a founder member of the People's Party (1925), then of the Nationalist Bloc (*al-Kutla al-Waṭaniyya*, 1928), and was a member of the delegation which negotiated with France the Treaty of 1936. After the war he was appointed Syrian delegate to the United Nations, and presided over the Security Council in 1947 and 1948. He retired from active life in 1955 and died on 2 January 1962.

Fāris al-Khūrī was a calm, level-headed man whose essential aim was to achieve the supremacy of justice. He was a man of great culture and erudition, and his powers of oratory were widely recognised. After the beginning of this century he took an interest in events outside the Arab world and derived from them the inspiration for his literary, more precisely his poetic, production, for this man of politics was also a poet. His classical background gave him the idea in 1898 of preparing an anthology entitled *Shudhūr al-dhahab fī laṭāʾif al-ʿArab* which has remained unedited, but he continued subsequently to compose verses, of which the total number is close to 2,000. His poetry is neo-classical in style and comprises a number of *ḳaṣīdas* on various events, notably on the Russo-Japanese War, panegyrics and obituary tributes dedicated to his friends or to distinguished personalities, a single *hidjāʾ* (of sultan ʿAbd al-Ḥamīd II, which he later regretted), and some love poems, including three *muwashshaḥāt*; another product of his classical education is a *takhmīs* of the *nūniyya* of Ibn Zaydūn [*q.v.*]. He also found the time, in spite of his many commitments, to write two legal works: a *Mūdjaz fī ʿilm al-māliyya* (1924, 1937) and the *Uṣūl al-muḥākamat al-ḥuḳūḳiyya* (2nd ed. 1936).

Bibliography: In addition to the archival information held by the family, whose material is unedited, there have been two monographs on Fāris al-Khūrī: Ḥannā al-Khabbās and Djurdjī Ḥaddād, *Fāris al-Khūrī*, Beirut 1952, and Muḥammad al-Farḥānī, *Fāris al-Khūrī wa-ayyām la tunsā*, Beirut 1964. See also *Cahiers de l'Orient Contemporain*, Paris, i-xxxii (1945-55), index; Nasīm Sh. al-Khūrī has presented at the Lebanese University in 1973 a *Dīwān Fāris al-Khūrī* containing all of his poetic work which is accessible, together with a detailed bibliography; this work should be published. (ED.)

AL-**KHURMA**, an oasis in western Saudi Arabia situated at lat. 21° 54′ N and long. 42° 2′ E, which became prominent in Arabian politics during the first quarter of this century. The oasis lies in the middle reaches of Wādī Taraba or Turaba (also shown on maps as Wādī Subayʿ). The companion oasis of Taraba [*q.v.*], capital of the tribe of the Buḳūm, is farther up the valley about 75 km. to the south-west. Another 75 km. downstream from al-Khurma the valley passes by the wells of al-Ḳunṣuliyya and then ends at ʿIrḳ Subayʿ, whose sands keep the flood-waters from joining the main drainage system emptying into Wādi 'l-Dawāsir [see (DJAZĪRAT) AL-ʿARAB]. The oasis is close to the northern tip of Ḥarrat Nawāṣif, the southern part of which is called Ḥarrat al-Buḳūm. The road from al-Khurma to al-Ṭāʾif runs south of west over the range of Ḥaḍn, often taken as marking the eastern geographical limit of al-Ḥidjāz [*q.v.*]. About 80 km. north of al-Khurma is the ancient gold mine of Ẓalim, attempts to rework which in recent times proved a failure. Beyond Ẓalim to the north is the present main highway from Djudda and Mecca to al-Riyāḍ (Darb al-Ḥidjāz); earlier, many pilgrims and a considerable amount of trade went along the track through al-Ḳunṣuliyya and al-Khurma.

The relatively small population of al-Khurma is made up of tribesmen from the western section of Subayʿ [*q.v.*], who regard the oasis as their capital, Sharīfs, and black freemen. The chief place in the oasis is Ḳaṣr Khālid, named after a former *Amīr* (see below), and the other principal settlements are al-Sūḳ and al-Sulaymiyya.

Unlike Taraba, al-Khurma is not mentioned by Hamdānī, though it may have been inhabited even before his time. Its first appearance in history seems to have been in 1212/1798, when the Sharīf Ghālib b. Musāʿad, a determined foe of the Wahhābiyya [*q.v.*], pitched his camp there with a host of "Bedouins, townsmen, Egyptians (*maṣāriyya*), and Maghribīs" (Ibn Bishr, i, 112) while making a sweep through the southwestern oases in an effort to halt the spread of the reform movement. Surprised by Wahhābī warriors under the leadership of Hādī b. Ḳarmala of Ḳaḥṭān and Rubayyiʿ b. Zayd of the Dawāsir, Ghālib and his host fled pell-mell, losing many hundreds of men and rich booty. This catastrophe compelled Ghālib to rescind in 1213/1799 the ban that for some years prevented the Wahhābīs of Nadjd from making the pilgrimage.

With the resurgence of the Wahhābiyya in this century under ʿAbd al-ʿAzīz Āl Suʿūd, possession of al-Khurma became a crucial issue. Many Khurmans had remained attached to the reform movement since the preceding century. As Wahhābī proselytising also won new adherents in the west, the Sharīf al-Ḥusayn b. ʿAlī of Mecca tried to assert sovereignty over al-Khurma, which would have carried his authority well towards the east. In the words of Philby, "Khurma itself was a locality of little importance, economically or politically, though it occupied a strategic position as the back-door to Najd. Its real significance was as a symbol of the struggle for Arabian hegemony, which had now been transferred from the old cockpit of the Qasim [see AL-ḲAṢĪM] to the frontiers of the Hijaz" (*Arabian jubilee*, 60). The British government held that al-Khurma, which it thought was not very far away from al-Ṭāʾif (the actual distance is 190 km.), fell within al-Ḥusayn's sphere. ʿAbd al-ʿAzīz, on the other hand, avowed that he had inherited all

the territory that had belonged to his forefathers, including al-Khurma.

The Sharīf Khālid b. Manṣūr Ibn Lu'ayy, said to have been named *amīr* of al-Khurma by al-Ḥusayn, became a convert to the Wahhābiyya, as a result of which al-Ḥusayn detained him in Mecca for a time; al-Ḥusayn also rebuked the Ḥanbalī *ḳāḍī* of al-Khurma for preaching in the Wahhābī vein. The Khurman Wahhābīs were devout enough to be reckoned as belonging to the ranks of the Ikhwān [*q.v.*]. Late in 1335/1917 al-Ḥusayn's son ʿAbd Allāh delivered ultimata to Khālid demanding that he return to his original loyalty. Khālid rejected the ultimata, and the Khurmans called on ʿAbd al-ʿAzīz for help. Sympathetic though he was to their cause, he was occupied elsewhere and could do little for them. During 1336/1918, expeditions sent by al-Ḥusayn to subdue al-Khurma were repulsed one after another by Khālid and the Ikhwān.

Infuriated by the tenacious and successful resistance of the little oasis, al-Ḥusayn in Shaʿbān 1337/May 1919 deputed his son ʿAbd Allāh with a martial array, well armed by Arabian standards, to settle accounts there once and for all. On the way, ʿAbd Allāh paused at Taraba, where Khālid and the Ikhwān, striking suddenly at night, won a signal victory reminiscent of the one achieved by their Wahhābī predecessors over the Sharīf Ghālib. No serious military obstacle then barred the way to al-Ṭā'if and Mecca, but ʿAbd al-ʿAzīz chose to bide his time. When the move in that direction leading to the capture of Mecca was finally made in 1343/1924, al-Khurma and Taraba provided the springboard for Khālid and the Ikhwān.

The *hidjra* of the Ikhwān beside Khālid's castle in al-Khurma is said to have been founded after the battle of Taraba. The British explorer Philby visited the oasis in 1336/1917 and again in 1351/1932, as well as a year or two before that while hunting with ʿAbd al-ʿAzīz.

KHURRAMĀBĀD, chief town of the *shahristān* of the same name in the Iranian province of Luristān (*ustān* 6), situated in long. 48° 21′ E., lat. 33° 29′ N.; population of the *shahristān* (1966): 259,000, elevation above sea-level: 4,700 feet.

The town is first mentioned under its present name in the 8th/14th century by Ḥamd Allāh Mustawfī, who states: "this was fine town, but it is now in ruins" (*Nuzhat al-ḳulūb*, 74). To the south-east of the town, along the banks of the Khurramābād river, and also to the south-west, are remains dating from the time when the site, then known as Dīz-i Siyāh, was the capital of the Saldjūḳ *atābegs* of Lur-i Kučik [*q.v.*], who governed the area from 580/1184 and whose last representative was killed by Shāh ʿAbbās I in 1006/1597. At a still earlier date, the Sāsānid town of Shāpūrkhwāst seems to have occupied the site (thus Minorsky, in *EI*[1], LURISTĀN, who supports Rawlinson *contra* Le Strange, *Lands*, 201-2).

This mountainous region, inhabited by Lurī-speaking tribes, remained remote until almost the end of the 13th/19th century, when it was finally opened up by the construction of the Tehran-Ahwāz highway; this reduced to 12 days the 40-50 days previously required for the journey from the Persian Gulf to Tehran via Shīrāz.

(R. M. SAVORY)

KHURRAMIYYA or KHURRAMDĪNIYYA refers in the Islamic sources to the religious movement founded by Mazdak [*q.v.*] in the late 5th century A.D. and to various Iranian, anti-Arab sects which developed out of it under the impact of certain extremist Shīʿī doctrines. Although the Khurramīyya are sometimes mentioned separately besides the Mazdakiyya, Ibn al-Nadīm, following Abu 'l-Ḳāsim al-Balkhī, is no doubt right in stating that the name Khurramiyya, as also Muḥammira [*q.v.*], originally meant the movement of Mazdak in general, and not merely a branch of it. Al-Masʿūdī's assertion that the Khurramiyya are distinct from the Mazdakiyya evidently relates to the later development, since he at the same time identifies the former with the followers of Abū Muslim. The Persian name Khurram-dīn ("joyous or agreeable religion") may, as has been suggested, have been chosen by the sectarians in analogy to the name Vēhdēn which the Zoroastrians applied to their own religion, though it seems also possible that it was coined by their Zoroastrian opponents. In the Islamic sources, it is usually explained as referring to their libertinist and hedonistic view that everything agreeable to the senses is permitted. Other explanations of the name, that it is derived either from Khurram, a district of Ardabīl, or from Khurrama, the wife of Mazdak, are probably unfounded.

Although the sources do not mention the Mazdakite movement in early Islamic times, it is evident that Mazdakite communities were dispersed in the countryside of many regions of Iran with the heaviest concentration in the province of al-Djibāl. The coalescence of the Khurramiyya with various extremist factions of the Kaysāniyya [*q.v.*] began during the upheavals of the late Umayyad age. Al-Ṭabarī, ii, 1588, reports that the ʿAbbāsid *dāʿī* Khidāsh [*q.v.*], who was active before 118/736 in the area of Naysābūr and Marw, taught the religion of the Khurramiyya and permitted promiscuity. Al-Nāshi' identifies the Khurramiyya of Khurāsān with the Khidāshiyya, who held that the imāmate had passed from the ʿAbbāsid Muḥammad b. ʿAlī by forfeiture to Khidāsh, and who furthermore denied the death of the latter. According to Abū Ḥātim al-Rāzī, the Ḥārithiyya, the extremist supporters of ʿAbd Allāh b. Muʿāwiya [*q.v.*] who after his death in 131/748-9 chose various chiefs of their own, were called Khurramiyya. It is likely that these two sects were partially recruited from the local Mazdakites in Khurāsān and western Iran, which was controlled by ʿAbd Allāh b. Muʿāwiya for some time. The strongest impact on the Mazdakite Khurramiyya was made, however, by the figure of Abū Muslim [*q.v.*], who as the leader of the revolutionary movement which overthrew the Umayyad caliphate and as the victim of ʿAbbāsid perfidy came to symbolise Persian self-assertion against Arab dominance. Many heresiographers fully identify the Khurramiyya with the Muslimiyya, who considered Abū Muslim as their *imām*, prophet or an incarnation of the divine spirit. Abū Ḥātim's statement that the Rizāmiyya belonged to the Khurramiyya is to be understood in the same sense, for he and some other sources explain this name as meaning the radical, anti-ʿAbbāsid followers of Abū Muslim.

The *daʿwa* of Abū Muslim evidently gained numer-

ous Mazdakite adherents during his lifetime. After his murder in 137/755, the Khurramiyya in Khurāsān, according to al-Mas'ūdī, rose in revolt. Some of them denied his death and expected his early return to establish justice in the world. Others affirmed his death and held that the imāmate had passed to his daughter Fāṭima. They were known as the Fāṭimiyya. The Zoroastrian Sunbādh [see SINDBĀD], a former associate of Abū Muslim, led an army of rebels from Naysābūr to al-Rayy where his following swelled rapidly. According to the *Siyāsat-nāma*, it was composed of Mazdakites, Shī'is and Zoroastrians. Sunbādh predicted the end of the Arab empire and promised to destroy the Ka'ba. Abū Muslim, he asserted, had not died and would shortly reappear, together with Mazdak and the Mahdī. By the latter, who is not identified, Muḥammad b. al-Ḥanafiyya may have been meant. The revolt was suppressed after 70 days and the leader was killed. Another former associate or *dā'ī* of Abū Muslim, known as Isḥāḳ al-Turk, after the former's murder fomented an insurrection in Transoxania, affirming that Abū Muslim was alive in the mountains of al-Rayy and would return. He is also reported to have previously taught that Abū Muslim was a prophet sent by Zoroaster, who himself was alive and would reappear to restore his religion. Nothing is known about the exact date of the activity of Isḥāḳ and the fate of his movement. It has been suggested, on the basis of the account of Gardīzī, that the governor of Khurāsān, Abū Dāwūd Khālid (d. 140/757) was killed by followers of Isḥāḳ and that the rebel leader Barāzbanda, whom Abū Dāwūd's successor 'Abd al-Djabbār joined when he revolted against the caliph al-Manṣūr, also belonged to Isḥāḳ's movement. The first suggestion is highly conjectural and the second quite unlikely; the white-clad (*sapid-djāmagān*) murderers of Abū Dāwūd were, according to Gardīzī, the followers of one Sa'īd the weaver (*djūlāh*), and Barāzbanda claimed to be Ibrāhīm b. 'Abd (read: Muḥammad?) al-Hāshimī (Gardīzī, *Zayn al-akhbār*, ed. 'Abd al-Ḥayy Ḥabībī, Tehran 1347, 123 f.). About two decades after the death of Abū Muslim, al-Muḳanna' [*q.v.*], also a former member of his *da'wa* and of the Rizāmiyya, appeared in Transoxania to lead another revolutionary movement. His following was composed of white-clad (Ar. Mubayyiḍa [*q.v.*], Pers. Sapīd-djāmagān) Soghdian peasants and by Turkish tribesmen. He claimed to be the final divine incarnation after Ādam, Nūḥ, Ibrāhīm, Mūsā, 'Īsā, Muḥammad and Abū Muslim (a different report adds Shayth and substitutes 'Alī and Muḥammad b. al-Ḥanafiyya for Abū Muslim) and taught the transmigration of souls and sexual license. The sect of the Mubayyiḍa is still mentioned as surviving in the 6th/12th century.

The latter two movements usually are not called Khurramiyya in the sources, though as branches of the Muslimiyya they were covered by the name in its wider sense. There is no specific information on their doctrine about Mazdak and the role of Mazdakites in them. Al-Bīrūnī, however, states in general terms that al-Muḳanna' prescribed for his followers "everything Mazdak had brought" and al-Shahrastānī counts the Mubayyiḍa as one of the neo-Mazdakite sects and as a variety of the Khurramiyya. They may have been crypto-Mazdakites before the coming of al-Muḳanna' (see A. Yu. Yakubovskiy, *Vosstanie Mukannī-Dviženie lyudey v belīkh odeždakh*, in *SO*, v [1948], 35-54).

The use of the name Khurramiyya is more prevalent for the neo-Mazdakites in western Iran. In 162/779 the Muḥammira, i.e. the Mazdakites, of Djurdjān rose and made common cause with the Khurramdīniyya, i.e. the Muslimiyya, claiming that Abū Muslim was alive and promising to restore his reign. They put Abu 'l-Ghazā', the young grandson of Abū Muslim, at their head and reached al-Rayy before they were defeated by 'Umar b. al-'Alā'. At the same time, the Khurramiyya of Iṣfahān revolted. Again in 180-1/796-8 the Muḥammira of Djurdjān rose and for a brief time held sway over the province. In 192/808 the Khurramiyya revolted in Ādharbaydjān and the regions of al-Rayy, Hamadhān and Iṣfahān. The insurrection was quickly suppressed by 'Abd Allāh b. Mālik and Abū Dulaf al-'Idjlī.

The anti-Arab and anti-Muslim activity of the Khurramiyya reached its climax in the great rebellion of Bābak [*q.v.*] al-Khurramī in Ādharbaydjān (201-23/816-38). Bābak had become the chief of the Khurramiyya in the region of al-Badhdh in Ādharbaydjān in succession to Djāwīdhān b. Shahrak, whose prophetic spirit, he claimed, had settled upon him. Djāwīdhān was alleged to have predicted the victory of Mazdakism under his successor. The sources offer little information on the religious doctrine of Bābak and his followers. Their connection with the Muslimiyya is indicated by the fact that some people, according to al-Dīnawarī, held Bābak to be a son of Muṭahhar, son of Fāṭima, daughter of Abū Muslim. The revolt later spread outside Ādharbaydjān. In 212/827-8 the Khurramiyya rose in the area of Iṣfahān and al-Karadj and some of them joined Bābak in Ādharbaydjān. In 218/833 they revolted around Iṣfahān under their chief 'Alī b. Mazdak and in Fārs. As 'Alī b. Mazdak took al-Karadj, the sectarians joined him in large numbers. After a bloody defeat by Isḥāḳ b. Ibrāhīm near Hamadhān, some of them retreated and pillaged in Iṣfahān, while others under their leader Bārsīs fled to Byzantine territory. They were enrolled in the Byzantine army and are mentioned in 223/838 fighting under the emperor Theophilus against the Muslims.

'Abd al-Ḳāhir al-Baghdādī treats a sect called Māzyāriyya, followers of the Ḳārinid ruler of Ṭabaristān, Māzyār [see ḲĀRINIDS] (d. 225/840), as the second major branch of the Khurramiyya besides the Bābakiyya. Māzyār, whose revolt against the caliphate developed out of his quarrel with the big landowners of the lowlands of Ṭabaristān and his rivalry with 'Abd Allāh b. Ṭāhir, was certainly not a Mazdakite, although he was accused of having aided Bābak. In his political struggle he came to rely on the non-Muslim elements of the highlands, particularly Zoroastrians, but evidently also Mazdakites. The Khurramiyya of Ṭabaristān and Djurdjān may have continued to honour his memory as the account of al-Baghdādī suggests.

According to the *Siyāsat-nāma*, the rebellions of the Khurramiyya in the area of Iṣfahān continued after the execution of Bābak until the year 300/912-3. First they rose during the reign of al-Wāthiḳ (227-32/842-7), and again sacked al-Karadj. Later, at an unspecified date, one Bāryazdshāh succeeded in fortifying himself in the mountains of Iṣfahān. The Khurramiyya joined him and raided caravans and villages. Only after some 30 years was he seized and executed. Still in 320-1/932-3, 'Alī b. Būya conquered several fortresses previously held by the Khurramiyya in the region of al-Karadj and captured great treasures.

Khurramī communities are mentioned in the 4th/10th century in the regions of Fārs, al-Ahwāz, Iṣfahān, al-Burdj, al-Karadj, Māsabadhān, Mihridjānḳadhaḳ, al-Ṣaymara, Dīnawar, Nihāwand, Hamadhān, Kāshān, Ḳumm, al-Rayy, in the mountains of

Ṭabaristān, al-Daylam, Ādharbaydjān, Armenia, Shahrazūr, Djurdjān, Balkh and Khurāsān. It has been accepted on the basis of a report of Miskawayh (ed. Amedroz, *Eclipse*, ii, 299; tr., v, 321) that Khurramiyya living along the coast of Makrān and Kirmān were subjugated in 360/971 by a general of ʿAḍud al-Dawla. The name al-Khurramiyya is, however, a corruption in the manuscript and should be read al-Djurūmiyya. This is evident from the text of Ibn al-Athīr (viii, 451) which is based on Miskawayh as well as from Miskawayh's mention of the same people called al-Djurūmiyya later under the year 364/974-5 (ii, 359 f.; Ibn al-Athīr, viii, 482; Hilāl in *Eclipse*, iii, 377: al-Djurūm; this point is also made by C. E. Bosworth, *The Banū Ilyās of Kirmān (320-57/932-68)*, in *Iran and Islam, in memory of the late Vladimir Minorsky*, ed. Bosworth, Edinburgh 1971, 123 n. 34). The latest mention of surviving Khurramiyya communities is for the first half of the 6th/12th century in the region of Ansābādh and Darkazīn, north-west of Hamadhān (al-Bundārī, *Mukhtaṣar zubdat al-nuṣra*, ed. M. Th. Houtsma, Leiden 1889, 124), and in Ādharbaydjān.

According to al-Masʿūdī (d. 345/956), the Khurramiyya in his time mostly belonged to two divisions, the Kūdakiyya and the Lūdshāhiyya). (variants Kūdshāhiyya, Kurdshāhiyya). The former were probably named thus because of their veneration of Mahdī b. Fayrūz, the son (or grandson?) of Fāṭima, daughter of Abū Muslim, whom they called *kūdak-i dānā*, the omniscient boy. They are also mentioned in other sources and apparently constituted the great majority of the Khurramiyya in western Iran. Abū Ḥātim al-Rāzī (d. 322/924) states that the extremist factions which originally developed out of the ʿAbbāsid revolutionary movement were known under different names in different regions; in the country of Iṣfahān as Kūdakiyya and Khurramiyya, in al-Rayy and elsewhere in al-Djibāl as Mazdakiyya and Sunbādiyya, in Dīnawar and Nihāwand as Muḥammira and in Ādharbaydjān as Dhaḳūliyya (or Dafūliyya). It is not clear if the latter name implies a distinction in religious doctrine between the Khurramiyya in Ādharbaydjān and elsewhere in western Iran, though any such differences were most likely not substantial. Abū Dulaf b. Muhalhil, who visited al-Badhdh about the middle of the 4th/10th century, mentions a place there were the Muḥammira known as the Khurramiyya consecrated their flags and where they expected the coming of the Mahdī. Probably the *kūdak-i dānā* or, in any case, a descendant of Abū Muslim's daughter Fāṭima, is meant

The reports of the Muslim sources about the doctrine and practices of the Khurramiyya are mostly summary and biased. An exception is the account of Muṭahhar b. Ṭāhir al-Maḳdisī, which is based on his personal acquaintance with members of the sect and his reading of some of their books. The Khurramiyya were dualists holding that the principle of the world was the light, some of which had become effaced and turned into darkness. They all believed in the transmigration of souls in human, animal, and angel bodies. Prophetic revelation in their view never ceased and the same divine spirit inhered in all prophets. They had no religious law but, according to Muṭahhar, had recourse to their *imāms* in legal matters. Messengers whom they called angels (*firīshtagān*) made the rounds among them. They were much concerned with cleanliness and purity, tried to win people's favour through acts of kindness and strictly avoided bloodshed except when they decided on rebellion. They expected the appearance of a descendant of Fāṭima, daughter of Abū Muslim, as the Mahdī who would make their cause prevail in the world. Wine was considered particularly blessed by them. According to Muṭahhar, some held promiscuity licit with the consent of the women and, in general, any fulfillment of natural desires as long as no one was harmed. The more extravagant clichés of some sources concerning their sexual libertinism deserve no credence. There is no sound evidence for community of goods among them.

The Mazdakite and Manichaean basis of these beliefs is manifest. The attempts of some sources to establish a close link between the Khurramiyya and the Ḳarmaṭīs and Ismāʿīliyya must be viewed with reserve. There is no evidence for any influence of Khurramī doctrine on Ismāʿīlī doctrine or of any large-scale conversion of Khurramīs to early Ismāʿīlism.

KHURRAMSHAHR, chief town (population in 1966: 88,536) of the *shahristān* of the same name (population in 1966: 156,281) in the Iranian province of Khūzistān (*ustān* 6), and situated in long. 48° 09′ E., lat. 30° 25′ N. Its elevation above sea-level is 8 m./26 ft., and the climate is hot and humid, with summer temperatures rising to 58° C./136° F., and a winter minimum of 8° C./46° F.

The present town is the successor of a number of settlements which, since ancient times, have been located in the general area where the Kārūn (Dudjayl) river and the combined Tigris and Euphrates rivers flow into the Persian Gulf a few miles apart. Elamite and Achaemenid settlements were succeeded, in Islamic times, by Bayān and Muḥriza, which were included by the Islamic geographers in the province of ʿIrāḳ-i ʿAdjam. The earlier settlements were situated on the Kārūn river itself, the later ones on a channel cut to link the Kārūn and the Tigris-Euphrates estuary (now called by the Arabs Shaṭṭ al-ʿArab, and by the Persians Arwand-rūd). The construction of this channel (known at different times as Jūy-i Bayān; Jūy-i ʿAḍudī (after it had been widened by the Buwayhid ruler ʿAḍud al-Dawla [*q.v.*]; and the Ḥaffār channel) created the island of Ābādān [see ʿABBĀDĀN],

the site of the National Iranian Oil Company's refinery.

After being mentioned by al-Muḳaddasī (4th/10th century), the site is not heard of again until the beginning of the 13th/19th century, when a fort called Kūt al-Muḥammara ("Red Fort") developed into the town of Muḥammara governed by Arab shaykhs of the Kaʿb tribe. The new town was situated on the Ḥaffār channel, one mile from its confluence with the Kārūn. The rise of a rival port at the end of the Persian Gulf was regarded by the Ottomans as a threat to the prosperity of Baṣra, and in 1254/1838-9 they sacked the town, which was, however, subsequently ceded to Persia by the Treaty of Erzerum in 1847. This treaty was violated by the Ottomans in 1886 by the construction of a fort at Fao, at the mouth of the estuary, which enabled them to harass shipping bound for Muḥammara.

In 1925, Riḍā Shāh Pahlawī brought the virtually autonomous shaykhdom of Muḥammara firmly under Iranian control, and in 1937 the name of the town, by a decision of the Iranian cabinet, was changed to Khurramshahr. During World War II, the port facilities at Khurramshahr were greatly expanded, and a 75-mile branch line was constructed to link the city with the Trans-Iranian railway at Ahwāz. After further development under the Second Seven-Year Plan (1955-62), Khurramshahr is now one of Iran's principal ports-of-entry on the Persian Gulf; its exports include dates, milk-products, skins and wool.

The 1912-14 Boundary Commission took as the international boundary with ʿIrāḳ the low-water line on the Iranian side of the Shaṭṭ al-ʿArab. This left the navigation channel to Khurramshahr under ʿIrāḳī jurisdiction, and resulted in constant friction between the two countries. This dispute appears finally to have been settled by the agreement signed on 6 March 1975, whereby Iran and ʿIrāḳ agree that the international boundary shall be the *talweg*, or line of deepest water.

(R. M. Savory)

KHURREM (P. "cheerful, smiling") is a name of both men and women. The most famous bearer of it is the Khāṣṣekī [*q.v.*] and beloved wife of Sulaymān I [*q.v.*], who was born in the early years of the 16th century and died on 26 Djumādā II 965/15 April 1558. Because of the necessary seclusion of her life, few facts about her are known. It is, however, certain that Sulaymān remained passionately devoted to her from their meeting, probably in Istanbul after his accession on 17 Shawwāl 926/30 September 1520, until her death; hence her power, by which she altered the course of the Ottoman Empire. This power, for which she is hated, brought upon her charges of witchcraft (Bassano, *Costumi*, Roma 1545, 18*v*.) and sorcery (Busbecq, *Omnia* ..., Basel 1740, 72-3), but Navagero's remark (Albèri, *Relazioni* iii/1, 74), "she knows the Sultan's nature very well", seems nearer the truth. According to the tradition established by Hammer-Purgstall (*GOR*, iii, 673), she was Polish, from Rogatin (Polish: Rohatyn) on the Gnilaya Lipa river, now in the Ukrainian SSR, then in the Little Russia of Poland, the daughter of a Greek Catholic *papas*; possibly her name was Aleksandra Lisowska (see *Belleten*, xxiii, 230). The area, an old Ruthenian settlement, was subjected to frequent Tatar raids; she may have been carried off on one of these and sold as a slave in Istanbul. It may not be a coincidence that she had a mosque built later in the ʿAvret Pazarī quarter, near the female slave-market. Other traditions, of little reliability, make her Slav, Circassian, Sienese, even French. She may have been presented to Sulaymān by his mother Ḥafṣa Sulṭān or by Ibrāhīm Pasha [*q.v.*] (Bassano, *loc. cit.*, 18*v*)., with whom she was to share Sulaymān's affection. She was called Khurrem (variants: Churram, Currem, Hürrem) but is known in Turkish histories generally as Khāṣṣekī Sulṭān and in Western accounts as Roxelana (variants: Roxolana, Roxelane, Rossolana, Rossane, la Rossa, la Rosa), probably all referring to her origin as a Russian or even a Ruthenian woman (*Belleten*, xxiii, 229), but not meaning "Rose", "Redhead", nor Baudier's ingenous "Roxana" to Sulaymān's Alexander the Great (*Inventaire*[2], Paris 1620, 344). Bragadin in 1526 (Albèri, iii/3, 102) describes her as "young not beautiful, but graceful and small".

As heir-apparent in Manisa, Sulaymān seems to have favoured two ladies, Gulbahār and Gulfem, said to be variously of Circassian, Albanian, Montenegrin and Crimean origin. Gulfem bore him Murād in 919/1513 and Maḥmūd in 921/1515, but both these sons died in 927/1521. Gulbahār bore Muṣṭafā [*q.v.*] in 921/1515; thus, by 1521, as mother of the Sultan's eldest surviving son, she was Khāṣṣekī Sulṭān and, after Sulaymān's mother, foremost in the Imperial Harem, then housed in the Old Palace. However, Khurrem had captivated Sulaymān, borne him a son Meḥemmed [*q.v.*] in 927/1521 and, after a squabble reported by Navagero (Albèri, iii/1, 75), during which Gulbahār had called her "sold meat", had ousted her. Gulbahār devoted herself to her son Muṣṭafā and, when she died in 988/1580, was buried beside him in Djem Sulṭān's mausoleum in Bursa (Refik, *xvi. asırda Istanbul hayatı*, Istanbul 1935, 8). Gulfem, no rival, was accepted by Khurrem and lived with her ladies; after her death, in 969/1561-2, a mosque was constructed in her memory in Üsküdar.

There is unanimous agreement that Sulaymān made Khurrem his legal wife by giving her the *kābīn* (dowry), said to be 5,000 ducats annually, but no hint as to when this took place. It may have been after the birth of Meḥemmed. An undated letter in the Archives of the Bank of St. George, Genoa, describes the wedding festivities in some detail (see Davey, *The Sultan and his subjects*, London 1907, 18-19). In 928/1522 their daughter Mihr-i Māh Sulṭān [*q.v.*] was born, the next year a son ʿAbd Allāh (died 932/1526) and, on 24 Radjab 930/28 May 1524, the future Sultan Selīm II [*q.v.*]. Khurrem bore two more sons, Bāyezīd in 932/1526 and, in 937/1530 Djihāngīr, a hunchback much loved by his father. The circumcisions of Muṣṭafā, Meḥemmed and Selīm were celebrated together with great pomp in Dhu 'l-Ḳaʿda 936/July 1530, after which Muṣṭafā, as *sandjaḳ-beg* of Ṣarukhān, departed with his mother to Manisa. On 4 Ramaḍān 940/19 March 1534 the wālide Ḥafṣa Sulṭān died. During the night of 21-2 Ramaḍān 942/14-5 March 1536, Ibrāhīm Pasha was assassinated in the Sultan's bedchamber in Topkapı Sarayı. Khurrem's influence is suspected in this murder, out of jealousy and fear for her children's lives after Ibrāhīm had declared in favour of Muṣṭafā as heir, but there is no proof of this. With Ibrāhīm's death, however, all her rivals had been removed.

In 945/1539 Khurrem began a long series of pious bequests with the construction of the Haseki mosque in Istanbul, the first commission of the new Chief Architect Sinān [*q.v.*]. It is in the former ʿAvret Pazarî, now Haseki district, and comprises two *medreses*, a *mekteb*, a *sabîl* and a hospital (finished 957/1550) which, as the Haseki Kadınlar Hastanesi, is still in use for women. Sinān also built another mosque on her behalf at Edirne, *ʿimārets* near the Kaʿba at Mecca, at Medina and at Edirne, and baths in the Aya Sofya and Yehudiler districts of Istanbul. Her other charitable works include a caravanserai and fountains at Edirne and a richly endowed *ʿimāret* at Jerusalem.

On the night of 27 Ramaḍān 947/25 January 1541 a fire swept through the Old Palace (Luṭfī, *Tewārīkh*, Istanbul 1341, 384). Khurrem seems to have moved at once with her ladies to Topkapı Sarayı, where she remained. With a woman lodged for the first time at the political centre, there begins at this date the *Ḳadînlar salṭanatî*, the rule of women, during which the policies of the Ottoman Empire were directed by a succession of foreign favourites, until the death of Murād IV's mother in 1061/1651. In the Genoese Archives there is a description of Khurrem's apartments, probably written in 1542 (see Davey, *Sultan*, 21-3), and also in Bassano (*loc. cit.*, 17v.). On 21 Ṣafar 948/16 June 1541 Khurrem had Muṣṭafā dismissed to Amasya and on 3 Shaʿbān 949/12 November 1542 her own son Meḥemmed was appointed *sandjaḳ-bey* of Ṣarukhān, the heir-apparent's post (*Kanunı armağanı*, 249). One year later, on 8 Shaʿbān 950/6 November 1543, Meḥemmed died in Manisa. Sulaymān was inconsolable; in a deed of gift to Khurrem made some eight years later (Ferīdūn, *Munshaʾāt*², i, 608-10), with all his other sons still alive, he calls her "the mother of my late son Meḥemmed". On 13 Ramaḍān 951/28 November 1544 Rüstem Pasha [*q.v.*], husband of Mihr-i Māh since 945/1539, was appointed Grand Vizier. He was devoted to the policies of his mother-in-law and wife, foremost of which was the destruction of Muṣṭafā so that one of Khurrem's sons might succeed. The law decreeing that a Sultan at his accession must have all his brothers executed created such a desperate struggle for life within the Sultan's family, of which the pathetic aspect is well illustrated by Navagero (Albèri, iii/1, 77). Their scheming was crowned with success on 27 Shawwāl 960/6 October 1553, when Sulaymān witnessed the execution of his brilliant and popular eldest son in camp at Eregli near Konya. To pacify the infuriated army Rüstem Pasha was dismissed at once and Ḳarā Aḥmad Pasha [*q.v.*] appointed Grand Vizier .Djihāngīr, proceeding with his father on the Persian campaign, died of pleurisy at Aleppo on 22 Dhu 'l-Ḥidjdja 960/29 November 1553. A few weeks later Muṣṭafā's son Meḥemmed, born at Amasya in 953/1546, was executed at Bursa. His death also is attributed to Khurrem's plots, as is the execution in office of Ḳarā Aḥmad Pasha on 13 Dhu 'l-Ḳaʿda 962/29 September 1555 and the immediate reinstatement of Rüstem Pasha. He and Khurrem plotted for the succession to pass to Bāyezīd, the younger but abler of Sulaymān's surviving sons, but neither of them lived to see the end of the struggle between the two brothers which resulted in Bāyezīd's execution in Persia at Selīm's instigation on 25 Dhu 'l-Ḳaʿda 969/23 July 1562. Barbarigo tells us (Albèri, iii/3, 148) that in her last years Khurrem would not allow Sulaymān out of her sight; both infirm, they spent the winter of 965/1557-8 in Edirne together, and she returned to die in Istanbul in April. She is buried in her mausoleum, built by Sinān beside Sulaymān's near the Süleymāniyye mosque. Due largely to her intrigues Selīm, Sulaymān's least worthy son, remained alone to succeed his father.

A number of Khurrem's letters exist. Seven letters to Sulaymān, written between 1526-53, published in modern Turkish transcription in Uluçay, *Osmanlı sultanlarına aşk mektuplari*, Istanbul 1950, are preserved in the Archives of the Topkapı Sarayı Museum as TKS Arşivi nos. E. 5038, 5662, 5859, 5926, 6036, 6056, 11480. In 1548 and 1549 she and Mihr-i Māh wrote to Sigismund Augustus of Poland; the originals are in Warsaw, AGAD, Arch. Kor., Dz. turecki, teczka 110, nos. 218, 219, 221, 222: French translations by Askenazy, *Listy Roxolany*, in *Kwartalnik Historyczny*, x (1896), 113-7. A correspondence with Persia ensued over the building of the Süleymāniyye mosque, with Khurrem answering Shāh Tahmāsp's wife's letter of good wishes to her in 962/1555 (reference to copies in Hammer-Purgstall's Ms. in *GOR*, ix, 375: items 499, 500) and the Shāh's sister's letter of congratulations after the completion in 964/1557; published in Ferīdūn, *Munshaʾāt*², ii, 63-6. There are many deeds of gift made by Sulaymān to Khurrem; see, for example, Heyd, *Ottoman documents*, Oxford 1960, 143, and *Kanunî Sultan Süleyman sergisi*, Istanbul 1958, nos. 71, 90, 102, 125. Some examples of embroidery said to be Khurrem's work are preserved in the Topkapı Sarayı Museum and the Türk İslâm Eserleri Müzesi in Istanbul.

Khurrem's fame spread through Europe in her lifetime. It is unlikely that she ever sat for a portrait, but several portraits of her exist. In Topkapı Sarayı there is an oil painting (see cover of Uluçay, *Aşk mektupları*), made from the engraving in Boissard, *Vitae et icones sultanorum*, Frankfurt 1596, and two other portraits (see Uluçay, 7, 20). Sokolnicki, *La Sultane Ruthène*, in *Belleten*, xxiii, 1959, 229-39, lists further portraits in Florence, Venice and Vienna, the latter bearing the same inscription as Uluçay, 20, and probably identical to it. There is a fine engraving of her by Melchior Lorich in *Turckische Figuren* (see Rouillard, *The Turk*, Paris 1938, plate 23). Khurrem's story inspired drama and literature in Europe in the 16th and 17th centuries, including two French plays, *La Sultane*, Paris 1561, and *Roxelane*, Paris 1643; see Rouillard, *The Turk*, 421-66, and Chew, *The Crescent*, New York 1937, 497-503.

(S. A. Skilliter)

KHURSĀBĀD, a village situated 36° 40′ N. and 43° 10′ E. in the plain 17 km. to the north-east of Mosul, in the *muḥāfaẓa* of al-Mawṣil. It is the site of the ancient Assyrian royal city Dur Shar-

rukin, "The Fortress of Sargon". The earliest excavations there were undertaken by Paul Emile Botta in 1843 when he was the French Consul at Mosul, and he has been described by Parrot as "the first systematic excavator of a Near Eastern site". He himself described his work in a series of letters which he wrote after each important find and he carefully copied all the inscriptions he discovered, although at that time Akkadian was still an undeciphered language. Victor Place continued the excavation of the site from 1852-5, but then it was abandoned until G. Loud worked there on behalf of the Oriental Institute of Chicago for eight seasons from 1927-35. Since then a number of stone reliefs from the palace, including two famous colossal bulls, have been removed to the Iraq National Musuem in Baghdad (1938, 1943) and the Directorate-General of Antiquities of Iraq resumed excavations for a short period in 1957.

Sargon II (721-705 B.C.) built the city between 717 and 707 when he moved the centre of his administration from Kalkhu (modern Birs Nimrūd), and the city is a model of Assyrian town-planning. It has seven fortified gates and the early excavations revealed the rooms of the palace and the houses of the palace officials. There are a number of shrines to various deities (called by Botta the Harem) and a ziggurat (which Botta described as an observatory). The later American excavation discovered the temple of Nabu who, with his consort Tashmetum, was a god of vegetation and recently it has been suggested by Postgate that the fertility ritual of the sacred marriage was performed in this building. The entrance to the palace was flanked by a pair of massive, winged, human headed bulls (as in other Assyrian cities) and the walls were decorated with detailed reliefs of battle scenes and festival processions. A number of glazed brick panels have also been recovered from the site and chemical analysis of the blue glazes derived from copper suggests that lead was being used as a flux, a technique that was forgotten but later re-developed.

Cuneiform inscriptions show that the city was completed just before Sargon died. It was during his eighth military campaign, on which he plundered towns and villages in north-western Iran, that he was ambushed and killed (705 B.C.) and his corpse was left unburied as "food for the birds of prey". The priests seem to have interpreted this final humiliation as a sign of divine punishment, and his son Sennacherib abandoned the city and turned his attention to the rebuilding of Nineveh, which remained the capital of Assyria until the empire was overthrown in 612 B.C. The most important document for historical research which has been discovered at the site is a list of the names of the kings of Assyria together with the length of their reigns as far back as Irishum I (1852-1813). Although there are inconsistencies of detail between this list and the King list from Asshur [see ATHŪR] in Suppl. and the records of astronomical observations, it does provide the basic framework for the study of Assyrian history.

The palace is built on a raised platform and planned around an open courtyard which was accessible to the public. This gave access to an inner courtyard which seems to have been reserved for those in special positions of authority. The throne room was approached from the inner courtyard through a triple doorway flanked by monumental sculptures. A staircase led from the throne room to the private living rooms. Because of the absence of any relief carving in the throne room it has been suggested that this was originally decorated with mural paintings but no traces have survived.

Sargon had the construction of the city described in detail on the pavement stones in the palace gates with these words: "[the king] built the city at the foot of Mount Musri above Nineveh and named it Dur Sharrukin. He erected palaces of ivory, maple, boxwood, mulberry, cedar, cypress, juniper, pine and terebinth as his royal dwelling place. In front of the gates he built a portico, as in a Hittite palace, which in the Amorite language is called a *bit ḫilāni*." It is particularly interesting to note that he received inspiration for at least one architectural detail from his western expedition.

When the site was first discovered, Botta thought he had found the much more famous city of Nineveh, for he was so astounded by the size and obvious splendour of the ancient city. Layard raised objections to this identification because he thought it was too far away from the Tigris. Neither of them appeared to know the traditional identification in Arabic historical sources; Yāḳūt describes the village as the site of an ancient city called Ṣarʿūn, which probably reflects an earlier corruption of Ṣarghūn.

When excavations began, E. Flandin was sent by the French government to copy the sculptures which had been found. It was identified with Dur Sharrukin after the inscriptions of its founding king had been translated. He had had it built as a strategic defence against the troublesome Cimmerian attacks from the north and had cobbled the main exit roads so that his troops could be transported efficiently with their supplies. The ancient walls surround an area of 320 hectares with the citadel occupying 20 hectares. Yāḳūt mentions that the village of his day (which he refers to as Khurustābād) had good irrigation. The modern village supports a small population (the average density of the area is 29.5 persons per km.²) situated on the eastern bank of the river Khawsar at the northern end of the Djabal Maḳlūb.

(M. E. J. Richardson)

KHURSHĪD, *ispahbadh* [*q.v.*] of the Dabūyid line in Ṭabaristān. It was long believed that there were two Khurshīds, because of errors in interpreting coin legends; Mordtmann, in *SB Bayr. Ak.* (1871), 30, 36, dated three coins of this prince to the years 70, 60 and 64 of the Ṭabaristān era, and this led people to posit the existence of a Khurshīd I who reigned 50-60 T. and a Khurshīd II who reigned 88-116 T. (idem, in *ZDMG*, xxxiii, 110, cited by Unvala, p. 8, § 5, p. 30, § 11). He was followed by Marquart, *Ērānšahr*, 132, who also read 64 T. on a coin which

he attributed to Khurshīd I, who must in his opinion have reigned 60-4 T. Vasmer, in *EI*[1] art. MĀZANDARĀN was the first to perceive this false reading, which he explained by the resemblance between *shast* = 60 and *dahsat* = 110 in the Pahlavi script. Accordingly, Vasmer dated the coins to 110 and 114 T., instead of 60 and 64 T., and he therefore denied the existence of two Khurshīds, especially as the local sources make no mention of a Khurshīd I. Unvala, p. 7, § 4, p. 8, § 5, p. 30, § 11, confirmed Vasmer's conclusions, and remarked that the coins of the alleged Khurshīd I are absolutely identical with those which Mordtmann attributed to Khurshīd II. As for the bronze coin dated by Mordtmann (*ZDMG*, xix, 474, No. 170) to the year 70 T. and attributed to Khurshīd I, Vasmer corrects this false reading to 107 T. (*EI*[1], *loc. cit.*). Unvala (p. 9, § 16, coin No. 800 in his catalogue) confirms Vasmer's dating, and observes that to date the coins to 64 and 70 T. and attribute them to Khurshīd I would interrupt in an inexplicable fashion the series of coins issued by Farrukhān the Great (60-79 T.). One must thus cease speaking of two Khurshīds, as does Spuler in *EI*[2] art. DĀBŪYA.

The *ispahbadh* Khurshīd is therefore the last Dabūyid prince, who reigned in Ṭabaristān 89-110 T./123-44 A.H./740-61 A.D. according to his coins, which corresponds closely with the information of local chroniclers. In fact, Ẓahīr al-Dīn, 40, gives him a reign of 13 years, to which should be added 8 years of the regency of his paternal uncle Sārūya (Ibn Isfandiyār, 113). But elsewhere (319), he gives him a reign of 51 years, which cannot even be given credence as an indication of his age. Al-Ṭabarī, iii, 140, states that Khurshīd was still young when his father Dādhburzmir died. According to Ibn Isfandiyār, *loc. cit.*, Dādhburzmir's brother Sārūya acted as regent for 8 years, but his sons wanted to keep the throne in their own line, hence plotted against their cousin Khurshīd, who had reached his majority. The latter managed to defeat them and recovered his throne (*ibid.*, 113-14). He was a real petty king, with a personal guard, an army and representatives in the various districts of Ṭabaristān (*ibid.*, 114-16). He even sent an embassy to the Chinese court of the Tʿang, in *ca.* 746 (Abel-Rémusat, i, 254, ii, 166-49): "In the fifth year Tian-pao, the king Hu-lu-han sent an embassy to the Imperial Court and received in exchange the title of King of Kuei-Sin" (submission to vassalage). These royal pretensions explain his rebellion under the last Umayyad caliph Marwān II (127-32/744-50; cf. Balādhurī, 338), but he had to submit to Abū Muslim al-Khurāsānī in 131/749 (Ṭabarī, ii, 2016). After al-Manṣūr's execution of Abū Muslim in 137/755, Sunbādh revolted and entrusted to Khurshīd part of the treasures of Abū Muslim (Ṭabarī, iii, 86, 119; Niẓām al-Mulk, tr. Schefer, 267-8, tr. Darke, 212). After his defeat, Sunbādh sought refuge in Ṭabaristān, but Khurshīd had him killed by his cousin, in order to get his hands on the rest of Abū Muslim's treasures (Ibn Isfandiyār, 117-18). The caliph al-Manṣūr had to send his son al-Mahdī to Rayy to recover Abū Muslim's property (Ibn al-Athīr, v, 369; Ibn al-Faḳīh, 312, 314). Khurshīd refused to send his son as a hostage, but had to pay a heavier tribute, at the level paid to the Sāsānids (Ibn Isfandiyār, 118).

This submission did not last long, since he took advantage of the rebellion of ʿAbd al-Djabbār b. ʿAbd al-Raḥmān, governor of Khurāsān, to cut off tribute in 141/758 (Ibn al-Faḳīh, 309-10; Balʿamī, iv, 380). This time, the caliph decided to finish once and for all with his vassal's insubordination and to annex his principality. His army invaded Ṭabaristān and they made contact with each other without fighting, forcing Khurshīd to take to the mountains, where he shut himself up in the fortress of al-Ṭāḳ (Ibn al-Faḳīh, 310). A long siege followed, but the place was finally captured in 142/759-60. Khurshīd managed to flee for refuge in Daylam (Ibn al-Athīr, v, 387; Ibn Isfandiyār, 121), but his family fell into the hands of the Muslims and were sent to the ʿAbbāsid court (Balādhurī, 339; Ṭabarī, iii, 136-7, 139-49). There is great confusion over the names of these captive princesses, and certain chroniclers identify them with the daughters of the *maṣmughān* of Dunbāwand and not with Khurshīd's family (Vasmer, 91, 100-1). However, various of this prince's daughters became concubines of al-Manṣūr, his brother al-ʿAbbās, and al-Mahdī, who had a son of al-Bakhtariyya (or al-Buhturiyya, according to Ibn Ḳutayba, *Maʿārif*, 193) called al-Manṣūr. It was al-Manṣūr b. al-Mahdī who refused the caliphate, as offered to him by the people of Baghdād in 201/817, after the choice of the ʿAlid ʿAlī al-Riḍā as al-Maʾmūn's heir-presumptive. He merely agreed to become governor of ʿIrāḳ for al-Maʾmūn (Ṭabarī, iii, 1001, 1005-6). Another of Khurshīd's daughters, usually named as Shakla, also became the concubine of al-Mahdī (Ṭabarī, iii, 140; Ibn al-Faḳīh, 314). She gave him a son, Ibrāhīm b. al-Mahdī [*q.v.*], sc. the anti-caliph of 201-4/817-19, who accepted his acclamation by the Baghdād populace after his half-brother al-Manṣūr's refusal. All this shows that one cannot set up against each other, in a simplistic fashion, the son of the "Persian concubine" (al-Maʾmūn) and the son of the "Arab princess" (al-Amīn), since the ʿIrāḳīs did not hesitate in 201/817 to set up the son of a Persian concubine (al-Manṣūr and then Ibrāhīm) against the son of another Persian concubine (al-Maʾmūn), who was moreover the very nephew of Ibrāhīm b. al-Mahdī.

Khurshīd gathered an army in Daylam and Gīlān and in 143/760 tried to regain his principality (Ṭabarī, iii, 141-2), but meeting no success, killed himself the following year (Balʿāmī, iv, 381; Ibn al-Faḳīh, 314). His son, who was on an embassy to China, learnt of the annexation of Ṭabaristān, as recorded in the Chinese annals: "He was honoured by the title of supernumerary officer-general, and awarded a purple cloak and a golden fish. Whilst he was staying in the capital, the black-robed Arabs conquered his lands" (Abel-Rémusat, i, 254). The other local dynasties of Ṭabaristān (the Bāwandids [*q.v.*] of Mount Sharwīn, the Ḳārinids [*q.v.*] of Mount Ḳārin and the Zarmihrids of Miyāndurūd) were kept as tributaries under the oversight of ʿAbbāsid governors resident at Āmul. These last continued to mint coins with Khurshīd's name till 114 T. (he having killed himself in 110 T.), which has led many historians to think that Khurshīd reigned till 115 T. The first extant coin minted in the name of an ʿAbbāsid governor is that of Rawḥ b. Ḥātim in 147/764 (cited by H. Gaube, *Arabosasanidische Numismatik*, Brunswick 1973, 124; it will be published shortly by R. Curiel, of the Cabinet des Médailles of the Bibl. Nat. in Paris).

Bibliography: In addition to the Arabic chroniclers (Balādhurī, *Futūḥ al-buldān*; Ibn al-Athīr; Ibn al-Faḳīh; Ibn Ḳutayba; Ṭabarī, etc.) and the Persian ones (Balʿamī; Ibn Isfandiyār, *An abridged translation of the History of Ṭabaristān*, by E. G. Browne, Leiden 1905; Niẓām al-mulk, *Siyāsat-nāma*, ed. and Fr. tr. Ch. Schefer ed. and Eng. tr. H. Darke; Ẓahīr al-Dīn, *Taʾrīkh-i Ṭabaristān . . .*, ed. B. Dorn, St. Petersburg 1850), the following should be consulted: J. Marquart, *Ērānšahr . . .*;

al-KHURṬŪM (Khartum, Khartoum), a city at the confluence of the Blue and White Niles, now the capital of the Democratic Republic of the Sudan. The name is said to be derived from the resemblance of the site to an elephant's trunk. At the time of the Turco-Egyptian invasion (1821), Khartum was a small village, the residence of a holy man. It was chosen as the military and administrative headquarters of the conquered territories by the governor, ʿUthmān Bey Djarkas, in 1824. With the extension of Turco-Egyptian rule, the pacification of the Sudan, and the opening-up of the Equatorial Nile and Baḥr al-Ghazāl [*q.v.*], Khartum developed into a flourishing town with a heterogeneous population, which included European traders, consular officials and Catholic missionaries. After the outbreak of the Mahdist revolt, the defence of Khartum was assumed by the governor-general, C. G. Gordon Pasha (General Gordon), a British subject in the khedivial service. The town, which had been under close siege from October 1884, fell to the Mahdī on 26 January 1885, Gordon being among the slain. During the Mahdist period, the capital was transferred to Omdurman (Umm Durmān), on the left bank of the Nile below the confluence, and Khartum was abandoned, apart from the dockyard (*al-tarsāna*), where the steamers of the Mahdist state were maintained, and the gardens, which became a source of revenue. After the defeat of the Khalīfa ʿAbd Allāh b. Muḥammad [*q.v.*] at Karari in September 1898 by Anglo-Egyptian forces, the restoration of Khartum was begun by Kitchener, the *serdār* and governor-general. Although again the administrative centre and the principal place of residence for Europeans, Khartum did not equal Omdurman in extent or population during the Condominium (1899-1955). Together with Omdurman and Khartum North it forms a conurbation known as "the Three Towns" (*al-Mudun al-Thalāth*).

KHŪRYĀN-MŪRYĀN, a group of islands in the bay of the same name on the south coast of Arabia, lying along latitude 17° 30′ N between longitudes 55° 30′ and 56° 30′ E. The islands, principally of granite and limestone formation, are the peaks of a submarine ridge. From west to east they are Ḥāsikiyya, Sawdā, Ḥallāniyya, Ḳarzawt and Djubayla. Ḥallāniyya is both the largest (about 8 miles long and 23 in circumference) and the only inhabited island of the group. At its centre it rises to a peak some 1,500 feet above sea-level. Its vegetation is scanty: only a few marine shrubs, some scattered tamarisks and occasional mimosas relieve the monotony of the landscape. The water is brackish, the best being obtained from a couple of wells sunk by a RAF survey party in 1963. Sawdā, the second largest island (3 miles long), is equally barren, though it was once inhabited. So also, apparently, was Djubayla, to judge from a few tombs on the island. Djubayla and Ḥāsikiyya, the westernmost island, lying only 20 miles from the mainland, are the haunts of thousands of seabirds, including pelicans and goosanders.

The Khūryān-Mūryān Islands were early identified with the so-called seven successive islands of Zenobios, and as such they marked the frontier between the kingdom of the Parthians and the kingdom of Ḥaḍramawt. From this it would appear that the Parthian frontier should be located in the innermost corner of Khūryān-Mūryān Bay. Over the centuries the inhospitality of the islands has forced their inhabitants to seek their livelihood from the sea. In the 6th/12th century, al-Idrīsī [*q.v.*] records that the islanders, who were then politically under al-Shiḥr, were very poor in winter and only managed to make a moderate living in the sailing season. They used to sail to ʿUmān, Aden and the Yemen. Their main source of revenue was tortoise shell, which they traded to the Yemenīs, and occasionally very beautiful amber, for which they sometimes got very high prices. Al-Idrīsī calls the bay containing the islands Djawn al-Ḥashīsh (Bay of Herbs). The Khūryān-Mūryān Islands in their turn were frequented by Arabs from Shiḥr and Mukallā in the Ḥadramawt [*q.v.* in Suppl.], and from Ḥudayda in the Yemen, to dig guano from Ḥāsikiyya and Djubayla Islands, where the seabirds down the centuries had left rich deposits. The guano was used as agricultural fertiliser, especially in the cultivation of tobacco.

The Portuguese were the first Europeans in modern times to record the existence of the Khūryān-Mūryān Islands. Affonso d'Albuquerque discovered them in 1503, and they appear thereafter in Portuguese sources as the Curia-Muria Islands, with Ḥāsikiyya as Asquié, Sawdā as Sodié and Ḳarzawt as Rodondo. Ḳawāsim [*q.v.*] from Ra's al-Khayma descended upon the islands in 1818, possibly with the intention of using them as a base for attacks upon shipping. The local inhabitants were driven or carried off and the islands remained unpopulated for several years afterwards. Sometime before or, more probably, after this incursion (the sources are unclear) the islands came into the possession of a sub-section of the Māhrā tribe, the Ibn Khalfān, residing in the vicinity of Mirbāṭ on the coast of Dhufār (Ẓufār [*q.v.*]). It is from this clan that the islands have derived the name by which they are known to the Arabs of southern Arabia—Djazāʾir bin Khalfān. By the middle of the 13th/19th century—and possibly a decade or so earlier—the islands had become a dependency of the sultanate of Masḳaṭ. French planters from Réunion Islands occasionally resorted to the islands to load guano for use as fertiliser, and it was the existence of these valuable deposits that led the British government in 1854 to ask the Sulṭān of Masḳaṭ, Sayyid Saʿīd b. Sulṭan, to cede the islands to Great Britain. The deed of cession was signed on 14 July 1854 and the guano deposits were worked from 1857 to 1859. A cable station was set up on Ḥallāniyya Island in 1861, only to be abandoned a year later when the Red Sea-Karachi cable proved unworkable.

From 1854 onwards, the Khūryān-Mūryān Islands were formally designated a dependency of the British colony of Aden, although administrative control over them was vested in the British political resident in the Persian Gulf, since it was more practicable for the British political agent at Maskaṭ to visit them than it was for the political resident (later governor) at Aden. When British rule over Aden ceased on 30 November 1967, the islands were handed back to the Sulṭān of Maskaṭ, despite the protests of the Aden successor government, the People's Republic of South Yemen, that it was entitled to succeed to sovereignty over all the dependencies of the former colony. Since that time the islands have been administered as part of the *wilāya* of Dhufār of the sultanate of ʿUmān. Ḥallāniyya Island is still populated, the number of inhabitants having remained fairly constant over the past century—36 in 1883, 50 in 1936, 70 in 1947 and 53 in 1976. They still derive their living from the sea, and especially from the great shoals of sardines which appear off the islands in late October each year, at the end of the south-west monsoon. Of late, foodstuffs and medical treatment provided by the ʿUmānī authorities in Salāla have gone some way to alleviate the rigours of the islanders' existence.

(A. GROHMANN-[J. B. KELLY])

KHUSDĀR [see KALĀT]

AL-KHUSHANĪ, ABŪ ʿABD ALLĀH MUḤAMMAD B. AL-ḤĀRITH, Mālikī faḳīh and biographer, originally from Khushan near Ḳayrawān. After studying *fiḳh* at the latter place and at Tunis, he left his homeland *ca.* 311/923, passing through Ceuta, where he was held back some time by teaching (he is said also to have corrected the orientation of the mosque there), and travelling to Spain. He resided in the Marches, and completed his legal training, especially from Ḳāsim b. Aṣbagh [*q.v.*], and ended up by enjoying the favour of the heir to the throne, prince al-Ḥakam, who procured for him the job of *ḳāḍī* of inheritances (*mawārith*) at Pechina, then that of the *shūrā* of Cordoba and after that, summoned him to his own side. He was something of a poet (though accused of committing faults here), and was considered to have a certain manual dexterity and to practise alchemy; he seems also to have acquired some medical expertise which allowed him, after his disgrace following al-Ḥakam's death in 366/976, to live by making up electuaries (*adhān*). He is said to have died in 371/981, but this date is not accepted by all his biographers, who however knew very little information about the last years of his life.

Al-Khushanī is credited with a hundred or so works and treatises composed at al-Ḥakam's behest, who was, as is well-known, a great lover of books. Amongst the titles cited here figure *al-Ittifāḳ wa 'l-ikhtilāf fi madhhab Mālik*, *al-Taḥāṣur wa 'l-mughālāt*, *al-Futyā*, *al-Taʿrīf*, *al-Mawlid wa 'l-wafāt*, *al-Nasab* and *al-Iḳtibās*, which do not seem to have survived. His fame, however, rests on his biographical works. As well as a *Taʾrīkh ʿUlamāʾ al-Andalus* and a *K. Fuḳahāʾ al-Mālikiyya*, which are no longer extant, al-Khushanī left two collections of especial interest. The first one which one thinks of is his *T. Ḳuḍāt al-Andalus*, ed. and tr. into Spanish by Ribera, Madrid 1914. Basing himself on written sources, archives and oral traditions, the author traces the biographies of the *ḳāḍīs* of al-Andalus from the conquest till 357/968, in a lively and instructive manner; and if he lacks a critical spirit in relaying, for instance, the fictitious story of the first three judges in Cordoba, he nevertheless does not omit items of information which are sometimes unfavourable to the Umayyads.

The second work which has been preserved, the *Ṭabaḳāt ʿulamāʾ Ifrīḳiya*, has been published by M. Ben Cheneb in his *Classes des savants de l'Ifriqiya*, Algiers 1915-20, as a continuation of the *Ṭabaḳāt* of Abu 'l-ʿArab [*q.v.*]. These *Ṭabaḳāt*, which the *ḳāḍī* ʿIyāḍ [*q.v.*] utilises freely in his *Madārik* under the title of *Taʾrīkh al-Ifrīḳiyyīn*, calling the author in familiar fashion Ibn Ḥārith, contain biographies of scholars who did not belong to the Mālikī school, and most remarkably, of converts to Shīʿism established in Ifrīḳiya by the Fāṭimids. It is the opinion of R. Brunschvig (*Un aspect de la littérature historico-géographique de l'Islam*, in *Mélanges Gaudefroy-Demombynes*, Cairo 1935-45, 150-1) that this exile, unable to come to terms with the doctrine imposed upon his native land, may have written this work at the demand of al-Ḥakam, who was eager to know about the situation there; in this respect, the *Ṭabaḳāt* are interesting for the information which they give on the Fāṭimids, but the author, far from being impartial, paints a gloomy picture of the *ʿulamāʾ* who remained behind in Ifrīḳiya and were compelled, according to his view, to rally to the new masters, either out of financial cupidity or from fear of persecution.

Bibliography: Ibn al-Faraḍī, No. 1396; Ibn Ḥazm, in *al-And.*, xix/1 (1954), 86; Ibn Nādjī, *Maʿālim al-īmān*, iii, 100; Ibn Farḥūn, *Dībādj*, 239; Ḍabbī, *Bughya*, No. 95; Samʿānī, *Ansāb*, f. 200b; Dhahabī, *Ḥuffāẓ*, iii, 196; ʿIyāḍ, *Madārik*, ed. Bakīr, Beirut 1387/1967, iv, 531-2 and index s.vv. (CH. PELLAT)

KHUSHHĀL KHĀN KHAṬAK, Pashtun poet and a warrior chieftain (1022-1100/1613-89), Khushḥāl Khān is recognised as the national poet of the Pashtūns.

1. Life. Son of Shah-bāz Khan and grandson of Yaḥyā Khān who, in turn, was the son of Malik Akōṛay, leader of a clan of the Khaṭak [*q.v.*], the boy Khushḥāl accompanied his father in tribal wars. After his father's death in a tribal battle, Khushḥāl succeeded him as *khān* or chieftain, and was recognized as such by Shāh Djahān, the Mughal Emperor. Khushḥāl served Shāh-Djahān in his army's campaigns in Balkh and Badakhshān in 1055/1645, but later, in the time of the Emperor Aurangzīb, the governor of Kābul aligned himself, along with some of Khushḥāl's uncles and cousins, against Khushḥāl. In 1074/1664, Khushḥāl, then 51 years old, was summoned by the governor to Peshāwar, where he was arrested and dispatched in chains to a fortress in Djaypūr. He was released two years later, but was not allowed to return home until 1080/1669. For the rest of his life, his sympathies rested with the rebel Pashtūn tribes. In his poems he preached unity of the Afghān tribes to resist Mughal domination. Khushḥāl greatly admired the Afrīdī chieftain Daryā Khān, who defeated the Mughal army at Landī Kōtal in the Khyber Pass [see KHAYBAR Pass] in 1083/1672, while leading a confederation of Afrīdī and Muhmand tribesmen. Accompanied by one of his loyal sons, ʿAbd al-Ḳādir Khaṭak, Khushḥāl fought and defeated the Bangash tribe, which supported Mughal rule. He also had to fight his third son, Bahrām, whom the Mughals sponsored in attempts to replace Khushḥāl as chieftain. In 1085/1674, he voluntarily relinquished his chieftainship to his eldest son, Ashraf, also a poet who was later (1044/1683) jailed by the Mughals. Khushḥāl declared himself a rebel and spent rest of his life with Afrīdī friends in the inaccessible eyries of Tīrāh, a zone "never effectively occupied by any government in all history". He travelled from tribal area to tribal area, seeking assistance and refuge. He was relentlessly pursued by his treacherous son, Bahrām, but evaded capture and died in the Afrīdī country in 1100/1689. The armed resistance which he encouraged by his pen and emphasised by his sword is "to be counted among the causes that brought about the dramatic collapse of the Mogul Empire in India" (Sir Olaf Caroe).

2. Literary Works. Khushḥāl, a prolific poet, constantly chanted his love of beauty, honour, and justice. As part of his opposition to Aurangzīb and his forces, Khushḥāl preached union of all Afghān tribes and encouraged revolt against Mughal rule:

> "My sword I gird upon my thigh
> To guard Afghān honour and fame:
> Its champion in this age am I,
> The Khaṭak Khān, Khushḥāl my name".

Khushḥāl also celebrates his successes and laments his subsequent misfortunes. He chastises those Pashtūns who accept gold rather than give battle to the Mughals.

As well as poetry, he wrote manuals on falconry, folk medicine, a dialogue between the pen and the sword, an account of his imprisonment and exile, and a geography of Swāt. "His lyrics and epics, alike present his religious devotion, occasionally in mystic terms, his patriotic feelings, his moral code, his many loves in object or joyful mood, and many other subjects" (D. N. MacKenzie). Khushḥāl rightly claims to be the originator of Pashtō poetic form and metre, but it must be remembered that he had a predecessor, Mīrzā Anṣārī. Both these early Pashtō poets used the Darī or Persian poetic mould, but instead of strictly applying the classical rules of prosody to Pashtō, they adopted the metres of popular Pashtō songs to verse forms known in Persian. "This metre is syllabic in nature, but the pattern is made by the stress usually recurring on every fourth syllable" (MacKenzie).

Khushḥāl further left many *ghazal*s in Persian under the pen-name of Rūḥī, and a Persian *ḳaṣīda* or ode on the futility of this world in same metre as the *Baḥr al-abrār* of Amīr-Khusraw Dihlawī; this Persian poetry is amongst the best of that written in the so-called *Sabk-i Hind* or "Indian style".

tūn (Procs. of Seminar on Khushḥāl Khatak held in Kābul in July 1966), Pashto Academy; *Tūryālay Pashtūn* (Procs. of Seminar held in July 1970), Pashtō Academy; *Pashtō*, Monthly Review, Peshāwar, special issue on Khushḥāl, July 1971.

(RAVAN FARHADI)

KHUSHḲADAM, AL-MALIK AL-ẒĀHIR ABŪ SAʿĪD SAYF AL-DĪN AL-NĀṢIRĪ AL-MUʾAYYADĪ, Mamluk sultan of the Burdjīs (regn. 19 Ramaḍān 865 - 10 Rabīʿ I 872/22 June 1461 - 9 October 1467). By origin a Rūmī (i.e. perhaps a Greek, but the term had a wide range of meanings), he was born *ca.* 815/1413. Brought as a boy to Egypt by the slave-merchant Khʷādjā Nāṣir al-Dīn, he was purchased by the sultan al-Muʾayyad Shaykh, whence his two *nisbas*. He rose through the grades of promotion of the Royal Mamlūks as *khāṣṣakī*, *sāḳī* and *amīr*, finally succeeding al-Muʾayyad Aḥmad b. Īnāl as *atābak al-ʿasākir* in Egypt when the latter became sultan in Djumādā I 865/Feb. 1461. The *atābakiyya* was at this time the highest in rank of the great offices of state, but had no specific functions; its holder was also styled *amīr kabīr*, i.e. the senior *amīr*. The reign of al-Muʾayyad Aḥmad was soon disturbed by the intrigues of Djānim al-Ashrafī, the governor of Damascus, who sought to usurp the sultanate with the support of his *khushdāshiyya*, the Ashrafiyya, i.e. the Mamlūk household of al-Ashraf Barsbāy [*q.v.*]. The Ashrafiyya were at first opposed by their rivals, the Ẓāhiriyya, i.e. the household of al-Ẓāhir Čaḳmaḳ [*q.v.*], whose chief Djānibak al-Ẓāhirī (formerly governor of Djudda) skilfully won the agreement of the two factions to the deposition of al-Muʾayyad Aḥmad and the installation of Khushḳadam as a compromise candidate until the arrival of Djānim from Syria. Since Khushḳadam was not of "the Nation" (*al-djins*, i.e. not a Circassian), it would be easy to depose him at will. Thus Djānibak alleged, but he rightly calculated that once Khushḳadam was recognised as sultan, he would be difficult to oust. He was accordingly proclaimed, and his supporters captured the Citadel of Cairo with little resistance, al-Muʾayyad Aḥmad being arrested and sent to imprisonment in Alexandria.

The new sultan was thus faced at the outset with both an over-mighty kingmaker and a powerful rival. Djānibak, who was appointed *dawādār kabīr* (a great office of state of growing importance in the later Circassian period), was at first the effective ruler (*mudabbir al-mamlaka*). When Djānim al-Ashrafī advanced to Khānḳāh Siryāḳūs, north of Cairo, Djānibak succeeded in obtaining an oath of loyalty to the new sultan from him, and Djānim returned, loaded with gifts, to Damascus (Shawwāl 865/July 1461). Some months later, Djānim was removed from office, and fled to Uzun Ḥasan of the Aḳ Ḳoyunlu [*q.v.*] in Ṣafar 866/Nov. 1461. With a force of Mamlūks and Aḳ Ḳoyunlu Turcomans, he subsequently crossed the Euphrates and advanced to Tall Bāshir (Shawwāl 866/July 1462), but the invasion came to nothing, and in the following winter he was killed in Edessa. The sultan was now strong enough to procure the murder of Djānibak (Dhu 'l-Ḥidjdja 867/August 1463); an event which was followed by the arrest of leading members of the Ẓāhiriyya faction. Khushḳadam's coup against the Ẓāhiriyya was, however, abruptly halted, probably because of a conspiracy against him in his own Mamlūk household. A reconciliation was effected through Ḳāyitbāy al-Ẓāhirī (the future sultan), and the offices and *iḳṭāʿ*s of the Ẓāhiriyya were restored.

There were no major foreign developments during the reign. Suzerainty was maintained over King James of Cyprus (who had been installed with the help of a Mamlūk contingent sent by al-Ashraf Īnāl [*q.v.*] in 864/1460), although in a clash between the king and the sultan's resident in Cyprus, the latter was killed, and Famagusta, which he had held, passed into the king's possession (868/1464). Another vassal-state, the march-principality of Elbistan [*q.v.*] under the Turcoman dynasty of Dulghādir (Dhu 'l-Ḳadr [*q.v.*]), was disturbed by a succession-struggle following the murder of its ruler, Malik Arslān, in 870/1465. Two pretenders, Shāh-Budaḳ and Rustum, successively backed by Khushḳadam, failed to hold their position against a third Dulghādirid, Shāh-Suwār, who had Ottoman support and at the end of the sultan's reign was threatening northern Syria. Khushḳadam sent orders to the governors of Tripoli and Ḥamāh to assist Aleppo, and made provisional arrangements for an expeditionary force from Egypt (Muḥarram 872/August 1467). There are some indications of a resurgence of Arab tribal power during the reign. Five expeditions were launched between 866/1462 and 869/1465 against the Labīd tribe of al-Buḥayra; while a few months before the sultan's death, he sent a punitive force against Shaykh Mubārak of Banū ʿUḳba, who had plundered the provisions for the pilgrims in the vicinity of Ayla. One of his last acts was to approve an expedition to Upper Egypt, where the *kāshif* had been defeated in a fight with Yūnus b. ʿUmar, the chief of the powerful tribe of Hawwāra [*q.v.*]. The sultan died a few days later. Shortly before his death, an assembly of magnates had elected the *atābak* Yalbāy al Īnālī al Muʾayyadī to succeed him.

KHUSRAW [see ANŪSHIRWĀN, AMĪR KHUSRAW, KHOSREW, KISRĀ, PARWĪZ].

KHUSRAW FĪRŪZ, name of the last Būyid ruler, better known by his *laḳab* of al-Malik al-Raḥīm. He succeeded his father Abū Kālīdjār in ʿIrāḳ in 440/1048. Most of his reign was spent in disputing with his brother Fulādh Sūtūn the possession of Fārs and Khūzistān and in trying to maintain discipline amongst the Turkish troops of his general al-Basāsīrī [*q.v.*]. There is no discernible doctrinal reason for his adoption, in defiance of the caliph, of an epithet reserved for God. In any case, the enfeeblement of the Būyid dynasty allowed the caliph in question, al-Ḳāʾim, to recover a certain amount of political authority, seen in the appointment once more of a vizier to the caliph, Ibn al-Muslima [*q.v.*]. A group within the caliphate, in which Ibn al-Muslima was a driving force, hoped to throw off the Būyid tutelage as the Sunnī sultan, the Saldjūḳ Toghril Beg approached, at the invitation also of Fulādh Sūtūn. In 448/1055 Toghril entered Baghdād, after having promised to respect al-Malik al-Raḥīm's position as his vassal, but a rebellion gave him a pretext to arrest the Būyid ruler, and the latter died two years later in prison at Rayy.

Bibliography: See the main histories of the period, and especially Ibn al-Djawzī's *Muntaẓam*, Ibn al-Athīr's *Kāmil* and Sibṭ b. al-Djawzī's *Mirʾāt*; H. Bowen, *The last Buwayhids*, in *JRAS* (1928);

and in general, the bibliography to BUWAYHIDS, to which should be added, H. Busse, *Chalif und Grosskönig, die Buyiden im Iraq (945-1055)*, Beirut-Wiesbaden 1969. (CL. CAHEN)

KHUSRAW MALIK [see GHAZNAWIDS].

KHUSRAW PASHA [see KHOSREW PASHA].

KHUSRAW SHĀH [see GHAZNAWIDS].

KHUSRAW SULṬĀN, eldest son of the Mughal emperor Djahāngīr [*q.v.*] by the daughter of Rādjā Bhagwān Dās, was born at Lahore in 995/1587. He was a favourite with his grandfather, Akbar, who perhaps wanted to make him his successor. He rebelled against his father in the first year of the latter's reign (sc. in 1015/1606), was defeated and imprisoned. He made a second conspiracy in Afghānistān, and this having been detected, he was, with one interval, kept in confinement for the rest of his life. He died at Asīrgaṛh near Burhānpūr in the Deccan in 1031/1622, in suspicious circumstances, and was in all probability murdered by Shāh Djahān. His sister had his body buried in the Khusraw Bāgh at Allāhābād. His two sons, Dāwar Bakhsh, otherwise Bulākī, and Garshāsp, were put to death at Shāh Djahān's accession.

KHUSŪF [see KUSŪF].

KHUṬBA (A.), sermon, address by the *khaṭīb* [*q.v.*]. The *khuṭba* has a fixed place in Islamic ritual, viz. in the Friday-service, in the celebration of the two festivals, in services held at particular occasions such as an eclipse or excessive drought. On the Friday it precedes the *ṣalāt*, in all the other services the *ṣalāt* comes first. A short description of the rules for the *khuṭba* according to al-Shīrāzī (*Tanbīh*, ed. Juynboll, 40), one of the early Shāfiʿī doctors [*q.v.*], may be given here.

(a.) One of the conditions for the validity of the Friday service is that it must be preceded by two sermons. The conditions for the validity of these sermons are the following: the *khaṭīb* must be in a state of ritual purity; his dress must be in accord with the prescriptions; he must pronounce the two *khuṭbas* standing and sit down between them; the number of auditors required for a valid *djumʿa* must be present [see ṢALAT].

Regarding the sermon itself, there are obligatory: the *ḥamdala*, the *ṣalāt* on the Prophet, admonitions to piety in both *khuṭbas*, prayer (*duʿāʾ*) on behalf of the faithful, and recitation of a part of the Ḳurʾān in the first *khuṭba* or, according to some doctors, in both. It is commendable (*sunna*) for the *khaṭīb* to be on a pulpit or an elevated place; to salute the audience when directing himself towards them; to sit down till the *adhān* is pronounced by the *muʾadhdhin*; to lean on a bow, a sword or a staff; to direct himself straightway to his audience; to pray (*duʿāʾ*) on behalf of the Muslims; and to make his *khuṭba* short.

(b.) Regarding the *khuṭbas* on the days of festival the same author says (42) that they are like those of the Friday-service, except in the following points: the *khaṭīb* must open the first with nine *takbīrs*, the second with seven. On the *ʿīd* he must instruct his audience in the rules for the *zakāt al-fiṭr*, on the *ʿīd al-aḍḥā* in the rules for the sacrifice of this day. It is allowable for him to pronounce the sermon sitting.

Regarding the *khuṭbas* of the service during an eclipse, al-Shīrāzī (43) remarks that the preacher must admonish his audience to be afraid, and in the service in times of drought he must ask Allāh's pardon, in the opening of the first *khuṭba* nine times, in the second seven times; further, he must repeat several times the *ṣalāt* on Muḥammad as well as *istighfār*, recite verse 9 of Sūra LXVI, elevate his hands and say Muḥammad's *duʿāʾ* (which is communicated by al-Shīrāzī in full). Further, he must turn towards the *ḳibla* [*q.v.*] in the middle of the second *khuṭba* and change his shirt, putting the right side to the left, the left to the right, the upper part beneath and keep it on till he puts off all his other garments.

These prescriptions give rise to the following remarks. C. H. Becker was the first to point to the relation between the Islamic pulpit and the judge's seat in early Arabia. This explains why the *khaṭīb* must sit down between the two *khuṭbas*; it explains why he must lean on a staff, sword or bow; for these were the attributes of the old Arabian judge. It is not easy to see why the *khuṭba* precedes the services on Friday, whereas on the days of festival and the other special occasions *ṣalāt* comes first. *Ḥadīth* tells us that Marwān b. al-Ḥakam was the first to change this order by pronouncing the *khuṭba* before the performance of the *ṣalāt* on the days of festival (e.g. al-Bukhārī, *ʿĪdayn*, *bāb* 6 and especially the pathetic picture in Muslim, *ʿĪdayn*, trad. 9).

It is also said that Marwān was the first to hold the *khuṭba* on these days on a pulpit, the old custom being a service without *minbār* or *adhān*. According to other authorities (cf. Muslim, *Īmān*, tr. 78, 79, and al-Nawawī's commentary) the *khuṭba* before the *ṣalāt* was an institution going back to ʿUthmān or even to ʿUmar. The common opinion of traditionists is, however, that it was an innovation due to the general tendency of the Umayyads to favour their own dynastic interests rather than those of religion. If this opinion should be right, the innovation as well as the holding of the *khuṭba* in a sitting attitude may be looked upon as an endeavour to go back to the pre-Islamic judicial rites concerning *minbar* and *khuṭba*.

Regarding the prayer on behalf of the faithful (*duʿāʾ li 'l-muʾminīn*) it must be observed that in this prayer before the Friday-*ṣalāt* it has become customary to mention the ruling sovereign. The history of Islam is full of examples of the importance which was attached to this custom, especially in times of political troubles, the name mentioned in this *duʿāʾ* betraying the *imām*'s political opinion or position. Though it is not prescribed by law to mention the ruler's name, the suppression of the name at this occasion exposed the *khaṭīb* to suspicion. In countries where Muslims lived under non-Muslim rule, even a prayer for the worldly prosperity of the ruler could expose the *khaṭīb* to suspicion on the part of his fellow-Muslims (cf. Snouck Hurgronje, *Islam und Phonograph*, 13 f. = *Verspr. Geschr.*, ii, 430 f.; idem, *Mr. L. W. C. van den Berg's beoefening van het Mohammedaansche recht*, in *Ind. Gids*, vi/1, 809 f. = *Verspr. Geschriften*, ii, 214 f.). The custom of mentioning the ruler in prayer is found as early as the 5th century B.C. in the Aramaic papyri of Elephantine (Pap. i, line 26; cf. also Harnack, *Mission und Ausbreitung des Christentums*, i, 286.

Several of the characteristics of the *khuṭba* prescribed by the doctors of the law occur also in *ḥadīth*. The *khuṭbas* of Muḥammad usually begin with the formula *ammā baʿdu* (al-Bukhārī, *Djumʿa*, *bāb* 29). Side by side with the *ḥamdala* (Muslim, *Djumʿa*, tr. 44, 45) the *shahāda* occurs (Aḥmad b. Ḥanbal, ii, 302, 343: "A *khuṭba* without the *shahāda* is like a mutilated hand". In a large number of traditions it

is stated that Muḥammad used to recite passages from the Ḳur'ān (e.g. Muslim *Djum'a*, tr. 49-52; Aḥmad b. Ḥanbal, v. 86, 88, 93 etc.). The *khuṭba* must be short, in accord with Muḥammad's saying: "Make your *ṣalāt* long and your *khuṭba* short" (Muslim, *Djum'a*, tr. 47). Just like the *ṣalāt* the *khuṭba* must be right to the purpose (*ḳaṣd*an, Muslim, *Djum'a* tr. 41). The audience must be silent and quiet; "who says to his neighbour 'listen', has spoken a superfluous word", al-Bukhārī, *Djum'a*, *bāb* 36). The two *khuṭbas* pronounced by the standing *khaṭīb*, who sits between them, are based on Muḥammad's example (al-Bukhārī, *Djum'a*, *bāb* 27; Muslim, *Djum'a*, tr. 33-5; Aḥmad b. Ḥanbal, ii, 35, 91, 98). During the *adhān* Muḥammad used to sit on the *minbar*; the *iḳāma* was spoken when he had descended (in order to hold the *khuṭba* standing); this order was observed by Abū Bakr and 'Umar (Aḥmad b. Ḥanbal, iii, 449 *bis*).

Neither the term *khuṭba* nor the verb *khaṭaba* in their technical meaning occur in the Ḳur'ān. Even in the passage containing an admonition not to abandon the Friday-service for worldly profit, it is only the *ṣalāt* which is mentioned (Sūra LXII, 9-11). It would be wrong to conclude from this silence that the *khuṭba* did not yet form a constituent part of worship in Muḥammad's time. Still, it is not probable that the different kinds of service were accurately regulated from the beginning. *Ḥadīth* has preserved descriptions showing that Muḥammad's *khuṭba* often did not have much to do with the regular sermon of later times. Abū Dāwūd, *Kitāb al-diyāt*, *bāb* 13, reports, for example, that the Prophet pronounced two *khuṭbas* at the end of a complaint raised against a collector of the *zakāt*. Still, it is not possible to distinguish between the kinds, as may appear from the following traditions. According to one of them related on the authority of Abū Sa'īd al-Khudrī it is said that Muḥammad on the days of festival used to open the service with the *ṣalāt*; then he pronounced the *khuṭba* "and his *khuṭba* usually consisted in the command to participate in some mission or expedition" (Aḥmad b. Ḥanbal, iii, 56 f.). A similar statement is to be found in Muslim, *'Īdayn*, tr. 9: "When Muḥammad had concluded the *ṣalāt* on the days of festival by the *taslīm*, he remained on his feet and turned to the sitting audience; when he wanted to send a mission or when he desired some other arrangement, he gave his orders on it; he used also to say: give alms, give alms; ... then he went away. This state of things asted till Marwān, etc.". This is a very simple description of the service and would be a considerable support to the view that a service with a fixed order only arose long after Muḥammad's time. Yet it must not be forgotten that the description just translated betrays the tendency to contrast the simple service of the Prophet with the highly official style introduced by Marwān, who even had a *minbar* built on the *muṣallā*. According to another tradition, the Prophet once interrupted his *khuṭba* in order to reply to a stranger who had asked for instruction in the Muslim faith (Muslim, *Djum'a*, tr. 60); he is also portrayed as interrupting the *khuṭba* to call out directly to a man (*ibid.*, tr. 54-9).

However uncertain the value of these traditions may be, it seems not out of place to suppose that a fixed order of service on Friday and the days of festival arose only after Muḥammad's lifetime. This order reposes on three elements: the early-Arabian *khuṭba*, Muḥammad's *sunna* and the example of Jews and Christians.

In his study on the history of Muslim worship C. H. Becker endeavoured to establish a close connection between the services on Friday and the days of festival on the one hand, and the mass on the other. But this view was opposed by Mittwoch, who found in the Jewish liturgy features corresponding to *adhān* and *iḳāma*, to the *ḥamdala*, the recitation of the Tora (first *khuṭba*) and the recitation from the Prophets (second *khuṭba*). It is perhaps impossible to decide the question; probably the example of the Jewish as well as that of the Christian liturgy exercised influence on the final constitution of the Muslim worship.

It is customary to pronounce the *khuṭba* in Arabic; nevertheless, this rule is not infrequently broken in non-Arabic speaking lands.

The history of the *khuṭba* in Islam remains to be written, and the study of oratory from the *minbar* or pulpit likewise remains to be undertaken. On the latter point, the enquirer might utilise with profit the texts (of varying degrees of authenticity) of those sermons of the Prophet given in the *Sīra*, in the *ḥadīth* collections and in historical texts, as well as in those *adab* works which have preserved specimens of famous *khuṭbas*. Collections like those of Ibn Nubāta al-Fāriḳī [*q.v.*] and the specially-compiled anthologies of sermons used by the professional *khaṭībs*, just as the secretaries used collections of model letters, would also be found useful. Collections of this latter type are often arranged according to the calendar, i.e. there are four sermons for each month plus supplementary ones for festival days, the Prophet's birthday and his *mi'rādj* or night-journey (see Ahlwardt, *Verzeichnis der arab. Hss.*, iii, 437).

(A. J. WENSINCK)

KHUTTALĀN, KHUTTAL, a region on the right bank of the upper Oxus river, in what is now Soviet Central Asia, lying between the Wakhsh river and the Pandj river (sc. the head waters of the Oxus), called the Wakhshāb and Djaryāb in mediaeval times. It was bounded on the west by the topographically similar regions of Čaghāniyan and Wakhsh [*qq.v.*], and was often administratively linked with Wakhsh (Yāḳūt, *Buldān*, ii, 402). Khuttal was a land of rich pastures in both the river valleys and on the upper slopes of the hills, where the famed horses of Khuttal, known even to the Chinese, were reared; the geographers advert frequently to the Khuttalī and Ṭukhārī breeds, and the men of Khuttal were celebrated for their knowledge of horse-breeding, farriery and veterinary science, and for their skill in making saddles and other accoutrements (see Bosworth, *The Ghaznavids*, 113). The valleys ran northwards towards the Buttamān mountains, which separated Khuttal from the upper Zarafshān river valley; gold and silver were mined there, and there dwelt in these mountains two fierce and predatory groups, the Kumīdjīs and the Kandjīna Turks, both of them probably remnants of Hephthalite peoples [see KUMĪDJĪS].

The form Khuttalān, with the plural ending, is early attested, for this is found in the very early New Persian satirical verses composed by the local

people against the Arab commander Asad b. ʿAbd Allāh al-Ḳasrī when he unsuccessfully raided Khuttal in 108/726-7, see Ṭabarī, ii, 1492, 1494, 1602. Later Persian poetry requires forms like Khutlān or Khatlān, whilst the *Ḥudūd al-ʿālam*, tr. Minorsky, 119, spells Khatulān. Yāḳūt, *loc. cit.*, gives both Khatlān and Khuttal, with his main entry under the latter form. In the Chinese annals we find forms like Kʿo-tut-lo, see Marquart, *Ērānšahr*, 299-300. An etymological connection with the name of the Hephthalites, within whose northern kingdom Khuttal certainly fell [see HAYĀṬILA] is certainly not impossible.

The principal town of Khuttal and the residence of its ruler was at Hulbuk to the south of the modern centre Kulāb/Kulyab, whilst Nučārā or Andīčārāgh is described as the main trading centre. Other towns enumerated by the geographers include the important centres of Halāwand and Munk, the latter probably corresponding roughly to the modern Baldjuwān; according to Yaʿḳūbī, Munk was on the borderland with Rāsht and the Turkish lands, sc. those of the Kumīdjīs, etc. Clearly, Khuttal was a prosperous and well-settled region at this time.

In the pre-Islamic period, the local rulers bore the titles Khuttalān-Shāh or Khuttalān-Khudāh and Shēr-i Khuttalān (Ibn Khurradādhbih, 40). The Arab invaders did not gain full control of Khuttal till the end of the Umayyad period. The rebel al-Ḥārith b. Suraydj [*q.v.*] received support from the local ruler, and in retaliation, Asad b. ʿAbd Allāh al-Ḳasrī led two expeditions into Khuttal in 119/737. These provoked an appeal for help to the Khāḳān of the Türgesh or Western Turks Su-lu, and the Arabs had to retreat hastily (Gibb, *The Arab conquests in Central Asia*, 81-3). The region was not fully secured till 133/750-1, when Abū Dāwūd Khālid b. Ibrāhīm, governor of Balkh, drove out the ruler (*malik*) of Khuttal, who fled first to the Turks and then to China, where he was granted the honorific title of *Yabghu* (Gibb, *op. cit.*, 95; E. Chavannes, *Documents sur les Toukiue occidentaux*, 168, 216.

In the ensuing century or so, Khuttal came under the rule of the Banīdjūrids or Abū Dāwūdids, who exercised power on both sides of the upper Oxus. In the Sāmānid period, the *amirs* of Khuttal were in loose tributary status only to the Sāmānids, sending presents but not taxation to Bukhārā (Muḳaddasī, 337), and they exercised suzerainty south of the Oxus, for the *Ḥudūd al-ʿālam*, 109, says that the *dihḳān* of the small principality of Yūn in Badakhshān was tributary to the *amir* of Khuttal. In the warfare of 336-7/947-9 between the Sāmānid Nūḥ b. Naṣr and Abū ʿAlī Čaghānī, all the vassal rulers (*mulūk-i aṭrāf*) along the upper Oxus were stirred into revolt by Abū ʿAlī, including the *amir* Aḥmad b. Djaʿfar of Khuttal, the *amir* of Rāsht and the Kumīdjīs (Gardīzī, ed. Nāẓim, 36-7, ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 157-8, cf. Barthold, *Turkestan*[3], 248).

Under the early Ghaznawids, Khuttal was strategically important as being in the buffer zone between the Ghaznawids and their Ḳarakhānid rivals. Khuttal is included with Čaghāniyān and Ḳubādhiyān amongst the territories enumerated in the ʿAbbāsid Caliph's investiture diploma of 422/1031 to Masʿūd b. Maḥmūd (Bayhaḳī, in Bosworth, *The Ghaznavids*, 54), but it was also claimed by the Ḳarakhānid ʿAlī-tigin [see ILEK-KHĀNS], who stirred up the Kumīdjīs to harry the region. Unlike as in the neighbouring principality of Čaghāniyān, where the Muḥtādjī *amirs* remained, no separate family of local rulers is mentioned for Khuttal at this time; Ghaznavid influence was exercised directly, seen in Masʿūd's appointment of *a ḳāḍī 'l-ḳuḍāt* for Khuttal (Bosworth, *op. cit.*, 178).

In the Saldjūḳ period, however, various local *amirs* are mentioned. An *amir* of Khuttal rebelled against Alp Arslan in 456/1064, but was killed (Ibn al-Athīr, x, 22), and in 553/1158 there was a campaign by the lord of Khuttal, one Ibn Shudjāʿ Farrukhshāh, formerly a vassal of Sandjar, against the important crossing-place of Tirmidh, taking advantage of the chaos in Khurāsān consequent upon Sandjar's capture by the Ghuzz and then his death; this Ibn Shudjāʿ is said to have claimed descent from the Sāsānid emperor Bahrām Gūr (Ibn al-Athīr, xi, 155). In the period of the Ghūrids and Khʷārazm-Shāhs, no separate native dynasty is mentioned. Like Wakhsh, it may have been part of the Ghūrid empire and may have become one of the small principalities into which that empire broke up, see Djūzdjānī, *Ṭabaḳāt-i nāṣirī*, ed. Ḥabībī[2], Kabul 1341-3/1962-4, i, 387, 392, tr. Raverty, 426, 236, 490. A Djalāl al-Dīn ʿUmar of Wakhsh, apparently from the Bāmiyān branch of the Ghūrids [*q.v.*], was carried off into captivity in Khʷārazm *ca.* 612/1215, according to Nasawī, see Barthold, *Turkestan*[3], 372.

In the 8th/14th century, Khuttal was likewise one of the small states into which Čaghatay's empire disintegrated; Sharaf al-Dīn Yazdī records that the ruler of Khuttal Kay Khusraw was killed by Tīmūr for treasonable contacts with Khʷārazm (*Ẓafar-nāma*, Calcutta 1885-8, i, 243). Later, Khuttal was one of the dependencies of the region of Ḥiṣār [*q.v.*] and was controlled by the later Tīmūrid *amir* of Ḳunduz. Then in the 10th/16th century it passed under Özbeg control. The name Khuttal now disappears from use, being replaced by that of the modern town of Kulāb; one of the last recorded uses of the old name is in the dynastic history of the Özbegs, the *Baḥr al-asrār fī manāḳib al-akhyār* of Maḥmūd b. Amīr Walī (begun in 1044/1634). After being included in the Khānate of Bukhārā during the 18th and 19th centuries, the mediaeval region of Khuttal now forms part of the Tadzhikistan SSR.

Yāḳūt, *Buldān*, ii, 402, also mentions a village of al-Khuttal in ʿIrāḳ on the Baghdād-Khurāsān high road near Daskara.

BOSWORTH)

KHUZĀʿA, an ancient Arab tribe of obscure origin. Muslim genealogists assuming a Muḍarī origin of Khuzāʿa based their argument on an utterance attributed to the Prophet according to which the ancestor of the tribe, ʿAmr b. Luḥayy [*q.v.*] was a descendant of Ḳamaʿa (= ʿUmayr) b. Khindif, thus tracing their pedigree to Muḍar (Ibn Hishām, *al-Sīra al-nabawiyya*, ed. al-Saḳāʾ, al-Abyārī and Shalabī, Cairo 1355/1936, i, 78; al-Balādhurī, *Ansāb al-ashrāf*, ed. Muḥammad Ḥamīdullāh, Cairo 1959, i, 34; al-Fāsī, *Shifāʾ al-gharām bi-akhbār al-balad al-ḥarām*, Cairo 1956, ii, 44-5; Muṣʿab b. ʿAbd Allāh al-Zubayrī, *Nasab Ḳuraysh*, ed. E. Lévi-Provençal, Cairo 1953, 7-8, 11; Ibn ʿAbd al-Barr, *al-Inbāh ʿalā ḳabāʾil al-ruwāh*, al-Nadjaf 1386/1966, 97-8; Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, ed. E. Lévi-Provençal, Cairo 1948, 222-4; al-Samʿānī, *al-Ansāb*, ed. ʿAbd al-Raḥmān al-Muʿallamī, Hyderabad 1385/1966, V, 116). Some sections in Khuzāʿa asserted that

they were descendants of al-Ṣalt b. al-Naḍr b. Kināna b. Khuzayma b. Mudrika b. Ilyās b. Muḍar. The claims for Muḍarī descent made by some groups of Khuzāʿa were firmly rejected by genealogists, who asserted that both Ḳamaʿa and al-Ṣalt died childless. (Ibn al-Kalbī, *Djamharat al-nasab*, Ms. B.M., Add. 23297, fol. 4b, ll. 9-10; al-Wazīr al-Maghribī, *Adab al-khawāṣṣ*, Ms. Bursa, Hüseyin Çelebi, 19, fols. 84b-86a; al-Balādhurī, *Ansāb*, i, 34 ult., 38-9; Muṣʿab, *op. cit.*, 11-12). Muṣʿab, recording the Muḍarī genealogy of Khuzāʿa, confirmed by an utterance of the Prophet, remarks cautiously that the pedigree uttered by the Prophet is certainly true, provided that it was actually said by him (Muṣʿab, 8; Ibn ʿAbd al-Barr, *al-Inbāh*, 98). Harmonising traditions, trying in the usual way to bridge the contradictory reports about the origin of Khuzāʿa, claim that the mother of Luḥayy married after the death of Ḳamaʿa the Yamanī Ḥāritha and the child traced his pedigree to the Yamanī father who adopted him (al-Fāsī, *Shifāʾ*, ii, 46). Another tradition states that Ḳamaʿa married, begot children, but clashed with his relatives, left for al-Yaman and allied himself with the Azd (al-Balādhurī, *Ansāb*, i, 35, ll. 1-2). The Yamanī tradition, on the other hand, records a lengthy list of ancestors of Khuzāʿa beginning with Luḥayy (= Rabīʿa) b. Ḥāritha b. ʿAmr b. ʿĀmir b. Ḥāritha b. Imru ʾl-Ḳays b. Thaʿlaba b. al-Azd. The pedigree is traced back, of course, to Ḳaḥṭān (al-Fāsī, *Shifāʾ*, ii, 45, ll. 5-10; Ibn ʿAbd al-Barr, *al-Inbāh*, 97; Ibn Durayd, *al-Ishtiḳāḳ*, ed. ʿAbd al-Salām Hārūn, Cairo 1378/1958, 468; al-Ḥāzimī, *ʿUdjālat al-mubtadī*, ed. ʿAbd Allāh Kānūn, Cairo 1384/1965, 54).

The traditions about the beginnings of the rule of Khuzāʿa in Mecca, ascribing Khuzāʿa to Azd, record a lengthy story about the migration of the tribal groups of Azd from al-Yaman to the North. While some tribal divisions continued their migration to Syria (Ghassān) and ʿUmān (Azd Shanūʾa), the Khuzāʿa separated (*inkhazaʿat*) and managed to get control of Mecca. One of the traditions reports that the leader of the Azd asked Djurhum [*q.v.*], the tribe which ruled Mecca at the time, to permit them to stay in the territory of Mecca until their foragers would find for them suitable pasture-grounds, threatening war if they were denied this. In fact, when Djurhum refused to grant permission, Khuzāʿa fought them, defeated them and got possession of the Sanctuary of Mecca. Another tradition, on the authority of Abū ʿAmr al-Shaybānī, reports that the custodianship of the Kaʿba was gained legally by Khuzāʿa, as their leader Rabīʿa b. Ḥāritha married Fuhayra, the daughter of al-Ḥārith b. Muḍāḍ al-Djurhumī; his son ʿAmr b. Rabīʿa (i.e. ʿAmr b. Luḥayy) had thus a legal basis for his claims to the custodianship. In the protracted battles which ensued between Khuzāʿa and Djurhum, Khuzāʿa defeated Djurhum, who had to leave the city. A third tradition ascribes the decline of the Djurhum in Mecca to their deterioration and moral decay. Afflicted by plagues, God's chastisement for their wickedness, they were extirpated, and only few survivors from amongst them left Mecca; the custodianship of the *ḥaram* was then taken over by Khuzāʿa. A diverse tradition gives a quite different account of the events, sc. that Khuzāʿa took over the control of Mecca from Iyād [*q.v.*]. A peculiar version of this tradition transmitted by al-Zubayr b. Bakkār reports a battle which followed some clashes between the ruling Iyād and Muḍar in which Iyād was defeated. Iyād got permission to leave Mecca on the condition that Muḍarī women married to Iyādīs would be returned to Muḍar if they wished. Among the returned women was a Khuzāʿa woman named Ḳudāma. Khuzāʿa, the report states, traced at that time their pedigree to Muḍar. As the Iyād failed to carry with them into exile the pillar with the Black Stone, they decided to bury it. The Khuzāʿī woman revealed to her people the place of the buried Stone and advised them to ask from Muḍar the custodianship of the Kaʿba as reward for finding the pillar with the Black Stone. Muḍar complied and Khuzāʿa got control of the Kaʿba, and retained this office until the arrival of Ḳuṣayy [*q.v.*] (al-Fāsī, *Shifāʾ*, ii, 26 f.; al-Yaʿḳūbī, *Taʾrīkh*, al-Nadjaf 1384/1964, i, 208; Muḥammad b. Ḥabīb, *al-Munammaḳ*, ed. Khūrshīd Aḥmad Fāriḳ, Hyderabad 1384/1964, 344 f.; al-ʿIṣāmī, *Simṭ al-nudjūm al-ʿawālī*, Cairo 1380, i, 183). Another tradition reports that Djurhum were driven out through a joint action of Bakr b. ʿAbd Manāt of Kināna and the Banū Ghubshān of Khuzāʿa (al-Fāsī, *Shifāʾ*, i, 370; "Bakr b. ʿAbd Manāt of Khuzāʿa", as recorded in the article DJURHUM above is an error).

These stories allotting exceptionally long lives to the rulers of Djurhum and Khuzāʿa have the character of folk-tradition in which were embedded elements of *muʿammarīn*-tales, edifying stories about righteous and pious men (see e.g. the story of Wakīʿ b. Salama of Iyād and his servant Ḥazwara, in al-Fāsī, *Shifāʾ*, ii, 26, and Muḥammad b. Ḥabīb, *al-Munammaḳ*, 346-7), accounts of battles and clashes in the popular style of the *ayyām al-ʿarab*, and recollections of legends about the migrations of tribes caused by a dam breaking in South Arabia. The tradition focuses around the person of ʿAmr b. Luḥayy, almost unanimously putting on him the blame for the wicked innovations in the faith of Abraham and for the introduction of idol-worship, especially that of Hubal, into Mecca. There is, however, a contradictory tradition asserting that it was Khuzayma b. Mudrika, one of the ancestors of Ḳuraysh, who introduced the worship of Hubal and stating that Hubal was consequently called "Hubal Khuzayma" (al-Balādhurī, *Ansāb*, i, 37, no. 77; al-Fāsī, *Shifāʾ*, ii, 51 inf.). As in the case of Iyād, some traditions mention among the Khuzāʿa a *homo religiosus*, Abū Kabsha, who in his search after the true religion worshipped Sirius. The unbelievers used to refer to the Prophet as Ibn Abī Kabsha in the early period of his prophethood, pointing out his deviation from the current beliefs of his people. (Muḥammad b. Ḥabīb, *al-Muḥabbar*, ed. I. Lichtenstaedter, Hyderabad 1361/1942, 129; ʿAlī b. Burhān al-Dīn al-Ḥalabī, *Insān al-ʿuyūn fī sīrat al-amīn al-maʾmūn* (= *al-Sīra al-ḥalabiyya*), Cairo 1382/1962, i, 333; al-Balādhurī, *Ansāb*, i, 91, 327; al-Suyūṭī, *al-Durr al-manthūr*, Cairo 1314, vi, 131; al-Ḳurṭubī, *Tafsīr*, 1387/1967, xvii, 119; al-Maḳrīzī, *Imtāʿ al-asmāʿ*, ed. Maḥmūd Shākir, Cairo 1941, i, 77, 158; al-Kāzarūnī, *Sīrat al-nabī*, Ms. B.M. Add. 1499, fol. 231a-b, ʿAbd al-Salām Hārūn, ed., *Nawādir al-makhṭūṭāt*, Cairo 1370/1951, i, 100 (al-Fayrūzābādhī, *Tuḥfat al-abīh fīman nusiba ilā ghayri abīh*).

These conflicting and contradictory stories seem to indicate that the formation of the tribe of Khuzāʿa took place over a long period of time, ramifying into various tribal units. The main area of abode of the tribe was between Mecca and Medina.

When Ḳuṣayy arrived in Mecca aiming to gain control of the city, he had to subdue the ruling Bakr b. ʿAbd Manāt of Kināna, the Khuzāʿa and their abettors, the Ṣūfa. The different stories about the enigmatic Ḳuṣayy resemble in their outline the stories about the former rulers of Mecca; his marriage with Ḥubbā bint Ḥulayl b. Ḥubshiyya gave legitimacy to his custodianship of the Kaʿba. Another manner of

legitimisation, the tale of how this office was purchased by Ḳuṣayy for a goat's skin of wine from the drunken Abū Ghubshān, is recounted in the compilations of proverbs and stories of fools (al-ʿAskarī, *Djamharat al-amthāl*, ed. Muḥammad Abu 'l-Faḍl Ibrāhīm and ʿAbd al-Madjīd Ḳaṭāmish, Cairo 1384/1964, i, 387, no. 585; Ḥamza al-Iṣfahānī, *al-Durra al-fākhira fi 'l-amthāl al-sāʾira*, ed. ʿAbd al-Madjīd Ḳaṭāmish, Cairo 1972, i, 139, no. 126; al-Thaʿālibī, *Thimār al-ḳulūb*, ed. Abu 'l-Faḍl Ibrāhīm, Cairo 1384/1965, 135, no. 190; al-Maydānī, *Madjmaʿ al-amthal*, ed. Muḥyī 'l-Dīn ʿAbd al-Ḥamīd, Cairo 1379/1959, i, 216, no. 1167; Ibn al-Djawzī, *Akhbār al-ḥamḳā*, Beirut, n.d., 42). The court of Abū Ghubshān (*dār Abī Ghubshān*) was extant in Mecca in the second half of the 3rd century of the Hidjra (al-Fākihī, *Taʾrīkh Makka*, Ms. Leiden, or. 463, fol. 456b, l.15). Like the preceding rulers, he fought, according to another account, the two tribes Bakr b. ʿAbd Manāt and Khuzāʿa and crushed their power. His wife Ḥubbā revealed, as in the story of Iyād, the place where the pillar with the Black Stone was buried, and so the true worship of the Kaʿba could be resumed (al-Fāsī, *Shifāʾ*, ii, 73; al-Nuwayrī, *Nihāyat al-arab*, Cairo 1374/1955, xvi, 31). The relations between Ḳuṣayy on the one side and the Bakr b. ʿAbd Manāt and Khuzāʿa on the other were settled on the basis of the judgment of the arbiter Yaʿmar b. ʿAwf of the Bakr b. ʿAbd Manāt, called al-Shuddākh. The verdict granted Ḳuṣayy the custodianship of the Kaʿba and provided that Khuzāʿa should be left in the area of the *ḥaram* (Ibn al-Kalbī, *Djamhara*, fols. 51a, inf.—51b, sup.).

In the new régime set up by Ḳuṣayy, in which the scattered tribal units of Ḳuraysh were gathered and settled in Mecca, the groups of Khuzāʿa played an important role in strengthening the power of Mecca, aiding Ḳuraysh to extend their influence among the tribes. Khuzāʿa was included in the organisation of the Ḥums. Two tribal groups of Khuzāʿa, the Muṣṭaliḳ and Ḥayā, were included in the organisation of the Aḥābīsh, the allies of Ḳuraysh (see e.g. Ibn Ḳutayba, *al-Maʿānī 'l-Kabīr*, Hyderabad 1368/1949, 998, l. 4; Muḥammad b. Ḥabīb, *al-Muḥabbar*, 178; al-Ḥāzimī, *al-Iʿtibār fi-bayān al-nāsikh wa 'l-mansūkh min al-āthār*, Hyderabad 1359, 150; Ibn al-Kalbī, *Djamhara*, fols. 48b-49a sup.; al-Fāsī, *Shifāʾ*, ii, 41; Yāḳūt, s.v. Makka; al-Bakrī, *Muʿdjam mā 'staʿdjam*, ed. al-Saḳḳā, Cairo 1364/1945, 245; Ibn al-Faḳīh, *al-Buldān*, ed. de Goeje, Leiden 1885, 18). Together with Muḍarī tribes, Khuzāʿa worshipped al-ʿUzzā and Manāt; together with the Daws they worshipped Dhu 'l-Kaffayn (Yāḳūt, s.v. Manāt; Ibn ʿArabī, *Muḥāḍarat al-abrār*, Beirut 1388/1968, i, 415; Ps. Aṣmaʿī, *al-Shāmil*, the section *Tawārīkh al-anbiyāʾ*, Ms. B.M. Or. 1493, fol. 27a; Muḥammad b. Ḥabīb, *al-Muḥabbar*, 318). The involvement of Khuzāʿa and Bakr b. ʿAbd Manāt in the affairs of Mecca and their influence can be gauged from the story about the agreement between Ḳuraysh and Thaḳīf concerning the mutual rights of these two tribes to enter Mecca and Wadjdj: the Thaḳīf complied with the demands of Ḳuraysh, fearing the strength of Ḳuraysh, Khuzāʿa and the Bakr b. ʿAbd Manāt (Muḥammad b. Ḥabīb, *al-Munammaḳ*, 280).

The considerable number of names of Khuzāʿīs married by Ḳurashīs recorded in the sources bears evidence of the close relations between Ḳuraysh and Khuzāʿa. Indeed, when Khuzāʿa decided to ally themselves with ʿAbd al-Muṭṭalib, they stressed that he was "borne" by Khuzāʿī women (*fa-ḳad waladnāka*). In the same style the Khuzāʿī ʿAmr b. Sālim addressed the Prophet with the words *ḳad kuntum waladan wakunnā wālidā* when he came asking his help against the Banu Bakr and Ḳuraysh (Ibn Sayyid al-Nās, *ʿUyūn al-athar fi funūn al-maghāzī wa'l-shamāʾil wa 'l-siyar*, Cairo 1356, ii, 164-5, 182).

When the Prophet was on his *hidjra* to Medina he met, according to one tradition, Burayda b. al-Ḥuṣayb al-Aslamī [*q.v.*] with a large group of his people; he and his people embraced Islam and prayed behind the Prophet. These Aslam, a branch of Khuzāʿa, allied themselves very early to the Prophet and warriors of Aslam took part on the side of the Prophet in his campaign. The agreements of the Prophet with Aslam (see Ḥamīdullāh, *Madjmūʿat al-wathāʾiḳ al-siyāsiyya li 'l-ʿahd al-nabawī wa 'l-khilāfa al-rāshida*, Cairo 1376/1956, 191-4, nos. 165-70) bear evidence to the friendly relations between the Prophet and Aslam. After the murder of the people of the expedition of Biʾr Maʿūna [*q.v.*], the Prophet invoked God's blessing for Aslam (*wa-Aslam sālamahā Allāhu*; al-Wāḳidī, *al-Maghāzī*, ed. Marsden Jones, Oxford 1966, 350). When the Prophet mobilised the forces for the conquest of Mecca he summoned the Aslam, who dwelt in the neighbourhood of Medina, to present themselves in Medina. In fact, 400 warriors of Aslam, among them 30 riders, took part in the conquest of Mecca. The two standard bearers were Burayda b. al-Ḥuṣayb and Nādjiya b. al-Aʿdjam of Aslam (al-Fāsī, *Shifāʾ*, ii, 123; Ibn Ḥadjar, *al-Iṣāba*, ed. ʿAlī Muḥammad al-Bidjāwī, Cairo 1392/1972, vi, 398, no. 8647; al-Wāḳidī, 799-800). Aslam, along with Ghifār, Muzayna and Djuhayna, were pointed out by the Prophet as surpassing in virtues the mighty tribes of Tamīm, Asad, ʿĀmir b. Ṣaʿṣaʿa and Ghaṭafān (al-Ḳasṭallānī, *Irshād al-sārī*, Cairo 1327, vi, 11-13; Ibn Ḥadjar, *Fatḥ al-bārī*, Cairo 1301, vi, 395-7). Commentators of *ḥadīth* are unanimous in saying that this high position was granted to them because they hurried to embrace Islam.

The attitude of the Muṣṭaliḳ, another branch of Khuzāʿa allied with the Banū Mudlidj of Kināna and included in the Aḥābīsh organisation linked with Ḳuraysh, was however quite different towards the Muslim commonwealth of Medina. Their leader, al-Ḥārith b. Abī Ḍirār, gathered the forces of his tribe for an attack against Medina. The forces of the Prophet attacked the Muṣṭaliḳ at Muraysīʿ in 5/627, defeated them and took captives and booty. The Prophet married the captured daughter of the leader, Djuwayriyya (al-Wāḳidī, 404-13).

Another branch of Khuzāʿa, the Kaʿb b. ʿAmr, played a decisive role in the struggle between Mecca and the Prophet. The dissensions and clashes between the Kaʿb and their neighbours, the Bakr b. ʿAbd Manāt, led the Kaʿb b. ʿAmr to opt for an alliance with the Prophet in the pact of al-Ḥudaybiyya, whereas the Bakr b. ʿAbd Manāt allied themselves with Mecca. A group of the Bakr b. ʿAbd Manāt aided clandestinely by some leaders of Ḳuraysh attacked the Kaʿb b. ʿAmr at al-Watīr and killed some of them. The orator of the Kaʿb, ʿAmr b. Sālim, appeared at the court of the Prophet in Medina and addressed him, reminding him of the alliance of the Kaʿb with ʿAbd al-Muṭṭalib, pointing out the killing of the Kaʿb at al-Watīr, and urging him to revenge his allies. The Prophet responded and promised aid for victory (*nuṣra*). The request of a man from the ʿAdī b. Amr, the brethren of Kaʿb b. ʿAmr, to be included in the promise was answered by the Prophet's remark that Kaʿb and ʿAdī are one corporate body (*wa-hal ʿAdiyyun illā Kaʿb wa-Kaʿbun illā ʿAdī*: Nūr al-Dīn al-Haythamī, *Madjmaʿ al-zawāʾid*, Beirut 1967, vi, 164; Ibn al-Baḳḳāl, *al-Fawāʾid al-muntaḳāt*, Ms. Ẓāhiriyya

madjmūʿa, 60, fol. 85b; al-Ṭabarānī, *al-Muʿdjam al-ṣaghīr*, ed. ʿAbd al-Raḥmān Muḥammad ʿUthmān, Cairo 1388/1968, ii, 73-5). It is evident that the tendency of this tradition is to establish the position of the ʿAdī b. ʿAmr in the Prophet's invocation and to stress their role in the expedition against Mecca. Whether the Kaʿb b. ʿAmr were already Muslims when they applied for help is disputed by scholars (Ibn Sayyid al-Nās, ii, 182, penult. says that they were unbelievers; al-Kalāʿī, *al-Iktifāʾ*, ed. Muṣṭafā ʿAbd al-Wāḥid, Cairo 1389/1970, ii, 288, that they were Muslims; and see Ibn Hishām, *op. cit.*, iv, 36, n. 4). According to some commentators of the Ḳurʾān, vv. 13-15 of *Sūrat al-Tawba* ordering fighting against the people who had broken their solemn pledges (*alā tuḳātilūna ḳawman nakathū aymānahum* ...) were revealed in connection with the wicked attack of the Banū Bakr b. ʿAbd Manāt against the Kaʿb b. ʿAmr (al-Ṭabarī, *Tafsīr*, ed. Shākir, Cairo 1958, xiv, 158-62 (nos. 16535-16547); al-Suyūṭī, *al-Durr al-manthūr*, iii, 214-15; idem, *Lubāb al-nuḳūl*, Cairo 1373/1954, 114; al-Ḳurṭubī, *Tafsīr*, viii, 86-7; al-Farrāʾ, *Maʿānī l-Ḳurʾān*, ed. Aḥmad Yūsuf al-Nadjātī and Muḥammad ʿAlī al-Nadjdjār, Cairo 1374/1955, i, 425).

When the Prophet went out against Mecca, he was joined by the tribesmen of Kaʿb who stayed in Medina; the main troop of Kaʿb joined the forces of the Prophet in Ḳudayd. The troop of the Kaʿb, numbering 500 warriors, had three standards carried by Busr b. Sufyān, Abū Shurayḥ (Ibn ʿAsākir, *Taʾrīkh*, Damascus 1349, vi, 400; Ibn Saʿd, *Ṭabaḳāt*, Beirut 1377/1957, iv, 294-5; al-Wāḳidī, 801 ["Ibn Shurayḥ" in *ibid.* l.2 is an error]) and ʿAmr b. Sālim. It is noteworthy that the Prophet permitted the Kaʿb to fight the Bakr b. ʿAbd Manāt in Mecca for some additional hours after he had ordered all other troops to stop fighting (see *ibid.* 839, al-Maḳrīzī, *op. cit.*, i, 388; al-Fāsī, *Shifāʾ*, ii, 144, al-Ḥāzimī, *al-Iʿtibār*, 153; ʿAlī b. Burhān al-Dīn, *op. cit.*, iii, 97 inf.). It may be remarked that a group of the Bakr b. ʿAbd Manāt hasted to join the forces of the Prophet. When Abū Sufyān looked at the marching troops of the Prophet and noticed the force of the Bakr he remarked sadly "By God, they are an inauspicious people; because of them Muḥammad raided us" (al-Wāḳidī, 820; Ibn ʿAsākir, vi, 401).

The meritorious attitude of Khuzāʿa towards the Prophet is fairly reflected in Muslim tradition. The Prophet is said to have stated that Khuzāʿa was intimately linked with him. (*Khuzāʿatu minnī wa-anā minhum*; *Khuzāʿatu l-wālidu wa-anā 'l-waladu*: see, e.g. al-Daylamī, *Firdaws al-akhbār*, Ms. Chester Beatty 3037, fol. 78b; ʿAlī b. Burhān al-Dīn, iii, 83; al-Muttaḳī al-Hindī, *Kanz al-ʿummāl*, Hyderabad 1385/1965, xiii, 55, no. 316). The Ḳurʾān is said to have been revealed to the Prophet in the dialect (*lugha*) of the two Kaʿbs, Kaʿb b. Luʾayy and Kaʿb b. ʿAmr b. Luḥayy, because they shared the same abode (al-Fāsī, *Shifāʾ*, ii, 55; Ibn ʿAbd al-Barr, *al-Inbāh*, 99). A special privilege granted by the Prophet to Khuzāʿa was that he awarded them the rank of *muhādjirūn*, permitting them to stay in their abode (*ibid.*, 100). It was a Khuzāʿī, Tamīm b. Usayd, whom the Prophet entrusted with the restoration of the border-marking stones (*anṣāb*) of the *ḥaram* of Mecca (Mughalṭāy, *al-Zahr al-bāsim fī sīrat Abi 'l-Ḳāsim*, Ms. Leiden, Or. 370, fol. 319a, inf.-319b; al-Fāsī, *al-ʿIḳd al-thamīn*, ed. Fuʾād Sayyid, Cairo 1383/1964, iii, 387, no. 861).

The leader of the Kaʿb, Busr b. Sufyān, according to one tradition, was appointed by the Prophet as the tax-collector of the Kaʿb. In 9/630 they were prevented from handing over their taxes by groups of the Banu 'l-ʿAnbar and Banu 'l-Hudjaym ("Ibn al-ʿUtayr" and "Banū Djuhaym" in al-Wāḳidī, 974 are errors) of Tamīm; against these two Tamīmī groups the Prophet sent a troop commanded by ʿUyayna b. Ḥiṣn (al-Wāḳidī, 974 f.). In the account it is emphasised that the Kaʿb were believers, paying the *ṣadaḳa* willingly. A special tax-collector was sent to the other branch of Khuzāʿa, the Banū Muṣṭaliḳ (Ibn Saʿd, iii, 440 inf.).

ʿUmar b. al-Khaṭṭāb used to carry the *dīwān* of Khuzāʿa to Ḳudayd and distributed there payments to the people of the tribe (al-Balādhurī, *Futūḥ al-buldān*, ed. ʿAbd Allāh and ʿUmar al-Ṭabbāʿ, Beirut 1377/1957, 634; Ibn Saʿd, iii, 298).

Khuzāʿī warriors participated in the conquests of Islam and groups of Khuzāʿa settled in the various provinces of the Arab empire. Some people of Khuzāʿa took part in the revolt against ʿUthmān in Medina (Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, ed. Aḥmad Amīn, Aḥmad al-Zayn, Ibrāhīm al-Abyārī, Cairo 1381/1962, iv, 300, l.19). Some groups of Khuzāʿa joined ʿAlī and fought on his side in the battle of Ṣiffīn, and some Khuzāʿīs in Khurāsān were among the ʿAbbāsid agents who paved the way for the new dynasty.

AL-**<u>KH</u>UZĀMĀ** (A.) "lavender" has for a long time been considered as the origin of the name of Alhucemas, on the coast of the Rīf of Morocco, and this etymology is still given in *EI*[1] (art. ALHUCEMAS). Since the problem raised by this toponym has not yet been satisfactorily resolved, and since moreover Alhucemas has now, since Morocco's achievement of independence, been "arabised" to al-Ḥusayma, it is under AL-ḤUSAYMA that an article on the place will be found in the Supplement.

<u>KH</u>ŪZISTĀN, a province of south-western Persia, and the land of the Hūz/Ḥūz/<u>Kh</u>ūz (Hussi/Kussi), the Οὔξιοι/Uxii of Strabo and Pliny. The province of <u>Kh</u>ūzistān corresponds more or less to the ancient Elam and to the classical Susiana, and the names of its present capital, Ahwāz [*q.v.*], its ancient capital, Susa [*q.v.*], and the town of Ḥawīza [*q.v.*], all reflect the name of its inhabitants in Elamite times.

Essentially, the province consists of alluvial fans formed by the Kar<u>kh</u>a and the Kārūn [*qq.v.*] rivers and situated between the Zagros mountains and the sea; near the Persian Gulf, partially saline mudflats merge into a zone of tidal marshes, and the coastline is pierced by deep tidal estuaries known as *<u>kh</u>or*. The province is bounded on the west by the Irano-ʿIrāḳī border; on the north by Luristān [*q.v.*]; on the south by the Persian Gulf; and on the east by the river Hindiyān or Hindī<u>dj</u>ān. The chief towns are: Ābādān [see ʿABBĀDĀN]; Ahwāz [*q.v.*]; <u>Kh</u>urram-<u>sh</u>ahr [*q.v.*]; Da<u>sh</u>t Mī<u>sh</u>ān; Dizfūl; and <u>Sh</u>ū<u>sh</u>tar [see <u>SH</u>USTAR]. The population of the province (1,614,576 in 1966) is mainly hybrid Arab-Persian.

The climate of <u>Kh</u>ūzistān is hot and, in summer, so humid that water drips from the trees. Both the Greek and Muslim geographers speak eloquently of the heat. Strabo, quoting an unknown source (Nearchos?), says that in Susa at mid-day lizards and snakes could not cross the streets quickly enough to avoid being frizzled, and that barley spread out in the sun jumped as though it had been placed in an oven (*Geography*, xv.3.10). There was general agreement that snow rarely fell in <u>Kh</u>ūzistān, and water rarely froze. The great heat is accounted for by: (1) the lack of elevation (average altitude in southern <u>Kh</u>ūzistān = 10 metres/32.80 feet, rising to 100 metres/328 feet in central <u>Kh</u>ūzistān); (2) the southerly inclination of the land, which exposes it to the maximum effect of the sun's rays; (3) the hot winds in summer from the Syrian desert and Arabia; (4) the clayey nature of the soil, which retains the heat; (5) the lack of open water, snow-covered mountains or forests to the west to moderate the heat of westerly winds. Because of its climate, <u>Kh</u>ūzistān did not have a good reputation as a place in which to live; the *Ḥudūd al-ʿĀlam*, tr. Minorsky, 130, describes the people of Ahwāz as "yellow-faced", and quotes a popular belief that "whoever establishes himself in Ahwāz becomes wanting in brains, and every aroma that is carried there loses its scent on account of the climate". Despite this, the province was noted for a perfume manufactured there from violets (B. Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 389).

Despite the disadvantages of its climate, <u>Kh</u>ūzistān from earliest times was noted for its prosperity. Unlike the regions of the Iranian plateau, <u>Kh</u>ūzistān has never lacked for water, which is provided in abundance by the Kar<u>kh</u>a, Diz and Kārūn rivers and their tributaries. The province was the breadbasket of the Achaemenid empire. Strabo states that "Susis abounds so exceedingly in grain that barley and wheat regularly produce one hundredfold, and sometimes two hundredfold" (*Geography*, xv.3.11). In Sāsānid times, extensive urban settlements, and cultivated lands watered by large-scale irrigation works, were protected from the destructive raids of the bedouin by a defensive ditch known as *<u>kh</u>andaḳ Ṣābūr*. In the 4th/10th century, <u>Kh</u>ūzistān had a monopoly of the sale of cane-sugar throughout Iran, ʿIrāḳ-i ʿArab and Arabia. Other important crops included citrus fruits, dates, melons, cotton and rice. The waters of the Persian Gulf provided abundant fish. The other basis of the province's prosperity was trade; from early times, Ahwāz had been the centre of an important road network and a recognised crossing-place on the river Kārūn.

Under the two great pre-Islamic Iranian empires, that of the Achaemenids and that of the Sāsānids, <u>Kh</u>ūzistān was firmly under the control of the central government. To the Achaemenids, it was the province of Uvaja, and Susa was the administrative capital of the empire; for the Sāsānids, it formed part of the "super-province" (*pā<u>dh</u>g<u>h</u>ōs*) of Nēm-rōz (the South), and was divided into seven *kūras*. In 17/638 the Muslim Arabs, after a reconnaissance raid across the Kārūn, launched a major attack on <u>Kh</u>ūzistān under ʿUtba, captured Ahwāz, and completed the subjugation of the province by 19/640. In the 3rd/9th century <u>Kh</u>ūzistān, and particularly the city of Ahwāz, suffered as a result of the Zan<u>dj</u> [*q.v.*] rebellion, and considerable damage was done to the irrigation systems. During the succeeding four centuries, <u>Kh</u>ūzistān was governed in turn by the Būyids [see BUWAYHIDS], the Sal<u>dj</u>ūḳs [*q.v.*] and the Īl<u>kh</u>ānids [*q.v.*].

In the 9th/15th century, following the onslaughts of Tīmūr on the Iranian world, a local Arab <u>Sh</u>īʿī dynasty, the Mu<u>sh</u>aʿ<u>sh</u>aʿ [*q.v.*], established itself at Ḥawīza, on the old course of the Kar<u>kh</u>a river on the western edge of <u>Kh</u>ūzistān, and enjoyed about seventy years of independence. In 914/1508, however, <u>Sh</u>āh Ismāʿīl Ṣafawī [see ISMĀʿĪL I], after his capture of Ba<u>gh</u>dād, occupied Ḥawīza, Dizfūl and <u>Sh</u>u<u>sh</u>tar, and received the submission of the Mu<u>sh</u>aʿ<u>sh</u>aʿ *sulṭāns*. Like the rulers of other petty states along the Ottoman-Ṣafawid border during the 10th/16th to 12th/18th centuries, the Mu<u>sh</u>aʿ<u>sh</u>aʿ *sulṭāns* played one side off against the other, often very much to their own advantage. As a consequence of Mu<u>sh</u>aʿ<u>sh</u>aʿ rule, the western portion of <u>Kh</u>ūzistān became known, from early Ṣafawid times, as ʿArabistān. In later Ṣafawid times, the title of "*wālī* of ʿArabistān" was conferred on the Mu<u>sh</u>aʿ<u>sh</u>aʿ *sulṭāns*. In the Ṣafawid administrative system, the *wālīs* were the highest in rank of the four categories of *umarā-yi sarḥadd*, or "*amīrs* of the marches", and, of the four *wālīs*, the first in rank was the *wālī* of ʿArabistān, who was "higher and more honoured than his colleagues, on account of his belonging to a *sayyid* family, his valour and the number of his tribes" (*Ta<u>dh</u>kirat al-mulūk*, tr. Minorsky, London 1943, 44). When the Af<u>gh</u>āns invaded Iran in 1135/1722, the Mu<u>sh</u>aʿ<u>sh</u>aʿ *sulṭāns* threw in their lot with the invaders. In 1140/1727 <u>Kh</u>ūzistān was temporarily occupied by the Ottomans, but in 1142/1729 Nādir <u>Kh</u>ān Af<u>sh</u>ār [see

NĀDIR SHĀH] reoccupied the province and made the Mu<u>sh</u>a'<u>sh</u>a' *sulṭāns* his vassals.

In the course of the 18th and 19th centuries, the Mu<u>sh</u>a'<u>sh</u>a' dynasty steadily lost ground to Arab tribesmen of the Banū Ka'b and Banū Lām [*qq.v.*]. The former had begun to migrate in large numbers from central and southern Arabia into southern Mesopotamia and southwestern Iran during the 11th/17th century; at the height of their power, in the latter part of the 12th/18th century, their sway extended from Baṣra to Bihbihān (in the province of Fārs, just east of the <u>Kh</u>ūzistān border). The Banū Lām were nomads inhabiting regions along the lower course of the Tigris, and between 1788 and 1846 some 17,450 families from this tribe moved into Iranian territory. These immigrants lived a life that was neither completely settled nor truly nomadic, but gradually a sedentary way of life became the norm. The Banū Ka'b not only intermarried with Iranians, but adopted <u>Sh</u>ī'ism, and wore a compromise style of dress consisting of Persian tunic and trousers under an Arab *'abā'*. Still later Arab arrivals, however, the Muntafiḳ [*q.v.*], who in 1812 migrated to Ḥawīza and ousted the Ka'b from that area, have remained Sunnīs. As a result of this great influx of Arabs, the name of 'Arabistān was, by the 19th century, usually applied to the province as a whole. In the 19th century, control of the province virtually passed from the hands of the central government into those of the *<u>sh</u>ay<u>kh</u>s* of Muḥammara (<u>Kh</u>urram<u>sh</u>ahr), and it was not until 1925 that Riḍā <u>Sh</u>āh Pahlawī [*q.v.*] overthrew the <u>Sh</u>ay<u>kh</u> of Muḥammara and restored the proper name of <u>Kh</u>ūzistān.

After the collapse of the Ṣafawid dynasty (1135/1722), the prosperity of <u>Kh</u>ūzistān sharply declined. A number of factors seem to have been involved: (1) hostility between Iranian and Arab elements; (2) the extensive damage to agriculture and to the settled communities caused by both the recent Arab immigrants and by the indigenous transhumant tribes like the Lurs and Ba<u>kh</u>tiyārīs (A. K. S. Lambton, *Landlord and peasant in Persia*, Oxford 1953, 157-8); (3) the constant raiding of trade caravans by the Banū Lām; (4) the breakdown of the authority of the central government, which led to general neglect and maladministration, and the instability caused by frequent changes of governors; (5) oppression by tax-collectors. In some areas the Arab *<u>sh</u>ay<u>kh</u>s* levied taxes five or six times a year (Lambton, *op. cit.*, 292). It was only after the discovery of oil at Masdjid-i Sulaymān in <u>Kh</u>ūzistān in 1908 that the economy of the province began slowly to recover, and this trend was accelerated by the completion of the Trans-Iranian Railway in 1938; the line ran through Ahwāz, and its southern terminal was Bandar-i <u>Sh</u>āhpūr.

In the last twenty years, <u>Kh</u>ūzistān's prosperity has increased exponentially. Many large oilfields are connected by road and pipeline with the refinery at Ābādān and with the terminal at Bandar-i Māh<u>sh</u>ahr (formerly Bandar-i Ma'<u>sh</u>ūr). Ābādān, a virtually uninhabited site fifty years ago, is now Iran's fifth city (estimated population, 1975, 320,000). In 1961, the deep-water tanker terminal on <u>Kh</u>ārg Island was opened. The construction of the massive Muḥammad Riḍā Pahlawī dam on the Diz river (1962) has not only provided the province with hydro-electricity but with water for the large-scale development of market-gardening and other agricultural projects, including the resumption of the cultivation of sugar-cane; other dams are planned. <u>Kh</u>urram<u>sh</u>ahr is now one of Iran's principal ports-of-entry on the Persian Gulf. More recently, the development of the natural gas industry has taken place on a large scale; in 1973, 8.7 billion cu. m. of natural gas were exported to the U.S.S.R. The petrochemical industry is expanding at a great rate. The rapidly developing <u>Dj</u>undī<u>sh</u>āpūr University at Ahwāz now has over 2,000 students. The words of the author of the *Ḥudūd al-'ālam*, written one thousand years ago, now once again hold true: "This province is more prosperous than any province adjoining it. Great rivers and running waters are found in it. Its countryside is flourishing and its mountains are full of utility" (129-30).

<u>KH</u>VAR<u>SH</u>Ī (self-designation, Kedaes hikwa, <u>Kh</u>uani, <u>Kh</u>var<u>sh</u>al; in Russian, <u>Kh</u>var<u>sh</u>intsī) an ethnic group in the Caucasus whose language forms, with Be<u>zh</u>eta, Ginu<u>kh</u>, Dido and <u>Kh</u>unzal [*qq.v.*] the Dido division of the Avar-Andi-Dido group of the north-eastern Ibero-Caucasian languages.

According to the 1926 Soviet census, there were 1,019 ethnic <u>Kh</u>var<u>sh</u>īs, of whom 1,018 gave <u>Kh</u>var<u>sh</u>ī as their maternal tongue. They formerly lived in five *auls* (including <u>Kh</u>var<u>sh</u>ī and In<u>kh</u>orari) on the upper course of the Ori-Tsḳalis, a southern affluent of the Andi-Koysu in the south-west of the Bagulal district of the Dā<u>gh</u>istān ASSR; in 1944, they were resettled in the district of Vedeno in that same republic. They lived originally in an isolated region of high mountains, which long preserved them from any marked degree of outside influence and allowed them to retain their patriarchal customs. They are Sunnīs of the <u>Sh</u>āfi'ī legal school.

Their traditional economy was based on sheep-rearing, with a system of transhumance, and also on terraced agriculture and various crafts; their present-day economy is essentially similar, with the added element of cattle-rearing.

<u>Kh</u>var<u>sh</u>ī is purely a vernacular language; Avar is used as the first literary language, and also as the second (sometimes first) spoken language, since it is used as the medium for primary education. Russian is the second literary language. Both linguistically and culturally, the <u>Kh</u>var<u>sh</u>īs are now being assimilated to the Avars [see further AVAR, DĀ<u>GH</u>ISTĀN, DIDO, AL-ḲABḲ].

ĶIBLA, the direction of Mecca (or, to be exact, of the Kaʿba or the point between the *mīzāb* or water-spout and the western corner of it), towards which the worshipper must direct himself for prayer.

i.—Ritual and Legal Aspects

From very early times the direction at prayer and divine service for the worshippers was not a matter of choice among the Semitic peoples. There is already an allusion to this in I Kings, viii, 44 and it is recorded of Daniel (Dan., vi, 11) that he offered prayer three times a day in the direction of Jerusalem (which has remained the Jewish *ķibla* to this day). As is evident from the names of the quarters of the heavens, the whole life of the Semitic peoples was turned eastwards. The Essenes prayed in the direction of the rising sun and the Syriac Christians also turned eastwards at prayer (*Ancient Syriac documents*, ed. Cureton, 24, 60; *Acta martyrum occid.*, ed. Assemani, ii, 125). It may therefore very well be assumed in agreement with the tradition that Muḥammad appointed a *ķibla* at the same time as he instituted the *ṣalāt*. It is certain that in the period immediately following the *hidjra* the direction taken by the Jews was also used by the Muslims. Tradition places the alteration in the *ķibla* to 16 or 17 months after the *hidjra*, in Radjab or Shaʿbān of the year 2, probably rightly, for in this period we have the important change in Muḥammad's attitude to the Jews. Disappointed at the slight success of his preaching among the Jews of Yathrib, he began to turn more and more to the old Arabian tradition and make the religion of Ibrāhīm the basis of all monotheistic religions. The Kaʿba was brought into prominence as a religious centre and the *ḥadjdj* began to be talked of as a Muslim rite. At the same time a beginning was made with the eviction of the Jewish tribes of Yathrib. The alteration in the *ķibla* is a not unimportant fact in this series of events and this train of thought. The Ķurʾān verses, II, 136 ff., refer to this: "What has induced them to abandon their former *ķibla*? Say: to Allāh belongs the east and the west. He guides whomsoever he pleaseth unto the right path ... We only appointed your previous *ķibla* to distinguish him who follows the Prophet from him who turns back on his heels ... Turn then thy face toward the holy *masdjid*; turn your face to it wherever you are".

The importance placed by Muḥammad himself upon the change is clear from these words. It is not necessary to assume with the tradition that it was brought about by scornful remarks of the Jews regarding Muḥammad's dependence on the prescriptions of their religion (so Ṭabarī, i, 1280). In other traditions, the new *ķibla* is represented as that of Ibrāhīm (Ṭabarī, *Tafsīr*, i, 378, ii, 13). Here we have a glimmering of the real truth of the matter, namely the connection with Muḥammad's new politico-religious attitude. According to one tradition (Bukhārī, *Ṣalāt*, *bāb* 32; *Tafsīr*, Sūra II, *bāb* 14) the revelation of the above quoted verses from the Ķurʾān was communicated to the believers in the morning *ṣalāt* in Ķubāʾ; according to another story Muḥammad had with a portion of the community performed two *rakʿas* of the *ẓuhr* prayer in a mosque of the Banū Salima, when he turned round to the direction of Mecca (Bayḍāwī, on Sūra II, 139). The mosque received the name of *masdjid al-ķiblatayn*, "the mosque of the two ķiblas".

If it may then be considered established that Muḥammad and his community turned towards Jerusalem at the *ṣalāt* during the early years of the *hidjra*, the question still remains, what was his *ķibla* before the *hidjra*? In Tradition two answers are given to this question and a third deduced by harmonising the other two. According to one, Muḥammad in Mecca observed the *ķibla* to the Kaʿba (Ṭabarī, *Tafsīr*, ii, 4; Bayḍāwī, on Sūra II, 138); according to the other story the *ķibla* had always been Jerusalem (Ṭabarī, *Tafsīr*, ii, 3, 8, *Annales*, i, 1280; Balādhurī, *Futūḥ*, 2); according to the third (Ibn Hishām, 190, 228) Muḥammad in Mecca was careful to have the Kaʿba and Jerusalem in a straight line in front of him at the *ṣalāt*. The first view is influenced by the theory of the "religion of Ibrāhīm" for al-Tibrīzī also makes ʿAbd al-Muṭṭalib already know that Ibrāhīm appointed the Kaʿba as *ķibla* (*Ḥamāsa*, i, 125). If the second opinion had not an historical basis, one does not quite understand how it could have arisen, for Tradition does not like to acknowledge Muḥammad's dependence on Jewish practice. This view seems therefore to be the most probable. It is further mentioned as a distinguishing peculiarity of Barāʾ b. Maʿrūr that even in the period before the *hidjra* he would not turn his back on the Kaʿba (Ibn Hishām 294); this tradition would lose its point if the old *ķibla* had been in the direction of the Kaʿba. Besides these traditional views, others have been put forward in recent years. According to Tor Andrae, *Der Ursprung des Islams und das Christentum*, Uppsala and Stockholm 1926, 4 (cf. Buhl, *Mohammed's liv*, 212) the original *ķibla* was to the east. Andrae bases his view not on the material of Tradition but on the general agreement between early Muslim and Christian religious usages. Schwally said that the Jerusalem *ķibla* was introduced into Mecca, perhaps as a Jewish-Christian institution (*Geschichte des Qorans*, i, 175, note k).

The direction of the *ķibla* was, or is, not assumed at the *ṣalāt* only and with the points of the toes (Bukhārī, *Ṣalāt*, *bāb* 28; *Adhān*, *bāb* 131; Nasāʾī, *Sāhw*, *bāb* 25; *Taṭbīķ*, *bāb* 96), but also at the *duʿāʾ* (Bukhārī, *Daʿawāt*, *bāb* 24), at the *iḥlāl* or *iḥrām* (Bukhārī, *Ḥadjdj*, *bāb* 29) and after the stone-throwing at the central Djamra (Bukhārī, *Ḥadjdj*, *bāb* 140-2); the head of an animal to be slaughtered is turned to the *ķibla* and the dead are buried with the face towards Mecca (Lane, *Manners and customs*, Paisley and London 1899; Snouck Hurgronje, *Verspr. Geschr.*, iv/1 243; v, 409).

In the *ḥadīth* it is forbidden to turn towards Mecca when relieving nature (Bukhārī, *Wuḍūʾ*, *bāb* 11; Muslim, *Ṭahāra*, trad. 61; Nasāʾī, *Ṭahāra*, *bāb* 18-20). On the question whether it is allowable in doing this to turn one's back to Mecca and thus in some parts of Arabia be facing Jerusalem no unanimity prevails (cf. Bukhārī, *Wuḍūʾ*, *bāb* 14; *Khums*, *bāb* 4; *Ṣalāt*, *bāb* 29; Muslim, *Ṭahāra*, *trad.* 59, 61-2; Abū Dāwūd, *Ṭahāra*, *bāb* 4); one should not expectorate in the direction of Mecca (Bukhārī, *Ṣalāt*, *bāb* 33).

The observance of a *ķibla* is given in old traditions along with the performance of the *ṣalāt* and ritual slaughter as a criterion of the Muslim: The Prophet of God said: "The command has been given me to fight the people till they say: There is no god but Allāh; when they say these words, perform our *ṣalāt* and slaughter in our way, their blood and their property shall be inviolate for us", etc. (Bukhārī, *Ṣalāt*, *bāb* 28; cf. *Aḍāḥī*, *bāb* 12). One of the terms for the orthodox community is *ahl al-ķibla wa 'l-djamāʿa*. In many Muslim lands the word has become the name of a point of the compass, according to the direction in which Mecca lies; thus *ķibla* (pronounced *ibla*) means in Egypt and Palestine, south, whereas in the Maghrib, east.

In the mosques the direction of the *ṣalāt* is indicated by the *miḥrāb* [*q.v.*]; in classical *ḥadīth*, this word does not occur and *ḳibla* is used to mean the wall of the mosque towards which one turns. At a *ṣalāt* outside a mosque, a *sutra* [*q.v.*] marks the direction. In Egypt, small compasses specially made for this purpose are used to ascertain the *ḳibla* (Lane, *op. cit.*, 228). It should be noted that many mosques are not accurately but only approximately orientated (according to the *djiha*, see below). It sometimes happens that this error has been later corrected by the drawing of lines or the stretching of threads. This is, for example, the case in many mosques of Indonesia where the faithful at the *ṣalāt* take their direction not from the *miḥrāb* but from such indicators.

The laws relating to the *ḳibla* are here given very briefly only and according to the Shāfiʿī school as laid down in al-Shīrāzī's *Kitāb al-Tanbīh* (ed. Juynboll, 20). The adoption of a *ḳibla* is a necessary condition for the validity of a *ṣalāt*. Only in great danger and in a voluntary *ṣalāt* on a journey can it be neglected. But if one is on foot or can turn his steed round, it should be observed at the *iḥrām*, *rukūʿ* and *sudjūd*. One should turn exactly in the direction of the *ḳibla*, and one who is near it can do so with certainty. According to others, when one is distant only the general direction (*djiha*) is obligatory. Outside of Mecca one turns towards the *mihrāb* within a mosque; when not in a mosque one follows the direction of reliable people: only a man who is in a deserted region is allowed to ascertain the direction for himself by means of certain indications. For details of the laws see the *Bibliography*.

ii.—ASTRONOMICAL ASPECTS

The determination of the *ḳibla* was an important problem for the scientists of mediaeval Islam. Although essentially a problem of mathematical geography, the determination of the *ḳibla* can also be considered as a problem of spherical astronomy. Thus most Islamic astronomical handbooks or *zīdj*s, of which close on 200 were compiled during the millenium beginning in 750 A.D., contain a chapter on the determination of the *ḳibla*. In addition, several dozen mediaeval manuals for timekeeping deal with the topic. In contrast, the number of treatises dealing specifically with the *ḳibla* problem is quite few.

The *ḳibla* at a given locality is a trigonometric function of the local latitude, the latitude of Mecca, and the longitude difference from Mecca. The derivation of the *ḳibla* in terms of these three quantities was the most complicated of the standard problems of mediaeval Islamic spherical astronomy, and the solutions to the *ḳibla* problem proposed by the leading astronomers of mediaeval Islam bear witness to the development of mathematical methods from the 3rd/9th to the 8th/14th centuries and to the level of sophistication in trigonometry and computational techniques attained by these scholars. Already in the 3rd/9th century Muslim scholars had derived exact solutions using the construction of Greek mathematics known as the analemma (in which the various significant planes involved in a specific problem are either projected or folded into a single working plane, whereupon the geometrical solution can be derived graphically or the trigonometric solution can be derived by plane trigonometry) or using the classical Theorem of Menelaos for the complete spherical quadrilateral. Later *ḳibla* methods included trigonometric solutions based on projection methods or on the simpler corollaries of the Theorem of Menelaos. Certain Muslim astronomers contented themselves with approximate solutions, which were adequate for practical purposes. The final mathematical solution to the *ḳibla* problem was the table compiled by the 8th/14th century astronomer al-Khalīlī, displaying the *ḳibla* for all latitudes and longitudes.

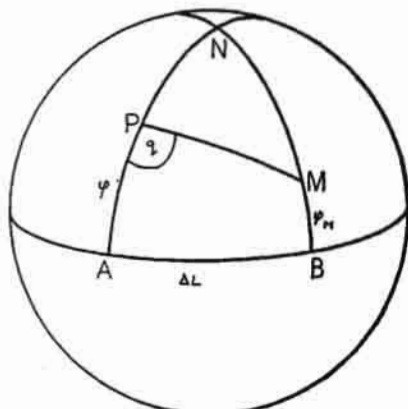
The mathematical problem


Fig. 1

Fig. 1 shows a locality P and Mecca M on the terrestrial surface. The point N. represents the north pole, and the meridians at P and M are shown as NPA and NMB, where A and B lie on the equator. In mathematical terms the *ḳibla* at P is defined by the direction of the great circle through P and M. In mediaeval Arabic the angle q between the arc PM and the local meridian NPS was called *inḥirāf al-ḳibla*, and the complementary angle between PM and the east-west line through P was called *samt al-ḳibla*. If φ and φ_M denote the latitudes of the locality and of Mecca (= PA nd MB), and ΔL denotes their longitude difference (= AB), then q is a function of φ, φ_M, and ΔL, and can be determined by spherical trigonometry. The modern formula, which can be derived from an application of the spherical cotangent rule to ΔNPM, is:

$$q = \cot^{-1} \frac{\sin \varphi \cos \Delta L - \cos \varphi \tan \varphi_M}{\sin \Delta L}.$$

The exact solutions proposed by the mediaeval astronomers are less direct but ultimately equivalent to this.

Although the problem of determining the *ḳibla* is a problem of mathematical geography, it is mathematically equivalent to the astronomical problem of determining the azimuth or direction of a celestial body with given declination for a given hour-angle, and as such it was usually treated by the mediaeval

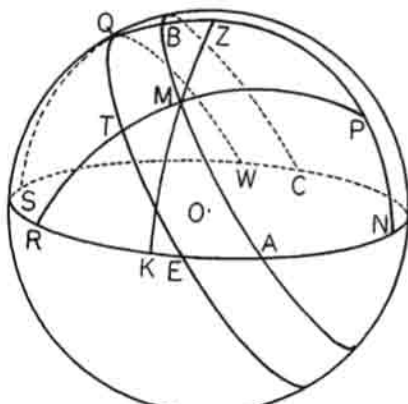
astronomers. Indeed, the *ḳibla* problem may be transferred to the celestial sphere simply by considering the zenith of Mecca rather than Mecca.


Fig. 2

Fig. 2 shows the zenith of Mecca M on the celestial sphere for a locality O. The local horizon is NESW and the local meridian is NPZS. EQW is the celestial equator, P is the celestial pole, and ABC is the day-circle of M. PMTR is the meridian of Mecca. Now:

$$PN = \varphi,\ MT = \varphi_M, \text{ and } QT = \Delta L,$$

and the problem is to determine the azimuth of M measured from the meridian by the arc SK = q. Most mediaeval methods involve first finding the altitude of the zenith of Mecca above the local horizon, measured by the arc MK = h. This is equivalent to finding the complement of the distance between the two localities. Thus the problem of determining q (φ, φ_M, ΔL) is mathematically equivalent to determining the azimuth a (φ, δ, t) of a celestial body with declination δ (measured by MT) when the hour angle is t (measured by QT) and the local latitude is φ (measured by PN). Indeed, several Islamic *ḳibla* methods state simply that if one faces the sun on the day when the solar declination is φ_M at the time when the hour-angle is ΔL (before or after midday, according as the locality is west or east of Mecca), then one is facing Mecca.

In the sequel a selection of methods is presented to illustrate the variety and sophistication of some of the few mediaeval *ḳibla* determinations that have been investigated in modern times. The notation has been modified in order to relate to that used in Fig. 2. For the details of the original constructions the reader is referred to the secondary literature listed in the bibliography. Those methods that are trigonometric in character are represented by means of trigonometric equations; in the original texts the relations are written out in words. The capital notation for trigonometric functions denotes that they are to a base other than unity: thus, for example, $\text{Sin}\ \theta = R \sin \theta$ where R is generally 60 and occasionally, in the case of works following the Indian-Sāsānid tradition, 150. Likewise $\text{Cos}\ \theta = R \cos \theta$, $\text{Vers}\ \theta = R \text{ vers } \theta = R\ (1 - \cos \theta)$, etc. The radius of the celestial sphere is taken to be R.

The trigonometric procedures outlined by the Muslim astronomers can also be performed geometrically using a grid of the kind which occurs on the circular instruments known in mediaeval Arabic as *al-dustūr* and *al-s̲h̲akkāziyya*, or the related quadrants known as *al-rubʿ al-mud̲j̲ayyab* and *rubʿ al-s̲h̲akkāziyya*. Most Islamic treatises on these instruments contain a chapter on the determination of the *ḳibla*.

Approximate solutions

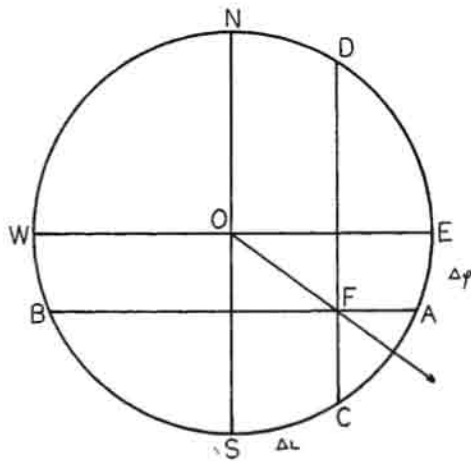
A popular approximate method for determining the *ḳibla* which occurs in the *Zīd̲j̲* of the Syrian astronomer al-Battānī (*fl.* Raḳḳa, *ca.* 297/910) and in several unsophisticated Islamic astronomical works such as *al-Mulak̲h̲k̲h̲aṣ fi 'l-hayʾa* by al-D̲j̲ag̲h̲mīnī (*fl.* K̲h̲ʷārazm, ? *ca.* 725/1325) is the following.


Fig. 3

Fig. 3 shows the construction for a locality where Mecca is to the south east. Mark the cardinal directions NWSE on a horizontal circle centre O and radius R and measure arcs $EA = WB = \Delta\varphi = \varphi - \varphi_M$ southwards and $SC = ND = \Delta L$ eastwards. Next draw AB and CD, and denote their point of intersection by F. Then OF defines the *ḳibla*. This method is equivalent to an application of the formula

$$q = \text{Sin}^{-1} \left\{ \frac{R\ \text{Sin}\ \Delta L}{\sqrt{\text{Sin}^2\ \Delta\varphi + \text{Sin}^2\ \Delta L}} \right\} = \text{Tan}^{-1} \left\{ \frac{R\ \text{Sin}\ \Delta L}{\text{Sin}\ \Delta\varphi} \right\}.$$

Certain Muslim astronomers also used tables based on this formula and displaying values of q ($\Delta\varphi$, ΔL) for each degree of both arguments from 1° to 20°. A feature of these tables is that the entries for $\Delta\varphi = \Delta L$ are all 45°0′.

Another approximate solution to the *ḳibla* problem is outlined in a treatise related to al-K̲h̲ʷārazmī (*fl.* Bag̲h̲dād, *ca.* 215/830). Here the formula

$$q = \text{Sin}^{-1} \left\{ \frac{\left[\dfrac{\text{Sin}\ \Delta L\ \text{Cos}\ \varphi_M}{R}\right] R}{\sqrt{\text{Sin}^2\ \Delta\varphi + \left[\dfrac{\text{Sin}\ \Delta L\ \text{Cos}\ \varphi_M}{R}\right]^2}} \right\},$$

with the trigonometric functions to base $R = 150$ rather than $R = 60$, is outlined in words. The table displaying q ($\Delta\varphi$, ΔL) that accompanies this treatise was rather popular with later Muslim astronomers and exists in several manuscript copies, some of which are of Syrian, Yemenī, and Turkish provenance. Yet other approximate *ḳibla* tables based on non-trivial formulae are found in the *As̲h̲rafī zīd̲j̲* of the Persian astronomer Sayf-i Munad̲j̲d̲j̲im (*fl. ca.* 710/1310), the *Zīd̲j̲* of the Persian astronomer S̲h̲ams al-Munad̲j̲d̲j̲im al-Wābiknawī (*fl. ca.* 725/1325), and

in a treatise on the quadrant by Ibn Ṭaybughā (*fl.* Aleppo, *ca.* 751/1350).

Exact solutions

Four exact solutions to the *ḳibla* problem are outlined below. The first and second illustrate the application and mathematical elegance of the analemma construction, and the way in which it can be used to derive complicated formulae of spherical trigonometry from a plane figure. The third and fourth illustrate the application and mathematical elegance of the Theorem of Menelaos and its corollaries. Al-Khalīlī's *ḳibla* table, which is perhaps the most sophisticated trigonometric table compiled in the mediaeval period, illustrates the competence of an 8th/14th century scholar in the algebra of functions and computational techniques.

A geometric *ḳibla* construction proposed by Ḥabash al-Ḥāsib (*fl.* Baghdād and Damascus, *ca.* 235/850) involves an analemma in which the working plane is considered consecutively as the meridian, equatorial, meridian, and horizon planes. Ḥabash's method may be summarised as follows (see Fig. 4). On a circle centre O and radius R mark the cardinal directione NWSE, and then draw arc WQ $= \varphi$, arc QB $= \varphi_M$, and arc QT $= \Delta L$. Draw the diameter QOR and the parallel chord BC with midpoint G. Mark the point M_2 on OT such that $OM_2 = GC$ and draw the perpendicular M_2M_1 onto BC. Next draw M_1L parallel to WE and M_1IJ parallel to SN to cut WE in I and the circle in J. Finally, construct the point M_3 on M_1L such that $OM_3 = IJ$ and produce OM_3 to cut the circle at K. Then OK defines the *ḳibla*.

This construction may be explained as follows. Firstly, QOR and BGC represent the projections of the celestial equator and the day circle of the zenith of Mecca in the meridian plane. Secondly, M_2 represents the projection of the zenith of Mecca in the equatorial plane. If we then imagine the equatorial plane to be folded into the meridian plane, M_2 moves to M_1, which is thus the projection of the zenith of Mecca in the meridian plane. Furthermore, M_1IJ is the projection in this plane of the almucantar through the zenith of Mecca, whose radius is thus IJ. Also M_1I and IJ measure the distances from the zenith of Mecca to the prime vertical and to the line joining the local zenith to O, respectively. Finally, we consider the horizon plane the working plane; by virtue of the construction, M_3 is the projection of the zenith of the Mecca in this plane. Thus OK defines the *ḳibla*.

From such a geometric construction a trigonometric solution for the *ḳibla* problem can be derived with facility. Indeed, from the analemma construction for the *ḳibla* proposed by Ibn al-Haytham [*q.v.*] (*fl.* Cairo, d. 430/1039: a single formula for q (φ, φ_M, L) equivalent to the modern one can be derived directly. Ibn Yūnus [*q.v.*] (*fl.* Cairo and Fusṭāṭ, d. 399/1009) proposed the following trigonometric solution to the *ḳibla* problem. Firstly from the quantity

$$h = \mathrm{Sin}^{-1}\left\{\frac{\dfrac{\mathrm{Cos}\,\varphi\,\mathrm{Cos}\,\Delta L}{R}\,\mathrm{Cos}\,\varphi_M + \mathrm{Sin}\,\varphi_M\,\mathrm{Sin}\,\varphi}{R}\right\},$$

and then the *ḳibla* is defined by

$$q = \mathrm{Sin}^{-1}\left\{\frac{\mathrm{Sin}\,\Delta L\,\mathrm{Cos}\,\varphi_M}{\mathrm{Cos}\,h}\right\}.$$

Ibn Yūnus offered no justification for this procedure, but his formulae can be derived from an analemma construction such as the one proposed by Ḥabash.

Fig. 4

If in Fig. 4 we draw the perpendiculars GH and GV from G to SN and M_1Y, then we have

$$M_1V = \left\{\frac{\mathrm{Cos}\,\varphi\,\mathrm{Cos}\,\Delta L\,\mathrm{Cos}\,\varphi_M}{R^2}\right\},$$

since

$$M_1V = M_1G\,\frac{\mathrm{Cos}\,\varphi}{R}$$

and

$$M_1G = OF = OM_2\,\frac{\mathrm{Cos}\,\Delta L}{R} = GC\,\frac{\mathrm{Cos}\,\Delta L}{R}$$
$$\frac{\mathrm{Cos}\,\varphi_M\,\mathrm{Cos}\,\Delta L}{R}.$$

Also

$$GH = OG\,\frac{\mathrm{Sin}\,\varphi}{R}\;\frac{\mathrm{Sin}\,\varphi_M\,\mathrm{Sin}\,\varphi}{R}.$$

Furthermore, since the arc JN measures h, we have $M_1Y = \mathrm{Sin}\,h$. But $M_1Y = MV + VY = MV + GH$. Ibn Yūnus' first formula follows immediately.

Next we observe that M_3Y and M_2F both measure the distance of the zenith of Mecca to the meridian and are hence equal. Thus

$$M_3Y = M_2F = OM_2\,\frac{\mathrm{Cos}\,\Delta L}{R}\;\frac{\mathrm{Cos}\,\varphi_M\,\mathrm{Cos}\,\Delta L}{R}.$$

Also, since the arc JN measures h, and OMf is by construction equal to IJ, we have OMf = IJ = Cos h. Ibn Yūnus' second formula follows immediately, since q measures the arc SK.

Ibn Yūnus also compiled a table displaying the solar altitude in Cairo when the sun is in the azimuth of Mecca. His table gives values for each degree of solar longitude, corresponding roughly to each day of the year. Tables of this kind were contained in the main corpora of tables for timekeeping that were used in such centres as Cairo, Damascus, Jerusalem, and Istanbul, and an isolated table of this kind was compiled for the observatory at Marāgha in north-western Persia. The solar altitude in the azimuth of Mecca is occasionally displayed graphically on the backs of astrolabes.

Al-Nayrīzī (*fl.* Baghdād, *ca.* 287/900) solved the *ḳibla* problem by four successive applications of the Theorem of Menelaos. His solution involves finding

successively the arcs TR, SR, MK and KS in Fig. 2, as follows. Firstly, find TR using

$$\frac{\text{Sin PS}}{\text{Sin SQ}} = \frac{\text{Sin PR}}{\text{Sin RT}}\,\frac{\text{Sin TE}}{\text{Sin EQ}},$$

that is,

$$\frac{\text{Sin }(180^\circ - \varphi)}{\text{Sin }\varphi} = \frac{\text{Sin }(90^\circ + \text{TR})}{\text{Sin TR}}\,\frac{\text{Sin }(90^\circ - \Delta L)}{\text{Sin }90^\circ}.$$

Secondly, find SR using

$$\frac{\text{Sin PQ}}{\text{Sin QS}} = \frac{\text{Sin PT}}{\text{Sin TR}}\,\frac{\text{Sin ER}}{\text{Sin ES}},$$

that is,

$$\frac{\text{Sin }90^\circ}{\text{Sin }(90^\circ - \varphi)} = \frac{\text{Sin }90^\circ}{\text{Sin TR}}\,\frac{\text{Sin ER}}{\text{Sin }90^\circ},$$

whence ER and SR ($= \overline{\text{ER}} = 90^\circ - \text{ER}$). Thirdly, find MK ($= h$) using

$$\frac{\text{Sin SP}}{\text{Sin SZ}} = \frac{\text{Sin PR}}{\text{Sin RM}}\,\frac{\text{Sin MK}}{\text{Sin KZ}},$$

that is,

$$\frac{\text{Sin }(180^\circ - \varphi)}{\text{Sin }90^\circ} = \frac{\text{Sin }(90^\circ + \text{TR})}{\text{Sin }(\text{TR} + \varphi_m)}\,\frac{\text{Sin MK}}{\text{Sin }90^\circ}.$$

Finally, find KS ($= q$) using

$$\frac{\text{Sin KS}}{\text{Sin SR}} = \frac{\text{Sin KZ}}{\text{Sin ZM}}\,\frac{\text{Sin MP}}{\text{Sin PR}},$$

that is

$$\frac{\text{Sin }q}{\text{Sin SR}} = \frac{\text{Sin }90^\circ}{\text{Sin }(90^\circ - h)}\,\frac{\text{Sin }(90^\circ - \varphi_M)}{\text{Sin }(90^\circ + \text{TR})}.$$

Al-Bīrūnī [*q.v.*] (*fl.* Kh*arazm and Ghazna, d. after 442/1050) proposed several different methods for finding the *ḳibla*, based on a variety of different procedures. In his work on mathematical geography, the *Taḥdīd nihāyāt al-amākin*, al-Bīrūnī derived the longitude difference between Mecca and Ghazna mathematically using the distances between staging posts on the major caravan routes, and then derived the *ḳibla* at Ghazna using four different methods, including spherical trigonometry (using Menelaos' Theorem), solid geometry (using procedures equivalent to those standard in solving timekeeping problems), and the analemma. Al-Bīrūnī's solution to the *ḳibla* problem in his major astronomical work *al-Ḳānūn al-Masʿūdī*, compiled after the *Taḥdīd*, is more elegant than his solution by spherical trigonometry in the earlier work. It was also proposed about thirty years previously as an alternative solution by Ibn Yūnus. Al-Bīrūnī proved its correctness by spherical trigonometry. Ibn Yūnus presented it algebraically with no justification, but he appears to have derived most of his formulae for spherical astronomy by projection methods rather than by spherical trigonometry. Al-Bīrūnī's treatment of the problem illustrates the progress made by Muslim scholars in spherical trigonometry during the tenth century. Whereas his predecessor al-Nayrīzī had laboriously used Menelaos' Theorem, al-Bīrūnī used its simpler corollaries, the spherical Sine Rule and the "Rule of Four Quantities".

Al-Bīrūnī first outlined an algebraic procedure for finding q using four auxiliary arcs which we call θ_1, θ_2, θ_3, and θ_4. Since he used $R = 1$ rather than 60 his trigonometric functions are the same as the modern ones. First find θ_1, "the distance on the day circle", thus $\sin\theta_1 = \sin\Delta L\cos\theta_M$. Then find θ_2, "the local latitude adjusted for the horizon (of Mecca)", using $\sin\theta_2 \dfrac{\sin\theta_M}{\cos\theta_1}$, and θ_3, "the correction to the latitude", using $\theta_3 = \varphi\text{-}\theta_2$. Then find θ_4, "the distance between the two localities", using $\cos\theta_4 = \cos\theta_3\cos\theta_1$. Finally, q is given by

$$\sin q = \frac{\sin\theta_3\cos\theta_1}{\sin\theta_4}.$$

Fig. 5

Al-Bīrūnī's justification of this procedure is equivalent to the following. In Fig. 5, which is essentially the same as the diagrams in the manuscripts of the original text, the base circle represents the horizon, with N and S the north- and south-points. The local meridian is SZPN where Z is the local zenith and P is the celestial pole. M is the zenith of Mecca and GLJ and MPL are respectively the horizon and meridian at Mecca. ZMK is the altitude circle of M and MHJ is a great circle with F as pole. Thus PN $= \varphi$, PL $= \varphi_M$, and MPZ $= \Delta L$, and it is required to find SK ($= q$). Al-Bīrūnī observed that (by the spherical Sine Rule).

$$\frac{\sin\text{MP}}{\sin\text{MH}} = \frac{\sin\angle\text{MHP}}{\sin\angle\text{MPH}},\ \text{i.e.,}\ \frac{\cos\varphi_M}{\cos\angle\text{F}}\,\frac{\sin 90^\circ}{\sin\Delta L},$$

whence $\angle$ F ($= \angle$ PFL) is known. Thus θ_1 is the complement of $\angle$ F. Similarly

$$\frac{\sin\angle\text{F}}{\sin\angle\text{PLF}} = \frac{\sin\text{PL}}{\sin\text{PF}},\ \text{i.e.,}\ \frac{\cos\theta_1}{\sin 90}\,\frac{\sin\varphi_M}{\sin\text{PF}},$$

whence PF is known.

Thus θ_2 is PF. Thirdly, since FN $=$ PN $-$ PF $= \varphi\text{-}\theta_2$, θ_3 measures FN. Fourthly, al-Bīrūnī states that by the "Rule of Four Quantities"

$$\frac{\sin\text{FZ}}{\cos\angle\text{G}} = \frac{\sin\text{FH}}{\sin\text{HJ}},\ \text{i.e.,}\ \frac{\cos\theta_4}{\cos\angle\text{G}} = \frac{\sin 90^\circ}{\cos\theta_1},$$

(note that $\cos\angle\text{G} = \cos\angle\text{FGN} = \cos\text{IQ} = \sin\text{ZI}$) so that θ_4 measures $\angle$ G.

Finally, he points out that (by the spherical Sine Rule)

$$\frac{\sin\angle\text{G}}{\sin\angle\text{F}} = \frac{\sin\text{FN}}{\sin\text{GN}},\ \text{i.e.,}\ \frac{\sin\theta_4}{\cos\theta_1} = \frac{\sin\theta_3}{\sin\text{GN}},$$

whence $q = \text{SK} = 90^\circ - \text{GN}$.

Al-Khalīlī (*fl.* Damascus, *ca.* 766/1365) compiled a *ḳibla* table based on an accurate formula and displaying $q(\varphi, \Delta L)$ for each degree of φ from 10° to 56° and each degree of ΔL from 1° to 60°. Al-Khalīlī's table thus contains a total of almost 3,000 entries, and the *ḳibla* is computed to degrees and minutes. The vast majority of the entries are either correct or in error by ± 1 or ± 2 minutes, a remarkable achievement. Table 1 shows a section of al-Khalīlī's table.

Table 1

Sample Entries from al-Khalīlī's *Ḳibla* Table
(The errors in the minutes are shown after each entry)

ΔL ij	34°	35	36°	37°
25°	66°55′ + 1	64°59′	63° 9′ + 1	61°20′ − 1
24	65 39 + 1	63 39 − 1	61 45 − 2	59 56 − 2

Al-Khalīlī does not describe the way in which he compiled his *ḳibla* table. However, in his introduction to the table he expresses his approval of the *ḳibla* method of al-Marrākushī (*fl.* Cairo, *ca.* 679/1280). This involved first finding h using

$$\text{Sin } h = \text{Sin } (\varphi + \varphi_M) - \text{Vers } \Delta L \, \frac{\text{Cos } \varphi_M \text{ Cos } \varphi}{R^2},$$

and then applying the standard Islamic formula for finding the azimuth from the celestial altitude, namely

$$q = \text{arc Cos} \left\{ R \, \frac{\left[\dfrac{\text{Sin } h \text{ Tan } \varphi}{R} - \dfrac{R \text{ Sin } \delta}{\text{Cos } \varphi} \right]}{\text{Cos } h} \right\}.$$

Both of these formulae can be derived from Fig. 4. If al-Khalīlī did use precisely this method to compile his *ḳibla* table, it may be that he also used his universal auxiliary tables (*al-djadwal al-āfāḳī*) to facilitate the computation. These tables which were specifically designed for solving all of the standard problems of spherical astronomy for any latitude, display the three functions

$$f\varphi(\theta) = \frac{R \text{ Sin } \theta}{\text{Cos } \varphi}, \; g\varphi(\theta) = \frac{\text{Sin } \theta \text{ Tan } \varphi}{R},$$

$$\text{and } G(x, y) = \text{arc Cos} \left\{ \frac{Rx}{\text{Cos } y} \right\}.$$

The procedure for finding $q(\varphi, \Delta L)$ would be to first find h $(\varphi, \Delta L)$ using the simple formula of al-Marrākushī and then to use the auxiliary tables to apply the formula

$$q(\varphi, \Delta L) = G\,\{x(\varphi, \Delta L), h\}$$

where

$$x(\varphi, \Delta L) = g\varphi(h) - f\varphi(\varphi_M).$$

This latter procedure is easily shown to be equivalent to the standard azimuth formula.

Al-Khalīlī also computed the *ḳibla* for 44 localities in Palestine, Syria, and Iraq. These are likewise very carefully computed. Sample entries from this list are shown in Table 2. Several other *ḳibla* lists were compiled by mediaeval Muslim astronomers, and the geographical tables in late Islamic *zīdj*s often display the *ḳibla* alongside the latitudes and longitudes of important localities.

Alignment of Mosques

Now even though the mediaeval astronomer might have been aware of an exact formula for computing the *ḳibla*, the accuracy of his *ḳibla* determinations depended on the geographical data that he had at his disposal. Mediaeval longitude determinations, based either on simultaneous observations of lunar eclipses in different localities or on measuring distances between the localities, were generally not very accurate. Mediaeval latitude determinations,

Table 2

Sample Entries from al-Khalīlī's *Kibla* List
(The errors are derived using the mathematically correct formula and al-Khalīlī's coordinates)

Locality	Longitude	Latitude	*Kibla*	Error
Gaza	57°0′	32°0′	42°46′	+ 1′
Hebron	56 30	31 35	45 21	— 6
Jerusalem	56 50	32 0	43 14	— 2
Damascus	60 0	33 30	29 4	+ 1
Beirut	59 15	33 20	31 59	— 4
Baᶜlabakk	60 0	33 50	28 25	+ 1
Hamā	61 45	34 45	20 32	— 2
Aleppo	62 10	35 50	17 42	0
Mārdīn	64 0	37 55	9 48	0
Baghdād	70 0	33 25	13 19	0
Kūfa	69 30	31 30	13 12	+ 1
Mecca	67 0	21 30	-	-

on the other hand, based on observations of the solar meridian altitude, were generally more accurate. Even so, the most popular values used by Muslim astronomers for the latitude of Mecca were 21°, 21° 20′, 21° 30′, and 21° 40′, whereas the accurate value is 21° 26′. This explains why mediaeval mosques may be incorrectly oriented even though their *miḥrāb*s [*q.v.*] were erected in a *ḳibla* direction computed by competent mathematicians.

Another reason why mosques may be incorrectly aligned is that their *ḳibla*s were not computed from geographical data at all but were inspired by tradition. Thus, for example, mosques in the Maghrib and the Indian subcontinent generally face due east or due west, respectively. Likewise, in early Muslim Egypt, the *ḳibla* adopted was the azimuth of the rising sun at the winter solstice. Several mosques in Cairo face this direction, which was favoured as the *ḳiblat al-ṣaḥāba* but which is about 10° off the *ḳibla* computed mathematically using mediaeval geographical coordinates and about 20° off the true *ḳibla* for Cairo. No survey has yet been made of the orientation of mediaeval mosques. Such a survey would be of considerable interest for the history of Islamic architecture as well as the history of science.

Bibliography: Several of the following secondary sources contain descriptions and analyses of mediaeval *ḳibla* methods. There exist numerous Islamic astronomical works containing *ḳibla* methods that have not been investigated in modern times. On the *ḳibla* method of Ulugh Beg [*q.v.*] (*fl.* Samarḳand, d. 853/1449), which is none other than the method of Ibn Yūnus and al-Bīrūnī, see L. A. Sédillot, *Prolégomènes des tables astronomiques d'Oloug-Beg: traduction et commentaire*, (Paris 1853), 116-21. On the approximate methods of al-Battānī and al-Djaghmīnī, see C. A. Nallino, *al-Battānī sive Albatenii Opus Astronomicum* (Milan and Rome 1899-1907), i, 318-9, and ii, p. xxvii; and G. Rudloff and A. Hochheim, *Die Astronomie des Maḥmūd ibn Muḥammad ibn ᶜOmar al-Ǵagmīnī*, in *ZDMG*, xlvii (1893), 213-75 (esp. 271-2).

The first serious investigations of Islamic *ḳibla* methods were conducted by C. Schoy (see his article KIBLA in *EI*[1]). The methods of Ibn al-Haytham and al-Nayrīzī were discussed in his *Abhandlung des al-Ḥasan ibn al-Ḥasan ibn al-Haiṯam (Alhazen) über die Bestimmung der Richtung der Qibla*, in *ZDMG*, lxxv (1921), 242-53; and in his *Abhandlung von al-Faḍl b. Ḥâtim al-Nairîzî über die Richtung der Qibla*, in *SB Bayr. Akad.*, Math.-phys. Kl. (Munich 1922), 55-68 (also contains a list of *ḳibla* values for various cities, taken from an 8th/14th century Syrian source). Schoy's other studies on the *ḳibla* include *Die arabische Sonnenuhr im Dienste der islamischen Religionsübung*, in *Naturwissenschaftliche Wochenschrift*, N.F., xi (1912), 625-9; *Mittagslinie und Qibla*, in *Zeitschr. der Gesell. für Erdkunde zu Berlin* (1915), 551-76; *Die Mekka- oder Qiblakarte (Gegenazimuthale mittabstandstreue Projektion mit Mekka als Kartenmitte)*, in *Kartographische und schulgeographische Zeitschr.* (Vienna 1916), 184-5; and *Gnomonik der Araber*, in E. von Bassermann-Jordan, ed., *Die Geschichte der Zeitmessung und der Uhren*, Band 1F (Berlin-Leipzig 1923) (esp. 33-43 and 84-6 on the methods of al-Battānī, Ibn Yūnus, and Abu 'l-Wafāʾ).

On al-Bīrūnī's *ḳibla* methods, see his *al-Ḳānūn al-Masᶜūdī*, ed. M. Krause, Hyderabad 1955, ii, 522-8; Schoy, *Die trigonometrischen Lehren des ... al-Biruni ...*, Hanover 1927, 70-1; and E. S. Kennedy, *A commentary upon Bīrūnī's Kitāb Taḥdīd al-Amākin*, Beirut 1973, esp. 198-215. Ḥabash's construction is discussed in E. S. Kennedy and Y. Id, *A letter of al-Bīrūnī: Ḥabash al-Ḥāsib's analemma for the Qibla*, in *Historia Mathematica*, i (1974), 3-11.

Al-Khalīlī's *ḳibla* table is analysed in D. A. King, *Al-Khalīlī's* Qibla *Table*, in *JNES* (1975), (which also contains references to other mediaeval *ḳibla* tables and a discussion of the determination of the *ḳibla* using a quadrant). Ibn Yūnus's table displaying the solar altitude in the azimuth of the *ḳibla* is discussed in idem, *Ibn Yūnus' Very useful tables for reckoning time by the sun*, in *Archive for History of Exact Sciences*, x (1973), 342-94 (esp. 368). Considerable additional information on *ḳibla* determinations is contained in the forthcoming publication by idem, *Studies in astronomical timekeeping in mediaeval Islam. ii. A survey of mediaeval Islamic tables for regulating the times of prayer*.

Several lists of geographical coordinates of cities and the corresponding *ḳibla* values, taken from Islamic astrolabes, are given in R. T. Gunther, *The astrolabes of the world*, i, Oxford 1932, see esp. 24-6. On mediaeval Islamic longitude determinations, see Schoy, *Längenbestimmung und Zentral-meridian bei den älteren Völkern*, in *Mitt. der kaiserlich-königlichen Geographischen Gesell.*, xii (1915), 27-62; Kennedy's commentary on al-Bīrūnī's *Taḥdīd* (mentioned above); and F. Haddad and E. S. Kennedy, *Geographical tables of mediaeval Islam*, in *al-Abḥāth*, xxiv (1971), 87-102.

On the analemma in mediaeval Islamic astronomy, see the reference cited in the study by E. S. Kennedy and Y. Id (mentioned above). On the development of spherical trigonometry and computational techniques in mediaeval Islam, see P. Luckey, *Zur Entstehung der Kugeldreieckrechnung*, in *Deutsche Mathematik*, v (1940), 405-46; Kennedy, *Al-Bīrūnī's Maqālīd ᶜIlm al-Hayʾa*, in *JNES*, xxx (1971), 308-14, and the references there cited; and King, *Al-Khalīlī's auxiliary tables for solving problems of spherical astronomy*, in *Jnal. for the Hist. of Astronomy*, iv (1973), 99-110. (D. A. King)

AL-KIBRĪT, sulphur. The Arabic term is derived from Akkadian *kuprītu* through Aramaic *ku/ebhrithā*. The Arabs knew both sedimentary and volcanic brimstone. Muḥammad b. Aḥmad al-Tamīmī, *K. al-Murshid*, Ms. Paris 2870, f. 20a, mentions a place where "white" brimstone was to be found on the

shore of the Dead Sea and in the neighbourhood of Jerusalem (see also Muḳaddasī, 184), in fact the deposits of brimstone to be found in clay, mixed with gypsum and calcium carbide, on the right bank of the river Jordan at a mile from the Dead Sea (see C. Hintze, *Handbuch der Mineralogie*, i/1, Leipzig 1904, 68 ff.). Abū Dulaf al-Khazradjī (*al-Risāla al-thāniya*, ed. V. Minorsky, Cairo 1955, 22, tr. 54-5, ed. P. Bulgakov, Moscow 1960, 34) mentions already a sulphur spring on Mount Damāwand [*q.v.*] around which brimstone had crystalised, and this volcano showed immense deposits of brimstone. The same author (*ibid.*, 43 = Yāḳūt, ii, 619) knows also the sulphur springs of Dawraḳ [*q.v.*] in Khūzistān.

In general, four sorts of brimstone are distinguished: yellow, white, black and red (see *WKAS*, i, 536). Muḥammad b. Zakariyyā' al-Rāzī, *K. al-Asrār* (ed. M. T. Dānish-Pazhūh, Tehran 1964, 3), however, differentiates these even further into 1. pure, massive, yellow brimstone; 2. pure, granular, yellow brimstone; 3. white, ivory-coloured brimstone; 4. white brimstone mixed with soil; 5. black brimstone, adulterated with stones; and 6. red brimstone. Descriptions like *kibrīt ḳāni'* "bright red brimstone", *kibrīt dhahabī* "golden brimstone", *kibrīt dhakar* "male brimstone", *kibrīt baḥrī* "brimstone of the sea", *kibrīt nahrī* "brimstone of the river", etc. are also found. These descriptions indicate the various modifications and qualities: brimstone deposited by springs is mostly fine-grained and yellow-white; elementary brimstone is often contaminated with bitumen, selenium and arsenic. These various descriptions, however, were of course not used by the Arabs to indicate a strict classification.

A special case was the "red brimstone" (*al-kibrīt al-aḥmar*). According to Aristotles' *Stone-book* (ed. J. Ruska, Heidelberg 1912, no. 26, p. 161 = Ibn al-Bayṭar, *K. al-Djāmi'*, iv, 49) it shines by night over a distance of many parasangs, as long as it is left in its place of occurence. Others maintained that red brimstone was a mineral to be found in the valley of the ants, marched through by Solomon (Ibn Samadjūn, in Ibn al-Bayṭar *loc. cit.*). These are fairy-tales. Al-Rāzī (*K. al-Asrār, loc. cit.*) knew already that "red brimstone" does not exist as a mineral, and this scepticism was wide-spread. Al-Djāḥiẓ (*Risāla fi 'l-Djidd wa 'l-hazl*, ed. P. Kraus, Cairo 1943, 93; ed. Hārūn, Cairo 1964, i, 271) remarks that "red brimstone" is easier to be found than a trustworthy friend, and the caliph al-Mu'taḍid bi-llāh (279-89/892-902) said that two things exist only in name: the phoenix (*'anḳā' mughrib*) and *al-kibrīt al-aḥmar* (Bīrūnī, *Djamāhir*, 154). In this sense is also to be understood al-Maydānī's proverb "more costly than red brimstone" (see Freytag, *Arabum proverbia*, i, 18, 220, ii, 149) and Bilawhar's saying (ed. D. Gimaret, Beirut 1971, 33) that his merchandise is better than red brimstone. The solution to this enigma is that *al-kibrīt al-aḥmar* is a pseudonym for the elixir, by means of which silver can be changed into gold (Bīrūnī, *Djamāhir*, 103, *WKAS*, i, 536 a25-b2).

The position of brimstone in the mineral system has been determined more than once: in Aristotles' *Stone-book*, compounds of brimstone and arsenic form one group together with salts and boraxes, without a fixed classification. The authors of the *Corpus Gabirianum* (3rd-4th/9th-10th centuries) counted red, yellow, black and white brimstone, together with orpiment, realgar, quicksilver, camphor and ammonia among the "spirits" (*al-arwāḥ*, τὰ πνεύματα), as opposed by the "metallic bodies" (*al-adjsām*) and the "mineral bodies" (*al-adjsād*). Ibn Sīnā (*K. al-Shifā'*, *al-Ṭabī'iyyāt*, v, ed. Madkūr, Cairo 1965, 20-2) divides all minerals into four classes: the stones (*al-aḥdjār*), the salts (*al-amlāḥ*), the fusible bodies (*al-dhā'ibāt*) and the brimstone-like ones (*al-kabārīt*). Brimstone has become here a general notion indicating those substances in which wateriness has been combined with earthiness and airiness and which have then been consolidated by cold. According to al-Ḳazwīnī, *'Adjā'ib*, 203-45, brimstone, together with quicksilver, pitch, naphtha etc. belongs to the viscous substances (*al-adjsām al-duhniyya*).

Already in the Middle Ages brimstone was an important mineral raw material. It was for instance used in bleaching. Thus the "brimstone of the river" (*al-kibrīt al-nahrī*) was also called *kibrīt al-ḳaṣṣārīn*, the "brimstone of the bleachers" (Galen, *K. al-Awdiya al-mawdjūda bi-kull makān*, in Ibn al-Bayṭar, iv, 49, below). Together with bitumen, fats, oil, etc., brimstone was a component part of Greek fire [see NAFṬ], and from the 7th/13th century onwards it was used with salpetre and charcoal, to make gunpowder.

Brimstone was also widely used in medicine. According to Dioscurides (*Mat. med.*, v, 107; Arabic tr. ed. C. E. Dubler, Tetuán-Barcelona 1952-7, 423) brimstone avails against a cough, against pus that is stuck in the chest, and against asthma. If a woman is fumigated with brimstone, she will have a miscarriage. Leprosy, cutaneous eruptions and other skin diseases are treated with brimstone, which, if mixed with natron, dissipates itching. Finally, brimstone avails against the stings of poisonous animals, against jaundice, cold, sweat, podagra, ear-ache and deafness. The same indications are found in Galen, *De simpl. med. temp. ac fac.*, ix, 3, 9 (Vol. xii, 217, Kühn; Arabic tr. in Ibn al-Bayṭar, iv, 50); 'Alī b. Rabban al-Ṭabarī, *K. Firdaws al-ḥikma*, 122, 224, 271, 322, 324, 407 (cf. W. Schmucker, *Die pflanzliche und mineralische Materia medica im Firdaus al-Ḥikma des Ṭabarī*, Bonn 1969, 380-2), Ya'ḳūb b. Isḥāḳ al-Kindī (cf. *The medical formulary of al-Kindī*, ed. M. Levey, Milwaukee 1966, ff. 95b, 101b, 133b), al-Rāzī, *K. al-Ḥāwī*, xvii, 55, and Ibn Sīnā, *Ḳānūn*, Rome 1593, i, 191. The *dawā' al-kibrīt* is one of the important electuaries. It equals theriae and avails against fever, cough, asthma, tetanus, dropsy, against stings of poisonous animals etc. ('Alī b. Rabbān 445; al-Madjūsī, *K. al-Malakī*, ii, 536; Ibn Sīnā, *Ḳānūn*, ii, 191).

The curative properly of sulphurous water is often praised: Abū Dulaf al-Khazradjī (*op. cit.*, ed. Minorsky, 12, tr. 43, ed. Bulgakov, 21, Yāḳūt, ii, 317) mentions the sulphurous springs in the neighbourhood of Ḥulwān [*q.v.*] in 'Irāḳ, which avail against manifold diseases. According to Aristotles' *Stone-book* (no. 26, pp. 113, 162) bathing in sulphurous springs is good for open wounds, tumours, itching, scabies and fever. Baths in sulphurous water avail also against trembling (*irti'āsh*) (Philagrises, in Rāzī, *Ḥāwī*, i, 44, see Galen, *De tremore et palpitatione*, vii, 600, Kühn). Finally, sulphurous water is curative of articular pains (Rufus, in Rāzī, *Ḥāwī*, xi, 199), hemiplegia (*fālidj*, 'Alī b. Rabbān, *Firdaws*, 197) and elephantiasis (*djudhām*, ibid.).

To the many palliatives which were recommended for expelling vermin from houses there are always included fumigations with sulphur (Rāzī, Ḥāwī, xix, 320-33), which was also used in magic as an ingredient of talismans (Pseudo-Madjrīṭī, *Ghāyat al-ḥakīm*, 243-6, German tr. by Ritter and Plessner, London 1962, 254-8).

Sulphur played a prominent part in alchemy (see AL-KĪMIYĀ'). Distillation of sulphur and the action

of sulphurous vapour on metals gave occasion to many observations and conjectures. Since sulphur is liberated in the distillation of most materials, it was believed to be a fundamental part of all minerals. In particular, it was assumed that the metals consisted of quicksilver and brimstone. If the parts of both materials are in an ideal ratio to each other, gold originates (see Dimashķī, *Nukhba*, 50 ff.). Sulphur is therefore also called "the mother of gold" (*umm al-dhahab*, see *K. al-Kanz*, ms. Berlin 4191, f. 51a).

The alchemists invented many pseudonyms for sulphur, like "the yellow, red or white bride") *al-ʿarūs al-ṣafrāʾ*, etc.), "the red soil" (*al-turba al-ḥamrāʾ*), "the colouring spirit" (*al-rūḥ al-ṣābigh*), "the saffron" (*al-zaʿfaran*), "the divine secret" (*al-sirr al-ilāhī*). The breath-taking smell of burning brimstone gave it the name "the suffocater" (*al-khannāķ*). Because brimstone combines quicksilver, it was also called "the fetter of the volatile" (*ķayd al-ʿābiķ*). Conversely, the term *kibrīt* was also used in various combinations as pseudonym of other substances, e.g. *kibrīta lā taḥtariķ* "incombustible sulphur" (see *WZKM*, lxiii-lxiv (1972), 168) designates the elixir of gold. (For the problem of the pseudonyms, see J. Ruska and E. Wiedemann, *Alchemistische Decknamen*. Beiträge LXVII, in *SPMSE*, lvi-lvii (1924-5), 20-33 = E. Wiedemann, *Aufsätze*, ii, 599-612; A. Siggel, *Decknamen in der arab. alchem. Literatur*, Berlin 1951).

(M. ULLMANN)

ĶIBṬ, the Arabic term for the Copts or native Christians of Egypt. The term is a derivative of the Greek *Aigyptos*, a phonetic corruption of the Ancient Egyptian *Ha-Ka-Ptah*, i.e. the house or temple of the god Ptah, signifying Memphis. The Greeks used the word for Egypt and the Nile, hence the word "Coptic" is originally the equivalent of Egyptian. Curtailment of both prefix and suffix from the Greek term gives us *Gypt* > Arabic rendering *Ķibṭ*. According to Semitic sources, however, this term is derived from Kuftaim, son of Mizraim, a grandchild of Noah who first settled in the Nile valley and imparted his name to the city of Ķufṭ or Gufṭ near Thebes or modern Luxor [see ĶIFṬ]. This latter theory is commoner among Arab writers who call Egypt *Dār al-Ķibṭ*, sc. the home of the Copts who were the Christianised descendants of the ancient Egyptians at the time of the Arab Conquest of 20-1/640-2.

Apparently the Copts were not unknown to the pre-Islamic Arab traders whose caravans penetrated the fringes of the Fertile Crescent and to some extent touched Egypt. More directly, the Copts came into the life of the Prophet Muḥammad through Maryam the Copt who was a gift from al-Muķawķas [*q.v.*] and who bore him his short-lived and only son Ibrāhīm. The Prophet is said explicitly to have told ʿUmar b. al-Khaṭṭāb that "Allāh will open Egypt to you after my death. So take good care of the Copts in that country, for they are your kinsmen and under your protection". This is said to have appeared in the first *khuṭba* by ʿAmr b. al-ʿĀṣ after the conquest, and in it he subsequently admonishes his Muslim audience to "Cast down your eyes therefore and keep your hands off them".

Though the caliph ʿUmar was hesitant to grant ʿAmr approval for the conquest of Egypt, certain factors in the Egyptian situation favoured the invaders. The Copts were restive under Byzantine rule. In pursuance to the policies established by Justinian (527-65), the Emperor Heraclius (610-41) in 631 appointed Cyrus (al-Muķawķas in Arabic sources) as prefect, army commander and patriarch of the whole of Egypt in order to facilitate the securing of both political and religious uniformity in that crucial part of the Empire. Byzantine taxation was also felt as oppressive. Cyrus forced the Copts to abjure their Monophysitism in favour of the Byzantine Chalcedonian profession and his legionaries pursued their native Patriarch-elect Benjamin I (623-62), who fled to the desert monasteries and remained in hiding until the removal of the Melkite Greeks from Egypt.

It was in these circumstances that ʿAmr crossed the eastern frontiers of Egypt [see MIṢR] and entered the country. Cyrus realised by then that he was fighting a lost battle, because the Copts wanted a change of masters at any cost. While the servitude of the latter was complete in civic, financial and religious matters, the Arabs cared more for the revenues from the province than for interference with the religion of the Copts. They did not distinguish between Melkites and Monophysites, and the Copts as Christians were regarded as a protected people (*Ahl al-Dhimma*), in return for payment of the *djizya* [*q.v.*].

When the Byzantine régime finally ended with the fall of Alexandria in 641, the Greek Melkite population was granted safe-conduct to depart with Cyrus, and the native Patriarch Benjamin I was summoned to emerge from hiding. His appearance in Alexandria was honoured by ʿAmr, and the Copts at last regained their religious liberty and even appropriated most of the Melkite churches and foundations then rendered vacant. Thus the new era augured well, and perhaps Muslim monotheism might have been interpreted as bordering on Coptic monophysitism, thus creating a temporary bridge between the two religions in the eyes of those who were unaware of their philosophies in details of doctrine and future developments.

From this moment, the relationship between the Copts and the Arabs was based pre-eminently on revenue and taxation. The Arabs recognised the elaborate system of government in Egypt, and left the administration unchanged in the hands of the Copts. In the first year, ʿAmr was able to raise 12 million *dīnār*s in revenue, but the caliph ʿUmar was dissatisfied and removed ʿAmr, nominating ʿAbd Allāh b. Saʿd b. al-Sarḥ [*q.v.*] to succeed him. The new governor was then able to raise 14 million *dīnār*s in the second year.

From 21/642 to 254/868, Egypt was directly under Caliphal control through a viceroy, and ninety-eight governors were appointed by the Umayyad and the ʿAbbāsid caliphs. The average tenure of each governor was about two years, too brief a period for any constructive work. But caliphal policy aimed at removing governors before they had sufficient time for

trying to break away from the central government. In the circumstances, a governor's sole concern was simply to squeeze the maximum taxation from the subjects, not only to pay the necessary dues to the central government, but also for his personal enrichment. The depletion of the resources of the country was also often aggravated by low Nile floods and the spread of disease and plague.

The worsening of the economy meant heavier pressure and exactions for the Copts. The results of this situation were three-fold: many Copts fled to the desert monasteries to escape the poll-tax from which clerics were exempted, although this privilege proved to be ephemeral; some turned to Islam for the same reason, although wholesale conversions did not take place because the caliphs usually discouraged them in order to safeguard their revenue; and some rose in revolt, not infrequently reinforced in their insurrection by Muslim settlers.

Perhaps the Bashmuric Rebellion of 214-15/829-30 in the marshlands of the lower Delta was the most serious of those local insurrections. The caliph al-Maʾmūn had to come in person to Egypt to fight the Bashmuric rebels and to pacify the Copts. The outcome of a steadily deteriorating situation was a neglect of the irrigation system, the blocking of canals with sand and silt, and the ruination of the Nile dykes. In addition to a decline in the number of Coptic farmers, the steady shrinkage in the arable soil led to the fall of the revenue to 3 million *dīnārs* by the 3rd/9th century until the last of the ʿAbbāsid governors, Aḥmad b. al-Mudabbir [*q.v.*], assumed power in 254/868 and doubled the *kharādj* and the *djizya*; now even the clergy and the desert monks lost their customary exemption from payment. In the same year Ibn al-Mudabbir was imprisoned by Aḥmad b. Ṭūlūn. The latter soon introduced numerous financial reforms which earned for him the loyalty of the inhabitants. The leniency and understanding towards the Coptic subjects of the Ṭūlūnids (254-92/868-905) and the Ikhshidids (323-58/935-69) [*qq.v.*] stood in contrast to the rule of Ibn al-Mudabbir, from whose imposts the Coptic clergy were once again exempted.

It would be wrong to judge Ibn Ṭūlūn by his harsh treatment and incarceration of the Coptic Patriarchs Shenouda I (859-80) or his successor Khāʾīl III (880-90), caused by internal dissensions amidst the Coptic clergy themselves. An undeserving deacon and monk who wanted a bishopric hatched conspiracies against the Patriarchs, together with the bishop of Sakha, who had been excommunicated for misdemeanour. They went to the governor with false reports about the Patriarchs, including the worst of accusations in the eyes of a Muslim ruler, that is, trying to bring Muslims into apostasy and sending them to the desert monasteries to become monks. As usual, this was coupled with accusations that the Patriarchs were avaricious and possessed masses of gold. The truth was revealed in the end, and the Patriarchs regained their liberty after signing a warrant for debt, which they tried to repay through money raised from charity and from simoniacal practices.

The state revenue had declined to 3 million *dīnārs* at the advent of Ibn al-Mudabbir, and he aimed at doubling it without mending the cause of its decline. Realising that the cause of this deficit was the decline of agriculture, Ibn Ṭūlūn introduced land and irrigation reforms which ultimately improved the revenue. Even with exemptions, the revenue rose to 4 million *dīnārs* before Ibn Ṭūlūn's death, in addition to accumulated savings of 10 millions in the treasury and the execution of an extensive building program. With the help of Ibn Kātib al-Firghānī, an accomplished Coptic architect, he constructed the Nilometer at the southern end of Rawḍa (Rōḍa) Island [see MIḲYĀS] and his famous mosque with its external spiral minaret. Muslims commonly destroyed churches in order to use their materials and pillars in building mosques. To save the churches, Ibn Kātib promised the governor to construct the mosque of Ibn Ṭūlūn without having to utilise pillars from churches. Thus the new pillars were built of massive masonry supporting pointed arches long before their use in Gothic art in Europe, and only two small marble pillars were placed on the flanks of the *ḳibla*. The mosque still stands as a testimony to the architectural genius of the builder and the return of the country to affluence.

During the years of stability in the rule of both these dynasties of governors, the Copts enjoyed a great degree of tolerance and prosperity. It is recorded that Ibn Ṭūlūn cultivated the habit of retiring to the al-Ḳuṣayr monastery south of Fusṭāṭ for rest and recuperation, and the first Ikhshīdid, Muḥammad b. Ṭughdj (323-34/935-46) used to participate in the celebrations of the Coptic Epiphany, according to the contemporary 4th/10th century historian al-Masʿūdī. Both dynasties entrusted the Copts with key positions in government.

The really favourable position of the Copts, however, was still to come, viz. under the Shīʿī Fāṭimid dynasty (358-567/969-1171), if we except the reign of al-Ḥākim bi-Amr Allāh (386-411/996-1021 [*q.v.*]), who ended by persecuting Copts, Jews and even Muslims. Hence the Copts, whose religious freedom had been undisturbed and who had occupied the highest positions in the administration during the reigns of al-Muʿizz (358-65/969-75) and al-ʿAzīz (365-86/975-96) now faced forced apostasy or persecution by the unbalanced monarch, and many of their churches were levelled to the ground. However, towards the end of his reign, al-Ḥākim apparently fell under the spell of a priest named Anba Salomon during his visits to the monastery of al-Ḳuṣayr on the Ḥelwān road south of Cairo, and eventually began to wear a monks' garment, while his atrocities ceased.

During the caliphate of al-Ẓāhir (411-27/1020-36), the re-building of churches was again authorised, and Christians who had been forced to apostasise were permitted to return to their faith. Nāṣir-i Khusraw [*q.v.*], who visited Egypt in the reign of his successor, al-Mustanṣir, remarked that nowhere in the world of Islam had he seen Christians enjoy as much peace and prosperity as did the Copts. The strongest Fāṭimid vizier, Badr al-Djamālī [*q.v.*], and his son al-Afḍal, both Armenian converts to Islam, favoured the Copts and relied on their service. Ultimately, the sixty-sixth Patriarch Christodoulos (1046-77) decided to move his seat from Alexandria to Cairo in order to be within easier access to the central government.

Only towards the end of Fāṭimid rule, when internal disorder grew, did Copts and Muslims alike suffer in the ensuing broils and confusion, and the fate of the Copts was further aggravated by the outbreak of the Crusades. It would therefore seem that the Copts reached the height of power and prosperity, but also latterly some of their worst tribulations, during the Fāṭimid era.

The advent of the Sunnī Ayyūbid dynasty (564-648/1169-1250) re-established internal stability and

eliminated the confusion of the age of the last Fāṭimid caliphs, but these times proved rather a mixed blessing for the Copts. In the course of his fighting the Crusaders in the Holy Land and the Christian kings of Nubia in the south, Ṣalāḥ al-Dīn's suspicions led him to dismiss the Copts from government service. It was probably on this occasion that Zakariyyā' b. Abi 'l-Malīḥ b. Mammātī (a corruption of the Coptic *Mahometi*) of Asyûṭ, a Copt who held the joint secretaryship of the War Office and the Treasury, decided to apostasise with his family and become a Muslim, in order to retain his high office for himself and his descendants. His son al-Asʿad inherited his father's office, and compiled one of the few cadastres of mediaeval Egypt (*al-Rawk al-Ṣalāḥī*), leaving a record thereof in his *Kitāb Ḳawānīn al-dawāwīn*. Ṣalāḥ al-Dīn's brother, Shams al-Dawla, who led the Nubian campaign, destroyed in the years 567-8/1172-3 the monastic settlement of Bawīṭ in Middle Egypt, the Coptic city of Ḳufṭ, which sank into insignificance thereafter [see KIFT], and the important Convent of St. Simeon (*Anba Hidra*) across the Nile from Aswān. Ṣalāḥ al-Dīn further decided to remove the imposing building of the Cathedral of St. Mark in Alexandria for fear that it might serve Crusader inroads with a fortified site, and the Copts tried in vain to ransom this church.

It would however be erroneous to accuse the Ayyūbid sultans of continuous intolerance and persecution of the Copts. One of their first deeds was to suppress Ibn al-Mudabbir's substitution of the lunar for the solar calendar in order to shorten the year and thus get more taxes. They left most of the Coptic churches standing, and generally refrained from interference with religious freedom. Ṣalāḥ al-Dīn himself granted the Copts an imposing monastery adjacent to the Holy Sepulchre, which they own to the present day as *Dayr al-Sulṭān*. The sultan's successes against the Crusaders and the recapture of Jerusalem in 583/1187 seem to have terminated his early apprehensions about the Copts. The Copt Ṣafī al-Dīn b. Abi 'l-Maʿālī, surnamed Ibn Sharāfī, became his private secretary. Two Coptic architects, Abū Manṣūr and Abū Mashkūr, were employed to repair and extend the fortified walls of Cairo and to build the Cairo Citadel on the Muḳaṭṭam hills overlooking the capital, Ṣalāḥ al-Dīn's most enduring monument which became the fortified seat of successive governments and dynasties.

In the reign of Sultan al-ʿĀdil Sayf al-Dīn (596-615/1200-18 [*q.v.*]), the Saphadin of western chronicles, a Copt by the name of Ibn al-Miḳāt assumed the administration of the War Office. In the Crusade of Damietta of 1218, the Coptic inhabitants participated in the defence of the city and with their clergy suffered greatly at the hands of the Latins. Again in the Crusade of St. Louis in 1249-50, notable Copts were to be found in the Sultan's camp. A number of Fāṭimid and Ayyūbid sources show that numerous Copts earned some of the highest titles of honour in the state such as *al-Ra'is, Hibat Allāh, al-Amdjad, al-Asʿad, al-Shaykh, Nadjīb al-Dawla, Tādj al-Dawla,* and *Fakhr al-Dawla*. The Church historian Yaʿḳūb Nakhla Rufayla collected as a sample some 30 Coptic names bearing these titles.

Two important processes were in progress since the Arab conquest, the Islamisation of Egypt and the Arabisation of Egypt, and these two processes should not be confused. That there should be a measure of conversion to Islam under early Arab rule was inevitable. The apparent kinship between Coptic monophysitism and Islamic monotheism might have played a role in a still amorphous body of doctrine, but the vexatious *djizya* or poll tax, increasing at a steady rate, left the impecunious Coptic taxpayer only one way to escape, sc. that of Islam. It is known that most caliphs discouraged wholesale conversion, in defence of a depleted inflow of revenue to the treasury. How can we explain, therefore, the eventual numerical superiority of Muslims as against the shrinkage of the Copts in Egypt? E. L. Butcher implausibly ascribed it to the popularity of the monastic life and called it "suicide of a nation". The Muslim social historian, Aly Mazahéri describes this phenomenon as "ethnic exhaustion", and discards the assumption of wholesale conversion. It does not seem that a single, facile answer can be given here.

The Arabisation of Egypt, on the other hand, is a more transparent process. A study of the papyri indicates that at first the Copts conducted the administrative records in Coptic, and that the Arabs, who did not know the native language, accepted their procedures thus. Then the year 86/705 witnessed the issuance of an edict by the governor ʿAbd Allāh b. ʿAbd al-Malik imposing for the first time the use of Arabic in state records. At this point, bilingual papyri begin to appear in an intermediary stage. Meanwhile, the Copts hastened to master the language of the new rulers, but the clerks persisted in the use of bilingual protocols in the papyri. As to the use of Arabic in public life, this must have been a slower process, although we may note the compilation of Coptic grammars and Coptic dictionaries in the 13th century, which is probably to be regarded as an indication to national Coptic efforts to keep the torch of the Coptic language burning amongst those who were fast losing it. Nevertheless, it would be a mistake to assume that Coptic was becoming extinct at that early date. The same century produced eminent Coptic writers such as Ibn al-ʿAssāl [*q.v.*] and other members of his family, who were perfectly conversant with Coptic, Greek and Arabic. As late as 1673, the traveller Vansleb reported that he met the last Copt who really spoke Coptic; and Benoît de Maillet, an 18th century French consul in Egypt, stated that he found whole villages in Upper Egypt whose residents spoke Coptic. In the present century, Werner Vycichl is quoted by the Coptologist William Worrell to have discovered Coptic-speaking communities at Zēniya and other isolated villages in Upper Egypt. Of course, the liturgy is still celebrated today in Bohairic Coptic, together with Arabic, in Coptic churches. The Arabisation of Egypt is an undisputed reality, but the total extinction of the Coptic language is still a debatable problem.

The later Middle Ages brought difficulties for the Coptic communities. The Mamlūks (648-922/1250-1517) who were originally slave soldiers bought by the Ayyūbid sultans, ended by seizing power from them, and they then continued to reinforce their army by more slave purchases. They were therefore men of varied ethnic and religious origins and had nothing in common with the Egyptians except the bond of Islam; and it is doubtful whether any of them was fully aware of the doctrines of their faith or the language of the Coptic people. Internal insecurity and increasing poverty and isolation now began to drive the Coptic populace into desperation. Skilled Copts continued to work in the Muslim administration, but as soon as they rose to wealth and power, the Muslim mob tended to clamour for their dismissal from office and to start a wave of

church destruction. As mob fury became overpowering, the Mamlūk sultans had often to yield to public pressure and unseat the Copts and condone the assaults on their religious foundations. Yet after a short period, confusion usually supervened in the government machinery, and the sultans were constrained to reinstate the Copts in office once more.

On one occasion, a group of exasperated Copts decided to retaliate against Muslim oppression. In 720/1320, a number of Coptic monks from Dayr al-Baghl ("The Monastery of the Mule") south of Cairo, formed a secret pact to use arson against mosques and Muslim quarters in the capital. Once while the city was ablaze, four of these monks were seized carrying naphtha and other incendiary substances. The Sultan ordered them to be burnt and the Copts were again dismissed from office. The infuriated mob continued their destruction of more churches. From 678/1279 to 851/1447, forty-four churches are reported to have been levelled to the ground in Cairo alone. The Patriarch Yohannes X (1363-9) was summoned by the Baḥrī Mamlūk Sultan al-Ashraf Shaʿbān (764-78/1363-76), and he and the archons or elders of the Coptic community were subjected to abject humiliation and confiscation of property, partly to appease the populace and partly to raise funds for waging war against the Cypriots in retaliation for their sack of Alexandria in 766/1365.

Occasional spells of relief for the oppressed Copts came only as a result of foreign intervention from three main sources. The first was from Constantinople, where the Byzantine emperor, himself harassed by the Ottoman Turks, pleaded at the Sultan's court on behalf of the remaining Melkite minority. The second was from Aragon, whose kings were for commercial reasons, usually on good terms with the Mamlūk monarchs, though their intercession was essentially on behalf of the churches in the Holy Land and only incidentally for the Copts. The third and perhaps the most important source of mediation came from Abyssinia, whose Negus had a strong bargaining power on behalf of the Copts in the counter-threat of ill-treatment of the Muslims under his dominion, and in the imaginary menace of deflecting the course of the Nile to the detriment of Egypt.

The harassed Coptic patriarchs also hoped tentatively for an undefined form of assistance from the western world, without jeopardising their delicate position with the sultans. One such glimmer of hope appeared at the time of the Council of Ferrara-Florence (1438-9), which aimed at the union of the Churches of East and West, separated since the Chalcedonian schism in 451. We know that a certain Yuhannes, Abbot of the Coptic Monastery of St. Anthony on the Red Sea, was a signatory to the *Decretum pro Jacobitis* declaring the formal union of the Churches. But the agreement long remained in abeyance until 1586, when Rome sent a delegation to Patriarch Yuhannes XIV (1571-86) in order to discuss the practical application of the union. The Patriarch and a few bishops were agreeable, though the majority of the community remained apprehensive; the sudden death of the Patriarch ended this abortive mission.

By then the Ottoman Turks had been established in Egypt since its conquest by Selīm I in 922/1517. Egypt became a dependent province with a vast empire, and the sultans derived their revenue from a governor, an Ottoman Pasha, whom they invested with the provincial government for brief periods. There was a Turkish garrison headed by a general independent of the governor, while the local administration was left in the hands of the surviving Mamlūk *amīrs*. Tax farming (*iltizām* [*q.v.*]) became the practice and the tax farmers and village headmen were subjected to all sorts of pressures for the payment of excessive dues, not only for the sultan in distant Istanbul, but also for the enrichment of a whole hierarchy of the administration. Within this framework, the Copts worked as clerks and tax collectors mainly in local Mamlūk households. Though they suffered occasional, temporary dismissals from service, they were not goaded by the outbreaks of mob fury as in Mamlūk times. In fact, they suffered, together with the Muslim inhabitants, from the depredations of the Arab nomads who used to descend on villages in the countryside for looting. The land became isolated and its inhabitants sank into lethargy and ignorance until the French Expedition of 1798-1801 arrived under Napoleon and opened Egypt to western influences.

Perhaps the most significant Coptic document after the rout of the Mamlūks and the settlement of the French was a petition submitted to Napoleon by a notable Copt, Girgis al-Djawharī, imploring him to lift Coptic disabilities, in keeping with the principles of liberty, equality and fraternity proclaimed by the French Revolution. However, the French, whose leaders feigned conversion to Islam in order to court favour with the Muslim majority, decided to overlook his plea and thus avoided the semblance of partisanship. Nevertheless, they did not hesitate to select the best candidates for the administration irrespective of religious considerations. Hence the same Girgis al-Djawharī became the head of the taxation department. They also nominated a commission of twelve to administer local justice. Six of these were Copts and the chairmanship fell to Muʿallim Malaṭī, a Copt about whom we possess no documentary evidence. But the real hero in Coptic annals emerged in the personality of Muʿallim Yaʿḳūb Ḥanna (1745-1801), whose meteoric career began in the predominantly Coptic city of Asyūṭ, in Upper Egypt.

Originally a humble civil servant under Sulaymān Bey, a Mamlūk *amīr* in charge of Asyūṭ province, he learned the equestrian art and the rudiments of Mamlūk warfare from his master and even participated in Mamlūk hostilities against the Turks. Later, when the French attempted to conquer Upper Egypt under Desaix, he played a prominent role in saving the French expedition from collapse. Then after the disastrous naval battle of Abūḳīr, which gave Nelson and the British command of the sea, Napoleon left and Kléber succeeded him with an empty treasury, while Turkish infiltrators played upon religious sentiment and incited the Muslim population of Cairo to rebellion. It was in these precarious circumstances that Yaʿḳūb, with the approval of the French authorities, recruited a Coptic legion of 2,000 Coptic youths to be trained by professional officers under his own command, first as Colonel, then in 1801 as General.

Still more spectacular in Yaʿḳūb's career was his dream of Egyptian independence from both the Turks and the Mamlūks. The documents pertaining to this chapter in his biography were discovered and brought to light by an eminent Muslim historian, the late Professor Shafīḳ Ghurbāl. The departing French made the stipulation that any native desirous to leave with them should be permitted to do so. Thus the General, together with a few companions, left Egypt with the French on the British ship *Pallas*, in the hope of convincing the rulers of Europe

that the only solution of the Egyptian question was the independence of Egypt. Yaʿḳūb died on the high seas on 16 August 1801 leaving the fulfilment of his mission to his accompanying delegation. Apart from his secret deliberations with the captain of the *Pallas* Joseph Edmonds, preserved in the memoirs of his interpreter Lascaris, a Knight of the Order of Malta, his correspondence was communicated or signed by proxy and addressed to Bonaparte and his foreign secretary Talleyrand (23 September 1801) as well as to the British Lord of the Admiralty, Earl St. Vincent (4 October 1801).

Curiously, the man destined to realise Yaʿḳūb's vision was Muḥammad ʿAlī (1805-49), the Macedonian soldier who came to Egypt as the head of a Turkish force and succeeded in founding the dynasty in Egypt which did not end till 1953. Under the new régime, the enfranchisement of the Copts went a long way. With increasing security and acceptance, it became less necessary for them to congregate in fortified quarters for self-defence, and they began to scatter all over the big cities side-by-side with their Muslim compatriots. They even took courage to fight for the removal of a few remaining disabilities in the Coptic Congress at Asyūṭ in 1911, clashing with a countermovement in the Muslim Congress in Alexandria. Both, however, were confined to a war of words and were discouraged by the Khedive ʿAbbās Ḥilmī (1892-1914); eight years later both sides were engaged within the Wafd Party in the struggle against the British protectorate over their common homeland. The only cases of violence in contemporary history have consisted of localised incidents of arson against churches by the Muslim Brotherhood [see AL-IKHWĀN AL-MUSLIMŪN], whose organization was eventually suppressed by Djamal (Gamāl) ʿAbd al-Nāṣir [*q.v.* in Suppl.] in 1966.

In recapitulating the story of the status of the liberated Coptic community in modern times, we should not forget two 19th century movements. The first was an educational and cultural one sponsored by the Patriarch Cyril IV (1854-61), known as the Father of Coptic Reform. He founded public schools including the first girls' school in Egypt, and imported a printing press, the second in the country after the Būlāḳ press. On the international scene, he carried out with success a conciliatory embassy in 1856-8 with the Emperor of Ethiopia on behalf of the Khedive Saʿīd (1854-63). But he did not live to realise his grand dream of an oecumenical union with the Greek Church, the Russian Church and the Anglican Church; it is said that this enterprise disturbed the Muslim authorities and hastened the visionary Patriarch to his grave. The second movement was a natural corollary to the first, for western education created a Coptic élite who strove in the pursuit of establishing a more democratic system of government in community affairs and in the management of church property. This met with staunch resistance in the clerical conservatism of the age of Cyril V (1874-1927), and the project of a Community Council (*Madjlis Millī*) has been in abeyance ever since.

Within the framework of the Islamic legal structure, the Copts made several gains of capital importance. The abolition of the *djizya* came to pass in 1855 during Saʿīd's reign, and this was coupled with the acceptance of the Copts into military service. At his accession, the Khedive Tawfīḳ Pasha (1879-92) publicly proclaimed the principle of equality of all Egyptians in every way, irrespective of their ethnic origin or religion; this was later formalised in a decree of 21 July 1913 and again in the Constitution of 1922.

In a period of more than thirteen centuries of Islamic rule, it seems that the density of population of Egypt has varied from time to time. At the Arab conquest, judging from the papyrus tax returns, the Copts must have been at least 12 millions. Owing to many hardships, occasional failure of Nile floods and diminution of cultivable soil, recurrent plagues, conversions to Islam and flight to the desert monasteries, we must assume the existence of a downward trend in the number of Copts throughout the Middle Ages and Ottoman Turkish times. We note that their number sank to approximately one million souls. However, the latest three official itemised censuses of the population reveal the following figures:

Year	*Total population*	*Muslims*	*Copts*	*Jews*	*Other religions*
1947	18,966,767	17,397,946	1,501,635	65,639	1,547
1960	25,984,101	24,068,252	1,905,182	8,561	2,106
1966	29,943,810	27,919,528	2,018,305	2,484	3,493

It is difficult to accept the above figures unhesitatingly. This is largely due to the fact that Coptic villagers have always shown a reticence in divulging the real size of their families. The newly-founded Census Department in the Institute of Coptic Studies in Cairo has been working with the local country priests in assessing the Coptic population; suggestions of a Coptic population from four to six millions in the year 1974 have been put forward.

The basic causes of the survival of the Copts are both internal and external. Internally, the Copts clung to their Church as a cementing element in their private life. Coptic ethnicity and faith became a profound faith, a way of life, and an intangible doctrine of ethnic consciousness. Externally, it is fair to admit that Islam shares in the credit of this survival. Under the aegis of Islamic dynasties, there came dark times when the violence of the majority could well have exterminated minority groups with the concurrence of the rulers; yet this did not happen, despite such difficult periods as the reign of the Fāṭimid Caliph al-Ḥākim in the 5th/11th century.

Bibliography: All chronicles and source material on mediaeval Egypt contain many references to the Copts; see especially Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1270; Suyūṭī, *Ḥusn al-muḥāḍara fī akhbār Miṣr wa 'l-Ḳāhira*, Cairo 1327; and ʿAlī Bāshā Mubārak, *al-Khiṭaṭ al-Tawfīḳiyya*, Būlāḳ 1304-6. Equally, bibliographies of Egypt under Islam cannot be overlooked. On the Copts proper, see W. Kammerer, *A Coptic bibliography*, compiled in collaboration with Elinor Husselman and Luise Shier, Ann Arbor 1950; and the monumental work of G. Graf, *Geschichte der christlichen arabischen Literatur*, 5 vols., Vatican City 1953. Some of the books cited below also contain additional detailed bibliographical material on special subjects.

1. *Primary sources*. Perhaps the most important primary source is Sawīris b. al-Muḳaffaʿ, *History of the Patriarchs of the Egyptian Church*, ed. C. F. Seybold (to 567 A.D.), and T. Evetts (to 849), in the *Patrologia Orientalis*. The remainder to 1102 was jointly edited with an English tr. by Yassa ʿAbd el-Masīḥ, O. E. H. Burmester and A. S. Atiya in 4 parts in the publications of the *Society of Coptic Archaeology*, Cairo 1943-59. An older chronicle,

written 50 years after the Arab Conquest, is indispensable, John of Nikion's *Chronicle*, ed. H. Zotenberg, Paris 1833. See also A. Grohmann, *Arabic papyri in the Egyptian Library*, 6 vols., Cairo 1934-62; B. T. Evetts, *The churches and monasteries of Egypt*, by Abū Ṣāliḥ al-Armanī, Oxford 1834-5 (a work probably written by Djirdjis b. al-Makīn, not Abū Ṣāliḥ, who must have only owned the manuscript); F. Wüstenfeld, *Macrizi's Geschichte der Kopten*, Göttingen 1846; J. M. Vansleb, *Histoire de l'église d'Alexandrie*, Paris 1677; *ibid.*, *Voyage in Egypt in 1672-73*. London 1678; Renaudot, *Historia Patriarcharum Alexandrinorum*, Paris 1713 (old but still useful); the Expédition d'Égypte contains records on Copts in the 18th century.

2. *Secondary sources in European languages*: E. Amélineau, *Géographie de l'Égypte à l'époque copte*, Paris 1893; A. S. Atiya, *History of eastern Christianity*, London 1967, and Notre Dame, Ind. 1968; E. L. Butcher, *Story of the Church of Egypt*, London 1897; A. J. Butler, *The Arab conquest of Egypt*, Oxford 1902; G. Douin, *L'Égypte indépendante, projet de 1802 A.D.*, Cairo 1924; A. Fortescue, *The lesser Eastern churches*, London 1913; G. Homsy, *Le général Jacob et l'Expédition de Bonaparte en Égypte*, Marseille 1921; R. Janin, *Les églises orientales et les rites orientaux*, Paris 1926; R. K. Kidd, *The churches of Eastern Christendom*, London 1967; Kyriakos Mikhail, *Copts and Moslems under British control*, London 1911; S. H. Leeder, *Modern sons of the Pharaohs*, New York 1910; O. F. A. Meinardus, *Christian Egypt, ancient and modern*, Cairo 1965; M. Roncaglia, *Histoire de l'église copte*, Beirut 1966- ; R. Rondot, *Les Chrétiens d'Orient*, Paris 1955; B. Spuler, *Die morgenländischen Kirchen*, Handb. der Orientalistik, Leiden-Cologne 1961; R. Strothmann, *Die koptische Kirche in der Neuzeit*, Tübingen 1961; G. Vries, *Oriente cristiano iere e oggi*, Rome 1950; E. Wakin, *A lonely minority, the modern history of Egypt's Copts, the challenge of survival for four million Christians*, New York 1963; Sir Thomas Arnold, *The preaching of Islam*, London 1896; Aly Mazahéri, *La vie quotidienne des Musulmans au Moyen Age*, Paris 1951; Shafīḳ Ghurbāl, *Al-General Yaʿḳūb wa 'l-Fāris Lascaris*, Cairo 1932; Jacques Tagher, *Aḳbāṭ wa-Muslimūn*, Cairo 1951; Tewfik Iscarous, *Nawābigh al-Aḳbāṭ*, Cairo 1910-13; Yaʿḳūb Nakhla Rufayla, *Taʾrīkh al-Umma al-Ḳibṭiyya*, Cairo 1898; Yūsuf Minḳarious, *Taʾrīkh al-Umma al-Ḳibṭiyya*, Cairo 1913 (Coptic history from 1893 to 1912, including documents).

(A. S. Atiya)

ḲIBṬĪ [see ČINGANE].

ḲIDAM (A.) in the technical vocabulary of philosophy and theology denotes eternity. It must be distinguished from *azal* and from *abad* [*q.v.*]. Al-Tahānawī writes: "*Azal* is the constant duration of existence in the past, as *abad* is its constant duration in the future." As opposed to temporal origin (*ḥudūth*), it is the fact of having been preceded by nothing else (*al-lā masbūḳiyya bi 'l-ghayr*): *azal* implies the negation of a first beginning (*nafy al-awwaliyya*); it is therefore a case of eternity *a parte ante*, and *abad* is eternity *a parte post*. *Azal* and *abad* are essentially identical in God (*inna abaduhu ʿayn azalihi*), for they mean that the two relative extremities which are the beginning and the end are both "cut off" from God (*inḳiṭāʿ al-ṭarafayn al-iḍāfiyyayn ʿanhu*). For Him they are negative attributes (cf. Fakhr al-Dīn al-Rāzī, commentary on the Most Beautiful Names of God, sūra VII, 180; *azalī* and *ḳadīm* are classed among the real and negative attributes. First, *awwal* is regarded as real, accompanied by relationship and negation (*ṣifa ḥaḳīḳiyya maʿa 'l-iḍāfa wa 'l-salb*). He is eternal, in the sense of *azalī*, that which is not preceded by nothingness, that which is in existence before any rational conception of a first beginning (*ḳabla taʿaḳḳul al-awwaliyya*), and in the sense of *abadī*, that which persists beyond any rational conception of an ultimate term (*baʿda taʿaḳḳul al-ākhiriyya*). Through these various definitions there come to light two conceptions of pre-eternity and post-eternity. The first is that of endless duration (*lā nihāyata lahu*) which extends either towards the past, or towards the future (in which case it is also known as *al-la-yāzāl*, that which does not cease to be). This scheme (cf. below) raises many difficulties in the solution of the problem of the creation of the world, since it introduces the concept of an infinite time before the moment of this creation. The second is more philosophical: the two eternities are nothing more than negative conceptions, to which contemplative thought has recourse in order to grasp the idea of eternity in relation to time, but which do not correspond to the reality of an infinite time in the two senses: they are relative to the mode of thought belonging to the human spirit, which as al-Rāzī points out (cf. below), cannot conceive of itself outside time. The reality which is hidden behind these imaginary concepts is that of God and of His subsistence through His essence (*baḳāʾuhu bi-dhātihi*), that is, of a being totally unaffected by time and temporality.

So what does *ḳidam* denote? Etymologically, the term should be associated with *azal* since it is a root expressing the idea of anteriority. The *LA* says of it exactly the same as al-Tahānawī says of *azal*: "It is the contrary of temporal origin (*naḳīḍ al-ḥudūth*)". Ibn Manẓūr also explains it through the roots *ʿataḳa* and *sabaḳa* ("to precede in a race"). It should in fact be noted that the idea of anteriorness in time or space is linked to that of superior worth, as would appear from the substantive *ḳadam* and from its Ḳurʾānic use: *ḳadam ṣidḳ* (X, 2) which al-Zamakhsharī interprets as *sabīḳa wa-faḍl wa-manzila rafīʿa*, a priority, a higher abode that God is preparing for the Believers. Another explanation is that in advance a gift has been prepared for them on the part of God (*ḳad sabaḳa lahum ʿind Allāh khayr*) which unites the two ideas of anteriorness and of the excellence of the divine gifts. It may be noted further, with regard to *ḳadam* ("step", whence the fact of being a step ahead of the others, of precedence) that the *LA*, as well as al-Ḳurṭubī in his commentary, quotes verses of Dhu 'l-Rumma [*q.v.*] where the expression of Bedouin mentality may be seen: *ḳadam* is associated there with high nobility and acts of splendour (*mafākhir*). Since the qualities of Bedouin ethic were in general transferred by Islam to God, it may reasonably be supposed that the root *Ḳ-D-M* served not only to connote the anteriorness of God, but also His ontological pre-eminence over all things, while it must be made clear that this is not an anteriority and a pre-eminence relative to others, as in the case of *mufākhara* which implies rivalry, but qualities that are transcendental and absolute. It is in this sense that the *LA* says that God is *al-Muḳaddim*, because he precedes all things (*yuḳaddim al-ashyāʾ*) and He puts them in their place (*yaḍaʿuhā fī mawāḍiʿihā*). But the terms *ḳidam* and *ḳadīm* in the sense of eternity and the

eternal, are technical creations (*iṣṭilāḥāt*); they are not Ḳur'ānic. The *ḳāḍī* ʿAbd al-Djabbār, in the *Sharḥ*, writes that according to the principles of the language *ḳadīm* is that which has existed for a longer time than something else (*mā taḳādama wudjūdhuhu*) and he quotes the verse (XXXVI, 39) where God compares the moon to an old palm (*ka 'l-ʿurdjūn al-ḳadīm*). As for the word *ḳidam*, it does not occur in the Ḳur'ān. The revealed Book conveys the idea of divine eternity through that of transcendence. God is al-Mutaʿālī (XIII, 9), and this name, according to al-Rāzī, belongs to him on the grounds that he is utterly removed (*munazzah*) in His essence, in His attributes and His actions from all that may not be asserted of Him. In consequence, He is outside time, Eternal, and it is thus that the term *ḳadīm*, taken absolutely (*al-Ḳadīm*) denotes God Himself.

Al-Tāhānawī also makes *ḳidam* the opposite of *ḥudūth* [*q.v.*]. These two terms denote attributes of existence and are studied together. Essence (*māhiyya*) is qualified only in regard to the qualification of the corresponding existence. They may be applied to nothingness, according to whether it is preceded by existence or not; thus one may speak of an eternal nothingness or nothingness resulting from obliteration. *Ḳidam* and *ḥudūth* may be taken according to reality (*ḥaḳīḳiyyan*) or according to relation (*iḍāfiyyan*).

1. Real eternity consists in the fact of not being preceded by another thing according to an anteriority which is essential and not temporal. This is what is known as essential eternity (*ḳidam dhātī*), which consists in the fact of needing absolutely nothing other than the self in order to exist. This implies the necessity of the being. The Eternal in this sense is the necessary Being. On the contrary, origin (*ḥudūth*) is the fact of having been preceded by something in existence according to an essential anteriority, which in this case may or may not also be a temporal anteriority (for example, the world is essentially the result of an origin, it is *muḥdath*, but nothing precedes its time; man is also essentially engendered, but his parents existed in the time previous to his birth). In a certain sense, time is the result of an origin (*ḥādith*), because if it has been preceded by nothing which could have existed before it in a temporal way, an absurd hypothesis, it does not have the absolute existence of necessary Being and at every instant it renews itself. It is possible to understand in particular by eternity the fact of not being preceded by the non-existence of a temporal anteriority: this will then be called temporal eternity (*ḳidam zamānī*), and the eternal in terms of time is therefore "that of which the time of existence has no first beginning". Similarly, one may talk of a temporal origin (*ḥudūth zamānī*) where the existence of a being is preceded by non-existence in time. Thus we define that which is the fruit of a temporal origin (*al-ḥādith al-zamānī*) as that which is preceded in time by its non-existence, according to the well-known formula: *lam yakun, thumma kāna* ("it was not, then it happened"). In this sense, time is not *ḥādith* because nothing can pre-exist itself.

2. As for relative *ḳidam*, it implies that the past time of the existence of a being is greater than that of the existence of another. But this sense cannot be conveyed by the word eternity. It concerns the antiquity of a being compared to the novelty of another, and *ḳadīm* means ancient, old, like *ʿatīḳ*. Conversely, *ḥudūth* will be novelty, *ḥādith*, that which is new.

Al-Tāhānawī adds that essential eternity is more particular (*akhaṣṣ*) than temporal eternity, which in its turn is more particular than relative eternity or antiquity. Thus necessary Being, which is *ḳadīm dhātī*, is also eternal according to a temporal point of view, since it is preceded neither by nothingness nor by that which is other than itself. But the converse is not true: thus the attributes of eternal Being, which are not preceded by nothingness since they are concomitants of its eternal essence, are not eternal in themselves and so do not have *ḳidam dhātī*. The same could be said of the world which is *ḳadīm zamānī* according to the *falāsifa*, but which is not however *ḳadīm dhātī*, because it depends on its cause, which is other than itself. As for *ḳidam iḍāfī*, it is not co-extensive with *ḳidam zamānī*. In fact, the past time of an existence may be greater compared with that which subsequently occurs for the first time. This applies to the father who is *ḳadīm* in relation to his son, but who is not thereby *ḳadīm zamānī*, because he is born of parents. So if we compare the world to a man, both of these have a history made up of successive events. In relation to one of these events, the past of the world and of this man extend over a time greater than that of the new happening. Each of them will therefore be called *ḳadīm* in relation to it. They are both *ḳadīm iḍāfī*. But the world is not only *ḳadīm* in this context: it is so in itself, because there has never been a time where it did not exist. Man is only *ḳadīm* in relation, for example, to the event of his paternity: doubtless he preceded it, but precisely according to an antecedence which is only relative to it. On the contrary, in the context of origins, it is *ḥudūth iḍāfī* which is the most particular; then comes *ḥudūth zamānī* and finally *ḥudūth dhātī*. This is because everything whose existence in the past covers a lesser time-span (*aḳall*: that is to say *ḥādith iḍāfī*) is preceded by nothingness, and is therefore *ḥādith zamānī*. *A fortiori*, it is *ḥādith dhātī*. This analysis has clearly been influenced by the thought of philosophers who tend to associate eternity with the ontological necessity of the *wādjib al-wudjūd* and *ḥudūth* with continuity. Theologians simply understand by *ḳadīm* that which is not preceded by nothingness, or in the vocabulary of al-Tāhānawī, *ḳadīm zamānī*.

To what does the notion of eternity apply? *Ḳidam* relates first to the essence of God. On this point all the philosophers and religious scholars are in agreement. On the question of the eternity of the attributes of God, there are differences of opinion among the *mutakallimūn*. God is eternal because He is not subject to an origin, and being, cannot be other than *muḥdath* or *ḳadīm*. So if God were subject to origin, in order to exist He would need another being to create him, a *muḥdith*. But the question would apply to the latter too and so on to infinity. So one must affirm the existence of God as eternal Creator, as it is expressed by ʿAbd al-Djabbār (*al-Ṣāniʿ al-ḳadīm*). This argument, which bears a philosophical mark, is not the exclusive property of the Muʿtazilīs. It is found in the same or similar terms in the *Kitāb al-Tamhīd* of al-Bāḳillānī, in the chapter where he shows that the agent which produces beings subject to origin (*fāʿil al-muḥdathāt*) cannot itself be the fruit of an origin. It is found in the *Kitāb al-Irshād* of al-Djuwaynī, where he proves that the existence of the Eternal "does not inaugurate itself" (*wudjūd al-ḳadīm ghayr muftatiḥ*); in the same place he gives an interesting and precise observation on the concept of an existence that has no beginning: does this not imply an infinite succession of moments? He replies

that the moment of a thing is defined by the fact that it is contemporary with other things. Now God is not contemporary with any other thing. So the eternity of God is implied by his uniqueness.

The Ashʿarī school admits the eternity of the divine attributes. On the contrary, the Muʿtazilīs express the major principle that "God has no co-eternal", according to the formula of ʿAbd al-Djabbār in the *Sharḥ* (*lā ḳadīma maʿ Allāh*). Nevertheless, they recognise as eternal four attributes: existence, life, knowledge and power. In fact, according to al-Djubbāʾī and the majority of the learned men of the school, these four attributes necessarily belong to God through his essence, therefore they are also eternal. His knowledge is His being in acts of knowledge (*kawnuhu ʿālim^an*) and the same applies to the other *ṣifāt*. Or furthermore, He knows through a knowledge which is Himself (Abu 'l-Hudhayl), etc. They do not say that He possesses eternal knowledge, but that he has not ceased to be in acts of knowledge (*lam yazal ʿālim^an*), etc. ʿAbbād b. Sulaymān refused to say that God possesses knowledge, any more than He possesses eternity (*ḳidam*); but it may be said that He is eternal (*ḳadīm*). Contrariwise, Ibn Kullāb thought that God is in acts of knowledge through a knowledge belonging to Him, and so on. To say that He is eternal, is to assert that He has not ceased to be in His Names and Attributes (*lam yazal bi-asmāʾihi wa-ṣifātihi*; *Maḳālāt*). The essence of God alone is eternal, not in the sense that it is stripped of all attributes, but on the contrary, clad in all that belong to God. Some of his disciples claimed that God is eternal through an eternity (*ḳadīm bi-ḳidam*), others that He is eternal, but not through an eternity (*ḳadīm lā bi-ḳidam*). We begin to deal here with pure subtleties of language, as in the distinction between the two expressions "God has not ceased to be" and "God has not ceased to be through the eternal attribute of eternity." A passage from the *Maḳālāt* deserves notice, however; "The supporters of the theory of attributes (*aṣḥāb al-ṣifāt*) differ in opinion concerning the attributes of the Creator: are they eternal or have they had an origin? Some say that they are eternal. Others declare: "If we say that the Creator is eternal in His attributes, we do not need to say that His attributes are eternal; so we say neither that they are eternal, nor that they have had an origin." According to al-Tāhānawī, Abū Hāshim added a fifth eternal attribute to the four abovementioned; holiness (*al-ilāhiyya*), which is distinct from essence. This is reminiscent of the *divinitas* of the 12th century theologian of Chartres, Gilbert de la Porrée. It is no doubt to this thesis that ʿAbd al-Djabbār alludes when he writes that, according to Abū Hāshim, the attributes belong to God necessarily, and by virtue of that to which he confirms in his essence (*li-mā Huwa ʿalayhi fī dhātihi*). So it is through divinity that these attributes are eternal. For Sulaymān b. Djarīr and other Ṣifātiyya, the attributes belong to God necessarily through "notions (*li-maʿānī*) which can be qualified neither by existence nor non-existence, nor by origin nor eternity" (*Sharḥ*). It is the concept of notional attribute (*ṣifa maʿnawiyya*), a term that has been translated variously as "essential", "qualitative", or even "entitative". It is nothing other than the qualification made necessary by the notion that one has of God. *Maʿnā* is always a notion signifying *cum fundamento in re*. The attribute *maʿnawī* therefore is not essence; neither is it a "thing" in God. It is that which the reality of God demands that one says of God. But, here too, that which is eternal is God and his essence, and the *ṣifa maʿnawiyya* escapes all ontological alternatives. Nevertheless, according to ʿAbd al-Djabbār, certain disciples of Ibn Kullāb reified the *maʿānī* and considered them to be eternal; for them the four aforementioned attributes are fitting to God by means of the *maʿānī azaliyya*, which may be translated by "eternal entities". (We may note with ʿAbd al-Djabbār that here *azalī* has the sense of *ḳadīm*, as often happens.) The *Ḳāḍī* points out however that these Kullābiyya did not dare employ this formula in its absolute sense, so as not to run counter to the unanimity of the Muslims over the denial of co-eternal attributes.

From the same root as *ḳidam* is the 5th form *maṣdar*, *taḳaddum*, which occurs in a very interesting commentary by Rāzī on Ḳurʾān, LVII, 3: "He is First and Last". The word *taḳaddum* (antecedence) has several meanings: (1) *al-taḳaddum bi 'l-taʾthīr* where the antecedent exercises an influence over the consequent, for example, the movement of the finger entails that of the ring; (2) *al-taḳaddum bi 'l-ḥādja*, based on the need which the consequent has of the antecedent; thus the number one is anterior to the number two without being its cause; (3) *al-taḳaddum bi 'l-sharaf*, according to worth; thus Abū Bakr has precedence over ʿUmar; (4) *al-taḳaddum bi 'l-martaba*, according to a hierarchical order, either sensible, such as the place of the *imām* in prayers before the faithful who pray; or rational, such as the place of the genus in relation to the species; (5) *al-taḳaddum bi 'l-zamān*, temporal anteriority or *ḳabliyya*; to which al-Rāzī adds (6) "But I think that there is a sixth division which is *like* the anteriority of certain parts of time in relation to others; this anteriority is not temporal, otherwise it would be necessary for time to develop another time, to the point of infinity. Thus the present would be within another present which would be within a third present... and all these presents would be present at the present moment (*kulluhā ḥāḍira fī hādhā 'l-ān*). But the ensemble of these moments would be posterior to the ensemble of past moments, to the extent that there would be another time for the ensemble of times (*madjmūʿ al-azmina*), which is absurd, for, being a time, it would have to enter into the ensemble of times. Consequently, it would be both within and outside this ensemble, which is impossible. "Furthermore, this anteriority of parts of time in relation to one another is not an anteriority according to causality, nor according to need, otherwise they would co-exist; evidently it is not according to worth, nor according to space. It is therefore a sixth kind of *taḳaddum*. Now the Ḳurʾān shows that God is First (Primus, not prior) for all that is not Him, and al-Rāzī shows here that this qualification only fits the necessary, first and unique Being, for all that is not Him is possible (*mumkin*) and the possible exists only through origin: it is *muḥdath*. But what is the nature of this divine anteriority? It is not owed to an act of influence, for the agent and the patient are relative one to another and co-existent. It is not a priority founded on need, since the precedence here is absolute. It is not a precedence owed to worth, for it cannot be said that God is more worthy or more noble (*ashraf*) than possible, since He is incomparable (although in one sense, necessary existence implies a fulness of being besides which the existence of the possible is deficient). As for anteriorities according to time or space, they have no meaning for God, because time and space are possibles which depend on an origin.

God, being anterior to the totality of times, is not anterior according to time, otherwise the divine anteriority would have to enter into the ensemble of times, since it would be a time; but it would have to be exterior to it, because it would contain them all and that which contains is other than what is contained. This would be an absurdity. Apparently al-Rāzī is proposing, in so far as concerns God, a sixth kind of anteriority which is not without analogies to the anteriorities of parts of time in relation to one another. However, these are not identical and that is why al-Rāzī, when introducing his sixth division, does not say it is, but only that it is *like* ... In conclusion, we know that God is First in a universal manner (*ʿalā sabīl al-idjmāl*), not in a detailed manner (*ʿalā sabīl al-tafṣīl*). As for grasping the reality of this priority (*awwaliyya*), human intelligences have not the means, since they cannot escape temporal forms. We may note that a similar division of *taḳaddum* is to be found in the *Maḳāṣid al-falāsifa* of al-Ghazālī, except that the *taḳaddum bi 'l-ḥādja* is called *taḳaddum bi 'l-ṭabʿ*, in a case where the antecedent is not suppressed by the suppression of the consequent, but the consequent is suppressed by the suppression of the antecedent (as with a series of numbers), and except that *taḳaddum bi 'l-taʾthīr* bears the name *taḳaddum bi 'l-dhāt* (in the relation of cause to effect).

The doctrine of the eternity of the world [see ABAD] was upheld in Islam only by the *falāsifa*, directly following the systems of thought of the Greek philosophers: Plato, Aristotle, Philo of Alexandria, Proclus, and John Philoponos the Grammarian. The two *Tahāfut* of al-Ghazālī and of Ibn Rushd deal with it in a detailed fashion. The fundamental argument is that it is impossible to conceive a temporal beginning to the world, a moment of time in which it was created, in such a way that an empty time preceded the creation. In fact, if, as Aristotle maintains, time is the numerical measurement of movement (a theory taken up by the *falāsifa*, see ḤARAKA), movement demanding a mobile thing, moving bodies, the physical world and in particular the stars, then it is impossible for time to have existed before the existence of the world. Furthermore, if it existed, it would be eternal or created. But eternity does not conform with time that is changing and elapsing (*sayalān*): each of its parts is new in relation to the preceding part, and time renews itself (*yatadjaddad*) in every one of its instants. If time is *ḥādith* in each of its parts, it has all the more reason for being so in its totality. So it is created: but then the problem arises: is it created in time and did a time exist before time? That is absurd. This is the argument as taken on the part of the world. On the part of God, given a temporal creation, what did the Creator do before creating. Was He inactive? That is not his nature and it is written (II, 255) that "Neither weariness nor sleep take hold of Him". Besides, if He was first inactive, then active, a change would have taken place in Him, which is inadmissible. What would have induced Him to create at the moment when He undertook His creation? A *muradjdjiḥ*, something which could have turned the scales in the sense of the act of creation? But this *muradjdjiḥ* is eternal or created. If it is eternal, the world must also be eternal, unless some other thing could prevent this *muradjdjiḥ* from acting; this is known as *tark al-muradjdjiḥ*. This *tark* in its turn will be created or uncreated. If it is eternal, there must have been, for creation to have taken place, the intervention of a *tark tark al-muradjdjiḥ*, and so on. If now the *muradjdjiḥ* is created, the question applies to it as to the world.

For their part, the theologians who believe in the creation of the world in time object on the grounds that if the world is eternal, it has no beginning, it has never ceased to exist and consequently it has existed for an infinite period of time. Now, according to an Aristotelian principle, it is impossible to traverse an infinite time. If there is an infinity of instants to traverse in order to arrive at the present instant that exists, it is impossible to arrive there and it does not exist. This is a contradiction. The same reasoning is made in considering the infinite chain of causes: the effect that exists at present could not possibly exist. The difficulty arises from the assimilation of eternity to an infinite time. But to say that the world is eternal is to affirm that while remaining in the interior of the world and of the time which is linked to the world, one will never find a moment which could be its first beginning. One will need to go back indefinitely, but not to infinity: in other words, we are dealing here with an indefinite, or in the language of Aristotle, with an infinity in power, not an infinity in action. In short, the objection supposes that the expression "not having a beginning in time" means "having a beginning in infinite time." Besides, an infinity may be traversed if it is contained; between two points on a line, an infinite number of points is traversed. Ibn Sīnā seems to have held this view with regard to the problem of the first cause, analogous to the problem of the first beginning. If one considers the ensemble (*djumla*) of causes within this world, it is clear that each one of them is at once cause and effect. Therefore, one cannot insert into this ensemble a first cause which would be without cause. "Every ensemble of which each unit is an effect caused demands a cause exterior to these units." In such a hypothesis of a causal chain "every series composed of causes and effects, whether finite or infinite, shows itself, if it contains within itself only caused effects, to need a cause that is exterior to it, but is definitely in continuity with it, as with a limit (*tattaṣilu bihā ṭarafan*)". If the components of this ensemble are infinite, we are then dealing with a limited infinite ensemble. That is to say, that in the search for the first cause, it will be seen to stand out as a limit to the infinite which thought can never reach and towards which it strives. But its action does not need to traverse the infinite discontinuity of causes and effects in order to act *hic et nunc*, for, as Ibn Sīnā points out "every cause of an ensemble which is not one of the units of that ensemble is in the first place cause of these units and in consequence cause of the ensemble." Such is one of Ibn Sīnā's points of view on this question, according to the *Ishārāt*. Another objection to the theory of the eternity of the world is based on astronomy. We have an example of it in the *Fiṣal* of Ibn Ḥazm. Having declared that to an infinite time one can add nothing, and having thus shown that the infinity of centuries to come adds nothing to the infinity of centuries passed, Ibn Ḥazm writes: "In its circular orbit, Saturn makes one revolution in thirty years, and it has never ceased to turn. The greatest sphere, in these thirty years, makes approximately 11,000 revolutions, and it has never ceased to turn. Now beyond any doubt, 11,000 revolutions is greater than one alone. Consequently, that which is infinite will be approximately 11,000 times greater than that which is infinite, which is absurd." This is a

crucial variation on the same theme: the assimilation of eternity to an infinite time. The reasoning of Ibn Ḥazm is ingenious, but it ignores the powers of the infinite.

And what of the end of the world? Plato apart, the philosophers held the view that that which has a beginning has an end, and correspondingly that which has no beginning has no end. From a creationist perspective, one could, however, admit that God will not destroy that which He has created, in such a way that the world could have been created, but eternal *a parte post*. For the philosophers, the universe cannot perish, but a part of it may disappear. For the theologians who believe in the end of the world, there remain Paradise and Hell which are eternal in the sense of *abadī*; in fact, it is written that the Chosen and the Damned shall dwell there eternally (*hum fīhā khālidūn*, as the Ḳurʾān says in a number of places). But on the basis of the verse where God describes Himself as the Last, Djahm b. Ṣafwān supposed that Paradise and Hell shall also have an end, and he found a confirmation of his theory in verses 107 and 108 of Sūra XI, "To dwell there eternally as long as the heavens and the earth remain". Thus God will find Himself as absolutely alone in post-eternity as he was in pre-eternity.

(R. ARNALDEZ)

ḲIFṬ, ḲUFṬ, ḲAFṬ, ancient Coptos, a small town of Upper Egypt situated where the Nile approaches its closest to the Red Sea (some 40 km. north of the ruins of Thebes, and about 2 km. to the east of the river). In Pharaonic times it was connected with the exploitation of the minerals in the hills between the Nile and Red Sea and with trade through the eastern part of Egypt, and enjoyed its greatest florescence in the Greek and Roman periods. Strabo describes the organisation of traffic up the Nile to Coptos, then by caravan across the desert to the Red Sea, and calls it a "town inhabited by the Egyptians and the Arabs together". In fact, it was a centre of attraction for the peoples of the eastern desert coming to trade there, above all, for the Bedja [*q.v.*], who doubtless received from there their Christianity; a bishop of the Bedja resided at Coptos-Ḳifṭ. It formed the centre of a pagarchy, then of a *kūra*, but then the position of Ḳifṭ as a starting-point for tracks to the Red Sea (in 132/750 some members of the Umayyad family fled there temporarily, probably with the intention of escaping) lost importance when the mainstream of oriental trade started using the Persian Gulf instead.

The tribes of the Nile-Red Sea deserts started attacking the Nile valley; Ḳifṭ was plundered with impunity in 204/819 by the Bedja, who were still Christian, and not till 212/828 was a rampart constructed to protect the settlement. In the first half of the 4th/10th century, al-Masʿūdī wrote that Ḳūṣ was more important than Ḳifṭ, whose lapse into disfavour he connects with the distance of the Nile channel from the town. In fact, the skilful traders of Ḳūṣ had been able to benefit by the river, the only commercial axis still flourishing, because of the commerce with Nubia, whilst the tracks were all deserted; when they were utilised once more, with the revival of oriental trade under the Fāṭimids in the 5th/11th century, Ḳifṭ revived, but by then Ḳūṣ had assumed the first place, by now a provincial capital. Ḳifṭ nevertheless acquired a numerous, mixed population, especially as relations with the Ḥidjāz had over a long period led to the settlement there of ʿAlid families. It was no doubt their influence which explains the considerable expansion there of Shīʿism and its fidelity to the Fāṭimids after Ṣalāḥ al-Dīn's assumption of power; a conspiracy, leading to a revolt in 572/1177, was savagely repressed. Consequently, Ḳifṭ left to Ḳūṣ the task of imposing the Sunnī counterrevolution on the Ṣaʿīd. The departure of certain families from the town (e.g. that of Ibn al-Ḳifṭī) is probably to be connected with these events; Ḳifṭ does not seem to have had a *madrasa* like the other small towns of Upper Egypt, and it soon lost its *ḳāḍī* (it passed under the jurisdiction of the representative of the *ḳāḍī* of Ḳūṣ). Its territory remained a *waḳf* whose revenue went to support the *sharīf*s of Mecca. In the Mamlūk period, Ḳifṭ was nothing more than a small agricultural centre in a countryside where the cultivation of sugar cane provided the main means of livelihood, and it has remained thus to the present day.

AL-ḲIFṬĪ [see IBN AL-ḲIFṬĪ].

KIHĀNA (A.) means divination in general. *Lā kihāna baʿd al-nubuwwa* "there is no divination after the prophetic mission"; if it were necessary to be content with this dictum, frequently repeated in the Tradition, such an article as this would be out of place in an *Encyclopaedia of Islām*. But once the precise sense of this term has been established and the range of concepts which it covers outlined, the reader will agree that it is, on the contrary, far from superfluous.

The word itself, both in terms of the conceptual aspect (*kihāna*) and the pragmatic aspect (*kahāna*) is a legacy, through its root at least, from the earliest Semitic antiquity [see KĀHIN]. Because of this fact, it covers all the concepts and all the practices which are connected, closely or distantly, to the general concept of divination or the art of knowing that which cannot be spontaneously known. The current division of divinatory methods into inductive and intuitive is also to be found in the immense Arab-Islamic corpus of Arab-Islamic mantic literature, without always taking on the nature of a rigid classification, in that the two types of method may overlap or be used concurrently.

It is fruitless to search for a theoretical definition of divination in the impressive mass of divinatory documents contained in the literatures of the Semitic languages, throughout the ancient period. At the most, there are to be found descriptive definitions,

consisting of a list of the techniques which it comprised, according to places and periods. It is such a pragmatic definition which may be drawn from the Arabic documentation reckoned to preserve pre-Islamic traditions.

But in the mediaeval era, with the impact of Greek and Hellenistic philosophical thought, there was born, among the Arabs and the Islamised Iranians, a taste for theoretical definitions and methodical classifications. Already, in the works of a polygraph like al-Masʿūdī (d. 346/956) there are recorded a number of attempts at theoretical definitions which have been summarised, by T. Fahd in *La divination arabe*, 43-5; cf. *Murūdj*, iii, 347 ff. = §§ 1233 ff. Some philosophers, such as Ibn Sīnā, al-Ghazālī, Ibn Rushd and Maimonides, have tackled this problem and attempted to elucidate it (cf. *La divination arabe*, 51-63). Then came Ibn Khaldūn who put together all these speculations (*ibid*; 45-51). He emphasises that as a branch of prophetic practice, divination constitutes the lowest echelon. Like prophecy, it is a divine gift entrusted to a privileged group, men and women. In fact, according to al-Ḳazwīnī, there exist illuminated and celestial souls which possess the faculty of knowing the names of the spirits. These are the souls of prophets and saints; they are also the souls of physiognomists, of soothsaying genealogists and of those who see the future by means of past and present events. "As for the souls of the soothsayers", he continues, "they receive spiritual knowledge and see through it the contingencies of beings which appear in dreams and in other manifestations" (i, 317-22; *La divination arabe*, 50-51).

So, divination is seen to be theoretically legitimised by inclusion in the mainstream of prophecy (on divination and prophecy see *La divination arabe*, 63-90). But, for practical purposes, it was necessary to strip it of all that was obsolete and too closely linked to paganism. From that point was born, in Islamic literature, a detailed inventory of divinatory practices, with precise definitions of the techniques listed. In their taste for the classification of knowledge, encyclopaedists and bibliographers finished by conferring upon the concept of divination an epistemological quality. We shall begin with the most detailed classification, that of Ḥādjdjī Khalīfa (i, 34-5), who draws the data of his inventory from his predecessors, from Ibn al-Nadīm (*Fihrist*) to Ṭāshköprüzāde (*Miftāḥ al-saʿāda*).

Islamic divination, a legacy both of ancient Semitic divination and of Hellenistic divination, is divided into three categories:

I. *Firāsa* [*q.v.*], or physiognomancy, and its ramifications. Under this heading, eleven "sciences" are listed:

1. *ʿilm al-shāmāt wa 'l-khīlān* "beauty-spots and birthmarks" (see SHĀMĀT and *La divination arabe*, 390-3).
2. *ʿilm al-asārīr*, "chiromancy" (see AL-KAFF and *La divination arabe*, 393-5).
3. *ʿilm al-aktāf*, "omoplatoscopy" (see AL-KATIF and *La divination arabe*, 395-7).
4. *ʿilm ʿiyāfat* (read *ḳiyāfat*) *al-athar* "observation of footprints (on the ground)" (see ḲIYĀFA and *La divination arabe*, 370-3).
5. *ʿilm ḳiyāfat al-bashar*, "divination by morphoscopic and genealogical lines" (see FIRĀSA and ḲIYĀFA and also *La divination arabe*, 370-90).

6-7-8. *ʿilm al-ihtidāʾ fi 'l-barārī wa 'l-ḳifār*, "the sense of orientation in deserts"; *ʿilm istinbāṭ al-maʿādin* "the detection of minerals"; *ʿilm al-riyāfa*, "the detection of wells". These three categories may be put together under the heading of "divinatory observation of the ground" (see MĀʾ and *La divination arabe*, 403-6).

9. *ʿilm nuzūl al-ghayth* "the knowledge of (signs foretelling) rainfall". This consists in meteorological divination with its various techniques: neromancy, capnomancy, anemoscopy, phyllomancy, brelomancy, etc. (see ANWĀʾ, MALḤAMA and *La divination arabe*, 407-17).
10. *ʿilm al-ʿirāfa*, "knowledge of the future by means of past events". This definition suggest that it is a case *strictu sensu* of inductive divination, although initially *ʿirāfa* implied a certain intuitive, and consequently gnostic and esoteric, awareness (see KĀHIN and *La divination arabe* 113-19).
11. *ʿilm al-ikhtilādj*, "palmomancy" (see IKHTILĀDJ and *La divination arabe*, 397-402).

II. *Siḥr* [*q.v.*] or magic, and its ramifications.

12. *ʿilm al-kihāna*, "divination" (astrological divination, involving incantations and invocations to the stars). Thus the influence of Hellenistic ideas led to the division of divination into two types, traditional divination or *ʿirāfa* and astrological divination, which underwent a great expansion in the Hellenistic period and which the Arabs came to know through the many translations of Greek, Syriac, Pahlavi and Hindu astrological writings (see NUDJŪM and *La divination arabe*, 478-97).
13. *ʿilm al-nīrandjāt*, "white magic" (see NĪRANDJ and T. Fahd, *Le monde du sorcier en Islam*, in *Sources orientales*, vii (1966), 184 ff.).
14. *ʿilm al-khāwaṣṣ* "knowledge of the properties of divine names (*al-asmāʾ al-ḥusnā*), of prayers (*daʿāwī*), of numbers (see DJAFR and ḤURŪF) and various other special things" (see KHAWĀṢṢ AL-KURʾĀN; *La divination arabe*, 214-45; *Le monde du sorcier*, 175-6).
15. *ʿilm al-ruḳyā*, "sympathetic actions or sorcery" (see RUḲYA and *Le monde du sorcier, loc. cit.*).
16. *ʿilm al-ʿazāʾim*, "conjurations of demons or incantations" (see SIḤR and *Le monde du sorcier*, 164-5).
17. *ʿilm al-istiḥḍār*, "the evocation of spirits in physical form" (see ISTINZĀL and *Le monde du sorcier*, 170 ff.).
18. *ʿilm daʿwat al-kawākib* "the invocation of (the spirits of) the planets" (see NUDJŪM and *Le monde du sorcier*, 169 ff.).
19. *ʿilm al-filakṭīrāt* (φυλακτήρια), "the art of making phylacteries" (see RUḲYA and *Le monde du du sorcier*, 172 ff.).
20. *ʿilm al-khafāʾ*, "the art of making oneself instantly invisible" (see NĪRANDJ and *Le monde du sorcier*, 184 ff.).
21. *ʿilm al-ḥiyal al-sāsāniyya*, "the art of trickery and forgery" (see *ibid.*).
22. *ʿilm al-kashf ad-dakk*, "the art of disclosing frauds" (see *ibid.*).
23. *ʿilm al-shaʿbadha*, "conjury" (see *ibid.*).
24. *ʿilm taʿalluḳ al-ḳalb*, "charms" (see RUḲYA and *Le monde du sorcier*, 172 ff.).
25. *ʿilm al-istiʿāna bi-khawāṣṣ al-adwiya*, "the art of employing the properties of drugs" (see ADWIYA).

III. Judicial astrology (see NUDJŪM) and its ramifications.

26. *ʿilm al-ikhtiyārāt*, "hemerologies and menelogies (see IKHTIYĀRĀT and *La divination arabe*, 483-8).
27. *ʿilm al-raml*, "geomancy" (see KHAṬṬ and *La divination arabe*, 195-204).
28. *ʿilm al-faʾl*, "omens" (see FAʾL, ʿIYĀFA; *La divination arabe*, 431-519).
29. *ʿilm al-ḳurʿa*, "rhapsodomancy" (see ḲURʿA; *La divination arabe*, 214-19).

30. *ʿilm al-ṭīra*, "ornithomancy" (see FAʾL, ʿIYĀFA; *La divination arabe*, 431 ff., 498-519).

As can be seen, in this inventory, Islamic divination avails itself of methods belonging to magic and astrology. A single term embraces all these arts: *ʿilm al-g̲h̲ayb*, "the art of apprehending the invisible". Any method permitting the acquisition of supernatural knowledge or assumed to do so is considered as relevant to divination.

IV. The disciplines omitted in this inventory.

31. Divination by dreams (see TAʿBĪR AL-RUʾYĀ; *La divination arabe*, 247-367; Fahd, *Les songes et leur interpretation selon d'Islam*, in *Sources orientales*, ii (1959), 127-58. The absence of oneiromancy among the divinatory techniques is justified by the fact that it occupies in Islam a higher place than that of divination in the sphere of religious inspiration. It is closer to prophecy, of which it constitutes one of the forty (or forty-six) parts (cf. Wensinck, *Concordance*, i, 343), while divination is the lowest echelon.

32-4. Among cleromantic practices, only rhapsodomancy and geomancy are mentioned. (32) Belomancy (see ISTIḲSĀM; *La divination arabe*, 181-8), (33) lithoboly (see RAMY AL-D̲J̲IMĀR; *La divination arabe*, 188-95), (34) *maysir* (see AL-MAYSIR; *La divination arabe*, 204-14).

The absence of these practices in the above inventory is due to the fact that they were associated with pagan culture and they were for this reason prohibited in the Ḳurʾān.

35-41. The use of the oracle (in its various forms: *sadjʿ*, *rad̲j̲az*, *hātif* [*q.vv.*], ventriloquism, and necromancy; see, *La divination arabe*, 148-9), which was still popular in pre-Islamic Arabia, (36) extispiciny, (37) hepatoscopy, (38) teratomancy, (39) medical diagnoses, (40) lecanomancy, (41) ordeal, mantic disciplines much used in ancient Mesopotamia, are present only as vague survivals in Islamic divinatory literature (cf. the index of techniques and ideas in *La divination arabe*, 591-3, and J. Nougayrol, *La divination babylonienne*, in *La divination*, studies collected by A. Caquot and M. Leibovici, i, 28-81).

If the diviner ceased officially to exist in Islam, divination survived, but considerably changed, adapted progressively to the taste of the period and enriched by new Hellenistic, Iranian and Hindu practices, to which were added the local practices of the conquered territories. At the end of this period of adaptation and enrichment, Islamic divination progressively lost its primitive oracular nature to become a τέχνη, an art or a science (*ʿilm*). It is thus, for example, that to belomancy, condemned by the Ḳurʾān because of the its connections with paganism, there succeeded *ʿilm al-ḳurʿa* or rhapsodomancy, *ʿilm al-d̲j̲afr* and *ʿilm al-ḥurūf* or onomatomancy, *ʿilm k̲h̲awāṣṣ al-Ḳurʾān*, a combination of rhapsodomancy and iatromancy, *ʿilm al-raml* or geomancy and *ʿilm al-zāʾird̲j̲a*, a sort of machine for producing omens. To oneiromancy, in the sense of dream-messages received directly from the divinity by a man or by his substitute and often expressed in explicit language, there succeeded *ʿilm al-taʿbīr* or oneirocriticism. To *ḳiyāfa* or physiognomancy, there succeeded *ʿilm al-firāsa* or physiognomony and the ramifications indicated above. The sphere of *faʾl* or omens was enriched by the transition of the Arabs from a nomadic to a sedentary culture, while preserving nevertheless, its original structure, especially where ornithomancy was concerned (cf. *La divination arabe*, 525-6).

Islamic divination resembles a crucible in which the divinatory practices of Semitic and Hellenistic antiquity were fused. The rich divinatory literature written in Arabic, Persian and Turkish conveys an imposing heritage the study of which will contribute to a better understanding of ancient and mediaeval *Weltanschauungen*.

Bibliography: It is impossible to give here all the relative bibliographical items, but see for these T. Fahd, *La divination arabe, études religieuses, sociologiques et folkloriques sur le milieu natif de l'Islam*, Leiden 1966, cf. esp. 529-65. Amongst more general works, there are A. (T. FAHD)

ḲĪḲĀN / KĪKĀN [see KILĀT].

KILĀB B. RABĪʿA, an Arab tribe belonging to the group of tribes called ʿĀmir b. Ṣaʿṣaʿa [*q.v.*]. The territories and pre-Islamic history of the tribe are described in that article. Kilāb was considered to have ten main divisions, of which the chief for a time was D̲j̲aʿfar b. Kilāb, from which came leaders of the whole of ʿĀmir. The most serious war of the Fid̲j̲ār [*q.v.*] resulted from the killing of ʿUrwa al-Raḥḥāl of Kilāb by al-Barrāḍ b. Ḳays al-Kinānī. Divisions within the tribe are reflected in hostility to the Muslims and friendship with them. Two men of Kilāb joined in attacking the Muslims at Biʾr Maʿūna [*q.v.*]; but al-Ḍaḥḥāk b. Sufyān became a Muslim and both called on his tribe to accept Islam and raided a recalcitrant section (al-Ḳurṭāʾ).

(W. M. WATT)

KILĀT, KALĀT, KELĀT, the name of a town and of an extensive region, formerly a K̲h̲ānate, of Balūčistān, now a District of Pakistan.

(1) The town (often called Kalāt-i Balūč to distinguish it from the Afg̲h̲ān Kalāt-i G̲h̲ilzay) lies in lat. 28° 53′ N. and long. 66° 28′ E. at an altitude of 6,800 feet, and has in recent centuries been the centre of the K̲h̲ānate of Kalāt; until the rise of Quetta as a military base of British India [see KWAṬṬA] it was the most important town of Balūčistān. The name Kalāt or Kilāt represents Arabic *ḳalʿa* and Persian *ḳala/ḳalāt*, often pronounced *kilā/kilāt* in Indo-Muslim usage; in Balūčī we have *k̲h̲ilāt* "fortress, citadel", cf. Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, 480, s.v. *khelát*, this last being the form of the name usually found in Anglo-Indian sources of the period. On locally-minted coins we find the name of the town both as *K.lāt* and as *Ḳ.lāt* (W. H. Valentine, *The copper coins of India*, London 1914, ii, 223).

In earlier times, the town was known as Kalāt-i Sēwa, from a legendary Hindu king, or as Kalāt-i Ničārī, after the local Brahūī tribe of Ničārīs. The name is not found in any of the early Islamic histo-

rians and geographers, but it is very probable that Kalāt marks the site of mediaeval Kīzkānān or Ḳīḳān, judging by the latter's position in the itineraries; it seems to be the Ki-kiangna of the early 7th century Buddhist pilgrim Hiuentsang (see Marquart, *Ērānšahr*, 275-6). Ḳīḳān and Būḳān were raided by the Arab commander Sinān b. Salama al-Hudhalī and then by al-Mundhir b. al-Djārūd al-ʿAbdī as early as Muʿāwiya's caliphate (Balādhurī, *Futūḥ*, 433-4). In the 4th/10th century, Kīzkānān is named as the residence of the local ruler of the region of Ṭūrān (on which see Minorsky in *EI* [1] s.v.), whom Ibn Ḥawḳal [2], 324, tr. Kramers-Wiet 317-8, calls Muʿtazz b. Aḥmad, adding that he recognised the ʿAbbāsids in his *khuṭba* (a point probably made by Ibn Ḥawḳal because the adjacent province of Sind at this time acknowledged the Fāṭimids and the Ismāʿīlī imāmate). However, the capital of the region was located not long afterwards at Ḳuṣdār, modern Khuzdār, 80 miles to the south of Kīzkānān/Kalāt [see ḲUṢDĀR]. In the early Ghaznawid period, it is recorded that Masʿūd b. Maḥmūd went lion-hunting in the district of Kīkānān (Bayhaḳī, *Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, 126).

Since approximately the 9th/15th century, Kalāt has been in the hands of Brahūīs of the Kambarānī tribe, from whome the later Aḥmadzay Khāns of Kalāt were descended. In the 18th century, the Khāns recognised the suzerainty of Nādir Shāh Afshār and Aḥmad Shāh Durrānī [*qq.v.*] during their Indian campaigns, and their power in Balūčistān grew. The greatest of the chiefs of this period, Naṣīr Khān b. ʿAbd Allāh, tried to shake off Afghān control, and though Aḥmad Shāh defeated him in battle, the latter was unable to take Kalāt town from Naṣīr Khān, despite three attempts (1172/1758). It was Naṣīr Khān who built the citadel of Kalāt, known as the Mīrī, which became the Khān's palace. We possess descriptions of Kalāt during the first half of the 19th century by travellers such as H. Pottinger (1810), who mentions the mud-brick defensive walls pierced with gun-holes and the ample water supply from a spring, which also turned several mills (*Travels in Beloochistan and Sinde; accompanied by a geographical and historical account of those countries*, London 1816, 40-51), and C. Masson (1830s), who describes the colony in Kalāt of Bābī Afghāns, expelled thither by Aḥmad Shāh from Ḳandahār, and who numbers the houses there at *ca.* 800, giving a population of say 3-4,000 (*Narrative of various journeys in Balochistan, Afghanistan and the Panjab*, London 1842, ii, 50-6, 96-8, 177-8).

In 1250/1834 the Afghān ruler Shāh Shudjāʿ al-Mulk took refuge in Kalāt with Miḥrāb Khān b. Maḥmūd b. Nāṣir after his failure to recover Ḳandahār from Kūhandil Khān, governor there for his brother Dūst Muḥammad [*q.v.*]. During the First Afghān War (1839-42) Miḥrāb Khān was drawn into conflict with the British force which advanced on Ḳandahār in 1254/1838 through the Bōlān Pass in order to reinstate Shāh Shudjāʿ. Kalāt was stormed in 1255/1839 and the Khān killed in the fighting; the districts of Kaččhī, Shāl and Mustang in the northern part of the Khānate were taken from Kalāt and ceded to Shāh Shudjāʿ, temporarily placed on the throne of Kābul, and British Agent installed in Kalāt. This last was killed by Brahūī tribesmen soon afterwards, leading to a second British occupation in 1257/1841. The ceded territories were now returned to the Khān, and with the annexation of Sind in 1843 and the Panjab in 1849, British influence was brought right up to the frontiers of the Khanāte. The Khāns themselves suffered several decades of disputed authority and tribal turmoil, till in 1876 the Government of India was compelled to intervene, and Capt. (later Sir Robert) Sandeman negotiated an agreement between the Khān and rival chiefs, making Kalāt a protected native state, with a British Political Agent to be henceforth stationed at Quetta. The northern *taḥṣīls* of the Khānate, Quetta, Nushkī and Naṣīrābād were leased to Britain in perpetuity, to form British Balūčistān, and the right to levy transit dues at the Bōlān Pass commuted for an annual subsidy (see T. H. Thornton, *Colonel Sir Robert Sandeman: his life and work on our Indian frontier*, London 1895, 39-87, 117-82, etc.). Even so, further intervention was necessary in 1893, when the tyrannical Mīr Khudādād b. Miḥrāb was deposed from his Khānate by the Government of India.

The earthquake of 1935 affected Kalāt badly, as well as Quetta and Mustang, demolishing most of the old town and causing widespread economic damage through destruction of the irrigation *kārīzs* [see ḲANĀT]. In 1940 strained relations and clashes between the Khān of Kalāt and the chief of Khārān [*q.v.*] to the northwest of Kalāt led to the recognition of Khārān as a separate native state under the control of the British Political Agent. Early in 1948 the Khān of Kalāt acceded to Pakistan and his Khānate became part of the Balūčistān States Union, with the Khān no longer an independent ruler but enjoying a privy purse from the central government.

(2) The province. This included by the 18th century the districts of Sarawān, Djahlawān, Kaččhī and Makrān, and the tributary states of Las Bēla and Khārān. In 1955 all the provinces of West Pakistan were merged into one unit, and Kalāt became a separate District under a Deputy Commissioner, whilst Khārān, Makrān and Las Bēla formed separate Districts. Kalāt District is today the biggest in area of all Pakistan, covering 30,931 sq. miles in area and with a population, made up of Brahūīs, Balūč, Jhāts, etc., of 341,420 (1961 census).

(C. E. BOSWORTH)

KILĀT (KALĀT)-I **NĀDIRĪ**, "the most famous fort of Central Asia", located some 70 miles north of Mashhad near the Irano-Soviet border, on a spur of the Ḳarādja-Dāgh Mts. Kalāt-i Nādirī consists of a high valley (altitude 2,500-3,000 feet), some twenty miles long and running west-east, which is converted into a natural fortress by walls of virtually unscalable rock to the north and south. The height of the southern rampart is 700-800 ft; the northern rampart is even higher. These walls are breached at only five points: Darband-i Arghūn on the south-west; Nafta on the north; Kushtanī Darband on the south-east; Čūbast on the west; and Dihča on the north-west.

In 683/1284, the rebellious Mongol prince Arghūn took refuge there after his defeat at the hands of

the Ilkhān Tekūder. In 782/1380-1, Tīmūr launched numerous assaults on Kalāt-i Nādirī without success; the fortress eventually fell as a result of pestilence. In 1153/1741, Nādir Shāh, who had previously used Kalāt-i Nādirī as the headquarters from which he set out to free Iran from the Afghāns, chose it as the site for the treasure-house in which he deposited the loot from his Indian campaign; the treasure-house was built by Indian craftsmen from massive blocks of Marāgha marble. After Nādir's death, his son Riḍā Ḳulī and fifteen members of his family were executed at Kalāt-i Nādirī by the future ʿĀdil Shāh.

Today, Kalāt-i Nādirī has reverted to its earlier name of Kalāt, and constitutes one of the five bakhshs of the shahristān of Darragaz.

(R. M. SAVORY)

ḲİLBURUN (Ḳinburun), a sharp cape or headland at the mouth of Dnieper (Özi) river on the Black Sea coast of South Russia; this Turkish name was given to it by the Turks because it looked as slender as a single hair (*ḳıl*). It lies at 2 sea miles's distance from the fortress of Özi or Oczakof, and at the tip of the cape was a fortress built by the Ottomans. Within the Ḳılburun promontory is an inner estuary 40 km. long and 8-10 km. wide (P. Minas Bijişkyan, *Karadeniz tarih ve coğrafyasi*, tr. H. D. Andreasyan, Istanbul 1969, 100). The salt obtained from the lakes in the vicinity of Ḳılburun increased its importance economically.

Ḳılburun came into prominence at the beginning of the 11th/17th century as a result of the Cossack invasions towards the Black Sea coastlands (Kātib Čelebi, *Fedhleke*, Istanbul 1287, ii, 72, 103), hence fortresses were built in various places, including Ḳılburun, against Cossack raids (Pečewī, *Taʾrīkh*, Istanbul 1283, ii, 152). The one constructed at Ḳılburun had a staff of 193 persons (Başbakanlık arşiv genel müdürlüğü, Kâmil Kepeci tasnifi, no. 4891). It became of especial strategic importance to the Ottomans when the Russians started descending the rivers to the Black Sea, and major reconstructions were accordingly undertaken in 1709 and 1733-4 (Muzaffar Erdoğan, *Lale devri Mimarı Kayserili Mehmed Ağa*, Istanbul 1962, 58-9, 81). In time of war, the Ḳılburun garrison worked in collaboration with the garrison of Özi (Oczakof) opposite to it, in defence of the mouth of the Dniepr. The Russians succeeded in capturing Ḳılburun for a while during the 1736-8 Ottoman-Russian war, but were later obliged to return it after demolishing it. The fort was again captured in 1772 during the 1768-74 Ottoman-Russian war, and this fact was accepted by Turkey at the settlement of Küčük Kaynardja. Ottoman forces which tried to recapture it during the 1787-91 war failed decisively to do so (Djewdet, *Taʾrīkh*, Istanbul 1309, iii, 32). Ḳılburun fort was occupied by a French force on 17th January 1855 during the Crimean War, but finally demolished by Russia in 1860. Ḳılburun, on which there is a small fishing village, is now within the Ukrainian SSR.

ḲILĪD AL-BAḤR [see ČANAḲ-ḲALE BOGHAZI].

ḲILĪDJ ALAYI [see TAḲLĪD-I SAYF].

ḲILĪDJ ʿALĪ PASHA [see ʿULŪDJ ʿALĪ].

ḲILĪDJ ARSLAN I, also known to the Crusaders, like his father, under the name Sulaymān/Soliman, son of Sulaymān b. Ḳutlumush [*q.v.*], second Saldjūḳ prince of Asia Minor. At an early age, he was in Antioch when his father was killed in battle fighting Tutush [*q.v.*], and he was handed over as a hostage to Malik-Shāh [*q.v.*] who conquered Syria in 1086. On the death of the latter (1092) he managed to escape, and arrived in Nicaea, his father's former residence, where he seems without much difficulty to have had himself accepted as sovereign by the semi-autonomous Turcoman chieftains who were waging against Byzantium a policy of entente with the Basileus, who for his part, threatened on all his frontiers, sought to use against his other opponents those of the Turks whom he hoped gradually to assimilate or to neutralise. Ḳılıdj Arslan was especially anxious to maintain relations with the Turkish East, which other Turks, in particular the Dānishmendids [*q.v.*] were threatening to cut off. In summoning his father to Nicaea, Alexis Comnenus had in effect brought his Turks far in advance of what then was still the principal zone of Turcoman population.

It was in these circumstances that the Crusades intervened, enabling Alexis temporarily to abandon the task of dealing with the Turks. Ḳılıdj Arslan crushed the Peasant Crusade of Peter the Hermit, but was subsequently forced to give up Nicaea, along with his harem, to the Barons' Crusade, and was later beaten by the Christians again on the edge of the Anatolian plateau at Dorylaeum. These victories of the Christians enabled Alexis Comnenus to regain control of the entire Aegean coast of Asia Minor; but the Crusaders did not stay in Asia Minor, and the Turkish forces, who being still semi-nomadic in character had been repelled but not destroyed, returned behind the backs of the Crusaders. The danger had furthermore led to a temporary reconciliation between Ḳılıdj Arslan and Dānishmend, which led to the annihilation, in 1100-1, of the rearguard troops of the Crusaders, an operation in which Dānishmend, it is true, played the more significant role; the latter, at the head of his troops, deprived the Franco-Armenians of the strategic centre of Malatya, vital to Ḳılıdj Arslan's links with the East. Also, when Dānishmend died in 1104, Ḳılıdj Arslan, who had become reconciled with the Greeks to the point of sending them contingents to fight other enemies (1106), came and occupied the place.

From there he was able to control Upper Mesopotamia, where the lieutenants of his Eastern Saldjūḳ cousins were in conflict with one another. When the enemies of Sultan Muḥammad b. Malik Shāh [*q.v.*]

appealed to him for help, he confronted the army of the latter on the Khābūr, and was killed (1107). This was for a long time the last intervention by the Saldjūḳs of Rūm in the East, and the roughly-constituted Turkish state was definitively enclosed within Asia Minor proper.

Bibliography: The sources include Anna Comnena, Matthew of Edessa, Michael the Syrian and the Latin historians of the First Crusade; the *Kāmil* of Ibn al-Athīr and the chroniclers of Syria (Ibn al-Ḳalānisī, Ibn Abī Ṭayyiʾ in the unedited part of Ibn al-Furāt and Ibn al-ʿAdīm, ed. S. Dahan) and of al-Djazīra (Ibn al-Azraḳ, unedited).

The modern bibliography is given in Cl. Cahen, *Pre-Ottoman Turkey*, London 1968, and O. Turan, *Selçuklular zamanında Türkiye*, Ankara 1971). (CL. CAHEN)

ḲILĪDJ ARSLAN II, son and successor of Masʿūd I, and one of the most important sultans of Rūm (1155-92).

Masʿūd had, in dealing with the Greeks, succeeded in restoring the position of the Saldjūḳs in relation to the Dānishmendids who were divided by quarrels over the succession. Ḳilīdj Arslan at first maintained this policy, and carried it to the extent of offering the Basileus Manuel Comnenus at Constantinople in 1162 a form of allegiance which, in concrete terms, cost him nothing. He was then able to make himself master of a portion of the Dānishmendid possessions, and he would have taken them all had he not been confronted by the powerful ruler of Muslim Syria, Nūr al-Dīn. The latter, champion of the Holy War against the Christians, pretended indignation at Ḳilīdj Arslan's relations with the Greeks. The two princes in fact were alternately allied and at odds, Ḳilīdj Arslan helping Nūr al-Dīn to deprive the Franks of their possessions on the Syro-Anatolian frontiers with the object of sharing them with his rival, and Nūr al-Dīn extending his power over this territory as soon as the Saldjūḳ sultan withdrew. The conquest of Egypt by Nūr al-Dīn's lieutenants Shīrkūh and Ṣalāḥ al-Dīn crowned his glory, and Ḳilīdj Arslan's enemies persuaded Nūr al-Dīn to undertake an expedition into Asia Minor which forced Ḳilīdj Arslan to recognise what remained of Dānishmendid territories. On the death of Nūr al-Dīn, he annexed them (Malatya in 1177) thus accomplishing, from the Byzantine territories in the West almost to the furthest limits of the East, the political unity of Asia Minor.

He no longer needed to deal with the Greeks, and on his side, Manuel Comnenus, though strengthened by the general success of his foreign policy, was uneasy at the growing power of the sultan, and decided that he must put an end to it. In 1176, at the head of a powerful army, he advanced on to the Anatolian plateau, but was crushed at Myriokephalon. This was, after an interval of a century, a replica of Mantzikert, which showed that henceforward there existed a Turkey which could never be further assimilated. If Ḳilīdj Arslan showed moderation in his official policy, the pressure of Turcomans on the frontiers led him to reach out to the upper valleys of the Aegean coast and, in spite of opposition from Rhodes, to the sea itself.

This expansion could not take place without risk. Trouble with the Turcomans, breaking out to the east of the Saldjūḳ State, grew more intense, with these Turcomans supplying troops ready to serve any ambitious chief. Whether for this reason or not, Ḳilīdj Arslan divided the territories under his suzerainty between his nine sons, a brother and a nephew. Needless to say, the latter quarrelled among themselves and one of them, Ḳuṭb al-Dīn, with support from some Turcomans, forced his aged father to accept his protection at Konya. These events were interrupted by the Crusade of Frederick Barbarossa; the latter, an enemy of the Byzantines, had established diplomatic relations with Ḳilīdj Arslan who, indifferent to Syro-Palestinian affairs, was inclined to promise him free passage. But Ḳuṭb al-Dīn's Turcomans attacked the Germans, who converged on Konya (1190). Shortly after, the old sultan succeeded in escaping from the semi-captivity in which his son was holding him, and took refuge with another of his sons, the son of a Greek mother, who was established on the western borders. It was there that he died, at the age of seventy-seven.

Bibliography: Sources include the Byzantine writers Cinnamos and Nicetas Choniatus, the Armenians Matthew of Edessa and Gregory the Priest, Michael the Syrian, and the Arab authors cited in the preceding Bibliography. References to modern works are given in the works of Cahen and Turan cited in *ibid.* and in N. Elisséeff, *Nūr ad-dīn*, Damascus 1968. (CL. CAHEN)

ḲILĪDJ ARSLAN III, the young son of the sultan of Rūm Rukn al-Dīn, who reigned only a few months (1204-5), after which the majority of the *amīrs*, worried at the general dangers inherent in the rule of a minor, deposed him in favour of Kay Khusraw I [*q.v.*].

ḲILĪDJ ARSLAN IV, better known by his *laḳab* of Rukn al-Dīn, one of the sons and successors of Khusraw II (1246). It was at the beginning of the period of the Mongol protectorate that, the three sons of the late sovereign all being minors, the senior *amīrs*, in order to safeguard the unity of the state, sought to install, under their own executive power, a sultanate shared jointly between the three young princes; Ḳilīdj Arslan was sent on a mission to the Mongol chief Batu to persuade him to accept this solution. This very mission alone established a special relationship between Ḳilīdj Arslan and the Mongols, and for many years two opposing parties were in conflict; the one, taking him as its figure-head, believing that the only possible course of action was to submit to the Mongols, the other, rallying behind his brother ʿIzz al-Dīn, seeking to organise resistance with the aid of the Turcomans of the West and in alliance with the Byzantines. Successive schisms resulted, leading on each occasion to a division, temporary at first, between the territories in the east, favouring the Mongols who were close by, awarded to Ḳilīdj Arslan, and those of the west, left to ʿIzz al-Dīn. United for the last time in 1260, the two brothers participated in a campaign against Syria under the orders of the Mongol chief Hülegü. Eventually, ʿIzz al-Dīn fled to Constantinople, and Ḳilīdj Arslan remained sole sultan. This did not mean that he exercised power; power in fact belonged to the *perwāne* Muʿīn al-Dīn Sulaymān, the favourite of the Mongols. When Ḳilīdj Arslan came of age and showed resentment towards him, the *perwāne* had him strangled (1265).

Bibliography: Sources include the Muslim historians of Anatolia Ibn Bībī, Aḳsarāyī and the anonymous author from Konya of the *Saldjūḳ-nāma*; the Arabic historians Baybars al-Manṣūrī (unedited) and Yūnīnī; and the Syriac one Bar Hebraeus. General references to modern works are given in the works of Cahen and Turan cited in the previous Bibliographies. (CL. CAHEN)

KILIFI, headquarters of Kilifi District in the Coast Province of Kenya, in lat. 4° S, is a small port which was an independent sultanate until 1592, including the present Kioni, Kitoka and Mnarani. The large Friday mosque, the wealthy *décor* of the adjacent tombs, and the walls and gatehouse, show that Mnarani was the chief amongst these settlements in medieval times. The cemetery is noteworthy for eleven inscriptions in 15th century *naskhī* script. Excavations by J. S. Kirkman in 1954 showed that the site was occupied from the end of the 14th century until some time in the 17th century when, as Capt. W. F. W. Owen recorded in 1833, it was destroyed by Galla tribesmen. The Sultan of Kilifi sent an ambassador to greet the Turkish commander Amīr ʿAlī Bey at Mombasa in 1586, and in 1589 joined him against the Portuguese in Mombasa. Following a long feud with Malindi, Kilifi was razed by the Portuguese with local allies in 1592, but recovered. It was to Kilifi that Sultan al-Ḥasan b. Aḥmad of Mombasa withdrew in protest against the Portuguese Captain of Mombasa's exactions in 1612.

ḲILLAWRIYA, Calabria (in Yāḳut is found Ḳillawriya, and in Ibn Djubayr, *Riḥla*, Ḳalawriya, both of these close to the Byzantine Καλαβρία, Kalavria, in Italian Calabria).

It is very likely that the Arabs, coming probably from Spain, launched attacks across the sea against certain coastlands of Calabria even before Asad b. al-Furāt [*q.v.*] landed in Sicily in 212/827, thus providing the Muslims with a base for military operations against the Italian mainland.

According to Ibn al-Athīr (M. Amari, *BAS*, Leipzig 1857, text 228), followed by Ibn Khaldūn (*ibid.*, 469), the first serious operation against Calabria took place in 225/839-40. With the capture of Messina in 228/842-3, it became easier for the Muslims of Sicily to undertake devastating raids and lengthy sieges, by means of which they were able to keep the Calabrian territory under continual threat from their incursions. This state of affairs lasted until the time when Constantinople decided to take the offensive and operations for the recovery of this region were entrusted to Nicephorus Phocas, who in 272/885-6 inflicted severe losses on the enemy. The Saracens, however, speedily counter-attacked. Possibly encouraged by the traditional hostility in southern Italy between the Lombard princes and the Byzantine imperial governors, they managed in the course of the following three years to assemble in Sicily a fleet meant for attacking Calabria. Operations began in 275/888, and ended in the waters of Milazzo by the rout of the Byzantine army, the sack of the town of Reggio and the resumption of the raids, henceforth continuous, into the interior of Calabria.

However, it was at the beginning of the 4th/10th century that the Muslim offensive grew more violent, under the stimulus of the savage Aghlabid prince Abū Isḥāḳ Ibrāhīm, who had been compelled, as a result of his unbridled despotism, to abdicate in favour of his son ʿAbd Allāh [see AGHLABIDS]; in order to expiate his misdeeds, he undertook a "holy war" in Sicily and Calabria, where he wrought, without any scruples, enormous devastations, attacking persistently Cosenza, before whose walls he died in 289/902.

The first Kalbid [*q.v.*] ruler to resume military operations in Calabria with both regular land and naval forces was al-Ḥasan b. ʿAlī, who captured Reggio in 339/950 and built there a mosque, which was however diverted from this usage after only four years; two years later, the same ruler gained a great victory over the Byzantine forces beneath Gerace.

The sequence of raids, sieges and movements of resistance on the part of the Christians continued until the point when, in 372/982, the Emperor Otto II decided to end this situation by simultaneously attacking both the Muslims and the Byzantines, whose troops, in this state of affairs, helped each other against the Frankish ruler. The latter's troops gained an initial success, but had to flee when his army was defeated before Stilo. In the period between this defeat and the occupation of Calabria by the Normans towards the middle of the 5th/11th century, the Calabrian region was once again the scene of clashes (in the course of the naval battle before Reggio in 395/1005, the Pisans inflicted a defeat on the Muslims), of unusual ententes between Christians and Muslims, and of exhausting trials for the local population, which suffered violent raidings and incursions and was never able to benefit from a stable Muslim régime which, in other places and in more favourable circumstances, was often the mediating force for the transmission of the genuine values intrinsic in its culture.

Bibliography: The texts of the greater part of the Arab geographers (above all, al-Idrīsī), chroniclers and historians, which involve Calabria, may be found in M. Amari, *Biblioteca arabo-sicula*, Leipzig 1857, 1st Appendix, Leipzig 1875, 2nd Appendix, Leipzig 1887, and *Storia dei Musulmani di Sicilia*², ed. C. A. Nallino, Catania 1933-9 (cf. the index s.v. Calabria, Reggio, Bruzzano, Gerace, Stilo, Tiriolo and Cosenza).

(U. Rizzitano)

KILLIZ, a town of northern Syria, situated to the north of Aleppo between the two rivers ʿAfrīn and Ḳuwayḳ, north of Aʿzāz and on the road from Aleppo to ʿAyntāb. It was apparently known to the Assyrians, since a letter in cuneiform script (Harper, no. 1037, Brit. Mus. K 13073, obv. 3) mentions a town Ki-li-zi. In Roman times, Killiz was called *Ciliza sive Urmagiganti* (*Itin. Ant.*, ed. Pinder-Parthey, 84). In the mediaeval period it seems to have been of no importance. It is mentioned by Ps. Denys of Tell-Mahré at the time of the revolt against the Patriarch Dionysius in 817. One should read Killiz instead of Kalaz or Shalaz in Bar Hebraeus, *Hist. eccl.*, ed. Abbeloos-Lamy, i, 339, 342, and Killiz instead of Ḥalīf in Michael the Syrian, *Chron. syr.*, ed. Chabot, iii, 23.

The Arab geographers do not seem to mention Killiz. Yāḳūt is somewhat confused. His Ḳilliz (iv, 158, cf. 168) refers to somewhere which he places near Sumaysāṭ or Samosata, but his Killiz (iv, 299) really does mean our Killiz, a town in the *nāḥiya* of ʿAzāz (Aʿzāz) between Aleppo and Antich, and he believes that it should be written Ḳilliz. The place in the region of Samosata is probably not Killiz but al-Kalīs or al-Kalis, which Ḳudāma lists among the frontier settlements of Diyār Bakr and which Ibn Ḥawḳal², 196 (1st edn., 131) places on the May-

yāfāriḳīn-Malaṭya route, and which is consequently not near to Samosata/Sumaysāṭ but to Shimshāṭ (on this al-Kalīs, see Markwart, *Südarmenien*, 249-50).

Killiz and Mardj Killiz are mentioned in verses of Abū Firās (in regard to Sayf al-Dawla's campaigns), which Yāḳūt also cites (*Dīwān*, ed. S. Dahhān, 115, v. 128, 150, v. 137). Since his successor Abu 'l-Maʿālī Saʿd al-Dawla neglected to pay tribute owed to Byzantium according to the treaty of 359/969, the Domesticus Bardas Phocas led an expedition into Ḥamdānid territory, stormed Killiz and carried off its inhabitants into captivity. At the time of the Crusades, Killiz fell within the Frankish territories, no doubt after the capture of Aʿzāz by Roger of Antioch in 1118-19, for in 1124 the Turcoman *amīr* Balaḳ, who had become master of Aleppo, attacked Aʿzāz and his troops laid waste the region of Killiz. Killiz presumably fell into the hands of Nūr al-Dīn at the same time as did Aʿzāz, sc. in 1150.

Although Killiz is some distance away from the important meeting-place of routes near Aʿzāz, it has nowadays eclipsed Aʿzāz in importance. The present town is in Turkey (see *Guide bleu* under Killis), and *ca.* 1948 had 24,000 inhabitants; Cuinet had given 20,000 in 1891, 15,000 of which were Muslims. The town was in the 10th/16th century the residence of the Druze Jumblatt family [see DJĀNBULĀṬ]. According to Hartmann, ancient Killiz was the modern Tanzimé Khān, where can still be found enormous pieces of stone, whilst the little garden Ilezī Baghčesi, 20 minutes' journey to the east of Killiz, is traditionally pointed out as being the ancient site of the town or at least of part of it, since it is assumed that Ilezī contains the name Killiz, and there are at that site traces of an ancient settlement.

KILWA, the name of various localities and islands of the east coast of Africa, amongst which should be mentioned KILWA KIVINYE, on the mainland (8° 45′ S.) about 140 miles south of Dār al-Salām (Dar es Salam), and in particular, the QUILOA of the Portuguese (Kulwa in Ibn Baṭṭūṭa, ii, 191 ff., tr. Gibb, ii, 379 ff., and in the ms. B.M. Or. 2666, but Kilwa in Yāḳūt s.v.). This last is today called KILWA KISAWĀNI, and is situated on an island near to the Tanzanian coast, 150 miles south of Dār al-Salām (8° 58′ S., 39° 34′ E.). It is the site, covering about one km.², of the capital of a region which stretched from the Rufiji River to Sofala in mediaeval times and was the greatest of the Islamic trading states in East Africa.

Barros, *Da Ásia*, 1552, preserves an anonymous abbreviated *Chrónica dos Reyes de Quiloa*, composed perhaps before 1507; an independent 16th century *Kitāb al-Sulwa fī akhbār Kulwa*, by an anonymous Shīʿī author, survives only in B.M.ms.Or. 2666, dated 1862. Neither is complete. A 19th century Swahili *History* is of little value. Coins of at least seven rulers are certain, and with them, Ibn Baṭṭūṭa and Muḥammad al-Fāsī sustain the historicity of the documents. After 1500, numerous accounts occur in Portuguese and French sources. In 1960-5 H. N. Chittick excavated the chief buildings.

The chronology is controversial. Chittick's deletion from the text of Barros of some fifteen rulers must be regarded as unacceptable. He dates the earliest occupation to *ca.* 800. The finds agree well with the documentary sources as they stand. They describe a dynasty of "Shīrāzī" settlers from the Gulf established *ca.* 957. The founder, ʿAlī b. al-Ḥusayn, bought the island from the preceding pagan ruler, marrying his daughter. For two centuries the expanding trading centre was often at war with neighbouring islands. In the 12th century it acquired the monopoly of Sofala's gold trade with its hinterland; its former governor, Dāwūd b. Sulaymān, was Sultan of Kilwa *ca.* 1131-70, and "master of the trade" of Pemba, Zanzibar, Mafia and the mainland. Essentially, it was an entrepôt trade serving Arab Indian Ocean routes, in gold, ivory and some slaves, against imported textiles, beads, and Near and Far Eastern ceramics. Under Sulaymān b. al-Ḥasan, *ca.* 1170-89, many important buildings were erected in a new style. ʿAlī b. al-Ḥasan, otherwise unrecorded, issued the first coinage in the late 12th century. About 1294 Mahdalī *sayyids* succeeded the original dynasty, possibly by female descent. Ibn Baṭṭūṭa visited Kilwa in 1331: the people were black, orthodox Shāfiʿīs, and devoted to *djihād* against mainland unbelievers.

Vasco da Gama sailed past Kilwa in 1498. In 1500 Pedro Alvarez Cabral was the first Portuguese to levy tribute. Francisco d'Almeida took it by storm in 1505. Contemporary accounts attest its wealth. A Portuguese fort controlled it until 1512: its economy was ruined by the Portuguese seizure of the Sofala trade in 1505. A population of perhaps 10,000 in 1500 had already dwindled to about 4,000 by 1587, when marauding Zimba massacred 3,000 inhabitants. Kilwa never recovered. After the ʿUmānī capture of Mombasa from the Portuguese in 1698, Kilwa also was made tributary to ʿUmān. In the 18th century the slave trade developed greatly, but Zanzibar was the main entrepôt. Zanzibar finally absorbed Kilwa in 1843, deporting the last sulṭān. When Germany acquired the mainland in 1886, some surviving royalties threw their records in the sea, lest they fall into infidel hands.

AL-**ḲILY**, also AL-ḲILĀ, according to Abu 'l-Ḥasan al-Liḥyānī also *al-ḳilw* (see al-Dīnawarī, *The book of plants*, ed. B. Lewin, Wiesbaden 1974, 170, § 643); the word is derived from aramaic *ḳelyā*), potash, potassium carbonate [K_2CO_3], but also soda, sodium carbonate [Na_2CO_3] (both materials were not clearly distinguished, therefore the Arabic term is kept in what follows.) *Al-Ḳily* thus indicates the salt which is won from the ashes of alkaline plants, but is also confusingly used for the ashes themselves and the lye. As synonyms are given *s̲h̲abb al-ʿuṣfur* and *s̲h̲abb al-asākifa* (Ibn Maymūn, *S̲h̲arḥ asmāʾ al-ʿuḳḳār*, ed. M. Meyerhof, Cairo 1940, no. 345). The plants or families of plants *rimt̲h̲* (Haloxylon articulatum Cav.) and *ḥamḍ* (Chenopodiaceae) serve as the standard plants employed. According to Abū Ḥanīfa al-Dīnawarī (*op. cit.* 104, § 411 = *LA*, s.v. *ḳ-l-y* = Ibn al-Bayṭār, *D̲j̲āmiʿ*, IV, 31) the best potash is won from *al-ḥuruḍ* (Arthroenemum c.q. Seidlitzia), the so-called "potash of the dyers" (*ḳily al-ṣabbāg̲h̲īn*). The other sorts sufficed for the fabrication of glass. The extraction of *ḳily* is concisely but accurately described by al-Layt̲h̲, the editor of the *K. al-ʿAyn* of al-K̲h̲alīl b. Aḥmad al-Farāhīdī (d. *ca.* 170/786): the plants *al-g̲h̲aḍā* (Arthroenemum c.q. Salicornia) and *al-rimt̲h̲* are burnt while green; the ashes are slaked with water which then consolidates into *ḳily* (see *LA*, s.v.).

Ḳily is used for various purposes: in the absence of soap (*ṣābūn*), clothes are washed with it (see *LA*: Yāḳūt, iii, 465). Chemists used it to manufacture pungent lyes (Muḥammad b. Zakariyyāʾ al-Rāzī, *K. al-Asrār*, ed. M. T. Dānis̲h̲-Paz̲h̲ūh, Tehran 1964, 76, 108 f.; J. Ruska and K. Garbers, *Vorschriften zur Herstellung von scharfen Wassern bei Ǧābir und Rāzī*, in *Isl.* xxv (1939), 1-34).

A prominent part is played by *al-ḳily* in the manufacture of glass. It is melted together with sand and magnesia and thus produces the "substance of glass" (*d̲j̲awhar al-zud̲j̲ād̲j̲*, Masʿūdī, *Murūd̲j̲*, ii, 407). Above all, it happens that the glass easily absorbs the various colorations (see Dimas̲h̲ḳī, *Nuk̲h̲bat al-dahr*, ed. Mehren, 80; J. Ruska, *Das Buch der Alaune und Salze. Ein Grundwerk der spätlateinischen Alchemie*, Berlin 1935).

Because of its biting, burning and purifying effect *al-ḳily* is used in medecine to treat skin diseases like vitiligo (*bahaḳ*), leprosy (*baraṣ*), scabies (*d̲j̲arab*) and also wounds and sores (*d̲j̲irāḥ, ḳurūḥ*). Morbid growths are also etched with it (Masīḥ al-Dimas̲h̲ḳī, who lived in the time of Hārūn al-Ras̲h̲īd, in Ibn al-Bayṭār, iv, 31; ʿAlī b. Rabban al-Ṭabarī, *Firdaws al-ḥikma*, Berlin 1928, 322; Pseudo-T̲h̲ābit b. Ḳurra, *K. al-D̲h̲ak̲h̲īra*, ed. G. Sobhy, Cairo 1928, 114; Ibn Sīna, *Ḳānūn*, Rome 1593, i, 248; *The medical formulary of al-Samarqandī*, ed. M. Levey and N. al-Khaledy, Philadelphia 1967, 148; Ḳazwīnī, *ʿAd̲j̲āʾib*, 233). Many people apply *al-ḳily* and vinegar on scorpion stings (Ibn Ḳutayba, *ʿUyūn*, ii, 102).

KIMĀK (in the texts usually Kīmāk, often wrongly vocalised Kaymāk), an early Turkish people living in western Siberia on the lower course of the Irtis̲h̲ River and on its tributaries the Is̲h̲im and Tobol, possibly as far north as the confluence of the Irtis̲h̲ and Ob and as far west as the Ural Mts.; they are mentioned in Islamic sources from the 3rd/9th century onwards.

The most detailed accounts of the Kimāk and their territories are in the anonymous *Ḥudud al-ʿālam* (begun 372/982-3), tr. Minorsky, 99-100, 304-10, and in Gardīzī's *Zayn al-ak̲h̲bār*, ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 257-9. There is considerable confusion in these and other sources on the localisation of the Kimāk, possibly reflecting a major historical displacement of the tribe or else a confusion between their winter and summer pastures; but there must certainly have been confusion from the fact that the two major sources above believed that the Irtis̲h̲ flowed westwards through the Urals, becoming the Kama and joining the Volga in Bulg̲h̲ār. The *Ḥudūd* places the Kimāk to the west of the Ḳirg̲h̲īz and to the east of the Ḳīpcaḳ [*qq.v.*], but all the sources agree that to the north of them lay the forest lands inhabited by savage peoples who exchanged their goods by dumb barter. The fur-trapping Ḳirg̲h̲īz tribe of the K.s.y.m (* Kis̲h̲tim?) mentioned by the *Ḥudūd* as living near the Kimāk may have been Samoyedes or a Yenisei Palaeo-asiatic people (see Minorsky, *Sharaf al-Dīn Ṭāhir Marvazī on China, the Turks and India*, 107-8). The Kimāk also had connections with the Og̲h̲uz to the south of them, and are said to have visited the Og̲h̲uz pasture-grounds in summer, possibly explaining why Muḳaddasī, 274, says that Sawrān on the middle Sīr Daryā is a frontier post against the G̲h̲uzz and Kimāk.

A legendary account of Kimāk origins given by Gardīzī mentions seven component groups, such as the Īmī, Īmāk, Tatār, Bayāndur, K̲h̲īfcāḳ, etc., and in his section on the Yag̲h̲mā tribe (ed. Ḥabībī, 260), he gives to the chief of the Kimāk the titles *s̲h̲ad* and *tutug̲h̲/tutuḳ*. The *Ḥudūd*, however, mentions that the ruler of the Kimāk is called the K̲h̲āḳān and has under him eleven subordinate chiefs. Two routes northwards to the Kimāk country from the northern fringes of Transoxania are mentioned: one from Ṭarāz or Talas, taking 80 days by swift horse (Ibn K̲h̲urradād̲h̲bih, Ḳudāma, the *Ḥudūd*), and another more westerly route from Yāngi-kant or Dih-i Naw near the Sir Daryā mouth (Gardīzī). The country of the Kimāk was excessively cold, so that the Kimāk lived in subterranean dwellings in winter and hunted on skis. They were in part pastoralist nomads, but were also trappers of sable and marten furs, which were exported to the Islamic lands; also mentioned is the *k̲h̲aland̲j̲* hardwood of the forest zone, brought from the Kimāk lands and used for making bowls and such-like table ware (see D̲j̲āḥiẓ, *Buk̲h̲alāʾ*, ed. Ḥād̲j̲irī, 54, tr. Pellat, 77: *k̲h̲aland̲j̲iyya kīmākiyya*). The only town, or rather encampment, of any signifi-

cance, was the Khāķān's summer residence, Namakiyya (*Yimakiyya?). The Kimāk worshipped fire and water and venerated the Irtish; according to Abū Dulaf al-Khazradjī in Yāķūt, *Buldān*, iii, 448, the Turks' "magnetic rainstone" belonged to the Kimāk.

The main significance of this remote people, who can never as such have been Muslim and who impinge little on Islamic history, is that the much more important people of the Ķīpčak [*q.v.*], the later Comans or Polovtsi, apparently sprang from them and eventually overshadowed them. By the late 5th/11th century, the Kimāk, whom Maḥmūd Kāshgharī, iii, 22, tr. Atalay, iii, 29, names as the Yamak (*Yimāk), were reckoned as a group of Ķīpčaķ, but different in origin; it is clear that the remnants of the earlier Kimāk were now being absorbed into the rising tribal confederation of the Ķīpčaķ. In the ensuing period, the name "Kimāk" fades into oblivion, although we belatedly hear of the Yimāk in association with the Ķīpčaķ and Ķanghlī [*q.v.*] at the time of the appearance of the Mongols; thus Nasawī, *Sīrat Sulṭān Djalāl al-Dīn*, tr. Houdas, 44, 72, says that the Khwārazm-Shāh's mother Terken Khātūn was of the Baya'ut branch of the Yimāk.

(C. E. Bosworth)

ĶIMĀR, the name given in Islamic geographical and travel literature to Khmer or Cambodia. The geography and political organisation of South-East Asia early became of interest to Islamic scholars because of trade links with Further India and China, and information was brought back by, *inter alios*, Arab and Persian merchants and navigators. Some of this information relates to the Khmer kingdom on the lower Mekong River, an outpost of Indian cultural and religious life, which lasted from the beginning of the 9th century to the middle of the 13th century (see R. Grousset, *Histoire de l'Extrème-Orient*, Paris 1929, 559-68, 587-8; G. Coedès, *Les états hindouisés d'Indochine et d'Indonésie*[3], Paris 1964, ch. vii, § 1, viii, § 1, ix, § 1, x, § 1, xi, § 1, Eng. tr. *The Indianized states of Southeast Asia*, Honolulu 1968).

Thus Ibn Khurradādhbih (mid-3rd/9th century), 66, 68, mentions Ķimār as a place on the route to the Far East. Some decades later, Ibn Rusta, 132-3, tr. Wiet, 148-50, devotes considerable space to the customs of the kings of Ķimār, their justice, their severity against fornication, adultery and wine-drinking, and he remarks on the flourishing state of the ascetic and eremitical life there; Muslim merchants were welcomed and not molested, and one Islamic funerary inscription has in fact been found in Cambodia [see KITĀBĀT. 8. South-East Asia]. Al-Mas'ūdī, *Murūdj*, i, 169 ff., = §§ 178 ff., has a lengthy anecdote on the relations of the king of Ķimār and the ruler named as *al-Maharādj*, the usual designation in the Islamic sources for the ruler of the kingdom of Śrīvijaya (Zābadj, Zābidj), centred on Palembang in Sumatra but also controlling the Malayan peninsula. Ibn Rusta names as his source one Abū 'Abd Allāh Muḥammad b. Isḥāķ who had resided for two years in Ķimār, probably early in the 3rd/9th century under the great king Jayavarman II Parameśvara of Angkor (802-50); information from this authority came first to Ibn Khurradādhbih, who referred to Ķimār only cursorily, and was eventually utilised even by al-Idrīsī, see S. Maqbul Ahmad, *India and the neighbouring territories in the* Kitāb Nuzhat al-mushtāq fi 'khtirāq al-'āfāq *of al-Sharīf al-Idrīsī*, Leiden 1960, 29, 142.

The *Ḥudūd al-'ālam* (372/982), tr. Minorsky, 86-7, mentions three great kingdoms of South-East Asia, sc. Ķāmarūn (Kāmarūpa, Assam [see ASSAM and KĀMRŪP], Ṣanf (Čampa, southern Annam or South Vietnam) and Ķimār, and it states that two of the most precious products of Ķimār were elephants' tusks and aloes wood. The aloes wood of Ķimār (*'ūd ķimārī*) is much-mentioned in Islamic sources, as is that of Čampa (*'ūd ṣanfī*), but there is considerable confusion in the sources about the origins of the different kinds of aloes wood stemming from eastern India and South-East Asia, with a particular uncertainty over the wood of Ķimār and that of Kāmarūpa. Moreover, Ibn Baṭṭūṭa, iv, 240-1, 241-2, when speaking of Djāwa (possibly Sumatra, since Sumatra and Java were frequently confused or even regarded as one island by the Muslims) mentions Ķ.māra as part of that land (*min ba'ḍ bilādihā*) and the Ķ.mārī variety of aloes wood as being particularly fine. See, in regard to these problems, the discussions about the various varieties in Ya'ķūbī, *Buldān*, 367-8, tr. Wiet, 238-9; and also Maqbul Ahmad, *op. cit.*, commentary, 128-9, and J. D. Latham, *Arabic into mediaeval Latin: Letter C, M.L.D.*, in *JSS*, xxi (1976), 135-7 (on the linguistic problems involved).

Ferrand, *Relations de voyages et textes géographiques arabes, persans et turcs relatifs à l'Extrème-Orient du VIIIe au XVIIIe siècles*, Paris 1913-14, i, 229-30 (= Abū Dulaf al-Khazradjī's information on Ķimār), and index s.v. "Khmèr".

(C. E. Bosworth)

ĶIMĀR is the most common Islamic term for gambling, which is strictly forbidden according to Muslim law. The prohibition goes back to the references to *maysir* [*q.v.*] in Ķur'ān, II, 219/216, and V, 90 f./92 f. *Maysir* was expressly equated with *ķimār* in general, supposedly already by 'Abd Allāh b. 'Umar (cf. al-Bukhārī, *al-Adab al-mufrad*, Cairo 1375, 325). Voices querying this assumption, and the assumption that the Ķur'ān had the legal classification of "forbidden" in mind, were rarely raised, and then only for the sake of argument. For all we know, the Muslim ban on all gambling has existed since the time of the Prophet in the same form as later on, and has remained in force throughout. Gambling was conceived as a transaction in which property changed hands arbitrarily and unproductively, something falling also under the injunction of Ķur'ān, IV, 29/33, against frivolous and worthless (*bāṭil*) business transactions. Economic theory, and economic realities, tended to favour a strict view of what constituted gambling.

According to Muslim sources, universal and reckless gambling was endemic in pre-Islamic Arabia. Although the Muslim attitude toward the *Djāhiliyya* no doubt contributed to this view, gambling was probably widely practised, and in a variety of ways, among which the drawing of arrows and the stake racing of horses and camels were the most prominent. The actual *maysir* game, as painstakingly reconstructed from stray verses of poetry by later scholars, principal among them Ibn Ķutayba, *al-Maysir wa-'l-ķidāḥ* (Cairo 1342), is presented to us as a kind of ceremonial lottery organised for charity.

Several gambling stories lead into the time of the Prophet. Thus, wagering with unbelievers by Abū Bakr "before gambling was forbidden" is mentioned in the Ḳur'ān commentaries in connection with Ḳur'ān, XXX, 1-4/1-3; it appears to be a rather old story, though hardly historical. Another, no less famous story, reported in connection with the battle of Badr, that of Abū Lahab gambling with al-ʿĀṣ b. Hishām, may also be old, but its connection with gambling can be shown to be mostly a later elaboration. The Ḳur'ān clearly indicates the social and religious undesirability of gambling: it is something causing quarrels, and it interferes with the performance of worship and prayer. However, the commentators were at a loss to cite any particular occasion for the prohibition. While there is much room for speculation, no convincing historical explanation can be offered, unless there is some significance in the fact that the *awā'il* literature credits a contemporary of the Prophet, al-Aḳraʿ b. Ḥābis [*q.v.*], with being the first to forbid gambling.

In spite of its being prohibited, gambling, or what was considered as such, seems to have always flourished everywhere in the Muslim world and at all levels of Muslim society. Lotteries proper appear to have been unknown in Islamic times, and wagering on unstaged events is not much attested (cf. for instance, al-Rāghib al-Iṣfahānī, *Muḥāḍarāt al-udabā'*, Būlāḳ 1286-7/1869-70, i, 127, 141). Favourite outlets for the gambling instinct were, among board games, backgammon (*nard* [*q.v.*]), played with six-sided dice, and, among sports, horse racing [see FURŪSIYYA]. Other board-games, such as merels (*ḳirḳ*) and "fourteen" (*sh/djahārdah/arbaʿata ʿashara*), could involve stakes; chess (*shaṭrandj* [*q.v.*]) and draughts [see KHARBGA], when played for stakes, fell into the category of gambling. Important sports suspected of being devices for gambling were archery (*ramy al-nushshāb* [*q.v.*]) and pigeon flying [see ḤAMĀM], as well as competitions such as footracing, swimming (*sibāḥa*), or, more significant as an organised activity, wrestling (*muṣāraʿa*). Fighting games of animals, looked upon with disapproval on the basis of the Prophetic warning against inciting animals against each other (*taḥrīsh*, *Concordance*, i, 446b, 64-66) and humanitarian principles, included cock [see DĪK] and dog [see KALB] fights. Playing cards (*kandjifa* [*q.v.* in Suppl.]) are attested since Mamlūk times (cf. L. A. Mayer, *Mamluk playing cards*, ed. R. Ettinghausen and O. Kurz, Leiden 1971). All these activities, of course, could be, and were, undertaken and enjoyed for their own sake without any accompanying gambling, and the gambling habits connected with them differed considerably. According to Ibn Taymiyya, *Fatāwī* (Cairo n.d. [1384-6]), iv, 308, *nard* was mostly played for stakes, while chess usually was not. The gambling that did take place was commonly in the form of stakes put up by the participating players themselves or, in the case of sports competitions involving animals, by the owners of the animals. However, although our information on this point is most deficient, it is clear that spectators, too, engaged in gambling on the outcome of the games and sports they watched.

While gambling by outsiders was clearly and indubitably illegal, the main problem for jurists was the determination of what constituted gambling by virtue of the manner in which the stakes were put up. The *ḥadīth* expressly permitted competitions with camels (*khuff*), horses (*ḥāfir*), and arrows (*naṣl*) (*Concordance*, i, 480a, 16-18), and there are stories establishing precedents set by the Prophet. Later jurists were inclined to deny the legality of stakes in connection with any other kind of sports contests and, in particular, board-games (of which *nard* was often declared illegal, even when played without stakes, because of its dependence upon dice). However, the permissibility of the legal sports was rationalised on the ground of their usefulness for military preparedness, an argument which, in practice, could be extended to other sports, even though jurists were usually hesitant to do so. The crucial question of how stakes, where they were at all admissible, could be legally established, was considered under three basic aspects: the establishment of stakes by a non-participant such as, for instance, the government, by one of the participants, and by both (or all) participants. The first two cases were legal (with some doubts in the second case as to what is to be done with the stake if the donor himself is the winner). The third constituted illegal gambling. In order to make it legal, the presence of a "legaliser" (*muḥallil* [*q.v.*]) was required, i.e. the participation of someone who did not contribute to the stakes. There exists a *ḥadīth* to this effect (*Concordance*, ii, 402a, 15-17, etc.). However, the legality of this procedure was debated. Mālik personally did not admit the device of the *muḥallil*, with the consequence that later Mālikīs differed in their attitudes. The Ḥanbalī Ibn Taymiyya and his followers rejected it forcefully. Legal attitudes towards potential gambling games in general can be said to cut across school lines. Shāfiʿism, whose basic text on games was *Kitāb al-Umm* (Būlāḳ 1324), vi, 213, was sometimes attacked, with little justification, for its alleged somewhat more lenient attitude. It should also be noted that by and large the legal literature paid comparatively scant attention to gambling, the reason being not so much the scarcity of gambling activities as the clearcut stand of the law as to its illegality. Occasionally we come across interesting statements, such as the one by the Ḥanafī Ḳāḍīkhān, *Fatāwī* (Calcutta 1835), iv, 587, suggesting that a Muslim could legally gamble with non-Muslims in non-Muslim territory.

The official handling of gambling offenders was determined by the peculiar nature of the circumstances under which gambling took place. Sporting events were mostly held in the open, but much other gambling went on in private. In the larger cities, there were gambling casinos (*dār al-ḳimār*, *ḳimār-khāne*, and other terms), where gambling was encouraged even to the extent of tempting losing gamblers with offers of loans (cf. Ibn Saʿīd, *Mughrib*, ed. and tr. K. L. Tallqvist, Leiden 1899, 30/63). Ordinary taverns, as later on the coffee houses [see ḲAHWA], also had the reputation of allowing gambling (in connection with board-games) on their premises. These could be raided, if local authorities saw fit to do so. However, unless public annoyance resulted, or complaints were lodged, the legal authorities, presumably represented primarily by the office of the *muḥtasib*, had little power or incentive to interfere with voluntary activities undertaken by mutual consent in the privacy of the home. If brought before the authorities, gamblers were liable to discretional (*taʿzīr* [*q.v.*]) punishment. Jurists considered habitual gamblers as having forfeited their *ʿadāla* and their capacity to function as witnesses, thus decisively downgrading their social and legal standing. Social degradation was commonly associated with gambling, at least in literature and theory. In real life, this probably affected only those who were unable to afford the losses incident to their gambling.

Excessive gambling, though evidently not un-

common, is not frequently attested. We hear about the gambler in moderate circumstances who brought ruin upon himself and who neglected his family (cf. Ibn ʿInaba, *ʿUmdat al-ṭālib*, al-Nadjaf 1381/1961, 210), or the poet al-Tallaʿfarī [*q.v.*] whose compulsive gambling made him a liability in court circles and kept him from advancement, or the—fictitious—Ṣūfī who intentionally freed himself from all worldly possessions by gambling them away (cf. H. Ritter, *Das Meer der Seele*, Leiden 1955, 202). Most gambling probably involved the minor losses that the losers were somehow able to absorb. It lies in the nature of gambling activities, especially where they are illegal, that reliable statistics with respect to them are unobtainable, and we have, of course, nothing to go on in the way of statistical information for the Muslim Middle Ages. We can only guess that gambling as such, common as it was, was nevertheless in no way a major economic factor or disruptive social force.

In addition to the legal injunction against it, the social stigma it carried, and its unsuitability for the economic environment created by Islam, gambling also presented a challenge to the metaphysical presuppositions of monotheism. Gambling was felt to be a manifestation of trust in blind fate and of an attempt at interference with, and thus disrespect for, the divine government of the world. A clever story, circulating since at least the 3rd/9th century (cf. in particular, Abū Zayd al-Balkhī, *Risālat ḥikmat waḍʿ al-nard wa 'l-shaṭrandj*), praised *nard*, with its reliance upon chance, as representative of the orthodox view of predetermination and trust in God, and blamed chess for the freedom of choice it requires of the player as something akin to Muʿtazilī doctrine. The story appears to have been meant originally as the opposite of what it seems to suggest, namely, as an argument for the superiority of the Muʿtazilī view of free will, while taking a dim view of gambling as supporting the idea of blind chance in the realm of metaphysics.

Thus the factors that in Islam fought against the human propensity for gambling were numerous. They were, moreover, reinforced by the generally disdainful attitude toward "play and amusement" (*liʿb —lahw*) in all forms professed by religious scholars and intellectuals. This did not eliminate gambling in Islam but, to all appearances, succeeded in keeping its impact upon society largely under control.

Bibliography: T. Hyde, *De ludis orientalibus*, Oxford 1689-94; Mez, *Renaissance*, 382-4 (Eng. tr. 403-6). References to gambling are as sporadic in the modern scholarly literature as they are in the primary sources. A first attempt to bring the available information together has been made by F. Rosenthal, *Gambling in Islam*, Leiden 1975, which contains the full documentation for the present article. (F. Rosenthal)

AL-**KĪMIYĀʾ**, alchemy. The word is derived from Syriac *kīmīyā* which in its turn goes back to Greek χυμεία χημεία "the art of casting or alloying metals" (see Liddell-Scott, *Greek-English lexicon*, 2013). The Arabs believed that *al-kīmiyāʾ* was a loanword from Persian (Ibn Durayd, al-Djawālīḳī), from Hebrew (al-Akfānī) or from Greek and had the meaning of "artifice and acuteness" (*al-ḥīla wa 'l-ḥidhk*, according to al-Khafādjī) or "solution and division" (*al-taḥlīl wa 'l-tafrīḳ*, according to Ibn Sallūm, 11th/17th century). As synonyms of *al-kīmiyāʾ* were used *al-ṣanʿa* (for ποίησις), *al-ṣanʿa al-ilāhiyya* (for ἡ Θεία τέχνη), *ʿilm al-ṣināʿa*, *al-ḥikma*, *al-ʿamal al-aʿẓam* (for τὸ μέγα ἔργον) etc. In abbreviation alchemy is also called *al-kāf*, which serves also as pseudonym (see *WKAS*, i, 439b, 29 ff.).

The Arabs have defined alchemy more than once. Its task is to make gold and silver without falling back upon the corresponding ores (*ṣanʿat al-dhahab wa 'l-fiḍḍa min ghayr maʿādinihā*, Ibn al-Nadīm, *Fihrist*, 351); it should lend colourings to the metals which they did not have before (Djābir b. Ḥayyān, *Textes choisis*, ed. P. Kraus, Paris 1935, 141), and it should alter the specific qualities (*khawāṣṣ*) of the mineral substances so that gold and silver can be obtained through certain artifices (*ḥiyal*; Ghazālī, *Tahāfut*, ed. M. Bouyges, Beirut 1927, 270); through alchemy harm and poverty are done away with (Ikhwān al-Ṣafāʾ, Beirut 1957, iv, 286, 305). The theme of alchemy is therefore the transmutation of base metals into precious ones. And thus certain limitations are given: retrology and mineralogy do not belong to alchemy in the strict sense, although the alchemist must of course have an exact knowledge of minerals (as well as of animal and vegetable substances). In the same way, fabrication of glass and falsification of precious stones (see the *Papyrus Graecus Holmiensis*, ed. O. Lagercrantz, Uppsala 1913) belong no more to alchemy than metallurgical activities like extracting iron, gold and silver from their ores, so precisely and impressively described by al-Hamdānī (*K. al-Djawharatayn*, ed. C. Toll, Uppsala 1968). Nor does the technical chemistry of the craftsman, namely the manufacture of tints, colours and perfumes, come within the field of alchemy. The title *Kīmiyāʾ al-ʿiṭr* (ed. K. Garbers, Leipzig 1948) which al-Kindī gives to his book on the falsification of perfumes is as metaphorical as the *Kīmiyāʾ al-saʿāda* with which the mystics entitled their writings (see *WKAS*, i, 515b). Finally, it should be mentioned that the notion of "pharmaceutical chemistry" did not exist in the Islamic Middle Ages. The often very complicated "compound medicines" (*al-adwiya al-murakkaba*) are prepared by the physician or the apothecary according to Galen's work *De compositione medicamentorum* or to the many *Aḳrābādhīnāt* [*q.v.*] composed by the Arabs. There were of course points of contact between the various professions: the metallurgists and perfumers worked with the same instruments and appliances as the alchemists. Some of the latter also excelled in the related sciences, like Muḥammad b. Zakariyyāʾ al-Rāzī, who classified the minerals. Alchemy, however, the art of transmuting metals, has to be singled out from the other more technically orientated professions because of its theoretical foundations.

Alchemy originated among the Greeks. In order to prevent misunderstandings, it should be mentioned that the fourth book of Aristotle's *Meteorology* (the genuineness of which is disputed) is neither a writing about chemistry in the modern sense of the word nor was it a starting-point for alchemy. It discusses only the primary qualities as causes of all changes in nature (see J. During, *Aristotle's chemical treatise Meteorologica, Book IV*, Göteborg 1944; H. Happ, *Der chemische Traktat des Aristoteles, Meteorologie IV*, in *Synusia, Festgabe W. Schadewaldt*, Pfullingen 1965, 289-322). *Ca.* 200 B.C. Bolus of Mendes knew certain techniques of colouring, and such techniques, combined with neo-Platonic, gnostic and hermetic ideas (Stoic philosophy seems also to have had some influence) helped alchemy to assert itself in Egypt (H. Diels, *Antike Technik*, 2, Leipzig-Berlin 1920, 121-54). From the period between the 2nd and 3rd centuries A.D. (see F. Sherwood Taylor, *The origins of Greek alchemy*, in *Ambix*, i (1937), 30-47; J. Lind-

say, *The origins of alchemy in Graeco-Roman Egypt*, London 1970) date a number of writings disseminated under the names of Hermes, Thoth, Agathodaimon, Cleopatra, Moses, Solomon, Mary, Jesus, Democritus (or Democrates), Zarathustra, Astanes etc. At the beginning of the 4th century these pseudographs are joined by the writings of Zosimus of Panopolis (= Akhmīm [*q.v.*]), the genuineness of which is better vouched for. In the 6th century the neo-Platonic philosopher Alymiodorus and emperor Heraclius wrote also on alchemy. A not inconsiderable amount of these Greek writings were translated into Arabic, but we have no exact information about times and places of these translations. It seems however that the first were made towards the end of the 2nd/8th century and that the greater part of these writings came to the Arabs in the 3rd/9th century (D. M. Dunlop, in *JRAS* (1974), 6 ff., makes it clear that the assertion according to which a work of Zosimus was translated into Arabic already in 38/659, is false). It is possible that in some cases there may have been intermediary translations in Syriac (for Syrian alchemy, see R. Duval in M. Berthelot, *La Chimie au moyen âge*, ii, Paris 1893), but it is not clear whether Ḥunayn b. Isḥāḳ [*q.v.*] and his pupils took part in the work of these translations. Most of the Greek writings have only been preserved in a very poor and fragmentary way. The oldest codex is Marcianus 299 dating from the 11th century (see M. Berthelot and Ch. E. Ruelle, *Collection des anciens alchimistes grecs*, i-iii, Paris 1887-8; J. Bidez, F. Cumont *et alii*, *Catalogue des manuscrits alchimiques grecs*, i ff., Brussels 1927 ff.). Since the Arabic translations are thus two hundred years older, and the Arabs at that period still knew an essentially greater amount of Greek writings than we do at present, the oriental tradition is of the greatest importance. It is certain that the study of Arabic alchemical literature will bring to light Greek works which have been lost in their original language.

Unfortunately, Arabic alchemistic literature has remained until now still a *moles indigesta*. Very many manuscripts have been preserved, but only an extremely small part of their contents has been disclosed through catalogues or published. Consequently, it is not yet possible to sketch out a history of Arabic alchemy. In particular, the beginnings of this science in the 2nd/8th and 3rd/9th centuries are still largely wrapped in darkness. It may however be stated that already in the period in which the *Corpus Gabirianum* (end of the 3rd/9th—beginning of the 4th/10th centuries) and the works of Muḥammad b. Zakariyyāʾ al-Rāzī [*q.v.*] were compiled, an important literature must have come into being, whose authors might have been Greek, Egyptian, Jewish, Christian, Persian or Indian wise men and philosophers. This pseudographic literature uses to a great extent the same names that served early Greek alchemy as designations. Some writings are in fact translations of Greek works; others were composed directly in Arabic but are imitations of Greek examples. It should however not be assumed that all sentences of Greek wise men, quoted by the Arabs, are taken from specific writings which are ascribed to these wise men. It seems rather that some of them originate only from doxographical collective works.

Nevertheless, a great number of Greek notions are found in these writings. The etyma of the terms *al-kīmiyāʾ*, *al-ṣanʿa al-ilāhiyya* etc. have already been mentioned above. The metals are called *al-adjsād*, corresponding to τὰ σώματα, quicksilver and sulphur are *al-arwāḥ* τὰ πνεύματα. Elixir, *al-iksīr* is the loanword τὸ ξηρίον, the distilling apparatuses *al-uthāl* and *al-anbīḳ* are derived from τὸ αἰθάλιον and ὁ ἄμβιξ, the processes *tabyīḍ*, *taswīd*. *tashmīʾ*, *taṣdiʾa* etc. are adaptations from λεύκωσις μέλανσις, ἐγκήρωσις, ἴωσις. In the same way a number of pseudonyms are imitations of Greek models, e.g. *ziʾbaḳ sharḳī* from ὑδράργυρος ἀνατολική, *zabad al-ḳamar* from ἀφροσέληνον, *kibrīta lā taḥtariḳ* from Θεῖον ἄκαυστον and *laban al-ʿadhrāʾ* from γάλα παρθενικόν (for other pseudonyms formed with *laban*, see *WKAS*, ii, 25 ff.). To these are added whole theorems: *al-ṭabīʿa tafraḥ bi 'l-ṭabīʿa* is the innumerably repeated ἡ φύσις τῇ φύσει τέρπεται, and *lam tafʿal al-ṭabīʿa shayʾan bāṭilan lā fāʾidata lahū* corresponds to ἡ φύσις οὐδὲν ποιεῖ μάτην. All this shows without any doubt the origin of Arabic alchemy.

We thus possess a great number of Arabic writings, fragments and quotations in which our attention is caught by the names of Pythagoras, Archelaus, Socrates, Plato, Aristotle, Porphyrius, Galen, Democritus, Zosimus and Theosebeia, Secundus "the silent philosopher" and many others. Often Hermes Trismegistus [see HIRMIS] is mentioned, who in the opinion of the alchemists was the first to speak about alchemy (*ʿilm al-ṣanʿa*, see *Fihrist*, 351). The writings attributed to him, *al-Risāla al-falakiyya al-kubrā*, *Risālat al-Sirr*, *Tadbīr Hirmis al-Harāmisa*, *al-Dhakhīra al-iskandariyya*, etc. have introductions in which in a legendary way is described how these texts were found in temples, caves and sepulchral vaults. The "Emerald table", a brief text full of symbols, was considered to be the key to the ultimate secrets of nature (see J. Ruska, *Tabula smaragdina. Ein Beitrag zur Geschichte der hermetischen Literatur*, Heidelberg 1926; M. Plessner, *Neue Materialien zur Geschichte der Tabula Smaragdina*, in *Isl.*, xvi (1927), 77-113). Sentences by Hermes are to be found in almost every Arabic alchemistic work (see e.g. H. E. Stapleton, G. L. Lewis, F. Sherwood Taylor, *The sayings of Hermes quoted in the Māʾ al-Waraḳī of Ibn Umail*, in *Ambix*, iii (1949), 69-90). Apollonius of Tyana [see BALĪNŪS] is considered to be the intermediary of the hermetic wisdom. Under his name a big commentary on the "Emerald table", the so-called *Kitāb Sirr al-khalīḳa*, an allegorical book on the seven metals, the *Kitāb al-Aṣnām al-sabʿa*, and other writings were disseminated. Agathodaimon [see AGHĀTHŪDHĪMŪN] is also associated with Hermes. In the *Risālat al-Ḥadhar* he communicates before his death to his pupils the secret of alchemy. Finally they are joined by Cleopatra (see M. Ullmann, *Kleopatra in einer arabischen alchemistischen Disputation*, in *WZKM*, lxiii-lxiv (1972), 158-75). Mary the Jewess, the Persian wise men Djāmāsfand and Ostanes, Mani, an Indian called Biyūn, Adam, Moses, Korah (Kārūn) and many others, whose writings and sentences became known to the Arabs at a relatively early period. This largely still uninvestigated complex of the pseudographs was enlarged by the Arabs since the 3rd/9th and 4th/10th centuries and rendered even more opaque by stamping as alchemists the Umayyad prince Khālid b. Yazīd, the son-in-law of the Prophet, ʿAlī b. Abī Ṭālib, the *Imām* Djaʿfar al-Sādiḳ [*qq.v.*] and the mystics al-Ḥasan al-Baṣrī, Sufyān al-Thawrī, Dhu 'l-Nūn al-Miṣrī and Abu 'l-Ḳāsim al-Djunayd [*qq.v.*]. The alleged writings and doctrines of all these Greek, Persian, Jewish and Arabic authorities form the groundwork for the two large alchemistic corpora which came into being at the turn of the 3rd/9th and the 4th/10th centuries, namely the *Corpus Gabirianum* and the writings of

Muḥammad b. Zakariyyā' al-Rāzī (the mutual relation of these two cycles has been discussed by J. Ruska and K. Garbers, *Vorschriften zur Herstellung von scharfen Wässern bei Ǧābir and Rāzī*, in *Isl.*, xxv (1939), 1-34). Djābir b. Ḥayyān [*q.v.*], who may have died *ca.* 196/812, is considered to be the author of the first work. Meanwhile, P. Kraus has proved that these writings cannot have originated before the second half of the 3rd/9th century and that a team of authors must be supposed (for this problem see also F. Rex, in *Isl.* xlix (1972), 305-10; idem, in *Deutsche Orientalistik am Beispiel Tübingens*, Tübingen 1974, 86-8). Accordingly, the writings of the so-called Ibn Waḥshiyya and the *Muṣḥaf al-djamāʿa*, whose Latin translation carries the title *Turba philosophorum*, may have originated at the turn of the century. In the *Turba* a congress of alchemists is pictured, in which Pythagoras takes the chair and Archelaus records the minutes, while nine pre-Socratic philosophers present their doctrines (J. Ruska, *Turba philosophorum. Ein Beitrag zur Geschichte der Alchemie*, Berlin 1931; M. Plessner, *The place of the Turba Philosophorum in the development of alchemy*, in *Isis*, xlv (1954), 331-8; idem, *Vorsokratische Philosophie und griechische Alchemie in arabisch-lateinischer Überlieferung. Studien über Text, Herkunft und Charakter der Turba Philosophorum*, forthcoming). In the 4th/10th century Muḥammad b. Umayl [*q.v.*] was outstanding with writings of a hermetic-allegorical character, followed in the 5th/11th century by Muḥammad b. ʿAbd al-Malik al-Kāthī, pseudo-Madjrīṭī with the *K. Rutbat al-ḥakīm* and Muḥammad b. Bishrūn. In the 6th/12th century the most important alchemists were the poet and statesman Ḥusayn ʿAlī al-Ṭughrāʾī and the preacher in Fās, ʿAlī b. Mūsā, called Ibn Arfaʿ Raʾs. Around the middle of the 7th/13th century, Abu 'l-Ḳāsim al-Sīmāwī (*Book of knowledge acquired concerning the cultivation of gold by Abu 'l-Qāsim Muḥammad Ibn Aḥmad al-ʿIrāqī*, ed. E. J. Holmyard, Paris 1923) worked in ʿIrāḳ, and in the 8th/14th century the Egyptian Aydamir b. ʿAlī al-Djildakī [*q.v.*] produced an unprecedented number of books in which he summarised and commented upon everything which had been written before him on alchemy and magic. In the following period a number of authors still further appear who are of importance partly as compilers, partly as producers of brief original writings, like al-Izniḳī (= ʿAlī Čelebī), al-Maṣmūdī, Bel Mughūsh al-Maghribī and others. In the second half of the 11th/17th century Ṣāliḥ b. Naṣr Allāh b. Sallūm, the court physician of sultan Meḥemmet IV (1058-99/1648-87), tried to introduce into Arabic medicine the chemical concepts of Paracelsus, which gave the alchemists the chance to set about new ways. They did not however avail themselves of these; on the contrary, they continued until recent times the ancient fruitless search for the "philosopher's stone" (G. Salman, *Archives Marocaines*, vii (1906), 451 ff.; C. Snouck Hurgronje, *Mekka*, ii, The Hague 1889, 215, Eng. tr. J. H. Monahan, Leiden-London 1931, 162 ff.; E. W. Lane, *The manners and customs of the modern Egyptians*, ch. xii; C. Barbier de Meynard, *L'Alchimiste, comédie en dialecte turc azeri*, in *JA*, 8e série, vii (1886), 5-66; Osman Nevres, in O. Rescher, *Beiträge zur arabischen Poesie*, iv/2, Istanbul, n.d., 92 ff.).

In the Middle Ages Arabic works were translated into Latin. We have in Latin versions the *Tabula smaragdina*, the *Tabula chemica*, the *Practica Mariae prophetissae*, the *Liber de compositione alchemiae* of Morienus (translated by Robert of Chester in 1144; partly translated by J. W. von Goethe, *Die Schriften zu den Naturwissenschaften*, Part 1, Vol. vi: *Zur Farbenlehre, Historischer Teil*, revised by D. Kuhn, Weimar 1957, 131 ff. Part 2, Vol. vi: *Ergänzungen und Erklärungen*, Weimar 1959, 439-41), the *Liber secretarum alchemiae* of Calid, the *Liber de septuaginta* and the *Liber misericordiae* of Geber (E. Darmstaedter, *Eine lateinische Übersetzung des grösseren Kitâb alraḥma*, in *Sudhoffs Archiv*, xvii (1925), 181-97) and many other works (see M. Steinschneider, *Die europäischen Übersetzungen aus dem Arabischen bis Mitte des 17. Jahrhunderts*, repr. Graz 1956, *passim*). It was not the Greek writings, but these Arabic ones which prepared the way for western alchemy (J. Ruska, *Das Buch der Alaune und Salze. Ein Grundwerk der spätlateinischen Alchemie*, Berlin 1935, 11). Thus they introduced a process which leads via Arnald of Villanova, the Latin "Geber" and Paracelsus to Robert Boyle (1627-91), Joseph Black (1728-99), Joseph Priestley (1733-1804), Antoine Laurent Lavoisier (1743-94) and finally to the miracle of modern chemistry. But they also gave important impulses to European cultural history; it may suffice to mention Jakob Böhme, the Rosicrucians, Novalis and Goethe (see R. D. Gray, *Goethe, the alchemist. A study of alchemical symbolism in Goethe's literary and scientific works*, Cambridge 1952).

This concise historical survey makes it clear that Arabic alchemy holds a key-position in the development of chemical thinking as a whole. However, in glaring contrast to its importance, it has been regrettably neglected by research until now. Most of what historians of science have written on the Arabic alchemists is second-hand, based on obsolescent literature and disfigured by gross errors. A vast and fertile field lies here open to research; access to it, however, is not easy.

Alchemy is an extraordinary complex phenomenon which combines many divergent trends. Muḥammad b. Zakariyyāʾ al-Rāzī in his *K. al-Asrār* exerted himself in particular to build up a sober system. The Djābir-writings contain concepts of the Ismāʿīliyya [*q.v.*] which came into existence *ca.* 263/877. The authors introduce also into their thinking magical, arithmological, astrological and biological reflections. The hermetic writings and those of Ibn Umayl are marked by gnosis, others are coloured by strong mysticism. So it becomes understandable that Ibn al-ʿArabī (*Futūḥāt*, ii, 357) can indicate alchemy as a "natural, spiritual, divine science" (*ʿilm ṭabīʿī rūḥānī ilāhī*). As a whole, it was a natural philosophy which aimed not only at teaching the transmutation of the metals, but also at the whole connection of the world. For many scientists, however, the effort to refine matter was inseparable from purification of the soul. The alchemists expressed their insight in theoretical discourses, and also in allegorical stories, myths, visions and poems (Pseudo-Khālid b. Yazīd, Ibn Umayl, Ibn Arfaʿ Raʾs). In order to protect themselves against prosecution by orthodoxy or against competitors, they used pseudonyms and availed themselves of obscure, encoded expressions. All this renders the writings apparently abstruse. It was therefore bound to happen that the "Aufklärer" counted the history of alchemy among the *Geschichte der menschlichen Narrheit* (J. C. Adelung, Leipzig 1785-9), and even in the first edition of the *Encyclopaedia of Islām* E. Wiedemann still remarked: "Often it cannot be understood how reasonable beings could have written such things". Only the science of religion and depth-psychology have

smoothed the way for a more justified and significant explanation of alchemy. J. Evola, C. G. Jung and M. Eliade in particular have rightly shown how alchemy is dominated by mythical, mystical and gnostic ways of thinking. There remains, however, the task of decoding the Arabic texts through exact historical-philological studies, and thus laying foundations which will no longer permit rash conclusions and approximate assertions.

Until now it has not been possible to say much about the theoretical foundations of Arabic alchemy, and even this little only incidentally. The way theories are built up differs considerably from one author to the other, and even in the corpus of writings known under the name of Djābir b. Ḥayyān and thus claiming unity, they show quite varying concepts. Hence only a few basic notions can be given here, which cannot be generally applied.

Transmutation is possible because the various sorts (*anwāʿ*) of metals form only one single species (*djins*). They are differentiated only in accidents (*aʿrāḍ*) which can be proper (*dhātiyya*) or occasional (*ʿaraḍiyya*). The accidents, however, are not stable but changeable, as can be seen in nature. Indeed, the metals grow in the bowels of the earth over long periods. In a sort of maturation process they change from base into precious metals until finally they become gold. According to some scientists, this conversion comes about under the influence of the stars. The alchemist is able to hasten this process in his retorts and to achieve by his skill in one day that for which Nature needs a thousand years. The literature gives hundreds, even thousands of recipes for making gold. Basically three methods can be distinguished:

1. The first method is based on the quicksilver-sulphur theory. In quicksilver water and earth are present, sulphur contains fire and air and thus both substances together hold the four elements. When the particles of sulphur and quicksilver are mixed and enter into a close compound, the heat generates a process of maturation and cooking which result in the various kinds of metals. If the quicksilver is clean and the sulphur pure, if the quantities (*maḳādīr*) of both substances stand in ideal relation to one another and if the heat has the right degree (*iʿtidāl*), pure gold (*dhahab ibrīz*, ὄβρυζον) comes into being. If before maturation coldness enters, then silver originates; if dryness, then red copper. The more disturbing factors enter, the more low-grade the metals become: thus originate tin (*raṣāṣ ḳalāʿī*), iron (*ḥadīd aswad*), plumbago (*usrub*) and antimony (*kuḥl*) (see Ikhwān al-Ṣafāʾ, Beirut 1957, ii, 106 ff.; Ḳazwīnī, *ʿAdjāʾib*, 204 ff.). The alchemist, then, exerts himself to imitate nature. He tries to discover how much sulphur and how much quicksilver is contained in gold and how great the heat must be to bring about the maturation process. If he succeeds in establishing these conditions, he is able to synthesise gold. It should perhaps be added that "quicksilver" and "sulphur" did not necessarily mean for the alchemists the chemical elements Hg and S, but that by these terms they understood rather the basic principles of fluidity and inflammability (they speak of *ziʾbaḳ radjrādj* and *kibrīt muḥtariḳ*).

2. The second method is based on the doctrine of the relations of quantities (*ʿilm al-mawāzīn*) propagated by the authors of the *Corpus Gabirianum*. The alchemist tries to establish the mutual relation of the metals according to volume and weight (*ḥadjm wa-wazn*) and to construct on the ground of these data a body with corresponding volume and weight (for details of these strongly speculative doctrines, see P. Kraus, *Jābir b. Ḥayyān*, ii, Cairo 1942, 187-303, ch. "La théorie de la balance").

3. The most important and most recommended method, however, consists in projecting an elixir [see AL-IKSĪR]. An elixir can be made from mineral, but also from vegetable and animal matter. It is thrown upon a base metal which precedingly has been transposed into the passive (or black i.e. without any quality) condition; it permeates it like yeast pervades dough, and transmutes it into gold which is more valuable than mineral gold.

All these theories were based on premises which could neither be proved nor refuted. Therefore no real progress could be recorded in the dispute of the Muslim scientists about the possibilities of alchemy. It was significant that among the arguments advanced against the alchemists the reference to the *de facto* failure of all endeavours played only a small part. The alchemists admitted the difficulty of their undertaking, but emphasised that it must be possible to rediscover the secret of making gold, undoubtedly known to the wise men of old. The dispute was above all enacted in the theoretical field. Philosophical and theological arguments were put forward and conclusions based on analogy were often drawn.

ʿAmr b. Baḥr al-Djāḥiẓ's [*q.v.*] standpoint towards alchemy is not completely unequivocal. He is sceptical, but poses the question whether once in five thousand years it could be possible to make gold, when the various factors, like the quality of the elements, the right period, the correct position of the stars etc. would coincide accidentally (*K. al-Ḥayawān*, iii, 374 ff.). It seems paradoxical to him that it is possible to make glass from sand, but that it is impossible to transmute brass and quicksilver into gold and silver, although quicksilver more resembles molten silver than sand does pharaonic glass.

Yaʿḳūb b. Isḥāḳ al-Kindī composed the *K. Ibṭāl daʿwā 'l-muddaʿīn ṣanʿat al-dhahab wa 'l-fiḍḍa min ghayr maʿādinihā*, a refutation of those who pretended to be able to win gold and silver otherwise than from ore. According to him mankind is unable to achieve acts which are reserved to nature. This polemic writing was immediately contested by Muḥammad b. Zakariyyāʾ al-Rāzī.

Al-Fārābī (d. 339/950) was of the opinion that transmutation of metals is possible because, according to Aristotle's stonebook, the various sorts (*anwāʿ*) of the metals belong to only one single species (*djins*). But it was indeed extraordinarily hard to realise the transmutation, and a thorough study of logic, mathematics and natural sciences was a prerequisite. The alchemistic texts were rightly veiled by pseudonyms and symbols, because otherwise, anybody might be able to find out the secret of making gold, and gold would become useless as means of payment. This economic argument was repeated again and again by later authors (E. Wiedemann, *Journal für praktische Chemie*, clxxxiv (1907), 115-23; A. Sayılı, *Fârâbî'nin simyanın lüzûmu hakkındaki risâlesi*, in Türk Tarih Kurumu, *Belleten*, xv (1951), 65-79).

The geographer al-Hamdānī (d. 334/945) worked with obvious analogies taken from metallurgy, of which he possessed a thorough knowledge. In the same way as iron and steel could reach various degrees of good quality and pureness through metallurgy, i.e. through the skill of man, in the same way man is able to make in an artificial way gold that otherwise maturates in a natural way in the bowels of the earth

(*K. al-Djawharatayn*, ed. C. Toll, Uppsala 1968, ch. xxxvi).

But the very assertion that man is able to imitate nature was contested peremptorily by Abū Hayyān al-Tawḥīdī and Abū ʿAlī b. Sīnā: the alchemists were only able to make something that externally resembles the precious metals, but the senses do not perceive specific differences (*fuṣūl*) in the metals after the alchemistic operations, but only attributes and accidents (*lawāzim*, *ʿawāriḍ*); the substance (*djawhar*) of the base metals remains untouched (E. J. Holmyard and D. C. Mandeville, *Avicennae de congelatione et conglutinatione lapidum*, Paris 1927, 85 f.; Ibn Sīnā, *K. al-Shifāʾ, al-Ṭabīʿiyyāt*, v, ed. A. Muntaṣir *et alii*, Cairo 1385/1965, 22 f.; G. C. Anawati, *Avicenne et l'alchimie*, in *Convegno internazionale 9-15 April 1969* [*Accademia Nazionale dei Lincei, Atti 13*], Rome 1971, 285-341). Because of these utterances, Ibn Sīnā became the target for the polemics of all later alchemists, in particular of al-Ḥusayn b. ʿAlī al-Ṭughrāʾī and Aydamir b. ʿAlī al-Djildakī.

With his *K. Ḥaḳāʾiḳ al-istishhād*, written in 505/1112, al-Ṭughrāʾī produced the most important writing in defence of alchemy. He meets Ibn Sīnā's objection by stating that the alchemistic processes do not absolutely create a new *differentia specifica* (*faṣl*), but that through them matter is only prepared to take in the *differentia specifica* which is granted to it by the Creator. Al-Ṭughrāʾī's argumentation thus takes account of the front of orthodox theologians, whose criticism found a mouth-piece in Ibn Ḥazm al-Andalūsī, Ibn Taymiyya and the latter's pupil Ibn Ḳayyim al-Djawziyya (d. 750/1349).

The latter's *K. Miftāḥ dār al-saʿāda* contains a polemic of 200 pages against all secret sciences, especially astrology (see C. A. Nallino, *Raccolta*, v, 33 f.). Like Ibn Sīnā, he is of the opinion that the alchemists only keep up appearances, but are in fact unable to make real gold and silver. The economic argument adduced by al-Fārābī to justify the disguise of the alchemistic writings is used by Ibn Ḳayyīm al-Djawziyya to refute alchemy itself: if man were able to make gold and silver, the economic order of the world, created by God, would collapse. Gold would lose its value if it were available in abundance. The social order would also be destroyed because nobody would be willing any more to be the slave of a master (J. W. Livingston, *Ibn Qayyim al-Jawziyyah: A fourteenth century defence against astrological divination and alchemical transmutation*, in *JAOS*, xci (1971).

Ibn Khaldūn also shows himself an adversary of alchemy, which in his opinion is in fact only a kind of magic (*siḥr*). With regard to Ibn Sīnā and al-Ṭughrāʾī his point of view is even somewhat more differentiated, without however alleging essentially new arguments (see G. C. Anawati, *La réfutation de l'alchimie par Ibn Khaldūn*, in *Mélanges d'Islamologie, Vol. mém. A. Abel*, Leiden 1974, 6-17). For this kind of polemic literature see also Abu 'l-Barakāt Hibat Allāh b. Malkā, *K. al-Muʿtabar*, ii, Hyderabad 1358, 231-6; Fakhr al-Dīn al-Rāzī, *K. al-Mabāḥith al-mashriḳiyya*, ii, Hyderabad 1343, 214-18; ʿAbd al-Laṭīf al-Baghdādī (A. Dietrich, *NAWG*, i (1964), no. 2, p. 106); Muḥammad b. Ibrāhīm al-Dimashḳī, *K. Nukhbat al-dahr*, ed. Mehren, 58-61; Khalīl b. Aybak al-Ṣafadī, *K. al-Ghayth al-musadjdjam*, i, Cairo 1305/1887, 9-13.

The theoretical expositions and speculations of the alchemists were partly complete in themselves, and partly completed by experiments in the laboratory. The experiences gained in such experiments gave again rise to new writings and theories. It is probable that alchemy had a greater part in the development of experimental science than medicine, pharmacology, physics and astronomy (see L. Thorndike, *A history of magic and experimental science*, i-viii, London-New York 1923-58). An important experimental achievement was the oxidation of quicksilver which had been exposed continuously to a very slow fire over forty days. Pseudo-Madjrīṭī describes the process in his *K. Rutbat al-ḥakīm* and emphasises that the weight of the matter was the same before and after the experiment (E. J. Holmyard, *Makers of chemistry*, Oxford 1931, 78). The furnishing of a chemical laboratory is very impressively pictured by Ibn Shuhayd (382-426/992-1035) (see J. Dickie, in *al-Andalus*, xxix (1964), 243-310). There were many apparatuses: the *uthāl* (Latin *aludel*), used to distil and to sublimate, the *ḳarʿ* (*cucurbit*), a receiver over which was placed an alembic (*al-anbiḳ* [*q.v.*]), melting-pots (*būtaḳ*, pl. *bawātiḳ*), kilns (*tannūr*, pl. *tanānīr*, Latin *athannor*) to generate high temperatures, phials (*ḳinnīna*), casseroles (*ḳidr*, *tindjir*), pans (*sukurrudja*) and mortars (*hāwūn*). Many apparatus are named after their alleged inventors, like *attūn Fīthāghūras*, the "oven of Pythagoras", the *biʾr Zūsim*, the "pit of Zosimos" and the *ḥammām Māriya*, the bain-marie (see A. Siggel, *Verzeichnis der Apparate und Geräte, die in arabischen alchemistischen Handschriften vorkommen*, in *Deutsche Ak. d. Wiss. zu Berlin*, Institut für Orientforschung, no. 1, Berlin 1950, 91-100; E. J. Holmyard, *Alchemical equipment*, in Ch. Singer *et alii*, *A history of technology*, ii, Oxford 1956, 731-52).

With such apparatus, vessels and ovens the procedures (*tadābīr*), i.e. certain chemical processes, were achieved. The methods of these procedures were essentially the same as those of Greek alchemy, and most of the Arabic *termini technici* are translations of Greek notions. The "solution" (*taḥlīl*, λύσις) of a matter is achieved by water, acids or lyes; the "putrefaction" (*taʿfīn*, σῆψις) is a process of decomposition furthered by water. Distillation and sublimation are indicated with *taṣʿīd* and *taḳṭīr*, calcination with *taklīs*. A substance is consolidated and fixed by *tadjmīd* and *taʿḳīd*. "Blanching" (*tabyīḍ*, λεύκωσις) indicates the making of silver, "reddening" (*taḥmīr*) the making of gold. Many alchemists, however, use these and many other expressions only symbolically or in a completely different meaning for fear that they might reveal their secret. Thus the understanding of alchemical texts is made extraordinarily difficult.

Since the alchemists were obliged from the earliest times to keep their esoteric knowledge secret (see *Papyrus Leidensis*, ed. C. Leemans, Leiden 1843, i, 10, 9: ἐν ἀποκρύφῳ ἔχε ὡς μεγαλομυστήριον, μηδένα δίδασκε), they used innumerable "pseudonyms", not only for the processes but also for the matters and elixirs. The same matter was often indicated with dozens of different names, and conversely, one and the same name was used to design different matters. These pseudonyms also have a Greek tradition. Thus the names of the planets serve as designations of the metals: *al-shams* is gold, *al-ḳamar* is silver, *al-mirrīkh* is iron, etc. Certain words contain the characteristics of a matter: *al-farrār* "the fugitive" is quicksilver, *al-ashḳar* "the reddish" is copper. Often names of animals are used: *al-ʿuḳāb* "the eagle" may designate sal-ammoniac, *al-ʿaḳrab* "the scorpion" and *ʿunuḳ al-ḥayya* "the snake-neck" can stand for sulphur, *ṭāwūs al-barbā* "the peacock of the Egyptian temple" for copper. The

meaning of such pseudonyms varied from one author to the other and from one workshop to the other; they had no general validity.

The first endeavours to solve this lexical problem were undertaken by the Arabs themselves: they composed glossaries or added to bigger theoretical works lists in which the meaning of the pseudonyms was explained. But the value of these lists is small. Only careful critical editions and competent lexicographical revisions of the sources may enable us to travel further in this thorny field, but in not a few cases it will probably be impossible to uncover now the original meaning of the alchemical recipes.

ĶIHĀ [see ķunā].

ĶĪNALĪZĀDE, ʿAlāʾ al-Dīn ʿAlī Čelebi (916-6 Ramaḍān 979/1510-22 January 1572), Ottoman scholar. His grandfather, ʿAbd al-Ķādir from Isparta, was one of the tutors of Meḥemmed the Conqueror, while his father was the *Ķāḍī* Amr Allāh, known also as a poet. His grandfather used to dye his beard with henna, hence was by-named *ķinalī* ("the one with henna"). This nickname was applied to other members of the family as well. Ķīnalīzāde ʿAlī was born in Isparta in 916/1510 where he had his elementary education. His first tutor was one of his relatives, the *Ķāḍī-ʿasker* Ķadrī Efendi. Then, he went to different *madrasas* and completed his education under such scholars as Maʿlūl Emīr, Sinān, Merḥabā, Ķara Ṣāliḥ, and Čiwizāde Muḥyī al-Dīn. In 948/1541, he was assigned by the *Shaykh al-Islām* Abu 'l-Suʿūd (Ebüssuʿūd) to the *madrasas* of Ḥusām al-Dīn (the Ḥusāmiyye) in Edirne as *müderris*. He next taught in the *madrasas* of Ḥamza Bey and Welī al-Dīn-oghlī Aḥmed Pasha—both in Bursa—and in the two *madrasas* of Rüstem Pasha, one in Kütahya and the other in Istanbul, and in *madrasas* of Khāṣṣeki and Semāniyye, also in Istanbul. In the year of 966/1559, when the construction of the *madrasas* of the Süleymāniyye Mosque was completed, he was assigned to one of them as *müderris*, thereby reaching the highest of the academic ranks. In Dhu 'l-Ḥidjdja 970/July-August 1563, he was appointed as *ķāḍī* of Damascus to succeed Ķurd Čelebi. He remained in Damascus nearly four years, after which he was appointed to Cairo and then to Bursa. Two years later he was appointed *ķāḍī* of Edirne, after which he became *ķāḍī* of Istanbul. Shortly afterwards, in Muḥarram 979/June 1571 he became *Ķāḍī-ʿasker* of Anatolia. This same year, while in Edirne with Selīm II, he died (6 Ramaḍān/22 January 1572) from an attack of gout, a complaint he had contracted during his earlier residence in Edirne. His funeral, attended by many of the statesmen and scholars of his time, took place at the Eski Djāmiʿ, and he was buried in the so-called Nāẓir cemetery on the road to Istanbul. In his youth, ʿAlī Efendi was famous for his memory and knew by heart numerous *ḥadīth*s and poems in Arabic, Persian and Turkish. He was versed in most of the branches of the knowledge of his time, including mathematics, astronomy and rhetoric; and while in Egypt his mastery of the Arabic language was admired by all. His son, Ḥasan Čelebi, informs us that he wrote marginal notes to the *Kashshāf* of al-Bayḍāwī up to *Sūrat al-Hūd* and that he corrected other versions of these manuscripts. According to his son's *Tedhkiret al-shuʿarā*ʾ, ʿAṭayī's *Dhayl al-Shaķāʾiķ* and *ʿOthmānlī müʾellifleri*, his works may be summed up as follows: (1) the *Akhlāķ-i ʿAlāʾī*, his most famous work and an important source for the study of Ottoman culture. He completed this work on 25 Ṣafar 973/21 September 1565 when he was the *ķāḍī* of Damascus and dedicated it to ʿAlī Pasha, the *Beglerbegi* of Syria, hence its title *Akhlāķ-i ʿAlāʾī* (For an analysis of the work and its sources, and in particular for its dependence on the *Akhlāķ-i Naṣirī* of Naṣīr al-Dīn Ṭūsī, cf. the article by A. Adnan-Adivar in *IA*, iv, 710-11). (2) his *Dīwān*, which includes his poems in Turkish, Arabic and Persian; (3) the *Ḥāshiye-yi tadjrīd*. He taught *tadjrīd* when he was *müderris* at the Ḥamza Bey Madrasa at Bursa, and wrote these marginal notes at that time; (4) *Ḥāshiye-yi Ḍurar u ghurar ilā niṣfihi*; (5) the *Kitāb al-Karāhat min al-Hidāya*; (6) *Risālatāni fī ḥaķķ al-wāķif*, written as a reply to Shāh Meḥmed Čelebi who had criticised one of his *fatwas* when ʿAlī Efendi was *ķāḍī* of Edirne; (7) the *Esʿāf*; (8) the *Risālet al-sayfiyya wa 'l-ķalemiyya*; (9) the *Ḥāshiye ʿalā Ḥasan Čelebi li-Shārḥ al-Mawāķif*; (10) his *Münsheʾāt*;

(11) the *Ḥāshiye-yi Kashshāf*; (12) the *Ḥāshiye-yi Bayḍāwī*; (13) the *Ṭabaḳāt-i Ḥanafiyya*; (14) the *Sharḥ-i Ḳaṣīde-yi Burde*.

Bibliography: Ḳïnalïzāde Ḥasan Čelebi, *Tedhkiret al-shuʿarāʾ*; Newʿīzāde ʿAṭāyī, *Dhayl al-Shaḳāʾiḳ* (originally called *Ḥadāʾiḳ al-ḥaḳāʾiḳ fī takmilat al-Shaḳāʾiḳ*), 164-8; *Sidjill-i ʿOthmānī*, iii, 501; *ʿOthmānlï müʾellifleri*, i, 406; *İA*, s.v.

(MEHMED ČAVUŞOĞLU)

ḲINALİZÂDE, ḤASAN ČELEBI (953-12 Shawwāl 1012/1546 14 March 1604), Ottoman scholar and biographer. He was born in Bursa where his father ʿAlī Čelebi (see the preceding article) was *müderris* at the Ḥamza Bey Madrasa. He first followed the lectures of Nāẓir-zāde Ramaḍān Efendi, who was *müderris* between 967/1560 and 973/1562 at the Yeñi ʿAlī Pasha Madrasa founded by Semiz ʿAlī Pasha in Istanbul. Afterwards he became a student of Abu 'l-Suʿūd (Ebüssuʿūd) Efendi. He began his career in 975/1567 as a *müderris* at Bursa. One year later, upon the assignment of his father as *ḳāḍī* of Edirne, he was transferred to the Čukhādji Ḥādjdjī Madrasa as a *müderris*. Later he became *müderris* at the Sulṭāniyye Madrasa in Bursa, after which he taught at several *madrasas* in Istanbul, ultimately attaining an appointment to the Süleymāniyye. In Djumādā al-Ākhir 998/April 1590 he was appointed *ḳāḍī* of Damascus, following which he received the *ḳaḍā*'s of Cairo again, Bursa, Gallipoli, Eyyüb and Eski Zaghra respectively. While in this last post he became ill and returned to Istanbul. He then requested and received the *ḳaḍāʾ* of the small town of Reshīd in Egypt, where he died shortly after his arrival. Although credited with several minor works, his fame rests on his biographical dictionary of the Ottoman poets, *Tedhkiret al-shuʿarāʾ*, the autograph of which is in the Library of Istanbul University (TY 1737). This is the fifth work in this genre after those by Sehī, Laṭīfī, ʿAhdī and ʿĀshïḳ Čelibi. Though completed at 994/1586, his own copy shows later revision and corrections. It is dedicated to Murād III and includes three sections: the first devoted to the *sulṭāns*, the second to the *shehzādes* and the third to poets proper, most of whom are also mentioned in previous *tedhkires*. Ḥasan Čelebi made use of the *tedhkire* of *Laṭīfī* [*q.v.*] and, in particular, that of ʿĀshïḳ Čelebi. As may be seen from the alterations in his autograph, his method was to adopt the information given by these two predecessors, recasting it in his own individual, elegant style. However, he sometimes criticises their views on the merits of certain poets and advances his own opinions. The information he has to give about the poets and scholars with whom he was personally acquainted gives his work a particular value.

Bibliography: ʿAṭāyī, *Shaḳāʾiḳ al-nuʿmāniyya dheyli*, Istanbul 1269, 491; *Sidjill-i ʿOthmānī*, ii, 127; Gibb, *A history of Ottoman poetry*, iii, 199. For the *tedhkire* manuscripts, see *Istanbul kitablıkları tarih-coğrafya yazmaları*, vii, 588-97.

(MEHMED ČAVUŞOĞLU)

KINĀNA B. KHUZAYMA, an Arab tribe, genealogically related to Asad (b. Khuzayma) [*q.v.*]. The territories of Kināna were around Mecca from the Tihāma on the south-west, where they were next to Hudhayl, to the north-east where they bordered on Asad. There were six main subdivisions of the tribe, though more are sometimes mentioned: al-Naḍr (or Ḳays), the ancestor of Ḳuraysh [*q.v.*], which is reckoned a separate tribe; Mālik; Milkān (or Malkān); ʿĀmir; ʿAmr; ʿAbd Manāt. The latter was further subdivided. Bakr b. ʿAbd Manāt was a strong group, and included as parts Mudlidj, al-Duʾil and Layth, as well as the more independent Ḍamra. Ghifār [*q.v.*] is sometimes reckoned to Ḍamra and sometimes said to be Ghifār b. ʿAbd Manāt. Al-Ḥārith b. ʿAbd Manāt was the main part of the Aḥābīsh [see ḤABASH, end], who were probably a collection of small groups without common ancestry (named as ʿAḍal, al-Ḳāra and al-Dīsh, all of B. al-Hūn b. Khuzayma, together with B. al-Muṣṭaliḳ of Khuzāʿ and sometimes B. Liḥyān of Hudhayl).

History. At an early date Fihr, the common ancestor of all Ḳuraysh, was leader of Kināna when they defeated a Ḥimyarite force. His descendant Ḳusayy [*q.v.*] had the help of men of Kināna in the fighting which gave him control of Mecca, and his position was consolidated by the arbitration in his favour of Yaʿmar b. ʿAwf of Layth, though most of Bakr b. ʿAbd Manāt opposed Ḳusayy. In the wars of the Fidjār [*q.v.*] the "day of Nakhla" resulted from the killing of a Kilābī by al-Barrāḍ b. Ḳays, a man of Ḍamra rejected by his tribe but protected by al-Duʾil, and a *ḥalīf* of Ḥarb b. Umayya (of Ḳuraysh). In general, Kināna, including Bakr, supported Ḳuraysh against Hawāzin, but some parts of Bakr continued to feel hostility towards Ḳuraysh, especially after the chief of Bakr was killed in revenge for a youth of Ḳuraysh. Because of this matter Ḳuraysh hesitated before setting out for Badr in 624, until a man of Mudlidj guaranteed that Bakr would not attack them from the rear. After this, however, Bakr supported Ḳuraysh against Muḥammad, and it was an attack by Bakr on Muḥammad's allies of Khuzāʿa which led to his conquest of Mecca in 630. In his force on this occasion Muḥammad had men from Ghifār, Ḍamra and Layth. Little is heard of the movements of Kināna after this. A prominent member of the tribe, Abu 'l-Aswad al-Duʾalī [*q.v.*], is known as a supporter of ʿAlī, and is incorrectly alleged to be the founder of Arabic grammar. In 230/844-5 al-Ṭabarī mentions some Kināna as still near Mecca but apparently weak. They are also recorded in the Ḥawrān, and, in the 6th/12th century, in Upper Egypt and the western delta.

Bibliography: Ibn Hishām, 79 f., 430-2, etc.; Caussin de Perceval, *Histoire des arabes avant l'islamisme*, index; al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, i, 350 f.; idem, *Nihāyat al-arab*, mentions most subdivisions; Yāḳūt, *Muʿdjam al-buldān*, index of tribes; Watt, *Muhammad at Medina*, index; Ibn Ḥabīb, *Muḥabbar*, 156 f. (intercalators of months from Kināna), 195 f. (al-Barrāḍ), etc.; idem, *Munammaḳ*, index; al-Azraḳī, ed. Wüstenfeld, 61-4.

(W. M. WATT)

KINĀYA (A.), a technical term of rhetoric corresponding approximately to "metonymy" and meaning the replacement, under certain conditions, of a word by another word which has a logical connection with it (from cause to effect, from containing to contained, from physical to moral, by apposition etc.). Etymologically, this term implies a sense of dissimulation found also in the word *kunya* [*q.v.*], which is considered by such a grammarian as al-Mubarrad (*Kāmil*, 677) to be derived from *kināya*. *Kināya* constitutes a particular type of metaphor (*istiʿāra* [*q.v.*]) and it is distinct from trope (*madjāz* [*q.v.*]) in that the latter is only to be understood if taken in its figurative sense (e.g. *raʿaynā 'l-ghayth* "we have caused the rain to feed", where *ghayth* can only mean the grass appearing after a fall of rain). For some theorists, *kināya* covers allusion (of which the various forms are called *taʿrīḍ*, *talwīḥ*, *ramz*, *īmāʾ* and *ishāra*), but this is not so because, if it may be

taken both in its proper and its figurative sense, it demands, if it is to be genuinely understood, an effort of imagination on the part of the listener, who may otherwise turn a deaf ear; after al-Tha'ālibī, Ibn al-Athīr saw fit to put together *kināya* and *ta'rīḍ* in *naw'* xix of *al-Mathal al-sā'ir*, so as to condemn the errors made by his predecessors in this regard and to make plain the differences which exist between the two concepts. On the other hand, euphemism, antiphrase and other methods of dissimulation of a more popular nature are to be included under the heading of *kināya*.

In general, if we are to follow Ibn al-Athīr, *kināya* describes a word or a group of words which may be interpreted either in their literal or figurative sense and are used to replace other words which are to be rejected, sometimes simply for considerations of style, sometimes out of respect for decency, avoiding the use of words likely to shock or judged to be of bad omen; a logical relation must however exist between the literal and the figurative, the *kināya* and the *maknī 'anhu*.

This is not the place to examine the other definitions proposed by the theorists and to take into account their disagreements regarding classification and nomenclature. We will simply observe that al-Sakkākī distinguishes three types: (1) *tamthīl* or assimilation of one thing to another (e.g. *naḳī al-thawb* "clean of clothing" meaning "exempt from moral vice". (2) *irdāf* "implication", a term which Ḳudāma (*Naḳd*, 88) invariably uses to the exclusion of *kināya* (e.g. *ṭawīl al-nidjād* "with long crossbelt", meaning "tall in stature", because the one cannot go without the other); in certain cases it is by a series of implications, more precisely of *ridf*s "pillion-riders" that the intended sense is reached (*kathīr al-ramād* "having a great quantity of ash" to express generosity, hospitality: in fact the abundance of ash implies successively abundance of fire, then of wood and of cooking for a large number of guests). (3) *mudjāwara* "proximity" or "association" (e.g. the container for the contained: *zudjādja* "bottle" = "wine").

Studies and chapters devoted to *kināya* contain first a number of quotations from the Ḳur'ān and from *ḥadīth*s which may be interpreted as metonomies; thus LXXIV, 4: *wa-thiyāba-ka faṭahhir*" and your clothing, purify" where *thiyāb* may be understood as meaning the soul, behaviour etc. Another characteristic example is provided by XXXVIII, 22/23: *la-hū tis'un wa-tis'ūna na'djatan wa-lī na'djatun wāḥida*, which is translated as "he has ninety-nine sheep and I have only one sheep", but where some, influenced no doubt by popular usage according to which the wife is called *na'dja* (al-Djāḥiẓ, *Bukhalā'*, 23, tr. Pellat, 40; *Ḥayawān*, i, 212), see a *kināya*. There seems little purpose in providing extensive examples of the ways in which the followers of allegorical interpretation (*ta'wīl*) can take advantage of this concept of *kināya* in order to justify all kinds of daring interpretations.

It must be said that the *fuḳahā'* themselves are sometimes obliged to take it into account where they have to use verses directly concerning the *Sharī'a*. This is the case for example with IV, 46/43, V, 9/6 where two *kināya*s appear: *aw djā'a aḥadun min al-ghā'iṭi aw lāmastumu 'l-nisā'* "if one (of you) has come from the place hidden from view or if you have touched women", then washing is obligatory; *ghā'iṭ* comes to mean latrines, then excrement, and *lāmasa* may be taken in a literal sense of "touching" or in the figurative sense of "having sexual relations with a woman", so this verb is of a type which provokes discussions. Another notable example is the text which demands, for the application of the legal penalty to the fornicator, the presence of witnesses testifying that they have seen *al-mīl fi 'l-mukuḥla* "the needle in the container for kohl"; but here the context leaves no doubt as to the true sense of the expression.

In these last examples it is a case of euphemisms whose purpose is to "palliate the ugly" (*taḥsīn al-ḳabīḥ*), as al-Tha'ālibī says (*Kināyat*, 55), and it is the examples of this genre that the authors most often quote, borrowing them from the Ḳur'ān, from *ḥadīth*s, from poetry; generally they concern woman, the sexual organs, defecation, various forms of uncleanness and everything which is of bad omen. Some *kināya*s testify to great finesse, notably that quoted by al-Mas'ūdī (*Murūdj*, vi, 350-4 = § 2550), where, in a letter addressed to al-Rashīd, the word *khayzurān* "bamboo", but also the name of the caliph's mother, is replaced by *ḳuḍbān*. Others however are criticised, notably the use of Abū Aws to describe a stone (*ḥadjar*), because the father of Aws was called *Ḥadjar* (al-'Askarī, *Ṣinā'atayn*, 370). There was thus ample scope for the making of puns, and the humorists did not hesitate to take advantage of this.

In the introduction to the *Kitāb Mufākharat al-djawārī wa 'l-ghilmān*, al-Djāḥiẓ makes fun of the hypocrites who cover their faces upon hearing a crude word, recalling that the most pious of the Muslims and the Prophet himself did not hesitate to use such words, and he adds that these words were created in order to be used and that it would be necessary to withdraw them from the Arabic language if one were not allowed to speak them. In the *Kitāb al-Ḥayawān* (i, 33), he notes the unwillingness of his contemporaries to use the specific term for excrement and their habit of utilising a number of euphemisms to describe latrines: *makhradj*, *madhhab*, *khalā'*, *ḥashsh*/*ḥushsh*, *mutawaḍḍā'*, and excrement: *radjī'*, *zibl*, *ghā'iṭ*; others could be added to this list. An anecdote probably invented for specific purposes figures in several sources (al-Mas'ūdī, *Murūdj*, viii, 330-3 = §§ 3490-2; al-Tha'ālibī, *Kināyāt*, 31; al-Sharīshī, *Sharḥ*, ed. Cairo 1314, ii, 270-1; al-Ibshīhī, *Mustaṭraf*, ii, 215-6; etc.): a man is the victim of a joke in bad taste, in that he is asking for the latrines and appealing to a group of singing girls who pretend not to understand him. He tries one by one about eight different terms supposed to belong to various regions of the Arabic-speaking world (but the variants are too numerous to permit the drawing up of a linguistic map on the basis of this anecdote); to the words quoted by al-Djāḥiẓ we may add here at least *kanīf*, *mustarāḥ* and *mirḥāḍ*.

In this regard, W. Marçais (*Euphémisme*, 395-6) comments that in classical Arabic "the plurality of nomenclature sometimes contrasts with the simplicity of the items described. If the latter are by nature liable to shock, one's tendency is to attribute this discrepancy between means and ends to the practice of euphemism." It is quite possible in fact that, independent of dialectical variants, the abundance of synonyms is sometimes due to the listing, by the lexicographers, of euphemistic terms whose origin is not indicated. It is thus for example that Ibn Manẓūr lists, according to Ibn Khālawayh, eight verbs meaning "to menstruate" (s.v. root *ḥ.y.ḍ.*); *ḥāḍat* can in fact be replaced by: *nafisat*/*nufisat*, *darasat*, *ṭamithat*, *ḍaḥikat*, *kādat*, *akbarat* and *ṣāmat*.

It is not impossible that certain of the euphemisms which figure in the dictionaries belong to the language

of slang, but it is not always easy to determine the degree of decency of such and such a term of which the satirists make considerable use. In this connection, we quote only one epigram of *Diʿbil* (ʿAbd al-Karīm al-Ashtar, *Shiʿr Diʿbil*, Damascus 1384/1964, 204) where the sixth verse contains the word *ḳiththa*, "cucumber" the sense of which is all the more readily understood because of the appearance in verse four of *tisʿīn* "ninety" which means the anus. This last *kināya* is borrowed from dactylonomy (*ḥisāb al-ʿuḳad* [*q.v.*]), which supplies a large number of less obscene examples (e.g. "93" or "99" = miser"); see now Ch. Pellat, *Textes arabes relatifs à la dactylonomie*, Paris 1977, 21-2 and passim.

As a result of its undeniable expressiveness, to which the numerous examples cited by rhetoricians bears witness, the *kināya* preserves all its force in colloquial Arabic, for not only do slang expressions abound here, but also convention demands a strict caution in circles where superstitions continue to be strong. To antiphrase (*bṣīr* "clear-seeing" for "blind", already found in the name of Abū ʿAlī al-Baṣīr [see AL-BAṢĪR], who lost his sight; with this may be compared Ḳurʾān, XI, 89/87; *inna-ka la-anta 'l-ḥalīmu 'l-rashīd* "truly you are long-suffering and just", which must be interpreted in the contrary sense), to designation by a verb without subject *kānet shayḥa lāyḥa* "the situation was lamentable"), by an adverb or a pronoun (*ʿand-hā hādūk* "she is having her menstrual period"; cf. in a verse of Abū Nukhayla, *Aghānī*, xx, 382, *ḥarraktu-hū*, where the pronoun refers to an obscene word not expressed (likewise *aduʿu-hu*, in Yāḳūt, *Irshād*, xvi, 209, l. 3 from bottom), and to euphemism pure and simple (in Morocco, *fākhər* "glorious" to describe coal (*faḥm*) because of its black colour), there are to be added voluntary alteration (*tasʿūd* [*təsʿud*] "you shall be happy" for the number "nine" because *təsʿa* also means "you shall be a beggar"), borrowing from other languages (the Turko-Persian *shishma* for "latrines"), the refusal to specify ("those who are not to be named" = the djinns) and other procedures. On this subject, one can only refer to W. Marçais, *Nouvelles observations sur l'euphémisme dans les parlers arabes maghribins*, in *Ann. de l'Inst. de Philol. et d'Hist. Or. et Slaves* of Brussels (*Mélanges Isidore Lévy*), xiii (1953), 331-98. For Berber, see E. Destaing *Interdictions de vocabulaire en berbère*, in *Mél. René Basset*, Paris 1928, ii, 177-277.

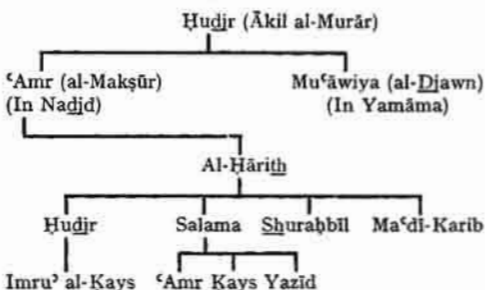
KINDA, a South Arabian tribal group, whose descent, real or imaginary, from Kahlān correctly identifies them as Arabs and distinguishes them, as it does the Azd, from Ḥimyar and other non-Arab inhabitants of South Arabia. The tribe spread all over Arabia in the 5th and 6th centuries A.D., from the south to the centre to the north, and played a decisive role in the military, political, and cultural history of the peninsula before the rise of Islam.

1. The pre-Islamic period.

From Kinda (a *laḳab*, nickname for Thawr) are descended Muʿāwiya and Ashras, and from the latter are descended al-Sakūn and al-Sakāsik. The more distinguished branch was Muʿāwiya, and within Banū Muʿāwiya, the house of Ḥudjr, nicknamed Ākil al-Murār, became the most illustrious.

Genealogical table of the Banū Ākil al-Murār

Ḥudjr (Ākil al-Murār)
- ʿAmr (al-Maḳṣūr) (In Nadjd)
  - Al-Ḥārith
    - Ḥudjr
      - Imruʾ al-Ḳays
    - Salama
      - ʿAmr
      - Ḳays
      - Yazīd
    - Shuraḥbīl
    - Maʿdī-Karib
- Muʿāwiya (al-Djawn) (In Yamāma)


It was this Ḥudjr who, in the second half of the 5th century and supported by the power of Ḥimyar, moved into central and northern Arabia and assumed supremacy over the Arab tribes of Maʿadd. One of the celebrated *Ayyām*, battle days of the Arabs, Yawm al-Baradān, involves him with Ziyād b. al-Habūla, the Salīḥī client-king of Byzantium. It was his descendants, the Banū Ākil al-Murār, that dominated the political and military scene in Arabia for almost a century. He was succeeded by his son ʿAmr, nicknamed al-Maḳṣūr, while his younger son Muʿāwiya (nicknamed al-Djawn) ruled over al-Yamāma. Neither was distinguished, and it was his grandson, al-Ḥārith b. ʿAmr, who became the best-known member of the house, an international figure known not only to the Arabs of the peninsula but also to Persia and Byzantium and to their Arab clients, the Lakhmids and the Ghassānids. Around 500 A.D. his two sons, Ḥudjr and Maʿdī-Karib, mounted an offensive against the Byzantine border and in 502 A.D. the Empire had to conclude a peace treaty with al-Ḥārith. For a short time he ruled over Ḥīra, adopting Mazdakism during the reign of the Persian king Kawād. Then leaving al-Ḥīra, he went over to the Byzantines, who assigned to him a phylarchate in Palestine, but he quarreled with Diomede, the *dux* of that province, and fled to the desert where he was killed in 528 A.D. either by the Lakhmid Mundhir or by a member of the tribe of Kalb.

Al-Ḥārith had divided the Arab tribes of Maʿadd among his four sons, Ḥudjr, Shuraḥbīl, Salama, and Maʿdī-Karib. After his death, rivalries broke out among them and brought about a bloody engagement, the first day of al-Kulāb, in which Shuraḥbīl was killed. Then the tribe of Asad rose against Ḥudjr and killed him. It was at this juncture, after the violent death of al-Ḥārith when the power of Kinda was in disarray, that Byzantium sent its two diplomats, Julian and Nonnosus, *ca.* 530 A.D., to Ḥimyar, Ethiopia, and Kinda for an alliance against the Persians. The services of Kinda were indispensable, and Byzantine diplomacy was finally able to compose differences between the Ḥimyarīs and the Kindīs by withdrawing Ḳays (probably the son of Salama) from central Arabia and arranging for the division of his dominion between his two brothers, Yazīd and ʿAmr. Ḳays visited Constantinople and was given a command in Palestine.

In the second half of the 6th century, the power of Kinda in central and north Arabia was clearly disintegrating. In addition to the fratricidal wars among the sons of al-Ḥārith in Nadjd, the Banu

'l-Djawn branch in al-Yamāma allowed themselves to be involved in the inter-tribal feuds of Tamīm and ʿĀmir; these resulted in the two battles of Shiʿb Djabala and Dhū Nadjab, which proved disastrous to the Banu 'l-Djawn. So precarious had the position of Kinda become that the tribe, according to the sources, decided to go back to its original home in Ḥaḍramawt.

A century or so of rule over such a vast area in the Arabian peninsula calls for an assessment of the role of Kinda in Arab history: (1) The dominion of Kinda represents the first attempt, however forcible, to impose unity on the tribes of central and northern Arabia; but this unity could not have been achieved without the support of Ḥimyar. (2) Kinda brought from the Ḥimyarī South a tradition of sedentary life; it ruled the Arabs from such urban spots as Ghamr Dhī Kinda, Baṭn Ākil, and Hadjar. (3) The house of Ākil al-Murār adopted Christianity, and must have been an important factor in disseminating it in central and northern Arabia. The most important Arabic Christian inscription of pre-Islamic times, commemorating the erection of a church in al-Ḥīra, is that of Hind, daughter of al-Ḥārith b. ʿAmr; and the Banu 'l-Djawn must have done their share in spreading Christianity in al-Yamāma. (4) Kinda contributed towards the spread of literacy among the Arabs and one Bishr b. ʿAbd al-Malik (from the Sakūn) is said to have learnt the art of Arabic writing in al-Ḥīra and to have taught it in Mecca, where he settled and married a sister of Abū Sufyān. (5) Kinda's greatest contribution, however, to the cultural life of the Arabs was Imruʾ al-Ḳays [*q.v.*], the foremost poet of pre-Islamic Arabia. Through him and through the unification of the Arab tribes for a century, Kinda accelerated the development of a common and standard Arabic language, transcending dialectal differences, a circumstance that attained its fullest significance with the rise of Islam.

While the Banū Ākil al-Murār were making history in the Fertile Crescent as well as in central and north Arabia, other Kindī groups were not idle in the south, where they rebelled against, as well as fought for, the Ḥimyarīs, with whom their relations as auxiliaries and clients remained close. They fought for Ḥimyar against the Lakhmid Mundhir, against Nadjrān and the Ethiopians, and also for Abraha [*q.v.*]. A measure of the military power of Kinda, in both the north and the south, is provided by the fact that of the twenty-one Djarrārūn (pl. of Djarrār, "leader of a thousand", chiliarch) of Yaman, eleven were Kindīs. Their military role in the south is evidenced by references to them in the Sabaean inscriptions (see below, Appendix).

The Arabic sources corroborate the Sabaean inscriptions on the importance of Kinda in the south and give prominence to Ḳays b. Maʿdī-Karib, also a member of Muʿāwiya but from the family of Banu 'l-Ḥārith. He was the lord of Kinda in Ḥaḍramawt, and is known to have adopted Judaism. Al-Aʿshā eulogised him and the famous al-Ashʿath [*q.v.*] was his son. Kinda is counted among the Arab tribes who adopted Judaism in pre-Islamic times, and it must have been this Kinda in the south that became Judaised. Their Judaism could possibly support the view that the *Nasaʾa* (those in charge of intercalation in the pre-Islamic calendar) had been Kindīs before the tribe of Kināna took over the function after one of them had married a Kindī princess.

2. **The Islamic period.**

Although it was in pre-Islamic times that Kinda, sc. Kindat al-Mulūk, "Royal Kinda", had its heyday, the tribe retained some of its power and influence in the time of the Prophet and in Islamic times. In addition to the Banū Muʿāwiya, the Ashrasīs, especially the Sakūnīs, now come to the fore, and within the Sakūn the Tudjībīs become the most important group. The Kindīs crossed the paths of Muḥammad, the caliphs, and their governors, who enlisted their talents in the service of Islam, as is clear from the many personages listed in the pages of such works as Ibn Ḥazm's *Djamhara*. They appear at critical junctures in the history of Islam, displaying the same unruliness and spirit of independence that had characterised their tribal *ethos* in pre-Islamic times.

Al-Ashʿath b. Ḳays [*q.v.*] led the delegation of Kinda to Medina and accepted Islam, and so did four other Kindī chiefs, Mikhwas, Mishraḥ, Djamad and Abḍaʿa, leading another branch of Kinda (in some sources the four chiefs are associated with the Ḥaḍramawt delegation); Tudjīb also sent a delegation and accepted Islam. In 9/630 the Sakūnī Ukaydir b. ʿAbd al-Malik, master of the strategic point Dūmat al-Djandal in northern Arabia, submitted to Khālid b. Walīd. Perhaps the best measure of the continuing importance of Kinda in the newly-emerging world of Islamic Arabia is the fact that Muḥammad contracted marriages with two, possibly three, Kindī princesses, but these do not seem to have been consummated.

After the death of Muḥammad, Kinda led a furious insurrection in Ḥaḍramawt, in which al-Ashʿath and the four chiefs mentioned above were involved, and it was with great difficulty that the insurrection was finally put down; the four chiefs were killed, and Abū Bakr spared the life of al-Ashʿath, who espoused the cause of Islam enthusiastically, fighting at both al-Yarmūk and al-Ḳādisiyya and later with ʿAlī at Ṣiffīn. Other Kindīs distinguished themselves in the conquests: Shuraḥbīl b. Ḥasana was one of the three or four main commanders appointed by Abū Bakr for the conquest of al-Shām or Syria and his front was al-Urdunn, which he conquered and later governed. Al-Simṭ b. al-Aswad, a member of Muʿāwiya, and al-Ashʿath b. Miʾnās, a Sakūnī, took part in the conquest of Ḥimṣ; the first is credited with the division of the city into quarters in which the Muslims settled.

It was during the caliphate of ʿUthmān that Kinda took part in what proved to be the turning point in the history of Islam, namely, the murder of the fourth Orthodox caliph. Many of the Sakūnīs had settled in Egypt, and in the rising against ʿUthmān they formed part of the Egyptian party of rebels which advanced against Medina. The weapon that actually killed ʿUthmān was wielded by a Tudjībī, Kināna b. Bishr by name, and two other Sakūnīs are also associated with the murder. A memorable event in the Second Civil War of Islam is also associated with a Kindī. It was al-Ḥuṣayn b. Numayr, a Sakūnī, whose catapults rained stones upon the Ḥaram when in 64/683 he conducted for the Umayyad Caliph, Yazīd, the siege of Mecca, during which the Kaʿba caught fire and was burnt down. More revelatory of the atavistic rhythm in the history of Kinda in Islamic times is the career of ʿAbd al-Raḥmān, commonly known as Ibn al-Ashʿath [*q.v.*], a member of Muʿāwiya, vividly aware of his Kindī and South Arabian origins and worthy of his grandfather al-Ashʿath. After extending the boundaries of the Dār al-Islām by his invasion of Zābulistān in 80-1/699-700, he raised the standard of revolt and marched against al-Ḥadjdjādj in ʿIrāḳ, where he was

finally beaten at the battle of Dayr al-Djamādjim.

It was, however, in the Islamic Occident, in faraway Spain and as late as the 5th/11th century, during the period of the *Mulūk al-ṭawāʾif*, that the Kindīs, unruly and rebellious as ever, achieved what figures such as Ibn al-Ashʿath in the Orient had been unable to achieve, namely, the carving out for themselves of an independent political existence, however shortlived this proved to be. The Tudjībids settled in Saraḳusṭa (Saragossa), Darawḳa (Daroca) and Ḳalʿat Ayyūb, in which cities they ruled, as they did also in al-Mariyya (Almeria), if the Banū Ṣumādiḥ were indeed Tudjībids, as is probable. Claims made by such historians as Ibn Khaldūn that the Dhu 'l-Nūnids [*q.v.*] of Toledo and the Afṭasids [*q.v.*] of Badajoz were Tudjībids, do not seem to have been substantiated by recent research, which affiliates them rather to a Berber ancestry.

(I. Shahîd)

Appendix. The relations of Kinda with Saba and Ḥimyar.

Pre-Islamic Sabaean inscriptions furnish us with some useful references to Kinda in its epigraphic South Arabian form *Kdt*. Unfortunately, one of the earliest of those references is not at present securely dateable, since the precise chronology of the Sabaean texts is still in dispute; however, a date in the 3rd century A.D. seems possible. This text, Ja 576 (published in full by A. Jamme, *Sabaean inscriptions from Maḥram Bilqîs*, Baltimore 1962), according to a recent re-interpretation offered by A. F. L. Beeston (*Notes on Old South Arabian lexicography VIII*, in *Le Muséon*, lxxxvi (1973), 448-51), depicts for us a situation in which Mālik king of Kinda was head of a confederation in which a certain Imruʾ al-Ḳays b. ʿAwf, called "king of the *KHṢṢT*", was a subordinate member; the latter committed an act of agression against Saba, as a result of which the king of Kinda and his *shaykhs* were forced under duress to surrender the person of the actual offender, to pay an indemnity, and to give hostages to the Sabaeans.

In two other texts of approximately similar date (Ja 660 and 665) we find Kinda and Madhḥidj, together with other bedouin groups, placed under the overall control of a Sabaean official with the title "*kabīr* of the Arabs of the king of Saba, and Kinda, and Madhḥidj etc,", and evidently acting as bedouin auxiliaries of the Sabaean army. In an inscription published by Sharafaddin (*Yemen*, Taʿizz 1961, 44, bottom left), a mixed force of Sabaeans, Kindī Arabs and other elements, was commanded by two individuals bearing the title "*wāziʿ* of Saba".

In the early 6th century A.D., the Ḥimyarite king Yūsuf (= Dhū Nuwās [*q.v.*]) was similarly employing Kindīs, together with members of the Murād and Madhḥidj tribes, under the control of a Sabaean commander belonging to the Yazʾan (in Islamic sources Yazan) family, as auxiliaries in his campaigns in central Arabia; see Ry. 508.7. (G. Ryckmans, *Inscriptions sud-arabes X^e ser.*, in *Le Muséon*, lxxvi (1953), 296) from Kawkab, an isolated rock northeast of the Kāra mountains and on the edge of the Empty Quarter.

In the mid-6th century, the Ḥimyarite king Abraha [*q.v.*] claims to have installed a certain Yazīd b. Kabsha as "his *khalīfa* over Kinda"; it appears that this Yazīd later revolted, but was defeated by the Ḥimyarites and forced to renew his allegiance in the year 657 of the Ḥimyarite era (*Corpus inscriptionum semiticarum*, iv, 541). Five years later, in 662 of the Ḥimyarite era, Kinda was again campaigning in support of the Ḥimyarites, this time being given the particular mission of pinning down the ʿĀmir b. Ṣaʿṣaʿa tribe [*q.v.*] while the king was engaged on military operations elsewhere (Ry. 506, *op. cit.*, 277). (A. F. L. Beeston)

AL-KINDĪ, ʿABD AL-MASĪḤ B. Isḥāḳ, the name given to the author of a defence of Christianity presented in the forms of a letter written in response to that of a Muslim friend, named ʿAbd Allāh b. Ismāʿīl al-Hāshimī, who invited his correspondent to embrace Islam. The names of these two characters are supplied only by al-Bīrūnī (d. after 442/1050 [*q.v.*]) in a reference that he makes to this defence in his *Chronology* (ed. Sachau, 205). In fact, the author of the two letters, who states in the prologue that he does not wish to mention the names of the correspondents "for a certain reason", speaks only of a Hāshimī and a Kindī. But it should also be noted that the headings of certain manuscripts supply the name of Yaʿḳūb b. Isḥāḳ al-Kindī, not to be confused with the name of the first Muslim philosopher (d. 256/870 [*q.v.*]).

The authorship of this defence is the object, among orientalists, of serious disagreements concerning his period and his sect. Taking as evidence the historical data supplied by the text, mention of the caliph al-Maʾmūn (198-218/813-33), of the sack of Mecca by Abu 'l-Sarāyā (199/815) and of the revolt of Bābak al-Khurramī (204/819), W. Muir believes that the date of the composition of the letter can be fixed at 215/830. But L. Massignon believes the composition to be later than the year 300/912, seeing that the author has borrowed from al-Ṭabarī (d. 310/923) his criticism of an opinion of the Ḥanbalī al-Barbahārī (d. 329/940). Similarly, observing a parallelism between certain criticisms contained in the letter and in a work of the Muslim heretic Ibn al-Rāwandī (d. 298/910), P. Kraus concludes that the Christian author borrowed these criticisms from the latter and therefore the letter can only have been composed at the beginning of the 4th/10th century.

As for the sect to which the author of the apology belonged, the majority of orientalists make him a Nestorian, as is moreover indicated explicitly by his Muslim friend in his letter. The fact that he himself mentions the convent (*ʿumr*) of al-Karkh, a suburb of Baghdād, and Sābāṭ al-Madāʾin, near Seleucia-Ctesiphon, confirm this idea. But Massignon, considering that the distinction between the essence and

the attributes of the act is an "adaptation to Christian theology of the tenets of Islamic *kalām*", is led to identify the author with the celebrated Jacobite philosopher Yaḥyā b. ʿAdī (d. 364/974). Similarly, M.-Th. de Alverny, on the basis of a passage in the Latin translation which treats the Nestorians as heretics, makes the author of the letter a Jacobite philosopher who, according to a concluding passage figuring only in the Latin version and a Karshūnī manuscript (Paris B. N. syr. 204), must have composed a work against Arius.

Now the publication of the work of a Jacobite theologian of the beginning of the 3rd/9th century, Abū Rāʾiṭa Ḥabīb b. Khidma, shows that, contrary to the opinion of Massignon, this distinction between the divine attributes dates from a period considerably before that of Yaḥyā b. ʿAdī, since it is found in the work of Abū Rāʾiṭa, from whom the author of the letter borrowed it, as well as the whole of the philosophical-theological section dealing with the unity of God (ed. G. Graf, *CSCO*, cxxx, 5-10). As for the fact of a Nestorian author borrowing from a Jacobite a discussion of the unity of God, this is not surprising, since there was no difference of opinion between them on this point.

Similarly, the publication of the Latin version has shown that in this version, conforming to the original Arabic, the Muslim tells his correspondent that of all the Christians, the Jacobites profess the worst doctrine while the Nestorians, his friends, are closer to the Muslims (379); and it is clear that the passage in the Latin version which describes the Nestorians as heretics (413), and which is nowhere corroborated by the Arabic text, arises from the fact that the translator has "revised" the text in a "Catholic" manner (400); as for the concluding passage where there is mention of a work against Arius, it seems, judging from its content and style, that it does not belong to the original text, and that it is a later addition.

Finally, it should be noted that in a Karshūnī manuscript (Paris, B. N. syr. 205), the text of the letter of the Muslim has been revised in manner favourable to the Jacobites, the name of the Jacobites being replaced by that of the Nestorians and *vice-versa*, and the writing of the name of Cyrillus being distorted (fol. 3b).

Presented as the work of a Nestorian Christian, a senior official at the court of al-Maʾmūn, this defence of Christianity is also a refutation of Islam, and is thoroughly documented, assessing the respective worth of the two religions from a historical and moral viewpoint. Translated into Latin in 1141, by Peter of Toledo and revised by Peter of Poitiers, the letter of al-Kindī played a very important role, in the East as well as in the West, in the polemic between Christians and Muslims.

AL-KINDĪ, ABŪ ʿUMAR MUḤAMMAD b. Yūsuf al-Tudjībī, historian of Egypt, was born on *yawm al-naḥr* (10 Dhu 'l-Ḥidjdja) 283/18 January 897 and died on Tuesday, 3 Ramaḍān 350/Wednesday, 16 October 961. He heard al-Nasāʾī, the author of the *Sunan*, when the latter lectured in Egypt, and appears to have lectured on *ḥadīth* himself. Among his teachers and historical informants, Ibn Ḳudayd (d. 312/924-5) seems to have been the most important one. His principal transmitters (cf. his *Judges*) was Ibn al-Naḥḥās (323-416/935-1025). This is about all that is known of his life. The authentic information goes back mostly to his contemporary, the historian al-Farghānī, who mentioned him in his continuation of al-Ṭabarī's *Taʾrīkh*; this information has fortunately been preserved in biographical notices added in Ms. Brit. Mus. add. 23, 324. The name of the town where he was allegedly born is in fact to be read *yawm al-naḥr*; this shows that no independent biographical information is preserved in the notice on al-Kindī in al-Maḳrīzī's *Muḳaffā*, reproduced by N. A. Koenig, *The history of the governors of Egypt*, New York 1908, 1, n. 5.

Al-Kindī's *Histories of the* (1) *Governors* (wulāt) *and* (2) *Judges* (ḳuḍāt) *of Egypt* are preserved in the above-mentioned Brit. Mus. manuscript. The definitive edition, provided with a careful introduction, is that of R. Guest, (GMS xix, Leyden-London 1912, reprinted in 1964, re-edition of the *Governors* by Ḥusayn Naṣṣār, Beirut 1379/1959). The *Governors* end with the year 334/946; they were briefly continued in the preserved ms. for a few decades to the coming of the Fāṭimids. The *Judges* end with the year 246/861 in the preserved text; they were perfunctorily supplemented by two hands through the first third of the 5th/11th century. Both works contain important information, and are early representatives of provincial historiography. As to political history, they afford a glimpse into events as seen from outside the centre of empire. As to judicial history, they reveal a good deal about legal institutions and practices. We may suspect, however, that they do not really compensate for the loss of the older, and early Fāṭimid, literature on Egyptian history. In Mamlūk times, al-Kindī's works together with what was then still known of the literature now apparently lost, were much used.

Al-Kindī is further credited with works on (3) the *Mawālī* (known from a considerable number of quotations), (4) the *Khiṭaṭ* of Egypt, (5) the *Khandaḳ* (the trench made by Ibn Djaḥdam around Fusṭāṭ in 65/684, cf. *Governors*, 46), (6) the *Great Mosque of the Ahl al-Rāya* (the mosque of ʿAmr), (7) the *Western Contingents* (*al-djund al-gharbī* or *al-adjnād al-gharābā*), and (8) *Marwān b. al-Djaʿd*, presumably the last Umayyad caliph (unless it dealt rather with al-Sarī b. al-Ḥakam). (5) and (6) may have been parts of (4). The assumption that he also wrote an independent history (see Brockelmann, in *EI*[1], s.v. *al-Kindī*) is quite uncertain.

A brief treatise on the *Faḍāʾil Miṣr* was compiled by al-Kindī's otherwise unknown son ʿUmar in the third quarter of the 4th/10th century. His authorship is indicated with some confusion at the beginning of the work and appears supported by the list of sources used, ending with Abū ʿUmar al-Kindī and Ibn Yūnus. Its transmitter was again Ibn al-Naḥḥās. Later authors took it for a work by Abū ʿUmar himself. It was first edited with a Danish

translation by J. Østrup, in *Oversigt over det Kongelige Danske Videnskabernes Selskab Forhandlinger*, Copenhagen 1896, 173-245. Another edition, by I. A. al-ʿAdawī and ʿAlī M. ʿUmar, appeared in Cairo in 1971 (including a reproduction of two pages of the ʿAkkā ms. supposedly dating from the 5th/11th century). Neither edition is complete with respect to the use of the available mss. material.

Bibliography: Given in the article, and Brockelmann, I, 155 f., S I, 229 f.; Sezgin, i, 358; Ḥasan A. Maḥmūd, *al-Kindī al-muʾarrikh*, Cairo n.d. (F. ROSENTHAL)

AL-KINDĪ, ABŪ YŪSUF YAʿḲŪB B. ISḤĀḲ, "The philosopher of the Arabs" whose distinguished genealogy is obligingly given by the bio-bibliographers, was born before the end of the 2nd/8th century and died in about the middle of the 3rd/9th (perhaps approximately 185-252/801-66).

An eminent universal scholar and philosopher, he lived in a period of intellectual ferment in the sphere of the sciences as well as in that of *kalām*: the period of the translations, and of the controversies concerning Muʿtazilism.

He was a companion of the caliphs al-Maʾmūn and al-Muʿtaṣim. To the latter he dedicated notably his *On first philosophy*, and to his son Aḥmad, who was a pupil of his, he dedicated a number of other treatises. His association with these two sovereigns, plus the fact that he fell into disfavour during the reign of al-Mutawakkil (and was even deprived temporarily of his extensive library), lead one to suspect at least a tendency towards Muʿtazilism on his part. This hypothesis is supported by several passages from his known works (where there are references to the negation of the divine attributes or to the excellence of the works of God), as well as by the titles of works which are known only from the bibliographies. The latter show the extent and the variety of the work of al-Kindī: almost 250 titles (according to the *Fihrist*) concerning all the sciences cultivated in his day (these include astrology but not alchemy, which he regarded as a form of trickery), also technical subjects of particular interest to the ruling classes with whom he was associated: the manufacture of glass, jewellery, armour and perfume.

It is impossible to give a complete account of al-Kindī's thought because of the relatively small number of documents which has survived (less than 40 extant titles, as many of them philosophical as scientific; the task of editing and evaluating a number of unpublished ones is as yet incomplete). In the meantime, one can sketch the general outline, or at least note certain significant features, on the basis of the available texts.

His general philosophical position is best expressed in the introductory chapter of *On first philosophy*. Besides certain definitions and technical statements concerning philosophy, sc. the principles of philosophy, the four "causes", the four "scientific questions", there is to be found there what is in effect both an advertisement for, and a defence of, philosophy (it should be remembered that this treatise is dedicated to the caliph).

Taking as his inspiration, and sometimes borrowing literally from, the opening of a book of Aristotle's *Methaphysics*, of which he quotes a passage (without, however, acknowledging his source), al-Kindī describes the progressive accumulation of true knowledge which has come about in the course of time, thanks to the efforts of the philosophers: from this he infers that "the truth must be acquired, from whatever source it comes", and the statements of the philosophers must be re-examined and completed. He violently criticises the opponents of philosophy who attack it in the name of religion, while they themselves, he says, are without religion. The content of "the science of things and their true nature", that is to say philosophy, is identical to that of the message of the prophets: the science of divine sovereignty and divine unity, the science of morality and ethics. Finally, a brief quotation from Aristotle's *Protreptic* (again not acknowledged), according to which it is logically impossible not to be a philosopher, is followed by a prayer invoking the assistance of God in the pursuit of knowledge.

Thus al-Kindī sets forth an intellectual orientation doubly opposed to that of the traditionalists; according to him, knowledge can come from various sources and can still be expected to develop; but equally, he claims to respect the prophetic message. In precisely the same spirit his epistle *Concerning the number of Aristotle's works* compares human knowledge (*ʿilm insānī*) with divine knowledge (*ʿilm ilāhī*); whereas the first depends on prolonged effort and preparation regulated according to a precise scheme, God inspires the prophets, when He so desires, and without them having recourse to the methods of "human knowledge", with a type of revelation condensed into a few phrases whose sense the philosopher can only explain at the cost of a lengthy process of elucidation.

This position of al-Kindī's, with regard to the sciences and to philosophy, derived from various sources on the one hand, to revelation and religious speculation on the other, emerges also in some ways from the information supplied by the bio-bibliographers. These emphasise that al-Kindī had an unequalled acquaintance with the ancient sciences (Ibn al-Nadīm), that he of all the Islamic philosophers was closest to Aristotle (Ibn al-Dj̲uldj̲ul), that he studied in depth the various branches of Greek, Persian and Indian wisdom (Ḳifṭī); but also that he combined in his works the principles of the Law and those of the rational sciences (Bayhaḳī) and that he wrote an essay on *tawḥīd* according to the methods of the logicians (Ibn al-Dj̲uldj̲ul).

Also, in a systematic list of his works such as is first to be found in the *Fihrist*, one notes the section of "books of dialectic" or of "controversy" (*kutub dj̲adaliyya*), many of which must have dealt with specific problems of *kalām*, such as prophecy, *istiṭāʿa*, divine unity, the creation of the body, of the atom, etc.

As regards the Greek philosophers, al-Kindī mentions by name Plato and Aristotle and hardly any others. We know on the one hand that he used the *Treatise on the heavens* of Aristotle, that he commissioned a translation of his *Metaphysics* and revised the translation of the *Theology* which was attributed to him. But careful scrutiny of his works shows that he must have been acquainted, directly or indirectly, with certain others, such as Epictetus, Proclus and probably John Philoponus; we find also echoes of the last phase of the teaching of the school of Alexandria as it is expressed notably in the writings of David. These various references to other authors and implied borrowings pose many problems, both historical and critical, which are far from being solved. Without doubt there are questions still to be asked.

The variety of these borrowings poses in addition a philosophical problem, which could only be solved by examining the entire corpus of works of our author and his precise chronology, and examining the con-

sistency and the development of his thought, and his vocabulary as well.

Without attempting to enter into the details of the philosophy of al-Kindī as it is known to us, we can say that he adopted from the Aristotelian tradition a certain number of concepts (the four causes, the categories of change etc.) and of propositions (the finiteness of the world, the impossibility of a corporeal infinitude as an act, the mechanics of intellectual perception etc.); from the Platonist tradition, he takes speculation on the soul in its relationship with the body and with the divine light and on its ascent to and beyond the heavens. Parenetic and semi-mystical in this last case, his style and method are by times extremely precise, very abstract, strained, proceeding freely and methodically by means of axioms and deductions of a geometrical regularity.

On the other hand, al-Kindī, who ceases to follow the Greeks where they are in disagreement with the Ḳur'ānic revelation (i.e. with regard to the creation, and the life-span of the Universe), is interested in establishing or formulating agreements between certain philosophical ideas and certain articles of the Islamic faith, even Muʿtazilī ones.

Thus the *On first philosophy*, after some reflections on the "one" and the "many", where we detect echoes of Proclus, concludes (that is to say, the first part of the book, which is all that has survived, concludes) with a kind of philosophical *tawḥīd* and with criticism of those who give attributes to God (the same theme is used in the essay *On the unity of God and finite nature of the world*). The epistle *Concerning the number of Aristotle's works* contains a philosophical commentary on verses 78-82 of Sūra XXXVI and the epistle *On the lowest prostration of the body* another on verse 6 of Sūra LV.

There are other detailed references to other works which could be quoted. It would appear that al-Kindī uses the same method in his choice of language where certain words or verbal roots are common to the vocabulary of religion and to that of the Greek translations (thus he refers to God by the name *al-wāḥid al-ḥaḳḳ*, which is both Ḳur'ānic and Neo-Platonist; he uses the word *rubūbiyya*, which belongs to the language of religion, in the title of the *Theology* attributed to Aristotle). It is important to analyse these various agreements and differences at this early stage of the history of *falsafa*.

In so far as one is able to judge from the bibliographical lists and the few treatises, of various lengths, which have survived, the scientific work of al-Kindī follows the same scheme as his philosophical work, sc. to revise and develop the findings of the ancient scholars in the light of new interests. He wrote essays on Euclid, Archimedes, Ptolemy, on the astrolabe and on Hippocratic medicine; he also drew to a considerable extent on Asiatic sources, particularly for his knowledge of remedies.

On the other hand he followed ideas which were specifically his own, notably in his studies of optics and pharmacology. His article on perspective (known only in Latin under the title *De causis diversitatum aspectus*) follows Euclid, though without following him blindly. Three points are set out here in succession: the rectilinear propagation of light which Euclid postulated and which al-Kindī demonstrates; a theory of vision whereby the eye illuminates the object seen—this also is a Euclidean theory which al-Kindī modifies, giving three dimensions to the rays emitted by the eye (whereas for Euclid these were geometric lines); finally, a theory of mirrors. Here too, his study of burning mirrors is an adaptation, that is to say a revision, a criticism and a completion, of what Anthemios of Tralles had written on this subject.

The same method is used in the treatise *On compound medicines*. The ancients had studied the proportions of the four qualities (hot, cold, dry, wet) in simple medicines. Now this method had to be extended to compound medicines, and al-Kindī takes pains to explain mathematically the relation between increasing the number of parts of each quality, and the corresponding increase in the effect of the medicine on the organism.

Al-Kindī left a few pupils (Aḥmad b. al-Ṭayyib al-Sarakhsī, Abū Maʿshar), but not a school in the strict sense of the word. It is most of all as a universal scholar and as an astrologer that he has survived (to the point that those of his works which were available in Latin, were still being read in medieval times). Ibn Khaldūn quotes him at various points in his *Muḳaddima*, but does not include him in his list of Islamic philosophers.

ḲINDĪL [see MIṢBĀḤ]

KINKIWAR, KANKIWAR, KANGĀWAR, a small town of western Persia (population in 1975, 13,144) situated in lat. 34°29′ N., long. 47°55′ E., and in the *bakhsh* of the same time in the *shahristān* of Kirmānshāhān. The town is almost equidistant from the cities of Kirmānshāh and Hamadān [*qq.v.*], and lies at an altitude of 1,467 m.; it is first mentioned by Isidore of Charax under the name "Concobar". The *bakhsh* comprises (1975) four *dihistāns*, with a total of some sixty villages and a population of about 38,435. The economy of the region is based on agriculture and trade.

The Kangāwar valley has since ancient times been an important staging post and centre of communications on the great highway from Mesopotamia to the Iranian plateau, and recent excavations have established that nearby sites such as Gawdīn Tappa and Sih Gabī were occupied several thousands of years prior to the foundation of Kangāwar itself, which probably occurred in Parthian times. The important temple to the goddess Anahita, recently discovered at Kangāwar, is thought to date from the 2nd century B.C.; its construction was erroneously attributed by early Muslim writers to the Sāsānid monarch Khusraw Parwīz.

In Islamic times, Kangāwar seems to have flour-

ished up to the Mongol invasions of the 7th/13th century. At about that time, most of the Saldjūḳ remains were destroyed by fire, and there seems to have been virtually no building on the site from Īlkhānid to Tīmūrid times, and little under the Ṣafawids and Ḳādjārs.

In general, the Islamic geographers refer to Kangāwar as Ḳaṣr al-Luṣūṣ ("Robbers' Castle"). Al-Ṭabarī, i, 2649, says simply that it acquired this name because the Arab army on the way to meet the Persians at Nihāwand (21/642) had some of its baggage-animals stolen there. Centuries later, this reputation of the people of Kangāwar still prevailed: Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb* (ed. M. Dabīrsiyāḳī, Tehran 1336/1957) states that they were "first-class thieves" (Le Strange's translation in Ḥamd Allāh Mustawfī, *Nuzha*, 107, is inaccurate). From the name Ḳaṣr al-Luṣūs derived the *nisba* "Ḳaṣrī" (see Barbier de Meynard, *Dictionnaire de la Perse*, Paris 1861, 450).

(R. M. Savory)

ḲINNASRĪN, an ancient town and military district in Syria; the name is of Aramaic origin and appears as Ḳenneshrīn in the Syriac texts. Composed of *ḳinnā* "nest" and *nasrīn* "of eagles", it is mentioned in the Babylonian Talmud in the form of Kannishrayyā and the European historians of the Middle Ages called the area Canestrine. A distinction must be drawn between the town and the *djund*.

1. The town. At the present day, Ḳinnasrīn is nothing more than a little village surrounded by ruins, a day's journey to the south of Aleppo, on the right bank of the Ḳuwayḳ which flows into the nearby marshy depression of al-Matkh. The Arab geographers place it in the fourth climate. Yāḳūt, who gives various explanations for the origin of the name, says that the place was already populated in the period when the Amalekites, coming from the south, sought refuge there, and that the town had once been prosperous and strongly fortified, but that in his time (beginning of the 7th/13th century) it was nothing more than a village, owing its survival to its position in the centre of a district where a number of highways converged. In ancient times the town, founded by Seleucus Nicator, was called *Chalcis ad Belum*, and gave its name to the Syrian-Arab *limes*. In the 4th century A.D. Ḳinnasrīn was a commercial centre and a prosperous agricultural market-town.

Set at a highway intersection and with a much-frequented *khān*, the town occupied an important position in the defensive system of the Syrian frontier from Antioch to the Euphrates and from the *hamad* toward Tadmur. It played a strategic role of some importance for the Byzantine empire and at the end of the 6th and the beginning of the 7th century A.D. it came under attack from the Persians.

After their victory on the Yarmūḳ [*q.v.*], the Muslim Arabs went on to conquer northern Syria. At Ḳinnasrīn, the garrison of local militia offered some resistance to the troops of Abū ʿUbayda, [*q.v.*] and in Shaʿbān 17/August-September 638, the town was taken. Under the reign of Yazīd b. Muʿāwiya, the town's defences were dismantled. Profiting by the experience of the Byzantines, the Umayyads, in their turn, installed a military headquarters at Ḳinnasrīn, which rapidly became the capital of the rich agricultural region of which it was the centre. Until the 4th/10th century, the history of the town was not marked by any event of importance.

In 331/943, it was one of the most solidly constructed localities of the region. Two years later, in the spring, the Ḥamdānid prince Sayf al-Dawla was defeated there by the troops of the Ikhshīd of Cairo. In the second half of the 4th/10th century, Ḳinnasrīn became the object of contention in the struggle between the Byzantines and the Ḥamdānids. At the approach of the Byzantines, in 351/963, the inhabitants fled from the city in panic. After the Ḥamdānid period, Ḳinnasrīn began to decline to the benefit of Aleppo. In 355/966, when Nicephorus Phocas advanced against Aleppo, Sayf ad-Dawla fell back upon Ḳinnasrīn, but being unable to defend it, he evacuated the town and the Byzantines came and burned the mosques. Part of the population settled to the East of the Euphrates and the rest took refuge in Aleppo. Shortly after, the town was repopulated, but in 389/998 it was burnt down and reconstructed once again. In 422/1030, it was again sacked by the Byzantines. Rebuilt at the end of the 5th/11th century by Sulaymān b. Ḳuṭulmush [*q.v.*], it was destroyed by his enemy Tādj ad-Dawla Tutush, [*q.v.*] brother of the sultan Malik Shāh [*q.v.*]. It remained virtually uninhabited. Nāsir i-Khusraw, passing that way in *Radjab* 438/January 1047, saw nothing but a poor village.

In the period of the Crusades, Ḳinnasrīn was to play only a strategic role and was scarcely populated at all. In Muḥarram 513/April-May 1119, without occupying Aleppo, Il-Ghāzī installed himself in Ḳinnasrīn, made it a depot for military equipment and made raids against Ḥārim, the Rudj and Djabal Summaḳ.

Some years later, Tughtakīn of Damascus joined forces with Aḳsunḳur and together they attacked Aleppo. Sawār, *amīr* of Aleppo in the name of Zankī, made Ḳinnasrīn an operational base. In 529/1134-5 Pons of Tripoli laid siege to the place, which was relieved by Zankī, arriving in haste from Ḥimṣ. The traveller Ibn Djubayr (end of the 6th/12th century) describes the town as being in a state of abandonment and ruin.

From the time of the Ayyūbid period (7th/13th century), Ḳinnasrīn is no longer mentioned as a town, but its *khān* is noted as a halting-place for caravans journeying from Aleppo towards the south, and, beyond the crossroads of al-Athārib, towards the west. Pilgrims continued to make their way to Tell Nabī ʿĪsā, one of the hills of the town, to the tomb (*maḳām*, *ḳabr*) attributed to the prophet Ṣāliḥ [*q.v.*] which is in fact the burial-place of the *amīr* Ṣāliḥ b. ʿAbd Allāh b. al-ʿAbbās. In the Ottoman period, Ḳinnasrīn was nothing more than an impoverished village, bearing the name Eski Ḥaleb. At the present day, it has returned to its original name.

2. The djund. Around Ḳinnasrīn there extends a

vast undulating plain (*kūra*); this is one of the most fertile regions of northern Syria where, with the aid of irrigation, cereals, fruit trees and vines are cultivated. In 375 Saint Jerome, visiting the province where at that time monasticism and asceticism were developing, testified to its agricultural prosperity.

On the horizon, there are visible to the south the Djabal Zāwiya, to the west the Djabal Barīsha, to the north the Djabal Sam^cān and the plain of Mardj Dābiḳ punctuated by tells, while to the east there are the shining salt-marshes of Djabbūl. The Arabs penetrated at an early stage the territory of Ḳinnasrīn, which corresponded to one of the Byzantine administrative divisions of Syria, representing the Roman "Syria Prima" of which Antioch was the capital. In the 6th century, Arab tribes were encamped in the eastern part of the region between the Euphrates and Ḳinnasrīn. Among the battles which took place on this territory, one may note the victory won in 554 A.D. near the source of the ʿUdhayya by the Ghassānid al-Ḥārith over the Lakhmid al-Mundhir of al-Ḥīra.

After the Muslim conquest, Syria was divided into four *adjnād*: the *djund* of Urdunn, that of Filasṭīn, that of Dimashḳ and that of Ḥimṣ. The creation of the *djund* of Ḳinnasrīn is attributed by some (al-Ṭabarī and al-Dimashḳī) to Muʿāwiya, who installed refugees from Baṣra and Kūfa there in 22/643, by others (al-Balādhurī, Yāḳūt) to Yazīd b. Muʿāwiya, who detached some districts from the *djund* of Hims.

In the ʿAbbāsid period, following the conquests of al-Manṣūr and his successors, the *djund* grew in size towards the north; at this time it covered its greatest expanse of territory. It absorbed to the north Ḳurūṣ, Tīzīn, Dulūk, to the north-west ʿAynṭab at a distance of two days' march, and Ḳalʿat al-Rūm [*q.v.*] at a distance of five days' march from Aleppo. To the south, it included the districts of the two Maʿarras (M. Misrīn and M. al-Nuʿmān) and of Ḥamāt, and the territory of Sarmīn.

Under the reign of Hārūn al-Rashīd (170-92/786-809), the *djund* of Ḳinnasrīn was deprived, to the west, of the territory stretching from Antioch to the coast, to the east, of the region lying between Aleppo and Manbidj, and to the north, of the *thughūr*, districts which were to constitute the region of the ʿAwāṣim [*q.v.*]. The *djund* was then limited to the area lying to the south of Aleppo. This was the end of its period of military importance, but economic activity continued, as is shown by the increases in taxation and in the tribute payed to al-Maʾmūn. In the 3rd/9th century, the *djund* of Ḳinnasrīn paid 350,000 *dīnārs* while that of Damascus paid only 120,000. In the mid-4th/10th century, the *djund* paid 400,000 *dīnārs* of *kharādj*, the same as Dimashḳ, and 370,000 of *ḥimāya* [*q.v.*]. The capital was then Aleppo, and the principal cities Antāḳiya, Ḳinnasrīn and Manbidj. Its limits were to the west, the coast from Lādhiḳiya to Bayās, to the north, Marʿash and the ʿAwāṣim, to the east the Euphrates between Sumaysāt and Bālis, and to the south, the region of Ḥamāt with Shayzar and Rafaniyya, a region claimed by both Ḳinnasrīn and Ḥimṣ.

In 349/961, Nicephorus Phocas attacked the region of Aleppo; he returned two years later to sow the ruins, and the population went in search of refuge elsewhere. The intervention of the Basileus led to the disappearance of the ʿAwāṣim, to the advantage of the Byzantines who occupied Antāḳiya. The reconstruction of northern Syria under the Saldjūḳs scarcely touched the *djund* of Ḳinnasrīn. In the 12th century, the latter came under pressure from the Franks of Antioch, especially in 495/1102 when Bohemond demanded tribute. In Ṣafar 527/Dec. 1132, Fulk of Jerusalem and the armies of Antioch attacked the territory of Ḳinnasrīn and imposed a truce with the addition of tribute upon Sawār, the Aleppo representative of the *Atabeg* Zankī.

At the end of the 7th/13th century, the *djund*, which retained its name in spite of the dominance of Aleppo, retrieved from the Franks the province of Antāḳiya and the lands of Sarmīn.

Under the Ottomans, in the mid-11th/18th century, Hādjdjī Khalīfa still speaks of "the province of Ḳinnasrīn of which the capital is Aleppo". Later, the *djund* of Ḳinnasrīn disappeared and was integrated into the *liwāʾ* of Aleppo.

(N. Elisséeff)

ḲINṬĀR [see MAKĀYĪL].

ḲIPČAḲ, a Turkish people and tribal confederation; usually also written Ḳīpčāḳ or Ḳifčāḳ; the forms Ḳifčākh, Khifshāḳ, Ḳifshākh and Khifčākh are also found. The etymology of the name is uncertain: the origin of the Old Turkish word *ḳïvčaḳ* (*ḳïbčaḳ*), which is known only in the form *ḳïvčaḳ ḳovï* "unlucky" (Clauson, *An etymological dictionary of pre-thirteenth-century Turkish*, Oxford 1972, 581), is conjectural, as well the connection with the Sagai word *ḳïpčaḳ* "irate, hot-tempered". The proper name Ḳïpčaḳ is recorded in the Uyghur texts. See Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, St. Petersburg 1899, ii, 843-5. In later popular and learned etymologies (first in Rashīd al-Dīn, *Djāmiʿ al-tawārīkh*, ed. Berezin = *Trudy Vost. Otd. Arkh. Obshč.*, vii, 23, later in Abu 'l-Ghāzī, ed. Desmaisons, 19) *ḳïpčaḳ* is connected with *ḳobuḳ* or *ḳobï* and explained as a "hollow tree trunk"; at the same time a legend is told of the birth of a boy from a hollow trunk; the boy is said to have been adopted by Oghuz Khān [cf. KIMĀK] and to have been given a separate territory as a fief. The relation of the tribe Ḳïpčaḳ, emerging in the Western Siberian steppes, to the other Turkish tribes is unclear. Gardīzī (text in W. Barthold, *Otčet v poezdke v Srednyuyu Aziyu*,

82 = ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 258) mentions the Ḳïpčaḳ along with the Īmāk as a division of the Kimak [see GHUZZ] who lived on the Irtish, [*q.v.*] although the earlier anonymous author of the *Ḥudūd al-ʿālam* (f. 19a tr. Minorsky, 101, § 21, comm. 315-17) says that the Ḳïpčaḳ had separated from the Kīmāk and dwelled to the north of the Pečenegs. Ibn Khurraddādhbih, 31, l. 9, and, following him, Ibn al-Faḳīh, 329, l. 3, tr. Massé 388, mention the Ḳïpčaḳ along with the Kīmāk as a separate people. Maḥmūd al-Kāshgharī, i, 273, describes the Yimāk (*sic*) on the Irtish as a subdivision of the Ḳïpčaḳ, not of the Kīmāk. In another passage of the same work (iii, 22) we are told that the Yimāk are a Turkish tribe (*djīl min al-turk*), the same "as we call Ḳïpčaḳ" (*wa-hum al-ḳifdjāḳiyya ʿindanā*); the Ḳïpčaḳ themselves thought they were a separate branch (*thumma atrāk ḳifdjāḳ yaʿuddūna anfusahum ḥizb^an^ ākhara*). The Kīmāk mentioned by Muḳaddasī, 274 l. 3, at Ṣawrān must have been Ḳïpčaḳ. In connection with the advance of the Ḳïpčaḳ from north to south is the appearance (first in the 5th/11th century in the *Dīwān* of Nāṣir-i Khusraw; cf. Browne, *Lit. hist. of Persia*, i, 227) of the name *Dasht-i Ḳïpčaḳ* for *Mafāzat al-Ghuzz*, cf. *ibid.*, ii, 168. The Ḳïpčaḳ (Khifčāḳ) are already mentioned by Bayhaḳī, ed. Morley, 91, as neighbours of Khʷārazm. According to Marquart, *Osttürkische Dialektstudien*, 102, the Ḳïpčaḳ appear in history for the first time in 514/1120-1 in Ibn al-Athīr, x, 399, as allies of the Georgians; according to Marquart (*ibid.*, 136) the kingdom of the Ḳïpčaḳ was founded by people who emigrated from Manchuria in connection with the rise of the Čurč (the Chinese Kin Dynasty); cf. thereon, P. Pelliot, in *JA*, ser. ii, xv, 125 ff. That the term Dasht-i Ḳïpčaḳ was also extended to South Russia is shown by the evidence of Ḥamd Allāh Mustawfī Ḳazwīnī, *Nuzhat al-ḳulūb* ed. Le Strange, 21, 238, that Dasht-i Ḳïpčaḳ is the same as Dasht-i Khazar. Altogether it seems to be sure, that in the 4th-5th/10th-11th centuries a loose political unit of Turkish tribes (including the Kīmāk) existed under this name in the above-mentioned territories. In the middle of the 5th/11th century, the Ḳïpčaḳ tribes moved to the Russian steppes, pushing the Oghuz toward the western areas of the Pontus region. [see GHUZZ]. After 1064 they became the lords of these territories, which they kept until the Mongol invasion. Among the Ḳïpčaḳ tribes, the Ḳuman (called Polovtzī by the Russians and Comani by Western Europeans) were the dominant element which played an important role in the history of Byzantium, Bulgaria and Hungary. They are often identified with the whole of the Ḳïpčaḳ tribal confederation. The Ḳïpčaḳ in South Russia were exposed not only to the influence of Islam but also to that of Christianity; a prince of the Ḳïpčaḳ (Chinese Kin-čʾa) in the time of the Mongol invasion (the same prince is mentioned in Russian annals) was called George (Russ. Yuriy, hence Chinese Yü-li-ghi, in Bretschneider, *Mediaeval researches*, ii, 297 ff. and Pelliot, *op. cit.*, 150). Ibn Baṭṭūṭa mentions Christian Ḳïpčaḳ at Ḳerč [*q.v.*]; the so-called "Codex Cumanicus" must be regarded as a memorial of the spread of Christianity among the Ḳïpčaḳ. The name Ḳïpčaḳ survived the Mongol invasion; it was later transferred to the empire of the Golden Horde. The Ḳïpčaḳ military slaves, coming to the Near East, especially to Egypt, played an important role in the history of this area as the Baḥrī Mamlūks [see AL-BAḤRIYYA and MAMLŪKS]. The first scant information concerning the language of the Ḳïpčaḳ is due to al-Kashgharī. According to his *Dīwān lughāt al-turk*, ii, 253, iii, 23, the dialect of the Ḳïpčaḳ had the same phonetic pecularities as the dialect of the Ghuzz, with dj for *y* at the beginning of a word. The first linguistic record relating to the Ḳïpčaḳ (Ḳuman) language is the Codex Cumanicus. From the Ḳïpčaḳ Mamlūks, several linguistic monuments are known. From the Armenians in Poland and in Ukraine, speaking a special Ḳïpčaḳ dialect, several literary and other documents have come down to us. One section of the Turkish languages, according to the ethnic and historical relation of these peoples to the Ḳïpčaḳ tribes and regions, is also called Ḳïpčaḳ. The Ḳïpčaḳ are no longer mentioned after the Mongol period; like many other early names of peoples (Ḳarluḳ, Uyghur, Nayman etc.) the name Ḳïpčaḳ is found as the name of a family or of a minor tribal unit among the Bashkir, Nogai, Ḳïrghïz and Uzbek. The Ḳïpčaḳ are particularly associated with Farghāna in the modern history of Central Asia, cf. KHOḲAND.

ḲÏR SHEHIR [see ḲÏRSHEHIR].

KIRĀʾ (A.), a legal term meaning the leasing or hiring out of things. This is a contract in every way like a contract of sale, but with this difference that a sale aims at transferring the possession of something in exchange for the sale price, whilst leasing or hiring out aims at the beneficial use or enjoyment of a thing for a fixed period to time in return for a hiring fee. It is accordingly the sale of a beneficial use (*bayʿ al-manāfiʿ*) and is built around the procedure for a contract of sale. The only differences are those which are inherent in the differing nature of the two contracts, but both of them come into the category of commutative contracts (*muʿāwaḍāt*), of which sale is the leading example. The term "commutative contract" is used in practice for all procedures (sale, exchange, loan, leasing or hiring out, settlement, etc.) in which we have the transfer of property (*milk*) or beneficial use (*manāfiʿ*) in return for the handing-over of an equivalent.

The essential elements of a contract of leasing or hiring out are (a) the contracting parties, the lessor (*kārī*) and the lessee (*muktarī*); (b) the object in question (*al-maʿḳūd ʿalayh*), i.e. the thing hired out and the sum corresponding to its beneficial use (*adjr*); and (c) the form or embodiment of the agreement (*ṣīgha*). The effects of a contract of this kind are those of a contract of sale, except for the differences arising out of the specific natures of the two contracts.

The contract is not dissolved by the deaths of either of the two contracting parties; the heirs have the power to re-negociate the contract. Hiring or leasing can always be annulled when there is an excuse (*ʿudhr*).

The types of objects which may be leased or hired out. Whilst *idjāra* [see IDJĀR] is the hiring out of a service and of movable objects, with the exception of ships and beasts which are used for

transportation, the term *kirāʾ* is used for these last and for immovable property. Hence in practice, *kirāʾ* may be a contract for transporting something. According to Ibn ʿArafa, it is in this case the sale of the beneficial use of an animal or of something else like a ship for purposes of transport. But the transporting of objects must be distinguished from the transporting of persons. Mālik sees there a *locatio operis*. Other Mālikīs pronounce in favour of a hiring out of services. The S̲h̲āfiʿīs consider this contract as a hiring out of objects. But in any case, the hiring out of beasts or burden and ships (*kirāʾ al-rawāḥil wa 'l-sufun*) is perfectly admissible, whether the beasts are individually determined or not.

Hiring out can cover land (*kirāʾ al-arḍ*), and the leasing of rural properties existed before Islam, under two forms: (a) *kirāʾ* involving payment of money; and (b) *kirāʾ* involving the making over of a proportion of the produce of the property (*muk̲h̲ābara*). This last form must have been the commoner one, in view of the scarcity of coinage.

The last type of hiring out of an object is *kirāʾ muʾabbad* or *conductio perpetua*, the lease in return for a quit-rent of ancient French law. It is the equivalent of our emphyteusis or emphyteutic lease. In Egypt, this institution is known under the name of *mudda ṭawīla*, in Algeria as *ʿanāʾ*, and in Morocco as *kirāʾ ʿalā 'l-tabḳiya*; all these names indicate the idea of a perpetual lease.

(A. M. DELCAMBRE)

ḲIRĀʾA, reading. Applied to the Ḳurʾān, *ḳirāʾa* also means *recitation*. In the present article the term *ḳirāʾa* is used as follows: 1. in the general sense of the recitation (a) of single parts of the Ḳurʾān, as prescribed for the ritual prayer (*ṣalāt*), or the recitation (b) of the entire Ḳurʾān, which has become, in the course of years, an accepted spiritual exercise (*ḳirāʾa* = recitation); 2. to indicate a special reading of a word or of a single passage of the Ḳurʾān (*ḳirāʾa*, pl. *ḳirāʾāt* = variant); 3. to indicate a particular reading of the entire Ḳurʾān (*ḳirāʾa* = reading). In the third case one speaks of the *ḳirāʾa* of Ibn Masʿūd or of the *ḳirāʾa* of the people of Kūfa as opposed to the *ḳirāʾa* of other authorities or to the redaction authorised by ʿUt̲h̲mān.

The recitation of texts proclaimed by Muḥammad as revelation played from the very beginning a prominent part in the Muslim community. This is already evident from the fact that the collection of these revelations was designated as *ḳurʾān* "recitation". However, the Ḳurʾān had not yet been codified at the death of the Prophet and the form of Arabic letters used to note down single parts of it and later on the whole collection was very incomplete; in a group of consonants a choice between two or more readings was possible. Consequently, disagreements soon arose on exactly how to read the revealed text. The promulgation of a canonical redaction of the Ḳurʾān under the third caliph ʿUt̲h̲mān (soon after 30/650) was intended to remedy this evil. Copies of this redaction were sent from Medina to Kūfa, Baṣra and Damascus, the most important cities of ʿIrāḳ and Syria. After a relatively short period, this redaction seems to have been generally accepted as the official text, finally even at Kūfa where Ibn Masʿūd (d. 33/653), the distinguished Companion of the Prophet, who maintained a "reading" of his own, had at first called upon his followers to resist.

On the whole, the text of ʿUt̲h̲mān had a strong unifying influence, which was felt to an increasing extent. But a really uniform *ḳirāʾa* was not thereby guaranteed. During recitation, which was essentially based on oral tradition, readings deviating from the official edition continued to be followed. In so far as these readings went back to recognised authorities of the early period and to trustworthy witnesses, they were also noted by commentators on the Ḳurʾān and philologists, and turned to exegetic or linguistic account. Thus variant readings of Ibn Masʿūd, Ubayy b. Kaʿb (d. 29/649 or 34/654) and other early "readers", which deviated from the official text, were transmitted in early scholarly literature and have therefore come down to us, at least in extracts. The *ḳirāʾa* of al-Ḥasan al-Baṣrī (d. 110/728) was later even inserted among the "fourteen readings" (see below).

Further development was on characteristic lines. The untramelled freedom with which the text had been treated in the earliest times was followed by a period of systematisation and limitation of the possibilities of the "readings" which the consonantal text and the oral tradition offered. However, complete unification was not achieved. People neither would nor could simply set aside the power of tradition. Thus the free choice on the *ḳirāʾa* was limited, but not entirely forbidden. While reading the officially accepted consonantal text (already in itself constituting a limitation), the "reader" could still make a choice between a certain number of authorities. In its detail the history of Ḳurʾān reading is very complex. The scanty and sometimes unreliable sources leave much uncertain. In general, however, the course of development is clearly recognisable, thanks in particular to the penetrating studies of G. Bergsträsser (in collaboration with O. Pretzl) and E. Beck (see *Bibl.*). In this article only the essential aspects will be briefly mentioned.

Important progress in the standardisation of the "reading" was achieved by differentiating the letters *b*, *t*, *th*, *n*, *y* etc. by means of strokes (later dots) and by introducing vowel signs. The redaction of ʿUt̲h̲mān, being officially recognised, gained in importance by this clarification. With the passage of time, other differences were gradually eliminated. Such a levelling seems at first to have been accomplished within single cities (*amṣār*), and later on through the influence of one city on another. Majority readings tended to prevail over minority readings, thus leading towards a general consensus. In the first half of the 4th/10th century, Ibn Mud̲j̲āhid (d. 324/936), the influential *Imām* of the "readers" in Bag̲h̲dād, publicly and with governmental support brought this process to its logical conclusion. He banned further use of the *ḳirāʾat* of Ibn Masʿūd and other uncanonical readings. Ibn S̲h̲anabūd̲h̲, a contemporary and fellow-reader of Ibn Mud̲j̲āhid, complied with this ban only after he had been arraigned and flogged. In addition, Ibn Mud̲j̲āhid declared the reading of the ʿUt̲h̲mānic consonantal text, standardised by tradition and consensus, to be obligatory, and compelled Ibn Miḳsam, an other fellow-reader, to renounce the claim which he had maintained until that moment that he could decide for himself on the punctuation and vocalisation of the text. As authorities on the traditional reading of the ʿUt̲h̲mānic text, Ibn Mud̲j̲āhid recognised seven "readers" belonging to the 2nd/8th century, among whom were ʿĀṣim of Kūfa (d. 128/745) and Nāfiʿ of Medina (d. 169/785), whose readings have both remained authoritative

to the present day, that of ʿĀṣim in the east and centre of the Islamic world, and that of Nāfiʿ—with some exceptions—in North Africa from Egypt westwards. To the seven "readers" recognised by Ibn Mudjāhid were added later on three others, and afterwards another four, but these never attained the same standing as the first seven. Furthermore, since Ibn Mudjāhid, in mentioning ʿĀṣim—one of the Seven—had often named two others, Abū Bakr Shuʿba (d. 193/809) and Ḥafṣ (d. 180/796), who transmitted ʿĀṣim's reading independently of one another, it became customary to add also the names of two other traditionists to each of the other six and of the "Three after the Seven". Thus originated the bewildering number of names in the list of readers recognised as canonical (*Gesch. des Qor.*, iii, 186-9; Blachère, 118-23; Bell-Watt, 49 ff.).

After the readings had been limited to the "Seven" recognised as canonical, and to the other "Three after the Seven" and "Four after the Ten", all the others were eliminated in the practice of recitation. The "readers" henceforward had to keep exclusively to the canonical readings. This however did not completely rule out the uncanonical "deviant" (*shawādhdh*) readings. They were later adduced as useful evidence in the practical interpretation of the Ḳurʾān and in the elucidation of linguistic problems. Besides his "Book of the Seven" (*Kitāb al-Sabʿa*, ed. Sh. Ḍayf, see *Bibl.*) Ibn Mudjāhid also composed a "Book of deviant readings" (*Kitāb al-Shawādhdh*), which is not extant. The debate on the uncanonical *ḳirāʾāt* was carried on throughout the centuries in a scholarly literature of growing importance. Ibn Abī Dāwūd al-Sidjistānī's (d. 316/928) *Kitāb al-Maṣāḥif* and Ibn Mudjāhid's works already mentioned were followed—to cite only a few of the most important names—by the monographs on uncanonical readings of Ibn Khālawayh (d. 370/980) and Ibn Djinnī (d. 392/1002), by al-Dānī's (d. 444/1053) classical manual of the Seven Ḳurʾān-readings (verse version by al-Shāṭibī, d. 590/1194) and his works on orthography, punctuation of the vowels and other punctuation marks, by Ibn al-Djazarī's (d. 833/1429) works on the Ten readings and on the classes (*ṭabaḳāt*) of readers, and finally by al-Bannāʾ's (1117/1705) book on the Fourteen readings. For the practice of recitation, the literary tradition constituted, in contrast with early times, an almost indispensable complement to oral instruction.

The knowledge of Ḳurʾān-reading (*ʿilm al-ḳirāʾa*) had become a distinct theological discipline and had many practitioners, few of whom, however, wrote books on it. In this connection, it becomes understandable that the official Egyptian Ḳurʾān of 1924 (following the reading of ʿĀṣim in the tradition of Ḥafṣ) is not founded on early Ḳurʾānic manuscripts, but is the result of reconstructions derived from the literature on the readings (see Bergsträsser, in *Isl.* xx (1932), 5 ff.).

In the recitation by professional "readers" (see above), a distinction is made between an incantatory, a rapid and a moderate tempo (*tartīl* or *taḥḳīḳ—ḥadr—tadwīr*). The manner of execution can be designated as cantillation, but there are also intricate musical settings (see the studies by K. Huber and M. Talbi). The technique of reciting is laid down in detail in works on the *ḳirāʾāt*.

Special importance is attributed to the rules of pronunciation, including the theory of assimilation (*idghām* [*q.v.*], *iddighām*), the modification of *a* into *e* (*imāla*), extension (*madd*), forms of the pause (*waḳf*) and the conservation or alleviation (*tabdīl*) of *hamza* (see O. Pretzl's analysis of a typical treatise on the *uṣūl al-ḳirāʾa*, in *Islamica*, vi (1934), 230, 291-331). The time required for private oral instruction is greatly increased by the fact that, since Ibn Mudjāhid, several different *Imām*s and Schools of Readers have been officially recognised. According to a distinctive method known as "assembling" (*djamʿ*) "the Ḳurʾān verse is divided into small fragments, each one of which is recited as often as there are variants of it, each time with another variant" (see the instructive passage, "Koranlesungsunterricht", by Bergsträsser, in *Isl.*, xx (1932), 36-42). When the whole of the Ḳurʾān is recited, the separate readings must be considered as self-contained units; the "readers" are thus not free to combine the text of their recitation from different *ḳirāʾāt* (Bergsträsser, *ibid.*, 29 ff.). These, however, are details which concern only an élite of "readers". The great mass of the *ḳurrāʾ*, consisting largely of blind men, would in any case limit themselves from the start to the study of a single reading (*Ḥafṣ ʿan ʿĀṣim*, in the west *Warsh ʿan Nāfiʿ*). In general, the originally large number of readings has given way in the course of centuries to a far-reaching uniformity both in the practice of recitation and in the theoretical *ʿilm al-ḳirāʾa*.

The history of the text of the Ḳurʾān and of the *ḳirāʾāt* has also been studied by European and American orientalists, notably Nöldeke and Goldziher, followed by A. Jeffery, G. Bergsträsser, O. Pretzl and E. Beck (see *Bibl.*). Important sources have been published, and separate stages of development reconstructed. Jeffery, and likewise Bergsträsser in association with Pretzl, planned an apparatus criticus for the Ḳurʾān. Bergsträsser and Pretzl had begun a systematic collection of photostats of early manuscripts of the Ḳurʾān in the hope of discovering variants not registered in the literature. Because of their untimely death (1933 and 1941), this research came to a standstill. Jeffery also died (1959) without having realised his vast project. The task, however, remains to evaluate the known and still unknown variants for the study of old Arabian dialects and in general for a future historical grammar of Arabic. Whether much will emerge to the profit of the historical interpretation of the Ḳurʾān remains to be seen. The harvest so far obtained by Bergsträsser and Beck is rather meagre and promises no new results of any importance. During the last years of his life, Pretzl himself had apparently "retreated from the generally high appreciation of the manuscripts and readings of the Ḳurʾān". August Fischer, who noted this *en passant* in a posthumous article (*Isl.* xxviii (1948), 5 f. n. 4), also cited a passage from Spitaler's obituary of Pretzl (*ZDMG* xcvi (1942), 163 ff.). In Fischer's opinion the Ḳurʾānic textual variants "*for the most part* (emphasis by Fischer) consist of no more than attempts at emendation made by philologically trained Ḳurʾān specialists on difficult passages in the ʿUthmānic redaction".

ĶIRĀʾA [see TADRĪS].

ĶIRĀḌ (also *muķāraḍa* and *muḍāraba*, cf. below), a commercial arrangement in which an investor (*ṣāḥib al-māl*) or group of investors entrusts capital or merchandise to an agent-manager (*ʿāmil, muķāriḍ, muḍārib*) who is to trade with it and then return it to the investor with the principal and previously agreed-upon share of the profits. As a reward for his labour, the agent receives the remaining share of the profits. However, in case of a loss resulting from an unsuccessful business venture, the agent is in no way liable for the return of the lost investment. He loses his expended time, effort, and anticipated share of the profit, while it is the investor who exclusively bears the direct financial loss.

The *ķirāḍ* combined the advantages of a loan with those of a partnership (*sharika*); and while containing elements characteristic of both contracts, cannot be strictly classified in either category. In all Islamic legal writings, it is treated as a distinct and independent contract with a separate section or book (*kitāb*) devoted to it. As in partnership, profits and risks in the *ķirāḍ* are shared by both parties, the investor risking capital, the agent his time and effort. However, in the *ķirāḍ*, unlike a partnership, no joint capital is formed and the investor does not become directly or jointly liable with the agent in transactions with third parties; indeed, third parties need not ever be aware of the investor's existence. As in a loan, the *ķirāḍ* generally entailed no liability for the investor beyond the sum of money or quantity of commodities handed over to the agent; and in the event of its successful completion, the agent returned the capital plus a share of the profits (the latter, corresponding to the interest in an interest-bearing loan).

The agent's complete freedom under normal trading circumstances from any liability for the capital in the event of partial or total loss and the disjunction between the owners of the capital and third parties are novel and distinctive features of the *ķirāḍ* which made it a particularly suitable instrument for long-distance trade.

Although commercial arrangements resembling the *ķirāḍ* were known in the Near Eastern and Mediterranean world from the earliest times, it appears very likely that its direct origins were indigenous to the Arabian peninsula, having developed in the context of the pre-Islamic Arabian caravan trade. With the Arab conquests, it spread to the Near East, North Africa and ultimately to Southern Europe. Its introduction in the form of the *commenda* in the Italian seaports of the late 10th and early 11th centuries A.D. was germinal to the expansion of mediaeval European trade. The *ķirāḍ* was the subject of lengthy and detailed discussion in the earliest Islamic legal compendia (late 2nd/8th century). Its legal treatment in these early treatises bears the hallmark of long experience with the *ķirāḍ* as an established commercial institution. Although not mentioned in the Ķurʾān, numerous traditions attribute its practice to the Prophet and his leading companions (e.g. Shirbīnī, *Mughnī al-muhtādj*, ii, 309; Sarakhsī, *Mabsūṭ*, xxii, 18-19; Shaybānī, *Aṣl muḍāraba*, fol. 42). From the sparse indications available, it appears that this form of commercial association continued through the early centuries of the Islamic era as a mainstay of caravan and long-distance trade. In one of the very few mediaeval Arabic treatises of commerce, Dimashķī's *The beauties of commerce* (probably 5th/11th century), the *ķirāḍ* is cited as one of the three methods by which trade is carried out;

Ghazālī lists it among the six commercial contracts, "the knowledge of which is indispensable to anyone seeking gain in trade" (*Iḥyā'*, ii, 66). The documents from the Cairo Geniza (5th-7th/11th-13th centuries) are replete with numerous examples of *commenda* agreements which account for a considerable share of the commercial activity reflected in these documents. Thus we may conclude that not only in law, but in practice as well, the *ķirāḍ* constituted one of the most widespread instruments of commercial activity.

Three Arabic terms are used to designate this contract: *ķirāḍ*, *muķāraḍa*, and *muḍāraba* and the terms are interchangeable with no essential difference in meaning or connotation among them. The divergence in terminology was probably originally due to geographical factors. The terms *ķirāḍ* and *muķārada* apparently originated in the Arabian peninsula, and the term *muḍāraba* was of ʿIrāķī provenance. Subsequently, the difference was perpetuated by the legal schools, the Mālikīs and Shāfiʿīs adopting the term *ķirāḍ* and, to a lesser degree, *muķāraḍa*, and the Ḥanafīs the term *muḍāraba*.

As in the case of several other commercial arrangements, Islamic law justifies the licitness of the *ķirāḍ* contract on the religious grounds of traditional practice (*sunna*), the consensus of the community (*idjmāʿ*) and, more interestingly, on the practical grounds of its economic function in society. After quoting a series of traditions describing the *ķirāḍ*'s use in trade by the Prophet and his companions, Sarakhsī adds that it is also allowed: "Because people have a need for this contract. For the owner of capital may not find his way to profitable trading activity, and the person who can find his way to such activity may not have the capital. And profit cannot be attained except by means of both of these, that is, capital and trading activity. By permitting this contract, the goal of both parties is attained" (Sarakhsī, *Mabsūṭ*, xxii, 19).

Sarakhsī's summary of the *ķirāḍ*'s economic function highlights one of the most important aspects of this contract's rôle in Near Eastern commerce, and helps explain its widespread use in mediaeval trade. For the investor, the *ķirāḍ* served as a means of hiring trading skill, and for the agent-manager, as a means of hiring capital. Since, in the mediaeval commercial context, profit could be realised only by the combination of capital and trading activity, the *ķirāḍ*, especially for the purposes of long-distance trade, became an ideal instrument to attain a profitable goal.

ĶIRĀN, in Islamic astrology "the conjunction". Without further qualification, this refers to the mean or true conjunction of Saturn and Jupiter. The conjunctions of these two planets were combined, apparently by Sasanid astrologers, with the Hellenistic doctrine of the triplicities to form the basis of one of several methods of predicting the course of history available to mediaeval astrology.

The four triplicities were associated with the four sublunar elements as follows:

Fire	Earth	Air	Water
Aries	Taurus	Gemini	Cancer
Leo	Virgo	Libra	Scorpio
Sagittarius	Capricorn	Aquarius	Pisces

Mean conjunctions of Saturn and Jupiter occur once in about every 20 years with a longitudinal increment of about 242;25°; for twelve or thirteen conjunctions, then, or about 240 or 260 years, they stay within the same triplicity, and it takes about 960 years (i.e. approximately a millennium) for the conjunctions to return to the triplicity in which the cycle started. The return of the conjunctions to the triplicity of fire (to Aries) in about a millennium was thought to indicate the appearance of a new prophet; the transfer of the conjunctions from one triplicity to the next in about 240 or 260 years was taken to signify a possible change in the dominant dynasty; and the occurrence of each individual conjunction was believed to portend lesser shifts in political, military, or economic status. The details of these predictions depended upon the horoscopes of the beginnings of the solar years in which the conjunctions occurred.

This theory of conjunctions usually appears in consort with various other elements of political astrology, all of which seem to have originated in the Zoroastrian millennarianism of Sasanid Iran. These other methods are: the revolutions of the world-years; the cosmic cycles—i.e. the mighty, big, middle, and small varieties of the *ķisma*, the *intihā'*, and the *fardārs* of the planets; the mighty years of the planets; and the planetary lords of the millennia, centuries, decades, and single years. These elaborate systems for predicting religious and political change, together with the related theory of the conjunctions of the maleficent planets, Saturn and Mars, in Cancer every 30 years, appealed strongly to dissident groups in the early ʿAbbāsid period and later, and especially to these with Iranian connections; in particular, one may mention the Ķarmaṭians and the Ismāʿīlīs. Many leading astrologers wrote expositions of the significance of the conjunctions, including Māshā'allāh and Abū Maʿshar; through their writings, this form of political astrology was transmitted to Western Europe, where it became extremely popular during the Renaissance.

ĶĪRĀŢ [see makāyīl].

ĶIRD (a., fem. *ķirda*, pl. *ķurūd, aķrād, ķirad, ķirada, ķarida*), a substantive having the general sense of "monkey", but representing in fact, among the simians of the Ancient World, only the members of two families, the colobids and the cercopithecids, the only primates known in ancient Arabia. Egypt, Abyssinia, Somalia, the Yemen and ʿUmān in fact constitute favourite habitats of baboons (genus *Papio*) and macaques or cynocephalous magots (genus *Macaca*). Both types live there in groups of which the total population can vary from a dozen to a hundred; each of these societies, which are based on polygamous family units, is subject to the authority of a male leader and this animal social organisation has not failed to attract the attention of those Arab writers who have spoken about monkeys. Since ancient times, the peoples of southern Arabia have looked with respect and circumspection tinged with an element of superstitious fear at the colonies of hamadryad baboons (*Papio hamadryas*) and of green baboons (*Papio anubis*) infesting the areas of high ground. In the times of the Pharaohs, the Egyptians deified these monkeys, and there was certainly a time when, in pre-Islamic Arabia, these animals were taboo. Were they demons incarnate, maleficent genii or metamorphoses of men? There was no shortage of questions for the credulous Bedouin to ask himself, and more especially, there was the ever-current legend according to which Solomon made a pact with the race of monkeys, setting them to guard the demons vanquished by the genii. Even in the 4th/10th century, Ibn al-Faķīh al-Hamadhānī [*q.v.*] and al-Masʿūdī report, with complete seriousness, that among these troupes of monkeys there is found one larger than the rest wearing at his neck the seal bestowed by Solomon. Apart from the involvement of the latter in the world of monkeys, there was alive in the minds of men the legend, of Talmudic origin (*Sanhedrin*, 109a), of the divine curse inflicted upon some of the builders of the tower of Babel; their expiatory punishment was to be changed into monkeys for all eternity. This curse was to be confirmed by the Ķurʾān (II, 61/65; VII, 166; V, 65/60) where it is said: "those whom He has cursed, He has changed into monkeys and pigs". Popular belief in such metamorphoses (*maskh*, pl. *musūkh* [*q.v.*], encouraged by successful fables such as the *Thousand and one nights* (for metamorphoses of men into monkeys, see nights 9, 12, 299, 624), was to persist for a long time in the bosom of Islam, in spite of categorical refutations on the part of the Prophet reported in certain *ḥadīth*s (see al-Damīrī, *Ḥayāt*, ii, 243-4), according to Ibn ʿAbbās. More sceptical, al-Djāḥiẓ did not omit to set these alleged retrograde mutations in the realm of fiction (*Ḥayawān*, i, 309).

By nature less inclined towards superstition than the nomads, the settled people of the Yemen and of ʿUmān were familiar with the baboons of their region and also with other monkeys imported from East Africa, and were able at a very early stage to domesticate the young animals and to use them for such menial services as turning millstones; butchers and grocers used them to guard their goods (al-Damīrī, *op. cit.*). The cunning and agility of the monkey were also exploited by thieves for picking pockets and housebreaking. So the monkey became a part of the every-day life of man, to almost the same extent as the dog, and the term *ķird* was no longer sufficient to differentiate between ages and sexes; a terminology based on exterior traits filled this gap. Thus the large male baboon was called *rubaḥ* or *rubbāḥ* (whence the form II verb *rabbaḥa* "to train monkeys"); he was known also as *ķurduḥ*/*ķurdūḥ*, *ḥawdal*, *ḥibn*, and his thick fur hood earned him the epithets *habbār*, *hawbar*. In the Ḥidjāz he was known as *hidjris*, a name for the fox in other countries. The female and the young monkey, smaller in stature than the male and with less hair, were known, according to different places and people, as *daḥya*, *ķishsha*, *ilķa*. In spite of these cases of domestication, which were in fact limited in number, relations between men and monkeys were not always so peaceable, and it happened quite often that as a result of the proliferation of the simian species, rural populations had to take issue with destructive and aggressive hordes; speaking of baboons, al-Idrīsī (*Nuzha*. . ., 2nd clime, section 6) remarks that, in ʿUmān, it is sometimes necessary to repel them with spears and arrows, and al-Maķrīzī notes (*Khiṭaṭ*, and quoted in the *Manhal al-ṣāfī* of Ibn Taghrībirdī) in referring to a *ķāḍī* of Mogadishu in Somalia, that in about the year 800/1398 this town was actually invaded by monkeys which installed themselves there firmly, and that in 839/1435-6, the date of his meeting with the *ķāḍī*, this permanent occupation was still going on, causing grave annoyance to the inhabitants.

In spite of a fundamental quality of mischief, encouraged by captivity and a sometimes extreme lewdness, stigmatised by the adage *aznā min hidjris*, the Arabs recognised in the monkey qualities lacking in other animals, such as a concern for cleanliness expressed through a continuous and methodical process of delousing, its extreme agility, its astonishing ingenuity and above all its exceptional talent for imitation; these qualities were defined in proverbial expressions such as *aʿlam min hidjris* "more cunning than a monkey", *akyas min ķishsha* "more sly than a she-monkey", *amlaḥ min rubbāḥ* "more pleasing than a baboon", *aḥkā min ķird* "more imitative than an ape", and they summed all of this up in the antithesis *al-ķird ķabīḥ lākinnahu malīḥ* "rascal though he is, the monkey is agreeable".

The maritime trade of slavers and of Arab and Persian merchants in the Indian Ocean made known to the Muslim world a number of new species of cercopithics and a considerable trade in monkeys developed in the ports of the Red Sea and the Persian Gulf. The hunters, sea-farers from the coastal region of the Ḥaḍramawt, went by preference via the island of Socotra to the coast of East Africa (the country of the Zandj and the country of Sufāla) in search of the magnificent guereza colobes (*Colobus abyssinicus*) with its fine black pelt, an item of great luxury, exported at that time as far as Central Asia and Europe. Al-Idrīsī (*Nuzha*, 1st clime, section 7) speaks of an "Island of Monkeys" (*djazīrat al-ķurūd*), in the Indian Ocean (perhaps the island of Pemba or that of Mafia?), where the hunters from Khuria-Muria and of Socotra went to trap monkeys (that is to say, the green monkeys *Cercopithecus callitrichs*, the vervets *Cerc. pygerythrus*, the moustacs *Cerc. cephus*, the grivets *Cerc. Aethiops* and the nisnas *Cerc. pyrrhonotus*) with the aid of small boats propelled to the coast by the tide and the currents. These boats contained delicacies for bait and on the gunwales

there were towing ropes manoeuvred by cords attached to the ship. Attracted by the food, the quadrumans soon crowded together in the boats and it was necessary only to operate the recovery ropes and to bring on board the teeming cargo; depending on the species, some were killed and their pelts sent to the fur market, and others, with collars on their necks, were sold at a high price either to merchants or to aristocratic collectors of rare beasts or to itinerant animal showmen.

It is known, from the chroniclers, and al-Masʿūdī (*Murūdj*, i, § 485) confirms it, that princes of India and of China kept trained monkeys, whose role was to detect poison in food and drink; the ʿAbbāsid caliph al-Mahdī was advised by Chinese ambassadors to avail himself of the same precaution. But, a century earlier, the Umayyad caliph Yazīd b. Muʿāwiya already had his monkey which accompanied him in processions, mounted on an ass (al-Damīrī, *op. cit.*). The ʿAbbāsid caliph al-Mutawakkil received, from a king of Nubia, two monkeys, of which one could sew and the other model in clay. On the other hand, the sea-farers of Sīrāf and of ʿUmān, maintaining commercial links with India, the islands of Indonesia and China, were the principal source of information on Asiatic fauna and flora, information exploited by Arab geographers and encyclopaedists from the 3rd/10th to the 7th/13th century; these hardy adventurers brought back, on their return, specimens of quadrumans native to these regions, such as rhesus macaques (*Macaca mulatta*) and crab macaques (*Macaca irus*) and semnopithics or langurs, including the hanouman entellus (*Presbytis entellus*), all of these being untouchable beasts to the Indians. Certain of these monkeys were offered, at the beginning of the 4th/10th century, by the *amīr* of ʿUmān, to the ʿAbbāsid caliph al-Muķtadir bi-llāh to complete his menagerie (*Murūdj*, i, § 487); with hunting dogs and falcons, monkeys were regarded as princely gifts and they were to figure among the presents sent by Hārūn al-Rashīd to Charlemagne on the occasion of the two exchanges of ambassadors between the two sovereigns (181-5/797-801).

For its part, the Maghrib was well acquainted with monkeys through the numerous colonies of apes, known as Barbary macaques (*Macaca inuus*) in the Atlas. Very tame and friendly animals, they are a tourist attraction in the valleys of the Chiffa, in Algeria, and it is well known with what vigilant care the British keep their few specimens imprisoned on the Rock of Gibraltar.

The monkey has always and everywhere had, with its grimaces its mimicry, its mischief and its agility, the power of amuse crowds; among showmen and jugglers, the exhibitor of monkeys (*ķarrād, ķurādātī, ķuraydātī*) was assured, in the Islamic countries, of success in the company of strolling players, in public places, at fairs and in markets. Yemenis and Somalians were the experts in this profession, which, while relatively lucrative, was held in considerable contempt by the upper classes; so, according to Ibn al-Faķīh, Khālid b. Ṣafwān, in the course of an oratorical contest between the people of North and South Arabia, threw this insult at Ibrāhīm b. Makhrama al-Kindī: "You other Yemenis, you are nothing but exhibitors of monkeys. . ." In spite of this disapproval of public entertainers who were, it must be said, in many cases rogues, the mass of the people, both rural and urban, were attracted to open-air entertainments and to exhibitions of rare and "clever" animals, whether these were monkeys, dogs, bears, or goats. As trained quadrumans were a source of hilarity, the people readily abandoned the term *ķird* to designate them, substituting expressions of a happier psychological effect; thus, in Syria and in Lebanon, the monkey was called *saʿdān* "lucky charm" and his trainer became the *saʿādnī*, while in Iran, ʿIrāķ, Turkey and Egypt it was *maymūn/mīmūn* "fortune" which prevailed and which by a coincidence perhaps not fortuitous could quite well be linked to the Greek μιμώ "ape" from the verb μιμοῦμαι "imitate, mimic". In the same spirit, the entire Maghrib instinctively adopted, in parallel to the classical substratum, *ķerd/gerd* (pl. *ķrūd, krūda/grūd, grūda*) and the Berber *ibki* (pl. *ibkan*) and *iddū* (pl. *iddawn*), the arabised Persian adjective *shādī* (pl. *shwada, shwāda, shwādī*) "gay, joyous" which must have been introduced by the Turks and which ʿIrāķ also made its own. Also in the Maghrib, the popular negro *Bū Saʿdiyya*, parodying black magicians, to the terror of small children, is often accompanied in his acts by a trained monkey, which he makes dance to the sound of the tambourine or of the *ghayṭa* [*q.v.*].

Arab authors have said very little about the tricks which the exhibitors of monkeys trained their pupils to perform. Al-Masʿūdī notes simply that the Nubian grivet exhibited in the fairs astonishes the audience by his surprising agility in climbing to the top of a spear fixed in the earth. As for al-Djāḥiẓ who, as an objective naturalist, enquired into the behaviour of monkeys employed by the *aṣḥāb al-ķirada* (*Ḥayawān, passim*), he makes no mention of the kinds of acrobatics that were displayed in public. It is nevertheless easy to imagine them for anyone who has witnessed the displays given in Morocco by the wandering troupes of the Ulād Sīdī Aḥmed ū Mūsā, the native showmen of the Sus, with their performing monkeys, and this on the occasion of local patronal festivals like that of *Lāllā Kassāba* (see E. Laoust, *Noms et cerémonies des feux de joie*, in *Hespéris* (1921), 44). In addition, the ambience of these travelling shows with their dense crowds of curious onlookers has been finely caught by Badīʿ al-Zamān al-Hamadhānī [*q.v.*] in his delightful *maķāma ķirdiyya* (*Maķāmāt*, Cairo 1923, 104-6; Fr. tr. S. de Sacy, *Chrestomathie arabe*, Paris 1827, iii, 246-7) where the *ķārrād* is none other than the waggish Abu 'l-Fatḥ al-Iskandarī constrained by vicissitudes to occupy this dismal condition. One of the most familiar street characters, the exhibitor of monkeys, is not absent from the stories of the *Thousand and one nights*, notably in the very salacious tale of the nymphomaniac princess who ravished one of his animals (Nights 355-7).

In Islam, as elsewhere, to liken a man to a monkey was one of the most degrading insults. Among the Muslims of Spain, in periods of friction between the communities, while the pig and the dog were used as epithets for the Christians, the name "monkey" was generally reserved for the Jews, in reminiscence of the Ķurʾānic verses quoted above (see H. Pérès, *Poésie andalouse*, Paris 1953, 240-1). In Ifriķiya, under the Aghlabid dynasty, the *ķāḍī*, in his zeal for *djihād* [*q.v.*], enjoined upon Jews and Christians the wearing on the shoulder of a square of cloth bearing the picture of a monkey in the case of Jews, and a pig in the case of Christians; these same symbols were to be shown on a board nailed to the door of their houses (according to al-Mālikī, *Riyāḍ al-nufūs, apud* H. R. Idris, *Contribution à l'histoire de l'Ifrikiya*, in *REI* (1935), ii, 142). The satirical poets did not hesitate to use derogatory comparisons with monkeys to brand those whom they were attacking; this was

done by the Andalusian Ibrāhīm al-Ḥasanī in referring to the famous *amīr* al-Manṣūr Ibn Abī ʿĀmir (Pérès, *op. cit.*), as was done before him by Abū Nuwās, proclaiming his hatred of the Barmakids [see BARĀMIKA] in this opening verse *hād͟hā zamānu 'l-ḳurūdi*. . ., "This is the age of the apes. . ." (*Dīwān*, Cairo 1953, 519; Beirut 1962, 415).

Under the scheme of Ḳurʾānic law, eating the flesh of the monkey is forbidden, since the animal is omnivorous and has canine teeth; an additional and fundamental reason for this prohibition is the instinctive revulsion, which is natural to the primates, the family to which the human race belongs, for the idea of devouring another member of the same family. For the evolved human being, eating the meat of the ape would be close to cannibalism. Nevertheless, ancient medical opinion held the flesh of the monkey to be an effective preventive agent against elephantiasis (*d͟jud͟hām*). Certain other parts of the animal, such as the teeth, the hair and the skin, possessed "specific qualities" (*k͟hawāṣṣ*) (see al-Damīrī, *loc. cit.*), which modern science has relegated to the rank of absurdity.

Finally, regarding the term *ḳird*, it should be noted that in astronomy the asterism ζ, λ *Canis majoris* and ύ, κ, θ, γ, λ, μ, ε *columbae* is wrongly called *al-Ḳurūd* "the Apes" in some treatises, a mistake arising from a misspelling of *al-Furūd* "the Hermits" (see A. Benhamouda, *Les noms arabes des étoiles*, in *AIEO*, Algiers (1951), ix, 181).

With *ḳird*, there has not so far been any reference to other than colobids and cercopithecids; it might also be asked what conception the Arabs had of the large anthropomorphic, or anthropoid, apes. These number no more than eleven species world-wide, seven gibbons, two chimpanzees, one gorilla and one orang-outang; none of these species exists in Arabia, and to find them one must go either to Indonesia or to central Africa. It is impossible, however, not to see in one or other of these primates the mysterious *nasnās/nisnās* (pl. *nasānis*) of the mediaeval Arab writers, and there can be no doubt that such a "demi-man" with human face, and vertical stance, without a tail and possessing the faculty of speech, but also covered with a thick fleece, usually russet-coloured, was originally nothing other than an anthropomorphic ape observed by sea-faring Arab merchants of the Indian Ocean, and only the gibbon (*Hylobates lar*), found in Malaysia, Indochina, Burma and the Himalayas, corresponds fairly accurately to this description. Ibn al-Faḳīh, who is quoted by al-Ḳazwīnī (*ʿAd͟jāʾib*, in the margin of al-Damīrī, *op. cit.*, i, 191) and Muḥammad b. Zakariyyā al-Rāzī [*q.v.*] say, with reference to Sumatra (*d͟jazīrat al-Rāmnī* = Lambri), that "there are found there human beings of both sexes, who go bare-footed and without clothing. Their speech is incomprehensible and they live in the tree-tops. They are entirely covered with hair and they live on a diet of fruit; they constitute an innumerable people who flee at the approach of man . . . these beings are four spans in height, their language is a kind of whistling and their faces are covered with russet-coloured down. . ." Al-Idrīsī (*Nuzha*, 1st clime, section 8) adds that their movement through the trees is accomplished by means of the arms alone and no use is made of the feet, which gives the impression that they are flying from one branch to another. In the 8th/14th century, Ibn Baṭṭūṭa (*Riḥla*, ii, 136) writes of the colonies of siamang gibbons (*Symphalangus syndactylus*) with black fleece and white mask which he encountered on the southern coasts of the Indies. As for the recently-discovered Asiatic orang-outang, the gorilla and the chimpanzees of Africa, these remained on the peripheries of knowledge until the 12th/18th century. Besides, in so far as they were known, their height, greater than that of man, meant that they could not be identified with the half-man which the *nasnās* is, by definition; the root *n.-s.-n.-s.* evokes in fact the idea of smallness and weakness. The reports of those who saw gibbons were rapidly distorted by the imagination of those who transmitted them to the point where the *nasnās* became a monstrous semi-anthropomorphic creature, one-eyed and one-legged, moving with successive bounds at a tremendous speed, in times past hunted for its meat in the Yemen. With the *s͟hiḳḳ*, another half-human monster, the *nasnās* is not without analogy with the *monoculus* and the *satyrus* of Pliny. Understandably, sceptical minds demanded visual proof of the existence of such phenomena and to this end the ʿAbbāsid caliph al-Mutawakkil, according to al-Masʿūdī (*Murūd͟j*, i, § 491), instructed the famous doctor and translator Ḥunayn b. Isḥāḳ [*q.v.*] to find for him some of these curiosities; it seems that the scholar brought back from his explorations two authentic *nasnās*, but nothing further is known of the episode.

Modern philologists, like P. Anastase-Marie, have gone so far as to see in the term *nasnās* the Greek νάννος "dwarf" (see Amīn Maʿlūf, *Muʿd͟jam al-ḥayawān*, Cairo 1932, s.v. *Ape*, 13-18); it cannot be denied that the two words have the same sense and one would thus be led to see, in the origin of *nasnās*, besides the gibbon, a human pygmy. Al-D͟jāḥiẓ, while not believing in them, lists a number of these fabulous beings which really existed in the popular imagination, and, this being an interesting fact, he assimilates the *nasnās* to the *wāḳ-wāḳ* and to the people of Gog and Magog (*Ḥayawān*, i, 189; vii, 178). Now the Arab geographers recognised three countries jointly said to be the land or the island of the *Wāḳ-Wāḳ* (or the *Wāḳ-Wāḳs*), the first situated below the country of the Zand͟j [*q.v.*], beyond Sufāla "of gold" (Mozambique); the second in the most eastern islands of Malaysia (the Philippines, Celebes, the Moluccas); and the third in the extreme north of the Sino-Asiatic continent; it is found that these three countries correspond quite closely to those inhabited by particularly small peoples, the Negrillos and the Akkas in Africa, the Negritos in Malaysia, in Deccan and in the southern Himalayas, and the Lapps, the Samoyedes, the Tungus and other nomadic ethnic groups of the arctic and sub-arctic regions. It may thus be supposed that those who encountered these pygmy people by chance identified them in their accounts with the *nasnās*, as had also been the case with the gibbon; and a detail which may corroborate this interpretation is the insistence of the authors on the faculty of speech attributed to the *nasnās*. Nevertheless, there remains the mystery of the alleged existence of the *nasnās* in the Yemen, and we can hardly be satisfied by the *ḥadīt͟h* (see *LA*, under *n.-s.-s.*) according to which the *nasnās* were the metamorphoses of men from the two cursed tribes of ʿĀd and T͟hamūd [*q.vv.*]. Was there, in Arabia, a small anthropoid ape, or a race of human pygmies? The question and its solution belong to the realm of palaeontology and of prehistory.

In fact, in historical times, the Arab peoples, having never encountered this fabulous *nasnās* in their own countries, quite naturally applied the term to all the small long-tailed flat-faced African monkeys with which the exhibitors made them

familiar (see al-Damīrī, *op. cit.*, ii, 353-4), and modern systematic practice has simply ratified the vox populi in retaining the name "nisnas" and applying it to the Somalian *Cercopithecus pyrrhonotus*. In conclusion, having been born out of confused images of the gibbon and a pygmy in travellers' tales, to become subsequently a monstrous human mutation blighted by divine punishment, the *nasnās* has finally been placed, by common logic, in one of the families defined by *ḳird*.

(F. VIRÉ)

KIRESUN [see GIRESŪN].

ḲIRGIZ, a Turkish people, mentioned as early as the oldest Chinese accounts of Central Asia (from the 2nd century A.D.) under the name Kien-Kuen, which according to P. Pelliot (*JA*, Ser. 2, vol. xv, 137) goes back to a Mongol word, singular *ḳirḳun*. The lands of the Kirgiz are not exactly defined in these sources; according to a very reliable source, the land of the Kien-Kuen lay north-west of the land of the K'ang-Kiu, i.e. of Sogdiana. The name Ḳirghīz first appears in the Orkhon inscriptions of the 8th century; at that time the Kirgiz (as the contemporary Chinese annals also tell us) lived on the Upper Yenisei (Turkish Kem), north of the Kög-men or Sayan mountains. The same name (Kūkmān) is also mentioned in Gardīzī (W. Barthold, *Otčet o poezdke v Srednyuyu Aziyu*, 86 = ed. ʿAbd al-Ḥayy Ḥabībī, Tehran 1347/1968, 262); according to this source, the capital of the Khān of the Kirgiz was 7 days' journey north of these mountains. There is also said that the Kirgiz had red hair and a white colour of skin (*surkhī-i mūy wa sapīdī-i pūst*), which is explained by their alleged relationship with the Slavs; the same anthropological features, of which there is no longer any trace among the modern Kirgiz, are mentioned in the Chinese *T'ang-shu*; linguistically, the Kirgiz were then already Turkicised. They did not come to the fore politically till about 840 A.D., when they succeeded in conquering the lands of the Uyghur in Mongolia. Nothing was known in Muslim lands of this event; Marquart's endeavour (*Osteuropäische und ostasiatische Streifzüge*, Leipzig 1903, 91-2) to connect with this the story in Djāḥiẓ of the defeats of the Toghuzghuz, can be utterly rejected; like Ḳudāma (ed. de Goeje, 262, l. 13) Djāḥiẓ only refers to the hostility between the Toghuzghuz and the Kharlukh (Ḳarluḳ [*q.v.*]). Iṣṭakhrī (ed. de Goeje, 9-10) and others mention the Kirgiz (Khirkhīz) as eastern neighbours of the Kimāk [see KIMĀK] and as northern neighbours of the Kharlukh and Toghuzghuz; in the east their lands are said to have stretched to the ocean. The most important article of export for trade with Muslim lands was musk. The ethnic and historical continuity between the Kirgiz and the people living today under the same name in the USSR is supposed but not proved. The Kirgiz were probably driven out of Mongolia in connection with the foundation of the empire of the Khitāy in the beginning of the 10th century [see ḲARĀ KHIṬĀY] and the advance of the Mongol peoples; on the other hand, a body of Kirgiz must have migrated as early as this century southwards to the present abode of the genuine Kirgiz (Kara Kirgiz); according to the *Ḥudūd al-ʿālam* (f. 18a, tr. Minorsky, 98, comm. 293-4, even the town of Pančūl (the modern Aḳṣu in Chinese Turkestan) was in possession of the Kirgiz. The Kirgiz are not mentioned again in this region till the 16th century; what the Chinese Č'ang-Te, who was there in 1259, records of the Kirgiz (especially on the use of dog-sledges, cf. Bretschneider, *Mediaeval researches*, i, 129) he had only been told, and did not see himself, and these stories probably do not refer to the people of the land he passed through. The main body of the people had probably remained on the Upper Yenisei; the Ḳarā Khiṭāy when driven out of North China had to fight with these Kirgiz during their trek westwards. In the fertile region of the modern administrative district of Minusinsk the Kirgiz gradually adopted agriculture and a settled mode of life. According to the *Ḥudūd al-ʿālam* (f. 17b, tr. Minorsky, 97, comm. 286) there was only one town among the Kirgiz, called Kemidjkat, where their Khāḳān lived, and no other towns or villages, but only tents; on the other hand, Rashīd al-Dīn says (ed. Berezin, *Trudī Vost. Otd. Arkh. Obshč.* vii, 168-9) that the Kirgiz had "many towns and villages". From these and similar statements Radloff has drawn the conclusion (*JA*, Ser. 6, vol. ii, 328) that the present state of Kirgiz culture is much lower than it used to be.

In the 13th century the Kirgiz on the Yenisei had to submit to the Mongols under Čingiz Khān [*q.v.*]. Negotiations for their submission were already begun in 1207, but it was only settled in 1218 when the last rebellion was put down. After the decline of the empire of the descendants of Čingiz Khān the Kirgiz had sometimes to be under the yoke of the Mongols, sometimes of the Kalmucks, and sometimes of the Russians; in 1607 they recognised the suzerainty of the Ḳazāḳ, but by 1609 we find them killing a tax-collector sent by the Ḳazāḳ. In 1642 they were described by the Kalmuck Khān Batur as Kalmuck, in 1646 by the Russian plenipotentiary Daniyil Arshinskiy as Russian subjects. In 1703 they were transferred by the Kalmucks, by arrangement with Russia, southwards to the region of the modern Semirečye; they are then said to have numbered 3,000-4,000 tents. As mentioned above, a portion of the Kirgiz had migrated at a much earlier date; shortly after 1514 a certain Muḥammad is mentioned as being invested as Khān of the Kirgiz by Saʿīd Khān the ruler of the Mongols (*Taʾrīkh-i Rashīdī*, tr. E. D. Ross, London 1895, 141); in the 16th century the Kirgiz were for the most part under the rule of the Khāns of the Ḳazāḳ. The Kirgiz were called *Burut* by Kalmucks; they were nearly all driven out from Semirečye to Farghāna and Ḳarātegīn; it was only after the destruction of the Kalmuck empire by the Chinese (1758-9) that they returned to their old settlements in the southern part of Semirečye. At this date the name Kirgiz was transferred to the Ḳazāḳ by the Russians; to distinguish them from the latter, the true Kirgiz were called

Black Kirgiz (Ḳarā Ḳirghiz). The term "Ḳarā" was never adopted by the people themselves and is now definitely repudiated. In Semirečye, the Ḳarā Ḳirghiz, outwardly at least, professed Islam; in their epic, which takes its name from the principal hero Manas, the wars against the Kalmucks are described as wars of religion. Unlike the Ḳazāḳ, the Ḳarā Ḳirghiz had neither princes or nobles; the elders, called *Manap*, were not chosen by any kind of election but owed their position entirely to their personal influence. Owing to the continual state of war, the tribes of the Ḳarā Ḳirghiz did not break up into small subdivisions as was the case with the tribes of the Ḳazāḳ; an *aul* (camp) of the Ḳarā Ḳirghiz comprised the members of a whole tribe and therefore occupied a much greater area than an *aul* of the Ḳazāḳ. In the 18th century authority over the Ḳarā Ḳirghiz was claimed by the Chinese, in the 19th first by the Özbegs in Farghāna and later by the Russians; the final establishment of Russian rule dates from 1864. The prosperity of the Ḳarā Ḳirghiz has been seriously affected by the Russian colonisation and particularly by the rising of 1916, when a considerable portion of the people migrated to China; the Russian government resolved—but nothing came of it owing to the revolution of 1917—to take from the Ḳarā Ḳirghiz all their grazing-grounds except the valley of the Tekes and to throw these lands open for Russian colonisation.

Until recently in both Russia and Western Europe the name "Kirgiz" meant particularly the Ḳazāḳ; they are sometimes called also "Kirgiz-Kaisak" (Kaisak, corrupted from Kazak, to distinguish them from the Russian Cossacks). On the separation of the Ḳazāḳ, from the Özbeg, cf. ABU 'L-KHAYR and ḲAZĀḲ. The whole of the Ḳazāḳ people was for long under the rule of one Khān who therefore had a considerable military force at his disposal; Khān Ḳāsim (d. 924/1518) was particularly powerful. In spite of several defeats from the Mongols allied with the Özbegs in the 16th century, the Ḳazāḳ still had a strong nomadic kingdom at the end of this century under the rule of Khān Tawakkul, who, during the last years of the reign of Khān ʿAbd Allāh b. Iskandar [*q.v.*] was able to make a successful incursion into Mā warā al-Nahr, and later still even held the town of Tāshkent. In the 17th century the power of the Khāns only rarely extended over the whole people; but about this time Tāshkent and Farghāna were usually in the possession of the Ḳazāḳ, sometimes under nominal recognition of the suzerainty of the Khāns of the Özbegs. At this time must have taken place the division of the Ḳazāḳ into three "Hordes" (called by the Ḳazāḳ themselves *djüz* "hundred"; the great horde (*ulu djüz*) occupied the most easterly, the little (*kishi djüz*) the most westerly part of the so-called "Kirgiz steppes" and between the two the central horde (*orta djüz*). Towards the end of the 17th century this division was already an accomplished fact. Khān Tyawka, celebrated as the law-giver of his people (in 1694 a Russian embassy was received by him in the town of Turkistān and in 1698 one from the Kalmucks), still ruled all three Hordes and had a representative in each of them. In 1717 unsuccessful negotiations for the submission of all three Hordes to Peter the Great were conducted; in 1723 the towns of Sayrām, Tāshkent and Turkistān were conquered by the Kalmucks. For a short period after this, the suzerainty of the Khān of the Little Horde was recognised by all the Ḳazāḳ and the agreement embodying this was sealed by the sacrifice of a white horse; but the treaty had no practical results. In 1730, Abu 'l-Khayr negotiated with Russia and concluded a treaty by which he declared himself and his people Russian subjects. This treaty was renewed several times in the 18th century; but it was not till the 19th century, especially after 1847, when the Russians were firmly established on the southern frontier of the Kirgiz steppes on the Sīr Daryā, that Russian rule became definitely established over the steppes and their inhabitants. The eastern part of the steppes was administered from Siberia and the western from Orenburg; regulations for the government of the Siberian Ḳazāḳ were published in 1822 and again in 1868. Even after the abolition of the Khān's authority, the descendants of Čingiz Khān or "Sultans" exercised a considerable influence over the people as a nobility (among the Ḳazāḳ called "white bones", *aḳ süyek*); their authority has been gradually destroyed by the measures of the Russian Government. The last popular leader of the Ḳazāḳ was Kenesarī, who fought against the authorities in Siberia and Orenburg from 1842 in the mountains of Ala Tau; several risings were stirred up until 1873 by his son Sadik (so-called by the Russians, properly Ṣiddīḳ). Another son, Aḥmad, later wrote the life of his father Kenesarī and of his brother Sadik, entitled: *Sultanī Kenisara i Sadik. Biografičeskiye očerki sultana Akhmeta Kenisarina. Obrabotano dlya pečati i snabženo primečaniyami E. T. Smirnovīm*, Tashkent 1889 (review by V. Rosen in *Zap.*, iv, 122-3).

The most southern part of the Kirgiz steppes was conquered in the 19th century by the Özbegs of Farghāna and Khīwa and partly colonised; the advance of the Russians in this part was therefore assisted by the Ḳazāḳ. After the foundation of the general-gouvernement of Turkestan (1867) and the general-gouvernement of the Steppes (1882) (Semirečye belonged at first to the latter, but was later again united to Turkestan), the government of Kirgiz steppes had less unity than before. On the other hand, after the Revolution an administrative unit was established called at first by the Russians the "Kirgiz Republic" and by the people themselves "Ḳazāḳistān". Today the Kirgiz form one of the Union Republics in the USSR. The number of the population in the Kirgiz Socialist Soviet Republic was 3,145,000 in 1973 (43.8% Kirgiz, 24.2% Russians, 11.3% Uzbeks, etc.). The whole number of Kirgiz living in the USSR was 1,452,000 in 1970. The number of Kirgiz living in China and Afghanistan is over 100,000. The Kirgiz language belongs to the northwestern (Kipchak) group of Turkic languages.

Bibliography: There exists the following guide to the bibliographies: E. E. Novičenko, *Bibliografiya bibliografiy o Kirgizii. 1852-1967. Annotirovanniy ukazatel' literaturī*, Frunze 1969.—The most important of earlier bibliographies are: A. N. Kharuzin *Bibliografičeskiy ukazatel' statey, kasayushčikhsya etnografii Kirgizov i Karagirgizov*, in *Ėtnografičeskoye Obozreniye* ix (1891); N. Veselovskiy, *Dopolneniye k bibliografičeskom ukazatelyu statey, kasayushčikhsya Kirgizov i Karagirgizov, sostavlennomu A. N. Kharuzinīm*, in *Ėtnografičeskoye Obozreniye*, ix (1891); A. E. Alektorov, *Ukazatel' knig, žurnal' nīkh i gazetnīkh statey i zametok o kirgizakh*, in *Izvestiya Obshčestva Arkheologii, Istorii i Ėtnografii pri Imperatorskom Kazanskom Universitete*, xvi-xx (1900-4); Z. L. Amitin-Shapiro, *Literatura o Kirgizii (1918-1924). Annotirovannīy ukazatel'*, Frunze 1963; idem, *Literatura o Kirgizii (1925-1936). Annotirovannīy ukazatel'*, Frunze 1965; idem, *Annotirovannīy*

ukazatel' literaturï po istorii, arkheologii i ėtnografii Kirgizii (1750-1917), Frunze 1958. The fullest history of the Kirgiz steppes is that by A. Levshin, *Opisaniye Kirgiz-kaisakskikh ord i stepey*, St. Petersburg 1832; this is supplemented by many quotations in Velyaminov-Zernov, *Issledovaniya o kazimovskikh tsaryakh i tsarevičakh*, ii. Of general works, see W. Barthold, *Histoire des turcs d'Asie Centrale*, Paris 1945; R. Grousset, *L'empire des steppes*, Paris 1952; D. Sinor, *Introduction à l'histoire de l'Eurasie Centrale*, Wiesbaden 1963; S. M. Abramzon, *Kirgizï i ikh ėtnogenetičeskie i istoriko-kul' turnïye svjazi*, Leningrad 1971. KIRID [see iķrītish].

ĶIRIM, a peninsula jutting out into the Black Sea south of the Ukraine (Russian Krïm; English Crimea; French Crimée; German Krim; with an area of 25,500 km²), connected with the mainland by the isthmus *ca.* 8 km. wide of Perekop (in Turkish Or Ķapï), and ending to the east in the peninsula of Kerč [*q.v.*]. The northern and central parts are flat; to the south lies a mountainous area consisting of three ranges, the most southern of which, Mt. Yayla (1,545 m. high), falls down steeply to the coastal strip. The climate is relatively mild and on the south-eastern coast similar to that of the Mediterranean area. The water of the few rivers and brooks—especially that of the Salghïr—is used for irrigation. The flat grounds are cultivated; in the mountains there are pastures besides woods, and wine-growing is not without importance. Some minerals are found (iron ore near Kerč, fluorspar near Sevastopol) and at present there is also all kinds of industry.

In antiquity, the peninsula was inhabited by the Scythians. From the 6th century B.C. onwards, Greek colonies existed on the coasts. Around 480 B.C. these formed the Bosporean State, whereas in the 1st century B.C. they belonged for a short time to the Pontian kingdom. From 63 B.C. onwards, the Roman Empire wielded supreme rule (see *Paulys Realenzyklopädie der klassischen Altertumswissenschaft*, new ed. by G. Wissowa, vi. Halbband, Stuttgart 1899, cols. 2254-69; H. G. Gundel, *Die Krim im Altertum*, in *Das Gymnasium*, liii (1942), 117-38). In the 4th century A.D. first the Goths came, then the Huns. Until 1239 the Byzantine empire held the Chersonese (Old Russian Korsun'), while the main part of the peninsula belonged to the territory of the Khazars [*q.v.*]. During the 10th and 11th centuries there was the Russian colony Tmutarakan' (probably near modern Taman'), important in relations with Byzantium. From around 1030 the peninsula was dominated by the Kumans or Ķïpčaķ [*q.v.*], and from 1239 by the Tatars of the Golden Horde. They also wielded a sort of supreme rule over the Genoese colonies that came into existence here (since 1261-5, especially in Kaffa, mod. Feodosiya, see kefe). These colonies took over the role of the Byzantine Chersonese and became of great significance for trade with Byzantium and the Mediterranean area until their downfall in 1475. They were to a certain extent tributary to the Tatars. Occasional plunderings of these towns by the Golden Horde (see batu'ids), e.g. in 1298-9, or sieges, e.g. 1343, remained incidental.

Ķïrïm is only rarely mentioned by the Arab geographers (and even then partly following the Italian reports, as by Idrīsī). The first contact with Islam dates from a campaign of the Rūm Saldjūķid sultan Kay Ķubād ʿAlāʾ al-Dīn II [*q.v.*] (616-34/1219-36). After the Golden Horde occupied the peninsula, first in 1223 and then, definitively, in 1238-9, the religious situation did not change immediately. At the instigation of the Egyptian Mamlūks (who entertained trade relations with the peninsula) a mosque was erected at Old Ķïrïm (also Solkhat/Solghad); another was built later by the Khān Özbeg (712-42/1313-41) [*q.v.*].

During the latter's reign, Sunni Islam had gained a firm footing among the Tatars of Ķïrïm, like among the rest of the Golden Horde. From Egypt shortlived influences of the *futuwwa* [*q.v.*] asserted themselves.

Next, there existed of old also Jewish settlements, but little is known about them in these centuries except from tombstones. Karaites or Ķarāʾīm [*q.v.*] were found at Čufut Ķale, and the Orthodox Christians had a bishopric of Gothia at Old Ķïrïm. Western or Latin Christianity, supported mainly by the Franciscans, was represented by the Genoese until the downfall of the latter in 1475. Already in 1261 a Latin bishop is mentioned, and in 1318 the bishopric of Kaffa was founded. Its jurisdiction stretched from Varna (in modern Bulgaria) to Sarāy [*q.v.*], the capital of the Golden Horde. The bishopric of Cherson, which came into being in 1303, was definitively established in 1333, with parishes in the individual towns. From here efforts were made to effect a union with the other Christians and to start missionary work among the Tatars, but at the end of the 14th century these attempts came to an end for lack of success. From 1351 until after 1370 there had even existed a Latin bishopric at Sarāy.

In the 14th century, during embittered fights with the Venetians in the Mediterranean and the Aegean Sea, the Genoese founded trading factories in Sughdaķ (Russian Surož), in Balaklava (then Cembalo), in modern Sevastopol, in Tana (Azóv, Turkish Azaķ [*q.v.*]) and in Moncastro (Aķ Kirmān [*q.v.*], Rumanian Cetatea Albă, since 1368) to the west of the mouth of the Dnĕstr. Until 1343 the Venetians had a colony at Tana (Azóv). Besides Italians, who had their own rule and system of justice, there were living in these towns Arabs from various Near Eastern lands; Turks from Anatolia; Lurs [*q.v.*]; Greeks; and above all, such a large number of Armenians that Ķïrïm was sometimes called Armenia Magna or Armenia Maritima. About the Crimean Goths we are informed by reports of the 13th century, and latterly in the 16th century by Augier Ghislain de Busbecq, ambassador of the Austrian emperor to Süleymān II (see E. S. Forster, *The Turkish letters of Ogier Ghiselin de Busbecq*, Oxford 1927, repr. 1968; W. von den Steinen, *Vier Briefe Busbecqs aus der Türkei*, 1926). Since that time they have merged with the Ķïrïm Tatars.

The Mongols of the Golden Horde had a governor on the peninsula (*ḥākim* or *wālī*), who kept up his own diplomatic relations with the Nile valley. We hear also of an "*amīr* of the right wing" and "of the left wing of the army". Until the middle of the 15th century Ķïrïm, thinly populated except for the coasts, remained a centre, especially through Byzantine intermediaries on the Dardanelles, for trade with Egypt. For a long period *via* the Ķïrïm slaves

(Mamlūks) were sent to that country, while all kind of goods (fine shawls, perfumes and the like) found their way from there to Ḳirim, and further to the Volga along the road of Sughdaḳ, Old Ḳirim, and Perekop. Trade with Anatolia was also important. The traffic was later taken over by Trebizond, which had remained Byzantine until 1462. The Genoese brought European goods (linen and ceramics) to Ḳirim and to further on. In the 15th century especially, the commercial highway ran along the bank of the Bug *via* Luck and Lemberg to Breslau.

Both in Old Ḳirim, the peninsula's seat of government in these centuries, and in Eski Yurt, many goods were warehoused. The currents of trade manifested themselves also in the artistic construction of buildings and in ceramics. These showed influences from Sarāy, Saldjūḳid Asia Minor, Egypt and the Genoese colonies, as we know since the excavations of 1924-8. Besides trade, a part was played by the manufacture of salt, the gathering of honey (which went as far as Khwārazm) and grapes, and by horse-breeding and tanning.

Notwithstanding all these developments, Ḳirim remained until the 15th century only an annexe of the Golden Horde and occasionally a refuge for ambitious claimants in their struggle for power, like Nokhay in 1291 and Mamay in 1359. Around 1345-8, 85,000 persons allegedly fell victim to the Black Death, and in 1395 the peninsula was ravaged by Tīmūr. Attempts of the double kingdom of Poland and Lithuania to push as far as the Black Sea and to endanger also Ḳirim were foiled in 1399 by the victory of the "mayor of the palace" Edigü (Russian Yedigey) on the Vorskla. The latter had his base here during his struggle with Witold of Lithuania, until he died in 1419.

During the civil wars which ravaged the Golden Horde from 1359 onwards, princes of the Mongol ruling dynasty who were descendants of Čingiz Khān and his grandson Togha Temür (the son of Djoči), had settled on various occasions in the peninsula. At the beginning of the 15th century they had apparently adopted the family-name of Girāy [*q.v.*] or Kerey. Relying upon the noble family of the Shīrīn, Devlet Berdi had established himself in Ḳirim after 1426, and in 1427 he tried to enter again into relations with Egypt. But he (and since 1427 also his brother Ḥādjdjī Girāy [*q.v.*]) encountered opposition from the ruler of the Great (until then, the Golden) Horde. In August 1449 Ḥādjdjī formally declared himself ruler of Ḳirim. With the help of the Turkish sultan and the Polish-Lithuanian king Casimir IV, he was able to hold out until his death in 1466, first in his residence Ḳirḳ Yer and later in the valley of Bāghče Sarāy [*q.v.*]. He and later his son again and again took in fugitives of the decaying Great Horde, and they thus became rulers of the strongest among the Tatar states that came into being. On the northern shore of the Black Sea a strip of land where the Noghāys [*q.v.*] lived, and since 1484 also the Budjāḳ [*q.v.*], came gradually under the rule of the Ḳirim Khāns.

After rather lengthy succession disputes, Mengli Girāy I [*q.v.*], one of Ḥādjdjī Girāy's eight sons, got the upper hand. He was to become the real founder of the independent Ḳirim state, in spite of the fact that he had to recognise Ottoman supremacy after the conquest of Kaffa in 1475 by the Sultan's troops. The Girāy family was then recognised as enjoying in Ḳirim the sole rights of succession and immunity. Since Islām Girāy II (992-6/1584-8) [*q.v.*], their name was mentioned in the *khuṭba* after the Sultan's; they had the right to strike their own coins; and they could grant asylum. They remained independent in internal policy and had at their disposal a richly-ramified officialdom which followed more and more the Ottoman Turkish pattern. Under the continuous political preponderance of the Sultan, co-operation between the two states generally passed off without too much friction, in spite of many dangerous tensions at times. Joint military expeditions were regularly organised; in 1476 and 1538 into Moldavia, in 1543 for the first time into Hungary. From the time when the Turks had conquered Kilia and Aḳ Kirmān (1484) and the Poles had been defeated in Moldavia (1497), the khanate of Ḳirim was in direct contact with the Turkish dominions in the Balkan peninsula. In the north-east the Čerkes [*q.v.*] and Kabards [*q.v.*] were subjects of the Ḳirim-Khāns, and thus the Black Sea became until 1739 a Turkish-Tatar inland sea.

Relations with the Christian powers in the north changed when, from 1470-2 onwards, Casimir IV decided to co-operate more and more with the Great Horde. The Ḳirim Khāns turned to the Grand Dukes of Moscow, who between 1468 and 1571 were exempted from paying tribute. With certain fluctuations in details, both states remained loyal to this alliance until the fall of the Great Horde in 1502, and even extended it, while the kings of Poland-Lithuania in 1480 and later repeatedly neglected their commitments to the Horde. From that period onwards, this double kingdom was exposed to attacks from both the Muscovites and the Ḳirim-Tatars, who again and again invaded Podolia, Volhynia and Galicia and more than once laid Kiev, Černigov and other towns under contribution (for the Tatar incursions between 1474 and 1569, see J. Ochmański, *Organizacja obrony przed Tatarami w Wielkiem Księstwie Litewskim* ("The organisation of the defence against the Tatars in the Grand Duchy of Lithuania"), in *Studia i materiały do historii wojskowości* ("Studies for the history of the army"), v (1960), 349-98, esp. 362-4). Under these circumstances the Great Horde got into great difficulties, especially after the death of Khān Aḥmed in January 1481. Until the very end of this state, officers, soldiers and even princes of the ruling house continued to desert to the Ḳirim-Khāns (see M. Małowist, *Kaffa: kolonia genueńska na Krymie i problem wschodni w latach 1453-1475* ("Kaffa, the Genoese colony in the Crimea and the eastern problem in 1453-75"), Warsaw 1947 (*Prace Instytutu Historycznego Uniwersytetu Warszawskiego* ("Publications of the Historical Institute of the University of Warsaw"), ii). Even after a temporary treaty of peace between the Grand Duchy of Moscow and Lithuania in 1493, the latter's contact with Ḳirim remained so close that the Khāns were able to mediate in 1496 for the establishing of diplomatic Russian-Turkish relations, initially in the main for commercial reasons (see V. E. Syroečkovskiy, *Puti i snosheniya Moskvi s Krimom na rubeže xvi veka* ("Ways and relations of Moscow with the Crimea at the turn of the 16th century"), in *Izvestiya Akademii Nauk SSSR*, iii (1932).

When in June 1502 the Great Horde was finally defeated to the east of Kiev and close to where the Desna joins the Dnyěpr, and their last Khān was forced to flee to Lithuania (where he was executed in 1505), the Ḳirim Khān, in accordance with his claim, assumed the rights of the former Golden Horde and demanded tribute "without subterfuge" from Moscow and Lithuania. To the Grand Duke of Lithuania he offered a treaty "after straightening

out relations". In addition, Mengli Girāy felt himself responsible for the security of the khānates of Ķāzān [q.v.] and Astrakhān [q.v.] and thus ran into increasing difficulties with Moscow (K. Pułaski, *Mendli-Girāy* (sic), *chan Tatarów perekopskich* ("Mengli-Giray, Khan of the Perekop Tatars"), Warsaw 1882). Under these circumstances, a treaty with Sigismund I Augustus (1506-48) of Poland and Lithuania was of great importance to Mengli Girāy I. But the negotiations had not yet been concluded when the Ķīrīm Khān died at a great age in 1515 (J. Pajewski, *Projekt przymierza polsko-tureckiego za Zygmunta Augusta* ("A project of treaty between Poland and Turkey under Sigismund Augustus"), in *Księga ku Czci Oskara Haleckiego*, Warsaw 1935).

Under Mengli Girāy I, Ķīrīm reached its cultural zenith. The area was opened up to Ottoman Turkish culture. Artists from the Islamic cultural environment and also Italian, often Genoese, artisans who had remained in the country after 1475, such as Augustino da Garibaldi and Vincento da Zugulfi, found work here, especially as architects and stone carvers. Intellectual and literary circles came also into being. Of special artistic importance was the Khān's palace at Bāghče Sarāy [q.v.], whither Mengli Girāy had transferred his residence from Old Ķīrīm. It is actually in ruins today, but the Zendjirli Madrasa has been preserved.

In view of the position of power which Meḥmed Girāy I (1515-22) [q.v.]) had inherited from his father (V. E. Syroečkovskiy, *Muchammed-Geraj i ego vassali* ("Meḥmed-Girāy and his vassals"), in *Učёniye Zapiski Moskovskogo Gosudarstvennogo Universiteta*, lxi (1940)), the new Khān also aspired to the position of the Golden Horde and wanted to unite all Tatars under his rule. His son Ṣāḥib Girāy [q.v.] in 1521 succeeded in driving away a Khān of Ķāzān who was friendly to Moscow and, in spite of the resistance of Astrakhān, in incorporating his territory into that of his father. Having become Khān (1532-51) after his father had been murdered and Islām Girāy I [q.v.] had been put aside, he did not however succeed in holding out after a defeat inflicted on him by Moscow on the Oka in 1541 (Ö. Gökbilgin, *Tarih-i Sahib Giray han (1532-1551)*, crit. ed., tr., notes and glossary, Erzurum 1973 (Atatürk Universitesi yayınları 212)). On the contrary, Ivan IV the Terrible (1533-84) who had born the title of Tsar since 1547, carefully collected his forces for a campaign which brought under his control Ķāzān [q.v.] in October 1552, and Astrakhān [q.v.], firstly in 1554 and definitively in 1556. Thus the Volga valley was opened up to Russia right down to the Caspian Sea, the waterway to Caucasia and the north coast of Persia lay free and the Russians got an extensive new region for settlement. Dawlat (Dewlet) Girāy I (1551-77 [q.v.]) finally saw himself confined to the Ķīrīm Khanate and its northern hinterland. After the manifold disturbances of the preceding decades he tried to collaborate again with Poland-Lithuania, which saw itself more and more threatened by Moscow and both of which merged into one single state in the Union of Lublin in 1569 (Ö. Gökbilgin, *1532-1577 yılları arasında Kırım Hanlığı'nin siyasi durumu*, Ankara 1973 (Atatürk Üniversitesi yayınları 289)).

However, the Khān was dissatisfied, as was Sultan Süleymān II, by the fact that so many Muslims had become subject to Orthodox Christian sovereignty. The two sovereigns entered upon a close treaty of alliance and for the time being supported Tatar revolts against the supremacy of Moscow; these revolts are echoed in the legends around Čora Batir (Saʿādat Šākir, *Čora Batyr. Eine Legende in dobrudscha-tatarischer Mundart*, Cracow 1935). Dewlet Girāy attempted to relieve them by marching against Russia in 1555. But his fear that the Sultan might enlarge his influence in Ķīrīm by stationing his own troops there made him abandon a plan of supporting the Ottomans effectively. Thus the Sultan received little help from the Ķīrīm Khān for his attempt to connect with a canal the Volga and the Don, at the place where they draw the nearest to each other (near modern Volgograd). He could rely only on the Noghāys [q.v.]. Consequently, when in the winter of 1569 the Turkish troops were defeated between Astrakhān and the Sea of Azov, the enterprise of Selīm II fell through. He had hoped to establish in Ķīrīm a base for his campaign against Shīʿī Ṣafawid Persia, and to activate from there economic relations with Central Asia (H. İnalcık, *Osmanlı-Rus rekabetinin menşei ve Don-Volga kanalı teşebbüsü* (1569), in *Belleten* xii 146 (1948), 349-402; Eng. tex t in *AÜDTCFD* (1947), 47-106; A. N. Kurat, *Türkiye ve İdil boyu. 1569 Astarhan seferi, Ten-İdil kanalı ve XVI-XVII yüzyıl Osmanlı-Rus münasebetleri*, Ankara 1966 (*AÜDTDF* Yayınları 151); P. A. Sadikov, *Pokhod Tatar i Turok na Astrakhan v 1569 godu* ("The campaign of the Tatars and Turks against Astrakhan in 1569"), in *Istoričeskiye Zapiski*, xxii, Moscow 1947, 132-66). When in 1571 the Turkish fleet became decisively weakened by the defeat at Lepanto [see AYNA-BAKHTĪ], any plan of a Turkish advance against Russia had to be abandoned. On the other hand, Ķīrīm was thus freed from the feared guardianship of the Sultan, although it also lost his direct protection.

The Khān availed himself immediately of this freedom at his rear to march against Moscow. In 1571 the city fell for the last time into Tatar hands and was burnt down. The Tsar was forced to declare himself prepared to resume paying tribute (*tīsh/tiylsh*). It was only Peter the Great who was able to free himself decisively from this obligation. At this point, the Tsar was unable to counter-attack, as a result of his military engagements in the west in regard to Livonia.

Ķāzān and Astrakhān thus remained in Russian hands. In order to change this situation, Khān Meḥmed II, the Fat (Semiz; reigned 1577-84) made new endeavours (Kırımlı Abdulla oğlu Hasan, *İkinci Mehmed Giray Han/Khān Meḥmed Girāy II*, in *Azerbaycan Yurt Bilgisi*, iii (1934), 1). Since Turkish help failed to come because of the war with Persia (1578-90), the Khān sought an alliance against Moscow with Poland, Lithuania and even with Pope Gregory XIII. He held out a prospect of conversion to Roman Catholicism, which caused the Popes to send several ambassadors between 1571 and 1583. A Ķīrīm embassy was honourably received at Vilna in 1579 (Stanisław Kryczyński, *Nieudana misja katolicka wśród muzułmanow litewskich w XVI w.* ("A failed Catholic mission among the Lithuanian Muslims in the 16th century"), in *Przegląd Islamski* (1935), 3/4, 11-14).

But not even in this way could Meḥmed Girāy II achieve a real success. He was forced to put *ca.* 5,000 soldiers at the disposal of the Sultan for the war against Persia. When the successor to the throne, the Kalghāy [q.v.], was taken captive by the Persians, the Khān himself interfered in the war against the Shāh. This led to friction with the Sublime Porte and in the course of the ensuing unrest in Ķīrīm, the Khān was murdered in 1584.

The new Khān, Ghāzī Girāy II (1588-1608) [q.v.],

got the upper hand after lengthy disturbances. He also came forward as a poet (H. Ertaylan, *Gazi Geray Han, hayatı ve eserleri*, Istanbul 1958; C. M. Kortepeter, *Gazi Giray II, Khan of Crimea, and Ottoman policy in eastern Europe and the Caucasus, 1588-1594*, in *The Slavonic and East European Review*, xliv/102 (1966), 139-66). His attack against Moscow in 1591 failed, and during the Turkish campaign against Hungary of 1592-1606 he had, in the same way as his predecessor, to provide troops for the Sultan, which on various occasions led to friction (B. Kocowski, *Wyprawa Tatarów na Węgry przez Polskę w 1594 r.*, Lublin 1948; M. Alekberli, *Borʾba Ukrainskogo naroda protiv turetsko-tatarskoy agressii vo vtoroy polovine XVI/pervoy polovine XVII vekov* ("The struggle of the Ukranian people against the Turkish-Tatar attack in the 2nd half of the 16th and the 1st half of the 17th centuries"), Saratov 1961.

During these various wars, Ķīrīm itself remained free of military incursions, and so the administration there could follow its even course. Public roads and inns were secure, and documents which survived the conflagration of the Khān's palace (in 1736) testify to well-organised archives and the regular proceeding of the Islamic law concerning justice, inheritance and marriage. Customary law (*ʿāda* [*q.v.*]) also played a rôle. The horse trade and rates of exchange of foreign currency were officially supervised. As in other Islamic countries, the *dīwān* [*q.v.*] was the supreme court of judicature. There were 48 judicial regions in the lowlands and 19 in the mountains, where, except for the infliction of the death penalty, convictions could be pronounced without right of appeal "insofar as the conviction was in accordance with the laws". However, in the administration of justice, corruption as always played a rôle that could not be disregarded.

The Tatars enjoyed personal freedom and, as in earlier centuries, passed for a friendly and hospitable people. Women were entitled to personal property, and took part now and then in public life, diplomatic negotiations or even in military expeditions; and occasionally they devoted themselves to poetry and literature.

Until the age of fifteen, the education of children of the ruling house was often left to Čerkes [*q.v.*], who taught them riding and the use of weapons. (Up to the 19th century other Caucasian peoples, including the Ossets, also had their children brought up by Čerkes.) The hardships thereby endured were supposed to influence many *khāns* up to their old age and to counterbalance Ottoman urban culture. In the course of time, however, rulers and high officials turned more and more to Istanbul for the education of their children; also, many a Girāy prince lived there as a hostage. Thus Turkish cultural influence became more and more important during the 17th and 18th centuries. Ottoman Turkish gradually began to supersede Ķīrīm Tatar as the written language; Turkish melodies (played on drums, clarinets and later also violins) may well have merged into local musical tradition; but confinement of women in harems increased.

In this way, the ties with Turkey were strengthened, but they also reinforced dependency upon the Sultans, who more and more intervened, by deposing, and occasionally reinstating, many a *khān*. Thus the stability of the regional government was undermined both by the power of Istanbul and by the growing independence of the Begs, who possessed wide powers within their fiefs and fought out among themselves many a personal feud. The noble families, the prominent ones being the Shīrīn, the Ķuluķ, the Bārīn, the Manṣūr and the Sulesh, enjoyed tax freedom. The state revenues consisted largely of certain customs duties, payments by individual governors, indirect taxes (mainly on salt) and an annuity of the Sultan. Direct taxes, as far as they were levied, consisted (at least officially) of the *ʿushr* [*q.v.*] and *zakāt* [*q.v.*].

The interventions of the Sublime Porte bound Ķīrīm the more closely to Turkey because no other policy of alliance was now possible with any power to the north (B. Baranowski, *Polska a Tatarszczyzna w latach 1624-1629* ("Poland and Tartary in 1624-9"), Lodz 1948). Bad harvests in the Crimea, whose agriculture normally secured the subsistence of its inhabitants, may have caused the Tatars to plunder again and again the south-western regions of Poland and Lithuania (W. Czapliński, *Sprawa najazdów tatarskich na Polske w pierwszej polowie XVII w.* ("The problem of the Tatar incursions into Poland in the first half of the 17th c."), in *Kwartalnik Historyczny* lxx/3 (1963), 713-20; M. Horn, *Skutki ekonomiczne najazdów tatarskich z lat 1605-1633 na Ruś Czerwoną* ("The economic consequences of the Tatar invasions in 1605-33 in Red Russia"), Breslau 1964; J. Coldberg, *Chronologia i zasięg najazdów tatarskich na ziemie Rzeczypospolitej Polskiej w latach 1600-1647* ("Chronology and reach of the Tatar invasions into the land of the Republic of Poland in 1600-47"), in *Studia i Materiały do Historii Wojskowości*, vii/1, 3-71). Properly speaking, these incursions had no political motivation, but they were to such an extent prejudicial to relations with the neighbours to the north-west that there could be no more question of combined action against the common enemy Moscow, which now became more and more threatening to both parties; also, the Ķīrīm Khāns themselves suffered repeatedly from the unrest of the nomads. When at the treaty of Pereyaslavlʾ in 1654 the Cossack hetman Bohdan Khmelʾnitskiy, who had been supported by the Tatars, changed sides and joined Moscow, the Tsar became a direct neighbour of the Crimean *khāns*. Now at last the Polish-Lithuanian king sought alliance with Islām Girāy III (1644-54 [*q.v.*]). They undertook a common military expedition against Moscow, which ended in 1655 with the victory of Ochmatów (J. Rypka, *Aus der Korrespondenz der Hohen Pforte mit Bohdan Chmelnyćkyj*, in *Festschrift für Jar. Bidlo*, Prague 1928; idem, *Weitere Beiträge zur ...*, in *Archiv Orientální*, ii (1930); idem, *Další příspěvek ke korespondenci Vysoké Porty s Bohdanem Chmelnickým* ("Further contribution to the correspondence. . ."), in *Časopis Národního Muzea*, 1931; idem, *Briefwechsel der Hohen Pforte mit den Krimchanen im II. Bande von Feridūns Münseʾāt*, in *Festschrift für Georg Jacob*, Leipzig 1932, 249-69; O. Pritsak, *Das erste türkisch-ukrainische Bündnis (1648)*, in *Oriens*, vi (1953), 266-98). The Tatars now also took part in the campaigns of the Poles against the allied forces of the Russians, Swedes, Brandenburgers, Transylvanians and Cossacks (in the period of the "Deluge") and fought in 1656 together with them before Warsaw, in Prussia and in Greater Poland. Many captives and rich booty were brought to the Crimea. Khān Meḥmed Girāy IV (who reigned for the second time 1654-66) concluded a treaty with the Polish king over the partition of the conquered regions; the Islamic areas, like Ķāzān and Astrakhān, were to fall to the Crimean khānate. Both peoples fought shoulder-to-shoulder against Transylvania in 1657 and against Moscow in 1660 (the Battle of Tsudnov) (L. Kubala, *Wojna brandenburska i najazd*

Rakoczego i wojna moskiewska ("The Brandenburg War, the invasion of Rákóczy and the Moscow War"), Lemberg-Warsaw 1913; A. Hniłko, *Wyprawa cudnowska w 1660 r.* ("The campaign of Tsudnov in 1660"), Warsaw 1931). The Tatar army numbered at this time 20,000-30,000 troops at the most; higher accounts (up to 150,000 and even 200,000) are probably false (O. Górka, *Liczebność Tatarów krymskich i ich wojsk* ("The number of the Crimean Tatars and their armies"), in *Przegląd Historyczno-Wojskowy*, viii/2, 1936). Single military units had their own standards, while the cavalrymen brought spare horses along with them. Victuals consisted mainly of millet, which was milled in leathern mortars. Prisoners of war were enabled to ransom themselves as far as possible; not infrequently they were humanely treated. In accordance with Islamic law, there may have been many freedmen.

The alliance between Poland-Lithuania and the Crimean k͟hānate came to an end when Meḥmed Girāy was deposed in 1666 and the armistice of Andrusovo, between Poland-Lithuania and Moscow, was concluded in 1667. The political situation changed further when Peter Doros͟henko (1665-76), the hetman of the Cossacks "of the left bank", submitted to the Sultan out of dislike for the equalising policy of Moscow (D. Dorošenko and J. Rypka, *Hejtman Petr Dorošenko a jeho turecka politika* ("Hetman P. D. and his Turkish policy"), in *Časopis Národního Muzea*, Prague 1933; Ch. Hilbert, *Osteuropa 1648-1681 bei den Zeitgenössischen osman. Historikern*, typewr. thesis, Göttingen 1948).

At the instigation of the Turks, K͟hān ʿĀdil Girāy (1666-71) had to collaborate with the Cossacks and therefore fell out with Poland-Lithuania. The ensuing war made Podolia in 1672 into a Turkish province, and thus the Sultan's empire reached its greatest expansion ever to the north of the Black Sea. Attempts by K͟hān Selīm Girāy I (1671-8) at mediation failed because of the Sultan's uncompromising attitude (J. Woliński, *Pośrednictwo tatarskie w wojnie polsko-tureckiej 1674-1675 r.* ("Tatar mediation in the Polish-Turkish War 1674-5"), in *Polityka narodów* iv (1954)/4). The new k͟hān, Murād Girāy (1678-83), tried to free himself from subordination to Turkey and wanted to replace the *S͟harīʿa* by "the Law of Čingiz K͟hān" (*Töre, Yasa*), a daring enterprise which naturally angered the *ʿulamāʾ*. In accordance with his political principles, he remained aloof during the Turkish march against Vienna in 1683, and his army corps did not take part in the battle of the Barren Mountain Kahlenberg. As a punishment, he was banished to Bulgaria (Kırımlı Abdullah oğlu Hasan, *Viyana önünde Kırım suvarileri*, in *Azerbaycan Yurt Bilgisi* ii (1933), 21-2, 348-53). Nevertheless, relations between the Tatars and Poland-Lithuania remained tense until the Peace of Carlowitz (1699 [see ḲARLOVČA]).

The Tsars availed themselves of this dissension. After the Cossacks of the left bank of the Dnyepr had come again under their control, two Russian armies marched against the Crimea in 1686 and 1687. While K͟hān Selīm Girāy (who reigned for the second time in 1684-91) succeeded in defending the peninsula itself, Azóv was lost to Peter the Great in 1699, and thus the k͟hānate was divided for several years into two parts, sc. the peninsula and the region towards the Caucasus. In order to counterbalance Azóv while it was in Russian hands, the fortress of Yeñi Ḳalʿe was founded near Kerč (B. H. Sumner, *Peter the Great and the Ottoman empire*, London 1949).

During this turbulent period, the cultural significance of the k͟hānate declined. Artistic creativity was small, although Islamic influences from the Crimea and from Turkey are clearly recognisable in contemporary Poland (T. Mańkowski, *Sztuka Islamu w Polsce w XVII i XVIII wieku* ("Islamic art in Poland in the 17th and 18th centuries"), Cracow 1935; F.-K. Spuhler, *Seidene Repräsentationsteppiche der mittleren bis späten Safawidenzeit: die sog. Polenteppiche*, doctoral thesis, Berlin 1968).

The victory of the European coalition over the Sultan in the great war of 1682-99 was of serious consequence for Ḳırım. Pressure from the north made itself more and more felt. The planned co-operation with the Swedish king Charles XII (1697-1718) and with the hetman of the Cossacks Ivan Stepanovič Mazepa, in which G͟hāzī Girāy III (1704-7) [*q.v.*]) was very interested, failed owing to the Russian victory near Poltava in 1709. It is true that the allies succeeded in forcing Peter the Great, hemmed in by Turkish troops near the Pruth, to retrocede Azóv, but this was all that could be achieved: a protest of K͟hān Dewlet Girāy II (who reigned for the second time 1708-13) remained unsuccessful (A. N. Kurat, *Prut seferi ve barışı* ("The Pruth campaign and peace"), Ankara 1951). More and more the Tatars began to fear and reject the adversary from the north (G. Veinstein, *Les Tatars de Crimée et la seconde élection de Stanislas Leszczyński*, in *Cahiers du monde russe et slave*, xi (1970), 24-92), especially when the Russians invaded Ḳırım in 1737 and 1738, destroying many cultural monuments, among them Bāg͟hče Sarāy [*q.v.*]. In 1739 the Tatars and Turks had to abandon Azóv definitively to the Russians (Z. Veselá, *Turets͟kij traktat ob osmanskik͟h krepostʾyak͟h severnogo Pričernomorʾya v načale XVIII veka* ("A Turkish treatise on the Ottoman fortresses on the north coast of the Black Sea at the beginning of the 18th century"), in *Vostočniye istočniki po istorii narodov yugo-vostočnoy i ts͟entralʾnoy Evropi*, ii, Moscow 1960, 98-139). As in Poland-Lithuania, the strength of Ḳırım was diminished by the heavy toll of human life, the demoralising defeats, the increasing interference of the Porte in Crimean affairs, the manifold struggles among the princes of the ruling house, and a fairly protracted revolt of the Nog͟hays [*q.v.*] around 1758 (see B. Kellner-Heinkele, *Aus den Aufzeichnungen des Saʿīd Giray Ḫān. Eine zeitgenössische Quelle zur Geschichte des Chanats der Krim um die Mitte des 18. Jahrhunderts*, Freiburg i. B., 1975). An attempt at a new alliance between Poland-Lithuania, Ḳırım and Turkey remained without further result during the 18th century (W. Konopczyński, *Polska a Turcja* ("Poland and Turkey") *1683-1792*, Warsaw 1936; D. Oljančyn, *Do istorii torhovli Ukraïny z Krymon* ("Contribution to the history of the trade between the Ukraine and Ḳırım 1754-8"), Lemberg 1933). An offer of alliance made to the Crimean k͟hān by Frederick the Great in 1761, at the most difficult moment of the Seven Years' War, led to no result either (H. Scheel, *Ein Schreiben des Krim Giray Khan an den Prinzen Heinrich, den Bruder Friedrichs des Grossen*, in *Jean Deny Armağanı*, Ankara 1958, 213-20).

On the other hand, the devastations of the war years stimulated the zest for living of the Crimean Tatars which, during the last decades of their freedom, flowered into a second cultural bloom, and which found its most important expression in the reconstruction of the *k͟hān*'s palace at Bāg͟hče Sarāy in 1740-3. The Sultan made a present of a valuable library, and in 1763 a new stateroom (*Dīwān*) was erected, richly decorated with paintings and sculp-

tures. Former hydraulic works, like aqueducts and canals, were restored and preparations made for a new period of prosperity.

But already in 1771, Russian armies had again marched into the Crimea. Khān Selim Girāy III (second reign 1770-1) tried to make a stand against them, in vain, because the Sultan himself pressed hard by a war (1768-74), against the Tsarina Catharine II, was unable to render effective help. Many people perished and many places were destroyed. The Russians marched as far as Kaffa and the Khān had to flee to Istanbul (A. Mačanov, *Bor'ba Tsarskoy Rossii i Turtsii za obladeniye Krîmskim Khanstvom* ("The struggle of Imperial Russia and Turkey for the domination of the Crimea"), Moscow 1929).

Thereupon the nobility decided to appoint a *khān* who was friendly to the Russians and to accede to the Russian occupation of the fortresses of Kerč, Yeñi Ḳalʿe and Kaffa. Thus the independence which the Sublime Porte was forced to grant to the Ḳîrîm at the peace of Küčük Ḳaynardje [*q.v.*] in 1774 (E. I. Družinina, *Kyučukkayandardžiyskiy mir 1774 goda: ego podgotovka i zaklyučeniye* ("The peace of K. K. in 1774: preparation and conclusion"), Moscow 1955), and the renunciation of its rights over these fortresses, on the Kubań and on the Taman peninsula, were only fictions, the more so because Kerč and Yeñi Ḳalʿe were at that time already directly subject to Russia (V. D. Smirnov, *Sbornik vîbora važnĕyshikh dokladov i ofitsialnikh dokumentov otnosyashč ikhsya k Turtsii, Rossii i Krîmu* ("Selection of the most important reports and official documents with reference to Turkey, Russia and the Crimea"), St. Petersburg 1881 (bearing mainly on the period 1768-74); F. A. Unat, *Kırım tarihi veya Necati efendinin Rusya sefaretnamesi 1769-75*, in *Tarih vesikaları* iii (1944), 599 (with continuations in later issues); *Mubadele. An Ottoman-Russian exchange of ambassadors* [*1775/76*], annot. and tr. by N. Itzkowitz and M. Mote, Chicago-London 1970).

Even the Russian concession at the treaty of Aynalî Ḳavaḳ in 1779 to declare the Sultan "in his capacity of caliph" to be the head of all Muslims could not prevent Crimean independence from coming to an end. Already two years earlier, the successor to the throne, Shāhīn Girāy, had succeeded as Khān with the help of the Russians and the Noghays (F. F. Lashkov, *Shagin-Girey, poslĕdniy krîmskiy khan* ("Sh. G., the last Crimean *khān*"), in *Kiyevskaya Starina*, Sept. 1886, 36-80). He was educated in Salonica and Venice, had become acquainted with Russia while living there as ambassador, and was open-minded to European and especially to Italian culture. Like the last Polish king, he thought about reforming the state, mainly after the Russian example. He thus transferred the capital to Kaffa, on the sea coast, probably after the example of the Russian transfer of their capital to St. Petersburg. He invited foreign instructors to train his army of 6,000 troops, limited the *waḳf*s [*q.v.*] while indemnifying the *ʿulamāʾ* with a pension, and introduced under foreign supervision a new silver coinage. A council of ministers consisting of 12 members was created, and finances were set up anew by introducing financial registers. These reforms burdened the country with considerable debts, and Russia availed itself of the ensuing discontent. Besides, the khanate became upset by a new revolt of the Noghays in 1781 and a rebellion of two brothers of the Khān, who saw himself forced to flee to Grigoriy Aleksandrovič Potĕmkin, the governor of the regions newly conquered by the Russians in the south (the Ukraine). After the Khān had returned to his country with Russian help, Catharine II pressed him under deceitful promises to abdicate. Shāhīn Girāy saw no escape from giving in to this pressure and from abandoning his country to Russia, to which it has belonged ever since (A. W. Fisher, *The Russian annexation of Crimea 1772-1783*, Cambridge 1970; N. F. Dubrovin, *Prisoedineniye k Rossii Krîma. Reskripti, pis'ma, relatsii i doneseniya* ("The union of the Crimea with Russia. Rescripts, letters, accounts and notes") i-iii, St. Petersburg 1855; idem, *V'ezd poslednyago krîmskago khana Shagin-Gireya iz Rossii v Turtsiyu* ("The journey of the last Crimean Khan Shāhīn Girāy from Russia to Turkey"), in *Zapiski Imperatorskago Odesskago Obshčestva istorii i drevnostey*, xiii (1883), 132-56).

The annexation of the peninsula to the Russian empire (first as the Tauris region, and then from 1796 onwards as the New Russia Government) brought about shiftings of the population which must be mentioned here. Already in 1779 the Orthodox Christians of the Crimea, for centuries subordinated to "the Bishop of Gothia", had been removed to Southern Russia at the latter's instigation: 31,280 people from 6 towns and 60 villages settled around Mariupolʾ (A. L. Berthier-Delagarde, *K istorii khristianstva v Krîmu* ("Contribution to the history of Christianity on the Crimea"), in *Zapiski Imperatorskago Odesskago Obshčestva istorii i drevnostey*, xxviii (1910), 1-108; A. I. Markevič, *K voprosu o položenii khristian v Krîmu vo vremya tatarskago vladičestva* ("Contribution to the situation of the Christians on the Crimea during the Tatar reign"), Simferopol 1910). Also the Armenians left the country (likewise with their own hierarchy) and settled in (New-) Nakhičevan, now a suburb of Rostov-on-Don. In order to be able to remain in their home country, many Christians, among whom were probably the last remnants of the Crimean Goths, embraced Islam. (E. I. Družinina, *Sĕvernoe Pričernomor'e* ("The northern edge of the Black Sea"), *1775-1800*, Moscow 1959). But also, many Tatars left the country at that period and in the 19th century to settle in Turkey (G. I. Levitskiy, *Pereselenie tatar iz Krîma v Turtsiyu* ("The settlement of Crimean Tatars in Turkey") in *Vĕstnik Evropî* v (1882), 596-639; A. Markevič, *Pereseleniya krîmskikh tatar v Turtsiyu v Ivyazi s dviženiem naseleniya v Krîmu* ("The settlements of the Crimean Tatars in Turkey in connection with the movement of the population on the Crimea"), in *Izvestiya Akademii Nauk SSSR* (1928), 375-405). In the place of all these people, came first Russian newcomers, and then also Czechs and Serbs, but furthermore some 7,000 Tatars from the Kuban area (M. Pinson, *Russian policy and the emigration of the Crimean Tatars to the Ottoman Empire, 1854-1862*, in *Güney-Doğu Avrupa Araştırmaları Dergisi*, i, (1972), 37-62). Most of the Crimean Tatars who had remained were moved to Central Asia in 1945 (and have not until now been permitted to return—*New York Times*, 13 July 1972—in spite of their official "rehabilitation" (*New York Times*, 5 May 1967; *Frankfurter Allg. Ztg.*, 13 Sept. 1967)).

Until February 1954, Ḳîrîm belonged to the Russian Socialist Federative Soviet Republic (RSFSR), but has since been combined with the Ukraine.

Chronology of the Crimean Khāns

(1449)-1456 Ḥādjdjī Girāy I
1456 Ḥaydar, son of the preceding
1456-1466 Ḥādjdjī Girāy I (2nd time)
1466-1467 Nūr Dewlet, son of the preceding

1467-1474	Mengli Girāy I, brother of the preceding
1474-1475	Nūr Dewlet (2nd time)
1475-1476	Mengli Girāy I (2nd time)
1476-1478	Nūr Dewlet (3rd time)
1478-1515	Mengli Girāy I (3rd time)
1515-1523	Meḥmed Girāy I, son of the preceding
1523-1524	Ghāzī Girāy I, son of the preceding
1524-1532	Saʿādet Girāy I, son of Mengli G. I
1532	Islām Girāy I, brother of the preceding
1532-1551	Ṣāḥib Girāy I, brother of the preceding
1551-1577	Dewlet Girāy I, nephew of the preceding
1577-1584	Meḥmed Girāy II, the Fat, son of the preceding
1584-1588	Islām Girāy II, brother of the preceding
1588-1596	Ghāzī Girāy II, brother of the preceding
1596	Fetḥ Girāy I, brother of the preceding
1596-1608	Ghāzī Girāy II (2nd time)
1608	Tokhtamīsh Girāy, son of the preceding
1608-1610	Selāmet Girāy I, son of Dewlet G. I
1610	Meḥmed Girāy III, grandson of Meḥmed G. II
1610-1623	Djānibek Girāy, grandson of Dewlet G. I
1623-1624	Meḥmed Girāy III (2nd time)
1624	Djānibek Girāy (2nd time)
1624-1627	Meḥmed Girāy III (3rd time)
1627-1635	Djānibek Girāy (3rd time)
1635-1637	ʿInāyet Girāy, brother of Tokhtamīsh G.
1637-1641	Bahādīr Girāy I, son of Selāmet G. I
1641-1644	Meḥmed Girāy IV, the Pious (*sofu*), brother of the preceding
1644-1654	Islām Girāy III, brother of the preceding
1654-1666	Meḥmed Girāy IV (2nd time)
1666-1671	ʿĀdil Girāy, from the collateral line Čoban G.
1671-1678	Selīm Girāy I, son of Bahādīr G. I
1678-1683	Murād Girāy, cousin of Selīm G. I
1683-1684	Ḥādjdjī Girāy II, cousin of the preceding
1684-1691	Selīm Girāy I (2nd time)
1691	Saʿādet Girāy II, brother of Ḥādjdjī Girāy II
1691-1692	Ṣafā Girāy, cousin of the preceding
1692-1699	Selīm Girāy I (3rd time)
1699-1702	Dewlet Girāy II, son of the preceding
1702-1704	Selīm Girāy I (4th time)
1704-1707	Ghāzī Girāy III, son of the preceding
1707-1708	Ḳaplan Girāy I, brother of the preceding
1708-1713	Dewlet Girāy II (2nd time)
1713-1716	Ḳaplan Girāy I (2nd time)
1716-1717	Dewlet Girāy III
1717-1724	Saʿādet Girāy III, son of Selīm G. I
1724-1730	Mengli Girāy II, brother of the preceding
1730-1736	Ḳaplan Girāy I (3rd time)
1736-1737	Fetḥ Girāy II, son of Dewlet G. II
1737-1740	Mengli Girāy II (2nd time)
1740-1743	Selāmet Girāy II, brother of the preceding
1743-1748	Selīm Girāy II, son of Ḳaplan G. I
1748-1756	Arslan Girāy, brother of Fetḥ G. II
1756-1758	Ḥalīm Girāy, son of Saʿādet G. III
1758-1764	Ḳirīm Girāy, son of Dewlet G. II
1764-1767	Selīm Girāy III, son of Fetḥ G. II
1767	Arslan Girāy (2nd time)
1767-1768	Maḳṣūd Girāy, son of Selāmet G. II
1768-1769	Ḳirīm Girāy (2nd time)
1769-1770	Dewlet Girāy IV, son of Arslan G.
1770	Ḳaplan Girāy II, son of Selīm G. II
1770-1771	Selīm Girāy III (2nd time)
1771-1772	Maḳṣūd Girāy (2nd time)
1772-1775	Ṣāḥib Girāy II, son of Selīm G. III
1775-1777	Dewlet Girāy IV (2nd time)
1777-1782	Shāhīn Girāy, son of Selīm G. III
1782-1783	Bahādīr Girāy II, brother of the preceding
1783	Shāhīn Girāy (2nd time)

A list of the Crimean *khān*s can be found in A. W. Fisher, *op. cit.*, 158 (defective) and in Zambaur, 247 f. For genealogical tables of the Girāys, see H. İnalcık, in *İA*, iv, after p. 788; Zambaur, table S; and B. Kellner, *op. cit.*, after p. 263 (18th c.).

ḲIRḲ KILISE, also Ḳîrḳ Kinise and Ḳîrknîsa (Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1928, viii, 69) a town in eastern Thrace, modern Kırklareli. This region to the east of Adrianople or Edirne [*q.v.*] had a centre in classical times, but its name is unknown (for the view that this place was called Heraclea, see J. von Hammer, *Histoire*, i, 234). The Byzantine name of Ḳîrḳ Kilise was apparently Sarante Eklesiai, and the name Ḳîrḳ Kilise must mean the church of forty saints and not forty churches (F. W. Hasluck, *Christianity and Islam under the Sultans*, Oxford 1929, ii, 391-2).

The later writers Kātibi Čelebi (*Djihān-nümā*, Rumeli section, Topkapı Sarayı Müzesi, Hazine kütüphanesi, no. 443, f. 17a) and Münedjdjim-Bashî (iii, 295), record the date for the conquest of Ḳîrḳ Kilise as 770/1368-9 (see Feridūn Bey, *Münshe'āt al-selāṭīn*, Istanbul 1274, i, 71-2). The early historians do not mention its capture, but the implication is that it was conquered few years after the conquest of Edirne in 763/1361 (for this, see Halil İnalcık, *The conquest of Edirne* (1361), in *Archivum Ottomanicum*, ii (1971). The first Islamic building constructed in the town after its conquest was the ʿAtîḳ mosque (Başbakanlık arşiv genel müdürlüğü, Tapu defteri, no. 370; this building was in a ruined condition in 1226/1807). Nomads (*yürüks*) brought from western Anatolia were settled in the region of Ḳîrḳ Kilise, and were during the 9th-10th/15th-16th centuries known as "the *yürüks* of Ḳîrḳ Kilise" (M. Tayyib Gökbilgin, *Rumeli'de yorükler, tatarlar ve evlâd-i Fâtihan*, Istanbul 1957, 84, 180 and *passim*), Ḳîrḳ Kilise was first attached to the Vize *sandjaḳ* of the province of Rumelia, but was then established as *müsellem sandjaḳ* (idem, *Kanuni Sultan Süleyman devri başlaraında Rumeli eyaleti, livaları, şehir ve kasabaları*, in *Belleten*, lxxviii (1956), 255, 269).

In the 10th/16th century, Ḳîrḳ Kilise consisted of 6 quarters or *mahalles*: Djāmiʿ-i ʿAtîḳ, Djāmiʿ-i Kebîr, Ḥādjdjî Zekeriyā, Sulṭān Bāyezîd Khān Ketkhüdāsî, Yapraḳlî and Ḳaradja Ibrāhîm, containing 283 households (Tapu defteri, no. 370). During the 11th/17th century, Ḳîrḳ Kilise was a small town with a few shops and red tile-roofed houses set among the vineyards, and visitors noted the Old Mosque (Eski Djāmiʿ), the *bedestān* or covered market, the Köprübashî fountain, and the coffee-house, meeting-place of the learned man, situated by a fountain (Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1315, v, 79-80). For the remaining monuments of the town today, see *Sālnāme-i vilāyet-i*

Edirne, Edirne 1309, 145 ff., 247 ff.; A. Rıza Dursunkaya, *Kırklareli vilâyetin tarih, coğrafya, kültür ve eski eserler yönünden tetkik*, Kırklareli 1947, ii; Özcan Mert, *Kırklareli kitabeleri*, in *TD*, no. 25 (Istanbul 1971), 155-62. During the 12th/18th century, the Greeks in the town almost equalled the number of the Muslims (see *Rucer Yosin Boşkoviç'in 1762 tarihli Istanbul-Lehistan seyahatine ait hatıra defteri*, tr. Ismail Eren, in *TD*, no. 16. (Istanbul 1962), 98-9). In the *sandjaḳ* of Ḳirḳ Kilise of the province of Edirne there was in 1899 an important number of Greeks and Bulgarians, and the population of the region was 18,325 (*Sālnāme-i vilāyet-i Edirne*, Edirne, 1317, 398-9). For a time, the town was included in the boundaries of Bulgaria after the treaty of San Stefano (3rd March 1878), but was given back to the Ottomans after the Congress of Berlin (13 June-13 July 1878). It again passed into Bulgarian hands for a short while during the Balkan War of 1912-3, but was recaptured on 8 July 1913. It was under Greek occupation for two years after the Mudros truce (1918), but was recovered by the Nationalist forces on 10th November 1922. The population of the town fell when the Greek population was transferred to Greece after the Treaty of Lausanne settlement in 1923. The name Ḳirḳ Kilise was changed into Kırklareli by a law taking effect from 24th December 1924. Under the Republic, Kırklareli has become the centre of a province or *vilayet* of the same name. Its population was 13,000 in 1927, 19,097 in 1955, 27,431 in 1970 and 33,260 according to the latest census (1975).

ĶIRĶLARELI [see ĶIRĶ KILISE].

ĶIRĶ WEZĪR [see SHAYKHZĀDE II].

KIRKŪK, the biggest town of the region of Mesopotamia (44° 25′ E., 35° 25′ N.,) bounded by the Little Zab in the north-west, the Djabal Ḥamrīn in the south-west, the Diyālā in the south-east and the mountain chains of the Zagros in the north-east. It is identified by some (e.g. C. J. Gadd in *Rev. d'Assyr. et d'Arch. Or.*, xxiii (1926), 64, and by Sidney Smith) as the site of the ancient city of Arrapḫa, and so Kirkūk participated in the revolt of the son of Shalmaneser II (850-824 B.C.) against his ageing father; again it rose up in the reign of Ashur Dan III (771-754 B.C.). It saw the victorious troops of Nabopolasser pass through in 626 B.C. before being taken by the Medes under Cyaxeres at the end of 615 B.C. (G. Roux, *Ancient Iraq*, London 1964, 247, 251, 312, 312). From the time of the ancient Babylonian empire and during the Assyrian empire the town and its surrounding territories were very exposed to raids by the mountain peoples from the north-east.

Under the Sāsānids (226-651 A.D.) the province of Kirkūk was called Garmakān (Moses of Khoren) and in Syriac sources, Beth Garmaï; here the town of Kirkūk itself is called Karkhā of Bēth Selōkh (G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer*, in *Abh. für die Kunde des Morgenlandes*, vii/3 (1880), 267 ff.). This name could have come from the king Seleucus I Nicator (*ca.* 255-280 B.C.) who is said to have had constructed a tower in the citadel. During the Sāsānid period the town also became a famous centre for the Nestorians. The metropolitan of Bēth Garmaï had his residence there (J. M. Fiey, *Assyrie chrétienne*, iii, Beirut 1968). Christians suffered persecution under Shāpūr II (310-79) (Fiey, *Histoires de Karka d'Bēṯ Sloḫ*, in *Analecta Bollandiana* lxxxii (1966), 203-9) and especially in 445 under Yezdegerd II, who made victims of thousands of them. Their situation later improved when a Christian of the town of Yāzdīn became chancellor under Chosroes II (591-628) and achieved such fame that his native town took the name Karkh Yāzdīn, (Fiey, *Assyrie Chrétienne*, iii, 23-8). Bēth Garmaï of the Syriac sources is called Badjarmā by the Arab historians. Yāḳūt speaks of a town Karkhīna (iv, 276) which Hoffmann (*op. cit.*, 272) believes can be identified, correctly it seems, as Kirkūk. Even today the people of Shaklāwā and ʿAyn Kāwā, when setting out for Kirkūk, still say that they are going to Karkhina (Fiey, *op. cit.*, iii, 44).

In the 6th/12th century the region of Kirkūk belonged to the territory dominated by the Begteginid dynasty [*q.v.*], who had their residence at Irbīl. After the death of Muẓaffar al-Dīn Kökbüri in 629/1232, the possessions of this dynasty reverted to the ʿAbbāsid caliphs, but not long afterwards were conquered by the Mongols. The name Kirkūk appears for the first time in the history of Tīmūr of Sharaf al-Dīn ʿAlī Yazdī (*Ẓafar-nāma*, written *ca.* 823/1424-5, tr. Pétis de la Croix, Delft 1723, ii, 259). Then came the reign of the Aḳ-Ḳoyunlu, followed by the conquest of Mesopotamia by Shāh Ismāʿīl I in the early years of the 10th/16th century. When finally Mesopotamia and ʿIrāḳ had fallen into the hands of the Ottoman sultans Selīm I and Sulaymān I (according to the first Turco-Persian truce at Amasya, 29 May 1555), Kirkūk again took on its rôle as an important bulwark against the enemy from the East.

The town fell again to the Persians after the fall of Baghdād in 1032/1623, but was reconquered by Khosrew Pasha [*q.v.*] in 1039/1630; in 1048/1638 Murād IV passed through the town on his march to reconquer Baghdād. But the true masters of these regions were the local Kurdish hordes, lords of the province of Ardalān (Ḥādjdjī Khalīfa, *Djihān-nümā*, 445). But shortly afterwards the Ottoman power became established there by the activity of the *pashas* of the *eyālet* of Shahrizūr [*q.v.*]. This *eyālet* was composed of 32 *sandjaḳs*, of which one was that of Kirkūk, and this town became the residence of the *pasha* of Shahrizūr after the castle in the town of this name had been razed by Shāh ʿAbbās (1571-1629) (*Djihān-nümā*, *loc. cit.*). In 1732 the future Nādir Shāh besieged the town in vain. A great battle took place near Kirkūk in the following year, when the Turks were completely beaten under the grand vizier Topal ʿOthmān Pasha, who died there. In 1743 Kirkūk fell again into the hands of the Persians, but was returned to Turkey after the truce of 1746.

The town remained in the Ottoman empire until the end of the First World War; it was occupied by the British on 7 May 1918, but abandoned fifteen days later. It was re-occupied at the end of October and remained occupied until the time of the Mudros armistice. Having remained outside the sphere of activities of Shaykh Maḥmūd (November 1918 until May 1919), Kirkūk and its district were administered peaceably. There was even a Turkish newspaper published there and sixteen schools were opened. At the time of the referendum of July 1921 Kirkūk

rejected the Amīr Fayṣal as king of ʿIrāḳ, and from that moment Turkish propaganda developed in the region, supported by a Turkish committee founded at Kirkūk by the family of the Naftčizāda and other Turcophiles. On 17 March the Turks named a *Ḳāʾim-maḳām* at Ruwanduz, and at the end of July, Col. ʿAlī S̲h̲afīḳ, who was called Öz Demir, "Pure Iron one", appeared and made some advances towards the territory; but he was unable to retrieve all the *vilāyet* of Mosul. The Turks tried again to claim it at the Lausanne Conference (20 November 1922 until 2 February 1923) but without success. The Treaty of Lausanne (24 July 1923) still left the question of Mosul undecided, and so it was referred to the League of Nations. A committee of enquiry was sent by them, and in its 34th session in Geneva on 16 December 1924, the Council gave a definite ruling: ʿIrāḳ was given the territory south of the so-called "Brussels line". Thereafter Kirkūk was incorporated into the kingdom of ʿIrāḳ.

The present-day town is built partly on top of an artificial mound or *ḳalʿa* about 40 m. high, and partly at its base, on the two banks of the K̲h̲asa Čay. These waters join with those of the Āwā Spī to form the Ad̲h̲aym which flows into the Tigris 30 km. south of Balad. On the right bank of the K̲h̲asa Čay, in the middle of a fertile plain, rises the residential district of Arrapk̲h̲a. In 1912 the population was estimated to be 15,000 (by E. B. Soane, *To Mesopotamia and Kurdistan...*, 120), in 1922 to be 25,000 (by C. J. Edmonds), and in 1965 official statistics, determined according to maternal language, gave 184,000 inhabitants, comprising 71,000 Kurds, 55,000 Turcomans and 41,000 Arabs, plus others. The present population is certainly over 200,000. It should be noted that, for many years, the authorities have made strenuous efforts to replace the Kurds by Arabs. Kirkūk is the centre of an administrative region, formerly a *liwāʾ* and now since 1975 a *muḥāfaẓa*, and has had its name changed; it is now called al-Taʾmīm ("Nationalisation") in honour of the nationalisation of oil on 1 June 1972 and also in the intention of "de-Kurdicising" the town (though the latter has however kept its Kurds). The population of the *muḥāfaẓa* is rapidly increasing thanks to the development of the oil industry; its 388,900 inhabitants of 1957 increased to 523,000 in 1970, with a majority of Kurds. The Kurds, Arabs and Turcomans of the town are Sunnī Muslims, but the Turcomans of the villages belong to an unorthodox and secret sect, the Ḳīzīlbās̲h̲. The Christians are mainly Chaldaean (about 4,500) with an archbishop, and the Nestorians, who are less numerous, have a bishop at Harīr. There was a small colony of Jewish merchants, one of whom was sent as a delegate to the Parliament in Bag̲h̲dād and another was at the head of the Department of Finance of the *liwāʾ* of *Kirkūk*, but it has disappeared since the Arab-Israeli War of 1948. It is thought they were the descendants of the Jews who were deported to Babylon by Nebuchadnezzar after the capture of Jerusalem (586 B.C.) and they continued to speak Aramaic. The little mosque of Nabī Dāniyāl on the slope of the hill of Kirkūk commemorates the Hebrew Prophet who was deported at the same time. This must be an ancient church which existed until *ca.* 1700, just like the Ulu D̲j̲āmiʿ mosque. The oldest church in the world was that of the martyr Mar Tahmazgerd, built by the metropolitan *ca.* 470 A.D., to the east of the citadel of Kirkūk; it was known as the Great Martyrion, but during the Turkish retreat of 1918 it was being used as a powder magazine and was blown up (C. J. Edmonds, *Kurds, Turks and Arabs*, 267; Fiey, *Assyrie*, iii, 54).

Urban planning in Kirkūk has made the centre a large circle of broad streets. Christians have been established there since earliest times, and seem always to have maintained positions of greater or lesser importance. The presence of a Turcoman minority in Kirkūk, within its Kurdish majority, must go back considerably before the conquest by the Ottoman sultans; their origin could be sought in a Turkish garrison which the caliphs may have installed there in the 3rd/9th century, or in an immigration at the time of the Sald̲j̲ūḳs, and the Begteginids or Atabegs of Irbīl (C. J. Edmonds, *op. cit.*, 267, has drawn attention to other opinions). Whatever may have been the circumstances of their coming to the region, the Turcomans of Kirkūk have always provided strong support for the Ottoman empire and its culture, and an abundant source for Ottoman officials (see *Türk Yurdu*, 1915).

Kirkūk's position as an administrative centre has varied through the ages: "In the 18th century Kirkūk was the chief town of the *eyālet* of S̲h̲ahrizūr which included the modern *liwāʾ*s of Kirkūk, Irbīl and nominally of Sulaymānī under a *mutasallim* appointed by Bag̲h̲dād. With the reforms of Midḥat Pas̲h̲a, *wālī* of Bag̲h̲dād from 1869 to 1872, the name of S̲h̲ahrizūr was given to the *sand̲j̲aḳ* of Kirkūk, corresponding to the present-day *liwāʾ*s of Kirkūk and Irbīl, whereas the historic S̲h̲ahrizūr remained outside, in the new *sand̲j̲aḳ* of Sulaymānī. The *vilāyet* of Mosul was formed in 1879 and Kirkūk remained an important garrison town" (Edmonds, *op. cit.*, 265-6). Under the Turkish régime, the *vilāyet* of Mosul was divided into three *sand̲j̲aḳ*s or *liwāʾ*s: Mosul, Kirkūk and Sulaymānī; in 1918 three *ḳaḍāʾ*s situated to the north of the Little Zab were detached from Kirkūk to form the *liwāʾ* of Irbīl. In the constitution of 1925, the new Iraqi state was formed of three Ottoman *vilāyets*: Bag̲h̲dād, which became the capital; Baṣra; and Mosul. The *liwāʾ* of Kirkūk was composed of four *ḳaḍāʾ*s: Kirkūk, Kifri, Čāmčamāl and Gil. Today, the *muḥāfaẓa* of al-Taʾmīm, with a *muḥāfiẓ* at its head, includes five *ḳaḍāʾ*s, as follows: Kirkūk, Ṭuz K̲h̲urmātu, Čamčamāl, Huwayd̲j̲a and Kifrī. Each *ḳaḍāʾ* has at its head a *ḳāʾim-maḳām*. The *ḳaḍāʾ* of Kirkūk has five *nāḥiyas*, as follows: Ṭāze K̲h̲urmātu, Ḳarā Ḥasan, Altun Köpri, Dibs and S̲h̲uwān, and each *nāḥiya* is administered by a *mudīr*. Kirkūk is the seat of the regional court and of a court of appeal, and it possesses a garrison and an airport. There is also an association of Turcoman writers.

Kirkūk is an important commercial centre and an agricultural market for the cereal and animal products of the neighbourhood. It is well served by good roads to Bag̲h̲dād through Taʾūḳ and Kifri to Mosul through Altun Köprü and Irbīl, to Sulaymāniyya through Čāmčamāl with branches to Sanāndad̲j̲ and Hamadān in Iran. A narrow-gauge railway links Kirkūk with Bag̲h̲dād in the south and with Irbīl in the north. The region around Kirkūk is undulating and it is populated mostly by Kurds. The Mesopotamian steppe begins to the west of the town and it is inhabited chiefly by Arabs. The immediately-surrounding district produces much fruit.

The region of Kirkūk abounds in sulphur and bitumen products and it is especially rich in petroleum deposits, extensively exploited even in ancient times. It should be noted that the petroleum had a

certain importance in Ottoman times, being used by the army (V. J. Parry, *Materials of war in the Ottoman empire*, in *Studies in the economic history of the Middle East*, ed. M. A. Cook, London 1970, 220. A *fermān* of 1049/1639 recognised the monopoly of rights over this petroleum to a group of Turks in the region of Kirkūk, the Neftčizādeler. But their systematic working dates from March 1925. At that time a concession was granted to the Turkish Petroleum Company (T.P.C.) which was founded in 1914 to exploit the deposits of the *vilāyets* of Mosul and Baghdād; royalties of 4 gold shillings per ton of extracted petroleum were payable. Before the end of 1925, geological work was begun and roads were constructed, water supplies, pipe lines and buildings were installed in the *vilayet* of Mosul, and there were 50 British and 2,500 Iraqis employed in the work. The drilling sites were chosen in the Djabal Ḥamrīn, near Ṭuz Khurmātu, in the neighbourhood of Kirkūk. The drilling programme was formally inaugurated in April 1927 by King Fayṣal I, and the first oil gushed forth on 27 October 1927 at Bābā Gurgur, near Kirkūk. The years 1927 to 1931 were given to preparing the whole region of Kirkūk for production by test drilling, scientific observation and arranging the necessary services; production units, reservoirs, workshops, housing etc. were established and at the same time negotiations were conducted with the Iraqi government to extend the period for selecting areas, according to the convention of 1925. In March 1931 the company, which had become the Iraq Petroleum Company (I.P.C.) in 1929, was able to operate in the whole territory in the north-east of Iraq, on condition that by 1935 they constructed a pipe-line to the Mediterranean with a capacity of 3,000,000 tonnes, with a branch at Ḥadīṯha on the Euphrates to Ḥayfā and Tripoli, and that they make an annual payment of £ 4,000 as an overall payment to the government.

It was also in 1931 that the operational headquarters of the I.P.C. was moved from Ṭuz Khurmātu to Kirkūk, and the headquarters for pipe-line operations was established at Ḥayfa. The drilling for crude oil at Kirkūk began at the end of 1934 and, from 1935 onwards, the annual production of 4,000,000 tonnes put Iraq in the eighth position among the oil producing countries. In January 1935 the double 12" pipeline from Kirkūk to the Mediterranean was formally opened, but because of the Arab-Israeli war of 1948, the branch leading to Ḥayfā was closed. This caused a loss of almost 7,000,000 tonnes and the corresponding royalties. The Tripoli pipe-line was, however, doubled by a second (16") pipe in 1949 and this trebled the export figure. In 1952 a third (30") pipeline was brought into service between Kirkūk and Banias (Syria). From then on the world market for Iraqi oil was to increase to 14,000,000 tonnes per year. On 3 February 1952 a new agreement was signed between the Iraqi government and the I.P.C. for the distribution of personnel, production and revenues. A minimum production of 22,000,000 tonnes was expected annually from 1953 and a revenue of £ 30,000,000, in 1952 to reach £ 60,000,000 in 1955. The profits gained from the oil workings would be shared equally.

The Iraqi revolution of 1958 did not change the agreements between the government and the petroleum companies. The objective was to obtain exports worth 100 m. in revenue from a capacity of 70 m. tonnes per year. This target was reached in four years, but a few problems of interpretation persisted. In April 1961 negotiations were begun and, after different interruptions, they finally reached deadlock. They were concluded by Law 80 of 11 December 1961 which dispossessed the company of 99.5% of the territories where they had prospecting rights and left I.P.C. with only 22 sites, 12 of them at Kirkūk in an area of about 478.75 sq. kms., 6 at Bay Hassan of about 182.5 sq. kms., and 4 at Djambar, of about 86.5 sq. kms. (Vernier, *L'Irak...*, 435). New installations were planned between May 1964 and June 1965 and were completed, with future plans taking into consideration the Iraqi National Oil Company (I.N.O.C.) which had recently been founded on 30 October 1962. More new laws were enacted as a consequence: Law 97 (6 August 1967) forbade any new concessions to foreign companies and Law 123 (October 1967) authorised the I.N.O.C. to exploit the remaining sectors, which seemed to put an end to the monopoly of oil production which the foreign I.P.C. enjoyed. On 14 June 1972, the I.P.C. itself was nationalised, and thus Iraq gained for itself all the profits from its rich petroleum deposits. The annual production of crude oil in Iraq has regularly increased from the 47.5 m. tonnes in 1960; by 1975 it had reached more than 110 m. tonnes, 60 m. of which were from the Kirkūk region. In 1973 the Iraqi reserves of crude oil were estimated to be 4.143 billion tonnes.

If the petroleum industry with all its subsidiary operations gave a favourable social status to its workers, for their standard of living is superior to that of other workers in the country, it did not suppress all the movements for social reform. Several important strikes were called in Kirkūk among the oil workers. The most notable were those of 1937 which coincided with the workers' strikes at the Kūt barrage, the drillers of the B.O.P., the railways, the stevedores at Baṣra and the weavers of Nadjaf. These showed a hardening of class-consciousness and the discovery of a new political weapon (Longrigg, *Iraq*, 252). In July 1947 a serious strike aggravated by politicians of communist leanings broke out at I.P.C., and it claimed several victims (*ibid.* 338).

Other demonstrations have had a more political tone. The mere announcement of the Treaty of Portsmouth (15 January 1948) produced a general strike for three days. At Kirkūk the British consulate was attacked, but the most tragic of these events was the so-called "purge of Kirkūk". On the occasion of the first anniversary of the republic (14 July 1959) Communist elements helped by bands of Kurds, massacred the Turcomans of the town, for they were considered to be anti-Communist. There were probably 120 killed and about 100 wounded. The participation of the Kurds in the affair was interpreted not as a sign of an antagonistic nationalistic rivalry against the Turcomans, but one of social competition. The Turcomans, who are more socially and culturally advanced, occupied more high-ranking positions in the I.P.C., while the Kurds had to content themselves with more subordinate work (cf. M. Khadduri, *Republican ʿIraq*, 125).

It must not be forgotten that one of the obstacles to a definitive solution to the Kurdish problem is precisely the claim of the Kurds to the territory and the revenue of the Kirkūk oil-fields, which they would like to see included in the territory of an autonomous Kurdistan. These claims are categorically refuted by the central Iraqi government. In October 1970 a plebiscite was to settle this point of contention, but it was adjourned indefinitely (E. O'Ballance, *The Kurdish revolt*, 161 f.). This at least in part provoked the outbreak of hostilities in

March 1974, just as the Kurdo-Iraqi agreement of 11 March 1970 was beirg implemented. The law of 11 March 1974 awarding autonomy to the region of Kurdistan defined this region in terms of the 1957 census, carried out under the monarchy. At that time, the Kurds were afraid to declare themselves as such, and thus the census did not give a Kurdish majority to Kirkūk; hence the town and the *muḥāfaẓa* were accordingly excluded from the autonomous area.

A well-known personality of Kirkūk was the Kurdish poet Shaykh Riḍā Tālabānī (*ca.* 1840-1910). More-or-less an agnostic character, but at the same time fanatical also, he had gifts of satire and improvisation and a sometimes obscene verve, and composed poems in Kurdish, Turkish, Persian and Arabic. They were published in Baghdād in 1935 and 1946 and he is remembered as one of the most popular poets of Iraqi Kurdistan (cf. E. B. Sloane, *op. cit.*, 134-5; Edmonds, *op. cit.*, 57-8, 290-5; Edmonds, *A Kurdish lampoonist: Shaik Riza Talabani*, in *JRCAS*, xxii/l (1935), 111-27).

(J. H. Kramers - [Th. Bois])

KIRMĀN, the name of a Persian province and of its present capital. The name goes back to the form Carmania, which is found in Strabo (xv, 2, 14), and which is said to be derived from the name of an ancient capital, Carmana (Ptolemy, *Geography*, vi, 8; Ammanianus Marcellinus, xxiii, 6, 48. See further Marquart, *Ērānšahr*, 30, on the name Carmania, and Browne, *Lit. Hist. of Persia*, i, 145, for the later popular etymology of the name).

The Province.—The province of Kirmān is situated to the south-west of the great central desert of Persia, the Dasht-i Lūt, which narrows to some 100 miles in width where it divides Kirmān from Sīstān. It is bounded on the north by Yazd and Khurāsān, on the east by Sīstān and Makrān (Balūčistān), which was regarded by most of the early geographers as separate from Kirmān, though Ḥamd Allāh Mustawfī states that it paid tribute (*kharādj*) to Kirmān (*Nuzhat*, 141), on the south by Makrān and Fārs and on the west by Fārs. Its boundaries have varied slightly from time to time. Ibn Rusta states that Fahradj was part of the tax district of Kirmān but that the ruler of Makrān claimed that it belonged to him (286). Khʷāsh, which is today included in Balūčistān, and Rīgān were both reckoned by Iṣṭakhrī to belong to Kirmān, though the former was, he states, part of the tax district of Sīstān (162). Idrīsī, on the other hand, includes Khʷāsh in Sīstān (417). Shahr-i Bābak was at various times included in Fārs, at others in Kirmān. In 1258/1842-3 it was placed, for revenue purposes, under Yazd (Aḥmad ʿAlī Wazīrī, *Djughrāfiyā-yi mamlakat-i Kirmān*, ed. Muḥammad Ibrāhīm Bāstānī Parīzī, in *Farhang-i Īrān Zamīn*, xiv/1-4, 163). Bāfḳ, which had earlier belonged to Kirmān, was also placed under Yazd about the year 1774 (Wazīrī, 175), though Khināmān, one of its districts, continued to belong to Kirmān. During the reign of the Saldjūḳ *malik* of Kirmān, Arslān Shāh (494-536/1100-41), Yazd and Ṭabas appear to have been under Kirmān (Afḍal al-Dīn Abū Ḥāmid Kirmānī, *ʿIḳd al-ʿūlā*, ed. ʿAlī Muḥammad ʿĀmirī Nāʾīnī, Tehran 1311, 76). Furg and Ṭārum, both placed in Fārs by the *Ḥudūd al-ʿālam* (129), were considered by Afḍal al-Dīn to belong to Kirmān (*ʿIḳd al-ʿūlā*, 75). Ibn Balkhī states that Rūdān, which had belonged to Fārs, was put on the Kirmān side of the frontier in the reign of Alp Arslān (*Fārs-nāma*, ed. Le Strange, 121), but according to Idrīsī, although it formed one of the dependencies of Kirmān, it was under Fārs for tax purposes (416). Hurmuz [*q.v.*] was sometimes counted as belonging to Fārs, sometimes to Kirmān, and has often been in different hands to its hinterland.

According to the Arab geographers, the western part of the province, which included Shahr-i Bābak, Sīrdjān, Urzūya, Aḳṭāʿ, Kushk, Ṣawghān, Isfandaḳa, Djīruft and Rūdbār, was in the third clime, and the eastern part, including Anār, Kūbanān (Kūhbanān) Zarand, Guwāshīr or Gawāshīr (also known as Bardsīr and later as Kirmān), Rāwar, Khabīṣ, Rāʾin, Sardūya, Bam and Narmāshīr, in the fourth clime, while Hurmuz, according to Ḥamd Allāh Mustawfī, was in the second clime (*Nuzhat*, 141).

In the variety of its topography the province is not dissimilar from Persia as a whole. A series of mountain ranges, with a general trend from north-west to south-east, runs through the province. Much is tangled broken country, but there are many fertile upland districts, pastures and mountain valleys with orchards, cultivated places, and many streams. Some of these have a high elevation: Saʿīdābād, near the site of the old city of Sīrdjān, lies at an elevation of 5,600 ft. and Pārīz at over 7,000 ft. There are also numerous arid waterless mountain districts and desert tracts. The main desert area is in the north and north-east on the borders of the Dasht-i Lūt, and is encroaching on the neighbouring fertile districts. The Lūt is defined in the south by the Bam-Zāhidān road and thus excludes Narmāshīr and the desert regions of south-eastern Kirmān and Rīgān, though physically these belong to the Lūt proper. There are also some stretches of arid land between the south-west highlands and the Djibāl Bāriz which run south-east from Sīrdjān to east of Djīruft. Salt swamps (*kafa*) are found in isolated depressions, notably the Kafa-i Ḳaṭrū near Sīrdjān (for a description of this, see K. E. Abbott, *Geographical notes taken during a journey in Persia in 1849 and 1850*, in *JRGS*, xxv (1855), 66-7). In some parts of the province the towns and villages tend to be separated from each other by broad stretches of uncultivated land (cf. Iṣṭakhrī, 163, Ibn Ḥawḳal, ii, 309). Along the nor-

thern littoral of the Persian Gulf and the Gulf of ʿUmān there is a narrow coastal plain.

The most northerly of the mountain ranges stretches from the neighbourhood of Yazd to Khabīṣ (the modern Shahdād) and south-eastwards towards Sarvistān. The fertile upland district of Kūbanān in the north, and, further south, the arid district of Rāwar lie along its eastern base. A second range, further to the west, which contains Mt. Djūpār (13,000 ft.) south of Kirmān city, and Mt. Hazār (14,500 ft.) to the south-west of Rāʾīn, runs towards Bam, while a third, still further west, runs south-eastwards from north of Shahr-i Bābak through Sīrdjān and Bāft, and contains Mt. Čihiltan (12,000 ft.) Mt. Čahārgunbad (13,000 ft.) and Mt. Lālazār (14,350 ft.). A lesser range, with Mt. Čāhhazār (9,480 ft.), lies to the south of Saʿīdābād, while the Mt. Dinā range of Fārs is prolonged in a south-easterly direction to near Bandar ʿAbbās. South of Sarvistān and to the east of Djīruft, lies the Djibāl Bāriz range [see DJABAL BĀRIZ in Suppl.], which also trends from the north-west to the south-east and rises to 13,000 ft. in the north and 12,450 ft. in the south. The Djibāl Ḳufṣ region of the Arab geographers (see Iṣṭakhrī, 164; *Ḥudūd al-ʿālam*, 124; al-Muḳaddasī, 471; Ibn Ḥawḳal, ii, 309-10; C. E. Bosworth, *The Kūfichīs or Qufṣ in Persian history*, in *Iran*, xiv (1976), 9-18) probably lay in the south-east in Bashākird, on the borders of Makrān and Rūdbār.

In the upland districts, notably in the Djibāl Bāriz, there exist remnants of a dry forest, consisting mainly of thin stands of pistachio trees, several species of almond, maple, celtis, juniper and other shrubs; stands of pistachio trees, almonds and other drought-resistant species are also found at lower levels. In the *garmsīr* the vegetation tends to be scattered trees and shrubs with a steppe-like ground cover. The *kunār* tree (*ziziphus spina Christi*) has a wide distribution, as also do several species of acacia, myrtle, tamarisk and oleander. Deforestation from charcoal burning and animal grazing has taken place, and present day cover, though in places still considerable, would appear to be appreciably less than the "forests" of both the early and mediaeval geographers and the 19th century writers.

There are no important rivers reaching the sea. The largest of them, the R. Mīnāb, rises in the hills of Bandar ʿAbbās. It has a considerable drainage and flows into the Persian Gulf some 30 miles east of Bandar ʿAbbās. The only considerable inland river is the R. Halīl, which is joined by its tributary, the R. Shūr, in the neighbourhood of Djīruft and disappears in the Djāz Muriān. According to Iṣṭakhrī, it had enough water to turn 20 (166), or, according to Ibn Ḥawḳal, 50 mill wheels (ii, 311). The province relies, for the most part, on *ḳanāts* [*q.v.*] and mountain streams for water. In many districts the sub-soil water is brackish and the soil is often impregnated with salt. Rainfall is low and decreases towards the south-east, though the relief of the land gives rise to many local variations. The maximum precipation is in winter. Kirmān town has an annual average rainfall of 7.9 in., Bandar ʿAbbās 10 in, and Bam 3 in. Drought, sometimes accompanied by famine, has not been uncommon in the history of Kirmān. The *ʿIḳd al-ʿulā* mentions one such in the *kharādjī* year 570 (97). In 1879 and 1880 Kirmān, like many other provinces, suffered severely from drought. Flash floods are also a hazard, such as the floods which occurred in Kirmān (and many other places) in 1001/1593 (Maḥmūd b. Hidāyat Allāh Natanzī, *Nuḳāwat al-āthār*, ed. Iḥsān Ishrāḳī, Tehran 1971, 531).

According to the Arab geographers, some three-quarters of the province bel›ngs to the warm regions (*djurūm, garmsīr*) and one quarter to the cold regions (*ṣurūd, sardsīr*). In the *garmsīr* the districts bordering the central desert have a hot dry climate, but in the southern parts of the province, especially in the Persian Gulf littoral, the climate in summer is hot and unhealthy. Bam is thus reckoned to have a better climate than Djīruft (Iṣṭakhrī, 166). The latter is described by Afḍal al-Dīn as a paradise for four months of the year but as hell for the rest of the year (*ʿIḳd al-ʿulā*, 69). The 5th/10th century Persian translation of Iṣṭakhrī adds to the latter's text the statement that the climate of Hurmuz was noxious (ed. Īradj Afshār, Tehran 1340, 139). The upland country of Aḳṭāʿ and Sīrdjān has a temperate climate, while Kirmān, Rafsindjān, Zarand, Rāwar and Kūbanān have a hot summer and mild winter. Barley is harvested in Rūdbār at the Persian New Year (21 March) and wheat twenty days afterwards. In Aḳṭāʿ barley is not harvested until five months after the New Year and wheat a month later.

Outside the coastal area, where the annual range of temperature is lowest, the difference between the coldest month, January, and the warmest, July, is considerable. At Kirmān, with an elevation of 5,680 ft., the average maximum temperature in January is 55.4° F and the average minimum 33.8° F, with an absolute maximum and minimum of 75.2° F and -7.6° F respectively and a mean monthly average of 42.8° F. In July the average maximum and minimum temperature is 95° F and 64.4° F respectively with an absolute maximum and minimum of 105.8° F and 48.2° F and a mean monthly average of 80.6° F. At Bandar ʿAbbās the average maximum and minimum temperatures in January are 73.4° F and 57.2° F respectively with an absolute maximum and minimum of 86.0° F and 41.0° F and a mean monthly average of 66.2° F, while the comparable figures for July are 102.2° F and 87.8° F, 113.0° F and 82.4° F and 95.0° F. In some parts of the province, notably Kirmān, high surface winds are common at certain times of the year, especially in spring. In the Khabīṣ district a poisonous wind (known as *bād-i simur*) blows in the desert in the middle of the day for about forty days in summer.

Ibn Rusta states that Kirmān was divided into five *kūras*, Bardsīr, Sīrdjān, Narmāshīr, Djīruft and Hurmuz, each *kūra* being called after its chief town (286). Muḳaddasī also states that the province had five *kūras*, but lists them differently, omitting Hurmuz and including Bam (460). Ḥamd Allāh Mustawfī states that it consisted of fifteen districts (*shahr*) (*Nuzhat*, 139). By the 8th/14th century the province was differently divided. In the 19th and 20th centuries there appears to have been a further proliferation of districts (*bulūkāt*), the names of which are variously given. Wazīrī in his *Djughrāfiyā-yi mamlakat-i Kirmān*, written between 1874 and 1876, mentions the following districts: Guwāshīr (the modern city of Kirmān and its surroundings), Kūhpāya, Khabīṣ and Gawk (which two, he states, in reality formed one *bulūk*), Bam, Narmāshīr, Rāʾīn, Sardūya, Djīruft, Djibāl Bāriz, Isfandaḳa, Rūdbār, Kūshk and Ṣawghān, Bardsīr, Aḳṭāʿ (earlier known as the district of Bāft), Urzūya, Sīrdjān, Shahr-i Bābak, Rafsindjān, Bāfḳ, Zarand, Anār, Kūbanān (which, he states, had been administered with Yazd for revenue purposes for nearly a hundred years) and Rāwar. Later the boundaries appear to have been slightly redrawn: Aḳṭāʿ and Urzūya were united into one district, as also were Bam and

Narmās̲h̲īr; Bāfḳ was transferred to Yazd, the district of K̲h̲ināmān only remaining with Kirmān, Pārīz and Rābur, which had formerly belonged to Sīrd̲j̲ān and Aḳṭāʿ respectively, both became separate districts, while Rūdbār was now called Rūdbār and Bas̲h̲ākird (Houtum-Schindler, art. *Kerman* in *Encyclopaedia Britannica*, 1911, xv, 756). Under Riḍā S̲h̲āh the province was divided into six *s̲h̲ahristāns*: Kirmān (which included the sub-districts of Zarand, Kūhpāya and Kūbanān), Bam (which included the sub-district of Rāʾīn), D̲j̲īruft (which included the sub-district of Sardūya, which in turn included Isfandaḳa, and Kahnūd̲j̲, which in turn included Rūdbār), Bandar ʿAbbās (which included the sub-district of Rūdān), Sīrd̲j̲ān (which included the sub-districts of Pārīz and Bāft, which in turn included Urzūya, Rābur, Kus̲h̲k and Ṣawg̲h̲ān) and Rafsind̲j̲ān (Ḥusayn ʿAlī Razmārā, *Farhang-i d̲j̲ug̲h̲rāfiyā-yi Īrān*, viii).

Agriculture and Livestock.—The Arab geographers describe Kirmān as a rich and prosperous province. The Persian translation of Iṣṭak̲h̲rī mentions that it produced all kinds of fruit (139), while Yāḳūt states that it was rich in date palms, cereals, cattle and beasts of burden and that it produced fruits belonging to both the cold and the hot regions in great variety, including an abundance of walnuts and dates (Barbier de Meynard, *Dictionnaire de la Perse*, 483). The author of the *Ḥudūd al-ʿālam* notes that D̲j̲īruft, Bāft and the mountain country between D̲j̲īruft and Manūd̲j̲ān, known as the Kūhistān-i Abū G̲h̲ānim, were prosperous and pleasant places (124). According to Muḳaddasī, the last-named district had many date palms (467). Rūdbār is described by the *Ḥudūd al-ʿālam* as consisting of woods, trees, and meadows (124). The mountain region between Sīrd̲j̲ān and Bardsīr was also very prosperous and pleasant according to the same authority, and contained 260 populous places. Muḳaddasī mentions a multitude of orchards and an abundance of fruit in Sīrd̲j̲ān (464), and many orchards and citrus trees in Mug̲h̲ūn (467). Afḍal al-Dīn speaks of the excellence of the pastures of Rūdbār and states that animals thrived in them (70). He also praises the fertility of Narmās̲h̲īr and states that it produced the fruit of both the *garmsīr* and the *sardsīr* (72). Muḳaddasī notes the great quantity of fruit belonging to the *sardsīr* and the *garmsīr*—dates, walnuts and citrus fruits—in D̲j̲īruft (466; cf. Iṣṭak̲h̲rī 166). Plenty prevailed in the D̲j̲ibāl Bāriz, which, like the Ḳufṣ Mts., were difficult of access (Iṣṭak̲h̲rī, 164; Ibn al-Ḥawḳal, ii, 310). Bam and K̲h̲ʷās̲h̲ had many date palms (Iṣṭak̲h̲rī, 166; Ibn Ḥawḳal, ii, 313), which also grew in great profusion in Hurmuz (Iṣṭak̲h̲rī, 166; Ibn Ḥawḳal, ii, 311) and in the Ḳufṣ Mts. Honey was also produced there (cf. Idrīsī, 429). Indigo and cumin were cultivated in D̲j̲īruft and the district which extended from Mug̲h̲ūn and Walās̲h̲gird to the neighbourhood of Hurmuz, and also sugar cane (Muḳaddasī, 467; Iṣṭak̲h̲rī, 167; Ibn Ḥawḳal, ii, 312). Idrīsī mentions the excellence of the quality of the indigo and states that the inhabitants of Mug̲h̲ūn and Walās̲h̲gird occupied themselves much in its cultivation and took a great deal of trouble over it because it was a source of considerable profit to them (424). Wheat and barley were grown in the *sardsīr*, but in Hurmuz millet was the staple crop and the food of the inhabitants (Iṣṭak̲h̲rī, 127; Ibn Ḥawḳal, ii, 311; *Ḥudūd al-ʿālam*, 124, Idrīsī, 424). Cotton, as well as grain and dates, were grown in Sīrd̲j̲ān and S̲h̲ahr-i Bābak (*Nuzhat*, 141). Silk was produced in Bam (*ʿIḳd al-ʿūlā*, 71). Asafoetida and gum tragacanth were found in parts of the province.

In the Middle Ages, apart from a period of prosperity under the Sald̲j̲ūḳs of Kirmān, agriculture suffered a decline. There were temporary fluctuations and local variations, but in general the agricultural recession continued until the second half of the 19th century. At that time a wide variety of crops were cultivated. Wheat and barley, though grown in most parts of the province, were not important in terms of the amount grown and some districts had a deficit. In the province as a whole, the yield was low. Some millet, and a small quantity of rice was also grown. Pulses, roots and edible gums were also produced. Cotton was grown in Rafsind̲j̲ān (which was later, in the 1930s, to turn much cotton land over to the cultivation of pistachio trees), Kūhpāya, Dārzīn (Dard̲j̲īn), Bam, Narmās̲h̲īr, D̲j̲īruft, Zarand and Anār. Dates were still one of the most important products of the province and came from Bāfḳ, K̲h̲abīṣ, Bam, Dārzīn, Rūdbār and to a lesser extent from Kūs̲h̲k and Ṣawg̲h̲ān. Rāwar was noted for its figs, Bāfḳ for its apricots and K̲h̲abīṣ for its citrus fruits. Cumin was grown mainly in Kūs̲h̲k and Aqṭāʿ. Pistachios, almonds (mainly from Sīrd̲j̲ān and S̲h̲ahr-i Bābak) and walnuts (from Sardūya, Bardsīr and Aḳṭāʿ) were important products. Sugar and indigo were no longer grown except on a very small scale, though an attempt was made by Wakīl al-Mulk to re-introduce sugar cane together with indigo, pepper, ginger and various other Indian plants into K̲h̲abīṣ (Houtum Schindler, *Reisen im südlichen Persien 1879* ..., in *ZG Erd. Berlin*, xvi (1881), 357). Dye plants included henna in Narmās̲h̲īr, K̲h̲abīṣ, D̲j̲īruft, and Urzūya and madder in Sīrd̲j̲ān, Rafsind̲j̲ān, Bāfḳ, Kūbanān, Anār and Zarand. By 1880 the cultivation of henna in Bam had brought about in some measure a revival of prosperity in that district (Fīrūz Mīrzā Farmān Farmā, *Safarnāma-i Kirmān wa Balūčistān*, ed. Manṣūra Niẓām Māfī, Tehran 1963, 6). Silk, though a little was still produced in Bam, Rafsind̲j̲ān, Bāfḳ, D̲j̲ūpār, Bāg̲h̲īn and Kūbanān, had also lost its importance, though some attention appears to have been given to the cultivation of mulberry trees during the reign of Muḥammad S̲h̲āh (1834-48) (R. G. Watson, *A history of Persia*, London 1866, 354). Tobacco was grown in Zarand and Bāfḳ, and potatoes in the district between Sīrd̲j̲ān and Pārīz. From the late 1870s opium cultivation became important in Māhān, D̲j̲ūpār, Narmās̲h̲īr, Sīrd̲j̲ān, Bāfḳ, Kūbanān and elsewhere. Honey came from Aḳṭāʿ, Bardsīr and Sardūya. (See further Wazīrī, who gives a list of the agricultural produce of each district (*bulūk*), and also references in E. Stack, *Six months in Persia*, London 1882, i, 184-238).

Sheep and goats were important throughout the province. There was much movement of flocks from the mountain districts to the plains in winter. Those from Rābur, Isfandaḳa and the neighbouring districts went mainly to Rūdbār and D̲j̲īruft. Much wool was produced, including a fine soft wool (*kurk*) produced by a special breed of goat. In Rūdbār there were also many herds of cattle. Buffaloes were found only in D̲j̲īruft.

Minerals.—Various minerals existed in the province and many of these were exploited. Ibn al-Faḳīh states that there were mines of gold, silver, iron, copper, sulphur, and zinc oxide (206), but their location is not clear from his account. Muḳaddasī describes how zinc oxide (*tūtiyā*) was mined and fired to produce tutty (459, 470). Ḥamd Allāh Mustawfī describes the process as carried out in "the village

of the tutty makers" as follows: the crude ore was brought out from the mine, moistened and made into bars (*mīl*) one gaz long, dried and put into a furnace, the action of the fire then causing the tutty to form in a thin film (*Nuzhat*, 205). Marco Polo, who locates the mines in Kūbanān, gives a somewhat similar account. Muḳaddasī also states that there were iron and silver mines in the province (470), the latter presumably located in the Silver Mine Mountains west of Djīruft (cf. also *Ḥudūd al-ʿālam*, 65). The *Ḥudūd al-ʿālam* mentions lead, copper and lodestone in the mountains between Djīruft and Bam (65). Ḥamd Allāh Mustawfī states that there was a turquoise mine and a lapis lazuli mine in Kirmān, but that the turquoises were immature and unformed and therefore not of much value (*Nuzhat*, 204, 206). Marco Polo also mentions turquoise in the mountains of Kirmān, while Wazīrī states that there was a turquoise mine near the mountains of Maymand in the Shahr-i Bābak district (164). He also mentions lead mines in Sīrdjān and Zarand, of which the former produced the best quality lead (156, 178). Abbott records the existence of a lead mine in the mountains of Zarand near the village of Tugradja and states that the government took 10% of its produce (*op. cit.*, 27). Wazīrī mentions a sulphur mine in Kūbanān, which was in operation when he was writing (175); he also states that there were copper mines in Sardūya (113), a copper mine in operation in the mountains of Bazindjān in Aḳṭāʿ (139), and many disused copper mines in the mountains of Rābur (142-3). Salt was obtained from deposits near Khabīṣ, Sīrdjān, Rāʾin and elsewhere. Curzon mentions coal north of Kirmān city and in Kūbanān, manganese oil in Rāwar, borax in Shahr-i Bābak and asbestos in Kūbanān (*Persia and the Persian question*, ii, 518). Extensive mining operations are being carried on in various parts of the province at the present day. Coal and other minerals are mined in the mountains between Rāwar and Zarand and copper in the Pārīz district.

The cities of Kirmān.—The main city of Kirmān under the Muslims until the middle of the 4th/10th century was Sīrdjān (the form Shīradjān is also found), which was situated some five miles to the east of the modern town of Saʿīdābād (Le Strange, *Lands*, 300). It was here that the governor (*wālī*) resided (Ibn Khurradādhbih, 49). Ibn Rusta describes Sīrdjān as the greatest city of Kirmān (286), as also does Iṣṭakhrī (167), Ibn Ḥawḳal (ii, 312) and the *Ḥudūd al-ʿālam*. The last-named states that it was the capital of Kirmān and the seat of the king (124), though by the time the *Ḥudūd al-ʿālam* was written, Ibn Ilyās, the Būyid governor, had, in fact, moved the capital to Bardsīr. Muḳaddasī states that it was the biggest town in the province (although no longer the capital) and more extensive than Shīrāz (464). Ḥāfiẓ Abrū refers to Sīrdjān as the second city of Kirmān (*Djughrāfiyā*, f. 140a), although it had, in fact, been destroyed in 798/1396 (before he wrote) after a long resistance by the armies of Tīmūr. After the city was laid in ruins, the name Sīrdjān was nevertheless still applied to the district of which it had been the centre. Towards the end of the 18th century Saʿīdābād was founded near the site of the old city. Abbott, who visited it in 1850, describes it as one of the most flourishing towns in Kirmān (*op. cit.*, 63). In 1881 it had some 8,000 inhabitants and appeared to be in a flourishing condition (Stack, i, 181; cf. also Wazīrī, 151). At the present day, the town of which Saʿīdābād is the centre is known as Sīrdjān.

Bardsīr (Bardasīr), which became the capital of the province under the Būyids, is the mediaeval name of the city now called Kirmān (Le Strange, *Lands*, 303). It was also known as Guwāshīr. The two names, Bardsīr and Guwāshīr, may represent the form Beh-Ardashīr, the name of the town built by Ardashīr, the founder of the Sāsānid dynasty (Ḥamza Iṣfahānī, ed. Gottwald, 46; Ibn Balkhī, *Fārs-nāma*, 303). Muḥammad b. Ibrāhīm uses the names Bardsīr and Guwāshīr indifferently. The copyist of Ibn Ḥawḳal, writing in 550/1155, states that Bardsīr in his time was a small town. It was, however, very prosperous and its surroundings, which had been brought under cultivation, were more flourishing than the town itself (ii, 309). Afḍal al-Dīn, writing some decades later, states that it was a large city with a wall (*rabaḍ*) and a suburb (*shahristān*). Adjoining the city outside the wall and surrounding it were orchards and villages. It had a temperate climate, good soil and good water (72). By the 10th/16th century the name Bardsīr appears no longer to have been applied to the capital of the province, which, although still called Guwāshīr, was by this time more usually known as Kirmān. It had the *laḳab* of *Dār al-Amān*. The name Bardsīr, although it had thus ceased to designate the capital of the province, was still applied to a district (Zayn al-ʿĀbidīn Shīrwānī, *Bustān al-siyāḥa*, lith. Tehran n.d., 164). This, however, did not include the town of Kirmān or its environs, but was bounded on the north-west by Rafsindjān, on the west and south by Aḳṭāʿ and Sīrdjān, on the south-east by Rāʾin and on the north-east by Kirmān (Wazīrī, 133). The main centre of this district, Māshīz, is also known as Bardsīr.

Bam [*q.v.*] was the second major city of Kirmān in the early centuries. The third, Djīruft [*q.v.*], was a prosperous, commercial centre, having trade with Sīstān and Khurāsān (Iṣṭakhrī, 166; Ibn Ḥawḳal, ii, 311; Muḳaddasī, 466; Idrīsī, 422). According to Ḥamd Allāh Mustawfī, when the Muslims conquered Kirmān, the region of Djīruft was wooded and occupied by wild animals. The Muslims cleared the country and made villages (140). Djīruft and its suburb Ḳamādīn flourished until the end of the Saldjūḳ period. Its buildings decayed during the reign of Malik Dīnār (582-91/1186-95), although the surrounding district continued to be cultivated (*ʿIḳd al-ʿūlā*, 40). Subsequently the district decayed also. Abbott, who visited it in 1850, states that is possessed only four or five collections of huts which could be termed villages, each of which had a mud fort; for the rest tribal groups from the mountain regions resided in scattered groups over the plain in winter (K. E. Abbott, *op. cit.*, 46). Today the town which has grown up round Sabzawārān is also known as Djīruft.

The fifth of the great cities of Kirmān in early and mediaeval times was Hurmuz [*q.v.*], situated on the Persian Gulf. It was the emporium of Kirmān. Its merchants, perhaps because of its bad climate, lived in the surrounding countryside (Iṣṭakhrī, 166). In 700/1300, because of repeated raids by marauding tribesmen, the ruler of Hurmuz moved all the inhabitants to the island of Djarūn where he founded the town of New Hurmuz (see further, J. Aubin, *Le royaume d'Ormuz au début du XVIᵉ siècle*, in *Mare Luso-indicum*, ii, *Hautes études islamiques et orientales d'histoire comparée*, iv/5, Geneva 1973). Other important towns were Manūdjān, Zarand and Narmāshīr. Many of the towns and villages mentioned by the early and mediaeval geographers have disappeared or have not yet been identified.

Communications.—In the early centuries Sīrdjān was the main centre upon which the principal roads converged. This, no doubt, in part accounted for its importance until it was destroyed in the 8th/14th century. Three roads led from it to Fārs, one via Shahr-i Bābak, another through Ṣāhik and a third to Nayrīz. Other roads went south to Furg, Ṭārum and Sūrū on the Persian Gulf, south-east to Bāft, Djīruft, Manūdjān and Hurmuz, north to Unās in Rūdān, north-east to Māshīz, Bāghīn and Kirmān, north-north-east to Māhān, Khabīṣ and Khurāsān, and east to Shāmāt and Rāʾīn. From Kirmān (Guwāshīr) two roads went north-west to Yazd, one via Zarand, Rāwar, Kūbanān and Bāfḳ, and the other via Rafsindjān and Anār. From Rāwar and Kūbanān roads went north-north-east across the Great Desert to Ṭabas and Khūr respectively. South-east from Kirmān a road went to Māhān, Rāʾīn, Dārzīn or Dārdjīn, Bam and Narmāshīr, where it bifurcated, one branch going to Faradj and Zarandj in Sīstān and the other to Rīgān, where it again divided, one road going east to Khʷāsh and the other south-west to Manūdjān. From Dārzīn another road went south to Djīruft (see further Le Strange, *Lands*).

In the 19th and early 20th centuries communications were still very backward. Generally speaking, the roads were fit for pack transport only. Moreover, many were often shut for months at a time owing to the activity of bandits. In 1901 a convention was signed between Britain and the Persian government for a three-wire telegraph line on iron posts from Kāshān to Balūčistān via Yazd, Kirmān and Bam. It was begun in December 1902 and finished in March 1907.

Manufactures and Trade.—In the early centuries, the province had manufactures of silk, cotton and woollen goods, which were important articles of local and long-distance trade. A cotton cloth (*baṭāʾin*), which appears to have been used as lining for clothes, was produced in Zarand and exported to Fārs and ʿIrāḳ (Iṣṭakhrī, 167-8). Ibn Ḥawḳal states that it was called al-Zarandiyya and taken to Egypt and the most distant parts of the Maghrib (ii, 313). There was also trade in cloth made in Sīrdjan (Muḳaddasī, 470). The people of Bam were noted for their craftsmanship, and the cloths which were made in Bam were of great elegance and lasting quality. They fetched a high price and were exported to Khurāsān, Egypt and ʿIrāḳ (Ibn Ḥawḳal, ii, 312; Muḳaddasī, 465; cf. also Iṣṭakhrī, 167-8). Idrīsī states that the cloaks of goat hair made in Bam equalled the best to be found anywhere in the world (423). Turbans of fine material were also made in Bam and were in demand in Khurāsān, Egypt and ʿIrāḳ (Ibn Ḥawḳal, ii, 312). There had at one time been a royal workshop for *ṭirāz* in Bam (*ibid.*). Cotton cloths (*aḳmisha*) were still produced in Bam at the turn of the 8th/14th century (cf. Rashīd al-Dīn, *Mukātabāt*, ed. Muḥammad Shafīʿ, Lahore 1945, 190). In the middle of the century it was apparently still an important trading centre with India, Sīstān, Khurāsān and Kābul (cf. Ḥamd Allāh Mustawfī, *Tārīkh-i guzīda*, ed. E. G. Browne, G.M.S., London 1910, 729). By the 9th/15th century, however, the textile industry appears to have no longer existed in Bam (J. Aubin, *Deux sayyids de Bam au XVᵉ siècle*, Wiesbaden 1956, 91-2).

Idrīsī states that there were leather workshops in Zarand and that girths were exported to ʿIrāḳ and Egypt (427). Marco Polo mentions the manufacture of saddles, bridles, spurs, swords, quivers and other arms in Kirmān. Al-ʿUmarī also states that swords were made in Kirmān (*Masālik al-abṣār*, ed. K. Lech, Wiesbaden 1968, 110). In the 17th century pottery (blue and white) was made in Kirmān. According to Du Mans, the best examples of this were difficult to distinguish from Chinese porcelain (*Estat de la Perse*, Paris 1890, 197).

There was considerable trade, local and long-distance, in agricultural produce. Indigo and cumin were exported to distant regions (Iṣṭakhrī, 167; Muḳaddasī, 470; Idrīsī, 424). Narmāshīr had trade with Khurāsān and ʿUmān, and was a collecting centre for dates, which were exported to different parts (Muḳaddasī, 463). Djīruft also had a large export of dates to Khurāsān. Muḳaddasī states that nearly 100,000 camels used to set out every year. The trade appears to have been carried out on a *munāṣafa* basis, i.e. the profit was divided equally between the producer and the camel-driver (469). Khabīṣ also exported dates to distant parts (*ʿIḳd al-ʿūlā*, 74).

Afḍal al-Dīn states that much trade from India, Sind, Ethiopia, Zangibar, Egypt, the Arab countries, ʿUmān and Baḥrayn entered the port of Tīz (which he places on the frontier of Kirmān, though usually it is reckoned as belonging to Makrān). Imports included musk, ambergris, indigo, velvets, cloths, and other luxury articles. Hurmuz was also an important trading centre, to which merchants came from the most distant parts (71). Later, in the reign of Shāh ʿAbbās (996-1038/1587-1629), Bandar ʿAbbās (Gombroon) [*q.v.*] became an important port, but this did not bring at first much additional trade to Kirmān, since goods appear to have gone into the interior mainly through Fārs rather than Kirmān. How early the long distance wool trade became important in Kirmān is not entirely clear, or when carpets became an article of export and carpet weaving became important. In the 17th century wool was being taken from Kirmān and Yazd to Europe. By the end of the century it was an important export of the East India Company from Persia and was used in feltings, suitings, and coverings for buttons, while in the 18th century Kirmān wool for hats and shawls was a commodity consistently sought after. This wool came from goats and in different colours, black, white and red. The last named was highly prized (see *Gombroon diary* for a discussion of the arrangements for obtaining Carmanian wool. See also A. A. Amin, *British interests in the Persian Gulf*, Leiden 1967, 126-7). During the reign of Nādir Shāh (1148-60/1736-47) wool for export was in short supply because it was used for the clothing of his army, and some of the Zand rulers appear to have prohibited the export of wool because they wanted it for the internal manufacture of shawls. The situation was not improved by the desolation which Āḳā Muḥammad Khān Ḳādjār carried out in Kirmān in 1794.

In the early 19th century, the main manufactures of Kirmān were shawls, carpets, felts, silk and cotton cloths, loaf-sugar, matchlocks and earthenware (Malcolm, *History of Persia*, London 1829, ii, 366). Macdonald Kinneir in his *Geographical memoir of the Persian empire* states that "the trade of Kerman is still very considerable, and it is celebrated for its manufactures of shawls, matchlocks, and carpets, which they chiefly export to *Khorassan* and the northern provinces, receiving in return drugs, skins (from *Bockhara*), furs, silk, steel, and copper. These articles as well as pistachio-nuts, carpets, rose-buds for preserves, and bullion, they send to *India*; and import from hence tin, lead, iron, chintz, wrought silk, spices, indigo, muslin, kheemkhob, gold brocade,

china and glass-ware, broad-cloth, hardware, etc." (London, 1813, 198-9). Abbott, on the other hand, states in a report made in 1849-50 that the commerce of Kirmān was much restricted, though its woollen manufactures thrived. Such little importance as it had was due to the manufacture and trade in shawls and other woollen fabrics. He estimated the number of looms for shawls in Kirmān city at probably 2,200 (though some put the figure at nearly double that number), for other coarser woollen fabrics some 220, and in addition some 325 looms in nine of the surrounding villages (Great Britain, Public Record Office, F.O. 60, 165, *K. Abbott's report on commerce of the south of Persia. Trade report. Notes on the Trade, Manufactures, and production of various Cities and of Persia, visited by Mr. Consul Abbott in 1849-50*). Wazīrī, writing rather later, states that shawls were exported to Transoxania, Anatolia, Arabia and Turkistan and that there were nearly 12,000 workshops in Kirmān (*Djughrāfiyā-yi mamlakat-i Kirmān*, 33). His editor states that there was a great expansion at the end of the 19th century in carpet weaving, which displaced the manufacture of shawls, but that carpet-weaving declined again very shortly afterwards (33-4). *Karbās* (a kind of coarse cotton weave) was woven in many parts of the province, and there was some export from Zarand for the local market. The *karbās* of Rafsindjān was reported to be of excellent quality (171, 178).

In the mid-19th century some of the transit trade between Central Asia and India passed through Kirmān, and there was also some direct trade between Kirmān and India. Gums, asafoetida, madder, roots, carraway seeds, silk, saffron (from Khurāsān), wool, cotton and dried fruits were exported to India and Arabia via Bandar ʿAbbās. There were also some imports of English goods via India, Tabrīz and Yazd (Abbott, *Notes on the Trade, etc.*). Abbott states that caravans from Bīrdjan reached Khabīṣ several times a year. They brought wool, grain, dried fruits, silk, saffron (from Ḳāʾīn), and clarified butter, etc., a great part of which went on to Bandar ʿAbbās for India. Returning caravans brought groceries, spices, indigo and English cotton manufactures for Khurāsān (*Geographical notes, op. cit.*, 34-5). Curzon states that Bandar ʿAbbās in 1889-90 was the start of the important caravan route running north to Kirmān and Yazd and ultimately to Khurāsān. Kirmān and Yazd were mainly supplied from India with piece goods, prints and yarn, copper sheets, iron bars, lead, tin, sugar, tea, dyes, spices, glass and china; and exported in return opium, wool, cotton, madder, almonds, pistachio nuts, etc. (*Persia and the Persian question*, ii, 571-2). According to Wazīrī, various districts of Kirmān took part in the long-distance trade. Among the articles which went to Bandar ʿAbbās and thence to India from Kirmān were cumin and wool from Aḳṭāʿ and Bardsīr (*op. cit.*, 136, 138), and a variety of dried and fresh fruit and nuts, namely pears and apples from Aḳṭāʿ and Rābur, quinces from Aḳṭāʿ, and raisins from Gawk; almonds from Shahr-i Bābak, Gawk and Aḳṭāʿ, walnuts from Sardūya and Aḳṭāʿ, and pistachios from Shahr-i Bābak; cotton from Sīrdjān (to Bombay) and Anār, peas from Aḳṭāʿ, and Bardsīr and sometimes wheat from Aḳṭāʿ and Urzūya, and barley from the latter district also.

Abbott mentions exports from Kirmān to Yazd and other neighbouring towns and villages, which included shawls, woollens, wool, opium, lead, soap, henna, indigo leaves, figs, gums and wild asses' skins (*Notes on the Trade, etc.*). There was also, according to Wazīrī, some internal movement of wheat from Zarand to Yazd and Rāwar and sometimes from Urzūya to Kirmān; Sīrdjān also exported wheat to Yazd and Kirmān. Peaches were exported from Gawk to Kirmān and other districts, dried apricots and dried mulberries from Bāfḳ to Kirmān, and dried figs from Rāwar to Yazd, whence they were exported to other parts of the country as *andjīr-i yazdī*; dates from Khabīṣ to Yazd and Khurāsān; peas and lentils from Shahr-i Bābak to Yazd and Kirmān; henna and *rang* from Narmāshīr to Kirmān, whence they were distributed to neighbouring regions; sometimes henna was exchanged in Sīstān for clarified butter and swansdown.

Milk products were an important article of local commerce. Rūdbār exported clarified butter (*rawghan*) to Kirmān. Bardsīr also supplied Kirmān with clarified butter and *kashk* (a kind of whey). Shahr-i Bābak supplied Yazd, Rafsindjān, and Sīrdjān with clarified butter, *kashk* and cheese, while Kūbanān exported *kashk* to various districts beyond the bounds of Kirmān. Lastly, wood was exported from Aḳṭāʿ to the surrounding districts and to Fārs (see further Wazīrī).

In 1904-5 a British commercial mission visited south-east Persia in order to encourage British trade in the area. Russian efforts were also made to increase their trade, and Russian trade agencies were established in Kirmān, Bam and Rafsindjān.

Population.—The settled population appears to have been mainly of Iranian stock. Strabo states that the customs and language of the population of Kirmān were similar to those of the Medes and Persians (xv.2, 14). Idrīsī describes the inhabitants of Kirmān (apart from the tribal population) in favourable terms. He states that they were remarkable for the purity of their customs and the grace of their character and that the merchants especially were marked by an amiability, sincerity and docility greater than elsewhere (421). Stack, writing several centuries later, remarks on the quiet and orderly habits of the people (ii, 182). Bārfurūshī, on the other hand, gives an unfavourable account of the people of Kirmān and accuses them of being given to sedition (*Mufarriḥ al-ḳulūb*, B.M., Or. 3499, f. 198a).

The geographers of the 3rd/9th and 4th/10th centuries mention a number of tribes as inhabiting Kirmān, namely the Ḳufṣ, (Kūfidjīs, Kūč [see KUFṢ], Balūṣ (Balūẓ, Balūč [see BALŪČISTĀN]), the Djibāl Bārizīs, and the Akhwāsh, all of whom were harried and, to some extent, displaced first by the Muslim armies, and then by the Ṣaffārids, Būyids, Sāmānids and Saldjūḳs. When Masʿūdī refers to Kurds (*Akrād*) in the province it is probable that he meant semi-nomadic or nomadic tent dwellers rather than ethnic Kurds. The Ḳufṣ were a mountain people, as their name suggests. They possessed herds of cattle (*ḍaraʿ*) and also practised agriculture. Their main occupation was alleged by Muslim sources to be highway robbery. The Ḳufṣ mountains in which they lived consisted, according to Iṣṭakhrī, of impregnable fastnesses. They were bounded on the south by the Gulf of ʿUmān on the north by Djīruft, Rūdbār and the Mountains of Abū Ghānim, on the east by Khwāsh and the desert of Makrān and on the west by Manūdjān and Hurmuz. There were seven different mountains each of which had a chief. The early Muslim governments, unable to bring the region under their direct control, gave the Ḳufṣ leaders allowances to keep them quiet, but they nevertheless raided the surrounding districts up to Sīstān and Fārs. Iṣṭakhrī mentions that they were reported to

have accumulated much wealth. He states that they were lean and swarthy; and that some said that they were, by origin, Arabs (163-4; cf. Ibn Ḥawḳal, ii, 310; Muḳaddasī, 471). The *Ḥudūd al-ʿālam* adds that the government tax-collector (*ʿāmil-i sulṭān*) did not go into the Ḳufṣ mountains and that their chiefs were responsible for the collection and payment of the government tax, which would appear to have been assessed by a *muḳāṭaʿa* contract. It also states that they spoke a special language (65).

The Balūṣ were, according to Iṣṭakhrī, herdsmen and tent-dwellers living along the western base of the Ḳufṣ Mountains and were rich in flocks (164; Ibn Ḥawḳal, ii, 310; Muḳaddasī, 471). Idrīsī, writing in the mid-6th/12th century, however, states that they lived at the base of the mountains to the north of the Ḳufṣ (429). They were the only people whom the Ḳufṣ feared. Iṣṭakhrī's claim that they were peaceable and did not commit highway robbery like the Ḳufṣ (164) is not born out by the *Ḥudūd al-ʿālam* (124) or Muḳaddasī, who couples them with the Ḳufṣ in the matter of brutality and bloodthirstiness and in their propensity to raiding the caravan routes (488-90). Muḳaddasī states that the Balūṣ had been very numerous until the Būyid ʿAḍud al-Dawla [*q.v.*] destroyed them. The language of the Ḳufṣ and Balūṣ, according to Muḳaddasī, was incomprehensible and resembled Sindhi (471).

It would seem that, in general, Muslim writers made no clear distinction between the two groups, and frequently mention them together. Miskawayh states that the Ḳufṣ and Balūṣ, together with the people of Manūdjān, joined Sulaymān b. Muḥammad b. Ilyās when he attempted, with help from the ruler of Khurāsān, to seize Kirmān from the Būyids. They were defeated by a Būyid force in 360/970, with heavy losses, and suffered further casualties when the Būyid forces pushed down to Hurmuz. The Balūṣ, however, did not remain quiet for long. Spreading into the districts of Sīrdjān they made ʿAlī b. Muḥammad al-Bārizī their leader, and began to commit disorders. ʿAḍud al-Dawla then marched against them in person. They retreated into the Djibāl Bāriz, but were defeated in 361/972 (ii, 298 ff.). Miskawayh states that those who were not killed were removed from the mountains by ʿAḍud al-Dawla, who replaced them with peasants who received the land on a crop-sharing agreement and with persons who were not well-off (*al-akara al-muzāraʿīn wa 'l-mastūrīn min adjnās al-raʿiyya*) belonging to various races among his subjects (ii, 300). There is mention of a detachment (*djaysh*) of Ḳufṣ in ʿAḍud al-Dawla's army in 366/977 (Miskawayh, ii, 368, and see further C. E. Bosworth, *The Kūfichīs or Qufs in Persian history*, 9-18).

The decline in the power of the Ḳufṣ and Balūṣ as a result of ʿAḍud al-Dawla's operations was only temporary. By the beginning of the Saldjūḳ period they were again in control of the *garmsīr* from Djīruft to the Gulf of ʿUmān, though, according to Muḥammad b. Ibrāhīm, their main location was in the Djibāl Bāriz (*ʿIḳd al-ʿūlā*, 66; Muḥammad b. Ibrāhīm, 6 ff.). They were reduced by Ḳāwurd b. Čaghrī Beg [*q.v.*] (Afḍal al-Dīn, *Badāyiʿ al-azmān wa waḳāyiʿ Kirmān*, ed. Dr. Mihdī Bayānī, Tehran A.H.S. 1326, 6 ff.). By the end of the 6th/12th century they were again operating in Djīruft and the *garmsīr* of Kirmān (Muḥammad b. Ibrāhīm, 5 ff., 182; *Tārīkh-i Afḍal*, 5 ff.). There are no references to the Ḳufṣ in the later Middle Ages, though there are, of course, many references to the Balūč, who were established in Makrān from the 5th/11th century and who may or may not have been the descendants of the Balūṣ [see BALŪČISTĀN].

Wazīrī claims that the Mihnī tribe were the descendants of the Ḳufṣ, but produces no evidence in support of this claim. When he was writing the Mihnī numbered some 700 families. They had a separate assessment, i.e. they were not included in the assessment of Djīruft and Isfandaḳa, where they had their winter quarters—and this, perhaps, suggests that they had at one time been more important. Wazīrī states that up to fifty or sixty years before he was writing the Mihnī leaders had enjoyed a considerable degree of independence. In 1259/1843-4, the government seized Fatḥ ʿAlī Khān, their leader, and confiscated the many estates which he held in Isfandaḳa and Djīruft (*Djughrāfiyā*, 56, 113-14, 121). According to a tradition current among the tribe, however, the Mihnī came originally from Khurāsān to Isfandaḳa in Ṣafawid times, when a number of tribes formed a federation under their leadership. This would seem more probable, and would suggest that at most only some of those reckoned as Mihnī today are the direct descendants of the Ḳufṣ. Their leaders claim to be descendants of Abū Saʿīd b. Abi 'l-Khayr [*q.v.*]. In 1969 the Mihnī consisted of the following eleven sub-tribes: the Sulaymānī, Lurī (who are alleged to have come to Kirmān from the Mamassanī in the reign of Nādir Shāh or, according to another account, in the reign of Shāh ʿAbbās), the Bahr Āsmānī, the Markī, Muḳbilī, Sālār Barkhʷurī, Lurī, Rāhī Bārčī, Iskandarī, Kahhūrī, Pushtkūhī, and Muẓaffarī. Wazīrī gives a list of twenty-three sub-tribes (199), which differs slightly from the above list.

The Djibāl Bārizīs, according to Iṣṭakhrī, were even worse robbers than the Ḳufṣ. They did not adopt Islam until ʿAbbāsid times and he alleges that they persisted, in spite of their conversion, in their evil ways. They were eventually pacified by Yaʿḳūb b. Layth and ʿAmr b. Layth and their leaders destroyed. They too had a special dialect (Iṣṭakhrī, 164, 167; Ibn Ḥawḳal, ii, 310; Muḳaddasī, 471). Whether as a result of the operations of the Ṣaffārids or because of the movements of the Ḳufṣ and Balūṣ, they appear to have been pushed out of the Djibāl Bāriz region. About the beginning of the 19th century the Manẓarī Tawakullī *tīra* of the Djibāl Bārizī apparently moved to Bazindjān, where they numbered some 4-500 persons in 1960. Wazīrī mentions Djabal Bārizīs in Pārīz (199), but whether they were the direct descendants of the earlier Djibāl Bārizīs is not clear. Wazīrī states that their prosperity and the numbers of their sheep, cattle and horses had decreased, especially from about 1860. They were engaged to some extent in trade, taking *kurk*, wool and cumin mainly to Bandar ʿAbbās for export to India and clarified butter and *kashk* to Kirmān (120). The *Gazetteer of Persia* records the existence of 50 families of Djabal Bārizīs in Aḳṭāʿ in 1903 (iv [Calcutta 1910], 338). In 1960 there were a few families of Djibāl Bārizīs who had summer quarters between Bāft and Rābur and winter quarters near Gulāshgird (Walāshgird).

The Akhʷāsh, the fourth of the tribes mentioned by the early geographers, centred on Khʷāsh, were said to be semi-nomads. They had camels and date palms and lived in houses made of reeds (Iṣṭakhrī, 168; Ibn Ḥawḳal, ii, 313). They are not separately mentioned in later times.

Although there appears to have been some immigration of Arabs into Kirmān before the Islamic conquest (Nöldeke, *Gesch. der Perser u. Araber*, 57)

there does not seem to have been widespread settlement by Arabs in the province during the early Islamic conquests. For the most part, the Arab armies pushed on through Kirmān into Sīstān and Khurāsān. So far as settlement took place, those who settled became, as in other provinces, largely assimilated to the local population. Small groups may also have been settled in the province after the period of the conquests. Yāḳūt records the existence of descendants of the Banū Azd [see AZD] and Banū Muhallab in Djīruft (Barbier de Meynard, 185). Wazīrī mentions the survival in Djīruft of a few families who still spoke Arabic (*Djughrāfiyā*, 119). The village known as Ḳaryat al-ʿArab, near the city of Kirmān, is believed to have been originally settled by the ʿĀmirī tribe, who came there from Simnān. In some of the coastal districts, such as Bandar ʿAbbās, however, much of the population was of Arab origin, though not necessarily Arab-speaking (cf. Houtum Schindler, *Reisen im südlichen Persien 1879*, 344).

Turkish tribes, Ghuzz and others, came into Kirmān from the 5th/11th century onwards. It is, however, difficult, if not impossible, to trace the changes in their locations and numbers. Whether the Salādjiḳa, who today are to be found in Rābur, are descendants of the Saldjūḳs is extremely doubtful. They do not appear to have any tradition among themselves of such an origin and are now Persian-speaking. They are mainly engaged in trade and for the past forty or fifty years have ceased to move from summer to winter quarters. The Khālū, centred on Rābur with winter quarters in Shastfīč, whom Wazīrī reckoned to be fifty families (*Djughrāfiyā*, 199), are related to the Salādjiḳa. They are so-called because Fatḥ ʿAlī (during the lifetime of his uncle Āḳā Muḥammad Khān) took one of their women, Fāṭima Khānum, to wife after he had defeated the tribes of Rābur. She in due course became his chief wife and was known as Sunbul Bādjī.

On the break-up of the Great Saldjūḳ empire there was a new influx of Ghuzz into Kirmān under Malik Dīnār. The Raʾīsī tribe claim to be their descendants. In the middle of the 19th century they numbered 200 families and lived in black tents in Narmāshīr, Rīgān and Rūdbār. Their *khāns* lived in the fortress of Kahnū in Rūdbār, which had been built by Malik Dīnār (Wazīrī, 108, 123). In 1903 they are recorded as comprising 700 families (*Gazetteer of Persia*, iv (1910), 337). In 1960 their winter quarters were in Mīnāb and Rūdān and their summer quarters in Ustur, Balward, Sīrdjān and Čahārgunbad.

There was further movement of Turkish tribes into Kirmān during the Mongol, Tīmūrid and Ṣafawid periods. When exactly the Afshār [*q.v.*], who appear to have migrated westwards with other Ghuzz tribes in the 5th/11th century, settled in Kirmān is not known. There was already an Afshār presence in the province at the beginning of the 10th/16th century (cf. *ʿĀlamārā-yi Shāh Ismāʿīl*, ed. Asghar Muntaẓir Ṣāḥib, Tehran A.H.S. 1349, 326). Their *khāns* held governments there in the Ṣafawid period. On the death of Nādir Shāh, Shāhrukh Khān Afshār, who was settled in Zarand, temporarily extended his power over the whole province. In the 19th century the Afshār were the most important of the tribes of Kirmān. They consisted in Wazīrī's day of 52 subtribes (*tīra*) and *ca.* 1,000 families (*ibid.*, 145, 198-9). Sheil, writing rather earlier, put their numbers at 1,500 houses (*Note on the tribes by Sir J. Sheil*, in Lady Sheil, *Life and manners in Persia*, London 1856, 398), which would suggest that Wazīrī's figures may be an underestimation. Today their summer quarters are between Bāft and Sīrdjān and their winter quarters in Urzūya and Dasht-i Bar. Their numbers in 1960 were estimated at *ca.* 20,000 and they were divided into 18-20 *tīras*. Among other Turkish tribes in Kirmān in Ṣafawid times there were the Ḳarā Oghlānū, a branch of the Ḳaramānlu, whose *khāns* held governships in Aḳṭāʿ and Urzūya towards the end of the period. By the time Wazīrī was writing, the tribe had become much weakened (*ibid.*, 143). A few Tekkelu are said to have fled to Aḳṭāʿ in the reign of Ṭahmāsp and to have been absorbed in due course by the Ḳarā Oghlānū (*ibid.*, 144). Of the various other Turkish tribes, the most important were probably the Ḳarāʾī and the Bučāḳčī. The former, according to Sheil, numbered 700 families (*op. cit.*, 398). Wazīrī put them at 800 (*ibid.*, 199), but by 1903 they appear to have declined to some 600 (*Gazetteer of Persia*, iv [1910], 337). The Bučāḳčī, according to a tradition current among themselves, were brought from Ḳarā Dāgh to Fārs in Ṣafawid times to act as wardens of the marches and later moved to Kirmān. According to Wazīrī they numbered 200 families, and many of them were settled in their summer quarters around Balward (*ibid.*, 154, 199). Some of them had winter quarters in the neighbourhood of Bandar ʿAbbās. By 1903 their numbers had changed little (*Gazetteer of Persia*, ix [1910], 337), but by 1960 they numbered some 2,000 families. Some of their *tīras* were Turkī-speaking, others Persian-speaking, and some of them were settled. The Shūl, who formerly belonged to the Afshār federation, had by 1903 joined the Bučāḳčī and numbered some 90 families (*ibid.*). In 1960 there were some fifty families of Shūl Turks settled near Sīrdjān, who claimed that their forefathers had come from Fārs at the beginning of the 19th century. The *Gazetteer of Persia* mentions 150 families of Ḳarā Ḳoyunlu in Aḳṭāʿ in 1903 (iv, [1910], 338). It is possible that they were descendants of families left behind in Kirmān by the Ḳarā Ḳoyunlu in the 9th/15th century. They appear to have been subsequently absorbed into the Afshār and in 1960 were reckoned among the Afshār *tīras*.

In the early 18th century a number of Lak tribes moved from Fārs to Kirmān and established their winter and summer quarters in Urzūya and Aḳṭāʿ respectively (Wazīrī, *Djughrāfiyā*, 144). They numbered some 2,000 families in 1903 (*Gazetteer of Persia*, iv [1910], 338-9). Sheil put the ʿAṭā Ilāhī, whom he described as Laks, at 3,000 tents and houses (*Note on tribes by Sir Justin Sheil*, in *op. cit.*, 398). According to Wazīrī, the Atā Ilāhī had cultivated land and cattle in Sīrdjān and Shahr-i Bābak. They were Ismāʿīlīs and numbered some 150 families (*Djughrāfiyā*, 157, 199). In 1960 there were some 2,500 Laks in the neighbourhood of Bazindjān. There are, or were, various other tribes and sub-tribes in the province whose origins are difficult to establish. Most of them are semi-nomadic and their numbers very small.

The internal organisation of these various tribal groups appears to have been broadly similar. Most of the tribes had a *raʾīs* or leader, whose office appears usually to have been hereditary within a family. Larger tribes or federations, such as the Afshār, had an *īlkhānī*. Each tribe was composed of a number of *tīras*, under a *kadkhudā*, whose office was sometimes hereditary but more often subject to election by the elders (*rīsh safīd*) of the *tīra*. The latter were composed of *ihshām*, i.e. groups of, perhaps, 5-12 families, each under a *rīsh safīd*. The

number and size of the *tīras* varied widely with the prosperity of the tribe. Success brought new followers, while failure or weakness caused the dispersal of its existing followers. The collection of taxes from the tribe and the decision of disputes were usually carried out by the *raʾīs-i īl*, though not infrequently an outsider became responsible for the payment of the taxes to the government. Thus Muḥammad Ibrāhīm Khān, the grandson of Ẓahīr al-Dawla, became responsible for the taxes of the Mihnī tribe and for those of Isfandaḳa and Rābur (*ibid.*, 56), while Muḥammad ʿAlī Khān Wazīrī was charged with the collection of the taxes in the Afshār of about 1870 and had the title *īlbegī* (*ibid.*, 61). In recent years the tribal structure has largely broken down.

In the present state of our knowledge it is not possible to give a breakdown of the population at different periods. From time to time, conquest brought about a transfer of power from one group to another, a redistribution of land and the emergence of new factions, but we are ignorant of the details of these events. It would seem likely, in view of the flourishing trade of Kirmān in the early centuries that the merchants formed a prosperous community, but that their importance declined with the decrease in trade. Aubin in his monograph entitled *Deux sayyids de Bam au XVe siècle* has studied the functions and influence of local religious leaders in the Tīmūrid period. Some information on the leading families in the 19th century is to be obtained from Wazīrī (*op. cit.*). In Kirmān, as elsewhere, in Persia, the *aʿyān* were composed of landowners, tribal leaders, religious dignitaries and merchants. The dividing lines were not always clearly drawn. Marriage alliances between them were common. Governors and local officials were also included in the *aʿyān*, and often used their official position to acquire wealth and land. In the 5th/11th and 6th/12th centuries the leading officials of the bureaucracy were rich and influential. It is not always easy to decide what was the basis of a family's influence, whether it was government office, trade, landownership or religious leadership, for all might be combined in one family. But governors changed frequently and though they sometimes settled in the province, the government of which they had held, the system did not make for the emergence of families who retained their pre-eminence over a long period. Some of the local *sayyids* were among those who could perhaps trace their influence back furthest. Wazīrī states that there were families of *sayyids* in Bam and Narmāshīr who had held property there for over 400 years (*ibid.*, 102). One, the Ḳāḍī family of Bam, had held the office of *ḳāḍī* there from generation to generation (*ibid.*, 97). There appears also to have been some movement among *sayyids*. Thus, the Mīrzāʾī *sayyids*, who came to Bam about 1770, were by origin from Tabrīz. One of their number, Ḥadjdjī Sayyid ʿAlī Khān b. Ḥādjdjī ʿAbd al-Wahhāb, was made *raʾīs* of Bam and Narmāshīr by Muḥammad Ismāʿīl Khān Wakīl al-Mulk (who became governor of Kirmān in 1860) and put in charge of *dīwān* taxation and the *khāliṣadjāt* of Bam. This, however, proved disastrous for the family: he was a spendthrift and was dismissed, and all his estates and those of his nephews were taken in lieu of arrears. But their fall was only temporary, and when Wazīrī was writing they were again a rich and respected family (*ibid.*, 100-1).

As elsewhere, it was not uncommon for the religious classes and the merchants to be closely allied, either through marriage or by actual participation in trade. Thus, Ḥadjdjī Sayyid Muṣṭafā b. Ḥadjdjī Sayyid ʿAbi 'l-Maʿṣūm, a Riḍawī *sayyid*, who owned numerous villages and hamlets and many herds of camels and flocks of sheep and goats, had agents and partners in Bandar ʿAbbās, Yazd and elsewhere, who traded on his behalf (*ibid.*, 158-9). There was also movement from merchant families and craftsmen into the religious classes. Ḥādjdjī Āḳā Aḥmad b. Ḥādjdjī ʿAlī Kirmānī, who belonged to a merchant family, studied *fiḳh* and became a *mudjtahid*. He owned much property in Rafsindjān and elsewhere (*ibid.*, 44-5).

Two families were especially prominent in Kirmān in the 19th and 20th centuries, those of Ẓahīr al-Dawla Ibrāhīm Khān b. Mihdī Ḳulī Khān b. Muḥammad Ḥasan Khān Ḳādjār Ḳuwanlu and Muḥammad Ismāʿīl Khān Wakīl al-Mulk Nūrī, both of whom had been governor of the province. Their fortunes illustrate the ease with which government officials were able to acquire wealth and property and become part of the local *aʿyan*. The first, Ẓahīr al-Dawla Ibrāhīm Khān (d. 1240/1824-5), who became governor of Kirmān in 1216/1801-2, settled in the province, where he and his descendants acquired property (*ibid.*, 54 ff.). He himself bought some of the estates of the heirs of Āḳā ʿAlī Wazīrī (see below) in lieu of arrears due from Mīrzā Ḥusayn b. Āḳā ʿAlī (*ibid.*, 170). His grandson, Muḥammad Ibrāhīm Khān, acquired villages in Isfandaḳa and Djīruft through marriage to a daughter of Fatḥ ʿAlī Khān Mihnī. He also founded new estates in those regions (*ibid.*, 56). Ḥādjdjī Mūsā Khān b. Ẓahīr al-Dawla's daughter married Mīrzā Abu 'l-Hasan b. Āḳā Ibrāhīm of the Mīrzā Ḥusayn Khān family. Wazīrī alleges that whoever in Kirmān married into the Ẓahīr al-Dawla family tended to become puffed up with pride because of the wealth of his wife (*ibid.*, 69-70). The second, Muḥammad Ismāʿīl Khān Wakīl al-Mulk, whose family came from Nūr in Māzandarān, was sent as *pīshkār* to Kirmān and Balūčistān in 1275/1858-9. In 1277/1860 he became governor of the province, holding office until his death in 1284/1867-8. He exerted great efforts in the development of Kirmān and Balūčistān. He made a number of *ḳanāt*s and gardens, and revived much *khāliṣa* land which had fallen out of cultivation or into a bad state of repair. He rented these for a lump sum, which transaction proved extremely profitable. He was also a great builder and made many caravansarais, *ḥammāms*, *ribāṭ*s and other buildings. His son Murtaḍā Ḳulī Khān Wakīl al-Mulk was governor from 1286/1869-70 to 1295/1878 (see further Asad Allāh Nūrī Isfandiyārī, *Tārīkh-i Khānawāda-i Isfandiyārī*, Tehran A.H.S. 1329). Both Muḥammad Ismāʿīl Khān and Murtaḍā Ḳulī Khān acquired extensive estates in the province and established links with the local *aʿyān* through marriage alliances. Muḥammad Ismāʿīl Khān gave one of his daughters to Mīrzā Ghulām Ḥusayn b. Āḳā Ibrāhīm, who owned estates round the town of Kirmān. This Ghulām Ḥusayn belonged to a family of *sayyids* originally from Djīruft (Wazīrī, *op. cit.*, 69), and his maternal grandmother was a sister of Mīrzā Ḥusayn Wazīr (see below).

In the local government offices there was often a hereditary tendency. For example, the office of *kalāntar* [*q.v.*] of Kirmān had been in the Kalāntarī family since the time of Shāh ʿAbbās. From towards the beginning of the 19th century they also held the office of *ḍābiṭ* of Khabīṣ and Gawk and from about the middle of the century the collection of taxes of the environs (*ḥawma*) of the town of Kirmān was also entrusted to them. Muḥammad Zamān Kalāntar

and his father Mīrzā Kāẓim Kalāntar were blinded by Āḳā Khān Maḥallātī in 1251/1835-6. Ḥādjdjī Mīrzā Abu 'l Ḥasan b. Mīrzā Ḥasan Khān, a nephew of Mīrzā Kāẓim Kalāntar, was the *kalāntar* and *ʿāmil* of Sīrdjān, and also the head of the Niʿmat Allāhī order. Another member of the family, Mīrzā Ḥusayn Khān b. Mīrzā Yūsuf, acquired many *mazāriʿ* and gardens in Khabīṣ and Gawk, where he was for years in charge of the collection of *dīwān* taxes. Mīrzā Mihdī Khān b. Mīrzā Muḥammad Khān was also an overseer (*mubāshir*) in the tax administration in Khabīṣ, where he too acquired desirable estates. He was a capable man, but tyrannical in the matter of tax-collection (*ʿāmilī*) (*ibid.*, 63-5).

Another family which seems to have risen to prominence through the holding of government office was the family of Mīrzā Khalīl, who was made *mustawfī* of Kirmān in the reign of Muḥammad Shāh. His son, ʿAlī Akbar, became *kadkhudā* and *dārūgha* of Kirmān city and *ḍābit* of Sīrdjān in 1258/1842-4. While holding the latter post he acquired riches and bought property in the environs of Sīrdjān and in Bardsīr, but dissipated much of his wealth towards the end of his life. His son, Yaḥyā, became *kalāntar* of Kirmān. Another branch of the family held the office of *kadkhudā* of Kirmān. When Wazīrī was writing, Mīrzā Zayn al-ʿĀbidīn was *kadkhudā* and known as the *kadkhudā-bāshī* although he did not have any authority over the *kadkhudā*s of the other quarters (*ibid.*, 65-8).

Among the oldest families of Kirmān was the Wazīrī family, who traced their origins back to the Ḳutlugh Khān, Barāḳ Ḥādjib [see BURĀḲ ḤĀDJIB], the founder of the Ḳarā Khitāy or Ḳutlughkhānī dynasty [*q.v.*], who died in 632/1234 (see below). At the turn of the 18th century the family was mainly engaged in trade but also owned land, Āḳā ʿAlī, the head of the family at the time, having many estates in Aḳtāʿ, Kushk and Khināmān. He was taken as a hostage by Karīm Khān Zand to Shīrāz, where he became acquainted with Āḳā Muḥammad Khān. On the death of Karīm Khān, Djaʿfar Khān gave money to Āḳā ʿAlī and sent him back to Kirmān on the understanding that he would bring Kirmān over to Djaʿfar Khān's side. After the death of Djaʿfar Khān, Āḳā ʿAlī threw in his lot with Āḳā Muḥammad Khān and refused Luṭf ʿAlī entry to Kirmān. The latter, when he subsequently took Kirmān seized Āḳā ʿAlī's possessions, put two of his nephews, Hādī Khān and Ṣādiḳ Beg, in prison, and fined his son, Mīrzā Ḥusayn, heavily. He also took one of his daughters to wife and gave another to his uncle, Naṣr Allāh Khān. The former was later married to ʿAbd al-Raḥīm Khān, the brother of Ḥādjdjī Ibrāhīm Shīrāzī [*q.v.* in Suppl.]. Āḳā ʿAlī, who had been sent to Tehran by Bābā Khān (later Fatḥ ʿAlī Shāh), reported these happenings to Āḳā Muḥammad Khān and encouraged him to set out for Kirmān, which he did in 1208/1793-4, accompanied by Āḳā ʿAlī. When Āḳā Muḥammad Khān, after defeating Luṭf ʿAlī gave the town of Kirmān over to pillage, he exempted from this the residence of Āḳā ʿAlī, and several thousand persons are alleged to have taken refuge there and escaped slaughter. Āḳā Muḥammad Khān made Āḳā ʿAlī's son, Āḳā Muḥammad Taḳī, governor of Kirmān, which office he held until the death of Āḳā Muḥammad Khān, and another son, Mīrzā Ḥusayn (d. 1270/1853-4), his treasurer (*ṣundūḳdār*). The mother of the latter, an Iṣfahānī, was a Mīr Muḥammad Rafīʿ *sayyida* on her father's side and a Ṣafawī *sayyida* on her mother's side. When Āḳā Muḥammad Khān returned to Shīrāz he took Āḳā ʿAlī and Mīrzā Ḥusayn with him. The former apparently died in Shīrāz shortly afterwards. Towards the middle of the reign of Fatḥ ʿAlī Shāh, Mīrzā Ḥusayn was appointed *wazīr* of Kirmān, which office he held until about the middle of the reign of Muḥammad Shāh. He had many estates in Aḳtāʿ, Urzūya and Kūshk. The office of *raʾīs* and *ʿāmil* (tax-collector) of the districts of Aḳtāʿ, Urzūya, Kūshk and Ṣawghān remained in his family for many years, and his descendants owned villages, gardens, flocks and herds in these districts. Muḥammad ʿAlī Khān, Āḳā ʿAlī's grandson, was *ʿāmil* of the districts of Aḳtāʿ, Urzūya, Kūshk and Ṣawghān and of the Afshār tribe for over twenty-five years. From about 1870 he had the title of *īlbegī*. In addition to the properties he inherited, Muḥammad ʿAlī founded many villages in Urzūya and Aḳtāʿ. His position as tax-collector enabled him to usurp the estates of his uncle Mīrzā Ḥusayn Wazīr and his cousin ʿAlī Muḥammad Khān after their deaths (*ibid.*, 61). His brother, Abu 'l-Ḳāsim Khān also usurped some of the properties of ʿAlī Muḥammad in Aḳtāʿ and Urzūya. He founded other properties as well and gradually became a wealthy man. A third brother, Murtaḍā Ḳulī, had numerous estates in Urzūya, Aḳtāʿ, Kūshk and Bardsīr, some usurped, some bought and some founded by himself. He put money out with merchants and others. He owned herds of horses and flocks of sheep (*ibid.*, 5 ff., 58 ff., 62). A grandson of Āḳā ʿAlī, ʿAlī Muḥammad Khān, married his cousin, Bībī Kūčik, a daughter of Mīrzā Ḥusayn b. Āḳā ʿAlī: their son was Aḥmad ʿAlī Khān Wazīrī, the author of the *Djughrāfiyā-yi mamlakat-i Kirmān* and the *Tārīkh-i Kirmān*. ʿAlī Muḥammad Khān is said to have brought back six *ḳanāt*s in Ṣawghān into a flourishing condition (*ibid.*, 12). Aḥmad ʿAlī Khān Wazīrī, unlike his forebears, did not enter government service, but occupied himself running his estates. He appears, however, to have received a government pension (*muḳarrarī*) (Wazīrī, *Tārīkh-i Kirmān*, ed. Bāstānī Pārīzī, Tehran 1961, introduction).

Wazīrī mentions another old family, the Āḳāyān of Anār, who traced their origins back to Bahādur Idgū Barlās, who had been governor of Kirmān in the time of Tīmūr. For years this family had held the office of *raʾīs* of Anār, but by Wazīrī's time they had fallen on evil days and become poverty-stricken (*Djughrāfiyā*, 183). For the rest, most of the families mentioned by Wazīrī had risen to prominence in recent times.

In the middle of the 19th century, partly as a result of the increase in the price of agricultural produce and the revival of long-distance and local trade, there appears to have been a revival in the prosperity of the merchant class and also a strengthening of their links with the landowning class. This was notably the case in Rafsindjān. Wazīrī relates that a certain Ḥādjdjī Āḳā ʿAlī of Rafsindjān had landed estates worth over 100,000 *tūmān*s and partners and agents in Bombay, Yazd, Iṣfahān, Tehran, Mashhad, Tabrīz and Istanbul, whereas thirty years before he had not owned property worth 1,000 *tūmān*s (*ibid.*, 168-9, 172). Among merchant families in Kirmān city, Wazīrī mentions that of Ḥādjdjī Muḥammad ʿAlī Amīn al-Raʿāyā b. Ḥādjdjī Muḥammad Ibrāhīm b. Ḥādjdjī Allāhvardī Kirmānī, who was the *raʾīs al-tudjdjār* of Kirmān. His father and grandfather had built many caravanserais, baths and mosques in the city of Kirmān and elsewhere. He himself had acquired many estates in the district of Khabīṣ and in Māhān. According to Wazīrī, he

showed little care for the poor and the deserving (*ibid.*, 78).

Wazīrī asserts that between about 1844 and 1874 there was a great increase in the wealth of those holding land, due, he states, to the high prices for cotton and madder which had prevailed for several years in India and for grain in Persia. Persons whose property thirty years before he was writing had been worth 1,000 *tūmāns* were then receiving an income of 2,000 *tūmāns* from their estates, and those who had formerly been prepared to sell a hamlet or piece of cultivated land for a song to pay their tax demands would not then sell for 3,000 or 4,000 *tūmāns*. This was especially the case in Sīrdjān, Rafsindjān and Urzūya. He alleges that the condition of agricultural labourers had also improved, so much so that they were better off than had been the owners of hamlets formerly. Many of the agricultural labourers of Rafsindjān had become *ḥādjdjīs*. Flockmasters, because of the rise in the price of *kurk*, had also become rich men (*ibid.*, 168-9, 158).

Religion.—In Sāsānid times, there were in addition to Zoroastrians a number of Nestorian Christians in Kirmān. The bishop of Kirmān was under the metropolitan of Fārs. Conversion to Islam after the Arab conquest was slow. The province was exposed to Khāridjī influence in the 1st century and to some Ismāʿīlī activity in the late 5th/11th and early 6th/12th centuries (see below). Muḳaddasī states that the Khawāridj had a Friday mosque in Bam. According to his account, the dominant rite was the Shāfiʿī one except in Djīruft. The *fuḳahāʾ* were not numerous; among them the *ahl al-ḥadīth* formed the majority except in Hurmuz (468-9). Afḍal al-Dīn praises the good religion and orthodoxy of the people of Bardsīr. He alleges that Kirmān was free from every kind of heresy and that the people were either Ḥanafīs or Shāfiʿīs. Yāḳūt states that the inhabitants of Kirmān were virtuous, honest, and very attached to Sunnism and orthodoxy (483). Under the Ṣafawids, Kirmān, like the rest of the empire, accepted *Ithna ʿasharī* Shīʿism. In the 19th century the Shaykhīs [*q.v.*] gained many adherents in Kirmān, as also did the Bābīs [*q.v.*]. The office of *Shaykh al-Islām* in Kirmān was held in the middle of the 19th century by Riḍawī *sayyids*, who were Shaykhīs (Wazīrī, *Djughrāfiyā*, 52-3). Factional strife between the Shaykhīs and Bālāsarīs was common. Under the Tīmūrids the Niʿmat-Allāhī dervish order, founded by Shaykh Niʿmat Allāh Walī (d. 843/1431), gained many followers in Kirmān and elsewhere. Shaykh Niʿmat Allāh's shrine at Māhān, near Kirmān, has remained one of the main centres of the order.

Zoroastrians appear to have maintained themselves as a community in Kirmān city, though in greatly reduced numbers, until modern times. Tavernier puts their numbers at 10,000 in the middle of the 17th century. In the reign of Shāh Sulaymān (1077-1105/1667-94) they were removed from the city at the demand of the *ʿulamāʾ*. They built a suburb to the north of the town. They were plundered by the Afghāns in 1133/1720-1 (Wazīrī, *Djughrāfiyā*, 28; *Tārīkh-i Kirmān*, 294). Khanikoff states that there were 12,000 Parsi families in Kirmān before its destruction by Āḳā Muḥammad Khān in 1794. Thereafter, their numbers declined. According to Abbott, there were only 150 families in Kirmān in the middle of the 19th century. Of these some 40 families lived in the villages around Kirmān, and the remainder in the town (*Notes on the trade*, etc.). Wazīrī put the number at 200 families (*Djughrāfiyā*, 40). In 1903 the total number of Zoroastrians was said to be 1,700 persons (*Gazetteer of Persia*, iv (1910), 349). A small community of Hindus from Shikarpūr appear to have settled in Kirmān some time after 1810. They were engaged in banking and trade with Karachi, Bombay, Sind and the Punjab (Stack, i, 215; Curzon, ii, 244). The export trade of Kirmān was largely in their hands in the 19th century (W. M. Floor, *The merchants (tujjār) in Qājār Iran*, in *ZDMG*, cxxvi/1 (1976), 121).

History.—Kirmān in many ways developed along different lines from the rest of Persia. It was distant from the early capitals of the caliphate. Its mountain fastnesses could not be easily controlled and local leaders were often able to assert their independence. Thus each of seven mountains which constituted the Djabal Ḳufṣ region had a separate leader in early Islamic times. The Lūt prevented easy access from Khurāsān and Sīstān, while the inhospitable country to the north-west discouraged expansion from and into the Djibāl. It was ideal country for dissident groups and was one of the regions where the Azāriḳa [*q.v.*] carried on their resistance to the caliphate. Its abundant pastures attracted tribal groups, but the broken nature of the country militated against the formation of large tribal kingdoms. Lack of communications tended to isolate the province but trade with Central Asia, India and the Far East and with other parts of Persia was, nevertheless, important, though subject to interruption by local outbreaks of disorder.

The Arab conquest of Kirmān as recorded by al-Balādhurī (*Futūḥ*, 315, 391 ff.) was begun about 17/638 by al-Rabīʿ b. Ziyād, who was sent by Abū Mūsā al-Ashʿarī [*q.v.*], then governor of Baṣra on behalf of the caliph ʿUmar. Al-Rabīʿ conquered Sīrdjān and made terms with the inhabitants of Bam. Another Arab expedition was sent about the same time by the governor of Baḥrayn, ʿUthmān b. Abi 'l-ʿĀṣ al-Thaḳafī, who killed the *marzbān* of Kirmān in the island of Abarkawān. The conquest of Kirmān was not, however, completed. In 29/649-50 Yazdagird, the last of the Sāsānid kings, fled from Iṣfahān to Kirmān and thence to Khurāsān. Most of the Arab army under Mudjāshiʿ b. Masʿūd al-Sulamī sent by ʿAbd Allāh b. ʿĀmir in pursuit of him perished in the snow at Baymand (in the district of Sīrdjān). Mudjāshiʿ, appointed governor of Kirmān by Ibn ʿĀmir, subsequently took possession of the chief towns up to the Ḳufṣ mountains. A counter-attack by the Persians from Hurmuz was defeated. Further details concerning the early conquests are uncertain and variously recorded (see al-Yaʿḳūbī, *Buldān*, 286).

Under the Umayyads, Kirmān became a theatre for the activities of the Khāridjīs. In 68/687-8 the Azāriḳa fled to Kirmān. About 73/693 they reassembled and under Ḳaṭarī b. al-Fudjāʾa [*q.v.*] seized Fārs and Kirmān, being joined by a number of the local inhabitants. They extended their activities to ʿIrāḳ. Harried by al-Muhallab, they withdrew again to Kirmān. By about 79/698-9 they had been exterminated by him. Kirmān nevertheless continued to be a hotbed of rebellions and a favourite asylum for rebels. Ibn al-Ashʿath [*q.v.*] took refuge there briefly *ca.* 82/701-2 or 83/702-3. In 101/719-20, the rebel Yazīd b. Muhallab, who, during his father's lifetime had for a period been governor of Kirmān, appointed a governor over Kirmān. After the failure of his rebellion, from about 102/720 the Umayyads (in whose name several coins struck at Kirmān survive) seem to have exercised control over the province, often through the governor of Khurāsān,

who would administer the province through a deputy. In 120/738 Muḥārib b. Mūsā, a supporter of ʿAbd Allāh b. Muʿāwiya b. Djaʿfar, who had turned out Marwān's governors from Fārs, made inroads into Kirmān but was later routed by the supporters of Marwān. In 131/748-9 an Umayyad army set out from Kirmān to oppose the ʿAbbāsid army under Ḳaḥṭaba, which had advanced on Ray, and was defeated near Iṣfahān.

Under the early ʿAbbāsids, governors were appointed over the province, which continued for the most part to fall under the general control of Khurāsān. ʿAbbāsid coins struck in the province in the year 165/781-2 and 167/783-4 survive. During the reign of Hārūn al-Rashīd rebellion spread to Kirmān when Ḥamza b. ʿAbd Allāh al-Sharī occupied Harāt in 179/795 and extended his authority to Fārs and Kirmān, where there were still a considerable number of Khāridjīs, who appear to have recovered from the defeats inflicted on them in late Umayyad times (see further Gh. H. Sadighi, *Les mouvements religieux iraniens au IIᵉ et au IIIᵉ siècle de l'hégire*, Paris 1938, 54 ff.).

Ibn Balkhī gives figures for the revenue of Kirmān at this period. In 200/815-16 Fārs, Kirmān and ʿUmān were assessed at 2,600,000 *dīnārs*, a new assessment having been necessary because the registers had been destroyed in the civil war. Another assessment made by ʿAlī b. ʿĪsā in the reign of al-Muḳtadir was rather lower, namely 2,331,880 *dīnārs*, of which Kirmān and ʿUmān accounted for 444,380 *dīnārs*. After various deductions the net sum going to the *dīwān* was 364,380 *dīnārs* (Ibn Balkhī, *Fārs-nāma*, 171).

A succession of governors, some of whom from the time of al-Muʿtaṣim onwards were Turks, ruled the province until the caliphate of al-Muhtadī, when Muḥammad b. Wāṣil al-Tamīmī rebelled in 250/864-5 and seized Fārs and Kirmān. Al-Muʿtamid on his accession to the caliphate sent an army against him. The two armies met near Ahwāz and the caliph's force was defeated. About the same time Yaʿḳūb b. Layth moved into Kirmān and took possession of it. Some of the supporters of Muḥammad b. Wāṣil joined him, while the remainder set out for Fārs. Yaʿḳūb after spending some two months in Kirmān, marched into Fārs in 253/867. Both he and his brother ʿAmr after him appointed governors over Kirmān. The latter, after he was defeated by al-Muwaffaḳ in Fārs, retired to Sīstān in 274/887-8, but in 280/893-4 al-Muʿtaḍid made peace with him and re-appointed him over Fārs, Kirmān and Sīstān. After the death of ʿAmr, his grandson Ṭāhir governed Fārs and Kirmān until 295/907-8, when it passed into the hands of Subkarī (?Sebük-eri), who was defeated by a caliphal army in 298/911 or 299/912. In 317/929, however, the Ṣaffārid Abū Djaʿfar Aḥmad b. Muḥammad b. Khalaf b. Layth was able to send a military force to Kirmān to collect revenue.

Meanwhile, the Sāmānid kingdom was in the throes of revolt. One of Naṣr b. Aḥmad's *amīrs*, Abū ʿAlī Muḥammad b. Ilyās, had seized Nīshāpūr. When Naṣr recovered the town in 320/932, Muḥammad b. Ilyās went to Kirmān and established himself there. In 322/934 Mākān b. Kākī drove Muḥammad out and took possession of the province on behalf of the Sāmānids. In either 323/935 or 324/935-6 Mākān left the province to undertake operations against Wushmgīr in Gurgān. Muḥammad b. Ilyās returned and attempted to restore his authority. Meanwhile Aḥmad b. Būya (later Muʿizz al-Dawla) had advanced on Kirmān and when he reached Sīrdjān in 324/935-6 the Sāmānid *amīr*, Ibrāhīm b. Sīmdjūr, who was besieging Muḥammad b. Ilyās, withdrew to Sīstān while Muḥammad b. Ilyās retired to Khurāsān. Muʿizz al-Dawla then undertook operations against the Ḳufṣ and Balūṣ, the details of which are variously recorded (see above). In 326/937-8 he was recalled to Baghdād. After the withdrawal of the Būyids, it appears that Muḥammad b. Ilyās returned to Kirmān. He acknowledged the Sāmānids in the *khuṭba* and received in 348/959-60 a banner and robe of honour from the caliph al-Muṭīʿ. Somewhat later, quarrels broke out between Muḥammad b. Ilyās and his sons, and he was finally persuaded to abdicate in favour of Ilyasaʿ. In 356/967 ʿAḍud al-Dawla took ʿUmān and invaded Kirmān. Bardsīr fell in Ramaḍān 357/August 968 and Ilyasaʿ fled to Khurāsān. ʿAḍud al-Dawla, having received a diploma for Kirmān from the caliph, then appointed his son Abu 'l Fawāris Shīrzīl (later Sharaf al-Dawla) governor and returned to Shīrāz. In 359/969-70 an abortive attempt was made by the Sāmānids to regain possession of Kirmān with the help of Sulaymān b. ʿAlī b. Ilyās. In 364/974-5 al-Ḥusayn b. (?) Muḥammad b. Ilyās placed himself at the head of a group of malcontents in the *garmsīr* but was defeated and captured (see further C. E. Bosworth, *The Banū Ilyās of Kirmān (320-57/932-68)*, in *Iran and Islam*, ed. idem, Edinburgh 1971, 107-24). The period of the Banū Ilyās was a time of disorder during which the revenues of the province were dissipated (Ibn Ḥawḳal, ii, 315). Under ʿAḍud al-Dawla the province appears to have been highly taxed compared to the reign of al-Muḳtadir. According to Ibn Balkhī, the total revenue of Fārs, Kirmān and ʿUmān, together with *ʿushr* levied at Sīrāf and Mihrūbān on goods imported by sea (?*ʿushr-i mashraʿa-yi daryāʾī*), in the time of ʿAḍud al-Dawla was 3,346,000 *dīnārs*, of which Kirmān, Tīz and the coastal districts of Fārs (? *bulūk*) accounted for 750,000 *dīnārs* (*Fārs-nāma*, 172). After the death of ʿAḍud al-Dawla in 372/982-3, his descendants began to fight among themselves for the province and a period of some confusion followed. Maḥmūd of Ghazna in 407/1016-17 attempted to instal his nominee in the province but without lasting success and in 424/1033 Masʿūd b. Maḥmūd temporarily occupied it (C. E. Bosworth, *The political and dynastic history of the Iranian world*, in *Cambridge History of Iran*, v, 13; see also ABŪ KĀLĪDJĀR).

In 431/1040 the Saldjūḳs defeated Masʿūd at the battle of Dandānḳān [*q.v.* in Suppl.], and some two years later in 433/1041-2 Ḳāwurd Ḳarā Arslān Beg b. Čaghrī Beg b. Mīkāʾīl b. Saldjūḳ [*q.v.*] was sent by Ṭoghrīl Beg to conquer Kirmān. This attack was repulsed by Abū Kālīdjār in 434/1042-3. A second expedition in 440/1048 was more successful, the governor, Bahrām b. Lashkar, surrendering the province without war. The Ḳufṣ, however, resisted but were defeated (see above). Ḳāwurd, who established his rule in Kirmān, made two attempts to usurp the sultanate. On the first occasion in 459/1066-7, Alp Arslān marched against him and defeated him, but reinstated him in Kirmān in his former position (Ibn al-Athīr, x, 36-7). After Alp Arslān left the province, Ḳāwurd went to Balūčistān, repaired the port of Tīz and appointed governors over Makrān. He also conquered ʿUmān, which remained in Saldjūḳ hands until the death of Arslān Shāh in 536/1141. When Alp Arslān died in 465/1072, Ḳāwurd made his second attempt to claim the sultanate. According to one account, he wrote to Malik Shāh stating that he was more fitted to succeed on the

grounds that he was Alp Arslān's eldest brother (Sayyid Ṣadr al-Dīn al-Ḥusaynī, *Akhbār al-dawla al-Saldjūkiyya*, ed. Muḥammad Iḳbāl, Lahore 1933, 56). According to another account, some of Malik Shāh's *amīrs* invited him to come (Muḥammad b. Ibrāhīm, 12-13). He was defeated near Hamadān, and taken prisoner and killed. The Saldjūḳs of Kirmān did not, however, come to an end with Ḳāwurd: the dynasty founded by him was to last some 150 years, during which the province enjoyed, on the whole, prosperity and peace.

The Saldjūḳs of Kirmān had a reputation for justice and caring for their subjects. Ḳāwurd took measures to establish security on the roads, and erected pillars at intervals along the Bam-Fahradj road so that travellers would not lose the way; he also built caravanserais and water tanks (Muḥammad b. Ibrāhīm, 10-11). Ḳawūrd, Tūrān Shāh b. Ḳāwurd, Arslān Shāh b. Kirmān Shāh and his wife Zaytūn Khātūn, and Muḥammad b. Arslān Shāh were all great builders. The latter built a library for the Tūrān Shāh *djāmiʿ*, which contained 5,000 books on different branches of learning. Some of them were also patrons of the religious classes. In the reign of Arslān Shāh b. Kirmān Shāh, the *ʿulamāʾ* are alleged to have come to Kirmān from far and wide. His son, Muḥammad, gave pensions to the *fuḳahāʾ* and during his reign there was, according to Muḥammad b. Ibrāhīm, a spread of learning and a tendency for craftsmen to send their sons to study *fiḳh* (29). Some of the officials and *amīrs* of the Saldjūḳs were also builders and patrons of the religious classes. The atabeg, Muʾayyid al-Dīn Rayḥān, made many charitable foundations and constituted *awḳāf* for their upkeep (*Tārīkh-i Afḍal*, 36).

Although the Saldjūḳs of Kirmān were familiar with city life, their existence was closely bound up with the well-being of their flocks. They habitually spent seven months of the year in Bardsīr and five (from Ādhar (Nov.-Dec.) to Urdī Bihisht (April-May)) in Djīruft, their flocks moving with them. Their financial position seems to have been favourable until towards the end of the dynasty, and Bahrām Shāh b. Muḥammad, under whom the decline of the dynasty set in, succeeded to a well-filled treasury. Throughout Ḳāwurd's reign of 34 years the value of the coinage remained stable (Muḥammad b. Ibrāhīm, 4). Trade probably contributed to this favourable situation. Ḳamādīn, even towards the end of the period, was still an important centre of long-distance trade and was "a place where strangers from Anatolia and India and travellers by land and sea lodged, and was full of wealth" (*Tārīkh-i Afḍal*, 41, 69). Some of the ministers and *amīrs* owned considerable estates. Muʾayyid al-Dīn Rayḥān appears to have let his money out to merchants and others, who presumably worked it for him (cf. *Tārīkh-i Afḍal*, 40). The pay and allowances of the military following of the ruler (*ḥasham*) were controlled from the centre (cf. *Tārīkh-i Afḍal*, 34). The troops were mainly Turks, but there were also some Daylamīs. They received allowances and *iḳṭāʿ*s, mainly, according to Afḍal al-Dīn, in the district of Sīrdjān, where "a great *amīr* with a large force was always stationed because it was on the frontiers of Fārs" (*ʿIḳd al-ʿūlā*, 74). The total number of the military following of the rulers and their *amīrs* was not large. Ḳāwurd, when he came to Kirmān in 433/1041-2 had, according to Muḥammad b. Ibrāhīm a force of 5,000 or 6,000 (2). The rival groups who disputed supremacy in the province at the end of the period and during the period of Ghuzz ascendancy were on the whole not large. Malik Dīnār is said to have ruled over 20,000 men (*ʿIḳd al-ʿūlā*, 20). Muḥammad b. Ibrāhīm credits Ḳuṭb al-Dīn Mubāriz and Niẓām al-Dīn Maḥmūd, the Shabānkāra *amīrs*, with having a force of 10,000 men, horse and foot, when they came to Kirmān in 596/1199-1200 (179).

Ḳāwurd was succeeded by his son Kirmān Shāh, whom he had appointed to act in his stead during his absence on the campaign against Malik Shāh. Sulṭān Shāh, who had been taken captive with his father Ḳāwurd, escaped from captivity and was brought to Kirmān. His brother had meanwhile died, and in 467/1074 he ascended the throne in Kirmān. In 472/1079-80 (or according to some sources rather earlier), Malik Shāh went to Kirmān and besieged Sulṭān Shāh in Bardsīr. After some seventeen days the siege was raised, Sulṭān Shāh was confirmed in his government and Malik Shāh returned to Iṣfahān. Sulṭān Shāh was succeeded by his brother Tūrān Shāh in 477/1085. His reign was on the whole uneventful. In 487/1094 he made an abortive expedition into Fārs. He was followed by his son, Īrān Shāh in 490/1097. The latter appears to have been won over to the Ismāʿīlīs. A number of *amīrs* had recourse to the *Shaykh al-Islām*, the *ḳāḍī* Djamāl al-Dīn Abu 'l-Maʿālī, who issued a *fatwā* for his death. Īrān Shāh fled, but was overtaken and killed, and Arslān Shāh b. Kirmān Shāh placed on the throne in Muḥarram 495/October 1101 with the joint support of the *amīrs* and the *ḳāḍīs*. He reigned for 42 years and under him the dynasty reached its greatest heights. He married a daughter of Muḥammad b. Malik Shāh. He appointed, as had his predecessors, *shiḥnas* over ʿUmān and attempted also to extend his dominion over Fārs. He defeated Čawlī Saḳāō in 508/1114-15, and on the death of the latter in 510/1116-17, Muḥammad b. Malik Shāh appears to have considered the threat posed by the Saldjūḳs of Kirmān to Fārs to be a real one (Ibn al-Athīr, x, 365). Towards the end of Arslān Shāh's reign, disputes arose between him and ʿAlāʾ al-Dawla, the ruler of Yazd. Bahrām Shāh b. Masʿūd, the Ghaznavid, when he was defeated by his brother Arslān Shāh, sought the help of Arslān Shāh b. Kirmān Shāh. The latter treated him with favour, but refused to help him on the grounds that he did not wish to interfere in affairs which properly concerned Sandjar. In 537/1142, Muḥammad b. Arslān Shāh set his father aside because of his advanced age and seized the throne, in spite of the fact that another son, Kirmān Shāh had been appointed *walī ʿahd*. A third son, Saldjūk Shāh, after making an abortive attempt to seize the kingdom, fled to ʿUmān, where he continued to constitute a potential threat to Muḥammad. The fact that the latter is said to have appointed *ṣāḥib khabars* in the towns within his kingdom and to have had an excellent information service perhaps suggests that there was unrest or hidden opposition to him. However that may be, Kirmān continued to prosper under Muḥammad. He extended his rule over Ṭabas and his successors continued to appoint *shiḥnas* over that city for some years. There was also a proposal by Rashīd Djāmadār, the governor of Iṣfahān, to hand that city over to Muḥammad, but the death of both parties in 551/1156 brought the plan to nought.

Muḥammad was succeeded by his son Ṭoghrïl Shāh, a somewhat frivolous character, and there was during his reign a decline in public morals. However, Kirmān still enjoyed security and prosperity under his rule (*ʿIḳd al-ʿūlā*, 7; *Tārīkh-i Afḍal*, 30; Muḥammad b. Ibrāhīm, 35). There was a total eclipse in the month of Urdī Bihisht 557 *kharādjī*/April-May

1169 (*ʿIḳd al-ʿulā*, 8; *Tārīkh-i Afḍal* 30). In the last years of Ṭoghrïl Shāh's reign, power was in the hands of the Atabeg Muʾayyid al-Dīn Rayḥān, who, on the death of Ṭoghrïl Shāh in 565/1170, placed the latter's son, Bahrām Shāh, on the throne, though not before Turkish troops had plundered Djīruft and carried off the cattle (*marākib wa suturān*) of the non-Turks and the bureaucracy (*Tārīkh-i Afḍal*, 33, 36). His succession was disputed by his brother Arslān, who was joined by the Atabeg Ḳuṭb al-Dīn Muḥammad b. Buzkush, and a period of internecine strife ensued. A third brother, Tūrān Shāh, sought help from the Atabeg Zangī of Fārs and advanced on Sīrdjān, but was put to flight by Arslān, while Bahrām Shāh retired to Khurāsān to seek help from the Ghuzz leader, Malik Muʾayyid. A second attempt by Tūrān Shāh to seize the province was also defeated. Bahrām Shāh, having obtained reinforcements from Malik Muʾayyid, advanced in 566/1171 via Sīstān and Makrān on Djīruft and put Arslān's forces, which had been weakened by disease, to flight at Ḳamādīn, which the Khurāsān army then plundered. Subsequently, heavy impositions were laid upon the people of Bardsīr, who were reduced to misery. Arslān, meanwhile, with support from the Saldjūḳ ruler of ʿIrāḳ, Arslān b. Ṭoghrïl, returned and besieged Bahrām Shāh in Bardsīr. After six months, Bahrām Shāh and his supporters, who were short of supplies, made peace. Bardsīr, Sīrdjān, Djīruft and Khabīṣ went to Arslān and Bam and Makrān to Bahrām Shāh. Peace, however, did not last; Bahrām Shāh again appealed to Khurāsān for help while Arslān had recourse to ʿIzz al-Dīn Langar, the ruler of Yazd. Bahrām Shāh was put to flight and Arslān entered Bardsīr in 569/1174. Some years later, Bahrām Shāh retook Bardsīr. In 570/1174 he died. A further period of strife and disorder ensued, the main roles being played by the atabegs and *amīrs* acting in the name of one or other of the Saldjūḳ princes; inroads into the province were also made by the forces of the atabegs of Fārs, Yazd and ʿIrāḳ. Under Tūrān Shāh, who eventually defeated Arslān, the Muʾayyidī *ghulāms* (i.e. the followers of the Atabeg Muʾayyid al-Dīn Rayḥān) played a dominant role (cf. *Tārīkh-i Afḍal*, 79). The Atabeg Rayḥān was persuaded to return to Kirmān from Yazd, to which he had withdrawn some seven years earlier, but retired again almost immediately because of his advanced age. By this time, the province had become impoverished. Afḍal al-Dīn describes its condition in the following words: "every year the unfortunate peasants used to take loans or sell their substance (*khān u mān*) to buy seed grain from Ṭabas or elsewhere. They would sow it only for another to harvest it and eat it" (81; Muḥammad b. Ibrāhīm, 99; cf. also *ʿIḳd al-ʿulā*, 13 ff., 77 ff.). All kinds of impositions and fines were meanwhile laid upon the population by the contending *amīrs* in order to support their forces. Little money remained in the treasury, and in 575/1179 the Turks rioted and killed a number of leading officials of the bureaucracy (*Tārīkh-i Afḍal*, 86).

New disasters were meanwhile in store for Kirmān. About 574 or 575/1179, Sulṭān Shāh turned the Ghuzz out of Sarakhs and some 5,000, with their families and flocks, came to Kūbinān, plundered the countryside and went on to Zarand and Bāghīn. The Atabeg Tekelle of Fārs, who at the time held Sīrdjān and Furg, sent a force against them. Together with the Kirmān army, it was defeated in 575/1179-80 and the Ghuzz spread into the *garmsīr*, where they committed pillage and waste. In the years 575-6/1179-80 or 576-7/1180-1 there was a severe famine in Bardsīr (*Tārīkh-i Afḍal* 91; *ʿIḳd al-ʿulā*, 97). In the winter of 577/1181-2, the Ghuzz again set out for the *garmsīr*. Afḍal al-Dīn states that since they had now come to stay, they began to develop and cultivate the districts of Djīruft and Narmāshīr and paid some consideration (*murāʿāt*) to the peasants (*bāzyār*), and brought from Iṣfahān, Sīstān and Fārs goods, beasts and booty which they took from caravans and accumulated in the *garmsīr* and the *sardsīr*. (*Tārīkh-i Afḍal*, 95). They also took several fortresses into which the remnants of the Turkish forces had retired. The *sardsīr*, however, to which the nominal rulers of the province were confined, remained in a state of distress. In 579/1183-4 Tūrān Shāh was killed by a group of *amīrs*, who released Muḥammad Shāh b. Bahrām Shāh from the fortress where he had been imprisoned and placed him on the throne. In 580/1184-5 famine again broke out in Bardsīr. In the following year 581/1185-6, Malik Dīnār came with some 80 men to Rāwar and Khabīṣ from Kūbanān, intending to join the Ghuzz in Narmāshīr. Some 300 men from Bardsīr set out to prevent his advance, but did not dare to join battle with him (*Tārīkh-i Afḍal*, 105). In 582/1186 Muḥammad Shāh set out for ʿIrāḳ to seek help against the Ghuzz. The following spring, Bardsīr surrendered to Malik Dīnār. Muḥammad Shāh, who had failed to obtain help from either ʿIrāḳ or Tekkele in Fārs, returned briefly to Bam. He then went to Sīstān and from there to the court of the Khwārazm-Shāh Takish. He finally took refuge with Shihāb al-Dīn, the ruler of Ghūr and Ghaznīn. In 583/1187-8 an abortive attempt was made to read the *khuṭba* in Bardsīr in the name of a Saldjūḳ princess, Khātūn Kirmānī, a daughter of Ṭoghrïl (Muḥammad b. Ibrāhīm, 146).

Malik Dīnār, having established himself in the district of Djīruft, struck coins and read the *khuṭba* in his own name. In Djumādā I 582/July-August 1186 he set out for Bardsīr, but lack of pasture and the ruin of the countryside appear to have prevented him from establishing himself there, and the town remained for some time in the hands of the Saldjūḳ forces until it surrendered on 5 Radjab 583/11 September 1187. During the next two years, Malik Dīnār was occupied in extending his power and putting down local pockets of opposition. He then made an expedition to the south, took Manūdjān and extracted 1000 *dīnārs* tribute from the ruler of Hurmuz (Muḥammad b. Ibrāhīm, 154). Revenue was also collected from the Makrānāt (*al-Muḍāf*, 5). Bam, which had been in the hands of an *amīr*, Sābiḳ ʿAlī, did not however submit until *ca.* 588/1192. In 589/1193 Malik Dīnār was again in the south and met the ruler of Ḳays, who promised him tribute. The death of Malik Dīnār in 591/1195 was followed by new outbreaks of disorder. He was succeeded by his son Farukh Shāh, who rapidly dissipated the contents of the treasury which Malik Dīnār had laboriously accumulated (*ibid.*, 164). Unable to establish himself, he had recourse to the Khwārazm-Shāh for help, but died in 592/1196 before this could arrive. Meanwhile, on the one hand the Ghuzz began to commit disorders and pillage on an unprecedented scale while on the other the *amīrs* were rent by faction and disunity.

The period of Ghuzz ascendancy, was a time of misery and distress for the people of Kirmān. The province was subjected not only to the ravages of the Ghuzz, but also to incursions by the rulers of Fārs and Khurāsān, or their *amīrs*, who from time to time established a temporary ascendancy in different

parts of the province. Trade was brought to a standstill and agriculture to ruin, even though the members of the warring factions were small—to be numbered in hundreds rather than thousands. The Ghuzz flocks commonly grazed the crops of the settled people, and in addition they levied a quarter of the share of the crop remaining to the landlord, after the payment of government dues to provide for their followers, although certain persons, mainly belonging to the religious classes, were exempted from this levy (*al-Muḍāf*, 19-20).

For a time the situation was extremely confused, until the Shabānkāra *amīrs*, Ḳuṭb al-Dīn Mubāriz and Niẓām al-Dīn Maḥmūd, defeated the Ghuzz in 597/1200, appointed a deputy over Kirmān and retired to Fārs. Shabānkāra rule proved no less harsh than that of the Ghuzz (Muḥammad b. Ibrāhīm, 183 ff., *al-Muḍāf*, 10 ff.). Finally, the population rose against them. Further disorders ensued until a group of the *amīrs*, townspeople and *imāms* of Bardsīr, fearing renewed attacks by the Ghuzz, decided to hand the town over to ʿAdjam Shāh b. Malik Dīnār, who, after a period spent at the court of the Khwārazm-Shāh, had returned to Bam and placed himself at the head of the Ghuzz in that district. New forces arrived from Fārs under ʿImād al-Dīn Muḥammad b. Zaydān, Saʿd b. Zangī's nephew, and they recaptured Bardsīr. About 601/1205 an expedition into Kirmān was made by Khwādja Raḍī Zawzanī, a Khwārazm-Shāhī *amīr*, who had been in Kirmān on several occasions and acquired many estates there. In 603/1207 another expedition came from Fārs. Later Saʿd b. Zangī came himself to Kirmān and undertook operations against the Ghuzz. They submitted in 605/1209 and Saʿd b. Zangī returned to Fārs. When he appointed officials over Bardsīr in that year, he is reported by Afḍal al-Dīn to have levied a quarter of the net income of the landowners by way of tax, but in 606/1210 this appears to have been increased to one-third and the exemptions formerly allowed by the Ghuzz to certain members of the religious classes and others withdrawn (*al-Muḍāf*, 20, 42). Waṣṣāf states that the taxes of Kirmān were not sufficient for the needs of the kingdom and the wages of the army, and so Saʿd b. Zangī issued a decree for an additional levy of one-tenth (*ʿushrī*) on landed estates, which was called *fidyat al-mullāk*. The people complained of this levy and it was abolished (*Tārīkh-i Waṣṣāf*, 151). According to Afḍal al-Dīn, Saʿd b. Zangī bought up much dead land and spent on its development whatever he received from the *dīwān* of Kirmān (*al-Muḍāf*, 42). Meanwhile, Khwādja Raḍī Zawzanī's forces, who are alleged to have committed great oppression, came into conflict with ʿIzz al-Dīn Faḍlūn, Saʿd b. Zangī's representative, and returned to Khurāsān in 606/1210.

Zangid supremacy in Kirmān was fleeting. In 609/1213, a Khwārazm-Shāhī *amīr*, Ḳiwām al-Dīn Muʾayyid al-Mulk, also from Zawzan, asked the Khwārazm-Shāh Muḥammad b. Takash to give him Kirmān and in Ramaḍān of that year, having received the title of *malik*, he set out from Zawzan for Kirmān (Faṣīḥī Khwāfī, possibly mistaking the *kharādjī* year for the *ḥalālī*, appears to put these events in the year 603, *Mudjmal-i Faṣīḥī*, ed. Maḥmūd Farukh, Mashhad A.H.S. 1239-41, ii, 281). Djīruft and Bam surrendered and also Bāfḳ and, finally Bardsīr in Ṣafar 610/June 1213. Muʾayyid al-Mulk then made an abortive expedition against Fārs, which he abandoned when part of his army deserted. In or about this year there was an outbreak of plague (? *wabā*) which spread from the south to Bardsīr and was accompanied by heavy loss of life (*al-Muḍāf*, 46 ff.).

Among the *amīrs* of the Khwārazm-Shāhs was a certain Abu 'l Fawāris Ḳutlugh Sulṭān Barāḳ Ḥādjib (see BURĀḲ ḤĀDJIB), who had been in the services of the Gūr Khān of the Ḳara Khitāy [*q.v.*]. He rose to the position of *ḥādjib* to the Khwārazm-Shāh ʿAlāʾ al-Dīn Muḥammad and became atabeg to his son Ghiyāth al-Dīn Pīr Shāh. The latter, after the fall of ʿAlāʾ al-Dīn, appointed him governor of Iṣfahān, but he, seeing the disorder into which the affairs of the Khwārazm-Shāh had fallen, set off with his followers for Kirmān intending to proceed to India. Having reached Kirmān, he joined battle with the governor of the province, Shudjāʿ al-Dīn Abu 'l Ḳāsim, defeated him and besieged his son in Bardsīr. When Djalāl al-Dīn Mangubirnī returned from India some months later, Barāḳ Ḥādjib requested from him the government of Kirmān. Djalāl al-Dīn, having little choice in the matter, agreed and gave Barāḳ Ḥādjib the *laḳab* of Ḳutlugh Khān (for which reason, the dynasty which he founded is sometimes known as the Ḳutlugh-Khānid dynasty), and went himself to ʿIrāḳ and Ādharbāydjān. Barāḳ Ḥādjib later apparently demanded and received from the caliph the title of "sultan," and the sources refer to the rulers of the dynasty as *sulṭān* and their rule as *salṭanat*. When Ghiyāth al-Dīn subsequently came to Kirmān and sought to establish himself there, Barāḳ Ḥādjib, after first temporising, finally seized and killed him. He then sent an envoy to Ögedey offering submission and was in return confirmed in his possession of the province of Kirmān, which he held for fifteen years. He had four daughters, the eldest of whom, Sevinč Khātūn, was married to Čaghatay, while the other three were married into the family of the Atabegs of Yazd. His son, Rukn al-Dīn Khwādjadjūḳ was sent to serve at the Mongol court and was with Ögedey at the time of his father's death, which took place on 20 Dhu 'l Ḥidjdja 632/6 September 1235 (the accounts of these events given by Nāṣir al-Dīn Munshī Kirmānī, *Simṭ al-ʿulā*, ed. ʿAbbās Iḳbāl, Tehran A.H.S. 1327, 22 ff., Djuwaynī, *Djahān-gushā*, and Nasawī, *Histoire du Sultan Djelal al-Din Mankobirti*, ed. and tr. O. Houdas, Paris 1891-5, vary somewhat).

After the death of Barāḳ Ḥādjib, the Ḳutlugh sultans, although their status was that of local rulers rather than governors, had no real independence. Mongol *amīrs* who had come as *basḳāḳs* to Kirmān are mentioned at the court of Ḳuṭb al-Dīn in 655/1257 (*Simṭ al-ʿulā*, 38). All the contenders for power among them appear to have found it necessary to obtain the support of the Great Khān or the Īlkhān for their cause. Many of them made marriage alliances with the Mongols. Barāḳ Ḥādjib was succeeded by his nephew, Ḳuṭb al-Dīn, who shortly after his accession, married Barāḳ Ḥādjib's daughter, Ḳutlugh Terken. However, when Rukn al-Dīn, who had obtained a *yarlīgh* for the province of Kirmān from Ögedey, approached the province, Ḳuṭb al-Dīn felt it necessary to set out himself for the Mongol court to seek support. Rukn al-Dīn, having reached Bardsīr in 633/1236, took possession of the province and ruled for some fifteen years. Ḳuṭb al-Dīn, unable to oust his cousin, who was supported both by Ögedey and Čaghatay's wife, Sevinč Khātūn, remained for a while at the Mongol *urdū* and was then sent to Maḥmud Yalawāč, the Mongol governor of Khiṭāy. In 646/1248, when Mengü Ḳaʾān succeeded Güyük, Ḳuṭb al-Dīn obtained a *yarlīgh* for Kirmān

and set out for the province. On his approach, Rukn al-Dīn abandoned the province. After appealing in vain for help from the caliph al-Mustaʿṣim, he went to the *urdū* of Mengü Ḳāʾān, where the case between him and Ḳuṭb al-Dīn was referred to the Mongol court (*yarghū*). After examination, Mengü handed Rukn al-Dīn over to his cousin, who killed him and then returned to Kirmān. Djuwaynī mentions that he saw Rukn al-Dīn in Almāligh in Ramaḍān 651/December 1253-January 1254 (*Djahān-gushā*, ii, 217). When Hülegü crossed the Oxus in 654/1256, Ḳuṭb al-Dīn came to his camp at Ṭūs and was given permission to return to Kirmān provided he came back with an army to join the Mongol forces in their march on Baghdād. He fell ill, however, in 655/1257 and died the following year.

Terken Khātūn, Ḳuṭb al-Dīn's wife, was put on the throne in Kirmān amid general acclaim, and subsequently received, after she had had recourse to Hülegü in person, a *yarlīgh* authorising her to act for Ḳuṭb al-Dīn's sons, who were still children. She ruled some 25 years, during which time Kirmān prospered. Many learned men among the *ʿulamāʾ* and merchants resorted to Kirmān during her reign. It was then also that Marco Polo visited the province. When the Čaghatay horde crossed the Oxus in 668/1270 to attack Abaḳā's domains, Terken Khātūn sent Ḥadjdjādj Sulṭān b. Ḳuṭb al-Dīn to Khurāsān with an army to support Abaḳā. She also tried to strengthen her position by marrying her daughter, Pādishāh Khātūn, to Abaḳā. However, when Ḥadjdjādj Sulṭān came back to Kirmān he sought to curtail the influence of Terken Khātūn. She repaired to Abaḳā's court to complain of this and was well received. On her return to Kirmān, Ḥadjdjādj Sulṭān retired to India, where he spent the next ten years. Finally, the sultan of Dihlī provided him with an army to retake Kirmān. He set out, but died en route and the army returned to India. (The *Simṭ al-ʿulā* gives 690/1291 as the date of his death. This is presumably an error.)

Djalāl al-Dīn Suyūrghatmish b. Ḳuṭb al-Dīn, Terken Khātūn's step-son, who governed the western part of Kirmān on her behalf, also apparently went, with her approval, to Abaḳā's *urdū* while he was in Khurāsān. On his return to Kirmān, Suyūrghatmish had his own name inserted in the *khuṭba* alongside that of Terken Khātūn. She complained to Pādishāh Khātūn, and received a *yarlīgh* forbidding the interference of Suyūrghatmish in the affairs of Kirmān. The latter then had recourse himself to the Mongol court. When Abaḳā died in 680/1281, Terken Khātūn immediately set out for Tabrīz to ensure her position. The new Īlkhān, Aḥmad Tegüder, however, dismissed her and appointed Suyūrghatmish in her stead. She was unable to secure her reinstatement, and spent the winter in Bardaʿa. The following summer, she went to Tabrīz where she died. Suyūrghatmish, who reached Kirmān in 681/1282, took possession of the province unopposed. After the accession of Arghūn (683/1284), Bībī Terken, Ḳuṭb al-Dīn and Terken Khātūn's eldest daughter, whose son, Nuṣrat al-Dīn Yülükshāh, was powerful at the Mongol court, accused him of peculation in the collection of taxes. He was dismissed, his accounts demanded, and officials sent to Kirmān to collect the taxes. By the expenditure of considerable sums of money, Suyūrghatmish appears to have obtained permission to go to the Mongol court and there, by further expenditure, to have reached a compromise with the Mongol authorities. By this his half-sister, Pādishāh Khātūn (who had been married to Abaḳā) was given in marriage to Gaykhātū, while Suyūrghatmish was married to Kürdüdjin, the daughter of Mengü Temür b. Hülegü and Abīsh Khātūn, the daughter of Saʿd b. Zangī, and Suyūrghatmish undertook to pay an annual sum for Kirmān of 600,000 *dīnār*s, against which, however, he was allowed as expenses (*ikhrādjāt*) for his administration and military forces, etc. 390,000 *dīnārs* (*Simṭ al-ʿulā*, 57). During Suyūrghatmish's absence, there was apparently an outbreak of famine in Kirmān. The price of wheat rose and the Turkomans rioted and plundered the city. He restored order on his return. He then proceeded to expend considerable sums of money on charitable works: he built a *madrasa*, a *khānḳāh* and a hospital, and constituted *waḳf*s out of *khāliṣa* property for their upkeep. He also extended his patronage to the religious classes (*Simṭ al-ʿulā*, 58). During his reign, Makrān was reduced and tribute exacted. There were, however, renewed encroachments into the province by the Ḳarāwun (Nikūdārīs), who had already in 677/1278-9 invaded Kirmān from Sīstān. In 680/1281-2 they penetrated to the Persian Gulf and in 683/1284-5 plundered the neighbourhood of Bardsīr (see further P. Pelliot, *Notes on Marco Polo*, i, 183-96 (art. *Caraunas*) and J. Aubin, *L'ethogenèse des Caraunas*, in *Turcica*, i (1969), 65-94).

On the death of Arghūn in 690/1291, Suyūrghatmish, taking advantage of the disorders which had ensued, asserted his independence. In the winter of the following year he went to the *garmsīr* and took Hurmuz. Returning to Bardsīr, he reassessed the kingdom and laid down that the taxes should be collected in three instalments (*Simṭ al-ʿulā*, 63). Meanwhile, Gaykhātū had sent Pādishāh Khātūn to Kirmān as governor. She immediately seized Suyūrghatmish and imprisoned him (691/1292). His wife Kürdüdjin contrived his escape, but he was recaptured and killed in 693/1294 (the sources differ in their relation of these events). In 694/1294-5 Kürdüdjin, encouraged by the rise of Baydū, laid siege to Bardsīr and captured and put to death Pādishāh Khatūn. Kürdüdjin then ruled the province, though there was beside her a Mongol *basḳāḳ* (*Simṭ al-ʿulā*, 77).

Baydū was overthrown almost immediately by Ghāzān Khān, who while still in Khurāsān appears to have sent *ilčis* to Kirmān to collect money for the Khurāsān army (*māl-i čirik-i Khurāsān*) (*Simṭ al-ʿulā*, 78). Once Ghāzān had established himself as Īlkhān, he appointed Muḥammad Shāh b. Ḥadjdjādj Sulṭān, who had been at his court, over Kirmān. During the early years of Ghāzān's reign, Kirmān was the scene of internecine and factional strife between Muḥammad Shāh b. Ḥadjdjādj and Süyükshāh, one of the sons of Bībī Terken and brother of Nuṣrat al-Dīn Yülükshāh, and between rival *amīrs* and officials (*Simṭ al-ʿulā*, 79 ff.). Demands for ever more revenue, including taxes for the Khurāsān army, were made; on one occasion a *yarlīgh* was issued for the payment of two years' taxes from Kirmān (*Simṭ al-ʿulā*, 83). There were also renewed attacks by the Ḳarāwun in 698/1298-9. In the following year, Fakhr al-Dīn, who had been appointed *wazīr* of Kirmān by Ghāzān, proceeded to the province accompanied by a number of *amīrs*. His behaviour provoked an uprising and he and his followers were seized and killed. The revolt spread. The rebels took refuge in the town of Bardsīr and were besieged by the Mongol forces, which, although they received reinforcements from Fārs, Luristān and Yazd, were unable to take the town. Ghāzān, who at the time was in Diyār Bakr or the neighbourhood, summoned Muḥammad Shāh and sent

him back to Kirmān as governor with a number of other officials. The siege continued for ten months. The defenders were reduced by famine and finally, according to Waṣṣāf's account, the city's defences were destroyed by siege engines brought from Fārs, where they had been made by experts summoned from Mawṣil, and the city fell. The ringleaders were put to death and Süyükshāh was sent to Tabrīz, where he was executed (*Simṭ al-ʿulā*, 85 ff.; Waṣṣāf, 426 ff.). The province was in a miserable condition and the treasury empty. The Ḳarāwun meanwhile renewed their attacks. A substantial remission of taxation was given (*Simṭ al-ʿulā*, 94), but the ensuing improvement was cut short by the death of Muḥammad Shāh in 703/1303-4 (Waṣṣāf gives the date of his death as 6 Djumādā I 702, 434). Shāh Djahān b. Suyūrghatmish, who was at the time at Ghāzān's court, was appointed to succeed him. At some time during the reign of Ghāzān or Öldjeytü, Rashīd al-Dīn's son Maḥmūd appears to have been governor of Kirmān and to have committed extortion against the people of Bam (cf. *Mukātabāt-i Rashīdī*, ed. Muḥammad Shafīʿ, 10 ff., and also 261). On the death of Öldjeytü, Shāh Djahān attempted unsuccessfully to establish his independence. He was dismissed after a reign of some two-and-a-half years, and with him the dynasty came to an end. He was replaced by Nāṣir al-Dīn b. Muḥammad b. Burhān, a descendant of Shihāb al-Dīn Ghūrī, in 704/1305 (Kāshānī, *Tārīkh-i Öldjeytü*, ed. M. Hambly, Tehran 1969, 43).

Kirmān was ruled for the next few years by Mongol governors until it was taken in 740/1340 by Mubāriz al-Dīn Muḥammad Muẓaffar, who was married to Ḳutlugh Khān, the daughter of Shāh Djahān b. Suyūrghatmish. An attempt made by Ḳuṭb al-Dīn b. Djalāl al-Dīn b. Ḳuṭb al-Dīn to regain the city with the help of reinforcements from Harāt was repulsed and Mubāriz al-Dīn, who had temporarily withdrawn, retook the city in 741/1340. Bam, which was ruled by a governor appointed by Abū Saʿīd, held out and was not captured until three or four years later. Meanwhile, the Īlkhān empire was rent by war and faction. In 748/1347 Abū Isḥāḳ b. Maḥmūd Shāh, the Īndjūʾid ruler of Iṣfahān, attacked Sīrdjān and destroyed the town, but left the citadel unreduced. After continuing his march on Kirmān, he then retired to Shīrāz without joining battle with Mubāriz al-Dīn. During a second expedition, he was defeated by Mubāriz al-Dīn and again retired to Fārs. Meanwhile the Djurmāʾīs and Ughānān, some of whom may possibly have been the descendants of the Mongol detachment which had been sent to Kirmān in or about 683/1284 under the leadership of Ughān (*Simṭ al-ʿulā*, 58), were committing renewed disorders in the south of the province. Mubāriz al-Dīn marched against them. The campaign was inconclusive and the Ughānān and Djurmāʾīs continued for many years to disturb the province, in spite of the fact that they frequently served in the ruler's army (in which they proved to be an extremely unreliable element). In 753/1352 renewed encroachments into Kirmān by the Īndjūʾids were repulsed near Rafsindjān. Mubāriz al-Dīn then extended his power over Fārs and appointed his son Shudjāʿ al-Dīn governor of Kirmān in 754/1353-4 (though he did not reside permanently in the province, taking part in military expeditions in Fārs and ʿIrāḳ-i ʿAdjam). In 757/1356 Mubāriz al-Dīn was again briefly in Kirmān and undertook a campaign against the Ughānān and Djurmāʾīs, who had been committing disturbances. Mubāriz al-Dīn's death in 765/1364 was followed by a period of internecine strife and faction. In Kirmān, the governor Pahlawān Asad rebelled. After an inconclusive battle with Shāh Shudjaʿ near Kirmān, Pahlawān Asad retired into the city, but submitted after a siege of several months (Ramaḍān 775-Radjab 776/March-December 1374). On the death of Shāh Shudjāʿ (786/1384), his son, Sulṭān Aḥmad, went to Kirmān as governor. In 787/1335-6 he read the *khuṭba* in the name of Tīmūr. When the latter set out for Fārs in 789/1387, Sulṭān Aḥmad repaired to Tīmūr's camp, was favourably received and given the government of Fārs, ʿIrāḳ and Kirmān. Internecine strife, however, continued among the Muẓaffarids in Kirmān and elsewhere, until finally they were overthrown by Tīmūr in 795/1393 and Idgü Bahādur Barlās appointed governor of Kirmān (see further, the supplementary chapter on the Muẓaffarids in the *Tārīkh-i guzīda*). The province was in a state of disorder, and Idgü had to establish his authority by a series of military operations. On Tīmūr's death in 807/1405, he recognised Shāhrukh. The province was nevertheless subject to pillage and disorder in the struggles which ensued between the various Tīmūrid princes. Idgü died in 810/1407 and was succeeded by his son Saʿīd Sulṭān, who was assassinated almost immediately on the instigation of his brother, Sulṭān Uways. Disorders continued (see further, J. Aubin, *Deux sayyids de Bam au XV^e siècle*, 20 ff.). Agriculture declined; Ḥāfiẓ Abrū states in the *Zubdat al-tawārīkh-i Baysunghurī* that wherever the army of Mīrzā Iskandar (d. 818/1415-6) passed through, no building or cultivation was left, and in the *Djughrāfiyā* he says that wherever Mīrzā Iskandar went he sacked everything, destroying buildings, cutting down trees and sending troops into all districts so that there was not a single corner of Kirmān which was not devastated (quoted by Aubin, *op. cit.*, 35-6). In 819/1416 Sulṭān Uways was besieged in Kirmān by a Tīmūrid army, and in the following year there was a severe famine in Kirmān accompanied by a heavy loss of life. Shāhrukh then sent Sayyid Zayn al-ʿĀbidīn to the province to restore agricultural prosperity. He devoted his efforts to the revival of *awḳāf* which had fallen out of cultivation. In the first year 250,000 *mann*s of wheat were sown. Various tax reductions and remissions were also given to the peasants (Ḥāfiẓ Abrū, *Djughrāfiyā*, f. 173b, quoted by Aubin, 50). On the death of Shāhrukh in 850/1447, there was renewed anarchy until Djahānshāh b. Ḳarā Yūsuf, the Ḳarā Ḳoyunlu, sent his son Abu 'l Ḥasan Ḳāsim Mīrzā to take possession of the province. Conditions showed little improvement (see Abū Bakr Tihrānī, *Kitāb-i Diyār Bakriyya*, ed. F. Sümer, Ankara 1964, ii, 334 ff., and Aubin, 58 ff.). Heavy taxes and dues were imposed on summer and winter crops and irregular levies made on the peasants; many properties were usurped by the government and *waḳf* revenues seized for the payment of the military (Aubin, 69-70). Abu 'l-Ḳāsim Mīrzā adopted the practice of billeting his followers on the province with all the attendant evils of such a practice (*Kitāb-i Diyār Bakriyya*, 302). On the death of Djahānshāh, confusion and disorder prevailed in Kirmān until the Aḳ Ḳoyunlu succeeded in establishing their rule. For a time Kirmān was governed by Zaynal, the third son of Uzun Ḥasan.

In 909/1503 the province came into the possession of Shāh Ismāʿīl. Some six years later, Kirmān, was invaded by the Uzbegs and suffered much damage (*ʿĀlamārā-yi Shāh Ismāʿīl*, 326 ff., 333). According to Wazīrī, the first Ṣafawid governor of Kirmān was Muḥammad Khān Ustādjlu (*Tārīkh-i Kirmān*, 265;

see also K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 11). From 930/1524 to 1000/1592 the province was under governors belonging to the Afs̲h̲ār tribe (*ibid*., 31, 37). According to the late Ṣafawid manuals, the *Tad̲h̲kirat al-mulūk* and the *Dastūr al-mulūk*, Kirman was one of the thirteen *beglarbegis* of the Ṣafawid empire (*Tad̲h̲kirat al-mulūk*, ed. V. Minorsky, G.M.S. London 1943, 163; Muḥ. Taḳī Dānis̲h̲paz̲h̲ūh, *Dastūr al-mulūk-i Mīrzā-Rafīʿa wa tad̲h̲kirat al-mulūk-i Mīrzā Samīʿa*, in *Rev. de la Faculté des Lettres et des Sciences Humaines*, Tehran, xvi/1-2 (1968), 75). For one or two years from 998/1590, however, part of the province, and from 1068-9/1658 to possibly 1106/1694 the whole of the province, was *k̲h̲āṣṣa* (i.e. under the direct administration of the central government) (Röhrborn, 120, 122). From 1005/1596 to 1031/1621-2 it was under the governorship of Gand̲j̲ ʿAlī K̲h̲ān, though during that period he was frequently absent from the province with the Kirmān army on military campaigns with the s̲h̲āh. During his government he built a number of caravanserais and bazaars in Kirmān city and elsewhere in the province.

During the reign of S̲h̲āh Sulṭān Ḥusayn, Kirmān was subject to renewed inroads by the Balūč. In or about 1133/1721 the Kirmānīs appear to have appealed to the Afg̲h̲ān Maḥmūd for help. He came to Kirmān and stayed for nine months, when he returned to Ḳandahār because of disturbances there. In the following year he came back, but it seems that the people were not prepared to receive him on this occasion and resisted his entry. He laid siege to the citadel, which fell. After plundering the countryside he continued his march to Iṣfahān (Mīrzā Mihdī Astarābādī, *D̲j̲ahāngus̲h̲ā-yi Nādirī*, ed. Sayyid ʿAbd Allāh Anwār, Tehran A.H.S. 1301, 12). In 1139/1726 Mīrzā Sayyid Aḥmad, who was descended from S̲h̲āh Sulaymān's eldest daughter, who had married Mīrzā Dāwūd Marʿas̲h̲ī, seized Kirman and assumed the title of *s̲h̲āh*. From there he went to Fārs, where he was defeated. He came back to Kirmān, but whatever support he may have had there had disappeared, and so he went via Bam and Narmās̲h̲īr to Bandar ʿAbbās, which he temporarily occupied. Eventually, after further adventures, he was captured by the Afg̲h̲āns and executed in 1140/1728 (J. R. Perry, *The last Safavids, 1722-1773*, in *Iran*, ix (1971), 59-70). After Nādir S̲h̲āh defeated As̲h̲raf at Iṣfahān in 1141/1729, the Afg̲h̲āns abandoned Kirmān.

Under Nādir S̲h̲āh, the province suffered further disasters. In the winter of 1149/1736-7 he marched through the province on his way to Ḳandahār and so denuded the people of supplies that there was famine for seven or eight years afterwards (L. Lockhart, *Nadir Shah*, London 1938, 112). Disturbances in southern Persia in 1156/1744 and in Sīstān in the spring of 1159/1746 brought the province into a state of confusion, and in the summer of that year a revolt broke out. It was on a small scale, and was speedily suppressed. In 1160/1747 Nādir S̲h̲āh again passed through Kirmān and treated the province with great severity (*ibid*., 259). His death in that year was followed by anarchy and renewed encroachments by the Afg̲h̲āns and Balūč.

It was not until 1172/1758 that K̲h̲udā Murād K̲h̲ān Zand took possession of Kirmān on behalf of Karīm K̲h̲ān Zand. During the period of his rule, Kirmān was less troubled by disorders and impositions by the government than had been the case under the Afs̲h̲ārs, and on the death of Karīm K̲h̲ān in 1193/1779 remained little affected by the struggle between the Zands and the Ḳād̲j̲ārs until 1205/1790, when Luṭf ʿAlī [*q.v.*], the last of the Zands, marched against Kirmān. Its governor, who had been appointed by Āḳā Muḥammad K̲h̲ān, agreed to submit but refused to come to Luṭf ʿAlī's camp. The latter thereupon besieged the town. Lack of supplies forced him to raise the siege and leave the district. Subsequently, having been defeated by Āḳā Muḥammad K̲h̲ān near S̲h̲īrāz in 1206/1790-1, he fled to Ṭabas. Offers of support from some of the *k̲h̲āns* of Narmās̲h̲īr induced him to return to Kirmān. He attacked the city and took possession of it in 1208/1793-4. Āḳā Muḥammad meanwhile advanced and laid siege to the town. After some four months, the population were reduced by hunger and a group of the defenders opened the gates on 29 Rabīʿ I 1209/24 October 1794. The surrender of the city was followed by a general massacre—the culminating disaster in the long series of calamities which the province had suffered during some four centuries. Luṭf ʿAlī escaped, but was captured in Bam and handed over to Āḳā Muḥammad K̲h̲ān. Meanwhile Āḳā Muḥammad Taḳī b. Āḳā ʿAlī (see above) became governor of Kirmān and held office until the death of Āḳā Muḥammad K̲h̲ān.

There appears to have been some fear that the disaffection caused by Āḳā Muḥammad K̲h̲ān's brutality towards the people of Kirmān, coupled with the failure of the government to control raiding and disorder by the Balūč might give rise to a desire for secession from Persia. Because of this, and partly, perhaps, as an result of the influence of Sunbul Bād̲j̲ī, Fatḥ ʿAlī's Kirmānī wife (see above), Fatḥ ʿAlī S̲h̲āh appointed Ibrāhīm K̲h̲ān Ẓahīr al-Dawla (see above) governor in 1218/1803. He held office until his death in 1240/1824-5 and was the first of a number of Ḳād̲j̲ār princes to be appointed governor of Kirmān. Under him the province enjoyed for the first time for many years a period of security. He repaired *ḳanāts*, fostered trade and agriculture (acquiring many estates himself in the process), and encouraged a revival of learning, inviting to the province *ʿulamāʾ* from Baḥrayn, K̲h̲urāsān, Fārs and elsewhere (S̲h̲ayk̲h̲ Yaḥyā Aḥmadī Kirmānī, *Farmāndihān-i Kirmān*, ed. Bāstānī Pārīzī, Tehran A.H.S. 1344, introd., 3). He also made a successful expedition into Balūčistān. This favourable situation did not, however, last. His son, ʿAbbās Ḳulī K̲h̲ān, who succeeded him as governor, attempted to throw off control, and in the succeeding years there were a number of disturbances and perennial outbreaks of disorder by the Balūč. In December 1831 ʿAbbās Mīrzā was sent to the province to restore order. His efforts were only partially successful. After he left the province there were renewed disturbances by governors and others, and in 1835 further inroads by the Balūč. Meanwhile, Muḥammad S̲h̲āh had succeeded Fatḥ ʿAlī S̲h̲āh and in 1835 or 1836 appointed Āḳā K̲h̲ān Maḥallātī, the leader of the Ismāʿīlīs, as governor of Kirmān. On his withholding revenue from the central government, a force was sent to collect arrears. Unable to resist, Āḳā K̲h̲ān fled in 1837 to Bam, where he was besieged by Fīrūz Mīrzā Nuṣrat al-Dawla. He surrendered and was sent to Tehran. Later he was allowed to return to Kirmān in 1840 and renewed his rebellion. After a number of skirmishes he was defeated, and took refuge in Afg̲h̲ānistān and later India, whence, it was alleged, he carried on a secret correspondence with his supporters in eastern Persia. His brother, Muḥammad Bāḳir, made a movement into Balūčistān in 1844 or 1845 but was repulsed. Balūčistān was

meanwhile gradually reduced by the governors of Kirmān, and by the middle of the 19th century Persian control had been extended southwards from Bampūr over the Makrān east of Djāsk.

From about 1858 Kirmān once more had a period of security and good government, this time under Muḥammad Ismāʿīl Khān Nūrī Wakīl al-Mulk (see above), first as *pīshkār* during the nominal government of Gayūmarth Mīrzā, and then as governor from 1860 until his death in 1284/1867-8. His period of office was marked by an increase in prosperity which continued during the subsequent decade. During the government of his son, Murtaḍā Ḳulī Khān Wakīl al-Mulk, who was governor from 1869-1878, Čāh Bahār was brought under the control of the Persian government. In 1877 there was an outbreak of factional strife between the Shaykhīs and the Bālāsarīs, which led to the resignation of Murtaḍā Ḳulī Khān and the despatch of a force from Tehran to restore order. Towards the end of the reign of Nāṣir al-Dīn Shāh there appears to have been considerable intellectual activity in Kirmān, and when the movement for reform became overt towards the end of the 19th century and in the early 20th century, a number of Kirmānīs, notably Mīrzā Āḳā Khān Bardsīrī Kirmānī (who became the editor of *Akhtar*, the Persian newspaper published in Constantinople) and Nāẓim al-Islām, played an important part (see DUSTŪR, and also, Nāẓim al-Islām, *Tārīkh-i bīdārī-i Īrān*, ed. ʿAlī Akbar Saʿīdī Sīrdjānī, Tehran A.H.S. 1349).

Bibliography: The works of the principal geographers have been mentioned in the text. They have been utilised by G. Le Strange, *The lands of the Eastern Caliphate*, 179 ff.; idem, *The cities of Kirman*, in *JRAS* (1901), 281-90; P. KIRMĀNĪ, AWḤAD AL-DĪN ḤĀMID B. ABI 'L-FAKHR (not to be confused with Rukn al-Dīn Awḥadī of Maragha in Ādharbāydjān who was also called Awḥad al-Dīn al-Iṣfahānī and who died in 738/1337-8) was an eminent Iranian mystic (cf. Ḥamd Allāh Mustawfī, *Ta'rīkh-i guzīda*, ed. ʿAbd al-Ḥusayn-i Nawā'ī, Tehran 1339/1960, 667-8; Djāmī, *Nafaḥāt al-uns*, ed. Mahdī-yi Tawḥīdī Pīr, Tehran 1331/1962, 588-92). He was a pupil of Rukn al-Dīn al-Sidjāsī (Sindjānī), of the affiliation of Ḳuṭb al-Dīn al-Abharī and Abū Nadjīb al-Suhrawardī. On his numerous travels, he came to Damascus where he became acquainted with Muḥyī 'l-Dīn b. al-ʿArabī, who mentions him in his *Futūḥāt al-makkiyya* (ch. viii), and was deeply influenced by his ideas. Awḥad al-Dīn knew Shams al-Dīn Tabrīzī (cf. B. Furūzānfar, *Risāla dar taḥḳīḳ-i aḥwāl wa zindagānī-i Mawlānā Djalāl al-Dīn Muḥammad mashhūr ba-Mawlāwī*, Tehran[2] 1333/1954, 53-5), and probably met also Djalāl al-Dīn Rūmī, ʿUthmān Rūmī, Ṣadr al-Dīn al-Ḳūnawī and Fakhr al-Dīn al-ʿIrāḳī. He spent the last period of his life as a well-known mystical teacher in the neighbourhood of Baghdād and was honoured by the ʿAbbāsid caliph al-Mustanṣir in 632/1234-5. He died probably on 3 Shaʿbān 635/21 March 1238.

Awḥad al-Dīn belongs with Aḥmad Ghazālī and Fakhr al-Dīn al-ʿIrāḳī to the representatives of *shāhidbāzī*, the contemplation of the divine beauty in earthly forms, preferably in beautiful boys. The basic concepts of his mystical philosophy are *ṣūrat* (outer form, image) and *maʿnā* (inner meaning, essence), in conformity with Ibn ʿArabī's key terms *ẓāhir* and *bāṭin*. The famous *mathnawī* poem *Miṣbāḥ al-arwāḥ*, often attributed to him, was actually written by Shams al-Dīn Muḥammad Bardasīrī Kirmānī. The poetical heritage of Awḥad al-Dīn is marked by short forms (i.e. only some *tardjīʿ bands* and a few *ghazals*, but a large number of *rubāʿiyyāt* which are grouped into 12 chapters), and is of a gnostic-mystical character. The *rubāʿiyyāt*, which are sometimes influenced by ʿUmar Khayyām, are not always of the best literary quality, but they show a deep mystical thought and experience, (as is found in verses of Djalāl al-Dīn Rūmī, Aḥmad Ghazālī, ʿAyn al-Ḳuḍāt al-Hamadhānī and Fakhr al-Dīn al-ʿIrāḳī.

Bibliography: B. Furūzānfar (ed.), *Manāḳib-i Awḥad al-Dīn Ḥāmid ibn-i Abī al-Fakhr-i Kirmānī*, Tehran 1347/1969, with an extensive introduction on the life and writings of Awḥad al-Dīn; B. M. Weischer, *Auḥaduddīn Kirmānī und seine Vierzeiler*, in *Isl.*, lxi (1979); B.M. Weischer and P.L. Wilson, *Hearts's witness. The sufi quatrains of Awḥaduddīn Kirmānī* Tehran 1978; (cf. also H. Ritter, *Das Meer der Seele*, Leiden 1955, 474-6).

(B. M. WEISCHER)

AL-KIRMĀNĪ, ḤAMĪD AL-DĪN AḤMAD B. ʿABD ALLĀH, was a prominent *dāʿī* of the Fāṭimids during the reign of al-Ḥākim bi-amr Allāh (386-411/996-1021) as well as the author of many works on the theory of the Imāmate and on Ismāʿīlī philosophy.

The life of al-Kirmānī is known only in its main outlines, which can be traced on the basis of statements contained in his own works. Some other details can be derived from unpublished Ismāʿīlī sources, as has been done notably by Muṣṭafā Ghālib (*op. cit.*, 41 f.) who, however, does not specify these sources. His *nisba* points to his origin from the Iranian province of Kirmān. It is evident from his works that he continued to be in touch with the Ismāʿīlī community in this area. It is not very likely that he was a pupil of the well-known *dāʿī* Abū Yaʿḳūb al-Sidjzī [*q.v*], as Ghālib states, for Abū Yaʿḳūb was not only al-Kirmānī's senior by half a century but there appears to have been a difference of opinion between the two on many doctrinal points as well. A great part of his life seems to have been spent in the service of the Fāṭimid *daʿwa* in the missionary district (*djazīra*) of ʿIrāḳ. The title *ḥudjdjat al-ʿIrāḳayn*, which is often added to his name by way of an honorific rather than as a designation of his rank (cf. W. Ivanow, *Naṣir-i Khusraw and Ismailism*, Bombay 1948, 44; W. Madelung, *op. cit.*, 63 f., n. 117), implies that this district also included the parts of Iran known as ʿIrāḳ-i ʿAdjamī. At least one of his larger works (*Kitāb al-Maṣābīḥ*) was composed in Iran, while two shorter *risālas* (*al-Hāwiya fi 'l-layl wa 'l-nahār*, dated 399/1009, and *al-Kāfiya fi 'l-radd ʿalā 'l-Hārūnī al-Ḥasanī* were addressed to a subordinate in Djīruft (Kirmān). The title of his *Kitāb al-Madjālis al-Baghdādiyya wa 'l-Baṣriyya*, which has not been preserved, refers to his personal activities in these cities of ʿIrāḳ. Ghālib ascribes to him a part in winning over the ʿUḳaylids of Mosul to the cause of the Fāṭimids. In the early years of the 5th/11th century, al-Kirmānī came to Cairo, where a serious crisis had developed among the Fāṭimid *dāʿīs* concerning the nature of the imāmate as it was represented at that time by al-Ḥākim. Quite a few of them, among whom are the founders of the religion of the Durūz [*q.v.*], propounded the doctrine of the divinity of al-Ḥākim. Either at the request of the chief of the religious organisation, the *dāʿī al-duʿāt* Khattigīn al-Ḍayf, or of the caliph himself, al-Kirmānī interfered in the controversy. In 405-6/1014-15 he wrote the *risāla* called *Mabāsim al-bishārāt* upholding the tenet that the imāmate of al-Ḥākim was, in spite of its exceptionally blessed condition, of an ordinary kind and that the theory of his divine nature was incompatible with the Ismāʿīlī dogma of the absolute transcendence of God. The *risāla* called *al-Wāʿiẓa fi nafy daʿwa ulūhiyyat al-Ḥākim bi-amr Allāh* (ed. M. Kāmil Ḥusayn, in *Madjallat Kulliyyat al-Ādāb* (Cairo), xiv/1 (1952), 1-20), composed in 408/1017, was a reply to a pamphlet by al-Ḥasan al-Akhram al-Farghānī, one of the supporters of the extreme point of view. Apparently, al-Kirmānī returned afterwards to ʿIrāḳ where he completed his major work, *Rāḥat al-ʿaḳl*, in 411/1020-1. The latter date provides also a dating *post quem* for his death.

Works. The fate of al-Kirmānī's work after his death has been determined by the further dogmatic history of the Ismāʿīliyya. While the later writers of the Fāṭimid period appear to be hardly influenced by him, he left a lasting imprint on the religious literature of the Ṭayyibiyya [*q.v.*] which continued a part of the Fāṭimid tradition in the Yaman and in India. This influence can be traced from the time of the second *dāʿī muṭlaḳ* of the sect, al-Ḥāmidī [*q.v.*], up to the present day (cf. e.g. R. Strothmann, *Gnosis-Texte der Ismailiten*, Göttingen 1943). Thanks to this continuous tradition of Kirmānī studies, the main part of his works has been preserved, although all the copies that have been brought to light so far are very recent.

The defence of the theoretic basis of the Fāṭimid imāmate, which al-Kirmānī regarded as one of his most important concerns, was not only directed against deviations within the movement itself. He also attacked the claims of the ʿAbbāsids (in *Maʿāṣim al-hudā*, a refutation of al-Djāḥiẓ's *Kitāb al-ʿUth-*

māniyya) and those of other Shīʿī pretenders (in *al-Kāfiya*, being a warning against the propaganda of the contemporary Zaydī Imām Abu 'l-Ḥusayn al-Muʾayyad bi 'llāh al-Hārūnī). In his *Kitāb Tanbīh al-hādī wa 'l-mustahdī*, the polemics against these opponents are combined with a plea in favour of the validity of the religious law for anyone without exception, addressed towards the antinomian strain current in the Ismāʿīlī movement. His fullest treatment of the theory of the imāmate, constructed as a support of the claim of al-Ḥākim, is contained in *al-Maṣābīḥ fī ithbāt al-imāma*. In the course of his argument, al-Kirmānī frequently resorts to Jewish and Christian scriptures, which he quotes in Hebrew as well as in Syrian (cf. Paul Kraus, *Hebräische und syrische Zitate in ismailitischen Schriften*, in *Isl.* xix (1930), 243-63, and A. Baumstark, *Zu den Schriftzitaten al-Kirmānīs*, in *Isl.* xx (1932), 308-13).

Of equal importance in the work of al-Kirmānī is his preoccupation with metaphysical speculation, to which his most important works are devoted. In the *Kitāb al-riyāḍ fi 'l-ḥikam bayn al-ṣādayn ṣāḥibay al-Iṣlāḥ wa 'l-Nuṣra* (ed. by ʿĀrif Tāmir, Beirut 1960), he attempts to settle the debate over a great number of philosophical questions which had been going on among the Ismāʿīlīs in Iran during the preceding generations. The starting-point of this discussion was the *Kitāb al-Maḥṣūl*, a work by al-Nasafī (d. 331/942), to whom the introduction of neo-Platonism in the speculations of the Ismāʿīlīs has been attributed. Al-Nasafī had been criticised on several points, which according to al-Kirmānī are of fundamental importance, by Abū Ḥātim al-Warsinānī (*fl.* about 322-34/934-46) in his *Kitāb al-Iṣlāḥ*, but the tenets of the former had been defended by Abū Yaʿkūb al-Sidjzī (d. after 360/971) in a work entitled *Kitāb al-Nuṣra*. Kirmānī, who on most issues takes the side of Abū Ḥātim, approaches these problems from a point of view to which he attributes an authoritative weight and which he denotes as "the canon of the guiding mission" (*ḳānūn al-daʿwa al-hādiya*); see further W. Ivanow, *An early controversy in Ismailism*, Leiden 1948, 115-59; 2nd ed. Bombay 1955, 87-122.

The *Rāḥat al-ʿaḳl* (ed. by M. Kāmil Ḥusayn and M. Muṣṭafā Ḥilmī, Cairo 1371/1952; ed. by Muṣṭafā Ghālib, Beirut 1967) contains a *summa* of Ismāʿīlī philosophy written for adepts who have prepared themselves for the study of the fundamental truths both morally, through the fulfillment of the commands of religious law, and intellectually, by the study of less abstract works of earlier Ismāʿīlī authors and of al-Kirmānī himself. The subject-matter has been arranged in chapters and paragraphs which have been styled "walls" (*aswār*) and "crossroads" (*mashāriʿ*) according to the allegory of a city of gnostic knowledge. By travelling along the fifty-six crossroads enclosed within the seven walls of this city, the searching soul acquires an awareness of the real structure of the universe, which consist of four separate but fully congruent worlds: the world of Divine creation (*ʿālam al-ibdāʿ*), encompassing the purely spiritual beings, the world of bodily existence or the realm of nature (*ʿālam al-djism, dār al-ṭabīʿa*), the world of religion (*ʿālam al-dīn*), which is the hierarchy of the Ismāʿīlī *daʿwa*, from the *nāṭik* up to the lowest delegate (*maʾdhūn*), and, finally, the world of the *ḳāʾim* where this universe returns to its primordial one-ness in its second perfection (*al-kamāl al-thānī*). In complete analogy to this macrocosmic process, the individual human soul, which by origin is only a virtually-existing first perfection, through acquisition of this metaphysical knowledge, can realise itself completely as an intelligent being.

The *Rāḥat al-ʿaḳl* is the earliest attempt at a complete and systematic exposition of Ismāʿīlī philosophy. In comparison to older works, and even to al-Kirmānī's own *Kitāb al-Riyāḍ*, it shows a profound influence of the metaphysical theories of the *falāsifa*. This is particularly evident in his concept of the world of creation as a decade of intelligent beings which has come into existence by way of "being sent out" (*inbiʿāth*) from the universal intellect, the first created being (see further ISMĀʿĪLIYYA. Doctrine).

Like many other Ismāʿīlī *dāʿīs*, al-Kirmānī attacked the writing of the arch-heretic Abū Bakr Muḥammad b. Zakariyyāʾ al-Rāzī. In the *Kitāb al-Aḳwāl al-dhahabiyya fi 'l-ṭibb al-nafsānī*, he supported the criticism of his predecessor Abū Ḥātim on al-Rāzī's ideas about the therapy of the mind expounded in the latter's *al-Ṭibb al-rūḥānī* (cf. P. Kraus, in *Orientalia*, v (1936), 36 f.; idem, *Rasāʾil falsafiyya/Opera metaphysica*, i, Cairo 1939, *tawṭiʿa*, 7-13, and the excerpts from the first part of al-Kirmānī's treatise in the notes to the edition of *al-Ṭibb al-rūḥānī*.

Bibliography: The editions of al-Kirmānī's works mentioned in the article all contain more or less extensive introductions to his life and work. Surveys of his works and of the manuscripts known to exist are given in W. Ivanow, *A guide to Ismaili literature*, London 1933, 43-6; 2nd ed. *Ismaili literature*, Tehran 1963, 40-5; Brockelmann, S I, 325-6; Mu'izz Goriwala, *A descriptive catalogue of the Fyzee collection of Ismaili manuscripts*, University of Bombay 1965, 37-57, nos. 51-65; Sezgin, *GAS*, i, Leiden 1967, 580-2. Fragments of some of the works of al-Kirmānī are contained in the great Ismāʿīlī compilations of ʿImād al-Dīn Idrīs (d. 872/1468), *Kitāb ʿUyūn al-akhbar*, and Ḥasan b. Nūḥ al-Bharōčī, *Kitāb al-Azhār* (written 931/1525), which are still unpublished. Excerpts from his *al-Risāla al-lāzima fī ṣawm shahr Ramaḍān* have been edited and translated into Urdu by M. H. Aʿẓamī, *Niẓām al-ṣawm ʿinda 'l-Fāṭimiyyīn*, Karachi 1961, 18-60. A work of doubtful authenticity has been edited by ʿĀrif Tāmir, *Arbaʿ rasāʾil ismāʿīliyya*, Beirut 1952, 59-66. On the *Khazīnat al-adilla*, which is really the work of a pupil of al-Kirmānī, see W. Ivanow, *A creed of the Fatimids*, Bombay 1936, 10-2. See further: E. Griffini, in *ZDMG*, lxix (1915), 87; H. F. Hamdānī, in *JRAS* (1933), 372-5; idem and Ḥ. S. Maḥmūd, *al-Ṣulayhiyyūn wa 'l-ḥarakat al-Fāṭimiyya fi 'l-Yaman*, Cairo 1955, 258-61, and passim; W. Madelung, in *Isl.*, xxxvii (1961), 119-27; Henry Corbin, *Trilogie ismaélienne*, Tehran-Paris 1961, passim; idem, *Histoire de la philosophie islamique*, Paris 1964, 130-1; S. H. Nasr, in *Cambridge history of Iran*, iv, Cambridge 1975, 436, 440.

(J. T. P. DE BRUIJN)

KIRMĀNĪ, KAMĀL AL-DĪN [see KHWĀDJŪ KIRMĀNĪ].

KIRMĀNSHĀH, a town and province in western Persia. The province is situated between lat. 34° N. and 35° N. long. 44° 5′ to 48° 0′ E. It lies to the east and north of ʿIrāḳ and Luristān-i Kūčik (or Pusht-i Kūh) and to the south and west of Kurdistān and Asadābād. In the early 20th century the province was divided into nineteen *bulūks*. These were Bālādih, Wastām, Miyān Darband or Bīlawar, Pusht-i Darband or Bālā Darband, Dīnawar, Kuliyāʾī, Saḥna, Kanguwār, Asadābād, Harsīn, Čamčamāl, Durū Faramān, Māhīdasht, Hārūnābād, Gūrān,

Kirind, Zuhāb, Aywān and Hulaylān (Government of India, General Staff, Army Headquarters, Intelligence Branch, *Gazetteer of Persia*, ii, Simla, 1914, 358). At the present day it is bordered by Sanandadj on the north, Asadābād on the north-east, Shāhābād on the south, Nihāwand and Tūysirkān on the east, Khurramābād on the south-east, and Ḳaṣr-i Shīrīn and Rawānsār-i Djawānrūd on the west, and contains the following districts: Sunḳur and Kuliyāʾī, Kanguwār, Saḥna, Harsīn, Sandjābī, Gūrān and Thalāth (Razmarā, *Farhang-i djughrāfiyā-yi Īrān*, A.H.S. 1329-32, v). The town of Kirmānshāh (also known as Kirmānshāhān, a name which appears to be used first in the 4th/10th century) is situated approximately at lat. 34° 19 N. and long. 47° 5′ E. at a height of 1322 m. on the Ḳara Sū River, which runs to the north-east of the town in a south-easterly direction until it joins the River Gāmāsiyāb (Gawmāsa) (also known as the River Ṣaymara) which flows into the River Karkha. A series of mountain ranges, trending from north-west to south-east, run through the province. Between them there are extensive plains and valleys, containing pastures and cultivated lands. From Asadābād, with an elevation of 2,340 m., there is a gradual descent through a succession of peaks and valleys to Ḳaṣr-i Shīrīn, which is at 575 m.

The climate is mild in summer but cold in winter, except in the Zuhāb district and the plains near the ʿIrāḳī frontier and in the lower parts of the Kalhur country (in the region of Mandalī) where it tends to be hot in summer. Snow on the mountains is heavy in winter and spring rains are normally plentiful. The maximum July temperature of the town of Kirmānshāh is 37.2° C. and the minimum January temperature −3.5° C. Annual rainfall is 372.7 mm (H. M. Ganji, *Climate*, in W. B. Fisher, ed., *Cambridge history of Iran*, Cambridge 1968, i, 247).

Parts of the province in the south, notably districts in Hulaylān, Bīlawar and Gūrān, are wooded. Oak, elm, sycamore and some coniferous trees and walnut trees are found in the mountains; willows, poplars and oriental planes are common throughout the province; palm trees are found in Sar-i Pul-i Zuhāb and Ḳaṣr-i Shīrīn. Fruit is abundant in some districts, especially in Kandūla, Harsīn and Saḥna; Kirind produces excellent seedless grapes, Rīdjāb is famous for its figs and Gahwāra for its apples. Gum tragacanth was formerly plentiful in the province, but indiscriminate tapping has caused supplies to diminish. Gum mastic (*saḳḳiz*) is obtained from Hulaylān and was formerly exported to Russia (Government of India, H. L. Rabino, *Gazetteer of Kirmanshah*, Simla 1907, 163, 163).

Dry farming is practised in most parts of the province. In the valleys river water is used for irrigation. *Ḳanāt*s are not numerous. The province is rich in grain land. Formerly, in a normal year the province had a large grain surplus, though from time to time this would be cut by insufficient rainfall, ravages by locusts and other pests, and by disorders. Surplus grain was exported to other parts of Persia, Ottoman Turkey and, later, to ʿIrāḳ. The proportion of wheat to barley was usually two-thirds wheat to one-third barley. Both are grown as unirrigated crops. Grain land is left fallow in alternate years or in many districts for longer periods. Rice is grown in some of the river valleys, including Raziyān, Bīlawar, Dīnawar, Čamčamāl, Zuhāb and Kalhur. It is of inferior quality and mainly consumed locally. Peas (*nukhud*) are produced in quantity and exported to other parts of Persia. Sugar beet has been an important crop since the 1930s and is grown especially in Māhīdasht. Cotton, castor oil, tobacco, saffron, opium, the cultivation of which on a significant scale probably did not begin until the late 19th century (United Kingdom, Foreign Office, Diplomatic and Consular Reports, Annual series, 3189, *Report on the Trade of Kirmanshah and district for the year 1903-04*, 22, and see further G. G. Silbermann, *The Persian Constitutional Revolution: the economic background 1870-1906*, unpublished Ph. D. thesis, University of London, 1974, 132 ff.), indigo, maize, clover, alfalfa, and vegetable crops, such as melons, water melons, cucumbers, egg plants and tomatoes, are, or were, grown for local consumption (see further Rabino, 153 ff.).

The province has rich pasture lands. Transhumance is widely practised. Formerly, nomadic tribes commonly migrated annually across the Ottoman-Persian frontier and later across the ʿIrāḳī-Persian frontier. Animal husbandry is of great importance, not only among the nomadic tribes but also among the settled peasants. After grain the most important product of the province is wool. Part of the spring wool crop was formerly exported. The autumn wool was less in quantity and inferior in quality and mainly used for the manufacture of felts (*namads*). Formerly, the manufacture of carpets was a thriving industry in the villages and among the tribes, but declined towards the end of the 19th century. By the 20th century it had virtually disappeared. Goat's hair was made into tents, saddle bags, ropes and yarn. Goat skins were dried and exported and were used for coverings for clarified butter and water skins. The markets of Tehran, Hamadān, Ḳumm and Baghdād were largely supplied with sheep from Kirmānshāh (see further Rabino, 158-9).

Mules and horses were bred in considerable quantities in the 19th century. The horses, which had much Arab blood in them and were well adapted for both draught and saddle, were highly esteemed (cf. J. P. Ferrier, *Caravan journeys*, London 1856, 26; *Gazetteer of Persia*, 341).

The extensive oil belt extending from Kirkūk in ʿIrāḳ to Khūzistān passes through the south-western part of the province of Kirmānshāh, and the extraction of oil has been carried on at various centres since antiquity (*Gazetteer of Persia*, 343). Other mineral resources include marble, porphyry and lime.

The province is mainly inhabited by Kurds, nomadic and sedentary, and Lurs. Most of the tribes have their own winter and summer quarters (see further ĪLĀT). A rough estimate of their numbers in the early 20th century put them at some 60,000 families or some 300,000 persons. Among them were the Kalhur, partly settled and partly nomadic, who were estimated at 12,000 families. They owned large stretches of irrigated land in the fertile plains of Māhīdasht, Gīlān and Kalleh Shahīn, the two last-named purchased by the Kalhur chiefs from their Turkish proprietors at the beginning of the 19th century (United Kingdom Foreign Office, Diplomatic and Consular reports, Miscellaneous Series, 590 (1903) *Report on the trade and general condition of the City and Province of Kermanshah by Mr. H. L. Rabino*, 46). The Gūrān, also partly settled and partly nomadic, were estimated at 4-5,000, the Sandjābī at 4,000, the Kuliyāʾī, mostly sedentary in Sunḳur, at 4,000 and the Zangana, who were mainly settled in Māhīdasht, at 2,500 (*Gazetteer of Persia*, 339; Rabino 171 ff.). Apart from some tribes near the ʿIrāḳī frontier, who are Sunnī, most of the Kurdish tribes of Kirmānshāh are Shīʿī. ʿAlī Ilāhīs are also

found in considerable numbers (cf. Zayn al-ʿĀbidīn S̲h̲īrwānī, *Bustān al-siyāḥa*, Tehran lith. 1315, 492; *Gazetteer of Persia*, 356).

The town of Kirmāns̲h̲āh or Ḳirmīsīn (var. forms Kirmāsin, Ḳarmāsīn, Ḳirmāsīn, Ḳarmas̲h̲īn) as it was known by the early Arab geographers was founded in the Sāsānid period. Ḥamd Allāh Mustawfī attributes its foundation to Bahrām IV (388-99 A.D.) (*Nuzhat*, 108), who had acquired the title Kirmāns̲h̲āh as governor of the province of Kirmān [*q.v.*]. The town founded by him was, however, more probably the small town of Kirmāns̲h̲āh situated between Yazd and Kirmān (cf. Ṭabarī, in Nöldeke, *Gesch. der Perser u. Araber*, 71). Another tradition attributes the foundation of Kirmāns̲h̲āh to Kawād̲h̲ b. Fīrūz (488-531 A.D.; cf. esp. Muḳaddasī, 257 ff.). The Sāsānid kings often resided there, and their example was from time to time followed by later rulers, notably the caliph Hārūn al-Ras̲h̲īd and the Būyid ʿAḍud al-Dawla, who built a palace there (Muḳaddasī, 393). The province is rich in monuments of the Achaemenians and Sāsānids, such as the sculptures of Ṭāḳ-i Bustān, three miles east of Kirmāns̲h̲āh, the rock inscriptions at Bīsutūn [*q.v.*] and various remains at Kanguwār [see KINKIWAR].

Kirmāns̲h̲āh was peacefully occupied by the Arabs after the capture of Ḥulwān in 21/640 (Balād̲h̲urī, Futūḥ, 301). It became part of the province of the D̲j̲ibāl and was known, together with Dīnawar [*q.v.*] as Māh al-Kūfa. Although situated on the great K̲h̲urāsān road almost midway between Bag̲h̲dād and Hamadān, it was less important in the early centuries than Dīnawar or Hamadān. Ibn Ḥawkal does not mention it among the best known towns of the D̲j̲ibāl, though he describes it as a pleasant place with running water, trees and fruit, in which living was cheap, and as having abundant pastures, where numerous flocks grazed, and much water. Many articles of commerce were also to be found there (i, 359). Later, Kirmāns̲h̲āh with Hamadān, Ray and Iṣfahān became one of the four great cities of the D̲j̲ibāl, though it did not rival them in importance. It was ruled successively by the ʿAbbāsids, the Būyids, the Ḥasanūya [see ḤASANWAYH] and the Sald̲j̲ūḳs.

In 594/1197-8 Kirmāns̲h̲āh was laid waste by the K̲h̲ʷarazms̲h̲āhī *amīr* Miyād̲j̲uḳ (Rāwandī, *Rāḥat al-ṣudūr*, 398). After the Mongol conquest, the D̲j̲ibāl appears to have been divided into two unequal parts, the larger in the east being known as Persian ʿIrāḳ and the smaller in the west, which included Kirmāns̲h̲āh, as Kurdistān. Ḥamd Allāh Mustawfī states that Kirmāns̲h̲āhān (which, he writes, was known in books as Ḳirmīsīn) had been a medium-sized town (*s̲h̲ahrī wasaṭ*) but that in his time it was a mere village (*Nuzhat*, 108). Čamčamāl near Bīsutūn, because of its excellent pastures, was a regular camping ground of the Mongol establishments, and, according to Ḥamd Allāh, Öld̲j̲eytü b. Arg̲h̲ūn built a town (*ḳasaba*) there (*ibid.*, 107). It would seem from Ḥamd Allāh Mustawfī's account that there was a decline in production in Kurdistān as in the neighbouring provinces after the Mongol invasions (*Tārīk̲h̲-i guzīda*, 371).

During the 9th/15th century Kirmāns̲h̲āh lay outside the main course of events in Persia, but with the rise of the Ṣafawids Kirmāns̲h̲āh became a frontier province facing the Ottomans. Many of the Kurdish tribes enjoyed a degree of local independence, and it does not appear that central control was established throughout the region in the early Ṣafawid period. The sources make little mention of Kirmāns̲h̲āh, though there is mention of Ṣafawid governors in Dīnawar—Solug̲h̲ Ḥusayn Tekkelu in the reign of S̲h̲āh Ismāʿīl and Čirāg̲h̲ Sulṭān in the reign of Ṭahmāsp (Bidlīsī, *S̲h̲araf-nāma*, Tehran A.H.S. 1343, 410, 270). Intermittent warfare with the Ottomans kept the frontier regions of Kirmāns̲h̲āh in a state of instability and often disorder, though the main theatre of operations was Ād̲h̲arbāyd̲j̲ān. By the peace treaty made by S̲h̲āh ʿAbbās in 999/1590 the western provinces of Persia, including Kirmāns̲h̲āh, were ceded to Turkey, and it was not until the campaign begun in 1011/1602 that Persian rights were reasserted and the lost provinces recovered in the following year. After the death of S̲h̲āh ʿAbbās an Ottoman expedition led by K̲h̲usraw Pas̲h̲a penetrated up to Hamadān (1039/1630). When peace was again signed in 1048/1639, Sulṭān Murād IV recognised the frontier more or less along the line which it occupies at the present day.

About the middle of the 11th/17th century, the Zangana family began to emerge as the most powerful of the local leaders, and from then on frequently held the government of Kirmāns̲h̲āh, which usually included Sunḳur and, from the reign of S̲h̲āh Ṣafī (1038-52/1629-42), Kalhur (K. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 9). S̲h̲ayk̲h̲ ʿAlī K̲h̲ān Zangana became governor under S̲h̲āh ʿAbbās II in or about 1058/1648 (Riḍā Ḳulī K̲h̲ān Hidāyat, *Rawḍat al-ṣafā-yi Nāṣirī*, Tehran, A.H.S. 1339, viii, 475). Members of the family also held important offices at court, which further strengthened their position. S̲h̲ayk̲h̲ ʿAlī Beg became *amīr āk̲h̲ur* to S̲h̲āh Sulaymān (1077-1105/1667-94). His son S̲h̲ayk̲h̲ ʿAlī K̲h̲ān, who also held this office, became governor of Kirmāns̲h̲āhān and finally Iʿtimād al-Dawla, which office he held for fifteen years. He died in 1101/1689-90 (*ibid.*, viii, 490).

After the fall of the Ṣafawids, Kirmāns̲h̲āh was again occupied by the Ottomans in 1136/1723, the deputy-governor Ḥusayn ʿAlī Beg submitting without resistance. By the terms of the peace made by As̲h̲raf with the Ottomans in 1140/1727 Kirmāns̲h̲āh, Hamadān, Sanandad̲j̲, Ardalān and Nihāwand and various other places were allocated in perpetuity to Turkey (L. Lockhart, *The fall of the Safavi dynasty*, Cambridge 1958, 292). Kirmāns̲h̲āh was retaken by Nādir Ḳulī (later Nādir S̲h̲āh) in 1142/1729-30 (Mīrza Mihdī Astarābādī, *Tārīk̲h̲-i d̲j̲ahāngus̲h̲ā-yi Nādirī*, ed. Sayyid ʿAbd Allāh Anwarī, Tehran 1962, 119 ff.), and when peace was again made in 1145/1732 Kirmāns̲h̲āh remained with Persia. It was reoccupied by the Ottomans later in the year, but evacuated after a brief siege by Nādir. The Zangana *k̲h̲āns* were still powerful, and in 1156/1743-4 Ibrāhīm K̲h̲ān b. Ẓahīr al-Dawla Zangana was appointed *sipahsālār* of Kurdistān and Luristān-i Faylī (*ibid.*, 400). On the death of Nādir in 1160/1747, Mīrzā Muḥammad Taḳī, who had been made governor of Kirmāns̲h̲āh by Nādir, took the part of ʿĀdil S̲h̲āh against his brother Ibrāhīm. The latter, sent an army to Kirmāns̲h̲āh, which plundered the town and took temporary possession of the district (*ibid.*, 429), but when Ibrāhīm defeated and dethroned ʿĀdil S̲h̲āh, Muḥammad Taḳī made himself virtually independent. In 1179/1766 Karīm K̲h̲ān took the town of Kirmāns̲h̲āh after besieging the fortress for two years. The defenders were finally reduced by famine. ʿAlī Murād K̲h̲ān was then made governor of Kirmāns̲h̲āh. (See further Abu 'l-Ḥasan b. Muḥammad Amīn Gulistāna, *Mud̲j̲mal al-tawārīk̲h̲*, ed. Mudarris Riḍawī, Tehran A.H.S. 1344.)

In the 19th century the commercial and strategic importance of Kirmān<u>sh</u>āh increased. It became the capital of Persian Kurdistān. The latter formed a separate province from Ardalān [*q.v.*]. The capital of Ardalān, which was also known as Kurdistān, was Sinna. Already in 1800, Sir John Malcolm noted the importance of Kirmān<u>sh</u>āh as a mart for trade between Turkey and Persia (Melville papers, quoted by C. Issawi, *The economic history of Iran 1800-1914*, Chicago 1971, 268). Sir John Macdonald Kinneir states that it was a flourishing town in 1801, containing about 12,000 houses (*Geographical memoir of the Persian empire*, London 1813, 132), which would have given a population of some 60,000 persons.

Fatḥ ʿAlī <u>Sh</u>āh appointed his eldest son, Muḥammad ʿAlī Mīrzā, as governor-general of Kurdistān and Luristān in or about 1806, and it became one of the most thriving provinces of Persia. Muḥammad ʿAlī disposed of a considerable army, mainly cavalry, composed largely of Kurds and trained by French officers, and under his rule Kirmān<u>sh</u>āh formed a bulwark against the advance of the Ottomans. Because of the rivalry which existed between him and his brother ʿAbbās Mīrzā, the *wali ʿahd* and governor-general of Ā<u>dh</u>arbāy<u>dj</u>ān, and the likelihood of a struggle between them in the event of Fatḥ ʿAlī <u>Sh</u>āh's death, he felt the need to attach the population to his interests. Ferrier states that he "administered the affairs of his government in a truly paternal manner. His charities enriched the town and the people lived in the enjoyment of plenty" (*Caravan journeys*, 24). Zayn al-ʿĀbidīn also comments on the expansion of the town under Muḥammad ʿAlī Mīrzā's government. He states that the number of its buildings surpassed those of most other towns in Persia (*Bustān al-siyāḥa*, 492). In addition to buildings in the town, Muḥammad ʿAlī Mīrzā surrounded the town by walls, flanked with loop-holed towers, and by a moat three miles in circumference.

Prior to the Turco-Persian war of 1821, the southwestern boundary of Kirmān<u>sh</u>āh had been some seven miles west of Kirind at Sar-i Mīl. Muḥammad ʿAlī, having embarked on successful operations against the Ottomans, annexed Zuhāb and advanced on Ba<u>gh</u>dād, but was forced to abandon his advance by an outbreak of cholera, to which he himself succumbed. The war continued until 1823. By the terms of the treaty then concluded, the districts acquired by either party during the war were to be respectively surrendered and the frontier line was to be restored to where it had been in Ṣafawid times. Zuhāb, although claimed by the Porte, nevertheless remained part of the province of Kirmān<u>sh</u>āh. Having been acquired in war, it became *<u>kh</u>āliṣa* [*q.v.*] and was farmed by the chief of the Gūrān tribe (H. Rawlinson, *March from Zohab to Khuzistan*, in *JRGS* ix (1839), 36).

After the death of Muḥammad ʿAlī Mīrzā, the town of Kirmān<u>sh</u>āh decayed as a result of the extortion and tyranny of the governors who succeeded him. Zayn al-ʿĀbidīn, writing about 1832, states that there were then no more than 10,000 houses in Kirmān<u>sh</u>āh (*loc. cit.*), while Ferrier, writing in 1845, states that its splendid bazaars were deserted, nine-tenths of the shops were shut and three-fourths of the population had emigrated, the townspeople to Ā<u>dh</u>arbāy<u>dj</u>ān and the nomads to Turkey (*op. cit.*, 25). All sign of Muḥammad ʿAlī's fortifications had disappeared by the 20th century. Cholera, plague and famine added to the misfortunes of the town, notably the plague of 1830, which is said to have reduced the population to 12,000 (*Gazetteer of Persia*, 355; cf. also Zayn al-ʿĀbidīn, *loc. cit.*); and in 1832 floods washed away about one fifth of the populated area with heavy loss of life (*ibid.*). These disasters, coupled with the rapacity of the governors, reduced the province to a low ebb. Consul Abbott, writing in 1849-50 states that there were some 5,000 inhabited houses (United Kingdom, Public Record Office, F. O. 60: 165, *K. Abbott's report on the commerce of South Persia ...*), which would have given a population of about 25,000. Another report written in 1868 estimated the population at 30,000 (*Report on Persia, accounts and papers 1867-68*, 19, quoted by Issawi, 28). By the end of the century there had been some degree of recovery, and in 1914 the population was put at 60,000 (*Gazetteer of Persia*, 355). This figure, which was probably a conservative estimate, was the same as that given by Sir J. Macdonald Kinneir rather over a century earlier.

Various Ḳād<u>j</u>ār princes held the government of Kirmān<u>sh</u>āh after Muḥammad ʿAlī Mīrzā. The first was his son Muḥammad Ḥusayn Mīrzā Ḥi<u>sh</u>mat al-Dawla, who held office for some ten years. Another of his sons, Imām Ḳulī Mīrzā ʿImād al-Dawla, also held the governorship for some twenty-one years under Muḥammad <u>Sh</u>āh and Nāṣir al-Dīn <u>Sh</u>āh. In 1842 relations with Turkey again became critical, and a mixed commission was appointed to delimit the frontier, an operation which was not finally completed until 1914 (see further C. J. Edmonds, *Kurds Turks and Arabs*, London 1957, 125 ff.). When Nāṣir al-Dīn <u>Sh</u>āh passed through the province on his way to Karbalāʾ and Na<u>dj</u>af in 1871, a huge petition was presented to him complaining of the oppression of the governor. It was not answered. From 1881 to 1888 the province was included in the immense region coming under Ẓill al-Sulṭān, the governor of Iṣfahān [*q.v.*]. When he was deprived of all his governments except Iṣfahān, his nominees in Kirmān<u>sh</u>āh and Kurdistān were dismissed. For some years after that the government of Kirmān<u>sh</u>āh was given to the highest bidder, with the result that the people were greatly oppressed.

In the last quarter of the 19th century the volume of trade coming through Kirmān<u>sh</u>āh markedly increased (*Gazetteer of Persia*, 343-4). With the opening of the Suez Canal in 1869 and the establishment of a steamer service on the Tigris, it became the port of entry for all goods entering Persia from Ba<u>gh</u>dād and coming from England and India via the Persian Gulf and the Tigris. By the end of the century the province equalled, if it did not excel, any other province in its general state (*Gazetteer of Persia*, 336-7). Consul Preece wrote in 1899 that "There are but few towns in Persia which show to-day so flourishing a condition, from a trade point of view, as Kermanshah, and this in spite of oppression by the local Governor, and badness and unsafety of the roads radiating from it" (quoted by Rabino, 206). There was a customs post at Kirmān<u>sh</u>āh, which was normally farmed. In 1881 the sum paid was 20,000 *krāns*. For the year ending 20 March 1897 the figure had risen to 480,000 *krāns* and for the year ending 20 March 1899 to 670,000 *krāns*. On 21 March 1899 the customs were taken over by the Belgians (see further *Gazetteer of Persia*, 350 ff.).

Kirmān<u>sh</u>āh also benefited greatly from the pilgrim trade, lying as it did on the direct route from Persia to Na<u>dj</u>af and Karbalāʾ. In the late 19th and early 20th centuries it was estimated that 150,000 to 200,000 pilgrims passed annually through the town. They brought money to exchange or tried to pay their way by selling things, and so gradually

added to the well-being of the town (*Gazetteer of Persia*, 344).

In 1914 there were about 200 merchants in Kirmān<u>sh</u>āh dealing mostly in Manchester goods obtained direct from Manchester or through Ba<u>gh</u>dād, in sugar from Marseilles, and in opium, gums, goatskins, carpets and wool, which they exported to Ba<u>gh</u>dād and England. One of the most prominent of these was Ḥād<u>jd</u>jī ʿAbd al-Raḥīm Wakīl al-Dawla, who combined trade with banking and landownership (for the career of his father and the rise of the family to wealth and influence, see Silbermann, 207). There were about twenty Ottoman Jews, who had in their hands the greatest part of the foreign and export trade. Kā<u>sh</u>ī merchants imported from Kāshān tobacco, native silk goods, copper-ware, to a total amount of some 100,000 *tūmāns*, which they covered by exports to Kā<u>sh</u>ān of prints and foreign goods received from Ba<u>gh</u>dād. Yazdī merchants imported henna and Yazdī silk from Yazd to the amount of 20,000 *tūmāns*, and exported an equal amount of foreign goods to Yazd. Iṣfahānī merchants imported native prints and cotton goods, such as *ḳalamkārs*, prints, *laḥāfs*, *ʿabās*, etc., and *gaz* and *gīvas* from Iṣfahān, and exported to Iṣfahān Manchester prints, iron, tea, cowhides, wool and *gilīms*. Their imports came to 100,000 *tūmāns*, but were exceeded by their exports. Hamadān merchants imported naphtha, rice, Russian prints, glassware and hardware (coming from Ra<u>sh</u>t), and exported to Hamadān dates from Mandalī, gall-nuts, grease, ghee, raw hides, tea, spices, iron, lead, Manchester goods and window glass. The exports exceeded the imports. Some Hamadān merchants worked exclusively as commission agents for releasing goods from the customhouse and forwarding them to Hamadān (*Gazetteer of Persia*, 355-6). There were also a few Persian Jews, who lived by small trade and hawking, and a very small number of Chaldean Christians, some engaged in trade and some living by the manufacture of *arak*.

Kirmān<u>sh</u>āh played little part in the constitutional revolution, but in 1911 Sālār al-Dawla entered Kirmān<u>sh</u>āh in the name of the ex-shah Muḥammad ʿAlī. In the following year he advanced on Tehran with a force of Kalhurs, San<u>dj</u>ābīs and other Kurdish tribes. He was defeated near Hamadān and government troops retook Kirmān<u>sh</u>āh. Operations continued until the autumn, during which time Kirmān<u>sh</u>āh repeatedly changed hands. In the first world war Kirmān<u>sh</u>āh was one of the centres of the *muhād<u>dj</u>arat* movement. A local committee for national defence was set up (*kumita-yi difāʿ-i millī*) and in December 1915 the central committee, which had retired from Tehran to Ḳumm and Iṣfahān in November of that year, withdrew to Kirmān<u>sh</u>āh. A provisional government had barely been established when the *muhād<u>j</u>irīn* evacuated Kirmān<u>sh</u>āh in March 1916 in the face of a Russian advance. Turkish forces later occupied the town but evacuated it in 1917 (see further Yaḥyā Dawlatābādī, *Ḥayāt-i Yaḥyā*, Tehran n.d., iii, 323 ff., Ḥusayn Samīʿī Adīb al-Salṭana and Amān Allāh Ardalān ʿIzz al-Mamālik, *Awwalīn ḳiyām-i muḳaddas-i millī*, Tehran A.H.S. 1332, 30 ff., 75 ff., P. M. Sykes, *History of Persia*³, London 1963, ii, 446 ff.).

(A. K. S. LAMBTON)

KIRMĀSTĪ, chef-lieu of a *ḳaḍaʾ* in Anatolia, 15 miles south-east of Mi<u>kh</u>ali<u>dj</u> (cf. J. H. Mordtmann, in *ZDMG*, lxv [1911], 101) and 40 miles S.W. of Bursa with about 16,900 inhabitants (1960). The town lies on both banks of the Edrenos Čay (Rhyndacus), now called the Mustafa Kemal Paşa Çay. The origin of the name, often wrongly written Kirmāslī, which points to a Greek *Κερμαστὴ or *Κρεμαστὴ, is uncertain, nor is it known what ancient town was here. Perhaps the Kremastis in the Troas (cf. Pauly-Wissowa, ii, 743) mentioned in Xenophon, *Hist.* iv, 8, is to be connected with it. In the Byzantine period Aorata is said to have been here, where the troops of Alexius Comnenus under Kamytzes were defeated in 506/1113 by the Sal<u>dj</u>ūḳs (cf. Anna Comnena, ii, 279 ff.). In any case there is close to Kirmāstī a Byzantine castle in ruins which resembles that 6 miles farther up the Edrenos Čay at Kesterlek and presumably was intended with similar defences at Ulubad (Lopadium) and Bursa to keep back the advance of the Ottomans. In the town, which has 6 mosques, including one large very old one with a *türbe*, and 14 *masd<u>j</u>ids*, there are ancient remains (sarcophagi, inscriptions on the walls, ornaments) which do not seem yet to have been studied. The history of Kirmāstī under the Ottomans is quite obscure, as there are no records. Ewliyā Čelebi (v, 290) and European travellers (cf. W. Hamilton, *Researches in Asia Minor*, London 1842, i, 77, 80, ii, 93) say practically nothing about it. The Muslim inscriptions have still to be studied and edited. Kirmāstī, which did not suffer from the Greek occupation, was in 1925 renamed Muṣṭafā Kemāl Pa<u>sh</u>a in honour of the Turkish President. Kirmāstī is the birth-place of Seyyid-i Wilāyet (d. 929/1522-3 in Istanbul), son-in-law of the historian ʿĀ<u>sh</u>ıḳ-Pa<u>sh</u>a-zāde (cf. Ta<u>sh</u>köprüzāde-Me<u>dj</u>dī, *<u>Sh</u>aḳāʾiḳ al-nuʿmāniya*, 352, 13), known from the *Menāḳib-i Tā<u>dj</u> al-ʿĀrifīn* (i.e. <u>Sh</u>ey<u>kh</u> Ebū 'l-Wefā); cf. Pertsch, *Lat. Türk. Handschr. Gotha*, 137, No. 166 and Tornberg, *Cat. Uppsal.*, 211, No. cccvii.

Two hours' journey from Kirmāstī are two hot mineral springs, called Dümbüldak and Aḳar<u>dj</u>a.

ĶIRMISIN [see ĶIRMĀNSHĀH]

ĶIRSH [see SIKKA]

ĶIRSHEHIR, modern Turkish Kırşehir (formerly *Ḳîrshehri* "town of the steppes", incidentally also called euphemistically *Gulshehri* "town of the roses"), a town in central Anatolia, *ca.* 490 m. above sea level, situated at 37° 9′ N. lat., and 34° 10′ E. long., on a small river called the Ķîlîč Ozü which flows into the Ķîzîl Irmaķ [*q.v.*], the ancient Halys. The town, with a total population of 14,168 in 1950, lies on the road from Ankara (195 km. distance) to Kayseri (140 km. distance). Another road leads after some 15 km. to the Kesik Köprü, a long bridge over the Ķîzîl Irmaķ of 13 pointed arches, built in 640/1248 by a Saldjūķ vizier called ʿIzz al-Dīn Muḥammad (see Taeschner in *Festschrift Ernst Kühnel. Aus der islamische Kunst*, Berlin 1959, 290-2, and A. Dietrich in *ZDMG*, cx (1961), 310-13). Close to the bridge, on the eastern bank of the river, is a *khān* or caravanserai, erected in 667/1268 by Nūr al-Dīn Djibrāʾīl b. Bahāʾ al-Dīn Djadja, *amīr* of Ķîrshehir (see K. Erdmann, *Das anatolische Karavansaray des 13. Jahrhunderts*, Istanbuler Forschungen, xxi/1, Berlin 1961, no. 21, 74-7). In the neighbourhood of the town are medicinal springs.

Ķîrshehir is certainly an old settlement, as may be deduced from the *hüyük* (a hill indicating ancient cultivation) in the centre of the town, which, however, has not as yet revealed its secrets. The ancient name of the town is not known; the denominations proposed for antiquity are disputed. So far as is recorded by inscriptions and architectural monuments, its history starts only in the early Turkish (Rūm-Saldjūķid) period. Then and shortly afterwards, from the middle of the 7th/13th until the middle of the 8th/14th centuries, the town must have been an important cultural centre.

After the battle of Malāzgird (1071), the Turks took possession of great parts of Anatolia, and Ķîrshehir became also Turkish, but the control of the city changed more than once: sometimes it fell to an *amīr* of the Danishmandids of north-eastern Anatolia (Sivas and Malatya), sometimes to a sultan of the Anatolian collateral line of the Saldjūķids, the so-called Rūm-Saldjūķids who resided in Ķonya. Under sultan Ķîlîč-Arslan II, the amirate of the Danishmandids was incorporated (*ca.* 1173) in the territory of the Rūm-Saldjūķids, who remained the overlords of the town until the end of their power in 1307. Then governors of the Mongol Il-Khāns of Iran started to rule the whole region, including Ķîrshehir, which served as a place of coinage for them until 728/1328. In his *Nuzhat al-ķulūb* (ed. G. Le Strange, i. Text, London 1915, 99, *ll.* 13 ff., ii. Tr. London 1919, 99, *ll.* 22 ff.), Ḥamd Allāh Mustawfī designates Ķîrshehir as "a big town with high sacred constructions (*ʿimārāt*), which enjoys a fine climate; the revenue of its *Dīwān* amounts to 57.000 *dīnārs*".

After the disintegration of the Il-Khānid state, Ķîrshehir again became a controversial issue between independently-behaving governors, like those of the Eretnids [see ERETNA] and other dynasties, until it was taken by the Ottoman sultan Bāyazīd I. After the latter's defeat near Ankara in 1402, the town was at first added by the conqueror Tīmūr to the territory of the Ķaramānids (Ķonya and Laranda), but afterwards changed masters several times until it became definitely Ottoman when Selīm I incorporated the principal ty of the Dulķadîr, to which Ķîrshehir had belonged ultimately. As capital of a *liwā* (*sandjāķ*), the town was attached to the *eyālet* (*wilāyet*) of Ķaramān.

When the *wilāyet* system was reorganised in the middle of the 19th century, the *sandjaķ* of Ķîrshehir was assigned to the *wilāyet* of Ankara. The town became a *wilāyet* in 1924 when the former *wilāyets* were abolished and the *sandjaķs* raised to *wilāyets*. But in 1954 the *wilāyet* of Ķîrshehir was suppressed; parts of its territory were added to the *wilāyets* of Ankara and Yozgad, but the greater part was assigned to the newly-formed *wilāyet* of Nevşehir.

The heyday of Ķîrshehir was the late-Saldjūķid and Il-Khānid period between *ca.* 1240-1340. The town must then have been really important; there was in any case an active intellectual life of a mystical-religious character, as may be seen from imposing architectural monuments which have survived until today (see Ali Saim Ülgen, *Kırşehir'de Türk eserleri*, in *Vakıflar Dergisi*, ii [Ankara 1942], 253-61, figs. 1-25; Halim Baki Kunter, *Kırşehir kitâbeleri*, in *ibid.*, 432-36, figs. 4-23; W. Ruben, *Kırşehir'in dikkatımızı çeken san'at abideleri. A*, in *Belleten*, xi [Ankara 1947], no. 44, 603-40, pls. CX-XCVI; idem, *B*, in *Belleten*, xii [Ankara 1948], no. 45, 173-93, pls. XXXVII-XLVI; idem, *Eigenartige Denkmäler aus Kırşehir*, in *ibid.*, 194-205; Cevat Hakkı Tarım, *Kirşehir tarihi üzerinde araştırmalar*, Kırşehir 1938; idem, *Tarihte Kırşehri - Gülşehri ve Babailer - Ahiler - Bektaşiler*, Istanbul 1948).

The oldest cultural institution in Ķîrshehir is possibly the *madrasa* of Malik Muẓaffar b. Bahrāmshāh, called Malik Ghāzī, of the Mangūčekdynasty, whom sultan ʿAlāʾ al-Dīn Kayķubād I had invested with Ķîrshehir as compensation for the principality he had taken away from Ghāzī's family. Of the *madrasa* allegedly built in 644/1246, only the relatively simple portal has been preserved. When the ruins of the *madrasa* were carried away, the portal was used in 1312/1893 for the reconstruction of the ʿAlāʾ al-Dīn Mosque on the hillock of the town. The still-standing graceful mausoleum of Malik Muẓaffar, the Malik Ghāzī Kümbedi, constructed by his consort in the style typical for the high-Saldjūķid period, indicates the original site of the *madrasa*.

For the next period, the *madrasa* of the *amīr* Nūr al-Dīn Djabrāʾīl b. Bahāʾ al-Dīn Djadja served as a centre of intellectual life. It belonged to an extensive foundation on which a deed of foundation (*waķfiyye*) in Arabic and Mongol, dated 670/1272, provides information (see Ahmed Temir, *Kırşehir emiri Cacaoğlu Nur el-Din'in 1272 tarihli Arapça Mogalça vakfiyesi*, Ankara 1959). Of the constructions belonging to this foundation, only a group of buildings in the centre of the town has survived. It consists of the *madrasa*, built in 671/1272-3 and presently used as the Friday mosque, its minaret and the tomb of the founder. The tomb is included in the north-eastern angle of the *madrasa* and can only be reached from the inside; on the outside, it is only marked by a window in the northern wall, of the same style as the portal of the *madrasa*.

To the north-west of the Malik Ghāzī Kümbedi, at a distance of *ca.* 200 m. from the Djadja Beg Madrasa, lies the Lâla Cami ("Tulip mosque"). A tale has it that its name is derived from a tulip of particular beauty, which the builders received from a pupil of the Djadja Beg Madrasa; proceeds of its sale then allegedly enabled him to build the Lâla Cami. The building, which lies in ruins and does not bear any inscription so that nothing is known about its construction and original use, apparently was not a mosque at the outset; during the Il-Khānid period it served as the mint, but was used as a mosque later,

probably still in the 14th century, as is shown by its *miḥrāb* built in Saldjūḳid style.

In the north-eastern part of the town, on a hillock in the Imaret ward, lies the tomb of Shaykh Süleymān-i Turkomānī, who is said to have introduced to Ḳirshehir the Mewlewī order, and to have built a Mewlewī khān, nothing of which has survived. The tomb has no inscription and so nothing is known about its construction or about the death of the man who is buried there. A wooden panel on the tomb gives 693/1294 as the year of his death, but this can not be correct since there exists a foundation deed (*waḳfiyye*) of Shaykh Turkomānī, dated Muḥarram 697/October-November 1297 (see C. H. Tarım, *Kırşehir tarihi*, 82-5). The biographical work *Nafaḥāt al-uns* of the Persian poet Djāmī (Turkish tr. Lāmiʿī, Istanbul 1289/1872, 652; M. F. Köprülüzāde, *Türk edebiyyātında ilk mütaṣawwiflar*, Istanbul 1918, 236, n. 1) mentions 714/1314 as the year of his death; this seems more probable. Until recent times, descendants of Shaykh Süleymān-ī Turkomānī have been known in Ḳirshehir, as may be seen from *inter alia* their tombs, all of which carry Mewlewī characteristics. It seems probable that the dignity of Shaykh of the Mewlevī community in Ḳirshehir was hereditary in their family.

The poet Gülshehri in all probability also originated from Ḳirshehir. He was one of the first to write poetry in Rūm Turkish, and by doing so was largely instrumental in this language's, the later Ottoman-Turkish, finding its place among the literary languages of Islam. Nothing is known about his life, nor is there any trace of his tomb in Ḳirshehir or elsewhere. But on the basis of his pen-name (*makhlaṣ*) Gülshehrī [*q.v.*] there can be no doubt that he originated from Ḳirshehir. Because his *Mantiḳ al-ṭayr* contains many references to the prophet Süleymān (Solomon), it has been supposed that Gülshehrī can be identified with Shaykh Süleymān-ī Turkomānī. The identification, however, is in no way proved and remains controversial.

From an artistic point of view, the most important building in Ḳirshehir is the *türbe* of the poet ʿĀshiḳ Pasha [*q.v.*; see also M. Fuad Köprülü, in *İA*, s.v.], born at Ḳirshehir in 670/1272. His grandfather Bābā Ilyās had been the founder of the Bābāʾī sect, and one of his followers, Bābā Ilyās, had been the leader of the great dervish revolt which had been crushed with great difficulty in 1242 on the Māliyye plain near Ḳirshehir. ʿĀshiḳ Pasha, himself a dervish also, died in the odour of sanctity on 13 Ṣafar 733/3 November 1333; his tomb at Ḳirshehir became a highly-visited place of pilgrimage. The magnificent *türbe*, which guards the mortal remains of the poet, was built after his death and has a style of architecture all of its own. It has nothing in common any more with the Saldjūḳid tombs, generally called *kümbed* ("cupola"), but it departs also from the customary style of the Ottoman *türbes*. A characteristic feature of ʿĀshiḳ Pasha's *türbe* is that before it extends a closed entrance hall which is accessible at the side through a grand portal.

From an historical point of view, the most remarkable monument of Ḳirshehir is perhaps the modest sanctuary of Akhī Ewrān which consists of the saint's *türbe*, a *tekiyye* and a mosque. On the role of this sanctuary in the economic life of Ḳirshehir, see AKHĪ BABA and AKHĪ EWRĀN. When in 1925 the dervish monasteries were closed, the role of the *tekiyye* of Akhī Ewrān came also to an end, and so Ḳirshehir was reduced to the status of a provincial town.

Taeschner, *Kırşehir, ein altes Kulturzentrum aus spät- und nachseldschukischer Zeit*, in *Necati Lugal armağanı*, Ankara 1968, 577-92. (F. TAESCHNER)

ḲIRṬĀS stands for 1. papyrus, papyrus roll, 2. parchment, and 3. later also rag paper; from the Arabic texts, it is not always clear which material is meant. The word *ḳirṭās*, *ḳarṭās*, *ḳurṭās*, or *ḳirṭas*, *ḳarṭas*, has been adopted from the Greek word χάρτη through the Aramaic; from the Arabic, it has been adopted by the Spanish as *alcartaz* meaning "bag", and by the Portugese as *cartaz* meaning "paper, permit; placard". In the Ḳurʾān, it is mentioned in the singular, *ḳirṭās* (Sūra VI, 7), and in the plural, *ḳarāṭīs*, meaning "[written] papyri" (Sūra VI, 91). Sometimes a genuine Arabic word is used: *waraḳ al-ḳaṣab*, "reedy sheet", and *waraḳ al-bardī* or *al-abardī*, "sheet made of the papyrus plant" [see ḲAṢAB, PAPYRUS]. The Arabs attribute the invention of the *ḳirṭās*, "papyrus", to the biblical Joseph (Ibn Ḳutayba, *Maʿārif*, Göttingen 1850, 274, etc.). Nothing is said about its production. Only in the *Fihrist* of Ibn al-Nadīm (d. 380/990), 21, and in al-Bīrūnī's *India*, 81, completed in 421/1030, are there two statements: that *ḳirṭās* is obtained from the reed of the papyrus (*ḳaṣab al-bardī*), or else from its pulp (*lubb al-bardī*). Only in the 7th/13th century after the termination of the production of papyrus in the 5th/11th century, Ibn al-Bayṭār (d. 646/1248) related in his *Djamiʿ li-mufradāt al-adwiya wa 'l-aghdhiya*, Cairo 1291/1874-5, i, 87 from his teacher Abu 'l-ʿAbbās al-Nabātī (d. 637/1239), that the Egyptians, in former times, used to split the stalk of the papyrus in two parts, cut [the pulp obtained thereby] into strips, put them [crosswise, in two layers] on an even pad made of wood, spread size on them which they had obtained from the seeds of the blue lotus (*Nymphaea coerulea* Sav.), dry [the strips combined thereby], and beat them carefully with a beetle until they got an even [piece].

Ḳirṭās was not usually sold as pieces, but rather as rolls of pieces stuck together. From these rolls, pieces could be cut, irrespective of the glued joints which were usually not visible. The smallest piece used in trade was a sixth of a roll, which was called a *ṭūmār* (Greek τομάριον) or *ṭūmār ḳirṭās* (Greek τομάριον χάρτου). On the front surface (*recto*), the strips of the papyrus ran horizontally, hence parallel to the writing, while on the reverse-surface (*verso*), the strips ran vertically. In the early ʿAbbāsid period several sheets were, sometimes, bound into a booklet (*kurrāsa*). Because of the high price of the material, it was usual to write on the reverse surfaces as well or to wash the written papyri and write on them again (thus forming an opistograph or palimpsest). The sizes of the sheets were probably generally the same as those of the Ancient World. The usual size was 30-40 cm. high and 20-30 cm. wide, but the width later was increased. The manufactories producing the different kinds of papyrus were run by the government or were under governmental supervision; it seems that this governmental control was certified by an official note on the back side of the first sheet of a roll.

The word *ḳirṭās* did not remain confined to

"papyrus", "roll of papyrus", but was used for "bag" and, in medical science, for "dressing", "a kind of absorbent gauze", and things like that (cf. Ibn al-Bayṭār, *op. cit.*, i, 87, and his sources, sc. Dioscorides, Galen, Ibn Sīnā, etc.), or else was applied to writing paper obtained from other materials, e.g. "parchment" [see DJILD, RAḲḲ] and "rag paper" [see KĀGHAD].

Bibliography: A. Grohmann, *Arabische Papyruskunde* (Handbuch der Orientalistik, erste Abt., Ergänzungsband ii, erster Halbband, Leiden-Cologne 1966), 49-118 (with bibliography); idem, *Arabische Paläographie*, i (Österr. AL-KISĀ'Ī, ABU 'L-ḤASAN ʿALĪ B. ḤAMZA B. ʿABD ALLĀH B. BAHMAN B. FAYRŪZ, *mawlā* of the Banū Asad, well-known Arab philologist and Ḳur'ān-reader (*ca.* 119-89/737-805). Descendant of an Iranian family from the Sawād, he was born in Bāhamshā, Dudjayl, north of Baghdād (Yāḳūt, *Muʿdjam*, i, 458 s.v.; M. Streck, *Die alte Landschaft Babylonien*, Leiden 1901, ii, 226) and when still a boy, came to al-Kūfa (Zubaydī, *Ṭabaḳāt*, 138; Ibn al-Djazarī, *Ghāya*, i, 535). It is related that he had difficulties with the *ʿarabiyya* and therefore sought to attach himself to the grammarian Muʿādh al-Harrā' (*Ta'rīkh Baghdād*, xi, 404). Al-Khalīl's [*q.v.*] authority in the field of Arabic philology allegedly caused him afterwards to go to al-Baṣra; at his advice, al-Kisā'ī is said to have stayed for some time among the Bedouins in order to become fully conversant with the secrets of the *ʿarabiyya* by direct association with them. As is shown by the explanations and interpretations of details which are to be found in grammars and lexicographical works of the native philological literature and which are to be traced back to al-Kisā'ī, it is in any case certain that he attributed more importance to linguistic usage then to learned systematisation, as was aspired to by Sībawayh [*q.v.*], another pupil of al-Khalīl, who laid this down in his voluminous *al-Kitāb*. Even if al-Kisā'ī, in his discussions and investigations, made use of the generally accepted method of analogy (*ḳiyās* [*q.v.*]), he nevertheless, in his learned observations, left, as was fitting, wide space to the anomalous ways of speech as presented especially by colloquial speech or dialect; he took care not to squeeze into a system such anomalies, exceptions and discrepancies from the general rule (against Yāḳūt, *Udabā'*, v, 190; Suyūṭī, *Bughya*, 336). In this way, he and those who followed him in this method preserved for us vestiges of the everyday language, which was not acknowledged by other scholars and therefore concealed and suppressed. Three or four generations later, in connexion with the controversies between al-Mubarrad and Thaʿlab [*q.vv.*] in Baghdād, the more independent treatment of the Arabic language by al-Kisā'ī, and not least that of his pupil al-Farrā [*q.v.*], became straightaway the method of the grammatical school of Kūfa; *ex eventu*, he and his teacher al-Ru'āsī [*q.v.*] have entered the history of Arab philology as the real founders of that school. In his introduction to Ibn al-Anbārī's *Kitāb al-Inṣāf* (Leiden 1913), G. Weil pertinently characterised this method as the "anomalous" one, in opposition to the strictly "analogous" one of the school of Baṣra, which has generally prevailed among the Arab grammarians. Apart from the material preserved in the *Kitāb al-Inṣāf* with respect to the school of Kūfa and in particular to al-Kisā'ī's teachings, see also Thaʿlab, *Madjālis Thaʿlab*[2], Cairo 1960, index; al-Zadjdjādjī, *Madjālis al-ʿulamā'*, Kuwait 1962, index; al-Suyūṭī, *al-Muzhir*[4], Cairo 1958, i-ii, index; idem, *al-Ashbāh wa 'l-naẓā'ir*[2], Ḥaydarābād 1360/1941, iii, 15, 18, 42; al-Sayyid Ṣadr al-Dīn al-Kanghrāwī (?) al-Istanbūlī (1278-1349/1861-1931; Kaḥḥāla, *Muʿdjam*, v, 17, 292), *al-Mūfī fi 'l-naḥw al-kūfī*, ed. M. Bahdjat al-Bayṭār, in *MMIA*, xxiv (1949), 417-32, 560-82; xxv (1950), 223-46, 399-414, 511-34; xxvi (1951), 85-100, 199-222, 407-22, 577-89 (cf. too A. al-Ḥimṣī, Ẓāhiriyya, Naḥw, 519: al-Kanghrī).

Al-Kisā'ī's learned studies, more concerned with a description of reality than with scholastic systematisation, apparently sprang from a basic attitude, which must also have enabled him to maintain for many years those manifold good and close relations with the ʿAbbāsid court in Baghdād, where he had moved. There the scholar, as original in knowledge as he was in ideas, was all the more welcome as teacher of the princes since he was also able to act as a Ḳur'ān-reader (Azharī, *Tahdhib*, 15). The caliph al-Mahdī had entrusted to him the education of the young al-Rashīd, who in his turn later caused his sons al-Amīn and al-Ma'mūn to be taught by al-Kisā'ī (Yāḳūt, *Udabā'*, v, 186, 194 ff.). Al-Rashīd promoted his teacher al-Kisā'ī among his personal companions and confidants (*al-djulasā' wa 'l-mu'ānisīn*) and requested him to accompany him on the *ḥadjdj* and other journeys (Yāḳūt, *Udabā'*, v, 183, 186), thus manifesting the intimate relation between pupil and teacher. During one of these journeys, probably the road to Khurāsān in 189/805 (Ṭabarī, iii, 701 ff.), al-Kisā'ī died at the age of seventy (Ḳifṭī, *Inbāh*, ii, 269), probably in Ranbūya in the neighbourhood of Rayy. Fragments of an elegy on him and on the jurist Muḥammad b. al-Ḥasan al-Shaybānī [*q.v.*] by his antagonistic colleague Yaḥyā al-Yazīdī [*q.v.*] have survived (Marzubānī, *Muḳtabas*, 290; Zubaydī, *Ṭabaḳāt*, 142; *Ta'rīkh Baghdād*, xi, 413 ff., and ii, 182; Yāḳūt, *Muʿdjam*, ii, 824 f.; idem, *Udabā'*, v, 183, 199; Ibn al-Djazarī, *Ghāya*, i, 540); for the *laḳab* "Kisā'ī", see *Ta'rīkh Baghdād*, xi, 404 f.; Suyūṭī, *Muzhir*, ii, 445; etc.; O. Rescher, *Beiträge zur arabischen Poesie*, 1963-4, viii/1, 108.

It is evident that the opinion of al-Kisā'ī's colleagues on a man who seemed to be favoured personally by fate because of his good relations with the court of the caliph, was not always positive (Abu 'l-Ṭayyib, *Marātib*, 74), all the more so because—as indicated above—in controversial questions he preferred to rely on the reality of the spoken language rather than on speculative assertions of the learned (Yāḳūt, *Udabā'*, v, 180). It was the Bedouins, undisputed authorities on the current language, who assisted him at the famous discussion with Sībawayh on the so-called *al-mas'ala al-zunbūriyya* (Zadjdjādjī, *op. cit.*, 8-10; Marzubānī, *Muḳtabas*, 288; Ḳifṭī, *Inbāh*, ii, 358 f., etc.; A. Fischer, in *A volume of oriental studies presented to E. G. Browne*, Cambridge 1922, 150-6). He is also reproached with being a pederast and fond of date-wine (*nabīdh*) (Marzubānī, *Muḳtabas*, 284, 289; Yāḳūt, *Udabā'*, vi, 185, 194, 198).

Al-Kisā'ī's authority as a Ḳur'ān-reader was generally recognised, both at the court and among the public of Baghdād, al-Raḳḳa and elsewhere (*Ta'rīkh Baghdād*, xi, 403). At first, he represented the reading of his teacher Ḥamza al-Zayyāt [*q.v.*], but in the course of time he developed his own (*Fihrist*, 30). How highly al-Kisā'ī's reading was appreciated is shown by the fact that it became the seventh of the seven canonical readings [see ḲIRĀ'A].

Probably his reading was as little established by its reader, al-Kisā'ī, as were the others by their readers. This was first done by al-Kisā'ī's pupil Abū ʿUbayd [*q.v.*], when he compiled 32 *ḳirā'āt*. As in parallel cases, the *Mufradat al-Kisā'ī*, which exists in Ms. Tehran University 4867,1 (M. T. Dānish-Pazhūh, xiv, 3897), could be a later extract from the *Shāṭibiyya*, the *Taysīr* or a similar work (see R. Sellheim, *Materialien zur arabischen Literaturgeschichte*, Wiesbaden 1976, i, 38 f.).

Of al-Kisā'ī's 14 or 15 works enumerated in the *Fihrist*, 65 ff., 165—for some of them, see Azharī, *Tahdhīb*, 15 ff. and Zubaydī, *Ṭabaḳāt*, 278 (or should we read Sībawayh here instead of al-Kisā'ī?)—nothing apparently has come down to us. According to the titles, they were devoted to questions of grammar, lexicography and the Ḳur'ān, and also of poetry, of which he allegedly did not have much knowledge (Yāḳūt, *Udabā'*, v, 193; Ibn Khallikān, ii, 457). According to Brockelmann, I, 118, S I, 178, three other treatises which are connected with his name and are lacking in the enumeration of the *Fihrist*, have been preserved: *Risāla fī laḥn al-ʿāmma* (ed. Brockelmann, in *ZA*, xiii (1898), 29-46; cf. Th. Nöldeke, *ibid.*, 111-15, ʿAbd al-ʿAzīz al-Maymanī, Cairo 1925, and R. ʿAbd al-Tawwāb, *Laḥn al-ʿāmma*, Cairo 1967, 111 f.); *Kitāb al-Mutashābih fi 'l-Ḳur'ān* (other mss. e.g. in Ẓāhiriyya [ʿIzzet Ḥasan, Ḳur'ān, 391], Chester Beatty [A. J. Arberry, 3165,1] or Baghdād, Awḳāf [ʿA. al-Djubūrī, i, 144, no. 433]; a remark on the *ṭalāḳ* formula in a verse (British Museum [Ch. Rieu, Supplement 1203, 12]), preserved in detail in Zadjdjādjī, *op. cit.*, 338-42 (for similar traditions, see e.g. Marzubānī, *Muḳtabas*, 285, *Ta'rīkh Baghdād*, xi, 406).

Bibliography (in addition to the works mentioned in the article): G. Flügel, *Die grammatischen Schulen der Araber*, Leipzig 1862 (reprint: Nendeln 1966), 121-6; Brockelmann, I, 117 f., S I, 177 f.; O. KISĀ' [see LIBĀS].

KISĀ'Ī, MADJD AL-DĪN ABU 'L-ḤASAN, a Persian poet of the second half of the 4th/10th century. In some later sources his *kunya* is given as Abū Isḥāḳ, but the form given above can be found already in an early source like the *Čahār maḳāla*. The *Dumyat al-ḳaṣr* by al-Bākharzī contains a reference to the "solitary ascetic" (*al-mudjtahid al-muḳīm bi-nafsihi*) Abu 'l-Ḥasan ʿAlī b. Muḥammad al-Kisā'ī of Marw who might very well be identical with this poet (cf. A. Ateş, *giriş* to his edition of *Kitāb Tarcumān al-balāġa*, 97 f.). The pen name Kisā'ī would, according to ʿAwfī, refer to the ascetic way of life adopted by the poet, but it can also be explained otherwise, e.g. as a *nisba* derived from the trade of tailoring. From the very beginning the title *al-Ḥakīm* has been attached to his name.

His origin from Marw is confirmed by the early sources. It is also certain that he made at least a part of his career as a poet in that city. In one of his poems, a lament of old age, he has inserted a precise dating of his birth: Čahārshamba, 26 Shawwāl 341 (Wednesday, 16 March 953) as well as the statement that he had reached the age of fifty. From this poem, the conclusion has been drawn that he must have died in or shortly after the year 391/1000-1. The actual date of his death is, however, unknown.

The *dīwān* of Kisā'ī was still extant in the 6th/12th century. After that time, its transmission appears to have been discontinued. Hardly any complete poem has survived. The fragments that have been collected so far from a great variety of sources are generally not longer than a few lines. It is, therefore, difficult to assess the statements concerning the nature of his work that have been made both by ancient and modern writers. It can be regarded as certain, anyhow, that Kisā'ī did enjoy a great reputation as a religious poet during the two centuries following upon his death as well as in his own lifetime. ʿAwfī describes him in the first place as a poet who practised the genres of devotional poetry (*zuhd*) and religious admonition (*waʿẓ*), and quotes a few specimens of his eulogies (*manāḳib*) on the members of the House of the Prophet. The *Kitāb al-Naḳḍ*, an apology of the Imāmī Shīʿa written about the middle of the 6th/12th century, establishes Kisā'ī with some emphasis as a Shīʿī poet.

The Ismāʿīlī poet Nāṣir-i Khusraw (died *ca.* 465/1072), who cultivated the same genres as Kisā'ī, acknowledged his indebtedness to this predecessor, indirectly, by using a claim to the superiority of his own poems over those by Kisā'ī as a *topos* of the epilogue in a number of *ḳaṣīdas*. As E. G. Browne has pointed out, these instances of poetical *fakhr* need not be taken as evidence of a sectarian controversy between these two poets (as it had been suggested by H. Ethé). The opposite conclusion reached by Saʿīd Nafīsī—namely, that they both belonged to the same branch of the Shīʿa—is equally untenable. The exchange of poems between Kisā'ī and Nāṣir-i Khusraw quoted by Riḍā-Ḳulī Khān Hidāyat from the *Khulāṣat al-ashʿār* by Taḳī Kāshī, is an anachronistic forgery made up from poems that actually belong to the *dīwān* of the latter only.

The paucity of the primary sources available now does not permit us to estimate how far Kisā'ī specialised in the writing of religious poetry. It is also impossible to define the social groups to which he addressed himself in these poems. It is evident, on

the other hand, that he did not stay aloof entirely from the profane practice of poetry. He was patronised by a minister of the Sāmānid *amīr* Nūḥ b. Manṣūr, and in his later days he wrote at least one panegyric ode to Sultan Maḥmūd of Ghazna. ʿAwfī praises his descriptions and quotes several specimens which show that Kisāʾī used all the poetical themes current in his age.

Bibliography: The fragments of Kisāʾī's poetry were collected for the first time by Ethé, *Die Lieder des Kisāʾī*, in *SB Bayr. Akad.* (1874), ii, 133-53. This collection, based on manuscripts of a number of *tadhkiras*, is now outdated. More material has come to light from various other sources, such as dictionaries and *madjmūʿa*-manuscripts. New collections have been published, in particular by M. Dabīr-Siyāḳī, *Gandj-i bāz-yāfta*, ii, and *Pīshāhangān-i shiʿr-i pārsī*, Tehran 1351/1972; see also *Lughat-nāma*, no. 182 (1351/1972), s.v. *Kisāʾī*. The most important primary sources on his life and work are of Naṣīr al-Dīn, al-Ḳazwīnī al-Rāzī, *Kitāb al-Naḳḍ*, ed. Djalāl al-Dīn Muḥaddith-i Urmawī, Tehran 1331/1952, 252, 628; Muḥammad b. ʿUmar al-Rādūyānī, *Tardjumān al-balāgha*, ed. A. Ateş, Istanbul 1949, printed text 13, 22, 46, 47, 104; Asadī, *Lughat-i Furs*, ed. M. Dabīr-Siyāḳī, Tehran 1336/1957, passim; Nāṣir-i Khusraw, *Dīwān-i ashʿār*, ed. Naṣrat Allāh Taḳawī, Tehran 1348/1969, passim; Niẓāmī ʿArūḍī, *Čahār maḳāla*, Tehran 1955-6, *matn* 44, *taʿlīḳāt* 89-97; ʿAwfī, *Lubāb*, ed. E. G. Browne, ii, 33-9; ed. S. Nafīsī, Tehran 1335/1956, 270-4, *taʿlīḳāt* 660-8; Amīn Aḥmad Rāzī, *Haft iḳlīm*, Tehran 1340/1961, ii, 7-9; Luṭf-ʿAlī Beg Ādhar, *Ātashkada*, lith. Bombay 1299 A.H., 136; Riḍā Ḳulī Khān Hidāyat, *Madjmaʿ al-fuṣaḥāʾ*, lith. Tehran 1295 A.H., i, 482-5. See further Ethé, in *Gr. I. Ph.*, ii, 281 f.; Browne, *LHP*, ii, 160-4; B. Furūzānfar, *Kisāʾī-yi Marwazī*, in *Ārmān*, i (1309/1930) 27-34 (= *Madjmūʿa-yi maḳālāt wa ashʿār*, Tehran 1351/1972, 1-7); idem, *Sukhan wa sukhanwarān*², Tehran 1350/1971, 38-42; ʿAbbās Iḳbāl, *Īrānshahr*, i (1340 A.H.), 337-41; ʿAlī Ḳawīm, *Armaghān*, xxiv (1328/1949) 241-51; Dh. Ṣafā, *Taʾrīkh-i adabiyyāt dar Īrān*⁴, i, Tehran 1342/1963, 441-9.

(J. H. Kramers-[J. T. P. de Bruijn])

al-**KISĀʾĪ**, Ṣāḥib Ḳiṣaṣ al-Anbiyāʾ, unknown author of a famous Arabic work on the lives of the prophets and pious men prior to Muḥammad. Some small passages of this book were first edited in 1898 by I. Eisenberg in his thesis on Muḥammad b. ʿAbd Allāh al-Kisāʾī. A complete edition was published in 1922.

In his thesis, Eisenberg tried to prove that the author of the *Ḳiṣaṣ al-anbiyāʾ* was the well-known philologist al-Kisāʾī, to whom Hārūn al-Rashīd had entrusted the education of his sons al-Amīn and al-Maʾmūn. But what renders this identification impossible is that Ibn an-Nadīm in his *Fihrist* does not make any allusion to any book of the philologist, the contents of which could have been the legends of the old prophets; furthermore, the name of al-Kisāʾī the philologist is Abu 'l-Ḥasan ʿAlī b. Ḥamza, and not Muḥammad b. ʿAbd Allāh, as indicated in the text edited by I. Eisenberg. Thus the identity of the author of the *Ḳiṣaṣ al-anbiyāʾ* remains an enigma.

Moreover, recent enquiries into the subject have proved that the legends of the prophets as written down in the numerous manuscripts of al-Kisāʾī's *Ḳiṣaṣ al-anbiyāʾ* belong to the popular narrative tradition of mediaeval Islam and can be compared with works such as the romance of ʿAntar, so far as the narrative style is concerned. So it would be of little use to search for an individual author al-Kisāʾī who could have compiled the *Ḳiṣaṣ al-anbiyāʾ* at a certain date; he is as vague a figure as the narrator al-Aṣmaʿī in the romance of ʿAntar. The mediaeval story-tellers (*ḳuṣṣāṣ* [see ḳāṣṣ]) apparently held al-Kisāʾī's *Ḳiṣaṣ al-anbiyāʾ* in high esteem; but they were not anxious to preserve one standardised text of the legends. It is for this reason that the manuscripts, the oldest of which date from the early 7th/13th century, differ considerably in size, contents, and even arrangement of the stories.

The legends of the pre-Islamic prophets as related in these compilations under al-Kisāʾī's name, or handed down unto us in many other anonymous manuscripts, must be considered as the vivid expression of the religious feeling of the average mediaeval Muslim. It is in this respect that al-Kisāʾī's *Ḳiṣaṣ al-anbiyāʾ* are sources of great value for scholars who want to carry out further investigations of the popular religious life of the Islamic world, a task which has been somewhat neglected up till now.

Nagel, *Die Qiṣaṣ al-anbiyāʾ—ein Beitrag zur arabischen Literaturgeschichte*, diss., Bonn 1967; J. Pauliny, *Einige Bemerkungen zu den Werken "Qiṣaṣ al-anbiyāʾ" in der arabischen Literatur*, in *Graecolatina et Orientalia*, i (1969), 111-23; idem, *Kisāʾīs Werk Qiṣaṣ al-anbiyāʾ*, in *ibid.*, (1970), 191-282; idem, *Literarischer Charakter des Werkes Kisāʾīs Kitāb Qiṣaṣ al-anbiyāʾ*, in *ibid.*, iii (1971), 107-26.

(T. Nagel)

KISANGANI, the former Stanleyville, is a city now of well over 250,000 inhabitants, the third city in Zaire, and the capital of the province of Upper Zaire, formerly Province Orientale. The most important urban centre in north-eastern Zaire, it is situated on the bend of the river Zaire, formerly called Lualaba (upstream) and Congo (downstream from the city), just where it turns west and a few miles north of the equator.

In 1877, Henry Morton Stanley set up camp here to rest from the exhausting weeks during which he negotiated the seven cataracts still called Stanley Falls. In 1882, Hamed Muhammad al-Murjebi, better known as Tippu Tibb [*q.v.*], founded a town on the northern shore of the island in the Zaire river that was formed by a creek called the Abibu. The new settlers, about 1500 in number and all nominal Muslims, called their town Kisangani, Swahili for "On the sandbank". In 1883, Stanley returned with instructions from King Leopold II to found a government station at the upper end of the navigable part of the Congo river. This became Stanleyville, with its centre on the right bank just north of the original Kisangani. By that time the Muslims (called "Les Arabisés" by the administration) had settled on the left bank, calling their new town Kisingitini, Swahili for "On the threshold". Their language of culture and literature is Swahili; their tribal background is mainly Kusu, Tetela and Genia, the Genia (Wagenia) being the original inhabitants of Wanie Rusari or Wanye Lesali, the island of which Kisangani formed part. Stanleyville became an important trading centre, exporting coffee, cocoa, palm oil, timber and ivory. Modern Kisangani has a university; it was part of the policy of authenticity of President Mobutu to replace the name Stanleyville by Kisangani as the name for the whole city.

The Muslims flourished with the city. More adaptable to urban culture and more conscious of their cultural dignity than the tribal peoples, they were more self-confident in their attitude vis-à-vis the Europeans, since their religion claimed equality with Christianity. The Belgian Congo government tried to restrict the activities of the Muslim missionaries, but could not prevent Islam from spreading to the country districts south of the city. The Muslims called themselves Waungwana "free men", the name by which all the Swahili peoples once called themselves. Their language is called Kiungwana, a dialect of Swahili [*q.v.*]. This Swahili became the lingua franca of the entire country east of the Lomami river.

Always rebellious against the colonial administration, the Muslims were among the first groups to form a nationalist party about the time of independence, sc. the Mouvement National Congolais, from which the late Patrice Lumumba drew an important part of his support (he was a Tetela himself). No longer isolated, the Muslims in Kisangani, although they number only some 10,000, are in contact with, and receive support from, those in Egypt, Arabia and Pakistan. Two neighbouring states, Uganda and the Central African Empire, have been ruled by Islamic governments until 1979.

Bibliography: J.-P. Rossie, *Bibliographie commentée de la communauté musulmane au Zaïre des origines à 1975*, in *Les Cahiers du CEDAF*, no. 6 (1976), 38 pp.; *L'Evolution de la communauté musulmane de 1964 à 1975 dans la presse Zairoise*, in *ibid.*, pp. 29-37. On Tippu Tibb and Stanley, see F. Bontinck, *L'autobiographie de Hamed ben Mohammed el-Murjebi Tippo Tip (ca. 1840-1905)*, in *Academie Royale de Sciences d'Outre-Mer*, Classe des Sciences Morales et Politiques, Nouvelle Série, XLII/4, Brussels 1974, with bibl. on pp. 25-39. A specimen of the liturgical literature can be found in J. Knappert, *A Swahili Islamic prayer from Zaire*, in *Orientalia Lovaniensia Periodica* (1973), 197-206. Crawford Young, *Islam au Congo*, in *Etudes Congolaises*, x/5 (Kinshasa, 1967), 14-31, updates the following: A. Abel, *Les musulmans noirs du Maniema*, in *Correspondence d'Orient*, Centre pour l'Etude des Problèmes du Monde Musulman Contemporain, Brussels 1960, 160 pp.; perhaps the most important work on the Muslims in Zaire. F. M. de Thier, *Singhitini, la Stanleyville musulmane*, Publications de Centre pour l'Etude des Problèmes du Monde Musulman Contemporain, Brussels 1963, is the only work that deals specifically with the history of Stanleyville-Kisangani. The Wagenia (who call themselves Waenya) have been described by A. F. Droogers, *De Gevaarlijke Reis. Jongensinitiatie bij de Wagenia van Kisangani*, Amsterdam 1974. (J. Knappert)

ḲIṢĀṢ (a.), synonymous with *ḳawad*, retaliation ("settlement", not "cutting off" or "prosecution"), according to Muslim law is applied in cases of killing, and of wounding which do not prove fatal, called in the former case *ḳiṣāṣ fī 'l-nafs* (blood-vengeance) and in the latter *ḳiṣāṣ fī-mā dūn al-nafs*.

1. For *ḳiṣāṣ* among the pagan Arabs see Wellhausen, *Reste arabischen Heidentums*[2], 186 ff.; Procksch, *Über die Blutrache bei den vorislamischen Arabern und Mohammeds Stellung zu ihr*; the collection of essays *Zum ältesten Strafrecht der Kulturvolker. Fragen zur Rechtsvergleichung, gestellt von Th. Mommsen*, Sections v-vii; and Juynboll, *Handbuch des islāmischen Gesetzes*, 284 ff.

2. Muḥammad takes it for granted that the bloodvengeance of Arab paganism—in which in contrast to the unlimited blood feud, definite retaliation, although not always on the person of the doer himself, forms the essential feature of the vengeance (cf. Procksch, *op. cit.*, 6 and n. 5)—is a divine ordinance with the limitation assumed to be obvious, that only the doer himself can be slain: Ḳur'ān XVII, 35; XXV, 68; VI, 152 (cf. ḳatl, i, 1; in these passages only the *jus talionis* can be understood by the right to kill another; already in XVII, 35 the avenger of blood is forbidden to kill any one other than the guilty one); II, 173 ff. (before Ramaḍān of the year 2): "To you who are believers the *ḳiṣāṣ* is prescribed for the slain, the freeman for the freeman, the slave for the slave and the woman for the woman; but if anyone is pardoned anything by his brother, he shall be dealt with equitably ... and pay him compensation as best he can. This is an indulgence and mercy from your Lord. But he who commits a transgression after this shall be severely punished. In *ḳiṣāṣ* you have life, you of understanding ..." (the first verse says that a free man can only be slain for a free man, a slave for a slave and for a woman only a woman [but probably a slave or a woman for a free man, but this is not expressly stated and must be deduced], naturally, of course, only the guilty one, and that in all other cases the payment of compensation (*diya*) takes place. This is an extension of what is presumed in the earlier passages: the treatment of the free man in relation to the slave is a matter of course, according to old Arab views, and that of the woman, which cannot be completely explained from them, represents an independent decision of Muḥammad's based on them (there is quite a different interpretation of the verse in Procksch, *op. cit.*, 75 n. 5). The commentators had difficulty in reconciling the passage with later developments (cf. below, 4). Only one explanation, thrust into the background and later completely abandoned, interprets the verse quite correctly, but makes it abrogated by v. 49 (see below). By "prescribed" is meant not a duty but a rule not to be transgressed; pardon is the abandonment of *ḳiṣāṣ* with a demand for compensation instead; the law is described as an indulgence and mercy and life-giving in contrast to the often unlimited blood-feud of pagan times, because only the guilty one is slain and the life of the innocent thus preserved); v. 49 (after the first encounter with the Medinan Jews, but before the outbreak of open hostilities): "and we have prescribed for them (the Jews) in it (the Torah): a life for a life, an eye for an eye, a nose for a nose, an ear for an ear, a tooth for a tooth, and *ḳiṣāṣ* for wounds; but if anyone remits it, it is an atonement for him (i.e. for his sins) ..." (this verse of course does not cancel II, 173). In the years 3-5, with IV, 94 ff. there came the distinction between deliberate and accidental killing (cf. ḳatl, i, 1); in this the application of *ḳiṣāṣ* is excluded. In II, 190 (before the campaign of the year 6), *ḳiṣāṣ* is used metaphorically in the sense of retaliation of like with like (in the case of disregard for the holy territory and month by the enemy).

3. The facts gathered from the *Sīra*, the records of the life of Muḥammad, are in agreement with this. In the so-called constitution of the community at Medina, which belongs to the early Medinan period, it is laid down that if any one slays a believer and is convicted (proof of guilt in a trial before the authority —Muḥammad—is therefore required as a condition for the carrying out of *ḳiṣāṣ*), talion takes place even if the avenger of the blood of the slain man declares himself satisfied; all believers must be against the

murderer and must take an active part against him. Here the *ḳiṣāṣ* is brought from the sphere of tribal life into that of the religious-political community (*umma*), which finds an echo in the law, not however to be taken literally, that believers are one another's blood-avengers for their blood spilt for the sake of Allāh; but it is also throughout recognised as a personal vengeance, as is also laid down in the case of the Medina Jews, and no-one is to be prevented from avenging a wound. A limitation of *ḳiṣāṣ*, logical from the standpoint of the *umma*, lies in the fact that the believer is forbidden in the ordinance of the community to kill a Muslim on account of an unbeliever. On two occasions, when Muslims had killed heathens who had however treaties with Muḥammad, he did not allow *ḳiṣāṣ* to be made "because they were heathen" (this does not in any way follow from the ordinance of the community), and even paid the compensation himself; his utterance regarding the possibility of *ḳiṣāṣ* à propos of the second of these cases is, however, illogical. On two occasions, also for political reasons, he obtained the acceptance of compensation when the avenger of blood undoubtedly had the claim to *ḳiṣāṣ*, but in one case he cursed the murderer—again an illogical attitude. Muḥammad in his turn after the capture of Mecca, in keeping with the regulation of the ordinance of the community, abandoned his claim to compensation for the slaying of a nephew of his, which had taken place during the heathen period. In this connection, he is said to have laid down the principle that any blood-guilt attaching to a Muslim dating from the period of heathendom was to be disregarded (cf. ḲATL, i, 2). But Muḥammad also intensified the operation of *ḳiṣāṣ*, and on two occasions had the murderer executed, when there were aggravating circumstances, without offering the avenger of blood the choice between *ḳiṣāṣ* and compensation; the proscription and execution of murderers who were also *murtadd*s [*q.v.*; cf. ḲATL, ii, 5], is however to be interpreted differently; from everything, it is clear that Muḥammad also supervised the carrying out of *ḳiṣāṣ*.

Taking the evidence of the Ḳur'ān and the *Sira* together, it is evident that Muḥammad did not recognise the blood-feud, but allowed *ḳiṣāṣ* to survive as personal vengeance. Moreover, he subjected its application to certain limitations and endeavoured to free it from tribal customs of pagan times, all important advances by which it was brought nearer in character to a punishment. That Muḥammad at the same time, according to the demands of the individual case, sometimes gave decisions deviating from his own rules, is intelligible.

4. Among the traditions (*ḥadīth*s) is one that must be genuine, according to which Muḥammad had a Jew, who had smashed the head of a Muslim *d̲j̲āriya* (slave girl or young woman) with a stone, killed in the same way, because in this case there was no question of an avenger of blood. At a later period when Ḳur'ān, II, 173 (cf. 2. above) was interpreted in a new way, the attempt was made to see in it evidence that a man might be killed as *ḳiṣāṣ* for a woman, without observing that the tradition referred to an unbeliever while the Ḳur'ān passage was only concerned with Muslims. But this Ḳur'ānic prescription regarding the woman was very early neglected and interpreted differently; it is true that ʿUmar b. ʿAbd al-Azīz, al-Ḥasan al-Baṣrī, ʿAṭā' and ʿIkrima are quoted as representatives of the Ḳur'ānic view that a man cannot be put to death for a woman (al-Zamak̲h̲s̲h̲arī on Ḳur'ān, II, 173) but Saʿīd b. al-Musayyab, al-S̲h̲aʿbī, Ibrāhīm al-Nak̲h̲aʿī and Ḳatāda had held the opposite view (*ibid.*), and the latter opinion prevails in the law-schools without any opposition (al-Zamak̲h̲s̲h̲arī's statements on the point are not quite accurate); at the same time it is remarkable that traditions expressing the rejected view are hardly to be found. From the point of view of the difference of opinion in the law-schools, the following is important. For the view that *ḳiṣāṣ* could be inflicted on several, on account of one individual, if they had committed the crime jointly, no unambiguous tradition could be found. Those who held this opinion had therefore to rely on a tradition which does not at all prove what it is said to, and were only able to quote in support (alleged) decisions of old authorities. Their opponents naturally pointed out this flaw. The question how the *ḳiṣāṣ* is to be executed is also disputed; the champions of the view that it is to be inflicted in the same manner as the slaying, quote the tradition mentioned above, while those who insist upon execution with the sword in every case rely upon a saying of Muḥammad's. There are also varying opinions as to whether a man can be put to death on proof by *ḳasāma* (cf. 5. below), and ancient authorities are quoted for both; the historical truth is perhaps that Muḥammad wished to apply *ḳasāma* in a case of bloodshed and when it could not be managed, paid compensation himself; besides it is said (certainly wrongly) that he confirmed *ḳasāma* as it existed in the period of heathendom. Among other traditions, mention may be made of the story that among the children of Israel there was only *ḳiṣāṣ* and no possibility of paying compensation (this is wrongly cited in explanation of Ḳur'ān, II, 174) and that Muḥammad granted the blood-avenger's request to abandon claim to *ḳiṣāṣ*, laid great stress on forgiveness, and even asked him to do so (cf. above 3.—in these historically certain cases, however, his attitude was influenced by purely political considerations); finally, we are told that he who raises a claim for blood without cause is one of the men most hateful to God. Other traditions agree with the regulations mentioned and still to be mentioned, and need not therefore be quoted, especially as the *ḥadīth*s on this subject are collected in Guillaume, *The traditions of Islam*, 107 ff.

Summing up the results of the traditions as the expression of opinion of authoritative circles of Islam in the early period, we must notice in contrast to Muḥammad's period the important change in the treatment of women, which marks an undeniable advance, just as the request for forgiveness is evidence of a loftier point of view.

5. The *ḳiṣāṣ fi 'l-nafs* according to the *S̲h̲arīʿa*. In the cases of illegal slaying noted in the article ḲATL, i, 5-7, *ḳiṣāṣ* comes into operation, i.e. the next-of-kin of the slain man, who in this capacity is called *walī 'l-dam* ("avenger of blood") has the right to kill the guilty man under certain conditions. From what has been said above, it is obvious that this punishment still partakes for the most part of the character of personal vengeance; this is also clearly seen in the regulations—disputed in points of detail—prescribed for the case when the avenger in any way mutilates the murderer and only occasionally the idea of punishment by an authority for the sake of justice crops up. (Thus in all cases of culpable, illegal slaying in which *ḳiṣāṣ* cannot take place, *taʿzīr* intervenes; the competent authority is therefore regarded as the *walī* of one who has no *walī*; therefore anyone who kills a *d̲h̲immī*, *muʿāhad* (an unbeliever connected with the Muslim state by a treaty) or a *musta'min*

(an unbeliever who enters a Muslim country after being given a safe conduct) must, according to Mālik, be put to death and the *walī* has no right to abandon claim to *ḳiṣāṣ*. On the other hand, however, it is laid down that anyone who kills a *waḳf* slave goes scot-free). But that this point of view is found at all is a step forward, for Muḥammad's decisions in this connection (cf. above, 3) were only dictated by the demands of the individual case; in other matters also, in certain points we see a loftier attitude adopted, at least in some of the schools.

For the application of *ḳiṣāṣ*, the fulfillment of the following conditions is necessary: (1) The life of the person slain must be absolutely secured by the *Sharīʿa*; this is the case with a Muslim, *dhimmī* and *muʿāhad*, at least so long as they are in the *Dār al-Islām* [*q.v.*], and *Dār al-Ṣulḥ* [*q.v.*] (in the case of the slaying of a Muslim prisoner in the *Dār al-Ḥarb* [*q.v.*], it is unanimously agreed that there is no *ḳiṣāṣ*, and for the slaying of another Muslim there is no *ḳiṣāṣ*, according to the Ḥanafī school; there are corresponding regulations for the *dhimmī* and *muʿāhad*) in contrast to the *mustaʾmin*, *murtadd* and *ḥarbī* (but *ḳiṣāṣ* may be inflicted on a *murtadd* if he kills another *murtadd*, and Mālik makes *ḳiṣāṣ* the general rule if anyone kills a *murtadd*, without the authority of the Imām). This point of view is to be distinguished from the conception of the illegality of the slaying (cf. ḲATL, i, 5) although the two ideas have a certain amount in common; the killing of a *mustaʾmin* is illegal, but there is no *ḳiṣāṣ* (apart from the special case just mentioned). (2) The slain man must not be a descendant of the slayer, nor the slave of the slave of one of his descendants, nor must there be a descendant of the slayer among the heirs of the slain man. (3) It is further taken for granted that the man when he committed the deed was of years of discretion and was in full possession of his faculties. (4) The further conditions are disputed (cf. below).

Any alteration in these relations of the doer after the deed makes no difference to the old blood-guilt (it is, however, to be noted that the adoption of Islam by a *ḥarbī* wipes out all previous blood-guilt) with the exception of lunacy (in which case *ḳiṣāṣ* cannot be inflicted), nor does, for example, an alteration in the relations of the slain man after the doer has decided on the deed but before it is actually committed (but there are various views on this point). If one of several men who have slain someone jointly cannot be put to death for one or other of these reasons, the others also escape *ḳiṣāṣ*; this is also the case if a further reason for killing leads to the action of the slayer. If the slayer dies before *ḳiṣāṣ* is carried out, all claim by the avenger of blood ceases according to Abū Ḥanīfa and Mālik; according to al-Shāfiʿī and Aḥmad b. Ḥanbal, compensation can still be claimed.

Mālik, al-Shāfiʿī and Aḥmad b. Ḥanbal further demand, before *ḳiṣāṣ* can be allowed, in addition to the conditions mentioned, that the slain man is at least the equal of the slayer as regards Islam and liberty, so that they certainly uphold Muḥammad's intentions, while the Ḥanafīs—of course interpreting differently the evidence cited—take no account of this, and therefore occupy an undoubtedly higher position. A particular view of Mālik's has already been mentioned. According to Mālik, the slayer can further be put to death, if he has deliberately slaughtered his descendant, and this view is also admitted in the Shāfiʿī school. Several may be put to death for the killing of one, according to Abū Ḥanīfa, Mālik and al-Shāfiʿī, if they have done the deed together, provided the part taken by each was such that if he had acted alone, the result would have been the same (Mālik alone excluded *ḳasāma* (cf. below) on the basis of which, according to him, only a single individual can be put to death). There is unanimity on the point that anyone who has killed several people is liable to *ḳiṣāṣ*; on the question whether compensation has also to be paid there are different views.

Ḳiṣāṣ can only be applied after definite proof of guilt is brought. The procedure of proof in a murder trial is essentially the same as in another case; in *Ḳiṣāṣ fi 'l-nafs* there is however also the old Arab institution of the *ḳasāma* (cf. ḲASAM and Goldziher, *Zeitschr. für vergl. Rechtswissenschaft*, viii, 412 ff.; Wellhausen, *Reste arabischen Heidentums*[2], 187 ff.) which Islam allowed to survive (cf. above); according to Mālik, Aḥmad b. Ḥanbal and al-Shāfiʿī's earlier opinion, *ḳiṣāṣ* can be inflicted on the accused (but according to Mālik on one only) if the *ḳasāma* is performed and the other conditions are fulfilled; according to Abū Ḥanīfa and the later view of al-Shāfiʿī, which became predominant in his school, he has only to pay compensation; among the Shāfiʿīs, with the limitation that he may be put to death if in the course of the trial the accuser swears to his guilt twice with fifty oaths each time. If the person entitled to inflict *ḳiṣāṣ* does so without previous judicial proof he is punished with *taʿzīr*.

The execution of *ḳiṣāṣ* is open to the avenger of blood, and according to Abū Ḥanīfa consists in beheading with the sword or a similar weapon; if the avenger slays in another fashion he is punished with *taʿzīr*, but not imprisoned. According to Mālik and al-Shāfiʿī, the guilty person, with certain limitations, is killed in the same way as he killed his victim; both views are given by Aḥmad b. Ḥanbal.

Ḳiṣāṣ takes place—among other conditions—only when the next of kin (*walī*) of the slain man or the owner of the slain man, if he was a slave, demands it. If there are several (equally nearly related) avengers of blood, all must express this desire; if one of them remits *ḳiṣāṣ*, the refusal affects all. Views are divided on the case where the avenger of blood (or one of several) can give no definite expression of opinion. The *walī*, or the wounded man before he dies if the case occurs, is permitted to remit the *ḳiṣāṣ* and he is even urgently recommended to do so, either in return for the payment of compensation or for another equivalent or for nothing. There are many special regulations on detailed points and many differences of opinion between the schools of law.

6. *Ḳiṣāṣ fī-mā dūn al-nafs* according to the *Sharīʿa*. If any one deliberately (with *ʿamd*, opposite of *khaṭaʾ*; cf. ḲATL, i, 5) and illegally (this excludes the wounding of one who tries to murder or injure or rob a fellowman, if it is not possible to repel him otherwise; it is for example permitted to strike someone in the eyes or throw something in the eyes of a man who forces his way into another's house without permission) has inflicted an injury, not fatal, which could be inflicted on the doer's person in an exactly similar way (what is meant by this is very fully discussed in the *Fiḳh* books), he is liable to *ḳiṣāṣ* on the part of the wounded man, (except that Mālik makes it be inflicted by an expert), if the conditions necessary for carrying out the *ḳiṣāṣ fi 'l-nafs* are present with the following modifications: according to Abū Ḥanīfa, *ḳiṣāṣ fī-mā dūn al-nafs* is not carried out between man and woman or slaves among themselves, but it is accord-

ing to Mālik, al-S͟hāfiʿī and Aḥmad b. Ḥanbal; Abū Ḥanīfa and Mālik further allow no *ḳiṣāṣ fī-mā dūn al-nafs* between free men and slaves. According to Mālik, al-S͟hāfiʿī and Aḥmad b. Ḥanbal, this *ḳiṣāṣ* is inflicted for one on several, but not according to Abū Ḥanīfa. A sound limb may not be amputated for an unsound one; if the guilty person has lost the limb, there can of course be no *ḳiṣāṣ*. In the case where he loses it after committing the deed, there is a corresponding difference of opinion, as in the case of his death before the execution of *ḳiṣāṣ fi 'l-nafs*.

The further regulations correspond to those quoted in section 5.

7. If retribution is not permitted or if the person entitled to *ḳiṣāṣ* voluntarily remits his claim, compensation may nevertheless be demanded; for an unlawful slaying, the blood money (*diya* [*q.v.*]) is to be paid to the avenger(s) of blood, in an unlawful but not mortal wounding, according to the particular case either the full *diya* or a definite part of it or a contribution defined by the law (*arsh*) or a percentage of the *diya* laid down by the judge (the so-called *ḥukūma*) to the injured person; all this, of course, on the supposition that the slain or wounded man was a free man. If he is a slave, his value must be made good. If the culprit is a slave, his owner has to pay these contributions for him; he can however escape by handling over the slave (parallel in the Romano-Celtic institution of *in noxam dedere*; cf. e.g. Girard, *Nouvelle Revue Historique* (1887), 440 ff.).

8. Of the regulations of the S͟hīʿa *fiḳh* books, which need not be gone into fully here as they are essentially the same as the Sunnī, we need only mention that among the Twelver Imāmīs, for example, it is taught that if a man has killed a woman, *ḳiṣāṣ* can be carried out if the *walī* of the woman pays the relatives of the man the difference between the bloodmoney on each side; an isolated interpretation explains Ḳurʾān, II, 173, in this way. Here we can scarcely have a late effect of the Ḳurʾānic rule regarding woman, as similar calculations are also made in other cases.

9. On the practical carrying out of *ḳiṣāṣ*, cf. ḲATL, ii, 10, in which we may note that breaches of his regulations are recorded of even the Prophet's companions.

ḲIṢAṢ AL-ANBIYĀʾ, the "legends of the pre-Islamic prophets", is the title of several works relating the lives of the prophets of the Old Testament, the story of Jesus, and some other events into which pious heroes or enemies of God are involved (on the etymology of *ḳiṣṣa* = "story", see ḲIṢṢA). Very famous and widely-spread books on this subject were the *ʿArāʾis al-mad͟jālis* by Abū Isḥāḳ Aḥmad al-T͟haʿlabī (d. 427/1036) and the different versions of the *Ḳiṣaṣ* written down in the name of a certain Muḥammad b. ʿAbd Allāh al-Kisāʾī [see AL-KISĀʾĪ].

The origins of this type of literature must be traced back to pre-Islamic Arabia. Knowledge of the tales of the Old and New Testaments and the apocrypha must have been transmitted to the Arabs through the Jewish influence in Yat͟hrib and through Christian missionary work, the effect of which can be ascertained not only in the regions close to the Byzantine and Sāsānid empires, but also on the shores of the Red Sea and in South Arabia (see Baumstark, in *Islamica*, iv (1931), 562 ff.; Altheim and Stiehl, *Die Araber in der Alten Welt*, iv, 306 ff.; v/1, 316 ff.). Umayya b. Abi 'l-Ṣalt [*q.v.*], a poet of al-Ṭāʾif and contemporary of Muḥammad, seems to have made use of some of these oral traditions; there are pieces of poetry ascribed to him dealing with Abraham, Isaac, the Deluge, etc., though their authenticity remains doubtful.

It was the Prophet of Islam who gave to these legends an entirely new meaning, finding the events of his own life reflected in them; his vocation for prophecy, his being rejected by his own people, the impending punishment, which might have meant the destruction of his own people. All these psychological implications of the Ḳurʾānic legends, and their didactic aspects, were studied at length by K͟halafallāh in his book on the Ḳurʾānic art of story-telling. From the Muslim point of view, the lives of the pre-Islamic prophets are awful examples (*ʿibar*) warning against the evil fate of those who are disobedient to God and His messengers. Thus the *Ḳiṣaṣ al-anbiyāʾ* became part of universal history, as history in general was often considered as a series of *ʿibar* (cf. Ṭabarī, *Taʾrīk͟h*, preface and pre-Islamic period).

The edifying character of the legends became even more stressed when they were separated from historiography; this was, so far as we know, first done by T͟haʿlabī. Moreover, T͟haʿlabī's narrative is mainly based on the *tafsīr*-literature. It must be mentioned that even in modern times the legends retained their importance for edifying sermons, as is proved by ʿAbd al-Wahhāb an-Nad͟jd͟jār's compilation, which was published in Egypt in the thirties of this century. The wide-spread and various versions of the *Ḳiṣaṣ al-anbiyāʾ* which were written down in the name of al-Kisāʾī show another form of this type of literature; they are the result of the imaginative art of story-telling cultivated by the popular narrators (*ḳuṣṣāṣ* [see ḲĀṢṢ]), and they are an abundant source for the study of the religious feeling and thinking of the average mediaeval Muslim.

The historical sources allude to the activities of the *ḳuṣṣāṣ* since the first Islamic century, but the oldest manuscripts of the popular legends date from the 7th/13th century. In certain circumstances, the activities of *ḳuṣṣāṣ* and the legends of the prophets could acquire a political significance; thus the story about Moses and Pharaoh was used in the anti-Umayyad propaganda, and the early S͟hīʿīs held that the history of the Muslim community was similar to that of the Israelites during Moses' lifetime, the S͟hīʿīs being the equivalents of those few who did not apostatise from the true faith when Moses was up on Mount Sinai.

KISH, KISHSH, the later SHAHR-I SABZ, a town of mediaeval Transoxania, now in the Uzbekistan SSR and known simply as Shahr, but in early times in the region of Soghdia (Ar. Ṣughd [*q.v.*]). It lay on the upper reaches of the landlocked Khashka Daryā in an area where several streams came down from the Sayām and Buttamān Mountains to the east, forming a highly fertile valley, intersected with irrigation canals. The town lay on the Samarḳand-Tirmidh high road, two days' journey from Samarḳand; after passing through Kish, this road continued for four more days' journey to the famous Iron Gate, the Bozgala defile [see DAR-I ĀHANĪN] which guarded the approaches to the Oxus. Further down the Khashka Daryā lay Nakhshab or Nasaf or Ḳarshi [see ḲARSHI], a town with which the fortunes of Kish were often linked.

Kish was clearly an important town in pre-Islamic Soghdia, and had its own prince. According to Yaʿḳūbī, *Buldān*, 299, tr. Wiet, 122, at the time of the Arab conquests in the early 2nd/8th century, Kish was the chief town of Soghdia and was accordingly, by the common process of applying the name of a district to its main urban centre, actually known as Ṣughd also. It appears in several Chinese sources, e.g. in the travel account of the early 7th century Buddhist pilgrim Hiuen-Tsang as Kie-siang-na; cf. E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, London 1888, i, 82, and Marquart, *Ērānšahr*, 55, 303-4, giving various Chinese renderings of the town's name.

When the Western Turks were defeated in Central Asia by the Chinese invasion of 645-8, the Chinese forces are said to have penetrated as far as Kish and the Iron Gate, after which the whole of Transoxania was nominally annexed to the empire and placed under the viceroyalty of Fīrūz, son of the last Sāsānid Yazdigird III. The raid across the Oxus of the Arab general Saʿīd b. ʿUthmān in 56/676, when according to Ṭabarī, ii, 179, the Arabs defeated the Soghdians and captured their city, may well have reached to Kish rather than to Samarḳand (see H. A. R. Gibb, *The Arab conquests in Central Asia*, London 1923, 19-20, 22). When Qutayba b. Muslim [*q.v.*] became governor of the East, al-Ḥadjdjādj ordered him to "crush Kish, destroy Nasaf and drive back [the local Soghdian ruler] Wardān" (Ṭabarī, ii, 1199). But he was unable in 88/707 to make headway against the Soghdian defending forces and had to fall back on Marw. It was not until 91/710 that he returned to subdue a revolt by the local ruler of Shūmān in upper Čaghāniyān [*q.v.*], and then marched through the Iron Gate and reduced Kish and Nasaf. The Arabs seem thereafter to have held on to Kish during the period of the Turkish revanche in Central Asia, but the town did rebel in 133/750-1, at the time of the final appearance of a Turkish army west of the Altai, in the expectation of Chinese aid. However, Abū Muslim's general Abū Dāwūd Khālid b. Ibrāhīm killed the local prince or Ikhshīd (*al-Ikhrid* in the text of Ṭabarī, iii, 79-80) of Kish at Kandak just north of the Iron Gate, looted his treasures (which included many luxury goods from China) and appointed his brother Ṭārān in his place (Barthold, *Turkestan*[3], 196; Gibb, *op. cit.*, 38, 96).

Two or three decades later, in the caliphate of al-Mahdī (158-69/775-85), the Kish district figured prominently in the anti-Muslim religious movement of Hāshim b. Ḥakīm, known as al-Muḳannaʿ, "the Veiled Prophet of Khurāsān". The revolt began in the Sayām Mountains just to the east of Kish, and it was in the Kish and Nasaf district that al-Muḳannaʿ drew strong support. Narshakhī states that the first village to join the rebel leader was Sūbakh in the Kish district (cf. Samʿānī, *Ansāb*, facs. ed. Margoliouth, f. 316b) under a local leader ʿUmar Sūbakhī, who killed the Arab *amīr* there. Kish welcomed al-Muḳannaʿ and supplied him with much wealth, and it was in a nearby fortress that al-Muḳannaʿ finally shut himself up against the Arab general Saʿīd b. ʿAmr al-Djurashī, dying there in 163/779-80. Even two centuries later, the common people of the Kish and Nasaf districts were still accounted Mubayyiḍa "wearers of white" and awaiters of the messianic return of al-Muḳannaʿ (Narshakhī, *Taʾrīkh-i Bukhārā*, ed. Mudarris Riḍawī, Tehran *ca.* 1939, 77-89, tr. R. N. Frye, *The history of Bukhara*, Cambridge Mass. 1954, 65-75; Yaʿḳūbī, *Buldān*, 304, tr. 131-2; Barthold, *Turkestan*, 199-200; E. G. Browne, *Lit. hist. of Persia*, i, 318-23; Gh.-H. Sadighi, *Les mouvements religieux iraniens au IIe et au IIIe siècles de l'hégire*, Paris 1938, 163-86).

The geographers of the later 3rd/9th and the 4th/10th centuries give good descriptions of Kish. The town, whose buildings were of clay and wood, had the typically eastern Islamic tripartite division of a citadel (*ḳuhandiz*), an inner city (*madīna dākhila*), in which lay the prison and Friday mosque; and an outer city or suburb (*rabaḍ*) called al-Muṣallā, where was situated the *Dār al-Imāra* or government headquarters. In Ibn Ḥawḳal's time (mid-4th/10th century) the citadel and inner city were both ruinous. The *madīna* had four gates, and the *rabaḍ* two. The whole administrative region or *ʿamal* of Kish contained 16 rural districts or *rustāḳ*s, stretching up river to the mountains. It was watered by two constituent streams of the Khashka Daryā, sc. the River of the Fullers or the Butchers (Ḳaṣṣārīn or Ḳaṣṣābīn; on this ambiguity, present in both the Arabic and the Persian sources, see *Turkestan*, 134, n. 2) and the Asrūdh, and was highly productive, its early fruits and vegetables being exported to Khurāsān. Also stemming from the region were manna; therapeutic substances found in the mountains; red salt (the red rock-salt of the Oxus lands was known since the time of Pliny, see Marquart, *Wehrot und Arang*, Leiden 1938, 76-7); and mules and other livestock. Muḳaddasī nevertheless comments on the unhealthiness of the place, a judgement endorsed by later travellers. The salaries (*ʿishrīniyya*) of the *Ṣāḥib-Barīd*, the Ḳāḍī and other officials of the Sāmānid administration there amounted to 300 *dirhams* each per annum. The ruinous state of the inner parts of the town show that under the Sāmānids, Kish had declined in status and given place to Bukhārā and Samarḳand, so that only the *rabaḍ* was occupied and a new town was being built on to it (see IṢṬAKHRĪ, 324; Ibn Ḥawḳal, ii, 470, tr. ii, 452-3; Muḳaddasī, 282; *Ḥudūd al-ʿālam*, tr. 113, § 25.15; *Turkestan*,

134-6; Le Strange, *The lands of the Eastern Caliphate*, 469-70).

In the period of the Ḳarak̲h̲ānids and Sald̲j̲ūḳs, little specific is heard about Kis̲h̲, which seems to have continued its decline into secondary status. In spring 1222 the Taoist holy man and traveller Č'ang-č'un passed through what he calls Kie-shi on his way from Samarḳand to Čingiz K̲h̲ān's encampment south of the Oxus; and in autumn 1255 Hülegü met Arg̲h̲un, governor of K̲h̲urāsān, and certain Persian magnates, and spent a pleasant month at Kis̲h̲ (D̲j̲uwaynī-Boyle, ii, 521; Bretschneider, *op. cit.*, ii, 115, 147; Barthold, *Turkestan*, 452, 483).

Kis̲h̲ revived, however, under the Čag̲h̲atayids and Tīmūrids, and Tīmūr himself was born in the Kis̲h̲ district in 736/1336 (according to Ibn ʿArabs̲h̲āh, at a village called K̲h̲od̲j̲a-Ilg̲h̲ān). Since the mid-7th/13th century, the region had apparently been occupied by the Barlās tribe of subsequently Turkicised Mongols, from whom Tīmūr sprang and from whom he derived much support in his struggles to achieve power in Transoxania (cf. Barthold, *Ulugh Beg*, in *Four studies on the history of Central Asia*, ii, Leiden 1958, 14-16). He seized control of Kis̲h̲ from the chief Ḥād̲j̲d̲j̲ī Barlās in 761/1360, and used it and the Barlās tribesmen for further expansion. Tīmūr's fondness for the Kis̲h̲ district perhaps depended less on a sentimental feeling for his birthplace than on his need to draw on the support of the Barlās there; after Tīmūr's death, these were a numerous element in Ulug̲h̲ Beg's army during his campaign into Mog̲h̲olistān of 824/1425. In 781/1380 Tīmūr made Kis̲h̲ his summer residence and the second capital of his empire after Samarḳand. He rebuilt the town, constructing a *madrasa* and a mausoleum for his dead first-born son D̲j̲ahāngīr, and above all, a splendid white-walled palace, the Aḳ Sarāy. This new importance of Kis̲h̲ doubtless accounts for the detailed description of K'o-shi in the Chinese Ming annals, which expatiate on its fine palaces and mosques; and the Spanish traveller Clavijo, who passed through Kis̲h̲ in 1404, mentions the still-unfinished mosque of Tīmūr there (S̲h̲araf al-Dīn Yazdī, *Ẓafar-nāma*, Calcutta 1887-8, i, 4, ii, 18, 28; Bretschneider, *op. cit.*, ii, 273-4; *Bābur-nāma*, tr. Beveridge, 83-4).

It is in the post-Mongol period that the old name Kis̲h̲ was gradually supplanted by that of S̲h̲ahr-i Sabz "the green city". The 8th/14th century was the transition period; the Čag̲h̲atayid usurper Būyān Ḳulī K̲h̲ān struck *dīnār*s at S̲h̲ahr-i Sabz in 752/1351, whereas other coins of his have Kis̲h̲ as the mint named on them. But the old name still persisted in literary usage for some time, since Bābur uses Kis̲h̲ as the primary name for the town (*Bābur-nāma*, *loc. cit.* and *passim*). The new name must derive from the greenness of the whole oasis, as Yazdī states, and was applied by the local people to the whole area, as well as to the town; local legend also gives other, fanciful explanations for the name. The identification of the recent S̲h̲ahr-i Sabz with the older Kis̲h̲ seems fairly conclusive.

In the time of the florescence of the Özbeg K̲h̲āns, the towns of S̲h̲ahr-i Sabz and Kitāb just to its north were often semi-independent under a *beg* of their own. It was therefore the constant ambition of the K̲h̲āns of Buk̲h̲ārā in the 18th and 19th centuries to bring S̲h̲ahr-i Sabz under their own control, although the desert to the west and the mountains to the north acted as effective barriers against attacks from the directions of Buk̲h̲ārā and Samarḳand respectively. In the 19th century, the Mangit K̲h̲āns Ḥaydar Tūra, his son Naṣr Allāh and the latter's son Muẓaffar al-Dīn all repeatedly tried to reduce S̲h̲ahr-i Sabz, and in 1856 temporarily captured it. It only lost its virtual independence in 1870, when the Imperial Russian General Abramov was sent by Kaufmann against it. He besieged S̲h̲ahr-i Sabz, and captured it after fierce resistance. The Beg fled to K̲h̲oḳand, and the Russians handed over S̲h̲ahr-i Sabz to the K̲h̲ān of Buk̲h̲ārā. See E. Schuyler, *Turkistan. Notes of a journey in Russian Turkistan, Khokand, Bukhara and Kuldja*, London 1876, i, 243 ff., ii, 62-76 (who estimated the population of S̲h̲ahr-i Sabz at approximately 20,000 and that of Kitāb at 15,000), and F. H. Skrine and E. D. Ross, *The heart of Asia, a history of Russian Turkestan and the Central Asian khanates from the earliest times*, London 1899, 214-15, 219-20, 256.

In the 20th century, Imperial Russian and then Soviet scholars have shown considerable interest in the place and its antiquities, and a full-scale archaeological and architectural survey was commissioned in 1942; special attention has been directed to the imposing ruins of Tīmūr's Aḳ Sarāy, to a mosque built by Ulug̲h̲ Beg and to the two buildings known as the Dār al-Siyāda and the Dār al-Tilāwa. For a detailed account of these and the other surviving monuments, see M. E. Masson and G. A. Pugačenkova, *S̲h̲ak̲h̲ri Syabz pri Timure i Ulug Beke*, in *Trudī Sredneaziatskogo Gosudarstvennogo Universiteta*, xlix (Tashkent 1953), 17-96, Eng. tr. J. R. Rogers, in *Iran, Jnal. of the British Inst. of Persian Studies*, xvi (1978), xvii (1980), and also *BSE*[2], xlvii, 557-8.

ḲĪS̲H̲LAḲ (T., < *ḳīs̲h̲* "winter"), winter quarters, originally applied to the winter quarters, often in warmer, low-lying areas, of pastoral nomads in Inner Asia, and thence to those in regions like Persia and Anatolia into which Türkmens and others from Central Asia infiltrated, bringing with them their nomadic ways of life; Kās̲h̲g̲h̲arī, *Dīwān lughāt al-turk*, tr. Atalay, i, 464-5, defines *ḳīs̲h̲laḳ* as *al-mus̲h̲attā*. Its antonym is *yaylaḳ* "summer quarters" (< *yay* "spring", later "summer"), denoting the upland pastures favoured by nomads for fattening their herds after the harsh steppe or plateau winters (cf. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, ii, 837-8; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 670, 672-3, 980-1).

The basic terms *ḳīs̲h̲* and *ḳīs̲h̲la-* "to spend the winter" are ancient Turkish ones, appearing in the Ork̲h̲on inscriptions. In the Čag̲h̲atay Turkish of Central Asia, the sense of *ḳīs̲h̲laḳ* evolved from that of "the K̲h̲ān's residence, winter quarters of the tribe" into the additional one of "village". Within the Iranian world, the word spread into such tongues as Kurdish, Pas̲h̲to and the Pamirs languages; through Ottoman Turkish, it spread into Balkan languages, but here with the derived Ottoman sense of "barracks" and the form *ḳīs̲h̲la* (G. Doerfer, *Türkische und Mongolische Elemente im Neupersische. iii. Türkische Elemente im Neupersische*, Wiesbaden, 1967, 479-81, No. 1496). This meaning has in fact passed into the Arabic colloquials of Syria and Egypt, as has also that of "hospital, infirmary", so that in Egyptian Arabic we have both *ḳus̲h̲lāḳ* "barracks" and *ḳas̲h̲la* "hospital" (S. Spiro, *An Arabic-English vocabulary of the colloquial Arabic of Egypt*, 488, cf. Dozy, *Supplément*, ii, 351).

In Arabic, we find such terms for "winter and summer quarters" as *mas̲h̲tā* and *maṣīf*, e.g. in the 4th/10th century geographers (the original sense of

the name for the Umayyad palace in Jordan, Mshatta [*q.v.*], is presumably that of "winter residence", *mus͟hattā*).

In Persian, approximate synonyms to *ḳis͟hlaḳ* and *yaylaḳ* are *sardsīr* (lit. "cold region") and *garmsīr* ("hot region"). But as well as denoting the seasonal pasture grounds of nomads, these Persian words were early used as geographical terms to denote, on the one hand, cooler, temperate highland regions, and on the other hand, hot, desert-type or sub-tropical lowland climates. Already by the time of the classical Arabic geographers, these topographical terms had been borrowed into Arabic, e.g. by Ibn Ḥawḳal and Muḳaddasī. Thus the geographers use *garmsīr* or its arabised form *d̲j̲arm*, pl. *d̲j̲urūm*, for the hot, coastal region of the Persian Gulf shores and the regions bordering on the great central desert, and *sardsīr*, arabised form *ṣard*, pls. *ṣurūd* and *maṣārid*, for the mountainous Zagros hinterland of Fārs and Kirmān (cf. Le Strange, *The lands of the Eastern Caliphate*, 249). This distinction is carried further into the realm of their characteristic products, called by e.g. Muḳaddasī *al-as͟hyāʾ al-mutaḍāḍḍa* "products of the two opposing regions" (cf. A. Miquel, *Aḥsan at-taqāsīm ... traduction partielle*, Damascus 1963, Glossary 390, 404-5), and of local populations (cf. the D̲j̲urūmiyya, inhabitants of the part of Kirmān bordering on the Straits of Hormuz, attacked by ʿAḍud al-Dawla's forces in 360/970, Miskawayh, in *Eclipse of the ʿAbbasid caliphate*, ii, 299, 359, tr. v, 321, 392).

ḲIS͟HM (D̲j̲azīra-yi Ḳis͟hm, or in Arabic, D̲j̲azīra al-Ṭawīla, "the long island") is the largest island in the Persian Gulf. It lies off the southern (Lāristān) coast of Persia between Linga and Bandar ʿAbbās [*q.v.*], and is separated from the mainland by Clarence Strait, the width of which varies from three to twelve miles. The island measures nearly 70 miles in length, from north-east to south-west, and an average of seven miles in breadth (20 miles at its widest point). Its general formation is that of an eroded, sloping plateau, inclining northwards from a sharp, rocky scarp onthe seaward side. The highest point, almost in the centre of the island, is 1,300 feet.

Ḳis͟hm now is virtually a desert, though it once produced grain, vines, fruit and vegetables in quantity. Salt is still mined from the great salt caverns, and there are workable deposits of sulphur and ferrous oxide, along with some naphtha springs on the south coast, near Salāk͟h. The population, some few thousand souls, mostly Arab and Sunnī, lives by fishing, limited cultivation and salt-mining. Ḳis͟hm town, at the north-eastern tip, is the only populated centre of any size.

The fleet of Alexander the Great, under the command of Nearchus, anchored at Ḳis͟hm on its voyage from the Indus to the Euphrates in 326 B.C. The sporadic references to Ḳis͟hm that appear in the next dozen centuries or so tell us nothing of its history. By the middle ages it was a dependency of the kingdom of Hurmuz [*q.v.*], and it remained so until Hurmuz fell to Portuguese in 921/1515. When the Portuguese were driven from Hurmuz by S͟hāh ʿAbbās I, with the assistance of ships of the English East India Company, in 1031/1622, Ḳis͟hm was incorporated in the Ṣafawid empire. It was occupied in *ca.* 1132/1719-20 by Masḳaṭ Arabs who were in turn expelled by Nādir S͟hāh in 1150/1737-8. Sometime after his death in 1160/1747, Ḳis͟hm fell under the control of the Banī Maʿīn (or Muʿayn) Arabs, who held it, along with Bandar ʿAbbās, in farm from Karīm K͟hān Zand (regn. 1163-93/1750-79). They retained possession of the island, despite attempts by the Ḳawāsim [*q.v.*] of Raʾs al-K͟hayma and Linga to dislodge them, until 1208/1793-4 when Ḳis͟hm, together with Bandar ʿAbbās and Hurmuz, was conquered by the Āl Bū Saʿīd ruler of Masḳaṭ, Sulṭān b. Aḥmad. He was afterwards confirmed in possession of Bandar ʿAbbās by a *firmān* from the Ḳād̲j̲ār court, granting him the lease of the town and its dependencies in return for an annual rental.

In 1219/1804-5 the Masḳaṭ garrison was evicted from Ḳis͟hm by the Banī Maʿīn and the Ḳawāsim in combination. Subsequently, the Banī Maʿīn joined the Ḳawāsim in piratical attacks upon British-Indian shipping, and in reprisal their stronghold at Lāft, on the northern coast of Ḳis͟hm, was attacked and destroyed in S͟hawwāl 1224/November 1809 by the British expeditionary force sent from India to subdue Raʾs al-K͟hayma and the other Ḳasīmī ports. After the reduction of Lāft, Ḳis͟hm island was returned to the authority of the ruler of Masḳaṭ, now Saʿīd b. Sulṭān (1221-73/1806-56).

Ten years later, after the second expedition to the Pirate Coast, a British military detachment was stationed on Ḳis͟hm, from S͟hawwāl 1235/July 1820 to Rabīʿ II 1238/January 1823, to keep watch on the Ḳawāsim. The Persian government objected to its presence on the grounds that Ḳis͟hm was Persian territory. Saʿīd b. Sulṭān, however, maintained that his father, Sulṭān b. Aḥmad, had acquired title to Ḳis͟hm by right of conquest, and that the island had passed to him in full sovereignty. It was not listed among the dependencies of Bandar ʿAbbās in the original *firmān* granting the lease of the town to Masḳaṭ; nor was it mentioned in any of the annual receipts for the rental of Bandar ʿAbbās. When the British detachment was withdrawn from Ḳis͟hm—because of the island's unhealthiness and the danger of the detachment's becoming involved in military operations on the Arabian mainland—the sovereignty issue was left unresolved. In Rabīʿ II 1239/December 1823 a stores depot for the Gulf squadron of the Bombay Marine was established at Basīdū, at the western end of Ḳis͟hm, without protest from the Persian government.

The Masḳaṭ lease of Bandar ʿAbbās and its dependencies was renewed in S͟haʿbān 1272/April 1856, shortly before Saʿīd b. Sulṭān's death. Ḳis͟hm and Hurmuz were declared to be Persian islands, and were classed as "dependencies" of Bandar ʿAbbās. The lease, which was restricted to Saʿīd and his sons, was terminated in 1283/1866-7 after Saʿīd's successor, T͟huwaynī b. Saʿīd, had been murdered by his son, Sālim. A new lease of eight years' duration was awarded to Sālim in D̲j̲umādā I, 1285/August 1868, only to be rescinded two months later when Sālim was overthrown. Despite attempts by Turkī b. Saʿīd after his accession in 1288/1871-2 to renew the lease, it was never granted again.

The British stores and coaling depot at Basīdū fell into gradual disuse, and it was finally abandoned in Muḥarram 1354/April 1935 to humour the wishes of Riḍā S͟hāh.

ḲISHN, a small town on the south coast of Arabia, some 40 miles west of Raʾs Fartak. Formerly it was the mainland capital of the Mahrī sultanate of Ḳishn and Suḳūtra (Socotra), which up to 1387/1967-8 formed part of the Eastern Aden Protectorate. After that date it was designated the sixth governorate of the People's Democratic Republic of Yemen.

The inhabitants of Ḳishn live mainly by fishing, pastoralism and trading, the principal exports being frankincense, dried fish and salt. The ruling family, now dispossessed, was the Bin ʿAfrār clan of the Mahra. The reigning sultan, from the senior branch of the family, traditionally resided on Suḳūtra, while the head of the cadet branch acted as his deputy at Ḳishn.

Ḳishn was several times raided by the Portuguese during their operations off the Ḥaḍramī and Mahrī coasts between *ca.* 929/1522-3 and *ca.* 956/1550-1. The period of Portuguese activity coincided with a successful war of conquest by the Kathīrī sultans of Shiḥr against the Mahra, which culminated in the capture of Ḳishn in 952/1545-6. The Bin ʿAfrār appealed for help to the Portuguese, who responded by expelling the Kathīr from Ḳishn, reputedly in Safar 955/April 1548.

A revival of Ottoman interest in South Arabia after 1287/1870-1 led the British authorities in Aden to secure an undertaking from the sultan of Suḳūtra and Ḳishn in Dhu 'l-Ḥidjdja 1292/January 1876 not to alienate Suḳūtra or its island dependencies to any foreign power. A treaty of protection followed in Radjab 1303/April 1886, which was extended in Shaʿbān 1305/May 1888 to include Ḳishn and the mainland dependencies. The treaties lapsed when British rule over Aden colony and protectorates ended in 1387/1967-8.

ḲISMA (A.), Ḳismet (T.), a term used for "fate, destiny". In Arabic, *ḳisma* means literally "sharing out, distribution, allotment", and one of its usages is as the arithmetical term for "division of a number". It later came to mean "portion, lot", and was then particularised to denote "the portion of fate, good or bad, specifically allotted to and destined for each man". It is in this final sense, and especially via Turkish, that *ḳismet* has become familiar in the West as a term for the fatalism popularly attributed to the oriental (the first attestation in English being, according to the Oxford English Dictionary, in 1849; see also K. Lokotsch, *Etymologisches Wörterbuch der Europäischen ... Wörter orientalischen Ursprungs*, Heidelberg 1927, 95, No. 1187).

As noted by H. Ringgren, the noun *ḳisma* does not occur in the Ḳurʾān in this sense (*Studies in Arabian fatalism*, Uppsala-Wiesbaden 1955, 106), but only in its basic sense of "division, apportionment" (IV, 9/8; LIII, 22; LIV, 28). In a verse like XVII, 14/13, the word *ṭāʾir*, originally "bird of ill omen", seems to convey the idea of a man's personal destiny as decreed by God (elsewhere in the Ḳurʾān, this word means rather "evil augury"), cf. Ringgren, *op. cit.*, 87-9; and T. Fahd, *La divination arabe*, Leiden 1966, 218, 436-8, 518). Concerning the more usual terms of early Islamic theology and philosophy for "determinism, predestination", see ḳaḍāʾ and al-ḳaḍāʾ wa 'l-ḳadar; however, it should be noted that *ḳisma* makes an appearance in Arabic poetry of the 1st century A.H. (ʿUmar b. Abī Rabīʿa, Djamīl) in the sense of "the share of human life allotted to a man by God" (Ringgren, *op. cit.*, 151, 156).

By Ottoman Turkish times, *ḳismet* was less a theological and philosophical term than one denoting a general attitude of fatalism, the resigned acceptance of the blows and buffetings of destiny (the same concept being often expressed in Persian and Turkish poetry by words like *falak*, *gardūn* and *čarkh* in reference to the blind, irrational influences of the heavenly bodies of mankind). The climate of popular belief in fate and chance is well seen in many stories of the *Thousand and one nights* [see alf layla wa-layla] and in much of the Perso-Turkish moralistic literature; thus these attitudes loom large in the stories in chs. v and vi of Saʿdī's *Bustān*, on *riḍā* "acceptance" and *ḳināʿat* "contentment" respectively.

Also in Ottoman usage, *ḳismet* was a technical term of the *ḳassāmlıḳ*, the official department of state responsible for the division of estates between the various heirs, the military branch of this being the *ḳismet-i ʿaskeriyye maḥkamesi*. For this service, a fee called the *resm-i ḳismet* was exacted; for further details see ḳassām.

Bibliography: (in addition to references given in the text): Sāmī Bey Frasheri, *Ḳāmūs-i türkī*, s.v.; *ERE*, vi, 794-6 art. "Fate (Muslim)" and viii, 738-9 art. "Kismet" (both by Carra de Vaux); E. Littmann, *Morgenländische Wörter im Deutschen*, Tübingen 1924 s.v. (C. E. Bosworth)

KISRĀ, Arabic form of the Persian name Khusraw, derived from Syriac *Kesrō* or *Kōrsrō* by the 6th century A.D. The consonant and vowel changes occurred because ܟ was used for both *k* and *kh* in Syriac, and used here for the Persian *kh*, became *k* in Arabic. The first *u* became *i* by vowel dissimilation in Syriac, and the final vowel became an *alif maḳṣūra* by approximation to the *fiʿlā* form. Arabic lexicographers said there was no Arabic word ending in *wāw* with *ḍamma* after the first consonant, so Khusraw was put in the *fiʿlā* form and the *kh* became *k* to show that it was Arabicised.

Although Khusraw occurs in Arabic, Kisrā was usually employed for proper names, especially for the Sāsānid rulers Kisrā Anūshirwān (531-79 A.D.) and Kisrā Aparwīz (591-628 A.D.). Because these two Kisrās dominated the late Sāsānid period and Arab memories of it, their name was identified with the dynasty. Arabs came to regard Kisrā as the name (*ism*), surname or title (*laḳab*) of Persian kings, the Sāsānid dynasty as the house of Kisrā (*āl Kisrā*), and crown lands in ʿIrāḳ as *arḍ Kisrā*. Women of the royal family were called "daughters of Kisrā". By the 2nd/8th century, the tendency to call all Sāsānid rulers Kisrā produced the broken plurals *akāsira* (the one most commonly used), *kasāsira*, *akāsir*, and *kusūr*, all contrary to analogy.

Kisrā personified Sāsānid royalty for the Arabs, who viewed him with an ambivalent combination of envy, awe and fear. They called Ctesiphon *Madāʾin Kisrā*, the great audience hall there the *Īwān Kisrā*, the defensive ditch the *Khandaķ Kisrā*, spoke of the crown, treasure, dazzling carpet, sword and armour of Kisrā, and associated polished manners, lavish hospitality, *haute cuisine*, golden tableware and the arbitrary exercise of power, with his court. Kisrā provided a symbol for Arab assimilation to Persian high culture, for feelings of common nobility, and represented the Persian monarch in lists of kings of the world and in the murals at Ķuṣayr ʿAmra. He was a poetic symbol of past glory and of fate that overtakes even mighty kings.

Kisrā's worldliness contrasted with Muslim spiritual values. *Ḥadīth* emphasised Muḥammad's lack of pretence, his avoidance of royal trappings, and his followers' greater respect for him compared to Kisrā and other rulers. Kisrā tore up Muḥammad's letter inviting him to Islam, and *ḥadīth* promised the destruction of Kisrā and Ķayṣar and that Muslims would spend their treasures. In the simile ascribed to Hurmuzān, Kisrā is the main enemy of Islam (the head of the hostile bird).

A fictionalised Kisrā emerged by the 3rd/9th century as a vehicle for edifying tales, a person who conversed with a Bedouin on the virtues of camels or exchanged the lethal gift of a leopard for an eagle with Ķayṣar. He was quoted as a source of proverbs and someone who knew these stories might be nicknamed "Kisrā".

Relative nouns *kisrawī*, *kisrī*, and *kisrawānī* were formed from Kisrā. The form *khusrawānī*, directly from Persian, referred to the greatest of the *akāsira* and meant a kind of drink or a very fine, royal silk used for clothing and used to cover the Kaʿba in the late 1st/7th century.

al-KISRAWĪ, Abu 'l-Ḥasan ʿAlī b. Mahdī al-Iṣfahānī al-Ṭabarī, *rāwī* of the 3rd/9th century who was also a poet and man of letters. He was the teacher of Hārūn, the son of ʿAlī b. ʿAlī b. Yaḥyā al-Munadjdjim, and transmitted historical and literary traditions, and especially on the authority of al-Djāḥiẓ. He was in contact with Badr al-Muʿtaḍidī [*q.v.* in Suppl.] and exchanged verses with Ibn al-Muʿtazz. His knowledge of *adab* led him to compose several works, amongst which are cited a *Kitāb al-Khiṣāl*, a collection of literary traditions, maxims, proverbs and poetry, a *K. al-Aʿyād wa 'l-nawārīz* and a *K. Murāsalāt al-ikhwān wa-muḥāwarāt al-khillān*. His poetry consists mainly of occasional verses which were improvised. He died at some point between 283/896 and 289/902, although Ḥādjdjī Khalīfa, ed. Istanbul, i, 705, places his death in *ca.* 330/941-2.

ĶIṢṢA (A.), pl. *ķiṣaṣ*, the term which, after a long evolution, is now generally employed in Arabic for the novel, whilst its diminutive *uķṣūṣa*, pl. *aķāṣīṣ*, has sometimes been adopted, notably by Maḥmūd Taymūr [*q.v.*] as the equivalent of "novella, short story", before being ineptly replaced by a calque from the English "short story", *ķiṣṣa ķaṣīra*. The sections of the following article are largely devoted to these literary genres as they are cultivated in the various Islamic literatures, even if the word *ķiṣṣa* is not itself used by them. Although some Berber tongues use the Arabic term (*lķiṣṣt*), it has not seemed necessary to add a section on the story in that language [see BERBERS], but a brief section is devoted to the *ķiṣṣa* in Judaeo-Arabic and Judaeo-Berber.

The ensuing article is accordingly divided as follows:

1. The semantic range of *ķiṣṣa* in Arabic.
2. The novel and short story in modern Arabic literature.
3. (a) The *ķiṣṣa* in older Turkish literature.
   (b) The novel and short story in modern Turkish literature.
4. The genre in Persian literature.
5. The genre in Urdu.
6. The genre in Malaysia and Indonesia.
7. The *ķiṣṣa* and its modern developments in Swahili.
8. The *ķiṣṣa* in Judaeo-Arabic and Judaeo-Berber.

1. The semantic range of *ķiṣṣa* in Arabic.

Judging by the contents of the articles in the Arabic dictionaries devoted to the root *ķ-ṣ-ṣ*, one may consider this as the result of a convergence of several different "roots". Among the various meanings shown here, two of them seem to be totally distinct from each other: "to clip the hair, wings, etc." (cf. Hebr. קצב and words made up of -קצ) and "to follow the tracks of a man or animal".

Taking into account the realities of Bedouin life, this last sense, to which *ḳiṣṣa* can easily be connected, is certainly old, if not the primitive signification. It is from the verb *ḳaṣṣa* taken in this sense that the name of the *ḳāṣṣ*, pl. *ḳuṣṣāṣ* "a kind of detective responsible for examining and interpreting tracks and marks on the ground" (al-Masʿūdī, *Murūdj*, iii, 343 = § 1227; cf. al-ʿUzayzī, *Ḳāmūs al-ʿādāt* ..., ʿAmmān 1973-4, iii, 85, who points out the use in Jordan of *ḳaṣṣāṣ* with the generally-developed sense of *ḳāʾif al-athar* [see KIYĀFA]) has evolved). Moreover, the Ḳurʾān provides two attestations of this old meaning of the root *ḳ-ṣ-ṣ*. Moses' mother says to his sister *ḳuṣṣīhi* "follow his tracks" (XXVIII, 10/11), and in XVIII, 63/64, it is said that Moses and his page boy "followed their tracks back again, retracing them" (*fa-rtadda ʿalā āthārihimā ḳaṣaṣā*). Nevertheless, the verb *ḳaṣṣa* is most frequently found in the Ḳurʾān with the derived sense of "to tell a story, narrate", or more exactly, "to give a circumstantial account of some happening, to recount an event by giving all the details successively"; this nuance is usually lost in translation, though it may sometimes be conveyed through an adverb like "exactly". One may note, with repetitions within the same verse, 19 occurrences of this verb: the account is given by God to the Prophet (IV, 162/164, VI, 57, VII, 6/7, 99/101, XI, 102/100, 121/120, XII, 3, XVI, 119/118, XVIII, 12/13, XX, 99, XL, 78), by the Ḳurʾān (XXVII, 78/76) and by Moses to Shuʿayb (XXVIII, 25); Jacob tells Joseph not to recount his dream to his brothers (XII, 5); divine messengers recite to mankind the miraculous "signs" of God (VI, 130, VII, 33/35); and God instructs the Prophet to recount "the affair" (VII, 175/176).

In this last verse, the word *ḳaṣaṣ*, which has the general sense of "narrative, explanation, report, story" in its five other attestations (III, 55/62, XII, 3, 111, XXVIII title and v. 25), has been translated by "affair". Doubtless one should not neglect the nuance of precision and exactness contained in *ḳaṣaṣ*, but it is perfectly certain that the term's sense tends to become attenuated in order to assimilate it to that of *ḥadīth*. It could be perfectly easily substituted for the latter word in at least five occurrences out of 23 (XX, 8/9, LI, 24, LXXIX, 15, LXXXV, 17, LXXXVIII, 1), and furthermore, the verb *ḥaddatha* is clearly equivalent to *ḳaṣṣa* in three verses (II, 71/76, XCIII, 11, XCIX, 4). Also close to *ḳaṣaṣ* are *khabar* (XXVII, 7, XXVIII, 29) and especially the pl. *akhbār* (IX, 95/94, XLVII, 33/31, XCIX, 4), and also *nabaʾ*, with 12 attestations out of the 17 in the singular (V, 30/27, VI, 34, VII, 174/175, IX, 71/70, X, 72/71, XIV, 9, XVIII, 12/13, XXVI, 69, XXVIII, 2/3, XXXVIII, 21/20 and LXIV, 5) and 7 out of the 11 in the plural (III, 39/44, 51, 121/120, VII, 99, XII, 103/102, XXVIII, 66 and LIV, 4) corresponding fairly exactly to *ḳaṣaṣ* in the sense of "narrative, story, tale". Thus four terms of very different origins converge here in the Ḳurʾān and tend to assume a common signification, whilst losing at the same time the nuances implied in their original etymologies [see ḤIKĀYA].

Ḳiṣṣa itself does not appear in the Holy Book, but one can point to some examples in the *ḥadīth* with a general meaning of "thing, affair" (= *amr*, *shaʾn*), close to one of the meanings of *ḳaṣaṣ*; but this term seems however to have kept well its original nuance of meaning in the traditionists' vocabulary, to judge by the expression *sāḳa al-ḥadīth bi-ḳiṣṣatihi* "he cited the *ḥadīth* in all its details, giving it word-for-word" (Muslim, Ṣaḥīḥ, *Salām*, *bāb al-siḥr*, trad. No. 44). The word also very rapidly became a technical term of Arabic grammar. Sībawayh certainly uses the verb *ḳaṣṣa* in the sense of "to narrate" (i, 60) and the noun *ḳiṣṣa* in those of "narrative" (= *ḥadīth*, i, 60) and "affair" (i, 415, 418, 432), but above all he applies it (52 instances) to the idea of "state" (= *ḥāl*; see G. Troupeau, *Lexique-index du* Kitāb *de Sībawayhi*, Paris 1976, 172); consequently the expressions *ḍamīr al-shaʾn* and *ḍamīr al-ḳiṣṣa* are absolutely synonymous (W. Wright, *A grammar of the Arabic language*, index.)

At the moment when Sībawayh wrote his work, the verb *ḳaṣṣa* meant, from the time of the Prophet onwards, "to practise as a popular preacher of sermons and edifying tales "[see ḲĀṢṢ], this profession being called *ḳaṣṣ* or *ḳaṣaṣ* (see Wensinck, *Concordance*, v, 391-2, 394, 395). The more serious among the *ḳuṣṣāṣ* made a speciality of giving a commentary to their audience on the miraculous events referred to in the Ḳurʾān and of recounting, in particular, in reference to the lives of the prophets, edifying stories. The *ḳaṣaṣ* of the Ḳurʾānic text was then specialised in meaning, as we have just seen, and replaced, in order to designate the material in the répertoire of the popular religious story-tellers, by *ḳiṣṣa*, pl. *ḳiṣaṣ*, without the term having, at least at the outset, the least element of the pejorative in its sense. However, in the 3rd/9th century, al-Djāḥiẓ, following other authors, reserves for *ḳiṣṣa* the sense of "religious tale", but sometimes adds, with his usual irony, some fairly precise nuances of "story full of marvels and somewhat unbelievable", of "myth" and of "traditional explanation of a supernatural happening" (see *Tarbīʿ*, index).

At this period, the *ḳuṣṣāṣ* were already mingling with their discourses stories totally lacking in edification, but it seems that *ḳiṣṣa* did not yet mean a secular tale, and even in the next century, Ibn al-Nadīm does not use the word in the chapter devoted to stories in the *Fihrist*. Moreover, a few decades later, *ḳiṣṣa* appears with the religious sense which it had when used by the first *ḳuṣṣāṣ*, in the title of al-Thaʿlabī's [*q.v.*] popular work, the *ʿArāʾis al-madjālis fī ḳiṣaṣ al-anbiyāʾ*; the expression *ḳiṣaṣ al-anbiyāʾ* [*q.v.*] was to become the title of quite a considerable number of works. Despite the precise meaning implied by this latter expression, the lexicographers, who devote quite a lot of space to the root *ḳ - ṣ - ṣ*, hardly give the precise sense of *ḳiṣṣa* at all. The *LA* limits itself to asserting that the term is well-known, and then glosses it by *khabar*, *ḥadīth* and *amr*, though it does however give a pejorative nuance for *ḳaṣṣ*, in fact equivalent to "words, chatter", opposed to *ʿamal* "action". In the *Miṣbāḥ*, *ḳiṣṣa* is defined only by *shaʾn* and *amr*; and in the *Ṣaḥāḥ*, *amr* and *ḥadīth* are further used to gloss this term, whose plural *ḳiṣaṣ* would therefore only be used for the *ḳiṣṣa* when it was written (likewise, also, in the *LA* and *Ḳāmūs*). Assuming that we are probably not concerned here with the *ḳiṣaṣ al-anbiyāʾ*, this rather enigmatic explanation is probably to be used with a technical sense different from that signalled in grammatical terminology; starting from the meaning of "affair", early attested and found from Ḳurʾānic times onwards, *ḳiṣṣa* very soon came in fact to mean "a written exposition of an affair or matter, a mémoire presented to a judge, a request placed before a ruler, a petition". Quatremère, in his *Sultans mamelouks*, i, 236 n. 111, gives a certain number of examples of this meaning and mentions the existence of an official, the *ḳiṣṣa-dār*, who was

concerned with such requests (see also Gaudefroy-Demombynes, *La Syrie*, p. XLIV; Dozy does not appear to have interpreted the material in the dictionaries relative to the written *ḳiṣṣa* in the same way as we have done, since he includes this term in his *Supplément*). Al-Ḳalḳashandī, in *Ṣubḥ*, iii, 487-8, does not cite the *ḳiṣṣa-dār* but provides some details about the manner in which *ḳiṣaṣ al-maẓālim* were treated.

Since some *ḳuṣṣāṣ* began regularly to narrate stories which had no religious character at all, *ḳiṣṣa*, without ceasing at the same time to characterise a serious, even a historical narrative (e.g. the 27 mss. called *ḳiṣṣat ghazwat*... "narrative of the expedition of ..." classified by Ahlwardt in his Berlin catalogue) tended to be applied to any story, sacred or profane, and to become a synonym of *ḥikāya*, and secondarily, of *ḥadīth* and *khabar*. As an indication, the above-mentioned catalogue has a total of 216 works beginning with *ḳiṣṣa*; that of the mss. in the B.N. of Paris drawn up by G. Vajda has 115 (of which 75 have been restored according to their contents); *ḥikāya* appears there 47 times, *ḥadīth* 12 times and *khabar* 4 times. In the group as a whole, there are certainly some edifying stories (e.g. the *Ḳiṣṣat Ahl al-Kahf*), but titles like *Ḳiṣṣat Sulaymān maʿa Bilḳīs* or *Ḳiṣṣat Tawaddud* reveal true romances. In this way, the modern use of the term is to be justified, and this, conversely, has brought about a revival of *ḳaṣaṣ*, now specialised in the sense of "narration", the narrative genre and the narrative art", leading to the creation of the word *ḳaṣaṣī* "narrative" (adj.). (CH. PELLAT)

2. In modern Arabic literature.

The modern and technical meaning of this word: "fictional narrative", "novel" has come to be accepted without eliminating the more general, older sense of "story", "account". Furthermore, it should be noted that, in this case as in many others, the neologism has not been immediately accepted and does not cover the same semantic field for all those who use it, even today. From the start, it is seen to alternate with other words.

In an article appearing in *al-Ahrām*, on 11 May 1881, where the *shaykh* Muḥammad ʿAbduh drew attention, without otherwise deploring it, to the taste of his contemporaries for the novel, we find the word *rumāniyyāt*. The definition of the genre remains somewhat hazy since the eminent reformer included under this heading *Kalila wa-Dimna* and the stories of traditional *adab* along with the recent translation of the *Aventures de Télémaque* by al-Ṭahṭāwī and the serial stories then published in *al-Ahrām*. Besides this borrowed term—which was not long to remain in use—there are words drawn from the Arabic vocabulary which come to mean the same as *ḳiṣṣa*. Understandably in the case of works on the borderline of the novel genre, the terminology appears uncertain: the *ʿAlam al-dīn* (1884) of ʿAlī Mubārak is presented by its author as a *ḥikāya* (story) while Ibrāhīm al-Muwayliḥī gives the title *ḥadīth* (talk) to his very interesting *maḳāmāt*: *Ḥadīth ʿĪsā b. Hishām* (1907). It is all the same curious to note that in 1917 a certain Djubrān Khalīl Djubrān, suggesting to the editor of the review *al-Hilāl* the holding of a competition for the best story—to promote a genre that has proved its worth in Europe—uses the term *ḥikāya* to describe the genre. Little by little, however, *ḳiṣṣa* came to prevail, and Ṭāhā Ḥusayn was seen claiming back his liberty as a creator and refusing to apply rules whose validity he did not recognise by saying in substance: the *ḳiṣṣa* is taught nowhere, and besides, what I write is not a *ḳiṣṣa* but a *ḥadīth* (cf. Ṣāliḥ, in *al-Muʿadhdhabūn fi 'l-arḍ*).

In fact, the lack of precision remains, mainly as a result of the differences in length among the various kinds of story. It is possible to account for these without departing from the root *ḳ-ṣ-ṣ*. For the abstract "narration", "narrative literature" we have *ḳaṣaṣ*, while the "story" of indeterminate length is called *ḳiṣṣa*, the novel being distinguished from the "tale" or from the "novelette" by an adjective (*ḳiṣṣa ṭawīla* in the one case, *ḳiṣṣa ḳaṣīra* in the other). The range of meanings may be conveyed in a still more precise fashion: a suitable adjective expresses the midway term, the long short story so popular with the British (*ḳiṣṣa mutawassiṭa*), while *uḳṣūṣa* (pl. *aḳāṣīṣ*) denotes the very short story, the short novelette.

But in practice, things are not so simple. The first Arabic story-teller to be universally known, Maḥmūd Taymūr, published successively two collections of stories, calling the first *aḳāṣīṣ* (*al-Shaykh Djumʿa wa-aḳāṣīṣ ukhrā*, 1925) and the second *ḳiṣaṣ* (*ʿAmm Metwalli wa-ḳiṣaṣ ukhrā*, 1926). At the other end of the scale, there are some who prefer *riwāya* to *ḳiṣṣa ṭawīla* to denote the novel; this neologism was more specifically reserved at the end of the 19th century to denote a "theatrical piece." Without it being an absolute rule, it may be stated that at the present day *uḳṣūṣa* is more frequently used in Syria and Lebanon in the sense of short story, while *riwāya* is preferred in Egypt with the meaning of novel.

Considerations of length are not the only ones to be of relevance. It should also be noted that some have tried to solve the ambiguity inherent in the word "tale" which exists also in English. If one wishes to differentiate the brief, realistic, truthful or plausible narrative (the short story) from a narrative of the same dimensions but imaginative, extraordinary or extravagant (the tale), one must call the latter by the name *ḳiṣṣa* (or *uḳṣūṣa*) followed by an adjective (*khayāliyya* or *khurāfiyya*), while being careful not to use the word *khurāfa* in isolation lest it be understood in a non-technical sense and with a pejorative flavour: "a cock-and-bull story".

The birth and evolution of Arabic fictional literature. The modern *ḳiṣṣa* owes nothing to Arab tradition. It is linked neither with the folklore of the *Thousand and one nights* nor with tales of chivalry nor with narratives of *adab*. The tradition of classical *maḳāma*, although taken up by two men of imagination and dual culture (Fāris al-Shidyāḳ for *al-Sāḳ ʿalā 'l-sāḳ*, 1855; and Muḥammad al-Muwayliḥī, cf. above, 1907) has left no legacy. It is from Europe that the Arabs have borrowed this literary genre totally unfamiliar to them, sc. the novel.

The press, which has been remarkably prolific in Cairo and Beirut ever since its first appearance there in the middle of the 19th century, has in a short space of time put into circulation stories of various lengths translated from French and English. Some periodicals, like *Ḥadīḳa al-akhbār* (founded in Beirut in 1858) publish examples from time to time, others, like *al-Djinān* (Beirut 1870) regularly devote a part of each issue to such translations, and the same applies to the reviews that the Lebanese resident in Egypt have subsequently launched in Cairo (*al-Hilāl*, *al-Muḳtaṭaf*, *al-Ḍiyāʾ*). Even the daily *al-Ahrām* founded in Alexandria in 1875 has its serial story. Furthermore, some weekly or monthly

entertainment publications are entirely devoted to them (*Silsilat al-fukāhāt*, Beirut 1884; *Muntakhabāt al-riwāyāt*, Cairo 1894). A certain degree of decentralisation has even been achieved with the appearance of *Silsilat al-riwāyāt al-ʿuthmāniyya* at Ṭanṭā in 1908 and *al-Samīr* at Alexandria in 1911. The second stage is the editing of the translated novels in volumes.

The essential object of this type of literature is to entertain. Publishers and translators search out stories of extraordinary adventures, of unhappy love-affairs, of poignant grief, rather than works of established quality whose authors are universally known. Fidelity to the original text was not regarded as an obligation in the period where the translator most in demand, Ṭanyūs ʿAbduh, a Lebanese who had settled in Egypt, was renowned for the imagination which he put into his work. The tendency was to adapt rather than to translate.

Quite naturally "original" composition has followed translation-adaptation and obeyed the same rules. It has even in some cases been exactly contemporary with it, and there are times when the translator is at the same time an author. This was the case with Salīm al-Bustānī, who published no less than five original works in serial form between 1870 and 1884 in *al-Djinān*, at the same time as he was translating French novels. His sister Alice and his cousin Saʿīd were also involved in the same sort of work. In serial stories of this kind as well as in the copied models there abound *coups de théâtre*, unexpected meetings, unsuspected relationships, etc. In order to avoid offending a very sensitive public moral sense, the scene of the plot still tends to be exotic, or if the action takes place in Egypt, the whole or the majority of the cast of characters must be foreign (*Fatāt al-ahrām* by Muḥammad Maḥmūd, *Fatāt Miṣr* by Yaʿḳūb Sarrūf). Saʿīd al-Bustānī discovered to his cost the powerful force of this unwritten rule: a resident of Egypt for ten years, a friend of Shaykh ʿAbduh, this Lebanese was nevertheless savagely criticised in conventionally-minded circles for having published *Dhāt al-khiḍr* (1894) which claims to show the disastrous results of an ill-matched marriage... in a wealthy family supposedly living in Alexandria!

Obliged to show some degree of discretion, limited in its intellectual ambitions, this newly-arrived genre would doubtless never have interested an enlightened Arab public had it not found sponsors and promoters. Shaykh ʿAbduh took an interest in it, as has been seen, because he reckoned it capable of having a reformatory effect, if carrying a well-formulated message. For Djirdji Zaydān (1862-1914), it was the ideal didactic means to put into the service of history, and this Christian author of a *History of Islamic civilisation* therefore brought to the novel the caution of the scholar. Whereas Djamīl Mudawwar had published in Beirut in 1881 a single historical novel about ʿAbbāsid Baghdād, he was to publish twenty-four such novels between 1889 and 1914, of which the majority appeared in serial form in Cairo in the review *al-Hilāl* which he edited. Serious information being in his view the essential part, the amorous element of the plot would serve only to lure the reader; this element seems therefore to be somewhat stereotyped from one volume to another; but at least, the construction is solid and the language clear and precise.

After reason, sensibility. It would be impossib e to overestimate the role of Manfalūṭī (1876-1924) for, in his two collections (*al-Naẓarāt* (1910-1921) and *al-ʿAbarāt* (1915)), he superbly arabises French romanticism to the point where, under his pen, translations, adaptations and original creations seem to flow from the same source. Having found a style and a tone, he knows how to stir emotions while dealing, in a context of traditional morality, with the problems posed by the irruption of European civilisation into the modern Orient. At the opposite extreme as regards content but with a similar degree of emotional intensity, is the message of "The American" Djubrān (1883-1931). Tears flow in abundance here too, but the romanticism is noble, protesting at the injustice practised by the powerful of this world as observed in the microcosm of the Lebanese village where the mayor and the priest seem to be constantly united in the effort to prevent the children from loving each other; *al-Adjniḥa al-mutakassira* (1912) hardly deserves to be called a novel, it is rather a long poem in prose devoted to an unhappy love affair of the author. "Broken wings" and "Tears", these are the two works, of Egypt and the *mahdjar*, which have moved or irritated several generations of Arabs all over the world.

But the first Arabic novel owes nothing to Manfalūṭī or to Djubrān. It was written in Paris—and perhaps partly in Geneva—by a young Egyptian student. Haykal (1888-1956) was feeling homesick when he wrote *Zaynab* (1914), and it is the Egyptian countryside that he attempts to re-create with its poetry, its variety, and also its characters, simple and poverty-stricken. But this evocation is centred around two victims of injustice in Egypt, sc. the peasant and the woman. Even though the first edition is signed under the pseudonym *Miṣrī Fallāḥ*, the poverty of the farm worker hardly holds our attention, while the fate of two women, equally unfortunate, illustrates the sorry condition of an entire sex and recalls the courageous protest of Ḳāsim Amīn at the beginning of the century. The hero ultimately makes his indictment: life has no appeal in a land where youth passes too quickly, where love is not allowed, and where the individual has no time to look at what is beautiful.

Even if the problems of writing and construction are not always perfectly solved, even if the influence of *La nouvelle Heloïse* of Rousseau is too obvious, this rich composition does not only have a historical interest, for it conveys an authentic tone, that of a desperate confession.

In spite of these promising beginnings, other novels were not to appear for a further fifteen years. In the interval, it is only short story writers who make a name for themselves, putting forward within the dimensions of shorter narratives technical solutions borrowed this time from the best European specialists. The stories that they tell, on the other hand, always deal with the reality that surrounds them. In "wringing the neck of rhetoric", these young pioneers feel that they are laying the foundations of a new literature. The first of them,—and paradoxically the only survivor—Mikhāʾīl Nuʿayma (born in 1889) began publishing his stories at the beginning of the First World War in *al-Sāʾiḥ*, then in *al-Funūn*, the two reviews edited by Syrian Lebanese settlers in New York. The best, later collected in an anthology (*Kāna mā kāna*, Beirut 1937), are striking for their simple language, the transparency of the characters, the significant choice of situations—where ancestral customs like the journey to America play a central role—and perhaps even more for the firmness with which the story is

told, a story where, however, emotion and humour make themselves discreetly felt. On Egyptian soil, slightly later, Muḥammad Taymūr (d. 1921) published in *al-Sufūr* some stories of which the best-known dates from 1919—an important year for Egyptian nationalism of which this writer was a passionate advocate. Add to this element the interest taken in social injustice and in poverty, and we have the principal source-material of the stories of Muḥammad Taymūr and of his comrades-in-arms. This expression is not an exaggeration when applied to his brother Maḥmūd, who describes himself as taking the torch from the hands of his brother, dead at the age of thirty. It is without doubt Maḥmūd Taymūr (d. 1974), the greatest story writer of the time, who has exerted the strongest influence in Egypt and in the other Arab lands, one of the most prolific of modern Arab writers and one of the most widely-translated too. Following the school of Maupassant—to whom his brother introduced him—he learnt to construct a plot firmly centred on a character who is bizarre to say the least, or on an exceptional incident. But he does not ignore the dominant themes of Egyptian social life, to which the brothers ʿUbayd and Maḥmūd Ṭāhir Lās̲h̲īn (d. 1955) also come to apply themselves, each according to his temperament and his special talent, Lās̲h̲īn being of the three the one whose palette would appear to be the best equipped both for varieties of subject and of resources of expression. Let it also be noted that this writer has written one of the few Arabic novels to appear before the Second World War: *Ḥawwāʾ bilā Ādam* ("Eve without Adam"), 1934.

Furthermore, it may be appropriate to note that this novel is distinct from the others in that its subject (the pitiable failure of a feminist schoolteacher who believed in love and social advancement) owes nothing to the life of the author, while Ṭāhā Ḥusayn (d. 1973) Ibrāhīm ʿAbd al-Ḳādir al-Māzinī (d. 1949), al-ʿAḳḳād (d. 1964) and Tawfīḳ al-Ḥakīm (b. 1902) had written nothing before 1939 but works largely autobiographical in character. What these men have in common is that they are not true imaginative writers, but rather they are part of the Egyptian intellectual élite. It should therefore surprise no-one that they look for material for their stories in their own experience. Besides, for these great thinkers of their generation also, this is the means of assessing the exact condition of their country, for carrying on, in short, the worried analysis conducted by Haykal in *Zaynab*. As chance would have it, the year 1929 saw both the second edition of this novel and the publication of the first part of Ṭāhā Ḥusayn's *al-Ayyām*. The accuracy in tone of this book, written with finesse and modesty, explains its immediate success in Egypt and the rest of the world; one feels that the blind boy struggling in a world that is hostile or indifferent or stupid symbolises more than an individual destiny. Even before the appearance of the second part of *al-Ayyām*, *Adīb* (1935) represents a split in the personality of the author, whose Egyptian half looks on helplessly at the folly and wreck of the Europeanised part.

The debate between the two civilisations—with their customs and culture—also interests Tawfīḳ al-Ḥakīm in two of his autobiographical novels, while in the two others (*ʿAwdat al-rūḥ*, 1933; *Yawmiyyāt nāʾib fi 'l-aryāf*, 1937) we find a number of the elements of the dossiers opened on Egyptian society by the short story writers. Superficially, the enquiry is less emphatic, there are times when the reader roars with laughter, but do not the laughter and the careless airs conceal a deep disquiet into which the faint-hearted lover and the Deputy Prosecutor are both plunged?

In drawing his self-portrait in *Ibrāhīm al-kātib* (1931), Māzinī speaks of disappointments in love which may be fictitious, but he is most certainly honest when he shows himself irresolute and easily discouraged. As if in spite of himself, he gives us suggestive insights into the three milieux that he sets himself to evoke and, when he does not overstep the bounds, his glibness does not lack charm.

Outside Egypt, a single novelist deserves mention for this period; the Lebanese Tawfīḳ Yūsuf ʿAwwād, who published *al-Rag̲h̲īf* in 1939. It is the Lebanon of the period of the First World War, the Lebanon "in the hour of the Turk", ravaged by famine, that we find here, the repression of nationalist movements coming to an end on the gallows of Beirut's Place des Canons. With a great deal of sobriety, a very sure sense of crowd-scenes, a properly romantic conception of history and politics, here is a writer who knows how to give to his narrative a depth which nobody else, Ḥakīm included, has yet succeeded in obtaining.

ʿIrāḳ at that time was still at a hesitant stage, with Maḥmūd Aḥmad al-Sayyid (d. 1937) publishing from 1921 onwards, in Cairo, stories which are admittedly rudimentary but where the effects of Turkish rule on ʿIrāḳī society are succinctly shown; with Anwar S̲h̲āʾul (first collection of stories 1930), the influence of Taymūr is clear. In his stories and those of ʿAbd al-Mad̲j̲īd Luṭfī (b. 1908), influenced by Tolstoy and Gorky, one feels that the seeds of a promising harvest have been sown in ʿIrāḳ.

Among the pioneers mentioned above, a certain number have lived on after the war. Their prestige has increased and they have attained immortality. Young Arabic literature has found in them its ancestors, its sponsors, its classics, it could be said. Each of them otherwise remains imperturbably faithful to his style. It is still the same self-centred man dissatisfied with home and love that Māzinī indulgently analyses (*Ibrahim II*). From an incident of everyday life, the Lebanese Mik̲h̲āʾīl Nuʿayma draws the material of an intimate diary (*Mud̲h̲akkarāt al-arḳas̲h̲*, 1949), where meditations on good and evil, the solitude of the soul and its mystical vocation, count more than the narrative plot. In the same way that Tawfīḳ al-Ḥakīm hardly descends from his ivory tower to stigmatise feminine duplicity and to comment ironically on the sacred bonds of marriage (*al-Ribāṭ al-muḳaddas*, 1944), Ṭāhā Ḥusayn pursues his dialogue with destiny, but through interposed characters, in a tragic family chronicle with slow tempo (*S̲h̲ad̲j̲arat al-buʾs*, 1954). The famous Maḥmūd Taymūr still composes short stories—his last collection appeared in January 1967—but he also writes novels where he expresses in the same pure language the qualities for which he is well known; very close to his times in *Ilā 'l-liḳāʾ ayyuhā 'l-ḥubb* (1959), he is halfway to fantasy in *al-Maṣābīḥ al-zurḳ* (1960). In this group, it is without doubt Haykal who has produced the least expected work for *Hākad̲h̲ā k̲h̲uliḳat* (1956) presents, on the eve of his death, a portrait of a woman that contrasts totally with the *Zaynab* of his youth; this cold, dominating female really existed, so well-informed contemporaries assert.

But the new-comers are henceforward very numerous, some of them belonging to Arab countries not

mentioned above. Reviews have been founded: in Egypt of course, but also in Baḥrayn, where a literary periodical of this name appeared when the first printing-press was installed in the Gulf (1939), most of all in Beirut where *al-Ādāb*, founded in 1953, and *al-Adīb* give young writers the opportunity to become known, in Tunis where, since 1944, the review *al-Mabāḥith* awards a prize (*Bahlawān*) to a writer every year. Henceforward, Arabic fictional literature is sufficiently vigorous and varied to convey trends which are to be noted elsewhere in the world.

The romantics. It is clear that romanticism has solid roots at its disposal—it is enough to recall the genre of the first European novels translated, the importance of Manfalūṭī, the tone of *Zaynab*. A younger generation dissatisfied with its condition finds at last the means of expressing its revolt and its dreams. Evidently it is love that polarises all attention. This lyricism is a phenomenon of youth in three senses: the youth of the writer, the youth of literature and the youth of the public. The theme of the impossibility of amorous relationships is treated at length by the Tunisian Rashīd Ghālī in the short stories that he has published in the review *al-Fikr* since 1960; an encounter without future constitutes the subject of *al-Baḥr lā māʾ fīh*, a story which gives its title and dominant tone to a collection published by the Libyan A. Ibrāhīm al-Faḳīh in 1966; the Sudanese Sabbār (b. 1927) published ten years ago a novel on a small scale: *Sirr al-dumūʿ*.

It should not, however, be assumed that this type of novel is always attributable to an "indiscretion of youth." Writers of considerable renown who are no longer adolescents have built their success upon this specialised genre, and their prolific output shows that they know how to pluck the string of emotion. In this context, one could hope for no better example than the Egyptian trio of Yūsuf Sibāʿī (d. 1978), ʿA. H. ʿAbd Allāh (d. 1973) and Iḥsān ʿAbd al-Ḳuddūs. The systematic exploitation of sentimental problems is their common denominator, as well as their ability to impose their personal style. The first emphasises the dramatic, or melodramatic quality of the situations that he imagines; the second does not flinch from a certain moralistic purring owed for the most part to the very literary nature of his language; finally, the third flirts with scandal, and his gallery of pretty girls at once innocent and greedy for liberty has aroused many adolescent dreams.

Readers unmoved by the magic of these masters perhaps would allow themselves to be seduced by more subtle forms of romanticism. In Egypt, ʿAbd Allāh Ṭūkhī finds in his native countryside (*Fī ḍawʾ al-ḳamar*, short stories, 1960) or in a cruise on the Nile (*al-Nahr*, a novel 1962) the appropriate setting that his dreams require, while Muṣṭafā Maḥmūd (b. 1931) studies the relationship of married people (*al-Mustaḥīl*, 1960) with much tact and sensitivity. In Syria, the short story writer Shāmil Rūmī (*al-Ḳaṭāʾif*, 1960) even seasons his outpourings with a fair dose of fierce satire. Finally, we draw attention to a short story by the Algerian Ṭāhir Waṭṭār (*Mamarr al-ayyām*, in *al-Fikr*, 1959) for this disillusioned statement by one of his heroes: "There is no youth in the Arab world. The Arab knows only two ages: childhood and adulthood." We shall have occasion to speak again of this sense of malaise.

The realists. These writers have inherited a populist or poverty-oriented tradition that is not very old. On the eve of the war, the Syrians T. ʿAwwād, K. M. Karam, and the ʿIrāḳī Djaʿfar Khalīlī were concerning themselves with fraternity, tearful commiseration or indignant horror at the sufferings of the lower classes.

We find this same interest in poor people with a great number of writers of the following period and in countries that have come to the novel more recently. From Morocco, we may mention two collections of stories; *al-Saḳf* by Muḥammad Ibrāhīm Abū ʿAllū and *Radjul wa-marʾa* (1969) by Zaynab Fahmī. Taymūr has really created a school, for we witness an impressive parade of pitiable or laughable "cases"; Y. Ḥaḳḳī's petty tradesmen, the charlatans of the Tunisian Muṣṭafā Fārisī, the baggage carriers of the Syrian Ṣamīm Sharīf, the water-carriers of the Egyptian Sibāʿī. These specimens of an idle or poverty-stricken humanity, true to type even when they live on the fringe of society, clearly lend themselves to living in novels. Who could deny the vividness of the portrait of Tarnannuh, idler and football fanatic, product of the imagination of Rashād Ḥamzāwī (Tunis, *al-Fikr*, 1959) or that of the "maker of grotesque cripples", the negro Zīṭa who introduces a kind of Court of Miracles in the lane (*Zuḳāḳ al-midaḳḳ*, 1947) described by the Egyptian Nadjīb Maḥfūẓ.

Apart from the hero, the writers strive to recreate a whole ambience to which they are deeply attached. Thus, thanks to the pen of a Ṭayyib Ṭarīkī or of a Ḥamzāwī, there appear before us the coloured quarters of Rabṭ and of Turbat al-Bey in Tunis, while the shrines of Old Cairo, Sayyidnā Ḥusayn and Sayyidatnā Zaynab, inspire the best works of Ḥaḳḳī and Maḥfūẓ, and the seascape of the Shaṭṭ al-ʿArab is recreated in a story such as *Dhākirat al-madīna* (1975) by the ʿIrāḳī ʿAbd al-Raḥmān Madjīd al-Rubayʿī.

It would be surprising if the countryside were to remain outside the fictional répertoire, when we recall that, with *Zaynab*, the Arabic novel was born there. It is in fact the same love of nature that shines through in a simple account of olive-picking in Tunisia, told by Muḥammad F. Ghazlī (b. 1927) in a short story (*al-Fikr*, 1961). But it is most of all in the novels of the Egyptian Sharḳāwī (*al-Arḍ*, 1954, *Ḳulūb khāliya*, *al-Fallāḥ*) that the rural life is conveyed in all its richness, at a time when new ideas are shaking the system of traditions that used to be thought immovable. On the contrary, Ḥusayn Naṣr (Tunisia) evokes the full force of the past in a few pages; this "Ox that my father left us" (*al-Fikr*, 1961) is slow to die and imposes his presence when the young men, rejecting the experience of the old, wish that the page had been decisively turned.

It will come as no surprise to find political involvement accompanying this meticulous survey of an entire people. At the same time that *al-Arḍ* appeared in Cairo, Ḥannā Mīna published in Damascus *al-Maṣābīḥ al-zurḳ*. We may thus see side-by-side two exemplary narratives: a peasant revolt in the Delta, and the resistance of the Latakians to the French Mandate at the end of the Second World War. The heroic times of such and such a country have inspired a considerable mass of stories. The Moroccan Khanātha Bannūna celebrates inter-Arab solidarity sealed in combat in a recent collection of short stories (*al-Nār wa 'l-ikhtiyār*) and his compatriot Mubārak Rabīʿ makes the participation of Moroccan troops in the battle of the Golan Heights, in 1974, the central subject of his novel: *Rifḳat*

al-silāḥ... wa 'l-ḳamar (1976). Sometimes one finds them to be too verbose and not sufficiently alive. This is especially the case with the entire output of Muṭā' Ṣafadī (Syria), a real propagandist of the Arab Revolution (*Thā'ir muḥtarif*; *Djīl al-ḳadar*; *Ashbāh abṭāl*, 1959). On the other hand, an 'A. Ḥ. ben Haddūḳa (Algeria) succeeds in interesting us in the conscience of a man who has just committed a political crime (in *Ẓilāl djazā'iriyya*, 1960). It is the analysis of the social and psychological consequences of the war of liberation which interests him in his first novel appearing ten years later (*Rīḥ al-djanūb*), of which the form catches the attention. His compatriot Ṭāhir al-Waṭṭār also distinguishes himself in his two recent novels by the originality of his vision of guerilla warfare (*al-Āz*) or the traumatic after-effects of independence (*al-Zilzāl*). Similarly, the Palestinian tragedy is presented, free of forced sentimentality, in fascinating novels by the Lebanese Ḥalīm Barakāt and the Palestinian Ghassān Kanafānī (*Ridjāl fi 'l-shams*).

Oriental society is evolving to a varied rhythm in its different aspects. Industrialisation, for example, has scarcely been reflected by the appearance of workers in romantic literature. To our knowledge, only two writers have taken an interest in this: Ḥ. Mīna (Syria) mentioned above, who has made a study *à la* Gorky of type-setters in a printing-press, *The invisible thread*, 1960; and Muḥammad Ṣidḳī (Egypt), who through the experience of a self-taught man trained in a number of occupations, gives us an insight into the daily life of the working classes (in the collections *al-Anfār* and *al-Aydī 'l-khashina*, 1956 and 1958).

On the other hand, the number of Arab women writers is already remarkable. Quite naturally, they are interested in problems that are specifically feminine. Since professional involvement of women is still somewhat limited in their countries, it is most of all "psychological realism" that they aim at. The older ones—Bint al-Shāṭi' and S. Ḳalamāwī in Egypt, Widād Sakākīnī in Syria—have born witness to the deep transformation affecting the female mentality. The younger women writers—Samīra 'Azzām in Irak, Colette Suhayl in the Lebanon, Ṣūfī 'Abd Allāh in Egypt—seek to re-establish, with regard to their sex, the truth misunderstood or distorted by men. The Egyptian Laṭīfa al-Zayyāt does not claim to make any extraordinary revelations in her novel *al-Bāb al-maftūḥ*, 1960, but points out succinctly that the noble protests of the sterner sex are not yet fully convincing.

So as not to distort the perspectives, it is important to draw special attention to the work of three Egyptian novelists whose renown extends over the entire Arab world: Yaḥyā Ḥaḳḳī, Yūsuf Idrīs and Nadjīb Maḥfūẓ. The name of the first, who was born in 1905, is linked with the difficult emergence of the Arabic short story in the years around 1925, but he has only become well-known since the war. His first collection *Ḳindīl Umm Hāshim* dates from 1943. His collections of stories, his short novel (*Ṣaḥḥa 'l-nawm*, 1954) and his memoirs (*Khallīhā 'alā 'llāh*, 1959) have made him known to the public at large as a writer of prose that is firm but not prudish, and one who treats his characters with sensitivity and humour.

As for Yūsuf Idrīs, he has been writing "committed" stories since 1949. With the appearance of his first collection (*Arkhaṣ layālī*, 1954), there is the feeling of a talented writer making himself known. His subsequent works (*al-Ḥarām*, novel, 1959; *al-'Askarī al-aswad*, a short story, 1961, among many others) testify to his dramatic sense, and his condensed style, on the borderline of grammatical correctness, counts as one of the most original of all.

Nadjīb Maḥfūẓ enjoys an even wider readership. He owes this perhaps to his uncompromising adherence to the classical language but most of all to the seriousness and depth of his analysis and to a remarkably prolific output—some twenty novels and a dozen collections of short stories published to date. His *Trilogy* (1957, 1958) is considered to be the perfect masterpiece of Arabic realism. It gives us the key to an understanding of the generation of contemporary Egypt through a wealth of passions reminiscent of the Russian novelists, but with a concern for detail that is exclusively his own, and most important of all, from a perspective such that every Arab reader feels himself involved.

The existentialists. In a society in a state of flux, there are some who feel resentful, disillusioned, alienated, and who find in existentialism a philosophy in tune with their mood. The Lebanese Suhayl Idrīs has done much to install this philosophico-literary doctrine in the Orient. He has been the prime mover in a major series of translations that have introduced the Arabs to Sartre and Simone de Beauvoir in particular. But his role has not been limited to that of translator nor to that of editor-in-chief of the major review *al-Ādāb*. He is also the author of a number of novels. In the first (*al-Ḥayy al-lātīnī*, 1953) he too examines the reactions of the oriental to the European way of life, but the analysis is different from one given by Ṭawfīk al-Ḥakīm in *'Uṣfūr min al-sharḳ* nearly twenty years earlier. In spite of his love for a European sweetheart—shared this time—the Arab student returns to the Lebanon to place himself beneath the yoke, and perhaps the protection, of the customs of his homeland. His resigned acceptance of the absurdity of life shows that his stay in the Latin Quarter has left deep marks on him.

The Lebanon is thus the favoured land for existentialism. There are some who take pleasure in a type of fiction that is closer to the debate of ideas than to the novel as strictly defined, like Emile B. Abī Nādir in *al-Farāgh* (1961). But the more interesting writers are able to bring to light in their plots the implacable character of life. A story by George Shāmī shows to what extent a personal sentiment, however sincere and profound, is helpless in the face of the tyranny of the family spirit, and another by Djamīl Djabr (*Ḳalaḳ*, 1961) finds the correct tone for describing, in the first person, an impossible love. The Lebanese novel does not however attain the level of despair except in the work of the woman-writer Laylā Ba'labakki; in *Anā aḥyā* (1958) and in *al-Āliha al-mamsūkha* (1960) there is a vivid account of the revolt of a feminine sensibility stifling in a male society, made—taboos included—for men.

Although she has become known more recently, the Syrian Ghāda Sammān is closely akin to her. One of her collections of short stories (*Laylat al-ghurabā'*, 1966) presents us with a study fundamentally of a single character in a variety of settings: the woman who feels herself involved neither with the family nor with the revolutionary ideal, a "stranger" always and everywhere, her too-clear intelligence and her too-vivid sensibility making of her a person who suffers and sees no other future than this suffering, which she broods over with a kind of masochistic delight.

ʿIrāḳ shows us another kind of existentialism, less intellectual, more visceral. Among story-writers of talent, the first place belongs to ʿAbd al-Malik Nūrī (born in 1921). Between 1946 and 1954 (*Nashīd al-arḍ*) he has created a genre: from the first to the last line, his fiction expresses malaise, an infinite despair or a fatal torpor. With Mahdī ʿĪsā Ṣaḳr and Fuʾād Takarlī (*al-Wadjh al-ākhar*, 1961) we are steeped in the same unrelieved black that seems to be the dominant colour of young ʿIrāḳī literature.

The basic problems. During its sixty or so years of existence, Arabic fictional literature has been obliged essentially to cope with two basic problems.

The one, purely internal, concerns language. For obvious reasons, the novelist must choose the type of language that he is to lend to his characters, dialect or *fuṣḥā*. A writer as eminent as Maḥmūd Taymūr has, to his credit, carefully tried each of the two alternatives and subsequently remained absolutely faithful to the academic language, of which he is besides a perfect master. The no less eminent Yaḥyā Ḥaḳḳī has shown a quite original attitude, proclaiming everywhere his loyalty to Arabic and wielding in a delicious manner in his short stories the Cairoese of his childhood or the Ṣaʿīdian patois dear to his heart. These examples should not be misinterpreted; the question does not only apply to Egypt. Throughout the whole Arab world, from ʿIrāḳ to Morocco, there are novelists who believe that they would be betraying their mission as creators and artists if they were to avoid using a type of language that is natural, living and immediately evocative of the correct sentiment, the spontaneous idea. Conversely, in every Arab country there are today writers who would consider themselves unworthy of their art and traitors to Arabism if they were to adopt—even in dialogues—a language other than "pure" Arabic obeying the rules of declension, more or less modernised in its vocabulary, but effectively unchanged in its syntax. The question of the two languages has been debated so often since the beginnings of the *nahḍa* that there is nothing to be gained by dwelling on it here. The adherents of one or other mode of expression may be confident of finding themselves in excellent company and having no shortage of arguments. In particular, the equation frequently proclaimed in the last fifty years (dialogue in dialect = literature in the service of the people) is no longer put forward today, when the purists too are "committed". At the most, we may attempt a risky generalisation: the tendency to use the spoken "popular" language is more widespread in countries where the literary public is greatest and which, believe, rightly or wrongly, that they have a better-established "Arab" character—thus in Egypt, rather than in Algeria. Whatever the answer may be to these formal—and important—questions, there is no likelihood of provincialism gaining precedence over a common Arab heritage that is easily recognisable through the entire spectrum of fictional literary production from "the Ocean to the Gulf" and through all the trends that we have attempted to unravel.

The other problem concerns the relationship of the Arabic novel to Europe, the master, in both senses of the word, pedagogic and colonialist. This relationship first applies on the level of content. The dialogue of a floundering East with a West that is too sure of itself constitutes one of the themes and sometimes the central theme of novels that have become famous. It is natural, with regard to novels, that this ill-fated or violent confrontation should take the form of an amorous encounter between a practical or fickle or dominating European woman and an Arab emigrant, usually a student, convinced that he owns a share of the truth but naive and maladroit. Furthermore, the character of the latter and the general physiognomy of the work change in the course of the years. In *ʿUṣfūr min al-sharḳ* by Tawfīḳ al-Ḥakīm (Egypt, 1938) Muḥsin is an incorrigible idealist, an incompetent pursuer of working-girls whom the author mocks and admires at once, while the hero of *al-Ḥayy al-lātīnī* discovers nausea in Paris, but returns to the fold of ancestral custom in Beirut. The English girl married by *al-Duktūr Ibrāhīm* by Dhu 'l-Nūn Ayyūb (ʿIrāḳ, 1939) is only the first stage of an ambition which comes to light on his return to his country. If Ismāʿīl repudiates his God on leaving Mary's embrace, he finds Him again on the banks of the Nile (Yaḥyā Ḥaḳḳī, *Ḳindīl Umm Hāshim*, Egypt, 1949). The experience of Adīb (Ṭāha Ḥusayn, *Adīb*, Egypt, 1935) is at the same time more profane and more desperate, but that described by the Sudanese al-Ṭayyib Ṣāliḥ in *Mawsim al-hidjra ilā 'l-shamāl* (1966) is violent, and it disconcerts because hatred here is innocent.

Nobody is deceived; whether sex and suffering intervene or not, it is always the impact of a culture that is in question, an invading, besieging, disruptive culture. Two Moroccan novels examine in detail its traumatic aspects: *Dafannā 'l-māḍī* by Ghallāb (1966) and *al-Ghurba* by Laʿrwī (1971). Quite naturally, another level of connections with Europe appears. Has this literary technique been learnt, assimilated or, on the contrary, has there been constant re-adaptation to a model which, as time passes, remains indispensible? It is in reality impossible to answer this question. It may simply be stated that this common Arab heritage mentioned above adapts itself well to the most recent trends in universal fiction, that the surrealism of Zakariyyāʾ Tāmir (*Dimashḳ al-ḥarāʾiḳ*, Damascus, 1973) with its nightmare universe, takes up and carries to an obsessional and hardly bearable degree, the taboos and desires of a sick society. It is madness—superficially, for what the mastery resides in the cascade of images and the narrative twists!—that succeeds the meticulous and classic analysis of ʿAbd al-Salām al-ʿUdjaylī and the cruel realism of Fāris Zarzūr, two Syrian novelists who have achieved renown in the sixties. Echoes of such trends arise from elsewhere: from Egypt, of course, where established novelists like Yūsuf Idrīs and Nadjīb Maḥfūẓ have begun in the sixties and at the present day to turn towards the short story in preference to the novel, a wild and implacable type of short story, to which the younger writers are also drawn: the Arslāns, the Ṭūbiyās; but Algeria has not lagged behind with the stifling compositions of a writer such as Ṭāhir al-Waṭṭār; this is taken even further in Baḥrayn, where ʿAbd al-Ḳādir ʿAḳīl sets in motion with *al-Nazīf* a series of dream-like sequences that express his continuing anticipation of revolutionary liberation.

Finally, if such-and-such a name made famous by the European "new novel" suggests itself to the readership of one of these narratives, it should be recognised that the Arab intelligentsia is henceforth in sympathy with the evolution of ideas and tastes throughout the world, that purely internal lines of influence are clearly visible in Arabic fiction and that the contemporary proliferation of works, the

multiplicity of devoted talents in all provinces of Arabism, are signs of the flourishing state of the *ḳiṣṣa*.

Bibliography: Arabic journals. The literary journals are very numerous, and some have only a short existence. Among the most important are *al-Ādāb*, *al-Adīb* (Beirut), *al-Madjalla*, *al-Ṭalīʿa* (Cairo), *al-Maʿrifa* (Damascus) and *al-Fikr* (Tunis). Those in European languages include *MIDEO*, *Orient*, *OM*, *Jnal. of Arabic Literature*, and *Bulletin d'études arabes of the IPEA* of Rome.

For the beginnings of the novel, the general histories of Arabic literature may be consulted [see ʿARABIYYA. B. (V)].

Anthologies give a very representative picture of contemporary novel writing, general introductions and valuable biographical details about the authors covered: *Anthologie de la littérature arabe contemporaine*, Paris 1964. I. R. and M. Makarius, *Le roman et la nouvelle*; Mahmoud Manzalaoui, ed., *Arabic writing today, the short story*, Cairo 1968.

Studies—most of these on the Arab short story and novel centre upon Egypt. In particular, note ʿAbd al-Muḥsin Ṭāhā Badr, *Taṭawwur al-riwāya al-ʿarabiyya al-ḥadītha fī Miṣr (1870-1938)*, Cairo 1963; R. Francis, *Aspects de la littérature arabe contemporaine*, Beirut 1963; Yaḥyā Ḥaḳḳī, *Fadjr al-ḳiṣṣa al-miṣriyya*, Cairo 1962?; ʿAbbās Khiḍr, *al-Ḳiṣṣa al-ḳaṣīra fī Miṣr mundhu nashʾatihā ḥattā sanat 1939*, Cairo 1385/1966; H. 3(a). In older Turkish literature.

As a generic term, *ḳïṣṣa* in Turkish texts was synonymous with story, tale (*ḥikāye*) and legend (*menḳabe*, *efsāne*). Fakhrī in 778/1367 calls his version of the romance of Farhād and Shīrīn [*q.v.*] a *ḳïṣṣa*; Meḥmed, writing in 800/1397, says that a copy which he found was old but the *ḳïṣṣa* (story) was new, and Sheykhī [*q.v.*], in the first half of the 9th/15th century, found the mere telling of a *ḳïṣṣa* (story) no longer sufficiently enjoyable (B. Flemming, ed., *Faḥrīs Ḫusrev u Šīrīn*, Wiesbaden 1974, vv. 2915-16 and p. 140 f.; S. Yüksel, ed., *Mehmed. Işk-nâme*, Ankara 1965, v. 404; F. K. Timurtaş, *Şeyhî'nin Husrev ü Şirin'i*, Istanbul 1963, v. 1565).

Narrative works in verse and prose dealing with epico-religious and heroic themes [see ḤIKĀYA, iii] were often called *ḳïṣṣa*, the term alternating with *destān*. This is true for the ʿAntar, Abū Muslim, Ṣaltuḳ and Ghāzī Dānishmend stories [see ḤAMĀSA, iii] or the tales around *Ḳïrān-i Ḥabeshī* and Bahmān Shāh b. Fīrūz Shāh (see A. S. Levend, *Türk edebiyatı tarihi. I. Giriş*, Ankara 1972, 113, and ḲAHRAMĀN-NĀMA) and Djelāl Shāh and Djemāl Perī (see H. Sohrweide, *Türkische Handschriften*. Teil 3, Wiesbaden 1974, 276, no. 316); not a few tales still await examination.

The lives of holy men and great Ṣūfīs of Islam such as Ibrāhīm b. Adham [*q.v.*] were treated collectively in the genre called *tadhkira*, the most famous being the extensive Persian prose work *Tadhkirat al-awliyāʾ* by ʿAṭṭār [*q.v.*]. An early Turkish example is the *Tedhkire-yi ewliyāʾ* adapted from the Arabic and presented to the prince of Aydïn [*q.v.*], Muḥammad Beg, by an unknown author (MS. Istanbul, Veliyüddin 1643).

In a more restrictive sense, *ḳïṣṣa* designated stories of the Prophets before Muḥammad, whose own life history gave rise to the *siyar* genre [*q.v.*], whereas events of the lives of members of his family inspired other books such as the *ghazawāt* of the caliph ʿAlī; the *maḳtal* works commemorated miracles and happenings around the martyrs of the house of the Prophet, particularly his grandson Ḥusayn [see ḤAMĀSA, iii and ḤIKĀYA, iii], especially famous being the *Ḥadīḳat al-suʿadāʾ* by Fuḍūlī [*q.v.*].

In the *ḳïṣṣas* some prophets were dealt with separately, such as Moses (*Ḳïṣṣa-yi Mūsā we Khiḍir*, see Levend, *op. cit.*, 126), and Solomon; such works being also known as *nāme* [see ḤIKĀYA, iii] the most voluminous of the *Süleymān-nāmes* being the compilation made by "Uzun" Firdewsī [*q.v.*]; Iskandar [*q.v.*] was also treated separately (see M. Götz, *Türkische Handschriften*. Teil 2, 161, no. 234 and ISKANDAR-NĀMA, iii).

Joseph or Yūsuf [*q.v.*] was a favourite hero of the histories of Prophets; his ascetico-mystical romance with Zulaykhā, based on the *Sūrat Yūsuf*, has been treated in many Turkish *mathnawīs* and prose works. The oldest appears to be the *Ḳïṣṣa-yi Yūsuf* by a certain ʿAlī, a work of uncertain provenance supposedly composed in the Crimea in 630/1232 (see N. Pekolcay, *Islamî türk edebiyatı*. I. Istanbul 1967, 77 ff.; Levend, *op. cit.*, 92, 125).

In Anatolia, Sheyyād Ḥamza wrote a *mathnawī* version (ed. D. Dilçin, İstanbul 1946); for Čaghatay, Mamlūk, Ādharbāydjānī, and many Ottoman versions see the list compiled by Levend, *op. cit.*, 128-30; for 19th century Kazakh versions, see *Fundamenta*, ii, 744.

Collectively, the prophets have been dealt with in the *Ḳïṣaṣ al-anbiyāʾ* [*q.v.*], which made their appearance in Turkish literature in the 8th/14th century. In 710/1310 Nāṣir al-Dīn al-Rabghūzī, working for a Mongol *amīr*, composed his Eastern Turkish *Ḳïṣaṣ al-anbiyāʾ* on the basis of a Persian version (facsimile ed. K. Grønbech, Copenhagen 1948). Other Turkish authors consulted the Arabic *Ḳïṣaṣ al-anbiyāʾ* by al-Kisāʾī, the *ʿArāʾis al-madjālis* by al-Thaʿlabī and others (see K. Erarslan, *Kisâ'înin Bedʾi d Dünyâ ve Ḳısaṣı l-Enbiyâ adlı eserinin İstanbul'daki tercümeleri*, in *TDED*, xviii (1970), 125-32; N. Hacıeminoğlu, in *TDED*, xi (1961) and xiii (1964), on an anonymous translation in the MS. Bursa, Ulu Cami 2474; and A. Ateş, in *TDED* viii (1958), 93 f., on the Yozgat MS. of the translation made by Iznīḳī (d. 833/1429-30).

In 987/1579 an Ottoman writer, Hindī Maḥmūd, composed a *Ḳïṣaṣ-i enbiyāʾ* (G. M. Meredith-Owens, *Traces of a lost autobiographical work by a courtier of Selīm II*, in *BSOAS*, xxii/3 [1960]). Later, more complex titles were used for the genre, such as *Mirʾāt el-ṣafāʾ fī aḥwāl el-enbiyāʾ* written by Ḳara Čelebizāde (d. 1068/1658).

A highly esteemed educational *Ḳïṣaṣ-i enbiyāʾ* written by the Ottoman statesman and historian Aḥmed Djewdet Pasha [*q.v.*] as late as the end of the 19th century, in no less than twelve volumes, is evidence for the tenacity of the genre.

Bibliography: In addition to the works cited in the article, see the relevant articles in *Philologiae turcicae fundamenta*, ii, Wiesbaden 1965; F.

Babinger, *Die Geschichtsschreiber der Osmanen und ihre Werke*, Leipzig 1927; *İstanbul kütüphaneleri tarih-coğrafya yazmaları katalogları.i. Türkçe tarih yazmaları*, Istanbul 1943 ff.; J. R. Walsh, *The Turkish manuscripts in New College, Edinburgh*, in *Oriens* xii (1959), 171-89, esp. no. 1; F. E. Karatay, *Topkapı Sarayı Müzesi Kütüphanesi türkçe yazmalar kataloğu*, Istanbul 1961; F. The impetus which the *ķiṣṣa, siyar*, and *maķtal* genres gave to Turkish religious iconography can be seen in N. Atasoy and F. Çağman, *Turkish miniature painting*, Istanbul 1974, and the literature cited by them.

(B. Flemming)

3(b). More recent Turkish literature.

After the *Mukhayyelāt* of ʿAlī ʿAzīz [*q.v.*] (1796), which form a transition between the old and the new, a series of translations, mainly from the French, followed some sixty years later, e.g. Fénélon's *Télémaque* as *Terdjeme-yi Telemak* (1862), Victor Hugo's *Les Misérables* as *Maghdūrīn ḥikāyesi* (1862), Daniel Defoe's *Robinson Crusoe*, as *Ḥikāye-yi Robenson* (from the Arabic, 1864), followed by Bernardin de Saint Pierre's *Paul et Virginie* (1870), Voltaire's *Micromégas* (1871), Alexandre Dumas père's *Le Comte de Monte Cristo* (1873), Lamartine's *Graziella* (1878), Abbé Prévost's *Manon Lescaut*, Octave Feuillet's *Le roman d'un jeune homme pauvre* (1880) and many others. Except for the *Télémaque*, which was translated in a most flowery and ornate style, in the best Ottoman *inshāʾ* tradition, most of the rest were rendered in a comparatively simple language, not far removed from spoken Turkish. This translation movement or activity coincided with the emergence of the literary *Tanẓīmāt* school, and the first generation of modernist writers provided the early examples of Turkish short stories and novels in the modern sense.

1. *The short story*

The pioneer of the short story is the popular author Aḥmed Midḥat [*q.v.*]. Although he did not belong to the literary school initiated by Shināsī [*q.v.*] and his associates, and was looked down upon by them as a conservative in outlook, as informal in style and as lacking in technique, and was consequently unfairly judged, he was avidly read by the general public and youth intellectuals alike and greatly influenced the succeeding generation of writers as witnessed by many of them (see ḤUSAYN RAḤMĪ and KHĀLID ḌIYĀʾ). Aḥmed Midḥat published two collections of short stories: *Ķiṣṣadan ḥiṣṣe* (1870) and *Leṭāʾif-i riwāyāt* (in 25 parts, 1870-95). His mostly romantic stories with an occasional touch of realism, some adapted from the French, became immensely popular and soon made the genre fashionable.

To this formative period belongs a collection of short stories in three volumes, the *Müsāmeret-nāme* ("The Book of soirées", 1872-5), inspired in structure, by Boccaccio's *Decameron*, and written by one Emīn Bülend, a civil servant about whom we know almost nothing. These are entertaining stories of uneven value, a mixture of traditional narrative and the new approach. Different from Aḥmed Midḥat's works, the *Müsameret-nāme*'s language and style vary in places from the ornate to the straightforward colloquial. A younger member of the *Tanẓīmāt* literary period, Sāmī Pasha-Zāde Sezāʾī [*q.v.*], is also reckoned among the pioneers of the modern Turkish short story. His modest output (two volumes, of which *Küčük sheyler* "Little things", 1308 Rūmī/1892), began the realist trend in the short story. He used a good technique and developed a tidier style and avoided ornate language. The great master of the Turkish short story is, however, Khālid Ḍiyāʾ of the *Therwet-i Fünūn* [*q.v.*] literary school, who perfected the genre, of which he made a study in his work *Ḥikāye* (1307/1891). Khālid Ḍiyāʾ, who tends in his novels to concentrate on the life of Istanbul upper and upper-middle classes and to use a precious language, by contrast in his numerous short stories (collected in 20 volumes) describes mostly ordinary people of the middle and working classes, and uses a comparatively less ornate style. Among minor writers of the same school, the novelist Meḥmed Raʾūf and the critic and journalist Ḥuseyn Djāhid [*q.v.*] also wrote short stories of uneven value. Two prominent writers who remained outside the *Therwet-i Fünūn* school, the novelist Ḥuseyn Raḥmī and the essayist Aḥmed Rāsim [*q.v.*] contributed realistic short stories which are vivid sketches of everyday life in Istanbul of the 1890-1920 period.

The restoration of the Constitution (July 1908) followed by the movements of Turkism [see TÜRKČÜLÜK], Populism (*Khalķa doghru*) and the New Language (*Yeñi lisān*), sponsored by Ḍiyāʾ Gökalp [*q.v.*] and ʿÖmer Seyf ed-Dīn [*q.v.*], revolutionised the whole approach to narrative in Turkish literature. Most short story writers (and novelists) switched from the capital (Istanbul) to the provinces and made an attempt to introduce colloquial Turkish into literary language and avoided, on the whole, elaborate psychological analysis for straightforward realism.

The prominent woman novelist, Khālide Edīb [*q.v.*], wrote realistic short stories mostly based on her own experiences or observations. ʿÖmer Seyf el-Dīn (1884-1920), who left ten volumes of short stories (posthumously collected in book form), led the reaction against the precious language of the *Therwet-i Fünun* school and wrote in spoken Turkish stories on the reminiscences of his childhood or on episodes of Turkish history. A hasty writer, his easy, even facile language is not always polished. But his deliberately direct style, avoiding the "literary", established a new tradition in Turkish narrative. The outstanding essayist and political satirist Refīķ Khālid Ķaray [*q.v.*], wrote his famous *Memleket ḥikāyeleri* ("Stories from the provinces", 1919), during his five years' exile in Anatolia. These stories on the types and customs of the villagers and provincial townspeople are told with a rare virtuosity of natural style and powerful realism unprecedented in modern Turkish literature.

Most novelists of the period (e.g. Y. K. Ķara-ʿOthmānoghlu, R. N. Güntekin, Peyāmī Ṣafā, etc.) also wrote short stories. But others excelled in the *genre*; Memdūḥ Shewket Esendal [*q.v.* in Suppl.], a politician and diplomat, wrote, at irregular intervals, stories which are different in subject matter, plot and style from the "classical" Maupassant-type stories of his contemporaries. F. Djelāl el-Dīn, a psychiatrist by profession, left remarkable sketches and short stories, written in a very personal style, about eccentric types and harmless maniacs of Istanbul, against an authentic "local" setting of the Ḥüseyn Raḥmī tradition. They are character studies or sketches of the moods of ordinary people, with emphasis on women, written in spoken Turkish, without any elaboration or embellishment and inbued with human warmth and optimism. The

novelist Haliḳarnas Balîḳčîsî [*q.v.* in Suppl.] who belongs to the same generation, but who published his work in the Republican period, after the age of fifty, wrote fascinating stories on the life and struggles of the sea folk of the Aegean.

The 1930s inaugurated a new era in contemporary Turkish literature, and witnessed the emergence of two prominent but very different story writers: Ṣabāḥ al-Dīn ʿAlī (also a novelist [*q.v.*]), who pioneered social realism, writing powerful stories on the true life experience and hardship of the village and small town communities of Anatolia. Saʿīd Fāʾiḳ (1906-54), perhaps the greatest name in the Turkish short story, described, in his compelling stories and sketches, written in a forceful and romantic style, the life and milieu of the simple people, workers, fishermen, vagabonds, etc. of Istanbul, based mostly on his personal experiences, with a deeply human touch. Aḥmed Ḥamdī Tanpînar [*q.v.*], poet, critic and novelist, and adept of the neo-classicist Yaḥyā Kemāl [*q.v.*], wrote nostalgic, evocative short stories where unresolvable psychological issues are the *leitmotiv*. The playwright and essayist Khaldûn Taner (b. 1915) writes stories flavoured with humour and social criticism. Îlkhān Tarus (1907-67), a civil servant, described in his stories the intricacies of bureaucracy in the provinces.

In the 1940s, 1950s and 1960s, most novelists (e.g. Kemal Tahir, Kemal Bilbaşar, Orhan Kemal, Samim Kocagöz, Yaşar Kemal, etc.) also wrote short stories in which concentration is on the plight of the peasantry, provincial townfolk and suburban dwellers (see below). This is particularly true of writers of peasant origin (e.g. Fakir Baykurt, Talib Apaydın, etc.). Aziz Nesin (b. 1915) the great humorous writer of unsurpassed popularity, has been writing innumerable stories and sketches where he uses his art to fight social evils and bigotry by ridicule. Oktay Akbal (born 1923) writes individualistic and romantic stories, mostly based on personal reminiscences, full of nostalgia for things past. Necati Cumalı (b. 1921), poet, playwright and novelist, differs from most of his contemporaries in not concentrating on any one given theme, but writing stories on a variety of subjects in a warm and flowing style.

Contemporary short story writers dwell as a rule on the social, political, economic and cultural problems of Turkey, a society in rapid transformation, linking them to the personal problems of the individual. From several dozen names (some of them also novelists), the following stand out: Mehmed Seyda (b. 1919), the poet S. K. Aksal (b. 1920), Yusuf Atılgan (b. 1921), Wüsʾat O. Bener (b. 1922), Muzaffer Buyrukcu (b. 1928), Bilge Karasu (b. 1930), Tahsin Yücel (b. 1933) and Bekir Yıldız (b. 1933). Among women writers one notes Nezihe Meriç (b. 1925), Adalet Ağaoğlu (b. 1929), Leyla Erbil (b. 1931), Füruzan (b. 1935) and Sevgi Soysal (1936-76) who dwell on the problems of women of all classes in present day Turkey.

2. *The novel.*

The outstanding lexicographer and scholar Shems el-Dīn Sāmī [*q.v.*] wrote the first Turkish novel in the modern sense: *Taʿashshuḳ-î Ṭalʿat we Fîṭnat* (1872). This is a love story used as a background to criticise the traditional marriage custom, marriage of partners unknown to each other. Nāmîḳ Kemāl [*q.v.*], the great poet and patriot of the *Tanẓīmāt* school, experimented with a romantic (*Intibāh*, 1876) and a historic (*Djezmī*, 1880) novel. One of his younger colleagues, Sāmī Pasha-Zāde Sezāʾī (1860-1936), wrote an anti-slavery novel (*Sergüzesht*, 1889), while another, Redjāʾi-Zāde Ekrem [*q.v.*] produced a social-satirical novel (*Araba sevdâsî*, "Devotees of the hansom cab", 1889, published 1896), which is a forerunner of later novels where the "westernising snob", the blind imitator of European manners and customs, is ridiculed (see below); and Nābī-Zāde Nāẓîm (1862-93) wrote examples of realist novels (*Ḳara Bibik*, a long short story, 1890, and *Zehrā*, 1895).

Outside this literary school of the "élite", the most important representative of the genre was the prolific popular writer, publicist and journalist Aḥmed Midḥat who flooded the post-1870s period with several dozen novels on subjects of all types: adventure, history, social satire, science fiction, realist and naturalist narrative, etc. He owes a great deal of his narrative technique, his dialogue and his handling of episodes to the traditions of Turkish popular art and literature (i.e. *Karagöz*, the *meddāḥ*, the *ṭulūʿāt* technique in the *Orta oyunu* and folk tales of various kinds), and also to the French novels of adventure. Many of his novels, particularly *Ḥasan Mellāḥ* (1875), *Ḥüseyn Fellāḥ* (1875), *Süleymān Muṣlī* (1876), *Henüz on yedi yashînda* (1882), *Dürdāne Ḥānîm* (1882), were enormously popular and read avidly by generations of readers of all classes until the 1910s. His novel *Eflāṭūn Bey ile Rāḳîm Efendi* (1896), pioneered a series of novels which satirise the *alla franca* way of life of Istanbul snobs.

In the following period of the *Therwet-i Fünun* school, the great representative of the novel is Khālid Ḍiyāʾ. Although as a boy writer, like most of his contemporaries, he greatly admired Aḥmed Midḥat, there is hardly any trace of the old Turkish popular narrative technique or the influence of the French novels of adventure and entertainment, even in his early novels of the formative period, which were romantic love stories with some elements of realism. He completely broke with traditional methods of story-telling and developed a well-disciplined narrative technique where there is no room for irrelevant digresssion or asides to the reader. Khālid Ḍiyāʾ perfected this technique in his later novels (e.g. *Māʾi ve siyāh*, "Blue and black", 1897, and *ʿAshḳ-î memnūʿ* "Forbidden love", 1900), inspired mainly by the method and style of the French realists. His works remained the best examples of realism in Turkish literature until the mid-1930s. The setting and characters are often chosen from the upper and upper-middle classes of Istanbul, the type of people with whom he came into direct contact during the strict Ḥamīdian régime. He chose, in his novels, to write, like most of his colleagues of the movement, in an extremely precious and artificial language, thus deviating from the trend of the first generation of modernists (the *Tanẓīmāt* writers) who had made an attempt to create a style which could be understood by a larger audience.

As Khālid Ḍiyāʾ dominated the scene in prose, minor writers were hardly noticed. One of them, Meḥmed Raʾūf (1875-1935), a naval officer, wrote a (probably autobiographical) novel, a poignant story of desperate love: *Eylül* ("September", 1900), which is the only work still remembered of his dozen novels.

Ḥüseyn Raḥmī, who did not join any particular literary group, began his career during the time of the *Therwet-i Fünūn* movement, and remained one of the most popular novelists from 1890s until the late 1920s. At the beginning, he followed in the steps of his master Aḥmed Midḥat, but he gradually pol-

ished the elements taken from Turkish popular arts and adopted them to his own purpose, blending them successfully with the technique of the French realists and naturalists, particularly of Maupassant and Zola. With his accurate observations of the life and types of Istanbul lower and lower-middle class families in the period approximately 1890-1920, his penetrating analysis of the burning social problems of his time and his acute sense of humour and satire, Ḥüseyn Raḥmī is perhaps the most original of all Turkish novelists. Like his prominent contemporary the essayist Aḥmed Rāsim [*q.v.*], his work is of great documentary value. He studied meticulously the everyday life of families and individuals and their development within disintegrating Ottoman society and all the social problems arising from the impact of Western ideas and customs. His best novel, *S͟hıpsevdi*, "Always in love" (written and partly serialised in 1901, published in book form 1912) is a further development of the theme already treated by his predecessor and himself: a character study of the "Westernising snob".

During this period, two works were the pioneers of the so-called "village novel" (*köy romanı*) which was to develop during the Republican period: Nabī-Zāde Nāẓım's long short story *Ḳara Bibik*, already mentioned, and Ebūbekir Ḥāzım Tepeyran's (1864-1947) *Küčük Pas͟ha* (1910), which describes life in a central Anatolian village during the last decade of the 19th century.

During the post-1908 era, with the freedom of the press restored and in the midst of warring ideologies (Ottomanism, Pan-Islamism and Turkism), we see that most writers of the young generation gather around a new trend called "National literature" (*Millī edebiyyāt*), led by the sociologist and guiding spirit of the intellectuals of the epoch, Ḍiyāʾ Gökalp and his associates (particularly ʿÖmer Seyf el-Dīn, see above). In this period, the prominent woman writer K͟hālide Edīb's early novels have considerable autobiographical elements, and with their passionate, independent, strongwilled heroines, outline the author's ideal of the emancipated Turkish woman. Under the impact of the Pan-Turkish-movement, she wrote *Yeñi Tūrān*, 1912, and her contemporary colleague, a minor woman writer Müfīde Ferīd (Tek, 1892-1971) followed her example with a similar novel *Aydemir*, 1918). However, K͟hālide Edīb later rejected this ideology and espoused the new nationalism of the resistance movement in Anatolia which she joined in April 1920. She wrote novels on the national struggle and life in Anatolia, based on personal experiences or observations (e.g. *Ātes͟hden gömlek*, "Shirt of fire", 1922; *Vuruñ ḳaḥbeye* "Strike the whore", 1923). During her long exile abroad (1925-39) and after her return to Turkey, she continued to write, mainly period novels. Already by 1930s the approach to the novel was beginning to change (see below). K͟hālide Edīb's prominent contemporary, Yaʿḳūb Ḳadrī Ḳara-ʿOt͟hmānog͟hlu (1889-1974 [*q.v.*]) the most powerful novelist of his generation, excelled in studies of periods and institutions. In a series of novels he described the disintegration of a family caught between the old and the new towards the end of the Empire (*Kirālıḳ ḳonaḳ*, "Mansion to let", 1920); life in a convent of the decaying Bektās͟hī order of dervishes (*Nūr Baba*); party strife in the post-1908 period (*Ḥüküm gedjesi*, "The night of the judgment", 1927); life in occupied Istanbul in the early 1920s (*Ṣodom ve Gomōre*, 1928); a poignant description of the gap between an educated man and the peasants (*Yaban*, "The stranger", 1932), a pioneer "village novel"; the life of a young Turk exile in Paris (*Bir sürgün*, "An exile", 1937), etc. He also experimented with a *roman-fleuve*, covering the second and the third decade of the Republican era (*Panorama*, 2 vols. 1953-4).

The humorist and essayist Refīḳ K͟hālid Ḳaray is the author of some twenty novels, mostly of mediocre literary value, except for the first, *Istanbuluñ ič yüzü* (1920, Roman script edition as *Istanbul'un bir yüzü*, 1939). This is written in the form of a diary and is a series of masterly sketches of Istanbul "society" between 1900 and 1920, in which the last vestiges of the old régime, the influential magnates of the all-powerful Committee of the Union and Progress and the degenerate *nouveaux-riches* of the war years are depicted with brilliant, merciless sarcasm. Peyāmī Ṣafā (1899-1961), a self-taught writer, produced in the early 1920s novels which described various characters of the changing Turkish society, emphasising the clash between the traditional and the new (e.g. *Sözde ḳızlar*, 1922, *Maḥs͟her*, 1924, *Fatih-Harbiye*, 1931); later he studied cases of psychological stress and crisis and also supernatural phenomena. His partly autobiographical *9uncu hariciye koğuşu* ("External ward No. 9", 1930) is one of the best examples of the psychological novel in Turkish literature.

The best-seller of the early 1920s was *Čalıḳus͟hu* (1922, Eng. tr. *The autobiography of a Turkish girl*, by Sir Windham Deeds, 1950) by Res͟hād Nūrī Güntekin [*q.v.*], who published several similar novels (e.g. *Aḳs͟ham günes͟hi*, 1926, Eng. tr. *Afternoon sun*, by Deeds, 1951). These were sentimental romances mixed with realistic observations of Anatolian life. With the publication of *Yes͟hil gedje* ("Green night", 1928), where the influence of religious fanaticism in Anatolia is studied, Res͟hād Nūrī changed his manner and wrote a series of novels dealing with social change brought about by the reforms of the 1920s, (e.g. *Yaprak dökümü*, 1930). Güntekin perfected the literary language based on spoken Turkish initiated by ʿOmer Seyf el-Dīn and was recognised as one of the masters of modern Turkish prose until the middle of the 1930s, when a profound transformation of the language, style and literary taste began to take place.

The early generations of novelists of the Republican era inaugurated a new approach to the novel which began in the 1930s, and gathering momentum in the 1940s, matured in the 1950s and 1960s. For the majority of contemporary writers, the novel is only a vehicle to convey ideas, to prove a point and to discuss the burning problems of modern Turkey. Except for sporadic cases, for nearly forty years novelists have been concentrating mainly on the following themes:

(1) The background and various episodes of the War of Liberation; (2) The plight of the villagers and provincial townspeople; (3) The struggle of the peasants against exploiting land-owners and corrupt bureaucracy; (4) Unemployment in the villages, and peasant migration to labour areas (cotton fields, etc.); (5) The peasant migrations to the cities in search of work and its consequences; (6) Peasants turned brigands as a result of gross injustice; (7) The problems of the peasant populations of the shanty-towns (*gecekondu*) in city suburbs; (8) The problems of illiteracy and educating children (particularly girls) in villages; (9) The influence of religious exploitation on the masses in villages and towns; (10) The plight of peasant migrant workers in Europe,

particularly Germany; (11) Problems arising from long-sojourn of Turkish worker-families in Europe; (12) The exploitation of the defenceless citizens by the *nouveaux-riches* business classes in the cities; (13) The ravages of partisan politics in villages and provincial towns; (14) The problems of women in general and working women in particular; etc.

In short, all the problems of a rapidly developing and industrialising, once mainly rural, society where a population explosion and a universal yearning for better living defy the dexterity of all government. The days of the "art for art's sake" principle of the *Therwet-i Fünūn* days are left far behind: the contemporary Turkish novelist has no time or leisure for telling stories of personal woes.

Leading names of the modern period are: the pioneer Ṣabāḥ al-Dīn ʿAlī (1907-48), already mentioned) whose novel *Kuyucaklı Yusuf* ("Yusuf from Kuyucak", 1937) is a masterly description of life in a small western Anatolian provincial town at the beginning of the century; Orhan Kemal (1914-70), who wrote with a warm and deeply human style the epic of the Turkish "little man"; and Kemal Tahir (1910-73 [*q.v.*]), who spent long years in Anatolian prisons where he collected his material on a series of novels on the life and problems of the central Anatolian peasantry and small town communities. He also wrote several period novels on episodes of early and modern Turkish history. Further, Samim Kocagöz (b. 1916) wrote on the peasant-landowner relationship in the Aegean area and also related episodes of the Anatolian resistance movement; Yaşar Kemal (b. 1922) excels in describing, with an epic style inspired by Turkish folk tales, the life and struggles of the peasantry in the Adana area; and Fakir Baykurt (b. 1929), of peasant origin himself, describes the life and problems of southern Anatolian villages, etc. (The majority of short story writers cited above are also known as novelists, and most of them should be counted in this category.)

Outside this category, there are novelists who belong to previous generations but who published their work in the 1930s or later: The short story writer Memdûḥ Shewket Esendal (1883-1952), published a remarkable novel *Ayaşlı ve kiracıları* ("The man from Ayaş and his tenants", 1934), a powerful study of a group of disparate types during the early years of the new capital, Ankara. Midḥat Djemāl Kuntay (1885-1951), a minor epic poet and biographer, wrote a single novel, *Üç Istanbul* ("Three Istanbuls", 1938). Planned as a period novel, it is rather a series of loosely-connected sketches on the life and character of Ottoman society and government in Istanbul during the period of decay and disintegration of the Empire (1890-1920). It is a fascinating panorama of events and of personalities, Ottoman, Levantine and foreign, told with a personal, elaborate and, in places, precious style. ʿAbd al-Ḥaḳḳ Shināsī Ḥiṣār (1883-1963 [*q.v.*]), who published some poems and critical essays in the 1920s, produced his first novel in 1941 at the age of fifty eight, *Fahim Bey ve biz* ("Fahim Bey and our family"), a powerful character study of an Istanbul type at the turn of the century, an inefficient civil servant turned businessman. After the great success of this novel, Ḥiṣār wrote several others, all in an anachronistic style which nostalgically evoke the Istanbul of 1900. Lastly, the unusual writer Haliḳarnas Balıḳčısı the famous exile of Bodrum (Halicarnassus), must be mentioned, who produced his first novel at the age of sixty (*Aganta, Burina, Burinata*, 1946) and devoted his entire work to the epic of the sea and seamen of the Aegean.

Bibliography: Mustafa Nihat Özön, *Türkçede roman*, Istanbul 1936; Ahmet Hamdi Tanpınar, *Ondokuzuncu asır türk edebiyatı tarihi*, Istanbul 1956; Tahir Alangu, *Cumhuriyetten sonra hikâye ve roman*, i, 1959, ii and iii 1965; Cevdet Kudret, *Türk edebiyatında hikâye ve roman*², 1970-1; Fethi Naci, *On türk romanı*, Istanbul 1971; Hilmi Yavuz, *Roman kavramı ve türk romanı*; *Türk Dili*, special numbers on the novel and short stories; *Roman özel sayısı I*, *Roman özel sayısı II*, *Türk öykücülüğü özel sayısı*, *Türk romanında kurtuluş savaşı özel sayısı*, Ankara, 1962-77. (Fahir İz)

4. In Persian literature.

In Persian the term *ḳiṣṣa* (together with its approximate synonyms *ḥikāyat*, *afsāna*, *dāstān*) covers a number of different literary forms, and while this article must be concerned primarily with the modern application, it is also true that the more traditional manifestations have had some influence on recent developments. One of the earliest uses of the term seems to have been in the sense of "biography". Examples of this range from the *ḳiṣaṣ al-anbiyāʾ*, the title given to a number of works, of which one of the earliest and most popular is that by Mawlānā Muḥammad Djuwayrī, said to have been written in 352/963, containing biographies of the prophets from Adam to Muḥammad, to, at the other extreme, the *ḳiṣaṣ al-ʿulamāʾ* written by Muḥammad b. Sulaymān Tunakābunī in 1290/1873 and consisting of accounts of leading Shīʿī divines, to which frequent reference is made in E. G. Browne, *Literary history of Persia*, iv, 354-449 *passim*. A condensation of this work was published in 1941 by Muḥammad ʿAlī Djamāl-zāda under the title *Ḳiṣṣa-yi ḳiṣṣa-hā*.

A second group includes pseudo-biographical works of a largely fictional nature. A classic example of this *genre* is the *ḳiṣṣa-yi Ḥamza* or *Ḥamza-nāma*, the hero of which was a contemporary of the Prophet Muḥammad and the story of whose exploits is said to have been commissioned by a namesake who led a rebellion in Sīstān at the end of the 2nd/8th century. The story is extant in a number of versions, some parts of which, judging from their style, may well go back to the 3rd/9th century. Another example in a slightly different class is the *Bakhtiyār-nāma*, the account of the deeds of a putative descendant of the legendary hero Rustam, said to have been a contemporary of the Sāsānid monarch Khusraw Parwīz; the earliest surviving version of this is the *Rāḥat al-arwāḥ*, composed (in prose) by Shams al-Dīn Muḥammad Daḳāyiḳī Marwazī in the 6th/12th century.

From this phase we move by a natural progression to the traditional romance with few or no historical or religious overtones. Some of these are by known authors—ranging from the famous *mathnawī*s of classical poets like Niẓāmī, Amīr Khusraw Dihlawī and Djāmī, retelling the stories of Laylā and Madjnūn, Khusraw and Shīrīn, Yūsuf and Zulaykhā, and so on—to the works of lesser or otherwise unknown writers, like Fakhr al-Dīn Gurgānī's *Wīs u Rāmīn*, ʿAyyūḳī's *Warḳa wa Gulshāh*, or the prose version of *Samak-i ʿAyyār* by Farāmarz b. Khudādād, all these dating from the 5th/11th century. Many such romances have been handed down orally in more or less corrupted versions, until they finally achieved permanence in manuscript or, most recently, in "chapbook" form. Characteristic examples are the stories of Ḥusayn-i Kurd, Bahrām and Gulandām, Ḥātim-i Ṭāʾī, Shīrūya, Falaknāz and Khurshīdāfarīn,

Malik Djamshīd, Nadjmā-yi Shīrāzī and Nūsh-āfarīn. Many of these must be of considerable antiquity, while others (for instance, the story of Amīr Arslān, known to have been composed, though doubtless on a foundation of traditional material, by Nāṣir al-Dīn Shāh's storyteller, Mīrzā Muḥammad ʿAlī Naḳīb al-Mamālik, during the second half of the 13th/19th century) are comparatively recent. Such stories, often qualified by such epithets as *shīrīn*, *shīrīn-ʿibārat*, are part of the stock-in-trade of the *naḳḳāl* or *ḳiṣṣa-gū*, both professional and amateur, who provide entertainment alike for the clients of coffee-houses, the children of private households, and the peasants of rural villages. In a similar tradition are the humorous anecdotes of Mullā Naṣr al-Dīn and Mullā Buhlūl-i ʿĀḳil, whose Iranian versions have not yet been given the attention they have received, for instance, in the Turkish folk-literature area. This vast reservoir of oral narrative, which in addition to the long romances provides innumerable examples of every category of folk-tale —animal tales, fairy stories, tales of magic, moral and satirical anecdotes—has been sadly neglected in the past (in spite of early collections like *Kalīla wa Dimna*, *Marzbān-nāma*, *Sindbād-nāma*, *Djawāmiʿ al-ḥikāyāt* and *Riyāḍ al-ḥikāyāt*), and it is only within the present century that serious attempts have been made by scholars and anthropologists, both privately and officially-sponsored, to collect and preserve this treasury of popular literature.

This neglect may account for the fact that, when the art of story-telling and novel-writing was revived on the literary level during the early years of the present century, models were sought not in Iran's own literary tradition but rather from the flourishing ateliers of Western Europe. Indeed, it is significant that the Persian language does not yet have a word for "novel", but still uses the French *roman* (*rumān*). In making this judgment, we are consciously leaving out of account such works as *Ruʾyā-yi ṣādiḳa* (1900), *Masālik al-muḥsinīn* (1905), and *Siyāḥat-nāma-yi Ibrāhīm Bayg* (1903-9), since the story element in these is subordinate, the primary purpose of the semi-anonymous authors being to expose social and political abuses in pre-Revolution Iran through the medium of a fictionalised travelogue. The authors of the first novels proper may indeed have had similar motives in setting their tales in remote historical periods, but the European influence is unmistakeable, not only in the clear debt owed to the historical novels of such writers as Alexandre Dumas (several of which had been translated into Persian), but even in the use of European forms of Persian names from the Achaemenid and Sāsānid periods. Among the more noteworthy of these novels are the trilogy by Muḥammad Bāḳir Khusrawī, *Shams u Ṭughrā*, *Mārī-yi Winīsī* and *Ṭughrul u Humāy*, published in 1909-10, three independent novels whose common link is their single hero and their setting in the period of the Mongol invasions of the 7th/13th century; another trilogy by Shaykh Mūsā Nathrī, *ʿIshḳ u salṭanat*, *Sitāra-yi Līdī* and *Sargudhasht-i Shāhzāda Khānum-i Bābulī*, published in 1919, 1924-5 and 1931-2 respectively, and set in the reign of Cyrus the Great; *Dāstān-i Bāstān*, by Ḥasan Badīʿ, the Achaemenid background of which is a mixture of elements drawn indiscriminately from the *Shāh-nāma* of Firdawsī and the works of Herodotus; and a long series of works by ʿAbd al-Ḥusayn Ṣanʿatī-zāda Kirmānī, beginning with *Dāmgustarān*, a two-volume novel published in 1921 and 1926 and set in the period of the rebellion of Mazdak and the fall of the Sāsānid dynasty, and continuing with stories from such widely separated historical periods as the reign of Shāpūr the Great (*Dāstān-i Mānī-yi naḳḳāsh*, 1927), the rise of the Sāsānid dynasty (*Salaḥshūr*, 1933), the overthrow of the Umayyad dynasty by the ʿAbbāsids (*Siyāh-pūshān*, 1944), the reign of Nādir Shāh (*Nādir, fātiḥ-i Dihlī*, 1956), and even the science-fiction future (*Rustam dar ḳarn-i bīst u duwwum*, 1935). Most of these works are noteworthy as pioneering efforts rather than through intrinsic literary value. Their language is literary, and even in the dialogues shows little attempt to adjust style to speaker, let alone to use colloquialisms; they are discursive and rambling, and historically full of inaccuracies and anachronisms. Their inspiration comes from the romantic historical novel of 19th century Europe rather from any native source. If they do reflect any particular society, it is rather that of the writers themselves, and in this respect at least the novels throw interesting light on contemporary Iran.

However, the popular success of these early works encouraged many other writers to follow their example, and a long list of such books, of varying merit, have appeared and continue to appear up to the present day. A fairly comprehensive list will be found in Kamshad's *Modern Persian prose literature*, 52-3, and it is sufficient here to mention a few of the outstanding names. The list includes a number of recognised scholars—Saʿīd Nafīsī, Yaḥyā Ḳarīb, Riḍā-zāda Shafaḳ, Dhabīḥ Bihrūz—whose writing is marked by a greater attention to accurate detail than some of their rivals, like ʿAlī Djalālī, Raḥīmzāda Ṣafawī, Ḥusayn Masrūr, Ḥaydar ʿAlī Kamālī, Djawād Fāḍil, Shīrāzpūr Partaw, and others whose novels show almost a tendency to revert to the style of the popular romances. Few writers have ventured into the field of contemporary history. A notable exception is Ḥusayn Ruknzāda Ādamiyyat's *Dalīrān-i Tangistānī*, first published in serial form in 1931 and recounting an episode in the southern tribal disturbances during the ffirst World War; though it appeared a year or two later in book form, it was subsequently suppressed and only reappeared after the abdication of Riḍā Shāh.

However, although contemporary history was too dangerous a subject for most writers, this did not apply to general social criticism, which indeed was quite consonant with the reforming mood of the years of Riḍā Shāh's reign. The theme that attracted most attention, partly perhaps because of the opportunities it offered to less talented and scrupulous writers to exploit sensationalism, was that of the position of women in traditional Iranian society. One of the first novels to take up this subject was Mushfiḳ Kāẓimī's *Ṭihrān-i makhūf* (1922), a somewhat rambling work woven round the subject of true love thwarted by family greed and social custom. Like a number of his successors, Kāẓimī devotes a good deal of space to the discussion and description of prostitution. ʿAbbās Khalīlī, Rabīʿ Anṣārī and Djahāngīr Djalīlī are other writers of this period who base their criticism of social conditions and the frustrations of youth on the oppression and in particular prostitution of women. The chief merit of these works is the light they throw on Iranian society, particularly of the middle class, under the impact of modernisation and western influences. Otherwise their style is rambling and discursive, with frequent digressions into moralising, while the language is still literary and ponderous.

A few writers of this category deserve fuller

mention. Muḥammad Masʿūd (Dihātī), who was assassinated in 1947 in consequence of his editorship of an outspoken and often slanderous newspaper, *Mard-i imrūz*, wrote a trilogy in 1932-4—*Tafrīḥāt-i s̲h̲ab*, *Dar talās̲h̲-i maʿās̲h̲* and *As̲h̲raf-i makh̲lūḳāt*—in which he draws on his own experience of lower middle class life in the provinces and Tehran. These novels were variously praised for their frankness and condemned for their pessimism and ribaldry. A later unfinished trilogy—*Gulhāʾī ki dar d̲j̲ahannam mirūyad* (1942) and *Bahār-i ʿumr* (1946)—is in the same vein, but shows a greater degree of maturity and objectivity. ʿAlī Das̲h̲tī is also well-known as a journalist and politician, and in addition has achieved distinction as an essayist and literary historian and critic. He earns mention here, however, for his three novels *Fitna* (1943), *D̲j̲ādū* (1951) and *Hindū* (1955). Like the others, these take the position of women in society as their central theme, but here it is the women of the upper classes that are under the microscope, and Das̲h̲tī's work has been criticised for its concentration on a rather narrow and repetitive stratum of Iranian life. His language, while no better suited to his subject than the others, is enjoyable for his skill in the handling of words and for his admittedly sometimes rather forced employment of Arabic and European terms. Muḥammad Ḥid̲j̲āzī is noted for a series of novels—*Humā* (1927), *Parīčihr* (1929), *Zībā* (1936-48), *Parwāna* (1952) and *Sirishk* (1953)—which also, as the names of the first four imply, have a woman as the central character. Ḥid̲j̲āzī's view of middle-class society, however, is less satirical and caustic than those portrayed by Das̲h̲tī and Dihātī, and sentimental philosophising expressed in high-flown language plays a greater part. Ḥid̲j̲āzī may also be regarded as one of the pioneers of the art of the short story, which during and since his time has tended in Iran to overshadow the full-length novel, perhaps because of its conciseness and discouragement of diffuseness and prolixity. Ḥid̲j̲āzī's many short stories are buried in some half-dozen collections of essays and sketches, notably *Āyina*, *Andīs̲h̲a*, *Nasīm*, published at intervals over the period 1932-60. Other novelists who deserve mention include Mahdī Ḥamīdī, for his three-part novel *ʿIshḳ-i dar-bi-dar* (completed in 1940), though he is better known as a poet; Fak̲h̲r al-Dīn S̲h̲ādmān for his *Tārīkī wa rawshnāʾī* (1950); and ʿAlī Muḥammad Afg̲h̲ānī for his two encyclopaedic novels *S̲h̲awhar-i Āhū K̲h̲ānum* (1961) and *S̲h̲ādkāmān-i darra-yi Ḳara-sū* (1966), the first of these being hailed at the time as a major breakthrough for the Iranian novel, though apart from its length it cannot be regarded as more than a worthy continuation of the tradition set by its predecessors mentioned above.

The true innovators are rather to be found in the field of the short story, and here the first name to be mentioned is that of Muḥammad ʿAlī D̲j̲amālzāda, whose first collection appeared in 1921 under the title *Yakī būd wa yakī nabūd*. The title itself is indicative of a new approach to the art of story-writing, for it is the conventional phrase used to open the traditional folk-tale ("Once upon a time"). In fact D̲j̲amālzāda's stories do not owe as much to folk-literature as this might suggest, though at least one of the six in this collection takes its basic plot from a well-known folk-tale (*Dūsti-yi K̲h̲āla K̲h̲irsa*). His contribution to the development of Persian prose lay rather in his insistence on the importance of using language that the ordinary people can understand, and although he does not go quite so far as to employ colloquial and dialect forms, except occasionally, his writings are nevertheless a rich mine of idiomatic and proverbial expressions. Indeed he has been criticised for using this stock rather in the manner of a card-index, instead of attempting to reproduce the tones and rhythms of common speech. D̲j̲amālzāda, like most writers of his time, indulges in social criticism; but the effectiveness of this is largely discounted by the author's long residence abroad and his consequent ignorance of present-day conditions. After his first volume of stories, D̲j̲amālzāda published nothing more for twenty years; but then there followed four more volumes of short stories, *ʿAmū Ḥusayn ʿAlī* (1942, extensively revised as *S̲h̲āhkār*, 1967), *Talk̲h̲ u S̲h̲īrīn* (1955), *G̲h̲ayr az K̲h̲udā hīčkas nabūd* (1961), and *Āsmān u Rismān* (1964), and six novels, *Dār al-mad̲j̲ānīn* (1942), *Ṣaḥrā-yi mahs̲h̲ar* (1944), *Ḳultas̲h̲an-i dīwān* (1945), *Rāh-i-āb-nāma* (1947), *Maʿṣūma-yi S̲h̲īrāzī* (1953), and *Sar u tah-i yak karbās* (1955). D̲j̲amālzāda's literary life of more than forty years has assured him a high place in Iranian literary history, even though the momentum of his original incursion into the field was not maintained in his subsequent writings.

The credit for changing the direction of Persian prose writing must go rather to a somewhat younger man whose literary career lasted only half as long, as well as to others who associated with him or followed his example. Ṣādiḳ Hidāyat's [*q.v.*] first published work dates from 1923, when he was only twenty, but his contribution to story-telling began in 1930 when, shortly after his return from studying in Paris, he published *Zinda bi-gūr*, a collection of eight short stories. The next four years marked the first fruitful period of creative writing; during this time he was the leader of a group of friends known to themselves and others as the *Rabʿa*, the "Group of Four", who included in addition to Hidāyat himself Masʿūd Farzād, with whom in 1934 he collaborated on a volume of satirical sketches (*Wag̲h̲ wag̲h̲ sāhāb*), Mud̲j̲tabā Mīnuwī, with whom he wrote an historical drama in three acts (*Māzyār*, 1933), and Buzurg ʿAlawī, the only other member of the Four to achieve distinction as a writer of fiction (the other two had noteworthy careers as scholars). From Hidāyat's pen came two more volumes of short stories, *Sih ḳaṭra k̲h̲ūn* (1932), *Sāya-yi raws̲h̲an* (1933), and a short novel, *ʿAlawiyya K̲h̲ānum* (1933), as well as a satirical play, *Afsāna-yi Āfarīnas̲h̲* (written in 1930 but not published until 1946), books and articles on literary topics, folklore and magic, and translations from French. The range of this output shows the lines along which Hidāyat was developing. Like D̲j̲amālzāda, he wanted to write in the language of the people; but he achieved this not by having at his elbow a stock of idiomatic expressions, but through an ear well-attuned to the speech of his contemporaries, particularly those of the lower social classes. Moreover, he did not confine himself to any one milieu or class, but wrote with equal insight of all, though his sympathies were always with the underdog. This period in his writing culminated in an astonishing work, *Būf-i kūr* (not published until 1937, and then only in a privately duplicated edition in India—full publication had to wait until 1941). So much has been written about this essay in surrealism that it would be futile to attempt to add anything here, and it is sufficient to say that this one work has established Hidāyat as a writer of international calibre.

After the change of régime in 1941, Hidāyat began

to write fiction again (the intervening six years had seen only a handful of literary articles and some translations from Pahlavi), and by 1947 he had published two more collections of short stories (*Sag-i wilgard*, 1943, and *Wilangārī*, 1944), a novel (*Ḥādjdjī Āḳā*, 1945), and two long stories (*Āb-i zindagī*, 1944, and *Fardā*, 1946), as well as a quantity of articles and translations. The work of this period shows a greater awareness of political questions and even for a time a degree of optimism quite out of character with the prevailing trend of his writing. However, this mood was not to last. In 1947 he wound up his fiction-writing with a searing and in places scurrilous satire on Iranian society, cast in the form of a mock history of the Pearl Cannon that used to stand in the centre of Tehran and served as a point of pilgrimage and petition for the uneducated women of the city (characteristically, the manuscripts of this work, which has never been published, carry the "spoonerised" "byline" Hādī Ṣidāḳat). Also possibly from this period, though probably earlier, is another unpublished and undated work, *al-Biʿthat al-islāmiyya ilā 'l-bilād al-afrandjiyya*, a satirical account of a fictional Muslim mission to Europe, in which he takes the opportunity to lampoon typical figures in the religious and political establishment. Four years later Hidāyat died in Paris by his own hand.

His close friend and colleague, Buzurg ʿAlawī, though sharing many of his aims and ideals, differed from him in a number of respects. He took less interest in literature and folklore, and was more deeply influenced by Freudian psycho-analysis and Marxist political theory. This latter enthusiasm led to his imprisonment in 1937 and to prominence in the newly formed Tūda Party after his release in 1941. Prior to that experience he had written only one volume of short stories (*Čamadān*, 1934), apart from a single story contributed to the volume *Anīrān* (1931), one of the other two contributors to which was Ḥidāyat. In 1941 he published a second volume of short stories (*Waraḳ-pāra-hā-yi zandān*), and in 1952 a third collection (*Nāma-hā*) and a novel (*Čashm-hāyash*). In 1953 he left Iran for East Berlin, whence his output of fiction has been negligible. The fact that his reputation stands so high on such a small foundation is a tribute to the quality of his writing, which shows a strong sense of realism and a profound understanding of character.

The "school" of writing started by the *Rabʿa* attracted a number of imitators and followers, some of whom achieved status as independent writers. Among these must certainly be mentioned Ṣādiḳ Čūbak and Djalāl Āl-i Aḥmad [*q.v.* in Suppl.]. Čūbak's reputation was established with his first book of short stories, *Khayma-i shabbāzī*, published in 1945, and this was followed by a second collection, *Antarī ki lūṭīyash murda būd* (1949). Like his colleagues, he is interested primarily in the lives and characters of members of the lower classes, and he depicts these with a strong sense of realism, which often leads him to use expressions and idioms that shock his elders. He is also one of the first writers to use colloquial language freely throughout. His second volume of short stories was followed by more than ten years of silence, but in 1963 he published a novel, *Tangsīr*, set in the Tangistān area of his home province of Fārs, which gives a vivid picture of the provincial and tribal life of the south of Iran. Two more volumes of short stories followed, *Rūz-i awwal-i ḳabr* (1965) and *Čirāgh-i Ākhir* (1966), and finally (for so far nothing else has appeared) in 1967 a long kaleidoscopic novel, *Sang-i ṣabūr*, written mainly in dialect, and with passages in dramatic dialogue form introducing characters from history, poetry, and so on.

Djalāl Āl-i Aḥmad, who died in 1969, has a wider range of writing than Čūbak, being interested in sociology, folklore, and political questions, on all of which subjects he wrote articles and books. In the field of story-writing he has four volumes of short stories, *Dīd u bāzdīd* (1945), *Az randjī ki mībarīm* (1947), *Sitār* (1948), and *Zan-i ziyādī* (1952). A further five stories were published posthumously under the title *Pandj dāstān*. He also published four novels or long stories, *Sargudhasht-i kandū-hā* (1954), *Mudīr-i madrasa* (1958), *Nūn wa 'l-ḳalam* (1961), and *Nifrīn-i zamīn* (1968). Āl-i Aḥmad's sociological interests show clearly in much of his work, but this is not a criticism of his writing, which is concise and economical, allowing his characters to develop in their own words (which are usually in their colloquial form) rather than through the author's description. Other writers who may be considered as having been influenced by the same school of writing include Muḥammad Iʿtimādzāda (Bih-Ādhīn), Ibrāhīm Gulistān, Iḥsān Ṭabarī, Raḥmat Muṣṭafawī, Sharīʿatmadārī (Darwīsh), and Djalāl Āl-i Aḥmad's widow, Sīmīn Dānishwar.

The interest in folklore shown by Ṣādiḳ Hidāyat was shared by other writers, some of whom could indeed claim to have preceded him, for instance, Amīr Ḳulī Amīnī, Kūhī Kirmānī, and Ṣubḥī Muhtadī. Only the lastnamed, however, ventured briefly into the field of original fiction, with a short novel in folk-tale form, *Ḥadjdjī Mullā Zulf ʿAlī* (1947). The two threads rejoined in the writings of Ṣamad Bihrangī [*q.v.* in Suppl.] and Ghulām Ḥusayn Sāʿidī. Both these writers, born in Tabrīz, use the folk-tale form as a medium for allegorical works commenting on contemporary social questions. Bihrangī, who was drowned in 1968, is the author of a series of ostensibly children's stories, all published between 1966 and 1969, of which mention may be made of *Ūldūz wa kulāgh-hā*, *Kačal-i kaftar-bāz*, *Afsāna-yi maḥabbat*, *Māhī-yi siyāh-i kūčūlū*, and *Kūrughlū wa Kačal-i Ḥamza*. A posthumous collection of short stories, *Talkhūn*, was published in 1970. Sāʿidī, who writes his fictional work under the pseudonym Gawhar-i Murād, is best known for his plays, mimes and film scripts; his short story collections include *Khāna-hā-yi shahr-i Rayy* (1955), *Shab-nishīnī-yi bāshukūh* (1960), *Dandīl* (1966), *Wāhima-hā-yi bī-nām-unishān* (1967), *Tars u āz* and *Tūp* (1968). Like Āl-i Aḥmad, he is interested in sociology, and is the author of a number of monographs. Other writers in this category include Ṣādiḳ Humāyūnī, Djamāl Mīr-Ṣādiḳī and Shāpūr Ḳarīb.

The latest phase in fiction-writing shows a trend towards a more introspective approach, perhaps encouraged by current political and social conditions, which are felt to preclude open discussion of current questions. The writers of this category choose a somewhat obscure and allusive mode of expression, which leaves the reader free to make his own interpretation; they are also more concerned with inner feelings and psychological states. One of the first writers in this vein was Taḳī Mudarrisī, whose novel *Yakūlyā wa tanhā'ī-yi ū* appeared in 1956. This was followed in 1966 by *Sharīf Djān*, a novel of the 1930s. Bahman Fursī is known chiefly as a playwright, but his collection of short stories, *Zīr-i dandān-i sag* (1964), attracted favourable notice. Two poets, Maḥmūd Kiyā-Nūsh and Maḥmūd

Ṭayyārī, are also known as story-writers. Two other writers deserve special mention: Hūs̲h̲ang Guls̲h̲īrī for his three novels *S̲h̲āzda Iḥtid̲j̲āb* (1968), *Kristīn wa Kīd* (1971), and *Maʿṣūm-i duwwum* (1972), and Nādir Ibrāhīmī, who since the late sixties has published a steady flow of novels and short stories. Other names include Kāẓim Sādāt-i Is̲h̲kiwarī and Bahrām Ṣādiķī.

Bibliography: Apart from the works of the authors mentioned in the text, the following surveys may be listed. For the traditional literature: Jiří Cejpek, ch. *Iranian folk-literature*, in J. Rypka *et alii*, *History of Iranian literature*, Dordrecht 1968, 607-709; William L. Hanaway, Jr., *Formal elements in the Persian popular romances*, in *Review of National Literatures* (New York 1971), ii/1, 139-60; idem, Introd. to *Love and war: adventures from the Firuz Shāh Nāma of Sheikh Bighamī*, Delmar, New York 1974, 1-24. For the modern period: E. G. Browne, *LHP*, iv, 458-90; Ras̲h̲īd Yāsimī, *Adabiyyāt-i muʿāṣir*, Tehran 1937; P. N. K̲h̲ānlarī, *Nat̲h̲r-i fārsī dar dawra-yi ak̲h̲ir*, in *Nak̲h̲ustīn Kungra-yi Nawīsandagān-i Īrān*, Tehran 1946, 128-87; D. S. Komissarov, *Očerki sovremennoi persidskoi prozy*, Moscow 1960; R. Gelpke, *Die iranische Prosaliteratur im 20. Jahrhundert*, Wiesbaden 1962; Bozorg Alavi, *Geschichte und Entwicklung der modernen persischen Literatur*, Berlin 1964; H. Kamshad, *Modern Persian prose literature*, Cambridge 1966; Maḥmūd Kiyā-Nūs̲h̲, *Bar-rasī-yi s̲h̲iʿr u nat̲h̲r-i fārsī-yi muʿāṣir*, Tehran 1967, 4th ed. 1976; Vera Kubíčková, ch. *Persian literature of the 20th century*, in Rypka, *op. cit.*, 355-418; L. P. Elwell-Sutton, *Recent developments in Persian literature*, in *Bulletin of the British Association of Orientalists*, New Series, v (London 1970), 12-18; Muḥammad Istiʿlāmī, *Bar-rasī-yi adabiyyāt-i imrūz*, Tehran 1970, repr. 1971, etc.; ibid., *Naẓm u nat̲h̲r-i dawra-yi mas̲h̲rūṭa wa muʿāṣir*, Tehran 1973, 3 vols.; Mohammed Ali Jazayery, *Recent Persian literature*, in *Review of National Literatures*, ii/1, 11-28; Ehsan Yar-Shater, *The modern literary idiom*, in E. Yar-Shater, ed., *Iran faces the seventies*, New York 1971, 284-320; Manoocher Aryanpur, *Retrospect and progress: a short view of modern Persian literature*, in *Books Abroad*, xlvi/2 (Norman, Oklahoma 1972), 200-10; P. Chelkowski, *The literary genres in modern Iran*, in G. Lenczowski, ed., *Iran under the Pahlavis*, Stanford 1978, 333-64.

(L. P. Elwell-Sutton)

5. In Urdu.

Until the beginning of the 19th century, prose literature was almost unknown in Urdu. A few prose works had been written in the Deccan as far back as the early 17th century, but they were mostly on religious subjects. A notable exception, however, was Wad̲j̲hī's story *Sab Ras* (1635). This is based on the Persian allegorical *mat̲h̲nawī*, *Dastūr al-ʿus̲h̲s̲h̲āķ*, by Yaḥyā b. Sībak, who is generally known as Fattāḥī Nīsāpūrī (d. 852/1448). *Sab Ras* is written in ornate rhymed prose, and like its Persian source, it tells the story of the romance of Princess Ḥusn (Beauty) and Prince Dil (Heart). All the characters bear similarly allegorical names. The work appears to have been an isolated piece, and it cannot be considered a progenitor of modern Urdu fiction.

There did exist a kind of versified Urdu fiction in the 18th century, namely, the narrative *mat̲h̲nawī*, of which the outstanding example is *Siḥr al-bayān*, by Mīr Ḥasan [*q.v.*]. At its best, the *mat̲h̲nawī* included some of the essential elements of the novel—a story with a logical sequence of connected incidents; characterisation, however rudimentary; and vivid description of scenes and social customs. But the plots relied too heavily on the incredible and supernatural.

Another precursor of modern Urdu fiction is to be found in certain collections of short stories within a "frame", which were recited to general audiences, as well as to royal courts and rich households. They are the Urdu equivalents of Arabic collections like *Alf layla wa-layla* and *Sīrat ʿAntar*, and are termed *dāstān* (pl. *dāstāneṅ*). Ralph Russell (*op. cit.* in *Bibl.*, 107) refers his readers to E. W. Lane's *Manners and customs of the modern Egyptians* for a "generally accurate account of how the dastans were recited in India". These cycles of legends were subsequently printed in Lucknow in the press established there in 1858 by Nawal Kis̲h̲ōr (d. 1895). *Amīr Ḥamza Ṣāḥib Ķirān kā ķiṣṣa* recounts the wonderful exploits of a famous uncle of the Prophet Muḥammad in 17 volumes totalling about 17,000 pages. The most popular sections were *Ṭilsim-i Hōs̲h̲rubā* (7 vols.) and *Naws̲h̲ērān-nāma* (2 vols.). Vying in popularity with this vast collection was the seven-volume *Bustān-i k̲h̲ayāl*. These works are generally considered to be of Persian origin; but it is not clear whether the reciters employed by Kis̲h̲ōr to produce his Urdu versions were actually translating Persian texts themselves, or using existing Urdu versions which had been passed from mouth to mouth. The language is highly-coloured and uses rhymes; but the stories recounted were apparently well-known and appreciated in India. The *dāstāneṅ* were tales of chivalry, and, like the *mat̲h̲nawī*, contained a strong element of the supernatural. But whereas a *mat̲h̲nawī* might have a well-formed story, the *dāstān* consisted of a series of short stories or incidents, with little attempt at characterisation.

In the evolution of the Urdu novel, we find the *dāstān* gradually giving way to the European-style novel. Indeed, in some measure the one gradually merged into the other. But the prelude to this transformation takes us to Calcutta, where, in 1800, the British East India Company established Fort William College, to train British officials in the languages, laws and customs of India. The first Principal, John Borthwick Gilchrist, assembled a number of Indian writers, whom he commissioned to produce prose works which could be used as text-books for Urdu and other languages. While not discouraging a sense of style and a modicum of linguistic embellishment, he required fairly simple language. A number of Urdu books were written, some of them fiction, which became popular classics. They were all adaptions from other languages, chiefly Persian but occasionally Sanskrit. The emergence of the Urdu novel later in the century diminished the importance of these works, though they served until the Second World War as text-books for British officials and army officers.

The best-known was Mīr Amman's *Bāg̲h̲-o-bahār* (1801) based on a Persian tale by Amīr K̲h̲usraw [*q.v.*]. It tells the story of four dervishes who are supernaturally guided to a city. There, aided by the King, they discover their long-lost loves. The scene is supposedly Istanbul; but it is described like Dihlī in the last years of the Mug̲h̲als. Since the original Calcutta edition, this book has been frequently reprinted, and an English translation by Duncan Forbes appeared in London in 1862. S. A. B.

Suhrawardy (*op. cit.*, in *Bibl.*, 18) describes it as "the first prose classic in Urdu... still read for enjoyment". Like other Fort William products, it is written in reasonably straightforward language, and includes good dialogue and characterisation. Amongst other Fort William fiction were *ʿArāʾish-i maḥfil* by ʿAlī Afsōs, and Mīrzā ʿAlī Kāẓim Djawān's *Shakuntalā*, based on the drama by Kālī Das. Not all the fiction written for John Gilchrist was published at the time. Two previously unpublished ones have recently been edited by ʿIbādat Barēlwī. They are by Maẓhar ʿAlī Khān Wilā. *Haft gulshan* (Karachi 1964) is a collection of fables; while *Mādhōnal awr Kām Kandalā* (Karachi 1965) is a short *dāstān*, in 20 chapters. Finally, mention must be made of another Fort William publication which provides a link with the *mathnawī*—Mīr Bahādur ʿAlī Ḥusaynī's *Nathr-i bēnaẓīr* (Calcutta 1803). It is a prose version of Mīr Ḥasan's *Siḥr al-bayān*, including verses quoted from the poem from time to time. Strange to relate, it was published two years earlier than the *mathnawī* itself.

Whether the fiction produced at Fort William forms a definite stage in the evolution of the Urdu novel and short-story, or was merely an interlude, is a matter subject to dispute. Muḥammad Sadiq (*op. cit.* in *Bibl.*, 212) denies that it was a "formative factor in the development of modern Urdu prose". He adds that, had it never existed, Urdu prose would not have developed any differently. On the other hand, Suhrawardy (*op. cit.*, 22) maintains that it not only furthered the simplification of Urdu prose, but also popularised prose romances. It is certainly arguable that the simpler prose fostered by the ʿAligarh Movement, and exemplified by the writings of Sir Sayyid Aḥmad Khān and Alṭāf Ḥusayn Ḥālī, and even ʿAbd al-Ḥalīm Sharar, is at times reminiscent of "Fort William prose". But of those three, only Sharar wrote fiction.

Whatever the merits and demerits of the Fort William products, they were important enough to stimulate controversy as to what features constituted good Urdu literary prose. Many considered the Fort William prose style too simple to be literary. In fact, the first original prose romance in Urdu, *Fasāna-yi-ʿadjāʾib* by Mīrzā Radjab ʿAlī Bēg Surūr (d. 1867), was regarded, and perhaps intended, as a reply to the Fort William style. He wrote it in about 1824, but it was not published until between 1839 and 1842. It may fairly be described as a *dāstān*, for it is a series of stories of chivalry, with a certain amount of the supernatural, set in a "frame"; but it is in one volume only. The frame is the love-story of Prince Djān-i ʿālam and Princess Andjuman-ārā. The stories or incidents describe the dangers, and fights with men and magicians, that the hero has to face in order to win her. The frame is a familiar one, and recurs in Sarshar's *Fasāna-yi-Āzād*. The language contains much rhetoric and rhyme, and it is interesting to note that Surūr wrote it in Urdu only because he feared that his command of Arabic and Persian was inadequate.

However, it was not until the 1860s and 1870s that the Urdu novel, in the European sense, emerged. There were good reasons for this. English became not only the language of government and higher education, but also a common medium of communication between the various peoples of India. English novels became familiar in the original language. Later, a number were "translated", or, more accurately, adapted into Urdu, as were selections of short stories. But as far as can be ascertained, these "translations" did not become common until after the First World War, by which time the Urdu novel was already flourishing. Another factor favouring Urdu fiction was the appearance of numerous newspapers and magazines, which published novels either in instalments, or as supplementary special issues. Fiction therefore became cheap enough to attract a wide readership. Thirdly, the ʿAlīgarh Movement made prose a respected literary medium, and also demonstrated that prose need not be artificial, full of rare words, balanced sentences and rhymes, to be artistic. During the last thirty years of the life of Sir Sayyid Aḥmad Khān (1813-98), the novel became an established form.

Of the three great novelists writing in this period, the first, chronologically, was Nadhīr Aḥmad (1836-1912). But it is more logical to discuss Pandit Ratan Nāth Sarshār (1845-1903), first, as his stories retain some features of the *dāstān*. Born in Lucknow, after a sketchy education he worked for the newspaper *Awadh panč*, then for its rival, the *Awadh akhbār*, of which the proprietor Nawal Kishōr appointed him editor. His gigantic picaresque novel *Fasāna-yi-Āzād*, on which his fame rests, appeared in this newspaper in instalments in 1878 and 1879, and was then published in book form in Lucknow in 1880, in four volumes totalling about 1700 double-columned pages. It is more like a collection of short stories and anecdotes than a novel, reflecting both Sarshār's untidy and disorganised way of life and the demands of serialisation, which required him to produce regular instalments with or without inspiration. According to Khūrshīd (*op. cit.* in *Bibl.*, 183), the idea of the work arose from a discussion about *Don Quixote* among members of the staff of the paper. Sarshar's book was a tremendous success, and it was imitated by many subsequent novelists.

The "frame" of *Fasāna-yi-Āzād* is that the noble and chivalrous Āzād, of the city of Lucknow, falls in love with the beautiful Ḥusn-ārā. In order to win her hand, he has to go and fight for the Turks against the Russians, and his adventures are recounted in the book. He has a companion, Khōdjī, who is a figure of fun. In fact, in many ways, the roles of Don Quixote and Sancho Panza are reversed in Āzād and Khōdjī. The work is so rich in characters, incidents and scenes that it defies description in a brief account. There are major sub-plots as well as the main "frame", and the incidents described are both numerous and varied, ranging from fighting and flirtation to discussions of poetry. It is notable for its pictures of Lucknow life. But above all, it is full of dialogue, often racy, and suiting the language to the speaker. A Western reader picking it up for the first time might think, from many pages, that it is a drama, with each speaker's name in bold letters at the beginning of the line, followed by "stage directions" and then what he or she says. This method of setting out dialogue was followed by a number of Urdu novelists—for example, ʿAbd al-Ḥalīm Sharar.

The hero, Āzād, resembles the *dāstān* hero—handsome, brave, a great lover and a champion of what is right. The realistic pictures, however, are modern, sometimes reminding us of Dickens; and there is very little of the supernatural. Thus it is a transitional work, between the *dāstān* and the novel; though by the time it was published, three of Nadhīr Aḥmad's novels had already appeared, with their realistic contemporary social themes. However, Sarshar wrote to entertain his readers. The abundant variety of characters, including many from the underworld

and the demi-monde; the wit and humour; the basic realism, despite a veneer of exaggeration—all these appealed so strongly to the readers, that it is said that when it first appeared in serial form, each new instalment was avidly awaited, and people rushed to buy the *Awadh akhbār* because of it.

Such a tour-de-force is hard to repeat; and Sars͟hār's Bohemian life-style, especially his addiction to alcohol, seems to have affected his work. Of his later novels, *K͟hudā'i fawdjdār* is an abridged and adapted version of Cervantes' novel. His *Kāmnī* is his only novel with a Hindu background—which is rather surprising, since he was himself a Hindu.

Nad͟hīr Aḥmad (1836-1912) is considered by many to be the first modern novelist in Urdu, especially by those who prefer a novel to be a study of contemporary social life, and who like it to have a message. Strange to relate, he became a novelist by accident. Educated at Delhi College, he worked first as a schoolmaster, then an inspector of education, and subsequently in various posts in the Revenue Department. His first "novel", *Mirā'at al-ʿarūs* ("The bride's mirror") (1869) was written for his own daughters to read privately; it was a moral tale to teach them the qualities required of a good and successful wife. A British Director of Public Instruction saw the manuscript, and urged Nad͟hīr Aḥmad to have it published. Because of its educational value and high moral tone, the Indian Government bought a thousand copies. Nad͟hīr Aḥmad achieves his didactic aim by describing two sisters and comparing their married life. Akbarī is a spoilt girl who proves incapable of running a house; while Aṣg͟harī is efficient and practical, almost a model of all the virtues. In 1873 he followed it with a sequel, *Banāt al-naʿs͟h*. Its subject is girls' education, but it is more like a series of lessons than a story. *Tawbat al-Naṣūḥ* (1877) is a more ambitious family tale. It tells how Naṣūḥ, while ill, repents; and, having previously allowed his children to do as they like, he now tries to reform them as well as himself. *Fasāna-yi-Mubtalā* (1885) treats of the evils of polygamy. *Ibn al-waḳt* (1888) describes the troubles of an Anglicised Indian who shuns his fellows Indians. But when his only British friend leaves the country, he finds himself isolated. All these novels, then, are stories with a moral, and the very names of many of the characters are descriptive of them: thus Naṣūḥ (repentant) and Mubtalā (afflicted).

These novels struck a new note and have many attractive qualities. They are straightforward stories of manageable (one-volume) size, in uncomplicated yet elegant style, dealing with the contemporary social scene and its problems. Their high moral tone, somewhat reminiscent of Victorian England, made them suitable reading for people of all ages and both sexes; and they were widely read, and frequently re-printed up to the Second World War. Nad͟hīr Aḥmad improved with experience, and his later novels are superior to his earlier ones in both character development and plot construction. But his earlier ones remained the most popular—especially *Mirā'at al-ʿarūs* and *Tawbat al-Naṣūḥ*. More recently, *Ibn al-waḳt* has attracted attention, because of its relevance to the last years of the British Rād͟j.

The main objection to these novels has been on grounds of the domination of the didactic aim; so much so, that it has been suggested that they are not real novels at all, but pleas for social reforms in the guise of novels. There is also a lack of humour in them. Nevertheless, they mark the advent of the social novel in Urdu.

Two distinct genres of novel, then, had emerged by the last quarter of the 19th century—the picaresque type of Sars͟hār, and the social type of Nad͟hīr Aḥmad. Both writers were imitated, and there was a burst of activity in both genres. The picaresque type gradually lost its appeal, and though many later examples could be mentioned, none achieved anything approaching Sars͟hār's success. The social novel, however, was continued unabated until the present time, and in 1899 an outstanding example appeared—*Umrāō D͟jān Adā*, by Mīrzā Muḥammad Hādī Ruswā (1858-1931). Ralph Russell describes it as the first true novel in Urdu (*op. cit.*, 132). It is the story of a retired high-class Lucknow prostitute, whose name forms the title, and who tells her life-story to the author. Like Sars͟hār, Ruswā tells much of the story in dialogue form, and the book is very readable and entertaining. As Muḥammad Sadiq says (*op. cit.*, 355), the didactic element emerges before the end. But what is remarkable in Ruswā's approach is his sympathetic and perceptive attitude to his heroine. He does not blame her, neither does he condone her sinful life, which has made her virtually a social outcast. He shows understanding without being sentimental. Ruswā wrote several other novels, but was unable to repeat the success of *Umrāō D͟jān Adā*.

As the 19th century drew to its close, a third genre of Urdu fiction appeared, the historical novel. Its pioneer was ʿAbd al-Ḥalīm S͟harar (1860-1926), a journalist and historian, and a leading figure in the ʿAligarh Movement. Born in Lucknow, he worked there for 5 years as Assistant Editor of the *Awadh panč*. In 1887, he started the magazine *Dil gudāz*, which he continued, with interruptions, until his death. His earlier novels were first published in serial form; but later ones were published whole, and sold cheaply as supplements to the magazine. The idea of writing historical novels came to him while reading Sir Walter Scott's *Talisman* during a train journey. Struck by the unfavourable light in which Scott depicted Muslims, he decided to try to redress the balance, and produced *Malik-i-ʿAzīz awr Ward͟jāna*. He had previously published a social novel, *Dilkasp*. But though he did not completely abandon this genre, the majority of his novels, numbering about 35, are historical. They contain unashamed propaganda for Islam, and paint Christianity in a poor light; but they are vivid and exciting stories of heroism and romance, with brave heroes, cruel villains, and beautiful heroines—the latter often Christians girls who fall in love with Muslims. They achieved enormous popularity, because S͟harar knew how to write a good story and sustain interest. His descriptive passages are convincing without being over-long, and there is considerable dialogue. But the drama often deteriorates into melodrama. His dénouements are frequently bloodthirsty, and he lingers too long over cruelty and killing for modern tastes. Historical veracity is often lacking, and there are anachronisms. Still, there is no doubt that he could draw characters credibly if not subtly. His language is eclectic and attractive, without being forced; and it still reads well. And though overladen with Arabic expressions for some tastes, this suits his themes.

His novels span the Islamic world from Spain to Africa, Turkey, the Middle East and India; whilst in time they range from the 7th to the 19th centuries. *Flōrā Flōrindā* (1897), a tale of Christians and Muslims in mediaeval Spain, is regarded as one of his best novels. The heroine, Flōrā, is the daughter

of a Muslim father who is brought up as a Christian. She is later raped by a "patriarch", whose child she bears, and whom she kills in the end. The story is highly involved, and the swift dénouement which occupies only 13 pages out of a total of 350, leaves almost all the main characters killed. Equally popular was *Firdaws-i-barīn* (1899), which to the present writer, is more convincing. The background to the story is the conquest of the valley of the Assassins (*Ḥashshāshiyya*) and their fortress of Alamût by Hûlāgû Khān in 1257. The hero and heroine, Ḥusayn and Zamurrad, have been in the power of the Assassin leader, Khūrshāh, but in the end they side with Hûlāgû against him. There is a vivid description of the final battle and the destruction of the "sublime paradise" of the Assassins, with the hero Ḥusayn playing a major rôle. Finally, Hûlāgû arranges for Ḥusayn and Zamurrad to marry, and they leave together for Mecca and the Pilgrimage. This accords somewhat ill with Ḥusayn's obvious enjoyment of prolonging the agony of those whom he kills in the final battle. But it is the sort of melodrama which doubtless appealed to the readers of 1899.

It is difficult to single out names of 20th century Urdu novelists who continued social and historical novels. Some of them, like Prēm Čand and M. Aslam, are better known as short-story writers. Rāshid al-Khayrī (1868-1936) was one of the most successful, and though best-known for his social novels, he also wrote a number of historical ones. His social novels, though not without humour, earned him the nickname of *Muṣawwir-i-ghamm* ("depicter of sorrows"). The main theme is the position of woman in Islamic society. His trilogy *Subḥ-i-zindagī*, *Shām-i-zindagī* and *Shab-i-zindagī*, is worthy of note. Among his historical novels, *ʿArūs-i Karbalā* deserves mention. The "bride" of the title is a Christian widow who feels drawn to Islam, and finally marries ʿUbayd, a partisan of al-Ḥusayn at the battle. Suhrawardy (*op. cit.*, 118) regards Rāshid al-Khayrī's historical novels as "poor stuff", lacking social colour and realism.

The Urdu short story is held by most Indian and Pakistani critics to be an importation from the West, although some of its elements may be seen in stories and anecdotes of the *dāstān*, especially *Fasāna-yi-ʿadjāʾib* and *Fasāna-yi-Āzād*.

M. Aslam in his introduction to one of his short-story collections, *Ḥaḳīḳatēṅ awr ḥikāyatēṅ* (Lahore 1972, 3) maintains that the reverse is true, and that the Europeans really took the short-story from the Muslims! He goes on to say that the short-story originated in religious literature such as the Old Testament and the Ḳurʾān, and attempts to substantiate this from stories in the Ḳurʾān. However, there is no doubt that the creator of the genre in its modern sense, in Urdu, was Prēm Čand (real name Dhanpat Rāʾē) (1880-1937). Born near Benares, he was a Hindu, and wrote in both Hindi and Urdu: indeed some of his fiction appeared in both languages —or in both scripts, Arabic and Devanagri. He started his writing career as a novelist, then turned to the short-story, which was at that time in its infancy in India. He was a prolific writer, and his short stories were collected in a number of volumes, including *Prēm paččīsī*, *Prēm battīsī*, *Prēm čālīsī*, *Wāridāt* and *Zād-i-rāb*. Prēm Čand is noted for his pictures of village life. He depicts the poor and humble as inherently good, but compelled to do wrong by the pressures of poverty and temptation. They are exploited by landowners and rich employers, and are a prey to fear, superstitions and religious bigotry. For such people little acts or accidents may have dire effects. Prēm Čand, then, was no less a pleader for social reform than Nadhīr Aḥmad. But whereas the latter concentrated on the middle class, Prēm described the lower classes, especially in villages. A master of characterisation, style and form, he made the short story his métier, and whilst his novels are now neglected, many of his short stories are acknowledged masterpieces.

Among later short story writers, mention should be made of M. Aslam (*Ēm Aslam*). the author of over a hundred books. Many of his short stories are romantic, and he depicts the instability of middle-class society in a period of change. Finally, there have been several brilliant writers of humorous short stories, and essays in story form. They include Shawkat Thānawī, Mirzā ʿAẓīm Bēg Čughtāʾī and Paṭras Bukhārī (1898-1958).

A word must be said about the nomenclature of Urdu fiction, which includes Hindi, Persian, Arabic and English terms. *Dāstān* has already been mentioned. *Kahānī* was used chiefly for fables, anecdotes and short stories. Throughout most of the 19th century, the term *fasāna*, with its variant, *afsāna*, was current. Nadhīr Aḥmad's novels were called *ḳiṣṣa*, but as we have seen, he also used the term *fasāna*. *Ḥikāyat* has been used considerably, particularly for the short-story. It seems likely that Sharar was the first to employ the English word "novel" (Urdu, *nāwal*) and this is now the ommonest name for a novel. A short-story is now usually called *afsāna*—more properly, *mukhtaṣar afsāna*.

Bibliography: Shāista Akhtar Bānu Suhrawardy, *A critical survey of the Urdu novel and short story*, London 1945, provides a full history to 1939, with critical accounts and plots of many individual novels and short stories. Ralph Russell, *The development of the modern novel in Urdu*, in T. W. Clark, ed., *The novel in India, its birth and development*, London 1970, 102-41, is valuable for its detailed accounts of *Umrāō Djān Adā* and *Florā Flōrindā*, with shorter accounts of previous novelists. Muḥammad Sadiq, *A history of Urdu literature*, London 1964, contains several sections on Urdu fiction; Wadjhī, 50-1; a highly unsympathetic account of Fort William's contribution, 210-21; Surūr, 143-4; Nadhīr Aḥmad, 316-24; Sarshār, 326-38; Sharar, 339-44; and Prēm Čand, 344-55; together with a lukewarm account of *Umrāō Djān Adā*, 355-6. Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, contains information on Urdu fiction, 239-50, 257-97, and 318-45. In Urdu there is a remarkably full account of the short story from its beginnings to 1943 by ʿIbādat Barēlwī in *Tanḳīdī zāwiyē*, Karachi 1957, 309-82. Sayyid ʿAbdu 'l-Laṭīf, *The influence of English literature on Urdu literature*, London 1924, contains some interesting background information, but no details of novels. Lists of Urdu novels and short stories which are "translations" (usually more properly "adaptions") of English and other Western literature, are given by Mawlwī Mir Hasan in his *Maghribī taṣānīf kē Urdū tarādjim*, Khayratābād, 1939. Finally, in view of the important rôle of the Urdu press in the development of the novel and short-story, reference may be made to ʿAbd al-Sallām Khūrshīd, *Ṣaḥāfat Pākistān-ō-Hind mēṅ*, more especially 183-4 (Sarshār) and 186 (Sharar).

(J. A. Haywood)

6. In Malaysia and Indonesia.

In dictionaries of older Malay, *ḳiṣṣa* is defined as "story, narrative episode". It occurs regularly in this sense in literary words from the 17th century onwards, and, in addition, is used in Malay historiographical works and romances as a kind of pericope marker to introduce a new stage or episode in a longer narrative.

It appears in the title of a Malay adaptation of the Stories of the Prophets, *Ḳiṣāṣ al-anbiyā'* (largely the version of al-Kisā'ī) which became popular from the 17th century onwards, and in more recent times was the title of an Indonesian magazine, *Kisah* (Jakarta 1953-8) devoted to the short story. It appears in the title of a collection of short stories, purely western and totally secular in theme and content by Armijn Pané, *Kisah Antara Manusia*. Nevertheless, it did not establish itself as the title of a genre. For shorter length narratives, the Sanskrit-derived *cerita* (story) was preferred, with, in imitation of European usage, the qualifying adjective *pendek* ("short"), the two words now being abbreviated to *cerpen*.

The short story is currently the most popular literary form in Indonesia and Malaysia. Its roots are to be found in local fables and animal stories, in short narratives of Perso-Arabic origin, especially those set within frame-collections, and in the flowering of the genre in late 19th century Europe. Although none of the great Arabic collections of stories such as *al-Bukhalā'*, *al-Aghānī* or the *Alf layla wa-layla* has accompanied the islamisation of the Malay world, one of the very oldest Malay MSS (*ca.* 1615) is a fragment of the Persian *Tūtī-nāma*: a rendering in Malay of a Persian version of the *Sukasaptati* or "Tales of a parrot". Other frame-stories such as *Kalīla wa-Dimna* and the *Sindibād-nāma* established themselves in Malay renderings relatively early. The large number of MSS. of such works is an adequate index of their popularity.

All of these stories belong to the popular domain. The composition by individuals of realistic short stories did not begin until the 20th century with the development of a popular press, and the possibilities that newspapers and periodicals offered for the development of such a form of narrative fiction. It established its present popularity in both regions during the 1950s.

In Malaysia, during the 1930s, the authors of short stories were graduates of Malay stream education and religious schools. The majority of their stories were moralistic, concerning such issues as the backwardness of the Malays, the problems of forced marriage, and the need for a reformist understanding of Islam. In Indonesia during the same period the secular stream was dominant. But just as since Malayan independence in 1957, the short story in Malaysia has become secularised, in Indonesia some short stories by Muslims have brought a consciousness and sensitivity to the perception of religious experience which is characteristically modern. In many cases, the concern is purely with man as man, and while a religious dimension is suggested, it is not worked out within the dogmatic frame-work of a single identifiable religious tradition. In a few, however, and A. A. Navis (see *Bibl.* below) presents the best example, a religious problem lies at the very heart of the story, and is the reason for its existence. Nevertheless, apart from contributing the word *ḳiṣṣa* to the Malay vocabulary, the Muslim religious and literary tradition has played only a limited role in the shaping of the short story in Malay. The Western secular tradition has been, far and away, the most important single influence.

7. In Swahili.

In Swahili literature, the word *ḳiṣṣa* was first used in the context of the *Ḳiṣaṣ al-anbiyā'* [*q.v.*]. The numerous Swahili authors (i.e. writers as well as composers of oral traditions) had at their disposal rather more elaborate versions than those of al-Kisā'ī or al-Thaʿlabī from which to borrow their themes for the prophets' legends, extremely popular in East Africa. Also, several of the Swahili versions of the legends have their parallels in Indonesia; see J. Knappert, *The Qiṣaṣu 'l-Anbiyā'i as moralistic tales*, in *Procs. of the Seminar for Arabian Studies*, vi (1976), 103-16.

In written Swahili literature, the legends of the pre-Islamic prophets are always treated in verse. Full-length epic poems are extant about Adam and Eve, Job (Ayyūb) and Joseph (Yūsuf), but fragments have also come to light dealing with Mūsā, Yaʿḳūb, Yūnus, Sulaymān and Dāwūd, Burahimu (Ibrāhīm), and Zakariyyā' and ʿĪsā; see Knappert, *Four Swahili epics*, London 1964; idem, *Traditional Swahili poetry*, Leiden 1967, ch. 2; idem, *Swahili Islamic poetry*, Leiden 1971, i, ch. 3. Many of these legends, and especially those with miraculous elements, circulate in oral tradition, see Knappert, *Myths and legends of the Swahili*, London 1970. It is

probable that these tales have come to the Swahili Coast with sailors from Arabia, Persia and India; the latter country in particular seems clearly to have influenced Swahili literature.

From this semi-religious usage, the word *ḳiṣṣa* (now spelt *kisa* with purely Swahili plural *visa*) acquired an extended range of meaning to that of "miraculous tale in general", "fairly tale of the type found in the *Alf layla wa-layla* collection" [*q.v.*]. The connection here is obvious, since many of the latter tales are variations on *Ḳiṣaṣ al-anbiyā'* themes or employ their characters, e.g. the tale of the fisherman who found a bottle that had been sealed by King Solomon, a tale well-known amongst the Swahili. These prose stories were not written down by the Swahili themselves, but missionaries with folkloric interests collected them in the 19th century; see e.g. E. Steere, *Swahili tales*, London 1869, and C. Velten, *Märchen und Erzählungen der Suaheli*, Berlin 1898. These *visa* were never composed in verse, until very recently, whereas the *hadithi*, traditions about the Prophet Muḥammad or other holy men, were often composed in verse and written down, in Arabic script of course. As well as the above two genres, traditional Swahili storytellers distinguish also the *ngano*, an invented tale or fable, of which last there are several in Swahili oral literature, some apparently derived from the Indian treasure house of fables, of the type represented in Islamic literature by *Kalila wa-Dimna* [*q.v.*] and the *Anwār-i Suhaylī* [see KĀSHIFĪ]).

It is only in the last thirty years or so that the word *kisa* has come to be used in the meaning of the modern novel, though Swahili novels have neither the extended treatment nor sophistication of European-language novels. Indeed, secular Swahili prose literature as a medium for artistic expression is still very much in its infancy. In the earlier, traditional society, prose was the vehicle for the conveyance of factual information, such as topics of history, law and theology. Artistic expression was channelled exclusively into poetry, even for subjects that in the West have not been represented in poetry for a century or so, such as theology and the rules of personal behaviour. Fable and fairy tale belonged to the realm of the (often illiterate) story-teller. The short story and novel have only come to the scene a generation after the influence of English literature, bringing with it an entirely new appreciation of the possibilities of prose writing, has affected the minds and creative faculties of Africans educated in mission secondary schools. Hence a major problem is now the adaptation of the Swahili language—previously largely a trade language, apart from its function in didactic and epic literature, where it has been bound by rigid conventions—into a flexible, modern medium for literature and belles-lettres.

The names of some recent Swahili novelists, with details of their works, are given below. No claim to completeness nor to any attempt at ranking in importance can be given, in view of the uncertain future course of development of Swahili prose. Muhammad Said Abdullah has written the first Swahili detective novel, *Mzimu wa watu wa kale* "The ghost of the old people" (1960), with a sequel *Kisima cha Giningi* "Mrs Giningi's well" (1968); in both, the chief character is Bwana Msa, a taciturn, pipe-smoking detective, obviously inspired by Sherlock Holmes. A. J. Amir's *Nahoda fikirini* "A captain in thoughts" (1971) is a semi-historical novel describing life on the Swahili Coast and at sea. Haji Chum's first novel is *Kisa cha ndugu saba* "The tale of the seven brothers" (1969), after his two epics *Vita vya Uhud* "The battle of Uḥud" and the unpublished *Utenzi wa Nushuri* "The Day of Judgment"; born in Zanzibar, he writes within the Islamic tradition. David Diva is a writer of short stories (*hadithi*) in the Islamic tradition, and one of the first modern writers in this genre. Abdullah Saleh Farsy, from a prominent family of Islamic scholars in Zanzibar, has written *Kurwa na Ndoto* "K. and N." about two young people getting married, with a concentration on the rites and ceremony of the Swahili wedding. Salim A. Kibao's *Matatu ya thamani* "Three priceless proverbs" (1975) describes how these proverbs save the life of a young man who buys them and make him into a king; the story has echoes of the Ḳur'ānic Yūsuf story so popular in Swahili. G. Ngugi wa Thiongo's novels are set in central Kenya and have the life of the Kikuyu as their background: *Mtawa mweusi* "The black hermit" and *Usilie mpenzi wangu* "Don't cry, my darling". F. V. Nkwera's *Mzishi wa baba ana radhi* "The one who buries his father will receive his blessing" (1967) is partly autobiographical. Abdullah Shariff Omar's *Kisa cha Hasan il Basiri* "The story of Hasan al-Basir" is an adventure story in the Arabian Nights' mould, still very popular in Swahili. Shaaban Robert is the only Swahili author of more than local fame, a poet, essayist and storyteller, and a writer of fine prose with a strong religious philosophy behind it; his *Kusadikika* "The credible country" (1951, 1960) and *Utubora* "Human excellence" both have moral implications behind their stories. John Ndeti Somba's *Alipanda pepo na kuvuna tufani* "He planted the wind and reaped the storm" (1969) and *Kuishi kwingi ni kuona mengi* "To live long is to see much" (1968) both deal with the author's own experiences in up-country Kenya.

(J. Knappert)

8. In Judaeo-Arabic and Judaeo-Berber.

The written and oral Judaeo-Arabic and Judaeo-Berber literature is a genre of intellectual activity which has a place in the cultural field of the Muslim West which is by no means negligible. In this sphere of the expression of Jewish thought, the *ḳiṣṣa* enjoys a certain favour both among the educated and among the wider public and the masses. The themes and genres are very varied: rhymed versions of Biblical stories or liturgical poems, songs of joy or of lament (*ḳinot*), eulogies, and panegyrical and hagiographical pieces glorifying the saints of Palestine in Jewish antiquity (Rabbi Shim'on Bar Yoḥay, buried at Meron in Galilee, and Rabbi Me'ir Ba'al Hannes, buried at Tiberias) or local saints (Mūlāy Ighghi, Rabbi Iḥyā Lakhḍar, etc.), venerated by means of *hillulas* and by local pilgrimages. Also connected with the *ḳiṣṣa* are the songs of folklore celebrating family ceremonies (e.g. *rites de passage* such as circumcisions, burials and periods of mourning), except that these form a genre devoid of any literary or intellectual pretentions, made up in a language closer to the local spoken tongues, whilst the *ḳiṣṣa* proper has a more studied form and a more precise expression. It is written in a special language, comparable to the *malḥūn*, a kind of poetic *koinè* in Arabic dialect given literary touches, largely stripped of Hebraisms or outside linguistic influences, and generally to be understood by the Jewish communities of the Maghrib as a group, even though differing from the current spoken language.

As well as the folkloric setting which it describes

and the precious linguistic materials which it represents, the *ḳiṣṣa* reveals on examination deep structures and a content attaching it, on the one hand, to the general cultural ambience of the Maghrib, but on the other, to universal Jewish thought. A rigorous and minute analysis of the written text or the oral discourse, and of their direct or allusive references, throws light on their literary founda- and on a cultural substratum of great richness.

The present author has given a sketch of all this in various publications (*REI*, *REJ*, *JA*, *ROMM*, etc.). Thus *L'histoire de Job en judéo-arabe du Maroc*, in *REI* (1968), 279-315, surveys a considerable number of Jewish, Arab-Muslim, Morisco and Coptic chronicles and legends, the (Greek) apocryphal text of the Testament of Job, as well as the conflicts and speculations of the Biblical text.

The pieces involving parodies, published in *REJ*, cxxviii (1969), 377-93, as *La parodie dans la littérature hebraïque et judéo-arabe, folklore de Purim au Maroc*, borrow from local ceremonies, the Jewish homilectic literature of the *Midrash* and *Aggadah*, and Arab-Muslim legends. *L'hymne à Bar Yohay*, in *REJ*, cxxvii (1968), 366-82, is a *ḳiṣṣa* from Tinghir of the Todgha which derives its sources from local mystical folklore combined with the texts of the Zohar, the Kabbalah, the Talmud and the *Midrash*.

(H. Zafrani)

ḲISṬ [see MAKĀYĪL].

KI-SWAHILI [see SWAHILI].

ḲIṬʿA [see MUḲAṬṬAʿA].

KITĀB (A., pl. *kutub*) "book". The beginnings of the Arabic book go back to the early Islamic period. According to traditions, sheets (*ṣuḥuf*) with verses of the Ḳurʾān were collected and put between wooden covers (*lawḥayn, daffatayn,*) kept thus and called by the Ethiopian word for "book", *muṣḥaf/maṣḥaf* [*q.v.*]. Following Christian and Jewish patterns, this form of a codex was generally maintained for the Holy Book since the authoritative redaction done under ʿUthmān; by that means, the Ḳurʾān was distinguished, by its material form, from profane writings in rolls made of papyrus [see ḲIRṬĀS] and from the *kitāb* pure and simple which meant, in that early period, "something written", "notes", "list" or "letter". As writing material, sheets of parchment [see DJILD, RAḲḲ, ṬIRS] were used, which, folded into four pages and placed within one another, became quires (*karārīs*); it is uncertain whether these quires were sometimes stitched. Presumably covers made of wood or papyrus were covered over and kept together with leather and, like contemporary Coptic or later Islamic covers, decorated with coloured wood, bone or ivory.

With the rise of the ʿAbbāsid caliphate, books and book knowledge, additional to knowledge of the Ḳurʾān, became a general aim of Islamic society. The interest of the government was evoked by questions concerning the legitimation of its power and by problems of administration connected with these questions, as a background to the theocratic claim to power [see SHUʿŪBIYYA]. During this period Arabic learning concerning problems of theology [see MUʿTAZILA], *ḥadīth*, *fiḳh*, history, philology, etc. and medicine, alchemy, etc., had its heyday, and this florescence was connected with the emergence and spread of rag paper [see KĀGHAD] from the end of the 2nd/8th century onwards. These scholars wrote books at the suggestion of or on order from the caliphs and the ruling classes, in the expectation of being honoured by presents and payments, in opposition to the organs of state and their policies, or just for the sake of belief (cf. Sūra LXVIII, 1; XCVI, 4). Apart from treatises on different subjects, general works were written by authors who were employed as secretaries or *ḳāḍīs* in state chanceries and offices, where the rather expensive writing materials were at their disposal. Others copied books not only for personal purposes, but for their living; moreover, they dealt in paper, ran a bookshop or a book-bindery, or combined one with one the other. It is surprising to note how quickly books were widely disseminated and did not remain confined to schools and learned institutions [see MADRASA], where also notes taken in lectures, enlarged by additional material, were made into books. Certain kinds of transmission of books and their authentication, including lists of students in a lecture audience, were formed [see IDJĀZA]; adoptations or quotations from other works were often marked by special terms, texts and copies were compared with each other, collated, complemented and glossed. In writing rooms which were sometimes associated to public libraries [see MAKTABA] books were multiplied commercially. An author could safeguard himself against dubious activities of scribes in these writing rooms through issuing his books by authorisation, only; e.g. al-Ḥarīrī (d. 516/1122 [*q.v.*]) himself wrote a note in 700 copies of his *Maḳāmāt*, during a period of ten years. The production of such books and their trade was immense in quantity and was widespread. Titles of books which had in the past been simple and short became ornate and flowery in the course of time, consisting of two phrases rhyming with one another (*sadjʿ*). First the titles were given in the prefaces, which usually contained the author's name and which started on a *b*-page; later the previous page (*a*-page) became the title page with the author's name. Already in this period, autographs or copies made by learned men or calligraphers [see e.g. IBN AL-BAWWĀB] were sold for high prices. There was a big demand for the libraries of learned men; some of them went to pious bequests [see WAḲF], others were put into the stacks of an academy when an attachment to heretical ideas of their deceased owner was known. Bibliophiles, from the caliph to the craftsman, competed in searching for valuable or rare books. As early as the *Fihrist* of Ibn al-Nadīm (d. 380/990 [*q.v.*]), compiled in 377/987, we find that this work gives, before its information on books and biographical notes on their authors or compilators, informative details about these matters. There is also the voluminous biographical literature, with its innumerable names of learned and literary men, secretaries, calligraphers, etc., and the multiplicity of manuscripts with their countless, often very personal, notes of the owners and readers, to be found in libraries situated even in remote places and containing thousands or tens of thousands of volumes. These considerable survivals, give us an ample idea about books and their quality in the Islamic Middle Ages; these books have in common one thing only, *sc.* the *basmala* [*q.v.*] at the beginning.

The upright quarto size was widespread, sizes in folio or oblong sizes being usually reserved for special occasions, e.g. presentation copies for high-ranking persons. The cover, writing materials, format and type of script [see KHAṬṬ] were determined by these purposes. The kinds of leather used for the covers, their colouring, workmanship and decoration sometimes refer to patterns of the Pre-Islamic period, e.g. in Egypt to Coptic, and in Persia to Sāsānid ones; they were developed in forms charac-

teristic for the respective countries, e.g. regarding the different kinds of workmanship in leather. Moreover, in regard to the arrangement of the areas on the covers, there are, apart from general principles like lines parallel to the edges of the book, features characteristic of certain places or periods, e.g. the treatment of the centre, and the application of innumerable geometrical patterns and ornaments in certain variations by using brasses. The triangular flap to protect the edge and the clasp and eyes, appear at an early period. Asphodelos paste was used in the Syrian-Palestinian area, and paste made of wheat in South Arabia. While rag paper was used for books in general, parchment was sometimes used for copies of the Ḳurʾān and other de luxe editions. Fine paper imported from China was reserved for books valuable to their owners, like books of sects. These books were not written with the usual ink [see KITĀBA] only, but also with ink made of silver and gold, and their pages and lines were decorated with coloured ornaments (arabesques [*q.v.*]). There were always illuminations [see ṢŪRA, TAṢWĪR], in spite of the prohibition of depicting living beings with a *rūḥ* or soul, but these were exceptional. A quire (*kurrāsa*) usually consisted of five double sheets, and several quires combined together, sometimes by chain stitches, made a sewn book. The quires were marked by consecutive numbers which were written out in words, and the right order of the sheets was controlled by catch-words, which appear early. The pagination of sheets or, sometimes, of pages, is only found later or in modern times; the pagination of sheets was more widespread. Many books ended with a colophon containing the name of the scribe, and often the date as well as, though not so often, the place; but in certain cases, the dates given there are not correct, e.g. when taken from texts which had been copied. For the post-Mongol period, the following features of the books should be noted. The sizes and the writing became smaller, and the kinds of paper became thinner, stronger and smoother. Coloured paper was used and, from the Ottoman period, imported paper from Europe also, firstly from Italy, and with watermarks. The ink became darker and more shiny; the writing surfaces were framed with lines in different colours or in gold, and an *ʿunwān* [*q.v.*] was drawn on the first page of a book. Owner's stamps appear in considerable number for the late period; and bookbinders' brasses with their names shaped like a medallion, can be found on the covers, even on lacquered ones. Splendid, calligraphic specimens of large size, with covers superbly wrought (these being mostly works of Persian poetry, often illuminated by unique miniatures), were produced mainly at the courts of the Tīmūrids, Ṣafawids, Mug̲h̲als and Ottomans; splendid copies of the Ḳurʾān were produced also at the court of the Mamlūks. The painter is often identical with the decorator, the "gilder" (*mud̲h̲ahhib*); he came next in prestige to the highranking calligrapher. The bookbinders formed their own guild from the time of Bāyazīd II (886-918/1481-1512 [*q.v.*]) onwards. Even after the introduction of printing [see MAṬBAʿA], books were written by hand, increasingly by European ink and nibs, and bound in the traditional way until the beginning of this century.

(R. SELLHEIM)

KITĀB AL-D̲J̲ILWA, one of the two sacred books of the Yazīdīs [*q.v.*], which with the *Maṣḥaf-rās̲h̲* contains the fundamentals of their religion. As the religious language of the Yazīdīs is Kurdish and all the prayers of the Yazīdīs known to us are in Kurdish (for example, the chief prayer, the morning prayer, the formulae used at baptism and circumcision, the proclamation at the assembly of the *sand̲j̲aḳ*, and God Himself in the apocryphal continuation of the *Maṣḥaf-rās̲h̲* speaks Kurdish), it is rather remarkable that their two sacred books, the existence of which has long been known and of which copies of the originals have come into the possession of Europeans, should be in Arabic, namely the *Kitāb al-D̲j̲ilwa* (*Kitāb-i D̲j̲ālwā*), the "Book of Revelation" (the form *D̲j̲ulūw* which S̲h̲araf al-Dīn gives from the manuscripts available to him, seems to be a slip on the part of the copyist), and the *Maṣḥaf-rās̲h̲*, the "black book"; "black" obviously means something sacred: for example God descends upon the "Black Mountain" (*Maṣḥaf*, xvi). The explanation of the name from the forbidden words, said to be covered over with black wax, is wrong, as in this case the Ḳurʾān is substituted as the sacred book of the Yazīdīs.

Father Anastase Marie of Bag̲h̲dād was the first to succeed in getting exact tracings of the alleged

original parchment copies of the two sacred books by bribing the keeper of the books of the Sindjār in 1904-6; they were written in Kurdish in a simple transposition cipher. The text written in this cipher shows clearly that it was copied from an original written in Arabic script. The possibility of a fraud was, however, not excluded especially as, stimulated by the interest of European scholars in Yazīdī beliefs, sharp guarantors in Mawṣil were always endeavouring to discover new texts. Mingana endeavoured to show that a former Nestorian monk of the Alkosh monastery, named Shammās Eremia Shāmir of the diocese of Kirkūk, who died in 1906, forged all the texts published by Chabot, Giamil, Isya Joseph and Browne, but the authenticity of the Kurdish text was accepted in Bittner's monograph, *Die heiligen Bücher der Jeziden oder Teufelsanbeter*, with *Nachtrag*, in the *Denkschriften d. Wiener Ak. d. Wiss.*, lv, Vienna 1913. The syntax of the text is, according to Edmonds, basically that of the present-day dialect of Sulaymānī Kurdish. Both Bittner and Edmonds agree that the Kurdish version is not the original, but must be a translation from the Arabic, as some linguistic peculiarities suggest (plays on words which are unintelligible in Kurdish).

The *Kitāb-i Djālwā* might nevertheless conceivably have been originally written in Kurdish, as the Kurdish text is in many passages more lucid and coherent than the Arabic, while in the *Maṣḥaf-rāsh*, the Arabic text is better than the Kurdish. According to Sharaf al-Dīn, the *Kitāb al-Djilwa* in its present form could not have been written by an Arab, as the language is modern; there are a number of expressions which are either not used in classical Arabic or only came into use very late. In places also the construction is un-Arabic. These considerations could, of course, be arguments in favour of a recent forgery. The Arabic of the *Maṣḥaf-rāsh* is even more modern, as it shows undeniably the influence of the spirit of Ottoman Turkish.

So far, we know of at least four versions of the two sacred books: one in the possession of O. Parry in 1895; one in the hands of Isya Joseph, who possessed two versions in addition to the one published in *AJSL*, xxv; two procured by Father Anastase Marie, one of which, the so-called Sindjār version, was copied in 1899 by a Sindjar Yazīdī for a Yazīdī apostate, while the other was copied in 1904 by Anastase himself from the original in the possession of a Mawṣilī.

The *Kitāb-i Djālwā* (also *Ktāb-i Djalwā*, *Djeloa*), the original of which according to Joseph was in 1892 still in the house of Mollā Ḥaydar in Bāʿadriyya and was taken twice a year to the tomb of Shaykh ʿAdī, is quite short. In book form it covers 8 pages and has 109 lines. It is ascribed to the reputed founder of the religion, Shaykh ʿAdī (d. 555/1160 or 557/1162; see ʿADĪ B. MUSĀFIR) who is said to have dictated it to Shaykh Fakhr al-Dīn.

The fact that the *Kitāb al-Djilwa* is not mentioned in the *Radd ʿala 'l-Rāfiḍa wa-Yazīdiyya al-mukhālifīn li 'l-milla al-islāmiyya al-muḥammadiyya* written in 725/1325 by the well-informed Ibn Djamīl (Abū Firās ʿUbayd Allāh) who belonged to the Euphrates district, nor in al-Maḳrīzī in connection with his description of the destruction and burning of the tomb and bones of Shaykh ʿAdī in 817/1414, makes Sharaf al-Dīn think its date of composition cannot be put earlier than 725/1325 or 817/1414. As Ewliyā Čelebī does not mention the work, this would bring the date even farther down, to 1655.

The above facts seem rather to indicate, however, that the Yazīdīs have been able to maintain the secret of the book with success. In spite of the advantages which might have accrued to them as *ahl al-kitāb*, they have preferred to deny their possession of sacred books. Only in the Catechism of the Shaykh Mīrān Ismāʿīl Bek ʿAbdī Bek Oghlu Nazli Rāhānī Yazīd for the Russian Yazīdīs is there a reference to "the glorious *Djilwa*", *Gyliazim*, as a source of the tradition.

The contents of the *Kitāb-i Djālwā*, the form and text of which are in keeping with its high purpose, are as follows: Melek Ṭāwūs who existed before all creatures sent ʿAbṭāwūs (= ʿAbd Ṭāwūs = Shaykh ʿAdī) into the world in order to guide rightly his chosen people, the Yazīdīs, by oral instruction and later by means of the *Kitāb-i Djālwā* which no outsider may read (preface). He then speaks in the first person of his pre-existence and eternality, his omnipotence over all other creators and gods (not "creatures" as in the Arabic), of his omnipresence and providence, the erroneousness of other sacred books and the clear perceptibility of good and evil, his rule over the world and his inscrutable decree, to which in every age we owe the sending of a great man upon earth (ch. 1). Further, he deals with his power of rewarding and punishing, which also allows those who do not deserve it to receive benefits; with the dying of a true Yazīdī and the migration of souls (ch. 2); he says that he alone has power to dispose of the creatures and things of the world (ch. 3). He warns against strange doctrines, so far as they contradict his own ones, and against three unnamed things, and promises his followers his powerful protection if they keep together (ch. 4). He asks that his cult and the orders of himself and his servants should be followed (ch. 5).

The *Maṣḥaf-rāsh* is more comprehensive. The Yazīdī Kurdish original is in the form of rolls and contains 152 lines in cipher. It is much more mundane and banal and less coherent than the *Kitāb Djālwā*. It is full of contradictions and breaks off abruptly. According to tradition, it was composed about 200 years after Shaykh ʿAdī (*ca.* 743/1342) by the great Ḥasan al-Baṣrī [*q.v.*]. The original was said to have been at one time in the house of the Kahāya ʿAlī in Ḳaṣr ʿAzz al-Dīn near Semali on the Tigris, but it seems now to be in Sindjār like the *Kitāb-i Djālwā*.

Cosmogony. In a very confused fashion, without divisions into chapters, the *Maṣḥaf-rāsh* deals with the creation of the world in three contradictory versions. According to what seems to be the more original story of the creation, God completed the creation alone. He made a white pearl which he put on the back of a bird Anfar (in many manuscripts, Anghar) created by him and was enthroned on it for 40,000 years. He then created the seven angels of God who are identified with the mystic *shaykhs*.

On the Sunday, God created ʿAzrāʾīl (Azāzīl, Zazāʾīl) = Melek Ṭāwūs, who is supreme over everything; on the Monday Melek Dardāʾīl = Shaykh Ḥasan (al-Baṣrī). The Yazīdī pronunciation is Shēkhūsin, as the invocation in the chief Yazīdī prayer shows (Sydjadin Shēkhysin = Sadjdjād al-Dīn Shaykh Ḥasan) (the conclusions which have been drawn from an alleged *Shaykh Sinn* who is compared with the moon-god *Sin*, e.g. by Massignon, *Essai sur les origines du lexique technique*[2], Paris 1954, 200 n. 2, are quite wrong); on Tuesday he created Melek Isrāfāʾīl (Isrāfīl) = Shaykh Shams (al-Dīn); on Wednesday Melek Mīkāʾīl = Shaykh Abū Bakr;

on Thursday Melek Djibrāʾīl = Sadjdjādīn (Sidjādīn, Sadjdjād al-Dīn); on Friday Melek Shamnāʾīl (Shatmāʾīl, Samansāʾīl) = Nāṣir al-Dīn; on Saturday Melek Ṭūrāʾīl (Nūrāʾīl) = Fakhr al-Dīn.

Then he created the seven heavens, the earth, sun, and moon, whereupon the last-named angel of God Fakhr al-Dīn took over the rest of the work of creation and created man and the animals.

God now came out of the pearl with the angels and caused it to burst into four pieces with a loud cry. On the sea which was formed by the water rushing out of the pearl, God sailed for 30,000 years in a ship created by him. Djibrāʾīl, created in the form of a bird, created from the pieces of the pearl sun, moon and stars, the mountains, plants, fruit-trees and the heavens (cf. on the rôle of the pearl, M. Mokri, *Le symbole de la perle dans le folklore persan et chez les Kurdes fidèles de vérité* (*Ahl-e Haqq*), in *JA* [1960], 463-81).

Parallel with this is the rather different conception of the seven deities, who arising through emanation, are light of the light of God just as light is lit from light, and among them the supreme god, Khudā, only appears as *primus inter pares*.

The statements regarding the creation of the religious community of ʿAzrāʾīl (= Melek Ṭāwūs) i.e. the Yazīdīs, to whom God sent Shaykh ʿAdī from Shām (Syria) to Lālish [*q.v.*], are fragmentary, as are the statements regarding the descendants of Shahr b. Safar, the son of Adam and Eve, the ancestors of mankind. After God had been worshipped for 40,000 years by the 30,000 newly-created angels, he created Adam out of the four elements with the active assistance of Djibrāʾīl and put him in Paradise, ordering him to eat of all the fruits of the earth, except wheat (according to one Yazīdī legend, the prohibition concerned grapes).

When, after 100 years, Melek Ṭāwūs reminded God that there could be no increase in Adam's race, God gave him permission to do what he thought fit. Melek Ṭāwūs induced Adam to eat of the forbidden wheat, whereupon Adam who had as yet no opening in his bowels was driven out of Paradise by Melek Ṭāwūs and suffered great discomfort until God sent a bird to pick an orifice in him. After another 100 years, God sent Djibrāʾīl to create Eve from the lower part of Adam's left armpit.

Another story of the creation in the *Maṣḥaf-rāsh* says that God, who was sailing about on the ocean on a ship created by Him, created a pearl but crushed it after 40 years; from its cry of pain arose the mountains, from the noise the hills and from its vapour the heavens. God then created six other deities by emanation from His light. Each of these deities in their turn then created something: the first the heavens, the second became the sun, the third the moon, the fourth created the horizons, the fifth the morning-star and the sixth the atmosphere.

There are further a few confused statements regarding the very early history of the Yazīdīs in the *Maṣḥaf*, which include a few features worth noting: after Melek Ṭāwūs had given Eve to Adam as a companion, he descended to earth to the Yazīdīs who, as descendants of Adam alone, had nothing in common with the rest of mankind. He appointed for them as for the Assyrians, who had been in existence from the earliest times, rulers namely: Nashrūḥ (Nasrūkh, Assyr, Nisroch) = Nāṣir al-Dīn; Djambūsh (Kāmūsh = Kamos) = Melek Fakhr al-Dīn and Artēmush (Artīmūs = Artemis) = Melek Shams al-Dīn. After them Shābūr (Shāpūr) I and II reigned for 150 years. From him, all their notables are descended, especially the family of the Yazīdī princes. The Yazīdīs had four rulers not definitely named. One of their kings, Āḥāb, ordered names of their own to be given to them (which names is not stated). Ilah Āḥāb (i.e. Baʿlzabūb) is now called Pīrbūb. Among other Yazīdī rulers were Bukhtnaṣar (Nebucchadnezzar) in Babel, Akhashwerosh (Akhashperosh) in Persia and Aghrinḳālūs (Aghrīḳalūs) in Constantinople.

The *Maṣḥaf* further contains prohibitions. The forbidden foods include lettuce (Yaz. *kāhū*, Arab. *khass*, which is prohibited on account of the resemblance of the name to that of the prophetess Khāsīa); beans (*lobīā*); fish (*māsī* = *māhī*, on account of the prophet Yūnān = Yūnus); gazelles (*āsek*); for the *shaykh* and his disciples, the flesh of poultry (*kālāshir*) and gourds (*kūlākā*) are forbidden.

As among the Sabians, the colour dark blue is prohibited. The following are also expressly forbidden: to micturate standing, to dress while sitting down, to use a closet and to wash in a bathroom (bath and closet are regarded as the abode of evil spirits). It is forbidden to pronounce the following words: *shayṭān* ("the name of their god"); *ḳayṭān* (noose); *shaṭṭ* (stream); *sharr* (evil); *malʿūn* (accursed); *laʿna* (curse) and *naʿl* (horseshoe).

Not mentioned in the *Maṣḥaf*, but traditionally regarded as forbidden, are words beginning with *shīn*; also *saraṭān* ("crab"); *ḥīṭān* ("hedges"); *bustān* ("vegetable garden"); *baṭṭ* ("duck"); *naṭṭ* ("jump") and others; reading and writing, shaving and complete removal of the moustache are also forbidden, as are the use of combs and razors belonging to others, taking wood from sacred forests, the rearing of bastards and drinking from gurgling vessels.

KITĀBA [see Supplement].

KITĀBĀT (A.), inscriptions.

1. Islamic epigraphy in general.

The study of Arabic inscriptions today constitutes a science full of promise, an auxiliary science to be sure, but a science indispensable to the scholarly exploitation of a whole category of authentic texts capable of throwing light on the civilisation in the context of which they were written. From a very early period, seeing that the first dated Arabic inscription available to us goes back to the year 31/652 and that we are aware of previous inscriptions and graffiti known as "proto-Arabic", there appeared in Islamic circles the practice of engraving, on stone or other hard material, in a more or less skilful fashion, the symbols then used in so-called archaic Arabic writing [see KHAṬṬ]. This practice subsequently spread, benefiting from the prestige soon to be enjoyed by a writing capable of giving material embodiment to and preserving the very letter of the Ḳurʾānic revelation while responding to the needs of the new society born simultaneously with the Arab-Islamic empire and state. This corpus

of inscriptions drawn up in the Arabic language, disseminated and preserved up to the present day throughout a particularly vast geographical region, that of the Muslim countries where Arabic writing was practised, may today be suitably considered in its entirety, in spite of the difficulties inherent in the massive scale of the regions in question and in the inadequacies of the researches hitherto undertaken.

In its capacity as an original discipline, Arabic epigraphy, in common with the subsidiary sciences which it more or less borders on, like numismatics, glyptic or diplomatic for example, or even those which it partially overlaps, like palaeography *stricto sensu*, was among the disciplines subjected to specific study, at the end of the 19th century, by enthusiastic Western scholars curious about Oriental civilisations. Its methods, inspired principally by those of classical epigraphy, and the first attempts at their application, were owed to their zeal. It enabled various Western Arabist and Islamic scholars to obtain historical and archaeological results which guaranteed its vigour. It was not however until several decades later that it came to be recognised as a science by Arabic-speakers themselves, in regions where the traditional taste for calligraphy had hitherto reigned unchallenged but had never taken the form of the searching out or the study of texts of this type decorating the walls of buildings or the surfaces of pieces of furniture; it is in fact no accident that the early Arab sources, anxious to describe the stages in the development of writing and to give the names of its eminent exponents, mention only the names of copyists or scribes distinguished in their use of the pen, while remaining silent on the issue of so-called lapidary writing and refer only exceptionally to the existence of the monumental graphic compositions that are so remarkable.

A modern science therefore by its very definition, Arabic epigraphy saw some of its rules codified as a result of the personal efforts of the Swiss orientalist Max van Berchem. The attention which this passionate enquirer tirelessly brought to bear on the remains of Arabic inscriptions preserved in Egypt and in Syria was in fact accompanied by a detailed consideration on his part of the fundamental principles according to which their study should best be conducted; some spectacular initial progress was marked in his lifetime and under his inspiration by the establishment of the first corpora of Arabic inscriptions.

This progress went far beyond anything that had been previously attempted. They should not, however, condemn to oblivion those earlier efforts which can be set back as far as the 18th century with reference to Tychsen, but which owed most of all, at the beginning of the 19th century, to the personality of J. J. Marcel, the French palaeographer, a member of Bonaparte's expedition to Egypt, who devoted his energies to deciphering, reproducing and annotating in tentative fashion some Kūfic inscriptions of Cairo with the aim of gaining insights into the evolution of ancient Arabic writing. His studies, like the works of other pioneers upon whom there is no space to expatiate here (see J. Sourdel-Thomine, *Quelques étapes et perspectives de l'épigraphie arabe*, in *SI*, xvii [1962], 5-22, also the references to epigraphy in the detailed historical chapter entitled *Die Entwicklung der arabischen Paläographie im Abendlande*, in A. Grohmann, *Arabische Paläographie*, i, Graz-Vienna-Cologne 1967, 32-65), gave clear indications of what was to follow. They even gave birth, alongside the ambitious and fruitless efforts of Lanci for example, to works that remain, even today, as indispensable for reference purposes as is the catalogue of inscriptions on objets d'art drawn up by Reinaud in connection with an important collection of his time (Reinaud, *Monuments arabes, persans et turcs du cabinet de M. le Duc de Blacas*, 2 vols., Paris 1828). The uneven quality of the results obtained emphasised even at this early stage the difficulties of a sphere where the best-conceived programmes—and this was the case with J. J. Marcel's programme at the dawn of the 19th century—most often came into confrontation with insurmountable obstacles of a material order and where the enthusiastic work of numerous specialists failed on every occasion to satisfy requirements, the importance of which they themselves had understood and asserted.

In fact, it was not at that time solely a case of showing that Arabic inscriptions deserved to be collected in the same way as Greek and Latin inscriptions. There was also a need to work .apidly in the field of new research, where the volume of exploitable documentation was remarkably copious. The initiative was taken by Max van Berchem when, having produced a large number of manifestos in commendation of Arabic epigraphy, he published, in the early years of the 20th century, the first volume of his *Matériaux pour un Corpus Inscriptionum Arabicarum*. But his ambitious and authoritative project of publishing systematically, region by region and monument by monument, a corpus of hitherto neglected epigraphic material soon had to be abandoned. The exemplary collections of inscriptions which he himself accomplished or supervised with regard to Cairo (M. van Berchem, *CIA Egypt* i, Cairo 1894-1903, *Mém. mission arch. fr.*, xix), Tripoli (M. Sobernheim, *CIA Syrie du Nord* i, Cairo 1909, MIFAO, xxv), Sīwās and Diwrigi (M. van Berchem and H. Edhem, *CIA Asie mineure*, i, Cairo 1910-17, *MIFAO*, xxix) and finally Jerusalem (M. van Berchem, *CIA Syrie du Sud*, Cairo 1920-2, *MIFAO*, xliii-xlv), were followed, after his death in 1921, only by a later supplement on Cairo (G. Wiet, *CIA Egypte*, ii, Cairo 1929-30, *MIFAO*, lii) and the publication still later, in the form of posthumous work taken over by other hands, of the results of a survey of Aleppo begun by Moritz Sobernheim, in the lifetime of Max van Berchem, and subsequently resumed by Ernst Herzfeld and Etienne Combe (*Syrie du Nord*, ii, Cairo 1954-6, MIFAO, lxxvi-lxxvii).

The terrain prospected on this basis remains, at present, minimal in comparison with that approached by less complete studies. Certainly there are other works of broad scope, undertaken in a different spirit, which also deserve mention. These have striven for example to deal with the question in their own way with regard to countries where Arabic inscriptions attracted attention at a very early stage: the inventories of Michele Amari for Sicily (*Le epigrafi arabiche di Sicilia, Iscrizione edili*, Palermo 1875, *Iscrizione sepolcrali*, 1879-81, *Iscrizione mobili e domestiche*, 1885, re-edited by F. Gabrieli, Palermo 1971) or of E. Lévi-Provençal for Spain (*Inscriptions arabes d'Espagne*, Leiden 1931), not to mention the various fascicules published in Calcutta under the title *Epigraphia Indo-Moslemica*. But beside these, of far greater number are studies that are currently out of date, such as the *Corpus des inscriptions arabes et turques de l'Algérie* (G. Colin, *Département d'Alger*, Paris 1901, and G. Mercier,

Département de Constantine, Paris 1902), works that have quite recently been supplemented by the various published fascicules of the *Corpus des inscriptions arabes de Tunisie* (1st part: S. M. Zbiss, *Inscriptions de Tunis et de sa banlieue*, Tunis 1955, *Inscriptions du Gorjani*, Tunis 1962; *Inscriptions de Monastir*, Tunis 1962), or the volumes devoted to various epigraphic collections of the Iberian region (M. Ocaña Jimenez, *Repertorio de inscripciones árabes de Almería*, Madrid-Granada, 1964; G. Rosselo-Bordoy, *Corpus balear de epigrafía árabe*, Mallorca 1975; F. Valderrama Martinez, *Inscriptiones árabes de Tetuán*, Madrid 1975). Moreover, there are numerous tentative works which are still at the project stage, although more than ever there is an awareness of the fundamental need for studies conducted on a regional basis, taking advantage of opportunities for verification on the spot (see in this context, the remarks of Sourdel-Thomine, *Perspectives nouvelles dans le domaine de l'épigraphie*, in *Boletin de la asociatión espanola de Orientalistas*, v [1969], 183-90, and M. Sharon, *Un nouveau corpus des inscriptions arabes de Palestine*, in *REI*, xlii [1974], 185-91).

As a consequence, the uneven quality of results obtained and their partial insufficiency remain the principal defects of collections made up to the present day. This assertion, banal though it may be, cannot be passed over in silence, even if the reasons for it are easily explained in a world stretching from India to the Pyrenees and from Anatolia to Black Africa, covering an immense territory that is little-known from an archaeological point of view and of which certain parts are particularly difficult of access, and which in any case considerably oversteps the limits assigned today to the Arab world as strictly defined. It is not only that Arabic inscriptions are dotted throughout areas that have since reverted to a desert state and that some provinces islamised at a late stage, like Anatolia, are not the least rich in hitherto unsuspected treasures; but there is also the fact that these inscriptions that have remained so long outside the canon of research are also distinguished by their diversity of appearance according to the regions, as witnesses to a society where writing, spread broadly throughout all areas, was subject to numerous stylistic variations [see KHAṬṬ]. The difficulties of decipherment are thus magnified by the effect of these local practices, and the traits and qualities peculiar to Arabic writing itself from the time of its appearance, which have subsequently conditioned its development, continue to be partially responsible for the shortcomings of a discipline where scientific progress is confronted by uncertain readings and by problematic interpretation of scripts, since there are numerous instances where letters are easily confused and uncertainties are further multiplied and complicated by a concern for ornamentation, which in most cases takes priority over legibility (cf. R. Ettinghausen, *Arabic epigraphy: communication or symbolic affirmation*, in *Near Eastern numismatics, iconography, epigraphy and history. Studies in honor of George C. Miles*, ed. D. K. Kouymjian, Beirut 1974, 297-317).

Such conditions were hardly favourable to the intensive and systematic publication of documents in the series of *Matériaux pour un Corpus* inaugurated by van Berchem. They were no more favourable to the establishment of the other fundamental study-apparatus envisaged a little later by Etienne Combe, Jean Sauvaget and Gaston Wiet in the form of a *Répertoire chronologique d'épigraphie arabe* which had the object of assembling, year-by-year and in an approximately geographical order, the texts of Arabic inscriptions already published, accompanied by their French translation and indispensable bibliographical information. To be sure, sixteen successive volumes of this *Répertoire* (Caire, PIFAO, 1931 ff.) have so far appeared and more than six thousand inscriptions have been edited covering the first eight centuries of the Muslim era. But since 1931, the date at which the enterprise was begun, the rhythm of discoveries has been more rapid than the rhythm at which the inventory has been assembled; the latter remains incomplete and today it swarms with inaccuracies in its most ancient sections, making it a vehicle for defective copies and sometimes of duplications. Even to consult it, in its present state of incompleteness, is to encounter difficulties which are barely alleviated by the publication of the *Index géographique* to its first six volumes, quite recently brought about through the good offices of the Centre d'Épigraphie Arabe of the École Pratique des Hautes Études IVᵉ section of Paris. Even if it may be hoped that forthcoming volumes (vol. xvii prepared by L. Kalus, in press), profiting from experience acquired and designed to respond to more precise critical objectives in an age where our knowledge of Arabic inscriptions has considerably developed, will avoid some of these defects, they will continue to be no less restricted by the inadequacies of the previous publications on which they cannot help being based.

The *Répertoire chronologique d'épigraphie arabe* is, in any case, the only existing attempt at systematic grouping of inscriptions, in a sphere where the means employed are, to this day, seldom sufficient for the extent of the tasks to be accomplished. Also to be asserted is the almost total absence of studies of Arabic epigraphy constructed on the principle of the series, the non-existence of functional corpora, organised according to material and category for example, the only means permitting a thorough investigation of the limited types of documents which inscriptions are, by definition. It is appropriate to mention in this connection, insofar as concerns the signatures of craftsmen, the inventories, designed to form a *Corpus of Muslim artists*, with which L. A. Mayer hoped to bring about a re-evaluation of our knowledge concerning the artistic schools as well as the functioning of their influences, and the publication of which was, also, interrupted soon after the death of the inaugurator of the collection (see Mayer, *Islamic architects and their works*, Geneva 1956; *Islamic astrolabists and their works*, Geneva 1958; *Islamic metalworkers and their works*, Geneva 1959; *Islamic armourers and their works*, Geneva 1962).

The bibliographical guides and the synthesised surveys are also inadequate to enable a confident orientation in a mass of studies that are too often indebted to fortuitous discoveries and consequently scattered through the most diverse of volumes, ranging from "epigraphic appendices" accompanying reports of explorations, accounts of journeys or archaeological publications to museum catalogues or monographs dealing with themes such as Islamology, history, palaeography or even aesthetics. Such in fact is the variety of subjects covered by Arabic inscriptions of an equally varied interest. Such also is the slow progress of research, which has been principally concerned with a copious proliferation of notes, correspondences and brief articles of un-unfortunately uneven quality.

Nor do we have at our disposal, it should finally

be made clear, manuals providing an introduction to Arabic epigraphy and guiding the efforts of those who wish to become conversant with it; familiarity with the works of their predecessors, especially with the articles of Max van Berchem, loaded with methodology (*Notes d'archéologie arabe*, i and ii, in *JA* [1891], i, 411-495, and [1892], i, 377-407; *Recherches archéologiques en Syrie*, in *JA* [1895], ii, 485-515; in particular, *Inscriptions arabes de Syrie*, in *Mém. de l'Inst. égyptien*, iii, 417-520), with the volumes already mentioned of the *Matériaux pour un Corpus* and the specimen publications of subtly-deciphered and annotated inscriptions offered by some articles of J. Sauvaget (such as his publication of the *Décrets mamelouks de Syrie*, in *BEO*, ii [1932], 1-52, iii [1953], 1-29, and xii [1947-8], 5-60, as well as his *Quatre décrets seljoukides*) remains for the aspiring student the only possible path to follow, apart from various items of specific information provided here or there. More regrettable, however, is the fact that numerous aspects are to be distinguished in a body of inscriptions influenced simultaneously by regional practices and by the disparities between schools marked by the proliferation of dynastic centres. We know in fact that diverse currents presided, according to places and periods, over the drafting of inscriptions, the text of which evolved in parallel with the development and stylistic ramifications of so-called lapidary writing (which has in fact applied to various materials), a writing the history of which is an important chapter of the history of Arabic writing [see KHAṬṬ]. Influences of every kind were manifested here equally in the form of politico-social transformations and historical events which it would be impossible to evoke in this article in the context appropriate to each, geographically distinct, group of inscriptions.

But this continually-renewed variety should not cause one to forget certain traits characteristic of Arabic inscriptions which may be underlined here, in regard to their nature and customary content, and which will enable us to stress the value of the conclusions to which their study leads.

One important feature to be emphasised is the frequency and significance of religious inscriptions, which have sometimes tended to be overlooked in cases where they are not accompanied by documents judged to be of historical interest and which, for this reason, do not figure in their own right in the *Répertoire* and are only briefly mentioned in the *Matériaux pour un Corpus*. These are sometimes isolated inscriptions also capable of supplying an ornamental function on buildings, tombstones or even household objects, sometimes elements belonging to texts where in spite of the profane purpose there is an inevitable collection of pious expressions and customary doctrinal preoccupations. Here we shall assemble in particular examples of Ḳurʾānic quotations, professions of faith, isolated or linked to the texts of epitaphs, prayers, invocations and blessings.

These religious inscriptions appeared at the very beginning of the Islamic era among the primitive graffiti which covered a large number of the rocks of the desert (see the bibliographic references of Sourdel-Thomine, *Inscriptions et grafitti arabes d'époque umayyade, à propos de quelques publications récentes*, in *REI* [1964], 115-20). But they were also early situated in ornamental bands forming an integral part of the architectural decor, as admirably illustrated by the interior of the Ḳubbat al-Ṣakhra [*q.v.*]. From this period, their essential theme has been the glorification of the Muslim faith, which could be associated with the personal nature of the testimony left behind by each traveller in the course of his wanderings, as much as with the majestic impassiveness of epigraphic compositions on a grand scale. It would not be enough, however, to say with Max van Berchem, that the dominating feature here is principally the notion of divine power which is one of the two main concepts of the Muslim spirit. Some of these texts, regarded in the most ancient cases as useful means of access to the deity, continue to act as representatives of the dominant religious feeling of the period and their formulae of praise and trust, varied to a greater or lesser extent with requests for pardons, blessings and favours, for a long time remained free of the constrictions of a stereotyped vocabulary. But even when they obeyed more rigid rules, they still maintained an authenticity enabling them to share in the expression of genuine religious options, and texts of commonplace appearance thus continued to reflect diverse doctrinal tendencies in the bosom of the Islamic community; allusions to sectarian beliefs, in the form of eulogies of a Shīʿī flavour for example; echoes of theological arguments like references to the created Ḳurʾān in professions of faith accompanying Egyptian epitaphs of the 3rd/9th century; maxims bearing the marks of philosophical wisdom and of mystical self-denial observed for example in the inscriptions of Khumartāsh at Ḳazwīn at the beginning of the 6th/12th century. Even the poetic quotations so frequent for instance in later Sicilian texts could concur to the same design, and variations in formula came to be accentuated with the fragmentation, of a religious as well as a political nature, which the Islamic world suffered towards the end of the Middle Ages (note the originality of the theological texts which adorned at that time the sanctuaries of the Twelver Shīʿī conducting the prayers on the basis of a cult of *imāms* unknown in other Muslim circles).

A common denominator to all these inscriptions may assuredly be found in the constant use of Ḳurʾānic quotations, multiplied to the extent that they sometimes take the place of any other form of devout reflection. But even here the choice of verses copied in whole or in part obeys specific intentions, which are discernible, if not clearly asserted, and their arrangement is sufficient to indicate the theological or judicial implications of texts which have a doctrinal value for anyone who is able to interpret them. References to *ḥadīth*, the use of extracts from the Ḳurʾān of a recognised propitiatory nature (the "Throne" verse, for example), the insertion of certain types of prayer, also constitute revealing elements (see in this connection, D. Sourdel, *A propos des "Dix Élus"*, in *REI*, xxxi [1963], 111-14).

It is to be regretted, however, that few Islamic scholars take an interest in material that too often continues to be strange to them, while on the other hand there is a vigorous and widespread school of thought seeking, in the light of illuminist doctrines popular in certain circles of initiates, to decipher every ancient inscription as if it were an esoteric riddle, tinted with "traditional" gnostic philosophy both Shīʿī and Iranian. In fact, besides the intentional use of certain formulae that are legible and loaded with meaning beneath the flamboyant style of the writing—such as for example the remarkable stucco composition in "square Kūfic" on the names of the Twelve *Imāms* preserved in the sanctuary of Pīr-i Bakrān at Lindjān near Iṣfahān—one might hesitate to see a hidden sense in the quasi-mechanical

repetition, on certain monuments, of formulae such as *al-mulk li-llāh* "the power is God's", or, on certain pieces of pottery, of expressions of the *al-ʿāfiya* type sometimes evolving towards pseudo-inscriptions. These formulae, reproduced in the manner of respected graphic combinations, doubtless preserved no theological significance more precise than the successions of appeals, such as "fortune, prosperity, blessing ... to him who possesses it" *al-yumn wa 'l-iḳbāl wa 'l-baraka*, etc.... *li ṣāḥibihi*, which at that time were invariably inscribed on manufactured objects. The connections between sign and signified which may still be legitimately read here, are thus shown to be especially typical of a psychological climate peculiar to Muslim society in the sense of a society marked by religiosity, and correspond to the tight liaison that we have already emphasised between the character, Muslim in tenor and ornamental in appearance, of the majority of the inscriptions in this category: these are works of art endowed in this sense with a fundamental ambiguity as means of expression, both aesthetic and symbolic, of the sensibilities of their period.

A second category of inscriptions that is no less copious is subsequently represented, that of historical texts which have the object of commemorating the individual and his acts, whether the case in question is of a senior government official or of the obscure occupant of a village tomb. To this category we may add construction texts fixing the date of a certain building, title deeds and other documentation of private transactions, foundation texts indicating (according to terminology originating with van Berchem and adopted by the *RCEA*) attestations of pious donations given in perpetuity through the custom of *waḳf* [*q.v.*], funeral texts of all kinds and even the straightforward signatures of master craftsmen and artists which will also be considered here. If these texts partially reflect the notion of "absolute political power" wherein van Berchem saw, according to an insufficiently-qualified assertion, the second major concept of the Islamic spirit, and if their principal gravitation is such that the same epigraphist expressed it, evolving around the names of the sovereign, his titles, his major deeds and his continuing praise, they also contain much more: through the evolution that they have undergone in the course of the centuries, they give information on popular beliefs, opinions current among the wealthy or academic classes of society and the functions served or the degree of respect attained, after their death, by certain of their members, as well as on the nature of the buildings, utilitarian or decorative, that the latter took pleasure in constructing. Some of this information of obvious value in the reconstruction of the social, economic and intellectual history of the Islamic world, is accompanied also by precise revelations touching on such-and-such a point of circumstantial history or such-and-such an archaeological detail: these amply compensate for the tedium that sometimes emanates from the stereotyped phraseology and the excessive enumeration of titles that are characteristic of documents tending towards a standard official formality rather than towards any personal touch, which is rarely encountered.

Of all these texts, the most copious category is undoubtedly that of epitaphs, collections of which, either remaining *in situ* in the ancient cemeteries or transferred to museums, are on such a massive scale as to discourage the most enthusiastic researcher and in consequence have seldom been catalogued in a systematic way. The specimens published since the unique example of 31/652 and the Egyptian steles of the end of the 2nd/8th century are nevertheless sufficient to give an idea of the progressive transformation, according to places and periods, of fairly simple types of texts, where the significant features have always been religious maxims and the professions of faith already mentioned (for supplementary details and bibliography, see ḲABR). Their references to certain currents of thought deserve in fact to be given more attention than the study of the dates of inscriptions or the genealogies of the deceased where statistics directed towards onomastic and prosopography, according to local perspectives, would alone be capable, in the longer term, of maintaining interest. But neither should one ignore the titulary inscriptions which are to be noted from the 6th/12th century onward, in a period where the devaluation of titles formerly reserved for sovereigns led to the attribution, to "men of religion" and other representatives of the upper urban classes, of honorific phrases, the history of which has not yet been written and which ought to be studied in the same way as the titles of individuals serving in the higher echelons of the administration [see LAḲAB].

Besides these epitaphs, marked by a discretion of vocabulary which is maintained up to the time of the royal epitaphs of the G͟haznavid Sebüktigin (d. 387/997) or of the Artuḳid Balak (d. 518/1124), there are other funerary texts which belong more emphatically to the canon of inscriptions intended to celebrate the glory of the sovereign. These are those which, from the 4th/10th century onward, accompany monumental mausolea varying considerably in architectural structure. A greater freedom of composition, already perceptible in the dated and dedicatory epigraphic friezes of the Iranian tower-tombs, is shown when the opportunity offers, notably in the original version of inscriptions specially designed before his death in 607/1210-11 by ʿAlī al-Harawī [*q.v.*] for the decoration of his tomb. These texts are as valuable for the history of monuments as they are for that of the sovereigns, officials or military chiefs who chose them for the commemoration of their graves. Moreover, they become especially significant when the tombs in question are those identified by popular piety as objects of pilgrimage and supplication, whether in S͟hīʿī circles where the buildings of *imām-zādas* [*q.v.*] were widespread at a very early stage, or to a certain extent throughout the Muslim world from the 6th/12th century, when the practice of *ziyāra* [*q.v.*] developed to the proportions of a veritable "cult of saints" in honour of pious individuals renowned for their posthumous miracles, or of celebrities from the early periods of Islam commemorated now for the first time by newly-built sanctuaries; only inscriptions of sufficient antiquity may in fact give information about the original period of these devotions, inaccurately described in the literary sources, while at the same time supplying the names of rulers or wealthy patrons who promoted them. These data are also useful for the reconstruction of the complicated history of the multi-purpose architectural complexes which became numerous around the tombs of saints from the end of the 7th/13th century and which grew up a little later around royal graves, as is proved by well-known Tīmūrid and Mamlūk examples [see ḲUBBA, TÜRBE].

The formulae employed in this particular category of funerary texts also belong partially to that attested by the innumerable construction texts en-

graved on Muslim monuments since the Umayyad period. These latter texts in fact obeyed from the start strict obligations, which imposed the following elements: definition of the work undertaken, name of the initiator responsible, sometimes located between the name of the reigning sovereign and those of the authorities who supervised the progress of the work, and date of the construction or restoration, the whole incorporated within a series of variable additions: variously distributed pious formulae which included Ḳur'ānic quotations appropriate to the nature of the work, but which most of all were requests to God for reward in respect of the work accomplished in his honour more or less detailed appeals on behalf of the founder and optional complementary notes, including the names of the author-scribe and the architect-mason. This was the constant framework, and the additions made in ensuing centuries were only such as to incorporate subsidiary details affecting in particular the titles of the builder or those of the various authorities on whom he depended: thus one may find, in the 5th/11th and 6th/12th centuries for example, successive mentions of the caliph of Baghdād, of the Saldjūḳ sultan, of the local sovereign, and the humble figure of the builder is introduced simply as *al-ʿabd al-faḳīr ilā raḥmati rabbihi* "the poor slave imploring the goodwill of his Lord". Furthermore, such rigidity of formulae provides the exact scheme that may be expected of inscriptions of this genre, texts that are easily reconstructed where there are lacunae in the details of ritual etiquette or in the order of succession of the various elements, but of scope limited by the constraints of their subject. Only on two points are we likely sometimes to be agreeably surprised: their archaeological interpretation, on the one hand, when care is taken to note their precise location in the building, to the dating of which they contribute; on the other hand, their richness in titles, from which one sometimes perceives the reality of Islamic government institutions which continue to pose numerous questions to the historian.

Comparable information is furthermore to be obtained, in the majority of cases, from foundation texts where the list of the titles of the legators obeys the same rules of precedence and is often clarified when account is taken of the more theoretical notions supplied by some Arabic texts dealing with chancellery practices. But the more original data contained in the disposal of these *waḳfiyya*s are of a topographical or toponymical order, on account of the large number of localities and regions listed as sources of revenue, or of an economic and social order, relating to daily life, sometimes also to urban life in general when the generous benefactor has decided for example to underwrite the excavation of *ḳanāt*s [*q.v.*] or the improvement of some municipal work. The profoundly Islamic character of these arrangements, as well as the attitudes that engendered them, is linked, through the solemn proclamation of the devotional work, to the psychological process according to which the construction of a building took on its true dimension when an inscription text preserved its memory and placed the builder or benefactor in his just position within the Muslim community.

This tendency was superimposed on a concern for the glorification of the individual concerned, which appears to a still greater extent in the inscriptions on material objects, which constitute the final category of Arabic commemorative inscriptions. The texts of these most often consist in fact of nothing more than greetings added to the name and titles which enable the owner to be identified, whether it was a case of a caliph ordering the manufacture of a *ṭirāz* [*q.v.*] in a royal factory or of a Mamlūk *amīr* acquiring a bronze or a ceramic plate bearing his monogram. The mention that such an object has been manufactured on the orders of a certain powerful dignitary is sometimes the only information to be conveyed, in the form of a motif that is both epigraphic and decorative. But the sense of pride of ownership also sometimes finds an echo in the professional pride of the craftsmen who at an early stage adopted the practice of signing their works, even if in the briefest manner possible (see in this connection the writings of L. A. Mayer mentioned above).

It remains to consider, in the third and final place, the group which, while being definitely the least important, is nevertheless extremely rich in information of all kinds, the group constituted by administrative texts. Linked to the functioning of the machinery of power, they are not designed to glorify, except indirectly, the holders of this power, but rather to make certain government decisions known. Represented in early times by inscriptions stamped on coinage, or on weights and measures of glass paste which appeared from the Umayyad period onward, they made way somewhat later for decrees of abolition of taxes. Mamlūk specimens are among the best known: these are, once again, valuable documents of economic and social history, comparable with title deeds and records of donation, to the extent that they provide precise and detailed information regarding fiscal policy or give accurate descriptions of bureaucratic procedures. But the quaint symbolic notations that they preserve are shown in their turn to be extremely rich when one attempts, as Sauvaget has done, to glean from them certain data on the spot and to deduce from them, especially in the sphere of topographical studies, elements of assistance in the reconstruction of certain aspects of urban evolution.

So here we find once more this golden rule for the utilisation of Arabic inscriptions, which seems to be always to consider them as concrete documents, which are not to be separated, beyond the official formulae and the pious expressions that characterise them, from the local and monumental context within which their most original significance is expressed. Some such epigraphic commentaries, even when they deal closely with the purport of the various texts the principal tendencies of which we have reviewed above, thus remain subordinate to that which constitutes the prime quality of the documents with which they are concerned that of having been composed to occupy a particular location in lasting fashion and to be integrated into the exterior appearance of the objects or the monuments that they accompany. Nor should one neglect those inscriptions which were capable of being enclosed in the interior of the most varied types of framework (panels, scrolls, friezes of all dimensions, the entire surface of an object or a tightly-limited section), entrusted to the most varied materials according to equally diverse processes (stone engraved or sculpted in depth, stucco elaborately worked on several surfaces, experiments with bricks in relief, mosaic, painting, moulded or incised metal, wood, ivory, ceramic, etc.), sometimes reduced to the subsidiary role of motifs underlining with their shapes the principal lines of the architecture or joining with covering linear décors composed of arabesques and

lattice-work. These details are to be considered with as much attention as the formulae of the inscriptions or as the style as revealed by the idiosyncrasies of the writing. For the reasoned study of this body of facts, with which, in order to be complete, any survey of Islamic epigraphy ought to begin, is the only means that will enable the scholar to put into their just place, for an introduction to the realities of mediaeval Islamic civilisation, the inscriptions which up to the present day scholars have been content to examine in a fashion that is still too incomplete and inevitably superficial.

2. In the Near East.

It is in the Near East, the cradle of Arabic writing, and more precisely in Syria (Namāra, Zebed, Ḥarrān, Umm Djimāl), that the oldest known inscriptions written in the Arabic language have been discovered. These so-called proto-Arabic inscriptions, sometimes bilingual (Greek-Arabic), have contributed to our understanding of the ancestry of the Arabic characters, which in the final analysis, derive from Syriac characters and not from Nabataean, as was previously believed.

The privileged place accorded by Islam to writing allowed the latter to undergo a rapid evolution and a rapid diffusion. From the time of the Umayyad era, inscriptions proliferated in all the provinces of the young Islamic empire. Construction texts, religious texts, milestones, epitaphs, and simple graffiti dating from this period have been and still are being discovered in the archaeological sites of Syria, Lebanon, Palestine, Egypt, and ʿIrāḳ.

The formula of these inscriptions was probably influenced by that of the Greco-Roman inscriptions, very numerous in these regions. It is simple, sober and varies in tenor according to the function of the text. It serves as a prototype for later periods which enrich it, while remaining faithful to its broad outlines. Official texts are generally composed as follows: almost always the *basmala*, one or more Ḳurʾānic verses, religious invocations, the dispositions of the work, the name of the caliph followed by his title *amīr al-muʾminīn*, sometimes the name of the overseer responsible for the work, and generally, the date.

The study of these inscriptions reveals the rapidity with which the crude and maladroit writing of the proto-Arabic inscriptions was transformed to the point of attaining, in the monumental inscriptions, a high level of aesthetic perfection. Engraved on rock in finely drawn lines of equal breadth, usually incised, very seldom in relief, sometimes executed in mosaic or in painting, Umayyad writing obeys the same norms: characters composed of simple geometric elements—verticals, horizontals, obliques, circles or segments of circles—set out on a base line which is strictly horizontal. This horizontal base line plays an essential role in Arabic writing. The latter was in fact conceived, after the pattern of Syriac characters, as resting on a foundation, as opposed to Nabataean characters, which appear to be suspended from an upper line. This role is such, that in certain types of archaic and crude writing, the base line is itself an integral part of the characters. These latter are in such cases formed of small simple lines, vertical or oblique, and of rings, resting on the horizontal of the base line, of which the continuity is unbroken (cf. Pl. VIII, 1).

In Umayyad epigraphy, the combinations of these geometric elements give two types of characters: tall letters with vertical strokes and short letters with notches or rings, connected by horizontal segments. This double typology constitutes one of the essential elements of the aesthetic quality of Arabic writing. In fact, it provides the artist with two areas where he can exercise his genius differently: the lower register, the more dense, where the artistic effect obtained results in a simple inter-play of characters, and the upper register where the spaces between the vertical strokes provide an ideal place for the artist to indulge his taste for multiple creations.

In the Umayyad period, this upper register was not used, but the stone-masons succeeded, by using the lower register alone, in creating "a harmony at once rhythmic and linear" which makes this form of writing a genuine work of art. The rhythm is obtained by the opposition and alternation of high and low characters, while the linear harmony results from the arithmetical reckoning of the proportions. This reckoning answers a need for equilibrium as much in height (the proportion of short characters to long varies generally between 1/3 and 1/2) as in width. It is to satisfy this latter need that the mason does not hesitate to extend his characters in width and to lengthen the joining segments. The standard of calligraphy definitely varies according to the type of inscription and it is especially in official texts that fine specimens are to be found. We shall mention simply as examples the inscriptions of the caliph ʿAbd al-Malik in the Ḳubbat al-Ṣakhra in Jerusalem and his milestones (cf. Pl. VIII, 2 and IX, 3).

During the first two centuries of the ʿAbbāsid régime, the Arabic inscriptions of the Near-East underwent an evolution corresponding to that of the socio-cultural development of the entire ancient Baghdād and that of the palaces of Samarrāʾ. The fact that these were constructed of brick, a perishable material, has deprived us of the monumental inscriptions which probably adorned the official buildings and which disappeared as a result of these destructions. On the other hand, we have dating from this period a large number of epitaphs and inscriptions on movable objects, especially on fabrics which benefited from the expansion of state factories (*ṭirāz*) supplying the needs of the caliphs and their court. The formula of these inscriptions, often found on the edges of the fabric, is stereotyped. It begins with the *basmala*, generally followed by the phrase *baraka min Allāh li-ʿAbd Allāh* followed by the name of the caliph and his title, and the expression of a wish for his long reign, then the name of the individual who ordered the fabric, the name of the workshop where it was made and the date of manufacture. These inscriptions are executed in archaic, angular characters whose typology corresponds, in broad outline, to that of the characters of the stone inscriptions.

In this area, undoubtedly the most interesting evidence is provided by the epitaphs, most of them of Egyptian origin, engraved on marble or on sandstone, of which a considerable number of specimens have survived to the present day. The formula of these epitaphs is constituted of different elements of which the combinations vary according to a variety of patterns: the *basmala*, a verse of the Ḳurʾān, one or more religious invocations, the profession of faith, more or less developed, the dedication of the tomb, the verb introducing the name of the deceased followed by his titles and

profession, the date of his death and an appeal for God's mercy upon him.

These epitaphs provide valuable materials for following the evolution of inscriptions on stone during the first ʿAbbāsid centuries. The change of dynasty did not immediately change the practices of the stonemasons and the characters of early ʿAbbāsid epitaphs are similar in outline to those of Umayyad inscriptions. Nevertheless, differences soon appear in the reckoning of the proportions. The characters diminish in length and correspondingly the joining segments between the letters become shorter. As a result, ʿAbbāsid Kūfic presents a more cramped and less harmonious aspect appearance than Umayyad Kūfic. On the other hand, this evolution is inclined toward a concern for the ornamentation of characters. This is expressed first in the lengthening of the terminal segments in the form of a bevel which tends to grow larger and larger. In the crude types it is sometimes replaced by a small hook or even a ring. To the development of the bevel there correspond a thickening of the outlines of the letters and a more frequent adoption of the technique of engraving in champlevé (cf. Pl. IX, 4), which allows two parallel expressions of the evolution of characters. corresponding to the duality of engraving techniques. Thus, in incised inscriptions, the vertical strokes of the letters are decorated with hooks, simple, double or triple, pre-figuring the palm-leaf (cf. Pl. X, 5), while in inscriptions in relief, the bevels evolve into foils, double foils or triple foils which later open out into leaves, fleurons and palm-leaves, a style of décor much in vogue in the mid-3rd/9th century (cf. Pl. X, 6).

Various other processes of ornamentation are encountered in this period: symmetrical indentations in the parallel vertical strokes of the *alif* and the *lām*, softening of the lines and the appearance of curves (in the *lām-alif*, the *kāf*), transformation of the lower appendices into rising tails, fleurons arising from mouth-shaped letters (*mīm*), the intertwining of contiguous lines, (cf. the knot formed by the *alif* and the *lām* of the word Allāh, Pl. X, 6, l. 1). The indentations and arcs which sometimes adorn the joining segments, especially in the word Allāh, roses and fleurons at the end of a word, framing in linear décor (braids, zigzags, mouldings, spirals) or in a décor of plant-forms (plant palm-leaves alternated on one side and the other by a sinuous line, leaves and symmetrical fleurons), sometimes an even more subtle composition (an arc delineated by a flat moulding with spandrels adorned by an outline in arabesque), combine towards the embellishment of the script.

With the Fāṭimid conquest of Egypt in 358/969 and its sporadic expansion in Syria-Palestine, new practices are introduced into the inscriptions of the Near East. The formula varies little in its basic elements, but the name of the caliph is almost always followed by mention of his links with the "Family" in a phrase such as *ṣalawāt Allāh ʿalayhi wa-ʿalā abāʾi-hi al-ṭāhirīn*, and the name of ʿAlī is often mentioned with that of the Prophet (*Muḥammad rasūl Allāh ʿAlī walī Allāh ṣalawāt Allāh ʿalay-himā*).

The effort at the embellishment of calligraphy continues, and a real proliferation of types of decorative inscriptions is seen. As characteristic examples, we mention the inscriptions of the 4th/10th century mosque of al-Ḥākim in Cairo (cf. Pl. X, 7) and those of the cenotaph of Fāṭima in Damascus (dated 439/1047, Pl. XI, 8). In the former, the linear element maintains a predominant place. The characters show a vigour of design which accentuates their relief on the excised base, completely bare in the lower part, decorated in the upper register by an independent, foliated scroll which glides alternatively above and below the vertical strokes and which gives a free run in the empty spaces to the development of spiral designs which open out in fleurons (cf. Pl. X, 7).

In the cenotaph of Fāṭima, the foliated scroll is sometimes linked to floral elements issuing from the characters and develops in such a fashion as to form a more dense composition (cf. Pl. XI, 8).

In the Fāṭimid period, the typology of the characters is considerably enriched. Curvatures, counter-curvatures, knots and indentations are numerous in the interiors of the characters, offering the stonemason infinite opportunities for improvisation. Purely for the sake of example, let us note the ten different types of *lām-alif* in the single inscription of the cenotaph of Fāṭima.

It would of course be wrong to attribute to Fāṭimid artists alone all the epigraphic innovations in the inscriptions of the 5th-6th/11th-12th century in the Near East. The conquest of Syria by the Salḏjūḳs, who imported with them the techniques and the graphical forms used in the eastern provinces of the Islamic empire, was accompanied by the intrusion of a number of the features mentioned in the Fāṭimid inscriptions, such as knots and right-angled bends in the vertical strokes of certain characters. There was probably a phenomenon of osmosis between these various regions where exchanges were frequent.

The inscription on the cenotaph of Sukayna in Damascus (end of the 6th/12th century; cf. Pl. X, 9) is an interesting specimen of the evolution of monumental Kūfic in the Salḏjūḳ period. The inscriptions engraved in the wood of the cenotaph are distributed on three levels, in two bands superimposed and separated by a fine braid. The main inscription occupies the full height of the broadest band, while at half-way up, the second is intertwined among the vertical strokes of the first. The third, quite independent, occupies the small upper band. These three bands stand out against a background decorated by a fine network of arabesques which cover all of the part crudely excised.

Among the specifically Salḏjūḳ types of monumental inscription, mention should be made of epigraphic bands with geometric décor where the vertical lines of the characters are extended in the upper area giving rise to the interweaving of stars and polygons. The inscription of Ṣafwat al-Mulk at Damascus is a living illustration of this.

The Salḏjūḳ influence is also shown in the evolution of the formulary of inscriptions of small Syrian dynasties of Salḏjūḳ allegiance where the titles become swollen with pomposity (cf. for example the titles of the *atābak* sovereigns in the construction texts of the great mosque of Damascus).

It was in the first half of the 6th/12th century that there was effected the most important transformation regarding the evolution of Arabic script in stone, when Nūr al-Dīn ordered the adoption of the cursive script in official inscriptions, to the detriment of the angular script, which, without disappearing completely, was reduced to repetitions of ancient types. Some fragments of cursive script are mixed, as an intrusion, in the Kūfic inscriptions of the bands of the minaret of the great mosque of Aleppo in 483/1090. There is found also at Buṣrā in Syria an inscription dating from 481/1188, where the characters, while still crude, are neatly rounded; but it is not until the first half of the 6th/12th century

that there appears the full flowering of cursive writing expressed in stone, with its full and its slender lines, its supple ligatures and the introduction of points and diacritical lines, not used in the inscriptions of angular type. A parallel transformation is effected regarding the base line which loses its rigidity and its horizontal continuity. The listels which delimit the bands of writing are not however eliminated, and they continue to compress the lower appendices, the latter being forced to develop below the base line. To remedy this inconvenience, the stone-masons divide the words and engrave the segments thus obtained on different levels, based on an oblique line descending from the centre of the band towards the listel of the base. This procedure permits a freer development of the lower appendices. The base line appears as a discontinuous line reduced to a series of oblique overlapping segments (cf. Pl. XII, 10). This procedure is accentuated in the Ayyūbid period, and already there appear inscriptions where the words are divided and staggered on two or three levels, almost parallel and superimposed. The word generally begins on the lower line and continues above (cf. Pl. XIII, 11).

In the Mamlūk period, this technique of engraving reaches its apogee. The characters are so interwoven that their decipherment becomes difficult all the more so as the characters used in the majority of the inscriptions of this period are of small dimensions, thick and squat. It is to this type of inscription that belong the Mamlūk decrees, engraved in profusion on the walls of official buildings and constituting precious documents regarding the socio-economic life of the Near East in this period (cf. Pl. XIII, 12).

There exists, moreover, a type of Mamlūk *naskhi* where this dense writing gives way to an elongated graphic style prefiguring the Ottoman script. This last gives the appearance of a transposition on to stone of manuscript writings, in particular the style known as *thuluth*, in which the Ottoman calligraphers excelled (cf. Pl. XIII, 13).

3. In Muslim Spain.

At the time of the Muslim invasion of the Iberian peninsula (92/711), the *kūfī* or Kūfic script had already existed in the Islamic world, as an official and sacred script, for 60 years. It was this script that the conquerors used from the start in their inscriptions. The most ancient evidence that we have of it is constituted by the bilingual coinage struck by the governor al-Ḥurr b. ʿAbd al-Raḥmān al-Thaḳafī (98/716-17); the uninterrupted continuity of its use is confirmed by all the coinages struck by subsequent governors and *amīrs*. From the time of the amīrate of ʿAbd al-Raḥmān II, this writing figures in pious foundation texts, in funeral and other inscriptions which corroborate this numismatic evidence, as well as testifying clearly to the development of the usage of the Kūfic characters in al-Andalus before the Almohad invasion (542/1147). Following this event, a struggle developed between *kūfī* and *naskhī*, ending in victory for the latter which subsequently took the status of the official scripts of epigraphy, while the former lost ground and its use became limited to religious or profane inscriptions of little importance and intended for purposes of general ornamentation.

The Kūfic features which appear in the oldest Arabic inscriptions of al-Andalus are virtually the same as those which were used during the last decade of the first century A.H. in all the lands conquered by Islam, that is to say, the symbols originating from the city of Kūfa, with scarcely any evolution in design. This Kūfic, on account of its clearly primitive nature, is generally called archaic. It was reproduced, with more or less finesse over the years, by the traditional craftsmen of Spain who never succeeded in mastering it fully and in consequence introduced no novelty of design by virtue of which it might be considered characteristic of, or exclusive to, al-Andalus. In the last years of the amīrate of Muḥammad I, a new generation of rather more arabised craftsmen began to turn the more extreme features of Kūfic script into stylised plant-forms. At first, this innovation was used very timidly because it applied only to a very small number of letters; nevertheless, little by little it found acceptance to the point where it was applied to all the symbols which permitted it. The craftsmen thus succeeded in creating the Hispano-Muslim version of floral Kūfic, while it must be admitted that the development of this variant of Kūfic never attained, in al-Andalus, the level reached by contemporary Kūfic writing in other Muslim territories.

In the reign of the second caliph of Cordova, al-Ḥakam al-Mustanṣir bi 'llāh, the religious puritanism and stern austerity which characterised the conduct of this powerful sovereign at the head of the government of al-Andalus made itself strongly felt, needless to say, in the epigraphy of the period. Decorative floral additions were suppressed and attempts made to restore the Kūfic letters to their primitive and classical design. But this was not entirely possible, because the letter-forms possessed henceforward a certain elegance which was lacking in them before; this elegance, far from disappearing as a result of this suppression, manifestly increased. Thus there was born a new Kūfic with streamlined, elegant shapes, stripped of all ornamental addition, commonly called simple Kūfic, which flourished until the downfall of the Caliphate of the West. Previous to this important historical event, there certainly existed a consistency in the style of writing Kūfic

in the whole of al-Andalus—as a consequence of the political unity of the region, feebly introduced by the governors and subsequently definitively enforced by the monarchs of the dynasty of the Banū Umayya —and a single cultural centre regulating its art, the metropolis of Cordova. After the downfall of the caliphate, a number of schools of design sprang up, for, with the end of the hegemony of Cordova, each province of al-Andalus followed its own political direction and developed its own artistic practices under influences of very diverse origin. Among the schools the most important were those of Seville, Toledo, Saragossa and Almeria, without counting that of Cordova. At Seville, simple Kūfic continued to be used in inscriptions; but the characters developed in height, which made them extremely elegant and distinctive. At Toledo, the craftsmen returned to floral Kūfic, with forms excessively overladen with plant-forms alternated with the use of simple Kūfic forms. Of these two variants, two distinct versions appeared: one traditional, firmly Cordovan in origin; the other authentically Toledan, which consisted in adding to characters carved in relief a central groove, giving them considerable force of expression. The Kūfic of Saragossa had a particular importance. It is known today through the inscriptions preserved at the Palace of Aljafería (al-Dja'fariyya), built by the princeling Abū Dja'far Aḥmad al-Muḳtadir bi 'llāh (438-74/1046-81); it is known that in the building of this monument, originally called Dār al-Surūr or House of Rejoicing, the craftsmen experimented with numerous innovations, architectural as well as decorative; and inscriptions—an ornamental element of first importance in Islamic art—were no exception. They stylised Kūfic characters to an incredible extent, and by sometimes making them slide on a floral base or at other times cleverly interlacing them with geometric motifs, they succeeded in composing epigraphic bands of great beauty and an originality unusual for the period. As for Almeria, principal base of the Umayyad fleet in the Mediterranean, it had been intimately linked with the metropolis of Cordova during the caliphate. Its craftsmen had always represented Kūfic according to the model of Cordova, and they did not change their style when the latter lost its political status. They continued to use the simple Kūfic which was in use at the time of this event; later, this Kūfic evolved very slowly and its most brilliant period, corresponding to the importance and splendour of this naval base, was reached under the aegis of the Almoravids. From the study of the Arabic inscriptions of Almeria, of which a fine selection survives, it may be deduced that the Almoravid invasion brought no change in the shape of the Kūfic of al-Andalus. By contrast, as mentioned above, the Almohad invasion had very significant effects on epigraphy. At first, the latter respected the Kūfic script and used it, as is well-known, in the first building that they constructed at Marrākush; but, when they were obliged to put into practice a policy of reconciliation of the peoples whom they had subdued by force, they very soon realised that the Kūfic script, with its difficulty of interpretation, was not suitable for the development of their policies, and they replaced it with *naskhī* or cursive in all texts relating to new foundations of a public character. For the craftsmen of al-Andalus in particular, this change had the effect of enabling them to acquire a thorough knowledge of the Arabic characters and to distinguish, in each one of them, that which was essential and invariable from that which was secondary and could legitimately be altered according to the taste of the designer. Thus they came to appreciate the true significance of Kūfic forms hitherto reproduced more or less mechanically. They were no longer content with drawing their designs according to the good taste of the Almohads, but little by little they transformed the shapes. First of all, with the idea of making them attractive and graceful; then by building up their upper portions with complicated interloops, while increasingly filling up with stylised plant-forms all the interstices not covered by the letters in the lines of inscription. In the end, they created ornamental motifs of a type which, on account of its incontestable decorative worth, was subsequently copied by the Mudéjar craftsmen, including those who worked in the Alhambra of Granada, thus undoubtedly conferring upon it a long-lasting prosperity. For it is certain that it is by virtue of these copies, made with extreme care and fidelity, that we are acquainted today with the Arabic epigraphy of al-Andalus current in the period of the Almohads, since the original inscriptions of this historical period surviving to the present day are very few in number, and discoveries have not been made on the scale which could have been desired. The motif-types mentioned above were incorporated into Mudéjar decoration without further consequence, and through incessant use over the course of the years they patently degenerated and became a parody of what they had originally been. On the other hand, their inclusion in the ornamentation of the palace of the Banū Naṣr had the effect of inspiring the craftsmen of Granada to the creation and the development to hitherto inconceivable limits of the geometric Kūfic which is admired today in the Alhambra and which is, beyond doubt, one of the finest ornamental creations contributed by Andalusian craftsmanship to the art of Islam. It was also in the Alhambra that the *naskhī* script achieved the highest point of its development within Muslim Spain. In fact, it is known that among the most important elements contributing to the ormanentation of the Naṣrid palace there are epigraphic friezes composed in this script and containing the best works of the most prominent poets of the period, Ibn Zamrak and Ibn Djayyāb, which are thereby available to us in "the most sumptuous edition in the world", to borrow the apt expression of E. García Gómez.

4. In North Africa.

The oldest inscriptions known to us in North Africa show no originality compared with those of the Near East in the Umayyad and, in particular, the ʿAbbāsid periods. The evolution of styles in Ifrīḳiya was to follow a course generally parallel to that of the styles known in Egypt which seems to have constituted the natural link in the chain connecting the Muslim East and West. The Maghrib al-Aḳṣā, by contrast, and especially from the time of the Almoravid period, was influenced by al-Andalus, which for a long time remained faithful to archaic forms of Kūfic but which, under the influence of the ʿAbbāsid East, submitted to the prevailing taste. Nevertheless, Muslim Spain was to interpret in its own fashion the styles of writing and their evolution such as were familiar in the Orient in the Fāṭimid period. This piece of the Orient set in Andalusion soil was to influence Morocco, and then with the victory of the Almohads, the whole of North Africa.

The style of monumental inscriptions in the Aghlabid period differs according to whether it is a case of carvings in relief, or incised engravings, on stone or wood, or of painting. The Kūfic carved in relief on stone may well be compared to that of the Nilometer of Rawḍa (199/814-15), notably on the marble at al-Kayrawān (the capitals and the interior of the *miḥrāb*). It may equally be compared to Ṭūlūnid Kūfic, but some of the details characteristic of the West appear to be quite original, for example the *alif* with a horizontal appendage towards the right in the lower part of the letter. The writing, whose essential value lies in the message to be transmitted, tends gradually to become a part of the ornamentation (for example, the inscription painted on wood at the base of the cupola of the Great Mosque of al-Ḳayrawān where the mis-shaping of the *ʿayn* gives a fleuron with three foils while the background is decorated with isolated floral motifs). The fine inscription on the façade of the Mosque of the Three Gates at al-Ḳayrawān also provides an example of this tendency which is emphasised in the marble plaque of the *miḥrāb* of the Zaytūna in Tunis, where the inscription in very fine Kūfic characters forms a decorative framework.

The Kūfic of the foundation-plaque of the *ribāṭ* of Sousse (206/821) appears very archaic in comparison with these inscriptions.

Funerary inscriptions are mostly engraved; the formula varies little, the main element being a few Ḳur᾽ānic verses, usually taken from Sūra CXII. These inscriptions perpetuate, in the 3rd/9th century, forms which are more emphatically archaic than those of the monumental inscriptions; this is especially notable in epitaphs on pillars, occasionally crudely executed in spite of some fine creations, and in the fine funerary inscriptions engraved on marble plaques or on tall columns. The similarity between the Aghlabid incised inscriptions and contemporary examples from Egypt and the Sudan is quite striking.

There can be no doubt that the arrival of the Fāṭimids in Ifrīḳiya and their installation at Mahdiyya, then at Ṣabra al-Manṣūriyya, accentuated the orientalisation of the country. The evolution of Kūfic in the Near East in the 5th/11th century, then in the 6th/12th century, was to be reflected almost immediately in the Maghrib. In the latter as in the former, the problem faced by the artist was how to alleviate the difficulties inherent in Arabic writing, very dense in the lower part of the line of inscription, but leaving important gaps in the upper areas. The solutions adopted consisted in the development of the vertical strokes and in their evolution, sometimes their distortion, in the intertwining of letters, and most of all, use was made of stylised floral patterns in decorating the background. These inscriptions are often divided in two parts by a rigid horizontal band, the lower part being occupied by the body of the letter while the upper register is decorated with a complicated floral design against which the vertical lines stand out. At Sfax, from the end of the 4th/10th century, the letter is seen to develop, the terminal

chamfer of the vertical strokes opening into floral shapes or curling so as to occupy the empty spaces. The influence of Fāṭimid Egypt is undeniable. The characters in general affect a refined elegance. The bordering strips contribute to the décor of the façades (Sfax, Great Mosque) or to that of the *miḥrāb*s (Sfax, Zīrid *miḥrāb*), mosque of Sayyida at Monastir (beginning of the 5th/11th century). At Constantine (*miḥrāb* of the Great Mosque, dating from the 6th/12th century), the epigraphic décor reaches a high degree of ornamental quality, recalling that of the finest Fāṭimid *miḥrāb*s of Cairo.

Funereal epigraphy also abandoned the archaisms of the Aghlabid period, but after a perceptible delay. Incised inscriptions practically disappeared. The form of the tombs evolved towards prismatic marble steles, notably at Monastir and at Tunis (cemetery of the Khūrāsānids). The writing, of refined elegance, recalls, by the development of the letters and by the appearance and proliferation of stylised floral designs, the style of the monumental inscriptions.

As for epigraphy on furniture, we have, in the magnificent *maḳṣūra* of al-Muʿizz b. Bādīs, one of the finest examples of floral Kūfic, with complex intertwining of letters and a background of plantforms comparable to the Kūfic of Aleppo or to that of Diyār Bakr.

In the Maghrib al-Aḳṣā and in the western region of the central Maghrib, very few inscriptions are to be noted before the Almoravid period. That of the Ḳarawiyyīn, dating from 263/877, is in Kūfic of the al-Ḳayrawān type, but, with the reign of ʿAlī b. Yūsuf, there appears the Andalusian Kūfic, characterised by well-proportioned letters with long and curved vertical strokes. However, the writing itself is very sober and stands out against a background flowered with arabesques and fleurons and palm-leaves with deep and multiple radiating divisions (Ḳarawiyyīn, Great Mosque of Tlemcen), or against a background of palms, of pineapples and of half-fleurons divided in two parts horizontally by a straight listel.

The epigraphy on furniture shows, on the contrary, an attachment to the old tradition, whence a surprising conservatism in the Kūfic inscriptions of the *minbars* of Nedroma and of Algiers, and in those of the *maḳṣūra* of Tlemcen.

But the most important event of this period is the appearance of the cursive script (*naskhī*). This style appears in Ifrīḳiya from 490/1096, in funereal inscriptions where it is presented in a very elaborate form (the characters are fine, large and supple and well-proportioned, framed with a border and standing out against a rich floral background of oriental type). It is to be supposed that it was by this oriental route that the new alphabet penetrated to the Maghrib al-Aḳṣā in the Almoravid period (the inscriptions of Tlemcen and of Ḳarawiyyīn) in about 531/1136-7. It is in fact impossible, in the absence of precise documentary evidence, to propose an Andalusian influence, as it seems that cursive writing did not appear in Andalusia until much later.

Whatever the case may be, the victory of the Almohads had as a consequence a certain unification of styles in the whole of North Africa with an inclination towards sober, angular Kūfic in the monumental inscriptions and, on the contrary, a preference for cursive in the funereal inscriptions. It is worth noting that no foundation inscription appears in this period in the religious buildings, pious works through which the great caliphs of the dynasty were able to bring honour to themselves.

One consequence of the Ottoman domination of Tunisia and Algeria was a new "orientalisation". The inscriptions lose their decorative quality and adhere to the requirements of the message to be transmitted. They are inscribed in frames or in scrolls in cursive characters, often with diacritical points, sometimes with vowels, on several lines which may overlap. The execution is rather casual, and the use of the Turkish language is limited.

On the other hand, Morocco remained faithful to the Andalusian models and followed their evolution in the period of the Naṣrids of Granada. The type of Kūfic script which distorts the letters, twisting and stretching them into wreaths and fleurons, is hardly distinguishable from the background, where geometric and floral elements are mixed. The cursive begins to take the place of the Kūfic script in the fine framing strips of the *miḥrāb*s of the Marīnid period. After the disappearance of the kingdom of Granada, Morocco tended to withdraw within itself, apparently shut of from outside influences.

At no time did the artists of the early Middle Ages make so much use of Arabic writing as an element of decoration. It appears everywhere, in religious buildings, in funereal pavilions, in the houses of citizens or in the palaces of kings, on furniture, on table-ware and on the most minor objects of daily life, where the ornamental role is often more important than the meaning of the language. The result is a pseudo-writing without precise meaning, or a constant repetition of a word or part of a phrase, in ornamental friezes, where ease and routine take the place of refinement and, above all, of faith.

5. In West Africa.

Proof is still awaited that any system of writing was in use among the Negro civilisations of West Africa before the introduction of written Arabic. An animal drawing on a sherd found by F. Willet at Old Oyo in Western Nigeria was considered representational rather than pictographic, whilst K. Hau's search for linguistic interpretations of recurrent *motifs* in the art of Benin proved inconclusive. Gold-weights from Ashanti and neighbouring districts seem to represent a preliterate stage, some of the designs symbolising proverbs and injunctions and others perhaps conveying metrological data. Inscriptions in Punic, Greek, Latin or similar Classical languages have not yet been reported from tropical West Africa.

The Saharan Berbers (Tuareg, "People of the Veil") derived their *tifinagh* alphabet from the Libyan script used in North Africa during the second century B.C. and subsequently (see BERBERS. vi). *Graffiti* in *tifinagh* are known to extend from Tibesti and Djado westwards to the Niger bend, and even into Mauretania, Mauny (1954) providing the most convenient survey of the literature. A complication in the reading of these inscriptions is the problem of determining their direction. They may run from left

or right, top or bottom, but within each inscription the direction remains uniform, and clues to the orientation are provided by the alinement of certain asymmetrical characters, and the stereotyped opening phrases. In academic usage texts are conventionally arranged to read from the right.

Two main varieties of *tifinagh* script are generally recognised. The older (called variously "*tifinagh* archaïque"; "Saharien ancien" and "Libyco-berbère") renders by bars certain characters (王 *gh*, ☰ *h*) which in the modern script are represented by dots (⁞ *gh*, ⁝ *h*)). The older script also lacks several characters. A number of the older *graffiti* were interpreted by Marcy (1937). They contain recurrent formulae, commencing with such words as 王 ⊙ O *usərəgh usereǧ*, "I require...", 王 | *enəǧ* "I need...", and often accompanied by a drawing to illustrate fulfilment of the wish, all designed to have a magical influence. A group of modern inscriptions commences with the word ⁖ | *nəkk nekk* "I...", followed by the writer's name, and a statement of his purpose or wish. Another group, still known only from modern examples, consists of formulae inscribed on the typical Tuareg stone armlets (*ahabeg*), and shields. These were presented to a departing lover to preserve his fidelity. Manifestly Islamic personal names in later inscriptions show that they are relatively modern, but much work has still to be done in the chronology, linguistics, and collection of the older *graffiti*.

Of Arabic inscriptions from West Africa, at once the oldest and the most important is the tombstone from Gao reported by Sauvaget. It records the decease on 1 Muḥarram 494/6 November 1100 of a personage designated *al-malik al-nāṣir li-dīn Allāh al-mutawakkil ʿalā Allāh*, Abū ʿAbd Allāh Muḥammad b. ʿAbd Allāh b. Zāg̲h̲ī. The Kūfic calligraphy of this monument closely resembles tombstones from Almeria (reported by E. Lévy-Provençal, *Inscriptions arabes d'Espagne*, Pl. XXVII-XXX), and it is carved from similar marble. There is a strong implication that the monument may have been made at Almeria (a part of Spain then subject to rule by the Almoravid Murābiṭ dynasty) for transport across the Sahara to Gao. This situation would present a new aspect of Almoravid connexions in the Southern Sahara. The inscription seems also to confirm the remark attributed to the *Ḳāḍī* Maḥmūd b. al-Ḥādjdj al-Mutawakkil Kuʿt (Kati), that the Islamisation of Gao took place between 471 and 475/1078-9 and 1082-3 (Kati, *Taʾrīkh al-Sūdān*, tr. O. Houdas, 332); also the reference of Ibn K̲h̲urradādbih, 89 (cf. *Ḥudūd al-ʿālam*, tr. Minorsky, 165, 476) to a ruler in West Africa named Zāg̲h̲ī b. Zāg̲h̲ī. The exalted titles appearing in the inscription may imply that the deceased person was himself Sultan of Songhay, but if so, his names are absent from the list given in the literary sources. Other inscriptions from Gao are of a Queen Swā (502/1108-9), of *al-malik al-nāṣir li-dīn Allāh al-mutawakkil ʿalā Allāh* Abū Bakr b. Abī Ḳuḥāfa (503/1109-10), of ʿĀʾis̲h̲a daughter of *al-malik* Kūrī (511/1117-8), and of another possible Sulṭān Māmā b. Kmā b. (Z)āg̲h̲ī (514/1120-1). Further inscribed tombstones from the area of the Niger bend have subsequently been published by Mrs. Viré, including a specimen of the year 496/1102-3 from Gao, and other from al-Sūḳ (504/1110-11), Bentia (Kukiya, a former Songhay capital on the Niger above Niyameh) bearing the date 800/1397-8, and El-Kreib in Mauretania, a place thought to represent the ancient site of Aretenna.

Later Arabic rock-graffiti are known from the Saharan zone, but other inscriptions on stone have not yet been reported outside the area of the Niger bend. The well-known inscribed swords carried by *amīrs* in Hausaland, being apparently imported, bear conventional Arabic inscriptions not characteristically local. Many West African vernacular languages have, however, been written in Arabic script. A Bornu dialect, apparently Kanembu, occurs in Ḳurʾānic glosses at least as early as 1080/1669. Kanuri, Hausa, Fulani, Nupe and Yoruba all occur at slightly later dates—Hausa for example being found in glosses ascribed to ʿAbd Allāh b. Fūdī (*ca.* 1762-1828) in a manuscript of *al-Muk̲h̲taṣar* owned by Abū Bakr G̲h̲ummī at Kano; the inscription on an iron panel at *Kofar Waika*, a gate of Kano city, though of uncertain date, contains several sentences in Hausa. The situation for the languages of the Upper Niger, Songhay, Malinke etc. is however less clear.

Arabic inscriptions in two cryptographic alphabets, called *Suryāniyya* and *ʿIbrāniyya*, were described by Monod and Mauny. Talismanic inscriptions and magic squares are known all over the area, often written in carbon ink on wooden writing-boards (Ar. *lawḥ*), or iron replicas of these boards; also on earthenware bowls, sherds, bones, human skulls and polished stone axeheads, besides everyday examples on paper sheets or scrolls.

For an understanding of the magic squares (*wafḳ*, pl. *awfāḳ*), the most informative study is probably that of Camman, who traces them back to the Chinese origins. In Nigeria and other West African countries, the work on this subject of Muḥyī al-Dīn Abu 'l-ʿAbbās Aḥmad b. ʿAbd Allāh al-Būnī (d. 622/1225 [*q.v.* in Suppl.]), *S̲h̲ams al-maʿārif wa-laṭāʾif al-ʿawārif*, is widely utilised. A Nigerian scholar of some renown, Muḥammad b. Muḥammad al-Fulānī al-Kas̲h̲ināwī (of Katsina, in Hausaland), friend of the Egyptian historian Ḥasan al-D̲j̲abartī, compiled a treatise on the subject entitled *Bahd̲j̲at al-āfāḳ wa-īḍāḥ al-labs wa 'l-ig̲h̲lāḳ fī ʿilm al-ḥurūf wa 'l-awfāḳ*. Anawati's description of charms on paper from Mālī gives a full bibliography of Arabic talismans and magical symbols. Cryptographic alphabets had a long history in the Near East, and became especially prevalent in North and West Africa. A standard treatment in Arabic is that of Aḥmad b. Abū Bakr b. Waḥs̲h̲iyya, *S̲h̲awḳ al-mustahām fī maʿrifat rumūz al-aḳlām* (ed. and tr. J. Hammer, *Ancient alphabets and hieroglyphic characters*, London 1806), though commentators have found these explanations obscure. One of these alphabets known as *al-Yāsīnī* (and conceivably therefore associated with the spiritual leader of the Almoravids, ʿAbd Allāh b. Yāsīn) was shown by Dalby to have influenced two of the modern indigenous scripts of West Africa, so that knowledge of it may have lingered from earlier centuries along the Senegal. The oldest of the scripts in question is the Vai syllabary of Liberia (212 characters: invented 1833); the other is the Mende syllabary of Sierra Leone (195 characters: invented 1921). Five other syllabaries and two alphabets, of differing structure and inspiration, designed for the expression of various African languages, are included in his account, but the currency of each is very restricted. Another item from the Islamic mystical repertoire, the *sabʿat k̲h̲awātim* or "seven seals (of Solomon)" 6 日 IIII ٦ 卄 卄 ✡ have been recorded amongst the Haua, amongst the Yoruba inscribed above the doorway of a building at Oyo, and in the Ivory Coast.

6. In eastern Africa.

So far some 250 inscriptions have been reported from the eastern coast of Africa lying between Mogadishu, in Somalia, and the mouth of the R. Zambezi, in Mozambique, as well as from the offshore islands, including also the Comoros [see ḲUMR] and Madagascar. The principal sites of most of the coast have been surveyed and some partly excavated; but very much remains to be done, and quite likely more inscriptions will come to light. Especially is this the case in Mozambique and the Kerimba Islands close to its coast, whose Islamic historical archaeology is still virtually unknown, albeit that the existence of mosques and widespread adherence to Islam is attested by 16th century Portuguese writers. Other than those of the present century, no inscriptions have been reported inland. Only one inscription is known completely in Swahili, even though some Swahili words occur in Arabic inscriptions of the 17th to the 19th centuries of the epitaphs of the petty Sultans of Kunduchi, 17 miles north of Dar es Salaam. With these exceptions and a group of 16th and 17th century Portuguese inscriptions in Fort Jesus, Mombasa, with a solitary one in Zanzibar, all the inscriptions are in Arabic.

The two earliest known inscriptions are an epitaph in the Friday Mosque at Barawa reported by Cerulli, dated 498/1104-5, and a Kūfic dedicatory inscription in the Friday Mosque at Kizimkazi, Zanzibar, dated 500/1106-7, which, if not carved in Sīrāf itself, would appear to have been the work of a Sīrāfī craftsman in Zanzibar [see KIZIMKAZI]. Apart from these, a small number of inscriptions in Kūfic or floriate scripts have been found in small numbers in or near Mogadishu, and at Malindi, Mnarani and Mombasa in Kenya. The remaining inscriptions are all in *naskhī* or cursive scripts. No comprehensive attempt has so far been made to identify or classify their style or provenance so far as it was not local, but at Kilwa certain decorative inscriptions have been thought to have Fāṭimid affinities. On these subjects it would probably be wisest to reserve judgment until more is known of the inscriptions of the Yemen and of the Ḥaḍramawt. The greatest number of inscriptions found in eastern Africa are epitaphs, very many of them of persons otherwise unknown. Quite exceptional are sixteen dedicatory inscriptions commemorating the foundation of mosques in Lamu between the 14th and the 19th century, which demonstrate the stages of growth of the town [see LAMU]. At Mombasa a number of inscriptions, mostly funerary, illustrate and provide a solid dating for the varying fortunes of the Mazar'i family, of whom a number of members served as *wali* under the suzerainty of ʿUmān from *ca.* 1734 until 1837. At Kilwa there are a number of inscriptions in the Great Palace known as *Husuni* (Swa. from Ar. *ḥiṣn*), but all undated, and on whose date agreement has not yet been reached. A curiosity is a carved ivory state horn (*mbiu*) with an inscription in Swahili, which has been ascribed to the 19th century; but a reference in the traditional Swahili *History of Pate*, from which town it came, would suggest, however, that its approximate date of manufacture was *ca.* 1060/1650.

Kirkman, *Fort Jesus: a Portuguese fortress on the East African coast*, 1974, 38-40, 61 (Arabic); 14-15, 17-18, 46, 51, 59 (Portuguese).

(G. S. P. Freeman-Grenville)

7. In Turkey.

The Muslim epigraphy of Turkey has not yet been the object of methodical research. It is true that there exist a large number of editions, but most of these are isolated undertakings.

The history of Muslim monumental epigraphy in Turkey does not in fact begin until the middle of the 6th/12th century. There had been building activity in Anatolia before, in the Turcoman states of the Dānishmandids, the Artuḳids, the Ṣaltuḳids and the Mengüdjekids, but most of the constructions of that time were destroyed as a result of the continuous fighting in the area.

Muslim epigraphy in Turkey can be divided essentially into three categories: commemorative inscriptions, pious inscriptions, and epitaphs. The most important of these, both from the historical and the

artistic point of view, is the former, which includes inscriptions commemorating the constructions or restorations chiefly of foundations for the public good—mosques, fountains, *sabīl*s, etc.—and, in later times, also of government buildings (offices, hospitals, schools, barracks, etc.). The pious inscriptions either contain only the names of God, Muḥammad or the four *rāshidūn* caliphs, or consist of *ḥadīth*s or citations from the Ḳur'ān that suit the purpose served by the object which they decorate. Thus in mosques one may find such Ḳur'ānic verses as IV, 104 or XV, 46; on fountains LXXVI, 18 and 21 or the words *min al-mā'i kull^a shay'^in ḥayy*, from XXI, 31; and on libraries the words *fīhā kutub ḳayyima* (XCVIII, 2). Pious texts may also serve as mottoes over commemorative inscriptions. Hence in foundation inscriptions of mosques one may find such sayings of the Prophet as "Whoever builds for God a mosque, even if only like the nest of a sand grouse, for him God builds a house in paradise". The number of inscriptions surviving on tombstones is very large. Especially in Istanbul very fine ones can still be seen. Unfortunately, the amount of research done in epitaphs is still less than that done in the other Muslim epigraphy of Turkey (see also ḲABR).

The typical Muslim inscription, including that in Turkey, is a rectangular slab with one or more lines of text, which are separated by narrow lines, the whole being enclosed in a narrow frame. In the Ṣaldjūḳ and early Ottoman periods the inscriptions were often also in the form of bands along the borders of porches, or, inside mosques, of *miḥrāb*s. Some inscriptions from this time consist of one line in *djalī thuluth* with elongated shafts through which runs a second line in Kūfī, these together against a background of spiral arabesques. In the Ottoman period the lines (in verse texts, the hemistichs) of most inscriptions are enclosed in cartouches with the left and right extremities elaborated in different manners; these inscriptions are sometimes decorated with such motifs as flowers (either separate or in vases), fruits, arabesques, rosettes and, especially in later times, *tughras* and crescent-and-stars. In the relief inscriptions the (raised) letters and decorations may be gilded, and the (sunken) backgrounds painted—mostly green or blue; it is uncertain whether these colours were used in the older inscriptions too, because the original paint of these has mostly worn off.

On the tile inscriptions, it is not the relief but the colours that present the necessary contrast between the text and the background. Inscriptions of this kind are mostly of pious content and undated. They are found in buildings from very early times; after the 11th/17th century their number gradually diminishes. Very fine examples of this kind of inscription are found inside the Selimiye Mosque (completed 982/1574-5) in Edirne and in the Bağdat Köşkü (11th/17th century) in the Topkapı Palace in Istanbul.

Since, under the Great Ṣaldjūḳs, Kūfic was very much used for inscriptions in Iran, it was also in the early Muslim epigraphy of Anatolia. This script, which was employed, roughly, in the period and areas of the above-mentioned Turcoman states, was, under the Rūm Ṣaldjūḳs, largely replaced in inscriptions by *djalī thuluth*, although it continued to be used for mere decorative purposes by them and by the Ottomans up to the reign of Meḥemmed II (855-86/1451-81). *Nastaʿlīḳ*, which was brought to Turkey by Persian calligraphers in the period of Meḥemmed II, became common especially in the commemorative inscriptions and epitaphs made after the middle of the 11th/17th century. (The earliest inscription written in this script is perhaps that of the Mosque of Seldjük Khātūn (dated 860/1455-6) in Edirne (Dijkema, No. 16)). This script became so popular because (a) by this time most of these inscriptions were in Turkish verse, which (as is demonstrated in the manuscript *dīwāns*) it was traditional to write in *nastaʿlīḳ*; and (b), since this script uses far less different auxiliary signs than does *djalī thuluth*, it is much simpler to handle for the stone carver. Such scripts as *muḥaḳḳaḳ*, *djalī muḥaḳḳaḳ* and ordinary *thuluth* are very rare in inscriptions. *Ruḳʿa* was used occasionally in the last period of the Ottoman empire, mostly on buildings of secondary importance.

Little is known about the calligraphers who designed the inscriptions in the Ṣaldjūḳ and early Ottoman periods. Later, the more reputed calligraphers used to sign their works, with such stereotyped formulas as *katabahu 'l-ʿabd al-ḍaʿīf* ... or *katabahu 'l-ʿabd al-dāʿī* .... They might omit their signatures, however, if on the same building there was another inscription written by one of the sultans (as is the case, for instance, in the inscriptions on the front of the two fountains of Sultan Aḥmad III in Istanbul).

Under the Rūm Ṣaldjūḳs and the early Ottomans, the general Muslim tradition was followed of writing inscriptions in Arabic. The earliest inscription in Turkish is perhaps that of the *madrasa* of Yaʿḳūb Čelebi (dated 814/1411) in Kütahya (İ. H. Uzunçarşılı, *Kütahya şehri*, Istanbul 1932, 79); later, especially from the end of the 10th/16th century, this came to be the language of most of the commemorative inscriptions and epitaphs, the cause of this rather radical change being probably an increase of the prestige of Turkish vis-à-vis Arabic following the Ottoman occupation of the Arab lands in the 16th and early 17th centuries. The Arabic inscriptions are mostly prose, the Turkish ones usually verse. The wording of the Arabic prose inscriptions closely follows the models of the Mamlūk and earlier Arabic epigraphy of Egypt and Syria. In most commemorative verse inscriptions, both those in Arabic and those in Turkish, the dates of the events commemorated are not expressed in figures or words but hidden in chronograms (see ḤISĀB AL-DJUMMAL). There do exist also Persian inscriptions, but they are very rare.

The redactors and calligraphers of the Muslim inscriptions in Turkey seem to have had a special liking for mystifying the reader—mostly in such a manner, however, that with adequate knowledge one can discover the true meanings of the texts. Not only is there the chronogram and, in verse texts, the often intricate language, but, for instance, in the inscription commemorating the 1282/1865-6 restoration of the Eski Cami (Dijkema, No. 126) in Edirne, some words are written phonetically. Calligraphers might add to the intricacy of inscriptions, often already sufficiently difficult to read through the interlacing of the letters, by several means: the inscription of the Muradiye Mosque (dated 839/1435-6) (*ibidem*, No. 7) in Edirne, for instance, contains unusual ligatures of letters; in the inscription of the Mosque of Sitt Khātūn (dated 889/1484) (*ibidem*, No. 23), in the same town, some letters are written mirror-wise; and in the inscription of the Ḳadln Most (dated 876/1471) (ed. by P. Wittek in *Byzantion*, xviii [1946-8], 327, n. 2) near Küstendil [*q.v.*] in Bulgaria, letters and words are arranged in an unnatural manner.

Damaged or lost inscriptions were often replaced by copies. The student of Ottoman epigraphy can mostly recognise these easily, for they are generally in a better state than originals dated in the same period. Also, the wording may give a hint. Knowledge of the history of calligraphy and decorative art may provide a means to ascertain the period when a copy was made. (The foundation inscription of the Darülhadis Mosque in Edirne, dated 838/1435 (Dijkema, No. 6), for instance, is written in a *nastaʿlīḳ* of a kind not used in Turkish epigraphy until the middle of the 11th/17th century.)

Bibliography: For a general appreciation of the significance of Turkish epigraphy, see R. Mantran, *Bilan et perspectives de l'épig aphie turque pour les périodes pré-ottomane et ottomane*, in *Revue d'histoire maghrébine* iv (1975), 217-20. For editions of Ottoman inscriptions, see the works of G. Colin, M. van Berchem, Khalīl Edhem, J. H. Mordtmann, F. Taeschner, P. Wittek, İsmail Hakkı Uzunçarsılı, Mübārek Ghālib, H. B. Kunter, M. Mujezinović, A. P. Vekilov, A. Zajączkowski, P. Miyatev, R. Mantran and F. Th. Dijkema (bibliographical details in F. Th. Dijkema, *The Ottoman historical monumental inscriptions in Edirne*, Leiden 1977, Introd., § i); some of their editions include also pre-Ottoman inscriptions. Among the editions containing more specifically pre-Ottoman inscriptions, there should be mentioned: Cl. Huart, *Épigraphie arabe de l'Asie Mineure*, in *Revue sémitique*, ii (1894) and iii (1895); J. H. Löytved, *Konia: Inschriften der seldschukischen Bauten*, Berlin 1907; the numerous articles of Aḥmed Tewḥīd in *TOEM*, esp. those in Nos. 29 (1330), 83 (1340), 86 and 87 (both 1341); P. Wittek, *Inscriptions*, in R. M. Riefstahl, *Turkish architecture in southwestern Anatolia*, Cambridge (Mass.) 1931, 77-116; J. Sauvaget, *Inscriptions arabes*, in A. Gabriel, *Voyages archéologiques dans la Turquie orientale*, i, Paris 1940, 287-356; W. Hinz, *Steuerinschriften aus dem mittelalterlichen Orient*, in *Belleten*, xiii (1949), 745-69. The voluminous studies which İ. H. Konyalı has devoted to the monuments and inscriptions of a number of towns in (mainly western) Anatolia are unmethodical and possess little or no value for epigraphical research. See further the *RCEA*; the sections VIIIc in the different parts of J. D. Pearson's *Index Islamicus*, Cambridge (later London) 1958- ; H.-J. Kornrumpf, *Osmanische Bibliographie mit besonderer Berücksichtigung der Türkei in Europa*, Leiden 1973, 1183-6; the bibliographies of the articles devoted in this encyclopaedia to towns of the Ottoman empire and to dynasties and important families in the area. Finally, many local histories of towns formerly under Ottoman domination contain records of inscription texts, even though this may not always be indicated in the titles.

(F. Th. Dijkema and A. Alparslan)

8. In South-East Asia.

Islamic epigraphy is distributed very unequally in South-East Asia, it being understood that islamisation, although it did take place, was not accomplished everywhere at the same time or with the same intensity. The survey which follows can give only an idea of the importance of documents from Indonesia (*Republik Indonesia*) and from the Federation of Malaysia (*Persekutuan Tanah Malayu*). We shall have only a few words to say about the other regions.

A. *Indonesia and the Federation of Malaysia*

The majority of epigraphic documents consist of tombstone inscriptions. Next in number are charters and related texts, and finally there are some brief legendary pieces on various subjects.

These three groups will be subdivided into four geographical regions, although the exigencies of history will not always allow a rigid separation: (a) Java (b) Sumatra (c) Malaysian Peninsula (d) Eastern Indonesia.

Regarding the Javanese year, since the introduction of the purely lunar calendar in 1633 A.D., it should be noted that the latter does not always correspond to the so-called "Arabic" system, because of a different distribution of "full" years of 355 days, and also as a result of local variations which are not all known to us. On this typically Javanese chronology (abbreviated Såkå Jav. or S.J.) and the theoretical conversion of its dates to the Gregorian system, reference should be made to the article *Tijdrekening*, in *ENI*², v (= Suppl. I), 73-9, which is accompanied by tables. For the pre-Islamic chronology (still in use in Bali) which consists of lunar-solar years, we shall use the term Śåkå (abbr. Ś.).

I. Tomb inscriptions.

(a) *Java*. It is on this island that the oldest known Muslim tomb in Indonesia has been found. It is the burial-place of a girl whose personal name is uncertain or is not indicated, but who is called Bint Maymūn. Without recalling here the arguments concerning the year of her death (there is an error in the writing of the word denoting tens), let us say that it may be read as 475 A.H. or 2 December 1082. This tomb stone is at Leran in eastern Java.

Eastern Java possesses a large number of tombs, among which we shall mention those of the cemetery at Trålåyå (usual orth. Trolojo). Here there are found, besides a number of undated or uninscribed tombs, ten dated inscriptions ranging from 1298 to 1533 Śåkå ,that is 1376 to 1611 A.D. It is seen that here the Śåkå chronology is still used for Muslim tombs, except in one case where we have a *hidjra* date expressed in Arabic numerals. Moreover, some of these tombs have a purely Javanese type of ornamentation and symbols which seem to link the interred persons to the court of Majapahit.

It is also in the east of Java that there is found the tomb of an individual reckoned by tradition to be one of the nine *Wālīs* responsible for the spreading of Islam to Java. His name is Malik Ibrāhīm, but his title cannot be established with certainty. The date is 822/10 April 1419.

In the cemetery of Tråwulan (usual orth. Trowulan) a few kilometres from Trålåyå, is the famous tomb said to be that of the Putri Čampå (a title interpreted as meaning Princess of Čampa), a figure well-known in legend, but the date, inscribed on the tomb in old Javanese numerals is 1370 Śåkå = 1488-9 A.D. which does not correspond to the year of her death given by the literary texts. The same cemetery contains a very simple tomb dated 1290 Śåkå = 1368-9 A.D., which is therefore more ancient and dates back to the glorious period of Majapahit.

There is furthermore in the Seṇḍang Ḍuwur complex, still in the east of Java, an inscribed wooden pole bearing the date 1407 Ś. (not 1507 as read by Stutterheim), again in old Javanese numerals. In another cemetery at Goṇḍang Lor (in the region of Tulung Agung) there is a tomb bearing the date

1470 Ś = 1548-9 A.D. In these two latter cases, the numerals are to be read from right to left, a mode of writing numbers unknown to epigraphy in the Arab lands but found in a number of cases in Indonesia (though rare in Sumatra), which doubtless arises from the system current in the Hindu period of expressing dates through chronograms.

Finally, in concluding this brief survey of the principal Muslim monuments of Java, let us note that in the burial complex of the famous Queen of Jåpårå (usual orth. Djaparra), Ratu Kali Nyamat, is a chronogram giving the date 1481 Ś = 1559-60 A.D.

(b) *Sumatra*. As a result of a systematic survey carried out between 1912 and 1917 in the region of the ancient kingdom of Samudra-Pasai and in the extreme north of the island, in Atcheh to be precise, the Archeological Service of Indonesia possesses a rich collection of photographs and casts of epitaphs, most of which however offer us nothing more than pious texts without historical value. Of the sixty dated inscriptions, wholly or partly legible, which we have been able to examine from Samudra-Pasai, the majority (more than thirty) are from the 9th/15th century; ten are from the 10th/16th century; four date from the 8th/14th century; and only one from the closing years of the 7th/13th century. Among these tombs, of which about half belong to women, a dozen or less are of persons of royal or princely rank. Only a few of these epitaphs have been published, and a systematic study has yet to be made.

We may mention among the historically more important, that of the first sultan of Samudra, Sulṭān Malik al-Ṣāliḥ who died in 696/1297, and that of his son al-Sulṭān b. al-Sulṭān al-Malik al-Ẓāhir Shams al-Dunyā wa 'l-Dīn Muḥammad b. al-Malik al-Ṣāliḥ, which is of a completely different style and dates from 726/1326. Among the other tombs, we may mention those of a descendant of the penultimate caliph of Baghdād, named ʿAbd Allāh b. Muḥammad b. ʿAbd al-Ḳādir, who died at Samudra in 809/1406; that of a queen of Samudra, great-granddaughter of the first sultan of the kingdom, dating from 831/1428; the epitaph of a princess with a Persian name, Mihr Shāh, daughter of Khōdja Aḥmad al-Sulṭān al-ʿĀdil; and finally, the tombs of two individuals, one named Rādja Khān dating from 834/1430 and the other, his son, Khōdja Rādja Khān b. Rādja Khān, buried in 865/1460-1.

One tomb, of unique type, is that of a person named Nāʾina Ḥusām al-Dīn b. Nāʾinā Amīn. As well as conventional texts, the tomb bears a poem by Saʿdī and dates from 823/1420.

Of two particularly interesting inscriptions apparently belonging to the same tomb, the one gives us a text in Old Malay written in palaeo-Sumatran characters, the epitaph of a queen whose name is uncertain but who died in 781/1380; the other stone bears an epitaph in Arabic of a princess, with a date almost identical to that of the former, the same day of the week, the same day of the month, the same month, but ten years later, 791/3 December 1398. It is probable that there is an error in the dating of one of the two inscriptions. In any case, the text in palaeo-Sumatran characters is very important, since it gives us evidence of the use of this script, which belongs to the pre-Muslim period, in the Islamic era and in the 8th/14th century, a hundred years after the islamisation of the region.

(c) *Federation of Malaysia*. Among the tombs discovered here are that of the sixth sovereign of Malaka, Sulṭān Manṣūr Shāh b. Muẓaffar Shāh, who died in 882/1477, and that of the first sultan of Pahang, Sulṭān Muḥammed Shāh, son of Sulṭān Manṣūr Shāh the conqueror of Pahang, who was the son of Muẓaffar Shāh, son of Muḥammed Shāh. The latter tomb is dated 880/1475, and it is noticeable that the genealogy here goes back further than in the previous example. The vast majority of tomb inscriptions are in Arabic, but one case is known where the epitaph proper is in Malay. It is that of a step-daughter of Sulṭān Aḥmad, the second sovereign of Pahang; she was in fact the daughter of the seventh sovereign of Malaka and sister of the seventh and last, who was forced to flee before the Portuguese invasion. Tl ere are various other royal tombs of the different sultanates, as well as those of eminent individuals dating from the 9th and 10th/15th and 16th centuries.

At Brunei, two tombs from the 15th century A.D. have been discovered. They are totally different from those of the Peninsular as regards the form and the style of the inscription.

(d) *Eastern Indonesia*. The island of Bali, where there is a small minority of Muslims in the north, has not hitherto yielded a single ancient inscription. There is one, however, on the island of Lombok, of which roughly half the population is Muslim. This inscription is bilingual: the *shahāda* in Arabic and a chronogram in Balinese script. The latter has been interpreted by Stutterheim as representing 1142/1727.

II. Charters and related documents.

(a) and (b) *Java and Sumatra*. On a *minbar* from the east of Java, of which we have only a facsimile, there is the date 1487 Śåkå/1565-6 A.D. inscribed in palaeo-Javanese numerals; but a chronogram which accompanies it causes difficulty. A small stele on at the centre of the ilsand, in Javanese, is dated 1624 S.J./1700-1 A.D. There are a number of texts in existence which are related to charters. They are written in Javanese and in Javanese characters, sometimes in Arabic characters (*pegon*).

In western Java (the Sundanese country), we have eleven charters dating from the 17th and 18th centuries A.D. (they are dated according to the Javanese Śåkå chronology).

From Bantan there are similar texts using both types of script, but dated according to the *hidjra* system. They date from the same centuries and are twelve in number.

Finally, from Palembang (southern Sumatra) there are various documents of which most are dated by the Javanese Śåkå chronology. They are written in Javanese language and characters and date from the 17th to the 19th century.

The appointment of a chief of the Badouy (the as yet Hindu population of the Sundanese country) dates from 1124/1712-13. This document is furthermore endorsed by the seal of a sultan of Bantan (the "Bantam" of the maps) which gives the date of the accession of this sovereign as 1102/1690. There are a number of other documents existing from the Lampung country, some written on bark, one on cattlehorn.

At Atcheh, documents of various kinds but generally authenticated by a seal, are called *sarakata*. None of those which have been preserved is very old.

(c) *Federation of Malaysia*. The most important document from this region is an inscription, unfortunately incomplete, of a type totally different and unique in this part of the world. The text includes a proclamation of Islam, followed by a list of ten in-

fractions, with the penalties laid down for each. The date is unfortunately incomplete but we can at least be sure that it belongs to the 8th/14th century. In this text there are very few Arabic words, and even the name of Allāh is rendered by an expression Hindu in origin, *Dewata Mulya Raya*.

(d) *Eastern Indonesia*. Especially interesting in this region are texts written in Arabic script but in the language of Ternate, emanating from the sultanate of the same name. They are all recent (19th century), but give valuable evidence concerning this language, which is not part of the Indonesian linguistic family (which henceforward may usefully be called Nousantarian), but which alongside Malay played the role of a lingua franca in the eastern parts of the Indonesian archipelago.

III. Inscriptions on various objects.

1. *Cannons*.

(a), (b), (c). *Indonesia and the Federation of Malaysia*. Cannons of diverse origin have been found (of French, Dutch or Indonesian manufacture) bearing inscriptions in Malay or in Arabic. They date from the 17th and 18th centuries. On one of these is inscribed the name *Yakertra* (variant of Djakarta) written in Javanese letters. It also bears a date, which is, however, problematical.

(d) *Eastern Indonesia*. A cannon of Indonesian manufacture, dating from the start of the 18th century, has been found at Soulawesi. It bears the name La Patau, the nephew of the famous Sultan of Boné, Aru Palakka.

2. *Other objects*.

(a) *Java*. There are various brief inscriptions on mortars and on carved wooden panels, all of them from the 19th century.

(c) *Federation of Malaysia*. From this region there are a number of *gantang* (measures for rice) bearing the name of the sultan of the period. They are mainly from the 19th century, and one of them even dates from the beginning of the 20th.

B. *Thailand*

From this country we have only one inscription, which is now in the museum of Sukhothai. It consists of five lines in Arabic (the name of the four archangels and the *shahāda*) as well as two lines in Urdu. It is dated 1338/1919 and has therefore no historical value, but it bears interesting witness to the behaviour of an Indian Muslim in a Buddhist country.

C. *Cambodia*

One inscription only has been found in the area of Pnom Penh. The first three lines consist only of pious texts and the fourth, which perhaps contains more interesting details, unfortunately cannot be deciphered.

D. *Čampa*

Two tombstone inscriptions have been found at Čampa, in Arabic with Kūfic characters. One is from 431/1039. The other is undated, but judging by the palaeography, is of roughly the same age as the first.

Bibliography: For convenience, the sources have been divided in the same way as in the text of the article, sc. in three groups: I. Tomb inscriptions; II. Charters and related documents; and III. Inscriptions on various objects. Each of these groups is subdivided also according to the article proper into (a) Java, (b) Sumatra, (c) Federation of Malaysia (including British Borneo) and (d) Eastern Indonesia. In general, only books and articles discussing the epigraphic data are listed here.

I. Tomb inscriptions.

a. *Java*. For the inscription of Malik Ibrāhīm's tomb at Gresik, see *TBG*, index 1910-13, under the name of Ph. S. van Ronkel, Th. Juynboll, J. P. Moquette and H. Djajadiningrat; anon., *Grisee, Grissee*, in *ENI*², i (1917), 819; G. P. R[ouffaer], *Lèran*, in *ENI*², ii (1918), 570; Moquette, *De oudste Mohammedaansche inscriptie op Java*, in *Verhandelingen van het Eerste Congres voor de Taal-, Land- en Volkenkunde van Java, gehouden te Solo, 1919*, Weltevreden, 1921, 391-9; P. Ravaisse, *L'inscription coufique de Léran à Java*, in *TBG*, lxv (1925), 668-703; D. A. Rinkes, *De Heiligen van Java. I. De maqām van Sjeich 'Abdoelmuhji*, in *TBG*, iii (1910), 556-89; idem, *De Heiligen van Java*. iv. *Ki Pandan arang te Tembajat*, in *TBG*, liii (1911), 435-581; Sur la tombe de Selâ Sirah: J. L. A. Brandes, *Enkele oude stukken ... te Leiden*, in *TBG*, xlvii (1904), 457 f.; on the complex of Ratu Kali Nyamat: F. D. K. Bosch, *OV* (1930), 52-7 with pls. 12-23; on Saṅḍan Ḍuwur and Goṅḍan Lor: W. F. Stutterheim, *OV* (1939), 10, n. 1 and fig. 34; L. C. Damais, *Etudes javanaises* I: *Les tombes musulmanes datées de Trâlâyâ*, in *BEFEO*, xlviii (1957), 353-415 with 20 plates.

a/b. *Java and Sumatra*: Moquette, *De grafsteenen te Pasè en Grissee vergeleken met dergelijke monumenten uit Hindoestan*, in *TBG*, liv (1912), 536-48; M[oquette] and H. D. [jajadiningrat], *Oudheden (Mohammedaansche)*, in *ENI*², iii (1919), 201-5; Djajadiningrat, *In Memoriam Jean Pierre Moquette*, in *TBG*, lxvii (1927), 1-35.

b. *Sumatra*. The official *Reports* of the prospecting mission undertaken since 1912 in northern Sumatra will be found in: J. J. de Vink, *Uittreksel uit het verslag over de oudheidkundige werkzaamheden in Pasè*, in *OV* (1912), 53-6; 68-72, 118-20, (1913), 11-2, 53-5, 70-2, 111-2; (1914), 41-2; idem, *Uittreksel uit het verslag over de oudheidkundige werkzaamheden in Atjèh*, in *OV* (1914), 81-3; 217-9, (1915), 40-1, 127-8; 167-8; (1916), 21, 61-2, 97-8, 158; (1917), 65-70.

Various studies: Moquette, *De eerste vorsten van Samoedra-Pasè*, in *ROD* (1913), 1-12, ill.; idem, *Verslag van mijn voorlopig onderzoek der Mohammedaansche oudheden in Atjeh en Onderhoorigheden*, in *OV* (1914), 73-80; [anon.], *Blang Mè*, in *ENI*², i (1917), 313-4; Moquette and Djajadiningrat, *Een merkwaardig ingewikkeld raadsel op een Pasèschen grafsteen*, in *OV* (1923), 20-8, ill.; Moquette, *Fabriekswerk*, in *NBG*, lviii (1920), 44-6, ill.; G. L. Tichelman, *Een marmeren praalgraf te Koeta Kareuëng*, in *Cultureel Indie*, ii (1940), 205-11, ill.; H. K. J. Cowan, *A Persian inscription in North Sumatra*, in *TBG*, lxxx (1940), 15-21, ill.; R. O. Winstedt, *A Pasai chief with a Persian memorial inscription*, in *JMalBrRAS*, xviii/2 (1940), 149; Bosch, *De inscriptie op den grafsteen van het gravencomplex genaamd Teungkoe Peuët-Ploh-Peuët*, in *OV* (1915), 129-30, ill.; Stutterheim, *A Malay sha'ir in old Sumatran characters of 1380 A.D.*, in *AO*, xiv (1936), 268-79, ill.; Winstedt, *Did Pasai rule Kedah in the XIVth Century?*, in *JMalBrRAS*, xviii/2 (1940), 150; G. E. Marrison, *A Malay poem in old Sumatran characters*, in *JMalBrRAS*, xxiv/1 (1951), 162-5; Moquette, *De grafsteen van Kloempang (Deli)*, in

III. Inscriptions on various subjects:

a. *Java*: Cohen Stuart, *Een oud vuurwapen van Djakarta*, in *TBG*, xx (1871-73), 70-7, ill.; Crucq, *Inscripties op oude kanonnen*, in *OV* (1930), 237-8, ill.; idem, *Een aequivalent van Ki Amoek te Batavia*, in *TBG*, lxxvi (1936), 576-8; idem, *De geschiedenis van het heilig kanon te Banten*, in *TBG*, lxxviii (1938), 359-91; idem, *Epigraphische Aanteekeningen*, in *OV* (1929), 259, 261; idem *Houtsnijwerk met inscripties in den Kraton Kasepoehan te Cheribon*, in *Djåwå*, xii (1932), 8-10, ill.

b. *Sumatra*: E. Netscher, (Cannons), in *NBG*, iv (1866), 271-2, s⁰; C. A. Gibson-Hill, *Notes on the old cannon found in Malaya and known to be of Dutch origin*, in *JMalBrRAS*, xxvi/1 (1953), 158, ill.

c. *Federation of Malaysia*: Blagden, *A XVIIth century Malay cannon in London*, in *JMalBrRAS*, xix/1 (1941), 122-4; Rentse, *Gantang of Kelantan*, in *JMalBrRAS*, xi/2 (1933), 242-4, ill.

d. *Eastern part of Indonesia*: Crucq, *Inscripties op oude kannonen*, in *OV* (1930), 238-9.

C. *Cambodia*: (anon). *La stèle arabe du Phnoṁ Bakheṅ*, in *BEFEO*, xxii (1922), 160.

D. *Čampa*: M. P. Ravaisse, *Deux inscriptions coufiques du Čampa*, in *JA*, 11/xx (1922), 247-89.

(L. Ch. Damais)

9. Iran and Transoxiana.

Before the advent of Islam, the regions of Iran and Transoxiana had long-established traditions of

literacy. On the one hand, use was made of various scripts derived from the Imperial Aramaic of the Achaemenid chanceries during the 5th and 4th centuries B.C. These employed a largely historical spelling for Iranian words, and combined with this, ideographic writing-elements formed from Semitic roots, but with added Iranian terminations (known as phonetic complements) to indicate the inflexions. On the other hand, in the regions of Balkh, Ṭukhāristān and Rukhkhadj, there had been current the cursive Bactrian script, a slightly modified form of the Greek alphabet, which like its parent employed for this Iranian dialect straightforward phonetic spellings. This survived on the so-called Arab-Hephthalite coins until the coming of Islam. Here and there, among the Buddhist communities, Indian Kharoṣṭhī and even Brahmī scripts had formerly been known; but with these, as with the Runic Turkish of Eastern Turkistan, and the undeciphered Kushan linear script of Dasht-i Navor, we are not here concerned.

To the first group, the descendents of Aramaic, belonged Parthian, Sogdian and Khwārazmian, besides a little-known variant of the same type used in Māzandarān. Sogdian and Khwārazmian lingered on, again on coins, well down into Islamic times. More prominent, however, was (Sasanian) Pahlavī, which, in its cursive form known as Book-Pahlavī, co-existed with Islam for centuries as a vehicle of Zoroastrian scriptures. It is found beside Arabic in bilingual Islamic inscriptions of the Caspian region at Rādkān (Neka), Lādjīm and Rasgit (Resget), and perhaps was the only method of writing the Persian language in the earlier Islamic period. Until the time of al-Ḥadjdjādj in 76/695-6, Pahlavī had been the chancery script of the eastern Arab governors. That viceroy, however (as asserted by al-Ḳalḳashandī, *Subḥ al-aʿshā*, i, 423) converted the chancery of al-ʿIrāḳ, and ultimately of the Iranian east, to Arabic script and language. In 84/703-4, Book-Pahlavī and Cursive Bactrian occur together with Arabic on a coin of the Gūzgān district in Afghānistān issued by Yazīd b. al-Muhallab. Sogdian and Khwārazmian script continue to occur on coins of Bukhārā and Khwārazm, and Book-Pahlavī on the issues of Ṭabaristān, well into ʿAbbāsid times. Otherwise, the language of the Umayyad "Reformed coinage", and succeeding Muslim issues, is uniformly Arabic, apart from the Marw issue of 79/698-9, which has the city-name in Pahlavī.

The four earliest varieties of the Arabic script, according to Ibn al-Nadīm, *al-Fihrist* (ed. Flügel, 8) were *makkī*, *madanī*, *baṣrī* and *kūfī*. The implied differences between these forms still elude modern commentators, who today use the term Kūfic (as opposed to *kūfī* in Ibn al-Nadīm's sense) with general application to all varieties of monumental, angular, and (usually) unpointed Arabic script, employed for the writing of Ḳurʾāns, in lapidary inscriptions, and in coin-legends. It can be observed that the Umayyad "Reformed coinage" actually shows five distinct styles of script: that of Damascus with its related mints; that of the earliest issues from Iranian cities; that of Wāsiṭ, with the developed Iranian issues; that of Sidjistān, a curiously awkward script with "thorny" letter-terminals; and the thin and delicate script of the closing Umayyad, and revolutionary ʿAbbāsid coinages.

Apart from inscriptions on the coins, the dated Arabic inscriptions of Iran, as at present known, begin surprisingly late. The earliest are a still unpublished series at Bahmāndiz, near the border of Fārs and Iṣfahān Provinces. The clearest text reads *ʿamarahā Khāzim b. Muḥammad b. Djāba (?)/sanat khams sittīn wa-miʾatayn*. Another records the birth of Muḥammad b. Yūsuf b. Khāzim on Monday, 27 Shaʿbān 309. The same site has one poorly preserved Book-Pahlavī inscription, and many other short texts in Arabic. A substantial list of the known Arabic inscriptions of Iran to 600/1203-4 was compiled by Miles. The earliest of consequence are the famous texts of the Būyid ʿAḍud al-Dawla Fanā-Khusraw [*q.v.*] in the Tachara at Persepolis, recording the defeat of Muḥammad b. Mākān in Ṣafar 344/May-June 955 and the ʿAmīr's interest in the decipherment of inscriptions. One of the texts has been shown to contain several Persian words (R. N. Frye, *The heritage of Persia*, London 1962, 251, 290, with fig. 63). Nearby is the inscription of Bahāʾ al-Dawla [*q.v.* in Suppl.] dated 392/1001-2. Earlier in fact than any known Arabic inscription of Iran or Afghānistān is the enigmatic text from the Tochi Valley in Wazīristān, now in the Peshāwar Museum, which is dated Djumādā I 243/August 857. This seems to contain a mention of "the land of ʿUmān", which, with the early date, could imply a connexion with the Khāridjite amīrate at Gardīz [*q.v.*], since judging by the *Taʾrīkh-i Sīstān*, caliphal control could not then have extended so far east.

Decorative varieties of Arabic script were equally slow to appear in the Islamic East. The texts of ʿAḍud al-Dawla show no more than occasional barbed terminations, and characters linked by small loops beneath the base-line. Foliation of letter-terminals seems to have developed first in Egypt, and to have been quickly followed there by Floriation (by which is here understood the use of attached, but extended, leaf-decoration, as well as that of circular flowers, either attached or separate). Such features, as Grohmann showed, were known in Egypt as early as 218/833-4, and must have travelled thence to the East; not, as Van Berchem maintained, on the evidence of a restored inscription at Tashkent, from Central Asia westwards. In Iran, strongly Foliated Kūfic often tending to floriation is found in undated (probably 4th/10th century) inscriptions of the Masdjid-i Djāmiʿ at Nāyin. The earliest dated examples of floriation appear to be the inscriptions of Badr b. Ḥasanawayh, a Kurdish ruler in Luristān: one at each end of the Pul-i Māmulān near Khurramābād, alike dated 374/984-5, and another from the Pul-i Kashkān completed in 399/1008-9, which all record the building of the bridges. Very fine specimens of Floriated Kūfic are those of the minaret of the Pā-yi Minār mosque at Zawāra (461/1068-9), and the tomb-tower of Hormizdyār at Rasgit (Resget). From a reading of its date that was uncertain, Godard sought to ascribe the latter to the 5th/11th century, but its thick, heavy script and florid decorations are more comparable with the legends of the Khwārazm-Shāhī coins of the 6th/12th century; and in any event, the closing words can hardly be taken for a date. In fact, the principality of Khwārazm had been slow to develop an ornate calligraphy. That region during the 5th/11th century had adopted an austere and elegant style, unusual only for the sweeping curves of the *djīm*, *ḥāʾ* and *khāʾ*, which is exemplified by the foundation-text of Maʾmūn b. Maʾmūn (dated 401/1010-11), in lead, from a minaret at Urgandj, or Gurgāndj [*q.v.*], now at Tashkent. With this may be compared the silver tray of the unidentified prince Tādj al-Umma wa-Sīrādj al-Milla Khwārazm-Shāh b. Ibrāhīm, reproduced by Smirnov. Further to the west in the Ziyārid kingdom,

the inscription of the Gunbad-i Ḳābūs (395/1004-5) is in a magisterially simple, yet wholly undecorated script. Such austere forms were well-adapted to rendering in the brickwork of the many minarets and domes erected under the Saldjūḳs in Iran: such, for example, as the plain and elongated lettering of the founder's inscription of the minister Niẓām al-Mulk in the sanctuary of the Djāmiʿ at Iṣfahān (*AMI*, vii, 2-3, 83) or that in the name of the Sultan Muḥammad b. Malik Shāh at Gulpāyagān.

More adventurous calligraphic developments had meanwhile been taking place in the Sāmānid territories of Transoxania and Khurāsān, no doubt stimulated by the introduction of paper-manufacture from China, and the stimulus consequently given to penmen. On the slip-painted "Nīshāpūr" pottery, magnificient lettering is found in black or chocolate over a pale ground, and plaited or interlaced letter-forms soon become widespread. In the absence of dated specimens, chronology of the pottery depends on examples in other media. Interlaced letters appear on a *dīnār* of Naṣr b. Aḥmad dated 324/935-6 from al-Muḥammadiyya (Rayy), and similar forms are found frequently on subsequent Būyid coins of North Iranian mints. Thus Plaited Kūfic seems to have been diffused from east to west across the Islamic world, in the opposite direction to floriation. In Iran, the classic example of the plaited style is the epigraphic frieze of Abū Djaʿfar Muḥammad b. Wandarīn on his tomb-tower at Rādkān in Māzandarān, commenced in 407/1016-17 and completed in 411/1020-1. The outstanding specimen to combine floriation with plaited decoration is the script at the tomb of Yaḥyā b. Zayd (known as Imām-i Khurd), at Sar-i Pul in Afghānistān. Undated, it mentions one Abū ʿAbd Allāh Muḥammad b. Shādān, evidently a relative of Abū ʿAlī Aḥmad, *wazīr* of the Saldjūḳ Čaghrī Beg, and so should be several decades later than the Saldjūḳ occupation of Balkh around 433/1041-2. Plaited script appears also on the celebrated arch of Bust in southern Afghānistān, which though ascribed by commentators to the 6th/12th century, has greater affinities, both architectural and epigraphic, with the Ghaznavid period. In view of this last fact, its fragmentary date could suitably be restored merely as *arbaʿmiʾa* (400/1009-10), which would thus be the earliest specimen of Plaited Kūfic in the Ghaznavid area, and belonging consequently to the reign of Maḥmūd I.

More typical of the lettering of the Ghūrid period, in contrast to the previous examples, is a Bordered Kūfic which descends from that of the later Ghaznavid minarets, those of Masʿūd III (492-508/1099-1115) and Bahrām Shāh (511-52/1117-57) at Ghazna. Here the decorative border is independent of the actual lettering, though both stand on a floral background. A forerunner of this convention may be the so-called shrine of Bābā Ḥātim or Sālār Khalīl, near Andkhoy, which may even predate the Saldjūḳ occupation there, and has bordered decoration of a simple kind. This monuments of the mature Ghūrid period (late 6th/12th century) show a great variety of scripts, which include a stiff, archaising Kūfic, and a flowing Naskhī (Thulth, see below). The most characteristic, however, both at Čisht, and in particular at Shāh-i Mashhad, is a form with broad decorative borders developed into complex geometrical forms. Further to the west, under successors of the Saldjūḳs in Iran, Bordered Kūfic is seen resembling that of the minarets at Ghazna on that at Nigār in Kirmān province. Enhanced with sparse turquoise tiling, it is presumed to date from 615/1218-19.

The Kūfic inscriptions so far discussed are all couched in Arabic. The small number of Persian epigraphs known which were written in this character were discussed by Bombaci in his examination of the long and fragmentary Persian verse-inscription on marble slabs, found in the palace of Masʿūd III at Ghazna (built in 505/1111-12). He notes Persian verses also on the tomb of an unknown person at Ghazna. However, the earliest example of such a text is on the portal-arch of Ribāṭ-i Malik near Bukhārā (Pope, *Survey of Persian art*, Pl. 272B), ascribed to the Ḳarakhānid Shams al-Mulk Naṣr b. Tamghač Khān Ibrāhīm (471/1078-9). Other monumental Persian inscriptions are at the tomb of Muʾmina Khātūn at Nakhčivān (N. Khanikoff, *Mémoire sur les inscriptions musulmanes du Caucase*, in *JA* [1862], 113-15); and especially that at the mausoleum of the later Ḳarakhānid Djalāl al-Dīn al-Ḥusayn b. al-Ḥasan b. ʿAlī at Uzgend (547/1152), where the Persian foundation-text is in sinuous Naskhī, and the largely Turkish protocol of the ruler, below, in a rigorously geometrical Bordered Kūfic. In unpointed script Persian has always been found extremely difficult to read, and it was only with the advent of fully-pointed Naskhī that the monumental use of Persian became extensive.

In any event, by the close of the 5th/11th century, decorated Kūfic was passing out of favour, both by reason of its difficult legibility, and perhaps on account of associations with the Fāṭimid dynasty, considered hostile by the Saldjūḳs. Cursive handwritings, the rounded Naskhī, and the flowing and ligatured chancery hands, had always co-existed with the angular script, and now emerged with full monumental status. A Naskhī text on the tombstone of Maḥmūd I at Ghazna contains the date 421/1030, but is often considered a later addition, as are the Kūfic inscriptions on the wooden doors from that tomb. Nevertheless, Ghazna played a leading part in the innovation, for the specimen there on a marble panel naming the Sultan Ibrāhīm b. Masʿūd is unlikely to be later than his death in 492/1099, in view of its wording. At Dandānkān [*q.v.* in Suppl.], a Naskhī text is placed before 494/1100. A small panel in Naskhī appears on the Čihil Dukhtarān minaret at Iṣfahān (dated 501/1107-9), as also on that of Muḥammad b. Malik Shāh at Sāva (504/1110-11), where the main text is Kūfic. The minaret at Dawlatābād near Balkh is ascribed to the year 502/1108-9. Besides a band of Kūfic it has a fine epigraphic frieze of Naskhī type (of a style which some designate Thulth). At the Imām-i Kalān shrine at Sar-i Pul nearby, the entrance inscription is in sprawling Naskhī, but unhappily only the units figure of the date is legible (- - 9). Thereafter, the historical inscriptions of Muslim monuments were regularly in the rounded script, as at the Imām-zāda Karrār at Buzūn (528/1133-4), which provided Herzfeld with the occasion to prepare a list of Kūfic and Naskhī inscriptions noted in his time. Recent discoveries enable us to add to his list the *madrasa* of Shāh-i Mashhad already mentioned, and the mausoleum of Qorveh (Ḳurwa) near Ḳazwīn, ascribed to 575/1179-80. Arabic manuals of calligraphy, followed by several recent commentators, apply special terms (*thulth*, *muḥaḳḳaḳ*, *rayḥānī*, *ruḳʿa* and so on) to varieties of Naskhī script. Yet since the application of these in succeeding periods is inconsistent, and the categories appearing on monuments do not always correspond, it is safer to use only the general term. From the second half of the 6th/12th century, Naskhī inscriptions exist in substantial

numbers in Iran. The best general study, no longer, of course, up-to-date, is that of Kratchkovskaya (in Pope, *Survey of Persian art*, iv, 1770-84). Often the Naskhī characters stand, without attachment, on an overall background of vegetable scrolls, a convention found also in the latest phase of Kūfic. In the period of the Ilkhāns and later, wide variations are found in the forms of script under the Naskhī "label". As outstanding specimens, mention must be made of the *miḥrab* of Öldjeytü in the Djāmiʿ of Iṣfahān, and the *minbar* of the Muẓaffarid Aḥmad at Sīrdjān, with its massed verticals typical of the *ṭughrā* style. Yet the fashion for Naskhī, in numerous forms and varieties, with increasing use of diacritical points and signs, persists down to the time of the Ṣafawids and still more recently. In later centuries, monumental inscriptions stand closer to the traditions of the manuscript copyists. Besides foundation-texts, they often include the detailed provisions of *waḳf*-endowments. However, from the point of view of script, they hardly make the same call as the examples of the Kūfic period for separate treatment.

10. India.

The Indian sub-continent is very rich in Muslim inscriptions, the study of which affords valuable information not only to the archaeologist and historian but also to the geographer, the economist, the student of religions, the linguist, and of course the calligrapher. Most of them are found on religious buildings (tombs, mosques, *ʿidgāhs*, *imāmbāṛās*, *madrasas*) and military works (forts, gates, bastions, cavaliers, towers), or on works of public utility (bridges, tanks, *bāʾolīs*, dams, sluices, *sarāʾīs*); some are also found on palaces, gardens, pavilions, etc.; and another class is found on movable objects such as guns and swords, ornamental metalwork including Bīdrī ware [see BIDAR], and on crystal and jade [see BILLAWR and YASHM]. The greatest part of the public inscriptions is carved on stone; often of a stone identical to that of the main building material, but not infrequently a specially selected fine-grained stone is used for the inscription and cemented into the structure.

Here the question of authenticity must be considered. An inscription may indeed be exactly contemporary with the building on which it appears. But it may also be earlier, preserved through the reverence accorded to the written word or through the ascription to it of some special sanctity, and set into a later unrelated building; or else later, marking say the completion of a building project essentially constructed perhaps half-a-century earlier, as at the Djāmiʿ masdjid of Bīdjāpur [*q.v.*], a late ʿĀdil Shāhī building whose inscription records its completion by Awrangzīb; or recording a restoration (as in many works in Dihlī of Fīrūz b. Radjab, whose inscriptions have to be studied in connexion with the problems of interpretation in his own accounts of his restorations in the *Futūḥāt-i Fīrūz-Shāhī*: see DIHLĪ. Monuments); or it may be fictitious—not necessarily mischievously: for example, the Persian inscription of the Masdjid Ḳuwwat al-Islām at Dihlī is probably a *pia fraus* of sixty or seventy years after the conquest.

The technique of carving stone inscriptions in Arabic, Persian or Urdū is conspicuously different

from that of inscriptions in other Indian languages, where the characters are engraved into the surface of the stone; in the Muslim inscriptions the outline of the letters is first written on the stone, and the ground between the letters then chiselled away leaving the inscription level with the original surface. A similar technique may be applied to inscriptions on crystal and jade, and also to the larger metal pieces, although on any of these fields the letters may be incised and the grooves filled with another material to leave an inscription flush with the surface; in the case of Bīdrī ware this is regularly of silver bar laid into the base metal. Inscriptions in ceramics may be either of letters in a contrasting colour fired integrally in a regularly-shaped tile (*haft-rangī*: see KHAZAF), or consist of the individual letter-shapes let into a contrasting ground by a mosaic technique. The former ceramic technique is more commonly employed for simple repetitive motifs (e.g. the names Allāh or Muḥammad), sometimes combined with a moulded base on which the letter-shapes are raised, as on the merlons of Rukn-i ʿĀlam's tomb in Multān; mosaic tile inscriptions, which do not appear until the 11th/17th century, are best exemplified in the Mughal buildings of Lahore ([see LĀHAWR]).

The language of the earliest inscriptions is invariably Arabic. There are no inscriptional records of the ʿAbbāsid presence in Sindh, although a few were engendered by the Muslim communities which lingered on in Sindh and the Pandjāb, with their occasional offshoots to Kaččh and the north coast of Kāṫhīāwāṛ [see GUDJARĀT], to which were added the small communities which grew up around the *khānḳāh*s of individual Ṣūfī saints who drifted in to India before the Ghūrid conquest, especially in the Pandjāb and the Ganges valley. After the Ghūrid conquest of Dihlī, dating inscriptions remain in Arabic regularly until towards the end of the 7th/13th century, when they are replaced by Persian; non-historical epigraphs tend to remain in Arabic somewhat longer, and of course Arabic persists up to the present day for Ḳurʾānic quotations on mosque and tomb inscriptions. This does not, however, apply to the sultanates of Bengal, where the preferred language of dating inscriptions remains in Arabic until Mughal times. In late Mughal times, in north India Urdū inscriptions appear beside Persian. Away from Dihlī, there are many bilingual and trilingual inscriptions, especially in the Deccan (Persian/Sanskrit, Persian/Marāṭhī, Persian/Kannaḍa, etc.); there are a few inscriptions in the Deccan regions in Dakhnī [*q.v.*]. Not infrequently the date is written in Arabic words in a Persian inscription; and often the Arabic, and to a less extent the Persian, is grammatically incorrect. The date in north Indian inscriptions is regularly expressed in Hidjrī years, except for a few inscriptions of the time of Akbar and Djahāngīr which use the Dīn-i Ilāhī [*q.v.*] system, or are dated by regnal years. In the Deccan, various solar calendars are occasionally used, especially the *Shuhūr san* (well studied by Marie Martin, in an unpublished M.A. thesis of the University of Colorado) in the ʿĀdil Shāhī sultanate of Bīdjāpur, and a *Faṣlī san* in Golkonḍā and under the Niẓāms of Ḥaydarābād. In Mysore under Ḥaydar ʿAlī and Tipū Sulṭān, the Mawdūdī era is used. For these eras, see TAʾRĪKH.

The scripts in use are the common Kūfic, *naskh*, *thulth*, and *nastaʿlīḳ*. Kūfic is used only in the earliest dating inscriptions, and retained long after its period of active use in Ḳurʾānic quotations. *Naskh* and *thulth* are in common use for both Arabic and Persian inscriptions all over India, with some regional modifications. *Nastaʿlīḳ* is regularly used for Persian inscriptions in and after the Mughal period, and for inscriptions in Urdū. Of the regional styles, the most striking is that of Bengal, where the vertical strokes of *alif*, *kāf* and *lām* are much elongated and spaced evenly across the length of the inscription, leaving the significant parts of the remainder of the letters to occupy the lowest quarter or third of the band; sometimes the tails of final or detached *nūn* or *yāʾ* are so disposed in the top part of the inscription to produce the "bow and arrow" effect. A similar style is seen also on some of the coins of Djawnpur. Elaborate *ṭughrā*s fall more in the domain of *farmān*s and other such documents rather than in public epigraphs, although they are certainly known in ceramic tile inlay and in *pietra dura* in Mughal buildings; but simpler *ṭughrā*s, in the square seal-script, are not uncommon, consisting usually of repetitions of the names Muḥammad or ʿAlī, or both, or the *kalima*. None of these seal-script inscriptions approaches the complexity of the Iranian examples. Simple dating inscriptions are usually unadorned; but many mosque inscriptions, starting with the *maḳṣūra* arches of the first stage of the Masdjid Ḳuwwat al-Islām in Dihlī, are engraved against an arabesque [*q.v.*] pattern also carried in relief on the ground. The finest example of this, however, is a dating inscription of the governor Tughril from a lost building at Bihār Sharīf. Similar arabesque patterns may also set off inscriptions in tilework or painted plaster, and occur also on coins of the Mughal period [see SIKKA]. Many inscriptions are of a high order of calligraphic excellence, and the names of many calligraphers in many regions of India are recorded.

The information which the inscriptions provide for the historian is sometimes very valuable; at times, they furnish the only sources for doubtful points of dynastic chronology; they supply missing details from the literary histories, or enable confusing points to be resolved where the other documents are in conflict; they enable more complete lists to be made of rulers' families, of the local nobility or court and town officials; and they are a valuable source of information on the history of the buildings on which they are found (subject to the reservation on their authenticity referred to above). Indirectly, too, their location enables the political status of border regions at certain confused times to be determined, such as the regions in dispute between the Mālwā and Djawnpur sultanates [*q.vv.*], or the Rayčūr *dōʾāb* [see HIND. History]; in many cases, an inscription is the only evidence for a fort or stronghold having been occupied by a particular power at any time. Even when rulers and governors are known from chronicles, the inscriptions often provide essential information on details of their careers, their promotions and postings, their achievements, even on their families. Tomb-inscriptions frequently mention their subject's birthplace, and thereby provide evidence for the extent of immigration and for the settlement pattern of foreign groups.

Administrative and economic details contained in or implied by the inscriptions can also be invaluable: information on details of departments, names of offices, and designations of office-holders; on the imposition or remission of taxes, and their varied application to certain classes or trades; on the nature and conditions of grants of land, both to

holders of an *iḳṭā'* [*q.v.*] and to charitable institutions such as mosque or *madrasa* as *waḳf* [*q.v.*]; on land cultivation or irrigation (well inscriptions, or records of repairs to tanks and dams, often refer to the amount of land intended to be irrigated); on regional boundaries; on markets. Records on works of public utility may include a schedule of expenses or the wages to be paid to employees. Geographical details, including distances, occur in inscriptions relating to roads and bridges, which also provide information on their builders—besides recording the correct forms of place-names, which seem singularly liable to corruption by copyists of the chronicles. Building inscriptions often indicate the cost of construction as well as details of the architects; an unusual inscription in the tomb of Hūshang Shāh at Māndū [*q.v.*] records a tribute by visiting Mughal architects of the family of master-builders who were later responsible for the Tādj Maḥall. Gun inscriptions, as well as prescribing essential instructions on the quantity of charge and shot required, frequently provide information on gun founding and the gun-founders—often Turks or Europeans—involved in the industry.

The literary contribution of the inscriptions must not be overlooked. Many inscriptions are in verses composed *ad hoc*, some of considerable beauty and skill; but it must be admitted that the verse of a lot of inscriptions is no better than doggerel. This is especially the case with verses containing a chronogram, where taste is often sacrificed in favour of ingenuity. There are occasional quotations from well-known Persian poets, but frequently the authors are local poets not otherwise recorded. Specimens of Dakhnī poetry are preserved in some Deccan inscriptions. Some prose inscriptions also evince literary merit, and may contain traditions not found in the usual collections of *aḥādīth*, such as the saying ascribed to Jesus in the Djāmi' masdjid of Fatḥpur Sīkrī (Persian), or the variations on a tradition (Arabic) in the mosque inscriptions of Bengal, basically: "The Prophet, God's peace be upon him, said 'He who builds a mosque to God, for him God builds a *ḳaṣr* in Paradise' ". Sentiments expressed range from strict and self-conscious rectitude through quietist mysticism to wistful nostalgia.

There is also the linguistic contribution of inscriptions. The occurrence of local words (Hindī, Bengali, Marāṭhī, Gudjarātī, Urdū and Dakhnī in particular) is useful in reconstructing the history (and social conditions of use) of Indian languages. Bilingual inscriptions provide evidence on the extent of use of local languages and their place in communication of official instructions to the public, and the status of a particular local language in a border area; this is especially the case in the Deccan, where Muslim inscriptions in Kannaḍa, Marāṭhī and Telugu are not uncommon besides the usual Persian and Dakhnī.

The Indian sub-continent has been fortunate in the attention which has been paid to Muslim inscriptions for well over a century. Hundreds are recorded in orientalist publications, besides those in specialist journals devoted to epigraphy alone; and India has been well served by highly competent Government Epigraphists appointed specially to oversee Arabic and Persian inscriptions, of whom Ghulam Yazdani and Ziauddin Desai are pre-eminent. The work of exploration, interpretation and publication is still active.

Bibliography: A complete bibliography would be enormous in view of the great corpus of Indian Muslim epigraphs published so far. Inscriptions which relate to particular regions of India are listed under regional articles on History. In the 19th century epigraphs were mostly published, usually with translations and notes, in *JASB*. From 1907 the invaluable *Epigraphia Indo-Moslemica* appeared, which continued until the independence of India and Pakistan. Pre-*EIM* inscriptions are listed in J. Horovitz, *A list of the published Mohamedan inscriptions of India*, in *EIM* (1909-10). Since the cessation of *EIM*, Muslim inscriptions of India have appeared in *Epigraphia Indica Arabic and Persian Supplement*, and valuable comments appear also in *Annual Report on Indian Epigraphy*. Articles and studies are recorded in Creswell, *Bibliography*, and its Supplement, and in Pearson and Supplements. Many of the earlier *EIM* articles collect the epigraphs of individual sultans, but recent discoveries have rendered many of these out-of-date. V. S. Bendrey, *Studies in Muslim inscriptions*, Bombay 1944, extracts some historical information from epigraphs published in *EIM* to that date, but since the author knew no Arabic or Persian many significant details were not appreciated, and the work suffers from the limitation of its corpus. There is a valuable chapter on Arabic and Persian epigraphy in the Deccan by Z. A. Desai in H. K. Sherwani and P. M. Joshi (eds.), *History of medieval Deccan*, ii, Hyderabad 1974. (J. BURTON-PAGE)

KITĀBKHĀNA [see MAKTABA]

KITĀMIYYA [see SHĀDHILIYYA]

ḲIṬFĪR, one of the most common names for the biblical Potiphar in Islamic tradition. It is probably a corruption of Fiṭfīr, based upon an early scribal error. Other forms of the name based on confusions of similar letters in Arabic script are Ḳiṭfīn, Ḳiṭ'īn, and Ḳiṭṭīn. The form Ḳiṭfīr is frequently corrupted further to Iṭfīr (so generally in Ṭabarī, Tha'labī, Zamakhsharī, Bayḍāwī, and others), and in some manuscripts Iṭfīn. He is given the patronymic Ibn Ruhayb (also Ibn Ruḥayb and Ibn Rūḥīt in mss.). There is considerable confusion regarding his name, and Ṭabarī, for example, uses several forms. Kisā'ī alone calls him Ḳūṭīfar, which is closest to the original Hebrew. In the Ḳur'ān, he is merely referred to by his title al-'Azīz (XII, 30, 51).

Ḳiṭfīr was the treasurer of Egypt. Because he immediately discerned Yūsuf's [*q.v.*] fine qualities, he is considered one of the three most insightful individuals (*afras al-nās*) in the judging of men, along with Shu'ayb's daughter, who asked her father to hire Mūsā, and Abū Bakr, who chose 'Umar as his successor (Ṭabarī, Tha'labī, Zamakhsharī, Bayḍāwī).

Several reflections of the Haggadic Potiphar are found in Muslim legends. Ḳiṭfīr dies after Yūsuf's release from prison. Yūsuf in most Muslim sources marries Ḳiṭfīr's wife and finds her a virgin. This is never explained by the fact that Ḳiṭfīr was a eunuch, as is common in the Judaeo-Christian tradition (based on a later interpretation of Bibli. Heb. *sārīs*), but rather that he was a homosexual as in some Jewish midrashim (comp. Ṭabarī, i, 396, with *Soṭa*, 13b, and *Genesis Rabba*, lxxxiii, 3). According to Kisā'ī, Ḳiṭfīr had been unable to have sexual relations with his wife because he was an alcoholic (*'annāb*). Yūsuf's marrying Ḳiṭfīr's wife probably reflects the association of Potiphar with Potiphera (Gen. xli, 45) in the midrash.

Ḳiṭfīr is a minor character about whom little is related in Islamic tradition.

(B. Heller - N. A. Stillman)

ḲIT̲H̲ĀRA, ḲITĀRĀ, a musical instrument of the lyre family. It first appears in Arabic literature on music in the 3rd/9th century to denote a Byzantine or Greek instrument of this type. It was made up of a richly-decorated rectangular sound box, two vertical struts fastened together by a yoke and strings which were left free at their greatest width. Ibn K̲h̲urradād̲h̲bih in his *K. al-Lahw* (ed. I. A. Khalifé, Beirut 1969, 19) and in his account appearing in the *Murūd̲j̲ al-d̲h̲ahab* of al-Masʿūdī (viii, 91 = § 3216) says concerning the *ḳit̲h̲āra*: "They (sc. the Byzantines) have the *lūrā* which is a *rabab* (sc. viol), which is made from wood and has five strings; they also have the *ḳithāra* with twelve strings". Al-K̲h̲ʷārazmī in his *Mafātīḥ al-ʿulūm* writes that "the *lūr* (*lyra*) is the *ṣand̲j̲* (harp) in Greek; the *ḳitāra* is one of their instruments, and resembles the *ṭunbūr* (lute with a long neck)". The approximation of the two instruments in the sources corresponds indeed to reality, because the *lūrā* and *ḳit̲h̲āra* were two variations of the same instrument type in vogue since classical times and up to the first centuries of Islam. The *lūrā* was a smaller instrument played by beginners and by amateurs, whereas the *ḳit̲h̲āra* was the instrument for professionals who towards the Islamic period used it to show off a virtuosity frequently displayed freely. It is possibly to this that a musical aphorism alludes, this figuring *inter alia* in the *Adab al-falāsifa* of Ḥunayn b. Isḥāḳ, the *Risāla fī ad̲j̲zāʾ k̲h̲abariyyat al-mūsīḳī* of al-Kindī, the *K. al-Lahw* of Ibn K̲h̲urradād̲h̲bih and the *Risāla fī 'l-mūsīḳī* of the Ik̲h̲wān al-Ṣafāʾ; "A philosopher (Orpheus, according to Ibn K̲h̲urradād̲h̲bih), having heard the sounds of a *ḳit̲h̲āra*, said to his disciple, 'Take me along to this musician, and possibly he will give us the benefit of a noble image'. But when they came upon him, they heard an unmetrical rhythm and a defective tune. So the philosopher then said to his disciple, 'The sooth-sayers assert that the raven's voice portends a man's death; if this is true, then the sound from this musician portends the raven's death'".

It seems that, at a later period, the term is used to denote a different instrument, the guitar, since this is the state of affairs in the *K. al-Imtāʿ wa 'l-intifāʿ*, where the *ḳitār* is one of the 32 instruments described in the second chapter (ms. Madrid, Res. 246). In the same realm of ideas, we believe that the name of the North African lute, the *kwītra*, derives from the interpretation of the *ḳit̲h̲āra* evolved by the authors of the 3rd/9th century who compared it to the *ṭunbūr* (lute with a long neck) or to the *murabbaʿ* (lute with a quadrangular sound box).

KITMĀN [see K̲H̲ĀRID̲J̲ITES; TAḲIYYA]

ḲIṬMĪR [see AṢḤĀB AL-KAHF].

AL-KIYĀ AL-HARRĀSĪ, S̲H̲AMS AL-ISLĀM ʿIMĀD AD-DĪN ABU 'L-ḤASAN ʿALĪ b. Muḥammad b. ʿAlī aṭ-Ṭabarī, known especially as al-Kiyā, jurisconsult of the S̲h̲āfiʿī school and As̲h̲ʿarī theologian, a dialectician known in his days as one of the best practitioners of the art of disputation. (The *nisba* al-Harrāsī = "a preparer of the food called *harīsa*", wheat and meat pounded together and cooked.) A class-mate of al-G̲h̲azālī and of the same age (they were born in 450/1058), al-Harrāsī died in 504/1010-11, one year before al-G̲h̲azālī.

He first studied in Ṭabaristān, which he left at the age of twenty to study under the direction of the Imām al-Ḥaramayn al-D̲j̲uwaynī [*q.v.*] in Nīs̲h̲ābūr; he was one of his most successful disciples and became one of the most able repetitors (*muʿīd*). He excelled in the field of law, both positive law (*fiḳh*) as well as its theory and methodology (*uṣūl al-fiḳh*). From Nīs̲h̲ābūr, al-Kiyā went to Bayhaḳ where he taught S̲h̲afiʿī *fiḳh*; this was very likely after the death of his teacher D̲j̲uwaynī in 478/1085. His class-mate al-G̲h̲azālī had gone to Ṭūs to the court of the Sald̲j̲ūḳ vizier Niẓām al-Mulk. From Bayhaḳ, al-Kiyā went to Bag̲h̲dād to assume the chair of law in the S̲h̲afiʿī *Madrasa Niẓamiyya*, a position which he kept until his death in 504/1110-11. He also taught *ḥadīt̲h̲*, and one of his pupils in this field was the famous tradition-expert al-Silafī (d. 576/1180-1).

Al-Kiyā was accused of Ismāʿīlī sympathies and was in danger of losing his life, but was saved by a petition signed by notable scholars of Bag̲h̲dād, among whom his older colleague and sparring-mate in disputations, the Ḥanbalī jurisconsult and theologian Ibn ʿAḳīl [*q.v.*].

Among his works, biographers cite the *S̲h̲ifāʾ al-murs̲h̲idīn*, considered by Tād̲j̲ al-Dīn al-Subkī as one of the most excellent works in the field of *k̲h̲ilāf*; and the *Naḳd mufradāt al-Imām Aḥmad*, points of law on which he differs from Aḥmad b. Ḥanbal. Al-Kiyā was in turn criticised by the Ḥanbalī S̲h̲ams al-Dīn Muḥammad b. Ḳudāma al-Maḳdisī (704-44/1304-43), in his *al-Radd ʿalā 'l-Kiyā al-Harrāsī*, as well as by the *Ḳāḍī 'l-Ḳuḍāt* al-Ḥasan b. ʿAbd Allāh, a student of Ibn Taymiyya (see Ibn Rad̲j̲ab, *D̲h̲ayl*, ii 438 (l. 14) and 454 (ll. 3-4), respectively). Biographers also attribute to him a work on *uṣūl al-fiḳh*, and this is borne out by a discovery made by G. Makdisi of a manuscript in the library of the University of Ankara, several years ago, during a search for works on *uṣūl al-fiḳh*. Indications on the title page show that this work of al-Kiyā had three recensions: great, medium and small, the extant copy being the medium recension. The title is given as *Taʿlīḳ fī uṣūl al-fiḳh*, and appears to be the work by the same title cited by Suyūṭī in his *Muzhir*, i, 23. It is not to be confused with his work on *uṣūl al-dīn* as suggested in Brockelmann, *GAL*, S I, 674 (l. 11), a manuscript of which is in the National Library in Cairo, for the work is definitely on *uṣūl al-fiḳh*.

Bibliography: *GAL*, I, 390, S I, 67 (bibliography cited); G. Makdisi, *Ibn ʿAqīl et la résurgence de l'Islam traditionaliste au XIe siècle (Vᵉ siècle de l'Hégire)*, Damascus 1963, 216 and n. 1 (bibliography cited), and index; idem, *Muslim institutions of learning in eleventh-century Baghdad*, in *BSOAS*, xxiv (1961), 41 and *passim*.

(G. Makdisi)

ḲIYĀFA (A.), the science of physiognomancy and the examination of traces on the ground.

In their concern for the purity of race and the

correctness of genealogical lines, the ancient Arabs perfected a technique which permitted them to verify, and, where necessary, to research into, lines of parentage. This technique consisted partly in experience and partly in divinatory intuition. In primitive times, a specialised personnel maintained the practice: but the progressive decline, in pre-Islamic Arabia, of personnel skilled in cultic and divinatory matters led to the accumulation of numerous mantic disciplines in the répertoire of the *kāhin* [*q.v.*]. But there were numerous individuals skilled in this sphere of activity who were not necessarily *kāhins* (cf., for example, Ibn Hishām, 115); certain tribes were noted for their practice of this art (the Banū Mudlidj, Khathʿam and Khuzāʿa).

Ḳiyāfa, ancestor of the Islamic *firāsa* [*q.v.*], comprised two branches:

(i) *Ḳiyāfat al-bashar*, "physiognomancy", which has the object of disclosing the lines of parentage between the child of an unknown father and his presumed father, with a view to his legitimisation. Thus by virtue of traditional *ḳiyāfa*, Muʿāwiya was obliged to recognise, as his consanguineous brother, Ziyād b. Abīhi [*q.v.*]. The principle on which *ḳiyāfa* is based is the necessary resemblance between the infant and his father. Certain parts of the body serve as points of reference, notably the sole of the foot, because, in most cases, the child has the same foot as his father (al-Masʿūdī, *Murūdj*, iii, 338 = § 1221). But these points of resemblances are not always evident; discovery of them requires a faculty of perception and a perfect memory (al-Rāzī, *Firāsa*, 13). The acute eye for detail possessed by the Bedouin contributed greatly to the perfection attained by the Arabs in this art.

(ii) *Ḳiyāfat al-athar*, the faculty of minute observation which the Arab displays, most notably in the course of everyday life. The examination of footprints permits him to find a stray animal, a fugitive chief, a lost path, etc.; he distinguishes the footprints of a man from those of a woman, those of a young man from those of an old man, those of a white man from those of a negro and those of a stranger from those of a local resident. He can even tell if the woman is a virgin or not.

This astonishing faculty of observation and deduction extended to the behaviour of animals. The legend of the sons of Nizār, interpreting, in each case according to a particular point, the traces of a camel, on their road, and the origin of the honey, the roast meat and the wine offered to them by their host (Masʿūdī, *op. cit.*, iii, 228 ff. = § 1092 ff.), is a perfect illustration of the minuteness with which the *ḳāʾif* dissected the most insignificant facts.

As a spiritual faculty surpassing human intelligence, *ḳiyāfa* possessed, as early as the pre-Islamic period, a sacred character which ensured its survival, as a judicial proof, in legal cases concerned with establishing the paternity of a child born of a slave (Ibn Ḳayyim al-Djawziyya, *al-Ṭuruḳ al-ḥikamiyya*, 208, 195-213). Shurayḥ, the famous *ḳāḍī*, was a *ḳāʾif*; al-Shāfiʿī wrote a *Risāla fī ʿilm al-ḳiyāfa* (Ḥādjdjī Khalīfa, i, 452; ms. Süleymaniyye, Mihrimah Sultan, 185, 4, in Turkish).

A product of nomadism and the milieu of the desert where it was applied under many different circumstances, *ḳiyāfat al-athar* rather lost some of its *raison d'être* in the Islamic city, where it was to be eclipsed by *firāsa*, which evolved on totally different principles.

ḲIYĀMA (A.), the action of raising oneself, of rising, and of resurrection. The root *ḳ-w-m* is employed very frequently in the language of the Ḳurʾān. *Ḳiyāma* occurs there seventy times, always in the expression *yawm al-ḳiyāma* "the day of resurrection". The resurrection of bodies follows the annihilation of all creatures (*al-fanāʾ al-muṭlaḳ*), and precedes the "judgment" (*dīn*), the "day of judgement" (*yawm al-dīn*). This will be the Last Hour (*al-sāʿa*). *Al-sāʿa*, *yawm al-ḳiyāma* and *yawm al-dīn*, taken as a whole constitute one of the "necessary beliefs" which determine the content of the Muslim faith. It may be noted that the word *nushūr* is an equivalent (in the Ḳurʾān) of *ḳiyāma*.

The works of *ʿilm al-kalām* and of *falsafa* deal with the whole subject of eschatology under the general title of *al-maʿād* "the return", a word which appears only once in the Ḳurʾān (XXVIII, 85) in the localised sense of "the place to which one returns". Hence very often, in learned discussions, the idea of resurrection will be expressed by "return". We may add that it would be inappropriate to deal with judgement as such and its modalities, or with retribution, under the term *ḳiyāma*. In this respect, the present article needs to be supplemented by the articles reserved for *al-ḥisāb*, "the reckoning", *al-maʿād*, *al-sāʿa* and *yawm al-dīn* [*q.vv.*]. We shall confine ourselves here to considering (1) the succession of eschatological events which precede and accompany resurrection; (2) the Ḳurʾānic arguments which demonstrate its possibility; and (3) the setting in perspective of the philosophico-theological problems which arise as a result.

I. *The succession of eschatological events.*

(a) Prophetic signs. Resurrection will be preceded by the end of the world, by "annihilation". The Meccan sūras are insistent on this. "Signs" will foretell the end; "the earth will be shaken with its earthquake" and will "yield up its burdens" (Ḳurʾān, XLIX, 1-2); the sky will crack, the planets will be dispersed, the seas "poured forth", the graves overturned (C, 9; LXXXII, 1-4; cf. LXXXI, 1-14; especially LVI, 1-6, etc.); the mountains (will fly) like "tufts of carded wool" (CI, 5), etc. The *Ṣaḥīḥ* of Muslim (viii, 179) gives a systematic list of these "signs". Al-Nasafī, in his *ʿAḳāʾid*, lists five of them, and the *Tafsīr* of al-Taftāzānī enumerates ten "major signs" (see the list in L. Gardet, *Les grands problèmes de la théologie musulmane—Dieu et la destinée de l'homme*, Paris 1967, 262, n. 6).

(b) The annihilation. On that day "the Sound shall ring out, and a second shall follow it" (Ḳurʾān, LXXIX, 6-7). This "sound" will be the "sound of the trumpet" (LXXIV, 8), which according to tradition will be blown by the angel Isrāfīl. Then there will not be, it is sometimes said, a single living being that does not die—"every soul shall taste death" (XXIX, 57). This is the final annihilation, where God alone remains in His absolute power, for "all shall perish save His countenance" (XXVIII, 88). In the course of time, this vision of an absolute *fanāʾ* came to be modified. From commentary to commentary, the number grows of the beings who shall escape annihilation: not because they are endowed with natural immortality, but on account of a "principle of permanence" (*ḥukm al-baḳāʾ*) which the will of God shall concede to them (list in L. Gardet, *op. cit.*, 264-6).

(c) The resurrection. When the "second blast of the Trumphet" has sounded, the whole of mankind, long dead or annihilated in the "great *fanāʾ*", will be revived in body, soul and spirit. "The day when the crier shall cry out from a nearby place, the day when they shall in all truth hear the cry, that will be the day of resurrection" (L, 41-2). Stress is always laid on the suddenness of this "return" to life. Resurrection is a rising up, the immediate passage, without reference to time, from non-life to life.

(d) The gathering (*ḥas͟hr*). God "shall gather" (L, 44; LIX, 2). He shall gather men together "as if they had stayed (in their tombs) only one hour of the day" (X, 45). He will gather the believers (XIX, 85). He will gather the impious (XX, 102; XXV, 17; etc.). He will gather men and *d͟jinn* (VI, 130), men and demons (XIX, 68). He will gather the angels (XXXIV, 40). This is the universal gathering. Also taking part in this, it is decided at a later stage, will be those protected from *fanāʾ* by divine mercy; and even, according to al-Nawawī, pack-animals and wild animals. This will be the "standing" (*al-mawḳif*) in waiting for judgement. Some traditions maintain that the first who will "rise" and arrive at the place of assembly (*al-maḥs͟har*) will be the Prophet of Islam. According to the most widespread beliefs, the prophets, the angels and the virtuous will be spared the terrors of waiting. But humanity in general "will sweat with agony"; they will be drenched in their sweat (*al-ʿaraḳ*), which will "bridle" them, as the bit bridles the horse (cf. al-G͟hazālī, *Iḥyāʾ ʿulūm al-dīn*, Cairo 1352/1933, iv, 436-7).

The Ḳurʾānic texts are abundantly glossed by *ḥadīt͟h*s (al-Buk͟hārī, ix, 46-61; Muslim, viii, 165-210, etc.). A whole didactic literature is grafted on to this stem. For example, in al-G͟hazālī, *ibid*., the last book of the fourth volume, entitled *D͟hikr al-mawt wa-mā baʿdahu*, 381 ff., in particular on the *yawm al-ḳiyāma*, 437-9; and the text attributed to the same author (wrongly, it appears), *al-Durra al-fāk͟hira* (ed. Cairo 1347/1928). See on this subject, as indicated in *EI*[1], Hughes, *Dictionary of Islam*, 539 ff., taking up the "Preliminary discourse" of Sale, section 4, 73-103 of the 1734 edition (the latter itself being based on Edward Pococke, *Porta Mosis*, ii, 235-313 of the Oxford 1654-5 edition, which deals at length with Arabic passages and expressions).

Popular imagery abounds with descriptive details and continually builds on the foundations of tradition. But such imagery is irrelevant to faith. On the other hand, the very fact of the resurrection of the body is a cardinal element of the Muslim faith. A meta-historical and unique fact, linked, as if to an "opposite correlative" (*muḳābal*), to the fact, also meta-historical, of creation.

We may further note that the S͟hīʿī beliefs refer to a first "return" which will precede the universal ressurection and gathering; only the virtuous will take part in it under the guidance of the *Mahdī* of the last times. This is the *rad͟jʿa* ("return to life"), a kind of millenarianism. The Rāfiḍīs, in the early centuries of Islam, insisted on this. It continues to be one of the perspectives of Imāmism, linked to the "return" of the 12th *Imām*, Muḥammad al-Mahdī, the "vanished one" (*al-g͟hāʾib*), who, with this "first return", will be *al-Ḳāʾim*, "the riser". The Ismāʿīlī "hidden sense" has more than once transposed the foretold *parousia* on a gnostic and extra-temporal basis.

The Muʿtazilīs opposed the Rāfiḍīs and declared this first resurrection to be "vain". Al-K͟hayyāṭ returns to it in his refutation of Ibn al-Rāwandī (cf. al-K͟hayyāṭ, *Intiṣār*, ed. Nyberg, French tr. A. Nader, Beirut 1957, *passim*, in particular 95-97/118-20). The As͟hʿarī reaction no longer held the idea of *rad͟jʿa*. Sunnī thought as a whole denies or ignores the expectation of a preliminary "return" of the virtuous, a golden age on earth preceding the day of judgement. For Sunnism, the only "return" is that of the last hour which will follow the "great *fanāʾ*", sc. that of the resurrection (*ḳiyāma*) and of the gathering (*ḥas͟hr*).

II. *Ḳurʾānic arguments*. As suggested by D. Masson (Ḳurʾān tr., Paris 1967, index, under "Resurrection"), these arguments may be grouped around three themes:

(a) A constant comparison of the creation (*k͟halḳ*) with the resurrection, which then appears to be a "new creation" (Ḳurʾān, XVII, 49; cf. XVIII, 48; XXI, 104; XXVII, 64) or "the second creation" (LIII, 47). It is the creative power of God which is invoked in reply to the man who would doubt the resurrection (XXII, 5); and to produce a second creation is "easy" for God (XXIX, 19; XXX, 27). He has created man and "formed him harmoniously" (LXXV, 38): "Is He who has done these things not able to bring the dead to life?" (LXXV, 40; cf. LXXXVI, 5-8).

(b) A second "sign" of the resurrection is the analogy of the production of vegetables and of fruits, and the revivification of the soil by water (XLI, 39; LXIII, 11). "Thus we restore life to the earth after its death. Observe how resurrection (*nus͟hūr*) comes about" (XXXV, 9; cf. L, 11). "God . . . brings forth the living from the dead and the dead from the living" (VI, 95; X, 31; XXX, 19): "thus we shall cause the dead to arise" (VII, 57). And resurrection after death is compared to the day that follows the night (XXV, 47).

(c) Finally, the example of miracles with reference to a dead man revived by God (II, 72-3 and 259). R. Blachère compares this last account with the Ethiopic version of the *Book of Baruch*. It should be noted that the Ḳurʾān does not speak here, like the *Book of Baruch*, of a waking after a miraculous sleep (cf. "the Seven Sleepers"), but of a new life after death.

III. *Problems posed*. The most diverse "professions of faith" (*ʿaḳāʾid*) steadfastly proclaim the resurrection of the body. But very soon problems of a philosophico-theological nature arise. The influence of the *falāsifa* is predominant. Not only the *Tahāfut* of al-G͟hazālī, but every *Kitāb al-Maʿād* of the major treatises of *ʿilm al-kalām* has the intention of refuting them, and, for this very reason, to a large extent adopts their methods of examining problems, and sometimes their vocabulary.

(a) The "punishment of the tomb" (*ʿad͟hāb al-ḳabr* [*q.v.*]). First question: is there a survival of the soul or of the spirit? Will the predicted resurrection be of the body alone, or of the whole man, body, soul and spirit? The Ḳurʾān does not talk explicitly of a survival of the soul or of the spirit after death. Man dies, then is recalled to life on the day of resurrection. Three texts, however (XL, 45-6; XL, 11; III, 169-70), are advanced by the *mutakallimūn* as evidence for the "punishment of the tomb"; at a later stage, "the pleasures of the tomb" are reserved for the virtuous. In conjunction with these texts, there are many *ḥadīt͟h*s, recognised as authentic (*ṣaḥīḥ*), which are quoted, such as "I take refuge with You against the punishment of the tomb" (cf. further, al-Buk͟hārī, xxiii, 87; lxxx, 37-9). The

punishment of the tomb and the interrogation that precedes it, the formulation thereby of a "first judgment" are mentioned in the majority of professions of faith. The Ash'arīs accuse the Mu'tazilīs of denying them. 'Abd al-Djabbār, on the contrary, affirms them; he locates them, however, not immediately after the "first death", but between the "two blasts of the Trumpet" (of annihilation, and of resurrection) that will sound at the last Hour. And his arguments in support of the punishment of the tomb are very close to the arguments habitually propounded by the Ash'arīs (cf. 'Abd al-Djabbār, *Sharḥ al-uṣūl al-khamsa*, ed. 'Abd al-Karīm 'Uthmān, Cairo 1384/1965, 732-3).

But what is at issue here is not the survival of a separate soul, by nature immortal. What is being discussed is a first and transitory resuscitation, at once corporeal and spiritual, which is not a true resurrection. It is not necessary, say some authors, that the entire body should revive; it is enough that some fundamental part or other, heart, kidney, etc., be animated afresh. Moreover, if the body has been completely devoured or reduced to ashes, it will not be difficult for God to reassemble it and restore to life a sufficient quantity of matter (cf. al-Ghazālī, *Iḳtiṣād*, Cairo n.d., 88-9). Besides, this survival of the tomb is brief. After being thus examined and punished (or rewarded), the man experiences "the second death". For a resumé of the question, see al-Djurdjānī, *Sharḥ al-Mawāḳif*, ed. Cairo 1325/1907, viii, 318. It is also declared that the prophets and the *shuhadā'* who have died fighting for God are excused from the interrogation and from the punishment of the tomb.

Under various influences (Mazdaean? Christian? The *falāsifa*?), or through a simple endogenous development, the belief in a survival of the soul or the spirit is developed: whether in the tomb, with, according to the circumstances, appropriate punishments or rewards; or in other places; or even in Paradise for the spirits of the prophets, of the *shuhadā'* and, according to some, of the Muslim children who have died before the age of reason. These spirits, in Paradise, are provided with a temporary body symbolised by "the gizzards of green birds". Furthermore, an exegesis that has come to be accepted of Ḳur'ān, XVII, 84 "the spirit proceeds from the commandment of your Lord", points to the directly divine origin of the spirit, hence to its immortality (cf. al-Ghazālī, *al-Risāla al-laduniyya*, the second of the short treatises linked together under the title *al-Djawāhir al-ghawālī*, ed. Cairo 1353/1934).

We have here a brief revival (body and soul), prolonged or not by a survival of soul or spirit, and what is at issue is, in any case, only a transitory state. The eschatological hour of the *yawm al-ḳiyāma* and that hour alone, retains its absolute quality.

(b) The *falāsifa*. The "punishment of the tomb" could hardly be accepted in anything other than a metaphorical sense in the view of the *falāsifa* in general. In their habitual concern to integrate all the articles of faith, they refrain from rejecting it, but interpret it according to the major frameworks of their anthropology. For them, in accordance with their Hellenistic sources, the reasoning soul, a spiritual substance, is by nature incorruptible; it belongs by nature to the sphere of separate substances. It is thus that Ibn Sīnā, describing the lot of souls after death, speaks of pleasures, or of purifications, or of intellectual punishments; with this explicit statement that the souls which, on earth, have taken pleasure only in physical enjoyments are now found to be irremediably deprived of them; they will be eternally at grips with tormenting and insatiable desires of lust and anger, and will draw from the celestial bodies the view within their imaginations of their torments (cf. *Nadjāt*², Cairo 1357/1938, 297). Their "hell" is to be barred from joining the higher angelic world—which we may take to be the world of separate substances—"where are found supreme happiness and accomplished splendour" (*Sharḥ K. Uthūlūdjiyā*, published by A. Badawi, in *Arisṭū 'ind al-'Arab*, Cairo 1947, 43). It is true, the "humble of spirit" (*buhl*), who have sought after good to the best of their ability, will enjoy a happiness that is subjectively absolute, objectively relative: an imaginative, not purely intellectual happiness, and the celestial bodies, here too, will supply them as if with an additional body. Thus, according to Ibn Sīnā, for the mass of humanity, what should hold is that which is said in the prophetic revelation about the judgment of the tomb, about punishments and potential rewards (cf. *Nadjāt*, 298; parallel texts in the *Shifā'*).

Are these spiritual torments and joys of the life to come connected with the *yawm al-ḳiyāma*, the day of resurrection of the body foretold by the Book? Resurrection is an article of faith too central to Islam to be explicitly and overtly dismissed by the *falāsifa*. Their position is nonetheless highly ambiguous.

It is appropriate to set aside Abū Yūsuf Ya'ḳūb al-Kindī, "the philosopher of the Arabs". He is the only *faylasūf* who explicitly maintained that philosophical research could be and should be strengthened and guided by prophetic revelation. Consequently, he professes, from a specifically philosophical point of view, the fact of the creation in time, and the possibility of the resurrection of the body; the latter is possible, he says, since that is what the creation was—thus he adopts the major Ḳur'ānic argument (cf. *Rasā'il al-Kindī*, ed. Abū Rīda, Cairo 1369/1950, i, 372 ff.). In works aimed at the "simple philosophers" (see *Manṭiḳ al-mashriḳiyyīn*, ed. Cairo 1328/1910, 3), Ibn Sīnā confines himself to affirming belief in the resurrection on the basis of Ḳur'ānic testimony: "The revealed law (*shar'*) maintains, and reason does not deny, that the body also will enjoy pleasures" (or will be plunged into misery and suffering); cf. *Tis' rasā'il*, Cairo 1326, 114-6; analogous texts in the *Shifā'* and *Nadjāt*. Such is, moreover, approximately the position of Ibn Rushd. It is for the sake of his respect for prophecy and the revealed law that he opposes with such vehemence the accusations of the *Tahāfut al-falāsifa* (*Tahāfut al-tahāfut*, ed. Bouyges, Beirut 1930, 580-6; see translation by S. Van den Bergh, London 1954, notes on vol. ii, 203-5).

But in fact, Ibn Rushd confines himself to a statement of principle, without replying to the arguments and objections of al-Ghazālī. Now it seems probable that the latter was familiar with the esoteric treatise of Ibn Sīnā, *al-Risāla al-aḍḥawiyya fī amr al-ma'ād*, which was translated into Latin (*Liber Mahad*) by Andre Alpago (Venice 1546) and has been edited recently in Arabic by Sulaymān Dunyā (Cairo 1368/1949). In this work, Ibn Sīnā attempts to demonstrate explicitly that the resurrection of the body, which he does not mean to deny, should be understood as a symbol or an allegory which has the object of inducing the mass of humanity to persist in virtuous behaviour. In reality "it is known that the true well-being of man is

opposed by the very existence of the soul in his body, and that physical pleasures are other than true pleasures, and that the fact of the soul returning to the body would be punishment for the soul" (*Risāla aḍḥawiyya*, 53). We can understand how al-Ghazālī was able to accuse the *falāsifa* of not admitting in its explicit sense, and according to all its demands, the teaching of the Ḳur'ān concerning resurrection: this is the 20th question of the *Tahāfut al-falāsifa*, Beirut 1927, 334 ff.).

(c) Responses and attempts at explanation of the Mutakallimūn. Later *kalām* was to judge the *falāsifa* much more by the esoteric treatise of Ibn Sīnā than by their statements of respect towards the religious law. When al-Djurdjānī lists the various attitudes which were or could be adopted (*op. cit.*, viii, 297; cf. Fakhr al-Dīn al-Rāzī, *Muḥaṣṣal*, Cairo n.d., 169), he seems to assimilate the *falāsifa* to those "deistic philosophers" who only accept "spiritual return", the *rudjū'*, in the sense found in the pseudographic *Theology of Aristotle*; while the men "with certainty of truth" (*muḥaḳḳiḳūn*), like al-Ḥalīmī or al-Ghazālī for example, profess a *ma'ād* that is both spiritual and corporal. It is in this sense that developments of *kalām* will tend to prove the rational possibility of the "return", then of the "gathering", and to study its conditions. We cannot follow in detail the whole series of discussions, arguments, objections and responses in all their intricacy and multiplicity (cf. L. Gardet, *op. cit.*, 266-9, and refs.). Nevertheless, we make some comments:

(1) Curiously enough, Fakhr al-Dīn al-Rāzī (*Muḥaṣṣal*, 170) declares that all the earlier prophets preached only the "spiritual return" and that it is the Ḳur'ān that proclaims the return of the body. His opponent, the Imāmī Shī'ī Naṣīr al-Dīn Ṭūsī (in the margin of the *Muḥaṣṣal*, *ibid.*) states furthermore that the Gospel does not preach the resurrection of the body, and quotes Matthew, xxii, 30 "they are like the angels in heaven". Ibn Rushd (*Tahāfut*, 580) seems to have had a better knowledge of Judaism and of Christianity.

(2) In his *Tahāfut al-falāsifa* (*loc. cit.*), al-Ghazālī, under the heading of a third hypothesis, and in the form of an argument *ad hominem*, concedes to his opponents that the soul may be of a wholly spiritual nature and that in it alone the human personality may reside (in the *Iḳtiṣād*, 88, he declared that this opinion "does not accord with what we believe"). Even in this case, he says, the resurrection of the body is still possible, and so it will take place, since the religious law foretells it. Also, he replies meticulously to three objections of a philosophical order (for the details of this debate, see L. Gardet, *La pensée religieuse d'Avicenne*, Paris 1951, 87 n. 3).

(3) Numerous explanations of the "return of the body" are proposed by the *'ilm al-kalām*. The Mu'tazilīs seem to have professed the "annihilation", then the "return" of substances and of "durable" accidents (real accidents) which are necessarily linked to them (see summary in al-Djuwaynī, *Irshād*, ed. and tr. Luciani, Paris 1938, 211/316). Al-Djuwaynī himself (*ibid.*, 213/318) and al-Ghazālī (*Iḳtiṣād*, 87) envisage either the "annihilation" of substances (and therefore of accidents which could not alone remain in the being), and their "return"; or the "annihilation" of accidents, then their "return", the substances remaining. For al-Ghazālī, either hypothesis is possible (*mumkin*). According to the followers of Ash'arism as finally evolved, such as al-Rāzī (*Muḥaṣṣal*, 171) and al-Djurdjānī (*op. cit.*, viii, 297), either God brings back to life (*i'āda*) an "annihilated" (*ma'dūm*) and the "return" is thus preceded by a reduction to non-existence (*'adam*), or else the return follows a total dispersion (*tafrīḳ*).

Discussion of these last two hypotheses led to developments concerning the relationship between substances and accidents, concerning an atomistic or non-atomistic view of the world, and concerning notions of being and of non-being. Three terms are constantly being repeated by the pen of the scholars: the being according to its first existence (*mubda'*), to the "annihilated" (*ma'dūm*) and to the "similar" (*mithl*). For it is not a "similar" being that returns on the day of resurrection, it is the being itself, the same one that was "annihilated". No difference between the first creation (*ibdā'*) and the "return" (*i'āda*) is spoken of by al-Ghazālī (*Iḳtiṣād*, 87-8), al-Rāzī (*Muḥaṣṣal*, 169-70) and al-Djurdjānī (*Sharḥ al-Mawāḳif*, viii, 292, 294). Henceforward, declares al-Djurdjānī (*ibid.*, 293-4), the subject of the first creation and the subject of the return are not at all to be distinguished in terms of their ensemble of determining characteristics (*māhiyya*), but only in terms of the essence (*huwiyya*) which places them within the being. There is between these two "subjects", that is between the thing and itself having "returned", an "interference" (*takhallul*) of non-existence, which al-Ghazālī and no doubt al-Rāzī on the one hand, and al-Djurdjānī on the other would explain rather differently. But the consensus continues to rest on the return to existence of the same being that was annihilated.

This dialectic, subtly conducted, and originally devised as a reply to the *falāsifa*, is characteristic of the procedure of the "modern" *mutakallimūn* (in the sense used by Ibn Khaldūn, *Muḳaddima*, Cairo n.d., 326-7, tr. de Slane, iii, 60, 62), and of the type of problems that they study. Also to be noted is their extreme sobriety in regard to traditional and descriptive data. We have, thus, in Sunnī Islam, as it were two lines of development: an expression of popular faith, employed to a large extent in the sermons of preachers and of a type to strike the imagination; and an explanatory effort at rational justification. Elementary manuals of a later period take inspiration from both one and the other. To this could be added various "hidden meanings" of Shī'ī traditions. But in opposition to the *Risāla aḍḥawiyya* of Ibn Sīnā and his allegorising theses, the existential reality of the basic fact of the resurrection of the body has not ceased to be vigorously maintained.

(L. Gardet)

ḲIYĀS (AR.), reasoning by analogy, the fourth source of Muslim law.

1. In law.

This word is derived from the Hebraic term *hiḳḳish*, infinitive *heḳḳesh* and from the Aramaic root *n-ḳ-sh* which signifies "to beat together". It is employed with reference to (a) the juxtaposition of two subjects in the Bible and the demonstration that they should be treated in the same manner; (b) the action of the exegete who applies the comparison suggested by the text; and (c) the conclusion of the reasoning by analogy which relies on the existence of a common characteristic in the "basic case" and the "analogous case" (J. Schacht, *Origins*, 99).

In a broad sense, *ḳiyās* can indicate inductive reasoning (*istidlāl*), and even deduction (*istinbāṭ*, *istikhrādj al-ḥaḳḳ*). It is thus that in *kalām*, *ḳiyās*

al-ghā'ib ʿala 'l-shāhid (Madjmūʿ, i, 333) indicates the syllogistic procedure which consists in induction from the known to the unknown; it is the ķiyās ʿaķlī that is inspired by Greek syllogism. While the Muʿtazilī Abū Hāshim al-Djubbā'ī retains this meaning for the Ķiyās sharʿī, his disciple Abu 'l-Ḥusayn al-Baṣrī rejects it (Muʿtamad, ii, 697). In the terminology of fiķh, ķiyās is "judicial reasoning by analogy". It is the method adopted by the Muslim jurisconsults to define a rule which has not been the object of an explicit formulation: a verse of the Ķur'ān, a ḥadīth of the Prophet or idjmāʿ. It is ķiyās fiķhī or sharʿī, different from the former in the sense that it "has its own structure and its own complexity" (R. Brunschvig, *Valeur et fondement du raisonnement juridique*, 61). This specific structure results from the particular nature of the mode of reasoning by analogy; the absence of a middle term in the primitive form of ķiyās, then definition of an explanatory principle (ʿilla) which is not a logical norm, but the prescription of a rule (ḥukm) established by God or His Prophet, this is the judicio-religious norm. The complexity of ķiyās sharʿī results from the diversity of cases to be taken into consideration and from the detailed reflections of the uṣūlīs on the different procedures that may be adopted in the execution of ķiyās sharʿī. The elaboration of the major treatises concerning uṣūl al-fiķh [q.v.] develops the notion of ķiyās in a systematic manner, conferring upon it a very strict and elaborate form. This work leads in the work of an author like al-Ghazālī (d. 505/1111) to a much-expanded concept of the fourth source of law, embracing the perspective of "Greek logic and traditional exegetical method" among the Muslims (R. Brunschvig, *op. cit.*, 57).

The problem. The establishment of ķiyās as a new judicial source responds to the need to find solutions not foreseen in the texts and to define rules applicable to new situations. The problem of ķiyās comes therefore to consist in determining "grounds of procedure" (bawāʿith) which respect the spirit of rules dictated by the text. The putting into effect of ķiyās sharʿī must, in consequence, appeal to principles of analogical deduction which enable the discovery in the rule of the derived case (farʿ) of the grounds which determine the rule of the basis (aṣl).

Like idjmāʿ [q.v.], ķiyās was instituted after the demise of the Prophet. With the death of Muḥammad, the community of the faithful was deprived of the "organ of revelation" and of its political and religious chief. Idjmāʿ was born of the need to ensure the coherence of the nascent doctrine of Islam, in the face of the dispersion of the believers and the proliferation of sayings attributed to the Prophet. The institution of idjmāʿ had the purpose of preserving the social and doctrinal unity of the parent-community (umma). In origin and in its "summary and primitive" form, ķiyās in ʿIrāķ was employed as a means of giving the force of law to certain ḥadīths attributed to ʿAlī which had not met with success (Schacht, *Origins*, 106-7); the extension of this practice may be considered not so much a factor of unity as of divergence. The putting into effect of ķiyās would appear more and more to respond to a need for diversification and clarification of the divine law. Also, the risk of divergence (ikhtilāf) was the essential motivation of the Shīʿī opposition to the use of ķiyās. The partisans of the Shīʿa do not accept the rule which considers that every mudjtahid speaks the truth (muṣīb), a rule implied by the practical application of ķiyās. Nevertheless, the continuing crop of new cases (ḥawādith) that the believer is obliged to cope with justifies in the view of the mudjtahid recourse to personal reflection, the practice of which is encouraged by the Ķur'ān and the Sunna (Ķur'ān, XIII, 3; XVI, 11, 67; XXX, 21; XXXIX, 41; XLV, 12; cf. Aḥmad b. Ḥasan Pazdawī, *Uṣūl*, iii, 995). The Prophet said: "The study of knowledge (ṭalab al-ʿilm) is a duty (farīḍa) incumbent upon every Muslim; and the knowledge that must be studied is that of the rules which shed light upon the divine law" (sharʿiyyāt; *Mughnī*, xvii, 278). Ķiyās is one of the means whereby reflection leading to this awareness may be exercised.

Development. The practice of ķiyās thus comes to be established as a means of establishing a judicial ruling not provided for in the texts. However, reasoning by analogy is, in the view of the faithful, to be treated with caution, for the simple reason that it is exercised by a fallible being who is liable to error. Idjmāʿ must therefore intervene to ensure the credibility and the cohesiveness of the opinions of the mudjtahids. Only the information provided by the Ķur'ān and the prophetic tradition is a source of integral truth (iḥāṭa). Such is the view of al-Shāfiʿī (d. 204/820), who may be regarded as the first of the uṣūlīs. The ruling that consists in believing that every mudjtahid speaks the truth (muṣīb; *Risāla*, ed. Shākir, § 1330; *Mughnī*, xvii, 277) will authorise the specialist to make a decision according to that which conforms most closely to the divine intention. By means of ķiyās, a search must be made, not for certainty (yaķīn) but the proof which will permit the deduction of a peremptory ruling (ḥukm ķaṭʿī). Ķiyās must be a determinant in a practical sense (mūdjib li 'l-ʿamal; al-Sarakhsī, *Uṣūl*, Beirut 1973, ii, 159; *Mughnī*, xvii, 291-2). There is thus a need to elaborate a theory of ķiyās sufficiently precise for its use to confer upon the specialist's decision the greatest possible integrity. In the practice of the Ḥanafī, Mālikī and Shafiʿī schools, ķiyās sharʿī cannot provide certain knowledge, it amounts only to a "strong putative probability" (ghālib al-ẓann; al-Āmidī, *Iḥkām*, iii, 256; al-Sarakhsī, *Uṣūl*, ii, 140; *Mughnī*, xvii, 277).

It was at a very early stage that ķiyās sharʿī began to be practised. As early as the 2nd century A.H., Ḥammād b. Sulaymān b. Rabīʿa, master of Abū Ḥanīfa and Ibn Abī Laylā, and judge at Baṣra, inaugurated its use. But the first to employ it systematically was Abū Ḥanīfa (d. 150/767), for which reason the practitioners of his school are known as those who use reason (aṣḥāb al-ra'y) to distinguish them from pure traditionists (aṣḥāb al-ḥadīth). The latter do not accept ķiyās except as a last resort; according to them, analogy is like carrion, to be eaten only when no other food is available" (L. Milliot, 135). Dāwūd al-Ẓāhirī (d. 270/884) avoided wherever possible reasoning by analogy, preferring the literal content of the Ķur'ān and of ḥadīth. In the same way that he restricts the notion of idjmāʿ, he imposes limits on recourse to analogy, without however rejecting it absolutely. According to him, one must bow the head before the inexorable law that the finite cannot contain the infinite and admit analogy in some cases (L. Milliot, *op. cit.*, 135; al-Sarakhsī, *Uṣūl*, ii, 118; al-Ṣaymarī, *Masā'il al-khilāf*, f. 48a-b). With Ibn Ḥazm (d. 456/1064), the Ẓāhirī school replaces ķiyās with the implicit sense of the text (mafhūm); according to this last, the notion of analogy is vague and arbitrary. Ķiyās is

rejected by the Ḥanbalīs and the Shīʿīs, but adopted by the other schools of law. In practice, it is the Ḥanafī doctrine which prevails.

In his *Risāla* on the foundations of law, al-Shāfiʿī provides the first stage in systematisation of the theory of *ḳiyās*. Having established precisely the role of the Ḳurʾān, of the Sunna and of *idjmāʿ*, he neatly defines that of reasoning by analogy. It is to him that is owed the fundamental distinction between *ḳiyās ʿilla* or *maʿnā* and *ḳiyās shabah*. The first bases analogy on an explanatory principle (*ʿilla*). This form of *ḳiyās* considers a thing according to its original meaning (*aṣl*). In this case, there is no need for disagreement. *Ḳiyās shabah* considers the thing in its similarity (*shabah*) to others; those who employ it may disagree (al-Shāfiʿī, *Risāla*, § 1334). Al-Āmidī (d. 631/1233), a Ḥanbalī *uṣūlī* who went over to Shāfiʿism, is at pains not to confuse the ruling of the basic case (*aṣl*), with that of the derived case (*farʿ*). The ruling of the former is given by the text of the Ḳurʾān or of *ḥadīth* or by *idjmāʿ*; it is certain. The ruling of the latter is deduced (*thamara nātidja*); it is putative (*al-ḳiyās lā yufīdu ghayr al-ẓann*; *Iḥkām*, iii, 264). For this reason, the conclusions of *ḳiyās* cannot in their turn provide deductive principles (*rukn*; *op. cit.*, 277). Analogy on the basis of analogy is not acceptable. Such is not the opinion of the Muʿtazilī ʿAbd al-Djabbār, who adopts the Shāfiʿī teaching and enlarges it. According to him, "there is no difference between the ruling of the basic case which is known through explicit evidence (*bi-ḍṭirār*) and that which is known through discussion (*istidlāl*); in fact, it is possible to extract a new ruling from the latter when there is a similarity between the reasons for which each of them is adopted. So there is not, in regard to knowledge (*ʿilm*), a need to take account of the different means whereby the ruling of the basic case is established. That which is known in an explicit manner may, in fact, be assimilated to that which is known through acquisition (*al-ḍarūrī fī-hi ka 'l-muktasab*). The explanatory principle (*ʿilla*) is fruitful; although dissociated from the basic case which has inspired it, it may be taken as operative, for it finds its own guarantee within itself. Thus, God (IV, 25) lays down that the punishment inflicted upon a slave woman should be half that applied to the free woman. As soon as we are aware that the reason for the existence of this *ḥukm* is the fact of slavery (*riḳḳ*), we may apply this ruling to the male slave. Similarly when we know that the reason for the prohibition (Ḳurʾān, II, 219; V, 90) of all fermented drink (*khamr*) is the existence of wine (*nabīdh*), we shall forbid the consumption of wine. For the Muʿtazilī ʿAbd al-Djabbār, *ḳiyās*, when applied to scriptural or rational material, is dependent on a similar process, that of intellectual effort (*idjtihād*). Here the role attributed to the action of the subject in interpretation of the *Sharīʿa* is predominant.

Foundation. The various objections raised to the practice of *ḳiyās* which are known to us through the different treatises of *uṣūl al-fiḳh* divide into two types of argument: an argument of fact and an argument of law.

(a) The verses of the Ḳurʾān and of prophetic tradition which forbid recourse to reasoning by analogy are numerous: "We have presented to you the Book to make all things clear" (XVI, 89), "We have neglected nothing in the Book" (VI, 38), "Your Master is not forgetful" (XIX, 64). Recourse to personal opinion (*raʾy*) to extract a ruling from it amounts to imputing inadequacy to the Holy Book. The Prophet, in his turn, accuses of aberration and error those who deduce a non-existent rule from an existing rule (Pazdawī, *Uṣūl*, iii, 991; al-Sarakhsī, *Uṣūl*, ii, 120).

(b) The argument of law consists in denying that legal status (*ḥukm*) may be founded on reason. The "*raison d'être* of law" (*ʿilla*) is attained through its erroneously convincing nature (*shubha fi 'l-aṣl*). The text (*naṣṣ*) has never determined explicitly the 'properties" (*awṣāf*) which might provide a foundation for legal precepts. The latter are obligatory on the grounds that they result from divine decision (al-Sarakhsī, *Uṣūl*, ii, 121; Abu 'l-Ḥasan Pazdawī, *Uṣūl*, iii, 992). Reason has no competence to exact that which only the All-Powerful is entitled to impose. The object of law is beyond reason. The content of a number of divine precepts cannot be subject to personal opinion; these *aḥkām* have no foundation other than divine decision; such is the case with regard to ritual ordinances (*ʿibādāt*). The practice of *ḳiyās*, in substance, far from providing a guarantee of rectitude, can lead only to a misunderstanding of rules (*djahālāt*; al-Sarakhsī, *Uṣūl*, ii, 122). In the argument of authority there is no place for personal assessment.

According to the Muʿtazilī al-Naẓẓām, the process of *ḳiyās* is far from always respecting the rational model. It is not compatible with reason to impose fasting on the menstruating woman and to excuse her from prayer, when she is better able to pray than to fast. The same applies to the prohibition laid upon the man against gazing at an aged free woman, with repulsive features, while he is permitted to look at an attractive young slave. It is contrary to good sense to cut off the hand of a petty criminal (*sāriḳ al-ḳalīl*), while the judicial rule spares the man who robs on a large scale (*ghāṣib al-kathīr*; al-Āmidī, *Iḥkām*, iv, 9; *Muʿtamad*, ii, 746). In other words, in ethical questions, analogy is inoperative. It has the effect of linking together dissimilar cases and dissociating similar cases, which preludes passing from the basic case (*aṣl*) to the derived case (*farʿ*); cf. al-Ṣaymarī, *K. Masāʾil al-khilāf*, f. 48a. It is interesting to observe that the Ḥazmian objection to the principle of similitude in religious questions (Ibn Ḥazm, *Iḥkām*, vii, 82) is the same as that of al-Naẓẓām. Such is the criticism of *ḳiyās* raised by these two authors. Classical Muʿtazilism, as represented by the *ḳāḍī* ʿAbd al-Djabbār, replies to the objection of ancient Muʿtazilism in declaring that "neither *qiyās* nor *iǧmāʿ* should, in the last resort to reason or to *ʿaql*, figure in the arsenal of judicial-religious thought ... as regards *qiyās*, there is the need to detach, among the elements of basic prescription, the invariants on the basis of which *qiyās* will be legitimate, if account is taken of the indication (*amāra*) which specifies them" (R. Brunschvig, *Rationalité et tradition chez ʿAbd al-Ǧabbār*, 214). The convincing validity (*ḥudjdjiyya*) of *ḳiyās* is, like that of *idjmāʿ*, based on a text; reason only intervenes in order to put the analogical deduction into effect.

The Shīʿī criticism of *ḳiyās* is directed against the diversity of opinion which is liable to result from it. The Ḳurʾān condemns divergence of opinion in many places (IV, 82; XLII, 13; VIII, 46; XXX, 31; III, 105). A number of *ḥadīths* attack those who profess divergent doctrines (al-Āmidī, *Iḥkām*, iv, 10).

To these objections, the scholars of *ḳiyās* reply in their turn with scriptural and rational arguments in favour of judicial analogy.

(a) God said: "Learn from this, O you who are clear-sighted" (LIX, 2). To learn a lesson is to associate a thing with its "homologue" (*naẓīr*); such is the process of *ḳiyās*. "If you are capable of interpreting dreams ..." (XII, 3); *ḳiyās* does nothing other than interpret the rule. "These verses are addressed to thinking people" (XII, 3; X, 24; cf. Abu 'l-Ḥasan Pazdawī, *op. cit.*, 995); what is more, the Ḳur'ān (IV, 146) employs analogy in authorising ablution with sand (*tayammum*) when water is lacking.

It is well-known that the Companions of the Prophet employed *ḳiyās* and dialectical discussions (*munāẓarāt*) and that they practised judicial consultations (*mus̲h̲āwarāt*). In a general fashion, the partisans of *ḳiyās* appeal to the *ḥadīt̲h̲* where it is related that when the Prophet sent Muʿād̲h̲ b. D̲j̲abal to the Yemen as *ḳāḍī*, the former asked: "How will you reach a judgement when a question arises?"; Muʿād̲h̲ replied: "According to the Word of God".—"And if you find no solution in the Word of God?"—"Then, according to the *sunna* of the Messenger of God".—"And if you find no solution in the *sunna* of the Messenger of God, nor in the Word?"—"Then I shall take a decision according to my own opinion (*ad̲j̲tahidu ra'yī*)". Then the Prophet of God struck Muʿād̲h̲ on the chest with his hand and said: "Praise be to God who has led the Messenger of God to a solution that pleases him" (Abū Dāwūd, *Aḳḍiya, b.* 11; al-Tirmid̲h̲ī, *Aḥkām, b.* 3; al-Dārimī, *Sunan*, Introduction; A. J. Wensinck, ḲIYĀS, in *EI*[1]).

(b) The person endowed with reason, the *mukallaf*, is naturally inclined to assess the invisible (*g̲h̲ā'ib*) on the basis of the perceptible tokens of experience (*ḥāḍir*). Cracks in a wall foretell its collapse, a cloudy sky and fresh wind are signs of rain, etc. (al-Āmidī, *Iḥkām*, iv, 5). Similarly, in matters of religious law, *ḳiyās* puts into effect "the cause-norm association" (*ʿilla-ḥukm*) to assist the exercise of reflection on two similar cases, the second not being defined by this association.

The nature of *ḳiyās*. According to al-S̲h̲āfiʿī, *ḳiyās* and *id̲j̲tihād* [*q.v.*] are two terms expressing a single notion; when the rule concerning a specific case is not dictated by a particular indication (*dalāla*), this indication must be sought by a means conforming to truth with the aid of *id̲j̲tihād*. Now *id̲j̲tihād* is *ḳiyās* (*Risāla*, § 1323). The specific nature of *ḳiyās* is not yet detached, it is subjective opinion (*ra'y*). With the elaboration of the science of the *uṣūl al-fiḳh*, the concepts are defined and fixed. *Ḳiyās* can then be defined as the method which consists in assimilating the derived case (*farʿ*) to the basic case (*aṣl*) in virtue of their similarity with regard to the *raison d'être* (*ʿilla*) of the norm (*ḥukm*). *Ḳiyās* is thus a form of reasoning which proceeds from particular to particular, linking a new case to an old case: "It cannot ... be considered as inductive reasoning, since it does not aim at applying to all cases of the same kind the observations made concerning one of them". (C. Chehata, *Logique juridique et droit musulman*, 20). Such is the character of the reasoning which concludes that in a case of fornication, a confession repeated four times on the part of the guilty party may be considered a sufficient proof of the offence. The basic case is defined by a Ḳur'ānic text which prescribes the execution by stoning of the guilty party in the presence of the four witnesses. This assimilation (*tas̲h̲bīh*) of ancient origin belongs to a still simplistic concept of *ʿilla*. With the development of the theory of *ḳiyās*, *ʿilla* takes on a more logical quality. Whence the penalty that reduces by half the punishment applied to female slaves as compared with free women (IV, 25); the *ʿilla* of the reduction in penalty is slavery. By analogy, this reduction will be applied to male slaves as compared with free men. Of the same type is the *ḳiyās* that prohibits the lending of dry dates or raisins at interest (*ribā*), on the basis of the prohibition of lending grain (wheat, barley), with the demand of eleven measures against ten. The reason for the prohibition is that usury is forbidden.

For *ḳiyās* to be effective, four elements are necessary: (1) the appearance of a new case which causes a problem; (2) a basic case (*aṣl*) governed by a *ḥukm* defined by a text; (3) a *raison d'être* of the law (*ʿilla*) which can provide the line (*maʿnā d̲j̲āmiʿ*) justifying the assimilation of the derived case with the basic case. This *raison d'être* is the "sign" (*ʿalāma*) which permits the knowledge that the ruling from a text may be applied to a case not envisaged in these terms. Once this reason is known, the jurist, proceeding by analogy, applies the law thus motivated to the case in which he sees a similar reason to pronounce judgment. This is the *taʿlīl* (L. Milliot, *op. cit.*, 138); (4) finally, a result which is the *ḥukm* applied to the derived case. Such is the prohibition against striking one's parents drawn from the prohibition against saying to them "fie!" (XVII, 24). As regards the third condition, "the Ḥanafīs only recognise *ʿilla* as endowed with a "transitivity" (*taʿdiya*), that is, susceptible to being put into effect in a derived case on the basis of a basic case (al-Sarak̲h̲sī, *Uṣūl*, ii, 161).The S̲h̲āfiʿīs, on the contrary, accept that an *ʿilla* may be intransitive (*ḳāṣira*), intransmissible to a derived case". In reality, the opposition between these two doctrines depends on the different manner in which the *ʿilla* is conceived in relation to *ḥukm*. According to the S̲h̲āfiʿīs, on the contrary the *ʿilla* is that which confers upon the *ḥukm* its "validity of origin". According to the Ḥanafīs, the *ʿilla* of the basic case justifies itself by the derived case (R. Brunschvig, *Valeur et fondement du raisonnement juridique*, 79-80).

From the point of view of modality, several types of *ḳiyās* are distinguished: (a) *ḳiyās ʿilla* or *ḳiyās al-dalāla* (al-Āmidī separates these two) which consists in associating (*d̲j̲amʿ*) the basic case with the derived case with the aid of the indication of the *ʿilla* and the qualifications which the latter entails (cf. Ibn Ḳayyim, *Iʿlām*, i, 138-9). An example is the association of wine (*nabīd̲h̲*) with alcoholic drink (*k̲h̲amr*), giving as "middle term" the faculty of upsetting good behaviour.

(b) *Ḳiyās s̲h̲abah* is an analogy by "simple similarity" which requires no intervention of motive or of common indication (*min g̲h̲ayri dalīl d̲j̲āmiʿ*; *Iʿlām*, i, 148). An example is the similarity established between the slave and the free man for the assessment of the *diya* [*q.v.*] when the slave is the responsible for the offence, and that which assimilates his compensation when he is the victim (*Muʿtamad*, ii, 692).

(c) *Ḳiyās al-ṭard* is a co-extensive *ḳiyās al-ʿilla* and its contrary is *ḳiyās al-ʿaks* or "reversibility", "reverting to non-*waṣf* → non-*ḥukm*" (R. Brunschvig, *op. cit.*, 81; al-Āmidī, *Iḥkām*, iii, 261). *Ḳiyās s̲h̲arʿī* would thus appear with *id̲j̲māʿ* to be a decisive criterion for the interpretation of Islamic law. It permits the establishment of new rules. But in the extent to which it is a process of reasoning which excludes the possibility of having recourse to a purely logical

norm, *ḳiyās s̲h̲arʿī* belonging definitively to personal opinion (*raʾy*), it is for this reason limited in range. From this results the need to resort in certain cases to other methods of reasoning: *istiḥsān* [*q.v.*] or *benignitas* and *istiṣlāḥ* [*q.v.*] or *utilitas publica*.

In the modern period, the theory of *ḳiyās* is generally applied in the different schools which adopt it in the spirit of the Ḥanafī doctrine. Because of the major role accorded to personal effort by the Ḥanafī *mad̲h̲hab*, the modern *mud̲j̲tahid* is generally eager to draw from this the norms enabling him to deduce new rulings; historically, the importance accorded to Ḥanafism results from the fact that the Ottoman empire followed the Sald̲j̲ūḳ sovereigns in imposing it as an official doctrine. This ascendancy, which prevailed over a large proportion of the Muslim world, had the effect of conferring upon the Ḥanafī *mad̲h̲hab* an official status in a number of countries "where the majority of the native Muslim population follows another school, e.g. in Egypt, Sudan, Jordan, Israel, Lebanon and Syria" (J. Schacht, ḤANAFIYYA, in *EI*[2], iii, 163).

(M. BERNAND)

2. In Grammar.

In grammar, the word *ḳiyās* indicates the "norm", meaning the instrument which enables the grammarian to "regulate" (*ḳāsa*) the morphological or syntactical behaviour of a word, where this is not known through transmission (*naḳl*) or audition (*samāʿ*), on the basis of the known behaviour of another word, by means of a certain kind of analogy; it is synonymous with *miḳyās* (pl. *maḳāyīs*). The term is well attested in the *Kitāb* of Sībawayhi (cf. G. Troupeau, *Lexique-index*, 179); Sībawayhi does not define it but he says that it may be bad (*radīʾ*, *ḳabīḥ*), constant (*mutlaʾibb*, *mustamirr*), flowing (*d̲j̲ārī*), stable (*mutamakkin*) and that it is indispensable (*lāzim*); he insists that one does not "regulate" a thing on the basis of that which is rare (*ḳalīl*) or exceptional (*s̲h̲ād̲h̲d̲h̲*), but that one "regulates" it on the basis of that which is in frequent use (*kat̲h̲īr*). The expression *ʿala 'l-ḳiyās*, which he often uses, indicates "according to the norm, normally".

It is the Muʿtazilī grammarian al-Rummānī (d. 384/994) who supplies the first definition of the term, in the *K. al-Ḥudūd* (ed. M. D̲j̲awād, 50); "*ḳiyās* is the combination (*d̲j̲amʿ*) of two things, whence results necessarily their combination in principle (*ḥukm*)".

Ibn D̲j̲innī (d. 392/1002) devotes to *ḳiyās* five chapters in the *K. al-K̲h̲aṣāʾiṣ* (ed. M. A. al-Nad̲j̲d̲j̲ār, i, 109-33, 357-69, 391-9). He asserts that the Arabs love affinity (*tad̲j̲ānus*) and resemblance (*tas̲h̲ābuh*) and that this leads them to assimilate things that are close to one another, and to trace (*ḥaml*) a secondary thing (*farʿ*) to a primary thing (*aṣl*); he comments that this penchant of the Arabs for assimilation (*tas̲h̲bīh*) sometimes leads them to trace a primary thing from a secondary thing, and that a rare thing can be the "norm", while a more common thing is not. As regards the links between the "norm" and audition and usage (*istiʿmāl*), he distinguishes four cases: (1) that which is generalised (*muṭṭarid*) according to the norm and according to usage; this is the optimum; (2) that which is generalised according to the norm, but exceptional according to usage; one adopts the word of most frequent usages; (3) that which is generalised according to usage, but exceptional according to the norm: one adopts that which is commonly heard (*masmūʿ*), but does not "regulate" anything else according to it; and (4) that which is exceptional according to the norm and to usage; this is faulty (*mard̲h̲ūl*) and should be rejected (*muṭṭarah*). Finally, he observes that the grammarians considered that that which is "regulated" according to the language of the Arabs, constitutes a part of their language, even if the Arabs have not used it in speech.

In the *K. Lumaʿ al-adilla fī uṣūl al-naḥw*, Ibn al-Anbārī (d. 577/1181) subjects *ḳiyās* to a lengthy examination (ed. A. Amer, 44-86). He considers that it is impossible to do without it in grammar, since the latter may be defined as being the science of "norms" (*maḳāyīs*) drawn (*mustanbaṭa*) from exhaustive study (*istiḳrāʾ*) of the Arabic language. He defines it as the tracing of a secondary thing from a primary thing, by virtue of a cause (*ʿilla*) which demands the application of the principle of the primary thing to the secondary thing. He distinguishes three kinds of *ḳiyās*, according to its basis upon (1) a cause to which the principle is attached; (2) a resemblance (*s̲h̲abah*) other than the cause to which the principle is attached; and (3) a generalisation (*ṭard*) of principle. Where the assumption (*ik̲h̲āla*) of the cause is lacking in this case, only the two former kinds are utilised by the grammarians.

Al-Suyūṭī (d. 911/1505), in the third chapter of the *K. al-Iḳtirāḥ fī uṣūl al-naḥw*, classifies all the data concerning *ḳiyās* supplied by previous grammarians (ed. Ḥaydarābād, 38-72). He divides his study into three parts: (1) the primary thing, on the basis of which one "regulates" (*maḳīs ʿalayhi*); (2) the secondary thing, which one "regulates" (*maḳīs*); (3) the principle; and (4) the cause that unites them (*d̲j̲āmiʿa*).

Finally, it should be noted that, in the *K. al-Radd ʿala 'l-nuḥāt*, the Ẓāhirī grammarian Ibn Maḍā al-Ḳurṭubī (d. 592/1196) objects to the use of *ḳiyās* in grammar and calls for its abrogation (ed. S̲h̲. Ḍayf, 156).

Bibliography: given in the text of the article.

(G. TROUPEAU)

ḲÏZ (T.), basically "girl, unmarried female", but often used with the more restricted meanings of "daughter, slave girl, concubine". It is already found in the Orkhon inscriptions in the phrase *ḳïz og̲h̲lï* "daughter", as opposed to *urï og̲h̲lï* "son",

and subsequently appears in most Turkish languages. Through Türkmen forms it passed into Iranian languages like Kurdish and Ossetian, and through Ottoman usage into Balkan languages like Serbian and Bulgarian, often via the Ottoman technical expression (for which see below) *ḳizlar aghasi* (see Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, ii, 818-9; G. Doerfer, *Türkische und Mongolische Elemente im Neupersische. iii. Türkische Elemente im Neupersische*, Wiesbaden 1967, 569-70, No. 1601; Clauson, *An etymological dictionary of pre-thirteenth century Turkish*, 679-80).

In mediaeval Islamic usage, one of its denotations was "Christian woman", doubtless influenced by the meanings "slave girl, concubine"; Djuwaynī, tr. Boyle, i, 257, calls the Georgian King David IV "the son of Ḳiz-Malik", i.e. son of the Queen Rusudani. Under the Ottomans, the term *Ḳizlar Aghasi* "*Agha* of the maidens" was generally used to denote the chief of the black eunuchs in the Imperial Palace, more correctly entitled *Dār al-Saʿādat Aghasi* "*Agha* of the House of Felicity". This officer was in charge of the sultan's harem, and was in practice the principal officer of the whole palace. From the last years of the 10th/16th century onwards, he enjoyed the prestige of vizierial rank, as a *pasha* of three *tughs*, with the title of *Mushīr*, coming in order of precedence only after the Grand Vizier and the *Shaykh al-Islām*. After 995/1587 he also displaced the Chief of the White Eunuchs from his control of the *awḳāf* or pious endowments of the *Ḥaramayn*, Mecca and Medina (see N. M. Penzer, *The Ḥarēm*,[2] London 1965, 128 ff.; I. H. Uzunçarşılı, *Osmanlı devletinin saray teşkilâtı*, Ankara 1945, 172 ff. and index; Gibb and Bowen, *Islamic society and the west*, i/1, Oxford 1950, 76-7, 329-31).

The element *ḳiz* also occurs in two well-known topographical features in the city of Istanbul and vicinity. First, there is the *Ḳiz-tashi* "Maiden's stone", the column of the Emperor Marcian (450-7), in the Fātiḥ quarter, so-called from its alleged power to distinguish virgins (in fact, the genuine "virgin's column" from near the Church of the Holy Apostles was incorporated in the Sülaymāniyye Mosque, which rose on that church's site after 1456); see E. Mamboury, *The tourists's Istanbul*, Istanbul 1953, 339-40, 41, and Baedeker, *Konstantinopel, Balkanstaaten, Kleinasien, Archipel, Cypern*[2], Leipzig 1914, 180. Second, there is the *Ḳiz-külesi* "Maiden's tower", the signal station and lighthouse built on a rock in the Bosphorus just south of Üsküdar in the entrance to the Bosphorus, popularly called "Leander's tower", referring to Leander's death by drowning when trying to reach his beloved Hero (though this occurrence is usually located in the Dardanelles between Cestus and Abydos). The classical name for this rock was Damalis (from the wife of the Athenian general Chares), but the Turkish name is connected with the story of Meḥemmed II's daughter, allegedly shut up there in a fruitless attempt to preserve her from death by snakebite (see Mamboury, *op. cit.*, 496-7, and *Murray's handbook for travellers in Constantinople, Brûsa and the Troad*, London 1893, 107).

For the social status of women in Turkey, see MARʾA. (C. E. Bosworth)

ḲIZIL AḤMADLĪ [see ISFENDIYĀR OGHLU].

ḲIZIL ARSLAN [see ILDEGIZIDS].

ḲIZIL-BĀSH (T. "Red-head"). The word is used in both a general and a specific sense. In general, it is used loosely to denote a wide variety of extremist Shīʿī sects [see GHULĀT], which flourished in Anatolia and Kurdistān from the late 7th/13th century onwards, including such groups as the *Alevis* (*ʿAlawis*; see A. S. Tritton, *Islam: belief and practices*, London 1951, 83).

The ʿAlawīs were closely connected with the Nuṣayrīs [*q.v.*] of northern Syria and Cicilia, and the *tahtacis* (*takhtadjis* [*q.v.*]), in order to protect themselves from persecution by the Ottoman government as schismatics, later "gained the right of asylum under the all-embracing and tolerant umbrella of the Bektāshī organization" (J. Spencer Trimingham, *The Sufi orders in Islam*, Oxford 1971, 83; see also BEKTĀSHIYYA). The *ḳizil-bash* did not constitute a Ṣūfī order as such, but rather a religious sect (Abdülbâkî Gölpinarlı, *İA* art. *Kızıl-baş*). The common characteristics of all those designated as *ḳizil-bash* was the wearing of red headgear. Gölpinarlı, *op. cit.*, sees the *ḳizil-bash* in this respect as the spiritual descendants of early Shīʿī *ghulāt* groups such as the Khurramīs [*q.v.*], who were also known as the Muḥammira from their practice of wearing red hats and robes, and even of pre-Islamic heretical sects of the Sāsānid period, especially that of Mazdak (see also Browne, *LHP*, i, 310-13). In its specific sense, the word *ḳizil-bash* was a term of opprobrium (often *ḳizil-bash-i awbāsh*, "scoundrelly *ḳizil-bash*", etc.) applied by the Ottoman Turks to the supporters of the Ṣafawid house [see ṢAFAWIDS], and adopted by the latter as a mark of pride.

In Ṣafawid usage, the term derived from the distinctive scarlet or crimson hat (*tādj*) with twelve gores (*tark*) commemorating the twelve Imāms of the Ithnā ʿAsharī Shīʿīs, worn by the disciples (*murīds*) of the Ṣafawid *shaykhs*. According to Ṣafawid tradition, in 893/1487 Shaykh Ḥaydar [*q.v.*], instructed in a dream by the Imām ʿAlī, devised this headgear (British Museum MS. Or. 3248, ff. 21a-b). When Ḥaydar first showed this "Ṣūfī *tādj*", as it became known, to the Aḳ Ḳoyunlu ruler Uzun Ḥasan, the latter kissed it and put it on his head (if the date 893/1487-8 is correct, this story is clearly apocryphal, because Uzun Ḥasan died in 882/1478). His son Yaʿḳūb, however, refused to wear it, and this was the origin of the enmity between Ḥaydar and Yaʿḳūb which resulted in the breakdown of the Ṣafawid-Aḳ Ḳoyunlu alliance. After the death of Ḥaydar, Yaʿḳūb not only forbade his subjects to wear the *ḳizil-bāsh tādj*, but also tried to prevent the Ṣūfīs of the Ṣafawid *ṭarīḳa* from wearing it (R. M. Savory, *The struggle for supremacy in Persia after the death of Timur*, in *Isl.*, xl (1964), 54 ff.).

Strictly speaking (as noted by Chardin; see V. Minorsky, *Tadhkirat al-mulūk*, London 1943, 188 and n. 5), the term *ḳizil-bāsh* should be applied only to those Turcoman tribes inhabiting eastern Anatolia, northern Syria and the Armenian highlands which were converted by the Ṣafawid *daʿwa* and became the disciples of the Ṣafawid *shaykhs* at Ardabīl. However, the term was also loosely applied to certain non-Turkish-speaking Iranian tribes which supported the Ṣafawids, for instance the tribes of Ṭālish and Ḳarādja-dāgh (Siyāh-kūh), and Kurds and Lurs. The great *ḳizil-bāsh* tribes (*oymāḳ*) were subdivided into as many as eight or nine clans (the list in Minorsky, *op. cit.*, 16-17, is by no means complete). The most important *oymāḳs* included the Ustādjlūs, Rūmlūs, Shāmlūs, Dulghadirs (arabice: Dhu 'l-Ḳadars), Takkalūs, Afshārs and Ḳādjārs; other tribes, such as the Turkmāns, Warsāḳs and Bahārlūs, are occasionally listed among the great *oymāḳs*. During the reign of Shāh Ismāʿīl I [*q.v.*], the Shāmlūs were the most powerful of the *ḳizil-bāsh*

*oymāḳ*s. The provenance of some of the great *oymāḳ*s is clearly indicated by the name of the tribe: for instance, the names Shāmlū, Rūmlū and Bahārlū consist of a place-name with the addition of the possessive particle *-lū*; others, such as Afshār, Warsāḳ, and Dulghadir, are the names of old Oghuz tribes. The origin of some names, such as Ustādjlū, is still obscure.

From the middle of the 9th/15th century, Ardabīl was the nerve centre of an extensive organisation designed to keep the Ṣafawid leadership in close touch with its *ḳizil-bāsh murīd*s in eastern Anatolia, Syria and elsewhere. This organisation was controlled through the office of *khalīfat al-khulafā'ī*, felicitously called by Minorsky (*op. cit.*, 125) "the special secretariat for Ṣūfī affairs". The *khalīfat al-khulafā'*, who was necessarily a *ḳizil-bāsh* and usually a Turcoman, appointed representatives termed *khalīfa* in the region in which the Ṣafawid *daʿwa* was active, and the *khalīfa*s in their turn had subordinates termed *pīra*. The presence of large numbers of *ḳizil-bāsh* Ṣafawid supporters in eastern Anatolia constituted a serious threat to the Ottomans. In 907/1502, Sulṭān Bāyazīd II transferred large numbers of Shīʿīs from Asia Minor to the Morea, yet in 917/1511 there was another serious *ḳizil-bāsh* revolt at Tekke [see BĀYAZĪD II], and Sulṭān Selim I, before invading Iran in 920/1514, massacred 40,000 of them in order to secure his rear (see Savory, *The consolidation of Safawid power in Persia*, in *Isl.*, xli (1965), 86-7).

The *ḳizil-bash*, as the *murīd*s of the Ṣafawid *shaykh*s, owed implicit obedience to their leader in his capacity as their *murshid-i kāmil* ("supreme spiritual director"). After the establishment of the Ṣafawid state, the Ṣafawid *shāh*s transferred this *pīr-murīdī* relationship from the religious to the political plane, since they were now not only their followers' *murshid-i kāmil* but their king (*pādishāh*) as well. As a consequence, what had formerly been an act of disobedience on the part of a Ṣūfī against the orders of his spiritual director now became an act of treason against the king or a crime against the state, and as such, punishable by death. The term *ṣūfigarī*, "proper conduct for a Ṣūfī", was extended to mean, "conduct becoming to a *ḳizil-bāsh* officer"; the converse, *nā-ṣūfigarī*, came to mean "failure to obey orders; rebellious or treasonable conduct". As late as 1023/1614-15, for instance, when Shāh ʿAbbās put to death some *ḳizil-bāsh* who had defected to the Ottomans, the charge was *nā-ṣūfigarī* (Savory, *The office of khalīfat al-khulafā under the Ṣafawids*, in *JAOS*, lxxxv (1965), 501). A passage in the *Tāʾrīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, Tehran 1334/1955, i, 68, where an officer is described as *mard-i ṣūfī wa yakdjihat wa dawlatkhwāh*, makes it clear that being a Ṣūfī and a *ḳizil-bāsh* was considered to be tantamount to being loyal to the shāh and the régime.

When the Ṣafawid state was established in 907/1501, the *ḳizil-bāsh* constituted the military aristocracy. Since they had been largely responsible for bringing the Ṣafawids to power, they considered it only right and proper that they should both fill the principal offices of state in the central administration and also hold the most important provincial governorships. The use of such terms to describe the Ṣafawid empire as *ḳalamraw-i ḳizil-bāsh* ("the *ḳizil-bāsh* realm") (*Tāʾrīkh-i ʿĀlam-ārā-yi ʿAbbāsī*, i, 206); *dawlat-i ḳizil-bāsh* ("the *ḳizil-bāsh* state") (*ibid.*, i, 152); and *mamlikat-i ḳizil-bāsh* ("the *ḳizil-bāsh* kingdom") (*ibid.*, i, 523), makes it clear that, in the view of the *ḳizil-bāsh*, the Tādjīk or Persian elements did not count for much in the new order of things. Similarly, the shāh is commonly referred to as *pādishāh-i ḳizil-bāsh*, again a term which appears to ignore the existence of the Tādjīks altogether.

Initially, the two principal offices of the central administration, that of the *wikālat* and that of the *amīr al-umarāʾī*, were both held by the same *ḳizil-bāsh* officer. Under Ṭahmāsp I [*q.v.*], the office of *amīr al-umarā'* declined in importance, and was superseded by the office of *ḳūrči-bāshī* [see ḲŪRČĪ], which was also a *ḳizil-bāsh* prerogative. The government of the provinces of the Ṣafawid empire during the early period was allotted almost exclusively to *ḳizil-bāsh amīr*s, who ruled as petty princes in their provinces. The provincial governors had courts which were replicas of the royal court, and the system of provincial administration in many respects resembled that of the central administration. These provincial governorships were assigned to the *ḳizil-bāsh amīr*s as fiefs known as *tiyūl* [*q.v.*]. The governors, in return for the obligation to provide the king with a stated number of fully-equipped troops when required, were allowed to consume locally the greater part of the revenues collected in the provinces under their jurisdiction; such provinces were known as *mamālik* or "state" provinces.

After the conquest of Khurāsān in 916/1510, Shāh Ismāʿīl made Harāt the second city of the Ṣafawid empire, and it became the seat of one of the Ṣafawid princes and frequently of the heir-apparent. The royal prince was placed in charge of the *ḳizil-bāsh* governor-general of Khurāsān who, in his capacity as *lala* or *atābeg* ("guardian") of the prince, was responsible for the moral and physical welfare of his ward. It was his duty to see that the prince was trained in archery, horsemanship and the like, and also to see that he received his apprenticeship in statecraft.

Since the *ḳizil-bāsh* were "no party to the national Persian tradition" (Minorsky, *op. cit.*, 188), their assumption that the principal offices of state would automatically fall to their lot led to immediate friction with the Persian elements in the administration. The Persians, or "Tādjīks" as the *ḳizil-bāsh* contemptuously called them, were the "men of the pen" who had traditionally filled the ranks of the bureaucracy in Iran and had provided administrative continuity under a succession of foreign rulers, Arabs, Turks, Mongols, Tatars and Turcomans. In the Persian view, the *ḳizil-bāsh* were "men of the sword", and were not expected to have any knowledge of statecraft. On the other hand, in the *ḳizil-bāsh* view, "Tādjīks" were fit only "to look after the accounts and *dīwān* business. They had no right ... either to maintain private bodyguards or to command troops in the field. If *ḳizil-bāsh* were asked to serve under a Persian officer, they consider it a dishonour" (Savory, *The qizilbāsh, education and the arts*, in *Turcica*, vi (1975), 169). Ismāʿīl I attempted to maintain a balance between these two forces by appointing Persians to the all-important office of *wakīl*, but this merely aggravated the tension between them, and the *ḳizil-bāsh* brought about the death of three of the five Persians appointed to that office under Ismāʿīl I (see Savory, *The significance of the political murder of Mīrzā Salmān*, in *Islamic Studies, Jnal. of the Central Institute of Islamic Research, Karachi*, iii (1964), 181-91).

When Shāh Ṭahmāsp succeeded his father in 930/1524, at the age of ten-and-a-half, the *ḳizil-bāsh* took advantage of his youth to assume control of the

state. Their mystical belief in the quasi-divine nature of Ismāʿīl I as their *murshid-i kāmil* had been shattered by the latter's disastrous defeat at Čāldirān [*q.v.*], and they now reverted to their primary loyalty to their tribe. This led to almost a decade of civil war as the great *ḳïzïl-bās̲h̲ oymāḳ*s fought for political supremacy, and between 932/1526 and 940/1533 either individual *ḳïzïl-bās̲h̲* tribes or coalitions of tribes ruled the state. In 937/1530-1 the Takkalūs attempted to seize the person of the s̲h̲āh, but the other great *oymāḳ*s rallied to his defence and, in the ensuing fighting, large numbers of Takkalūs were killed. The survivors fled to ʿIrāḳ-i ʿArab; some of them subsequently entered Ottoman service, and one of their chiefs, the renegade Ulama (Ulāma), was involved in the rebellion of Alḳāṣ Mīrzā [*q.v.*]. These events virtually ended the political influence of the Takkalū *oymāḳ*.

In 940/1533 S̲h̲āh Ṭahmāsp managed to reassert the authority of the crown, and for some forty years remained in control of affairs, but in 982/1574, when he fell ill, there was immediately a recrudescence of dissension among the *ḳïzïl-bās̲h̲*. The political situation, however, was very different from the situation obtaining in 932/1526, at the outbreak of the civil war between the *ḳïzïlbās̲h̲* tribes. The new factor was the introduction of a "third force" to the political scene in the form of Armenians, Georgians and Circassians, who became *g̲h̲ulāmān-i k̲h̲āṣṣa-yi s̲h̲arīfa*, "slaves of the royal household". These men, many of whom had been taken prisoner in Ṭahmāsp's campaigns in Georgia between 947/1540-1 and 961/1553-4, or were the offspring of women brought to Iran at that time, adopted Islam, and were given special training to fit them for service either in some branch of the administration of the royal household, or in one of the newly-constituted *g̲h̲ulām* regiments. The *g̲h̲ulām*s, instead of being paid on a quasi-feudal basis like the *ḳïzïl-bās̲h̲*, were paid direct from the royal treasury, and their primary loyalty was therefore to the s̲h̲āh and not to any tribal unit. When therefore there was a fresh outbreak of factionalism in 982/1574, "it was no longer a struggle to determine which tribe could outstrip its rivals in a state in which the *Qizilbāsh* tribes as a whole enjoyed a dominant and privileged position, but whether the *Qizilbāsh* tribes as a whole could maintain their privileged position against the threat from the new elements in Persian society, the Georgians and Circassians" (Savory, *Ṣafavid Persia*, in *Cambridge History of Islam*, i, 407-8). This struggle was not resolved during the remainder of Ṭahmāsp's lifetime, or under his successors Ismāʿīl II and Sulṭān Muḥammad S̲h̲āh [*qq.v.*].

When ʿAbbās I [*q.v.*] was placed on the throne in 996/1588 by the powerful *ḳïzïl-bās̲h̲ amīr* Murs̲h̲id Ḳulī K̲h̲ān Ustād̲j̲lū, he realised that not only his personal future but the continued survival of the Ṣafawid state depended on his being able to establish his authority over the *ḳïzïl-bās̲h̲* as rapidly as possible. The Ottomans, taking advantage of *ḳïzïl-bās̲h̲* factionalism, had made large inroads into Persian territory in the west, as had also the Özbegs in the east. ʿAbbās's solution of curbing the power of the *ḳïzïl-bās̲h̲* and increasing that of the *g̲h̲ulām*s, though successful in the short term, ultimately seriously weakened the military and political effectiveness of the Ṣafawid state. The *ḳïzïl-bās̲h̲* regarded the *g̲h̲ulām*s with contempt, and dubbed them *ḳarā-og̲h̲lu*, "sons of black slaves". The *g̲h̲ulām*s, though some great commanders emerged from their ranks, did not have a fighting élan comparable to that of the *ḳïzïl-bās̲h̲*, the only troops in the Islamic world who had earned the grudging respect of the Ottoman janissaries. Essentially heavy cavalry, the *ḳïzïl-bās̲h̲* carried a formidable arsenal of weapons—bow, lance, sword, dagger and battle-axe; in action, the *tād̲j̲* was replaced by a helmet with mail cheek-pieces (Minorsky, *op. cit.*, 32); as they charged, they set up a rhythmic chant of "Allāh! Allāh!" (*Taʾrīk̲h̲-i ʿĀlam-ārā-yi ʿAbbāsī*, ii, 699). The basis of their fighting spirit, however, was their fierce tribal loyalty (*taʿaṣṣub-i oymāḳiyyat; taʿaṣṣub-i ḳïzïl-bās̲h̲iyyat*). S̲h̲āh ʿAbbās I was well aware of this and, in pursuance of his policy of curtailing the power of the *ḳïzïl-bās̲h̲*, not only reduced the strength of the *ḳïzïl-bās̲h̲* regiments but also deliberately weakened the all-important attachment of the *ḳïzïl-bās̲h̲* soldier to his tribe. He did this in a variety of ways: he placed an officer in charge of a tribe who was not himself a member of that tribe; in certain cases, alleging that a particular tribe did not possess an officer worthy of holding the rank of *amīr*, he appointed a *g̲h̲ulām* as *amīr* of the tribe; he transferred groups of men from one tribe to a district belonging to another tribe. The continuance of these policies by his successors ultimately undermined the military strength of the Ṣafawid empire.

In Afg̲h̲ānistān, there exists a substantial S̲h̲īʿī minority group of *ḳïzïl-bās̲h̲*, living mainly at Kābul and in the high valleys of Foladi on the western edge of the Hazārad̲j̲āt [*q.v.*]. These people are the descendants of garrison troops left behind by Nādir S̲h̲āh [*q.v.*] in 1150/1738 during his Indian campaign. The *ḳïzïl-bās̲h̲* hold clerical posts in government offices, engage in trade or are craftsmen; in short, they constitute an important and politically-influential element in the population. Estimates of their total number vary from 60,000 to 200,000 (see H. W. Bellew, *The races of Afghanistan*, Calcutta 1880, 107; D. N. Wilber, *Afghanistan*, New Haven, Conn., 1962, 49-50; and V. Gregorian, *The emergence of modern Afghanistan*, Stanford 1969, index *s.v.* *Qizil-Bash*).

As recently as 1945, the fact that the name *ḳïzïl-bās̲h̲* still had an emotive power in Ād̲h̲arbāyd̲j̲ān, the nerve-centre of the Ṣafawid organisation in earlier times, was demonstrated by the choice of this name for the regular troops recruited by the short-lived autonomous republic of Ād̲h̲arbāyd̲j̲ān.

Bibliography: Given in the text. For a detailed description of the rites and ceremonies of the Anatolian *ḳïzïl-bās̲h̲*, see article *Kızılbaş*, in *İA*. For additional textual references, see G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, iii, *Türkische Elemente im Neupersischen*, Wiesbaden 1967, 470-2.

(R. M. Savory)

ḲÏZÏL-ELMA (or **ḲÏZÏL-ALMA**), "Red Apple" is an expression which occurs in written sources from the 16th century onwards; it also occurs in Turkish oral traditions from Anatolia and Ād̲h̲arbāyd̲j̲ān as well as in modern Greek, Bulgarian and Rumanian folklore, current to this day. It refers to a legendary city which was to be the ultimate goal of Turko-Muslim conquests, and some versions explain the term from the resemblance between a red apple and the golden dome of a building—in this latter case it refers to a large church situated in the area. In the Ottoman period Ḳïzïl-Elma tended to be identified with the large cities associated with Christianity—Constantinople, Budapest, Vienna and Rome—which the armies of the *Pādis̲h̲āh* were hoping

to conquer (see J. Deny, *Les pseudo-prophéties concernant les Turcs au XVIe siècle*, in *REI*, x/2 (1936), 201-20; E. Rossi, *La legenda turco-bizantina del Pomo Rosso*, in *Actes du Ve Congrès international des études byzantines*, Rome 1936, 542-53).

Another tradition, which must have developed before the Ottoman one, identifies Ḳīzīl-Alma with Dāghistān, beyond Demir-Ḳapu. It has been supposed that this legend originated from the ceremony for enthroning the Shamkhal of Dāghistān, in which the claimant to the throne is involved in throwing a "golden ball"; because of this ball, Dāghistān was called "The land of Ḳīzīl-Alma" (see Fahreddin Çelik, *Kızıl-Almanın yerleri*, in *Cınaraltı*, Jan. and March 1942; Banıçiçek Kırzıoğlu, *Kars ili ve çevresindekilere göre Kızıl-Alma*, in *Türk folklor araştırmaları*, No. 181, Aug. 1964).The idea of Ḳīzīl-Alma being situated in Dāghistān as the furthest point of Muslim expansion has persisted in the oral tradition of Eastern Anatolia among the residents of Kars, Ardahan, Kağızman and both parts of Ādharbāydjān. The legendary place is mentioned in the 18th century by two poets from the fringes of the Caucasus. The one, ʿĀshīḳ Ṣafī, speaks of it in a song composed to celebrate an expedition of Nādir Shāh (1736-47) against the Russians in Dāghistān (see F. Çelik, *op. cit.*). But drawing on information given by a certain Bahrām of Damascus in his geographical work which was translated from Latin (Nūr-i ʿOthmāniyye Library, ms. 2996), Çelik suggests that the country of the Khazars was called Ḳīzīl-Alma since the 4th/10th century.

A popular legend, which probably rose in the oral tradition of the Janissaries, has survived in written recensions. One version is dated 13 Shaʿbān 1084/23 November 1673 and is found in the National Library at Ankara ("cönk" collection, No. 72). A second, dated 15 Djumādā II 1179/29 November 1765 is in a collection of folk narratives from manuscripts brought together by P. N. Borotav. The narrative is written in the form of a letter and it combines the motif of "Ḳīzīl-Alma, the ultimate goal of the Ottoman conquests" with that of a Christian king who, having been vanquished and wounded by ʿAlī b. Abī Ṭālib, was plunged into a deep sleep, and is waiting for a favourable day to revive and to take his revenge on the Muslims. In this version of the legend, an attempt can be seen at an identification and a localisation, which has ended in contradiction and anachronism. The Christian king is called Rum Papa "The Pope of Rome", so Ḳīzīl-Alma is thus being identified with Rome. But the narrative also locates the same legendary place at Bec (Vienna), and links this legend with the account of the Ottoman raid carried out during the reign of Süleymān II in 1532 by the historical person Ḳāsīm Voyvoda (see P. N. Borotav, in *Annuaire de l'École Pratique des Hautes Études*, IVe section, 1966-7, 263-4). The motif of the resurrection of a king is certainly Christian and probably Byzantine. It is linked with the cycle of pseudo-prophecies at the end of the period of Turkish domination (Deny, *op. cit.*), but later on it must have been integrated into Turkish tradition.

Oral versions of this narrative are still being told today. The present writer has recorded five versions in Turkish folklore (1) Ispartalı Hakkı, *Köyümden geliyorum*, Ankara 1971, 34-5 (the material in this book dates from 1916); (2) H. I. Erginol, in *Gediz*, No. 33 (1944)—cf. P. N. Borotav, in *Journal de la Société des Africanistes*, xxviii (1958), 16; (3) Kurt Bittel, *Legenden vom Kerkenes-Dağ (Kapadokien)*, in *Oriens*, xiii-xiv (1960), 33; (4) a version noted by Boratav in the villages of Han Köy and Ak-Dere (Afyon province) in 1950; and (5) a version noted by Oğuz Tansel in the village of Meyre (near Bozkır, Konya province). The two last versions are part of Borotav's own manuscript collection and are ununpublished. A Greek version from Asia Minor has also been recorded; it comes from a village in the region of Ephesus (see Dido Sotiriou, *D'un jardin d'Anatolie*, a novel translated from Modern Greek, Paris 1965, 22). For an Arabic version, see Yakoub Artin Pacha, *Seize haddouta, contes populaires racontés au Caire*, Cairo 1903, 11-12.

Bibliography: A full bibliography is provided by J. Deny and E. Rossi in their articles. Apart from works cited in the article, see for the motif of the Ḳīzīl-Elma Elmas Yılmaz, *Kızıl-Elma efsanesi* in *Türk folklor araştırmaları*, No. 146, Sept. 1961. (P. N. Boratav)

ḲĪZĪL-IRMĀḲ (T. "Red River"), the ancient Halys ("Ἅλυς) or Alys ("Ἄλυς), the largest river in Asia Minor. It rises in the mountains which separate the *wilāyet* of Sīwās from that of Erzerūm, waters the towns of Zarra (4,530 feet high) and Sīwās (4,160 feet high), then enters the province of Anḳara where it meets the mountain of Ardjīsh and the Ḳodja Dāgh range which force it to make an immense detour of over 160 miles. Its course is at first south-east, then it turns northwards, and finally it reaches the Black Sea below Bāfrā in the middle of marshes. It is nearly 600 miles long. Its waters, of a dark yellow colour when they are in flood, diminish enormously in the summer; its bed is wide and its banks high. Its principal right-bank tributaries are the Khān-ṣūyu and the Delidje-Čay; those on the left are the Ṣārūmṣāḳ-Čay which flows by Ḳaysariyye, the Dewrek-Čay from Ṭosya, the Gök-Irmāḳ which comes from the Ighāz-Dāgh (the ancient Olgassus) and waters the town of Ḳasṭamūni [*q.v.*]. According to Strabo (xii, 561), the river Halys ('Ἁλύς) took its name from the mines of rocksalt, the product of which was exported in the form of large blocks; these mines thirty miles to the north of Yūzghād (Yozgat) near the village of Ṣārī-Ḳāmish, are worked among the red sandstone, covered with clay and marl of a reddish colour; this soil washed down by the heavy rains gives the river a reddish colour, whence its name.

In ancient times, this river marked the boundary between the autochthonous peoples of Asia and those who had come from Europe to colonise the country. Herodotos (i, 72) makes it a frontier between Lydia and Media. It seems to have been known to the Arabs by its ancient name, if it is this river that is referred to by the name *Ālis* in a verse of Abu 'l-ʿAlāʾ al-Maʿarrī (S. de Sacy, *Chrestomathie arabe*[2], iii, text, 45, tr. 109, gives by mistake "Alous", an error reproduced by Defrémery, *Mémoires d'histoire orientale*, ii, 221).

ḲĪZĪL-ḲUM (T. "Red sand"), a desert between the Sīr-Daryā and Āmū-Daryā rivers [*qq. v.*, and also ḲARĀ-ḲUM], falling within the modern Uzbekistan and Kazakhstan SSRs. The country is less uniform, especially in the central part, than in the Ḳarā-Ḳum; the sand desert is crossed by several ranges of hills, and in some places is rocky. The Ḳīzīl-

Kum becomes more and more inhospitable as one goes southwards. The region called Adam-Kïrïlghan ("where man perishes") between the Āmū-Daryā and the cultivated region of Bukhārā, consisting of sandhills (*barkhān*), is considered especially uninviting and dangerous. In summer, there is absolutely no life in the desert; in the winter, there is vegetation, such as the *saksaul* shrub, and a few springs and wells are visited by Kazakh nomads. Schuyler noted that "Kirghiz" (sc. Kazakh) nomads crossed into the Kïzïl-Kum from north of the Sïr-Daryā on the river ice and returned in the spring when there were still ice floes in the river. Moreover, the mediaeval Islamic sources show that the winter, when the desert was carpeted with snow, was normally the time for military and other movements across the Kïzïl-Kum. Thus the Ghaznawid historian Bayhaḳī noted that it was the absence of snow which prevented the Oghuz ruler of Djand, Shāh Malik, from restraining the rebel in Khwārazm Hārūn and his Saldjūḳ allies from invading Khurāsān in spring 426/1035 (*Ta'rīkh-i Mas'ūdī*, ed. Ghanī and Fayyāḍ, 683-4); and in the 6th/12th century the raids of the Khwārazm-Shāhs to Djand and against the Ḳïpčaḳ were always made in winter [see DJAND in Suppl.]. At the south-eastern extremity of the Kïzïl-Kum lay the Ḳaṭwān Steppe, to the north of the Samarḳand-Khudjand road, where in 536/1141 Sultan Sandjar was defeated by the Ḳarā-Khiṭāy [*q.v.*]. In recent times, the desert sands have encroached on the cultivated fringes, and in the later 19th century several villages on the lower course of the Zarafshān river became buried in the sands.

Machatschek, *Landeskunde von Russisch-Turkestan*, Stuttgart 1921, 286 ff.; V. Peltz, *Očerk yuznïkh Ḳïzïl-Ḳumov*, Samarḳand 1912.

(W. BARTHOLD - C. E. BOSWORTH)

ḲIZIL-ÜZEN (in Āzerī Turkish "Red River"), the ancient Amardus, a river which flows through Ādharbāydjān and enters the Caspian Sea forty miles east of Sefīd-Rūd, "White River", at its junction with the river Shāh-Rūd at Mendjil. Its source lies in the province of Ārdilān, and it begins by crossing 'Irāḳ 'Adjamī to the north; its right-bank tributary is the Zandjān, on the left it receives the Ḳara-göl at Miyāne, then it runs along the southern slopes of Elburz, describing a great arc 125 miles long and crosses this range through the defile of Rūdbār and the narrow valley of Rustamābād, a kind of couloir through which rush violent winds from the south in winter and from the Caspian in summer. It was known to the Arabs as Nahr al-Abyaḍ "White River" (tr. of the Persian *Sefīd-Rūd*) (cf. Dimashḳī, *Cosmography*, tr. Mehren, 145); at one time the Turks called it the Hūlān (Ḥādjdjī Khālifa, *Djihān-numā*, 304).

(CL. HUART)

KIZIMKAZI, in full, KIZIMKAZI-DIMBANI, a small hamlet in south-west Zanzibar situated in lat. 6° 26l S, which possesses the earliest datable mosque in East Africa. Its *miḥrāb* has a dedicatory Kūfic inscription recording its foundation by Shaykh Abū 'Imrān Mūsā al-Ḥasan Muḥammad in 500/1106-7. This is flanked by Ḳur'ānic verses and two inscriptions in roundels, all of great elegance. The nearest analogy is with a grave cover found at Sīrāf: the *ensemble* was either imported from there or executed in Zanzibar by a Sīrāfī mason. This Persian connection accords with traditions of trading relations attested by inscriptions in Somalia and by the Kilwa histories. Otherwise, the mosque is an undistinguished rectangular structure. H. N. Chittick excavated it and the adjacent site in 1960. The hutted settlement dates from the 11th century or earlier: a ruined stone house and defensive enclosures are probably 18th century, when, as is commemorated by another inscription dated 1184/1772-3, the mosque and *miḥrāb* were largely rebuilt, the earlier inscriptions being incorporated into the fresh structure. An oral tradition claims that it was the capital of Bakari, a 17th century Swahili ruler of southern Zanzibar, but this seemingly contradicts the archaeological evidence; the fortified residence and the rebuilding of the mosque are more congruent with the 18th century development of the eastern African slave trade.

KĪZKĀHĀN [see KILĀT].

KĪZLAR AGHASĪ [see ḳïz].

ḲOČ ḤIṢĀR, a name of several towns and villages in Asia Minor, derived from Ḳodja-Ḥiṣar; compare such names as Ḳoč Ḥiṣārï, Ḳoyun Ḥiṣārï, Ḳoyul Ḥiṣārï, Keči Ḥiṣārï and Ṭoḳlu Ḥiṣārï. Confusion is often prevented by the addition of the name of the nearby provincial capital or of another word, e.g. Čankïrï Ḳoč-Ḥiṣārï, Sherefli Ḳoč Ḥiṣār. For the same reason, the toponyms of places with this name have been changed in recent times.

I. SHEREFLI ḲOČ ḤIṢĀRÏ (in modern usage *Şerefli Koçhisarı*, centre of an *ilçe* (previously *ḳaḍā'*) formerly called Esb-keshān, in central Anatolia nowadays within the *il* (*wilāyet*) of Ankara (formerly of Konya), 8 km east of the northeastern shores of the Tuz Gölü [*q.v.*]. The town is situated on the road connecting Ankara with Adana via Aksaray, nowadays a major line of communication. The countryside around it is watered by a mountain stream and yields a varied agricultural produce; there is also sheep-raising. Since ancient times salt has been produced at Kaldırım on the lake. In 1950 Şereflikoçhisar town had a population of 4,458 and the

ilçe (then called a *kaza*) one of 46,300, the latter including within its boundaries 97 villages.

Bibliography: B. Darkot art. s.v. in *İA*; F. Taeschner, *Das anatolische Wegennetz*, Leipzig 1924-6, i, Table 6*; *Ankara il yıllığı*, Ankara 1967; İ. H. Konyalı, *Şereflikoçhisar tarihi*, 1971.

II. Čankïrï Ḳoč Ḥiṣārï, in modern usage Çankırı Koç Hisar, since *ca.* 1923 centre of an *ilçe* (*ḳaḍā*ʾ) in the *il* (*wilāyet*) of Çankırı (Čanḳïrï [*q.v.*], Ḳānghrï before 1925) in central Anatolia, nowadays called Ilgaz. In the 19th century it was a *nāḥiye* in the *sandjaḳ* of Ḳānghrï, in the *wilāyet* of Anadolu, and since 1864 in that of Kastamonu. Situated in the valley of the River Devrez (= Devrek) on the southern slopes of the Ilgaz Mountains at an altitude of 905m. the town is an agricultural market centre, lying near the crossroads of the routes from Ankara to Kastamonu via Çankırı and of that from Istanbul via Bolu and Tosya to Erzurum and the east. Islamisation came after the conquest by the Dānishmend *amīrs* in *ca.* 468/1075. Afterwards the region became part of the dominions of the Isfendiyāroghlu [*q.v.*] or Djandārid dynasty of Kastamonu (Ḳaṣṭamūnī [*q.v.*]). The Ottoman Sultan Bāyazīd I took it in 795/1393. After the invasion and restoration of the amīrates in Anatolia by Tīmūr (after 804/1402), Ḳoč Ḥiṣār definitively became Ottoman territory in 855/1451. It then became an important halting-stage in the Ottoman network of routes of the so-called "left wing" (*sol ḳol*) of Anatolia. In 1950 the town of Ilgaz itself had a population of 1,783, and the *ilçe* (then called a *kaza*) one of 24,800, the latter including in its boundaries 76 villages.

Bibliography: [R. Bozkurt] *Osmanlı imparatorluğunda kollar ulak ve fase menzilleri*, Ankara 1966, 12, 15, 22 and map; *Çankırı il yıllığı 1967*, Ankara 1967; R. Leonhard, *Paphlagonia. Yalçın, *Çankırı*, Istanbul 1961; Y.Yücel, *Kastamonu'nun ilk fethine Kadar Osmanlı-Candar münasebetleri*, in *Tarih Araştırmaları Dergisi* (1963), i.

III. Ḳočḥiṣār (Sivas) nowadays Hafik, centre of an *ilçe* in the province of Sivas situated on the old main road and caravan route from Sīwās to Erzindjan [*q.vv.*] and the East 37 km. N.E. of Sivas on the right bank of the Ḳïzïl-Irmaḳ at an altitude of 1340 m. The population of the town in 1970 numbered 3,156. Nearby is Lake Todurgha (Tödürge, now Kaz Gölü or Demiryurt Gölü). Ḳočḥiṣār is identical with Ḥāfīk Ḳalʿesi (Ḥāwīk), a stronghold of some importance during the amīrate of Sivas of Ḳāḍī Burhān al-Dīn [*q.v.*]. In the 19th century the town had a mixed Armenian and Turkish population.

Bibliography: V. Cuinet, *La Turquie d'Asie*, Paris 1892, i, 695; B. Darkot, art. *Sivas* in *İA*, with list of older sources; H. W. Duda, ed. and tr., *Die Seltschukengeschichte des Ibn Bībī*, Copenhagen 1959, 248 and n.b.; F. Taeschner, *Wegennetz*, ii, 2 f., 11 n. 1, 3, table 36; Y. Yücel, *Kadı Burhaneddin Ahmed ve devleti* (*1344-1398*), Ankara 1970, 32 f., 45 f., 52, 73.

IV. Ḳočḥiṣār (Mardin) nowadays called Kızıltepe, the centre of an *ilçe* of the province of Mardin in southeastern Turkey (*Djazīra*) on the Zerkan Suyu, a tributary of the Khābūr, to the south-west of the city of Mārdīn [*q.v.*]. Its population numbered 16,376 in 1970. In early Islamic times this, Ḳočḥiṣār was called Dunaysir (Dunaysar) [*q.v.*]. During the rule of the Artuḳids [*q.v.*], the town was an important caravan centre, and a medical school existed here. The present ruins of the Ulu Djāmiʿ are a monument of that period (*ca.* 601/1204-5). At the time of Sultan Selīm I's campaigns against the Ṣafawids, an Ottoman army commanded by Bïyïḳlï Meḥmed Pasha, *beglerbegi* of Diyār Bakr, defeated a Persian force under Ḳarakhān Ustādjalū near the town in 922/1516. Afterwards the whole region came under Ottoman rule, with Mārdīn as a *sandjaḳ* (*liwā*) of the new *eyālet* (*beglerbegilik*) of Diyār Bakr [*q.v.*]. Ḳočḥiṣār was a part of the *ḳaḍā*ʾ of Mārdīn in 924/1518 and remained a subdivision of that district, being a *nāḥiye* of the *sandjaḳ* of Mārdīn during the 19th and 20th centuries and a *ḳaḍā*ʾ of the *wilāyet* of Mārdīn since the Republic was founded.

In 1766 the well known traveller Carsten Niebuhr visited Kočḥiṣār ("Kodsje hissar" in Arabic "Gunāssar" or "Dunāssar"), finding five minarets still standing (cf. *Reize naar Arabie*, Amsterdam-Utrecht 1776-80, ii, 366-7).

V. Ḳočḥiṣār also Ḳodja Ḥiṣār, identical with the Byzantine fortress of Trikokkia in the Sakarya region to the south-east of Iznīḳ [*q.v.*]. This place was conquered by Sultan Orkhān [*q.v.*] in 708/1308 (713/1313).

ḲOČI BEG, also called Göridjeli Ḳodja Muṣṭafā Beg, Ottoman writer of treatises on statecraft.

Ḳoči Beg was a native of Göridje (Gorča, Korytza) in Macedonia. He entered the Palace service as a *devshirme* [*q.v.*] during the reign of Aḥmed I and served under successive sultans until his retirement to his native place in the early years of Meḥemmed IV's reign. He seems never to have served in any capacity outside the Palace. He gained the especial confidence of Murād IV and Ibrāhīm, and it is for his memoranda to these sultans that he is famous. He was also tutor to the historian Naʿīmā [*q.v.*] (for a full biographical account see M. Çağatay Uluçay, *İA* art. *Koçi Beg*).

Ḳoči Beg's best-known work is his *Risāle*, presented to Murād IV in 1040/1630, where he analyses the causes of Ottoman decline and suggests remedies. There are several printed editions of the work: Aḥmed Vefīḳ Pasha (ed.), *Ḳoči beg risālesi*, London 1279/1862-3, Istanbul 1303/1885-6; A. K. Aksüt, *Koçi bey risalesi* (in Latin script), Istanbul 1939; German translation by W. F. A. Behrnhauer, in *ZDMG*, xv (1861), 272 ff., with comments by Fleischer in *ZDMG*, xvi (1862), 271. The work is summarised in J. von Hammer, *GOR*, v, 291. A second *risāle* attributed to Ḳoči Beg was apparently compiled from memoranda submitted to Sultan Ibrāhīm on that Sultan's order. There is no critical edition of the work. The first published version is an incomplete but fairly full

German translation by Behrnhauer, entitled *Das Naṣîḥatnâme*, in *ZDMG*, xviii (1864), 699 ff., based on manuscripts now in the Nationalbibliothek, Vienna (Mix. 477, A. F. 188, Hist. Osman. 150). The translator states that the author is anonymous. The second published edition is in A. K. Aksüt, *op. cit.*, 78 ff. (in Latin script), based on a manuscript in Millet Library, Istanbul, no. 474. In a third published edition, based on a manuscript in Nuruosmaniye Library, no. 4950, the editor attributes the *risāle* to the Grand Vizier Kemānkesh Ķara Muṣṭafā Pasha (F. R. Unat, *Sadrazam Kemankeş Mustafa Paşa lâyihasi*, in *TV*, ii, no. 6, 443 ff.). There are divergences between the published versions and between them and other existing mss. (for details and discussion, see M. Çağatay Uluçay, *Koçi Bey'in Sultan Ibrahim'e takdim ettiği risale ve arzlar*, in *Z. V. Togan'a armağan*, Istanbul 1950-5, 177 ff.).

The contents of Ķoči Beg's *risāle* presented to Murād IV resemble those of an earlier analysis of Ottoman decline, the anonymous *Kitāb-i müsteṭāb*, (ed. Yaşar Yücel, Ankara 1974) and are entirely conservative in outlook. The spread of corruption, he argued, had brought about a decline in the old institutions and bred disrespect for the *sharīʿa* and old laws (*ķānūn* [*q.v.*]). Remove corruption, restore respect for the *sharīʿa* and *ķānūn*, and the Empire would return to its former glory. In the old days before the reign of Süleymān I, the sultan had attended the *Dīwān* personally. Süleymān had abandoned this practice. Before the year 982/1574-5 the Grand Vizier had been independent, with no intermediary between him and the sultan. The sultan's favourites (*nüdemāʾ*) had never interfered in affairs of state. Bribery was unknown and *begs* were never unjustly dismissed. There was strict control over the emoluments of Palace officials and they never received lands whose rightful use was as *timars* or *zeʿāmets* [*qq.v.*].

After 982/1574-5 Palace officials and Sultan's favourites were able to engineer the dismissal of Grand Viziers, *beglerbegis* and *sandjaķ begis* and acquire lands rightfully allocated to timariots, as freeholdings (*temlik*) or fief-holdings (*pashmaķlıķ*, *arpalıķ*). As a result, the state lost its worthiest officers and no longer had the timariots available for war. A similar decline occurred in the *ʿilmiyye* hierarchy. After 1003/1594-5 *sheykhülislāms*, *ķāḍī ʿaskers* and *ķāḍīs* [*qq.v.*] frequently suffered wrongful dismissal. *Mulāzemets* and *ķāḍī*-ships were offered for sale, allowing ignorant men to enter the profession. Promotion, too, had come to depend on age, rather than ability. In the old days, the *ʿulemāʾ* had been upright men. Because they had feared God, the people had feared them, and the integrity of the *sharīʿa* had been preserved.

The *timar*-system had underlain the Empire's former military strength. In 992/1584-5, however, Özdemir-oghlı ʿOthmān Pasha had allocated *timars* to deserving *reʿāyā*. After him, the principle was extended, and unworthy *reʿāyā* and Palace nominees had received *timars*. These made bad and rebellious troops. Few bothered to present themselves for campaigns. Many had contradictory *berāts* [*q.v.*], giving rise to disputes and a decline in the respect due to the sultan's decrees. Finally, the abolition of the *yürüks* and *müsellems*, who had acted as a pioneer corps on campaigns, meant that the timariots, the picked troops of Islam, now had to perform menial tasks. The Janissaries and other *ķapıķulu* corps [see ORDU] had also become corrupt. It was again Özdemir-oghlı ʿOthmān Pasha who, in 992/1584, had admitted suitable non-*ķuls* into these corps, and after 1003/1594-5 this had become a flood. The *devshirme* system broke down; tradesmen and others secured posts lawfully due only to *ķuls*, and admitted their relatives to the corps. The number of so-called *ķuls* increased enormously, many of them retiring early without performing their military or other duties, and consequently they became a heavy burden on the treasury. Previously, they had resided only in Istanbul, Edirne and intermediate villages. They now resided throughout the empire, often exercising dictatorial powers in a region.

The swollen number of *ķuls*, together with a decline in *khāṣṣ-i hümāyūn* lands [see KHĀṢṢA], which had either passed to enemies or else been allocated as *pashmaķlıķ*, *waķf* or vizier's *khāṣṣ*, meant a vastly increased burden of taxation on the *reʿāyā*. The sale of tax-collecting rights exacerbated the situation. Excessive taxation had impoverished the *reʿāyā* and this, in turn, led to insufficient treasury revenue. This led to military weakness which undermined the authority of the sultan. The result was internal dissension and military defeat.

Ķoči Beg's remedy for the decline was as conservative as his analysis of its causes: a return to the imagined perfections of the era before Süleyman I. Bribery should be removed by restoring the independence of the Grand Vizier and neutralising the influence of Palace favourites in affairs of state; by keeping *begs* in their posts without fear of unjust dismissal; by dismissing ignorant *ʿulemāʾ* and replacing them with learned men; by distributing *timars* only to men worthy to receive them, and ceasing the practice of distributing *timar*-lands as *pashmaķlıķ*, *waķf* or other form of tenure. Only *beglerbegis* should appoint timariots. They should make a roll-call (*yoķlama*) of present incumbents in their provinces (*eyālet*), renewing the *berāts* of qualified timariots and removing the unqualified. *Ķuls* with high pay should receive *zeʿāmets*, thus creating a warrior's fief (*ķılıč*) and removing a burden from the treasury. Able-bodied timariots should serve on campaigns with the number of retainers (*djebelü*) which the old *ķānūns* specify. This would produce 400,000 to 500,000 troops and provide a counterbalance to the influence of the *ķapıķulus*. Similarly, all innovations (*bidʿat*) in the Janissary and other *ķapıķulu* corps which contravene the old *ķānūns* should be abolished. There should be a graduation (*čıķma*) from the Palace once in every seven years, and at these times the *ķapıķulu* corps should receive only enough recruits to replace dead members. Officers (*ḍābiṭ*) of these corps should never be unjustly deposed.

Ķoči Beg's second *risāle* is a straightforward description of various state institutions and governmental practices, interspersed with political maxims. Its purpose was to guide the new and totally inexperienced sultan, Ibrāhīm, and its language, in accordance with that ruler's mental capacities, is extremely simple (see M. Tayyib Gökbilgin, *İA*, art. *İbrahim*, and IBRĀHĪM).

ĶODJA ELI, modern Turkish Kocaeli: a region between the Black Sea and the Sea of Marmara, covering a part of ancient Bithynia with its centre Izmīd [*q.v.*] (ancient Nicomedia), and the name of a *sandjaķ* of the Ottoman empire. Nowadays it is the name of a province (*il*) of Turkey (population 385,408 in 1970), with Izmit as its capital. In 1954 the eastern part of the province Kocaeli was separated to form the Sakarya (Saķārya) province with its capital Adapazarı. Since this administrative reform, Kocaeli has comprised the *ilces* (formerly *ķaḍā*'s) of (Izmit-) Merkez, Gebze, Kandıra, Gölçük (before 1936, Değirmendere) and Karamürsel. The province is traversed by the main route of communication between Istanbul and Ankara and the East, nowadays by the Anatolian railway (since 1873) and the motorway No. 1/E5. Modern industries have been founded along the Gulf of Izmit (Izmit Körfezi) in the Republican period, complementing the already existing ones (e.g. the Imperial Ottoman textile and carpet factory at Hereke). Thanks to the large forests prevailing in the region (in 1970 42,1 % of the area was still considered as forestland), the province became a centre for shipbuilding already in ancient times (cf. the mediaeval type of (rowing- and sailing) transport vessel, *Caramusali*, Turkish *Karamürsel*, called after the port of Karamürsel).

The Gulf of Izmit was a base area of the Ottoman navy from the 10th/16th century onwards. A dockyard and naval establishment existed at Izmit till World War I. Since 1926 Gölcük has been one of the main bases of the modern Turkish navy.

Ķodja Eli was one of the earliest Ottoman *sandjaķs*, formed during the reign of Orkhān in the years 1327-38. Its name is derived from that of one of the *ghāzī* leaders of the first two Ottoman rulers Aķčaķodja, who with Ķara Mürsel and Ķonur Alp first raided this then Byzantine region, and was buried on Baba Tepe near Ķandīra in 728/1327. During the Ottoman interregnum 1402-13 the Byzantines were able to regain their territory, but in 1419 Timūrtāshoghlu Umur Beg reconquered Ķodja Eli definitively for the Ottoman Sultan. Before the end of the 10th/16th century, the *sandjaķ* became part of the *eyālet* of the *ķapudān pasha* and its *sandjaķ-begi* a commander of a naval squadron. In 1867, within the framework of the new system of provincial administration, Ķodja Eli was incorporated in the *wilāyet* of Khudāwendigār [*q.v.*]. From 1888 till the end of the Ottoman period it became the independent *sandjaķ* (*mutaṣarrīflīķ*) of Izmīd, with the 5 *ķaḍā*'s of Adapazari, Ķandīra, Geyve, Karamürsel and Izmīd-Merķez. In *ca.* 1890, V. Cuinet (*La Turquie d'Asie*, Paris 1894, iv, 303 ff., 371) estimated the population of the *sandjaķ* at 223,000, of which 129,000 were Muslims, 49,000 Armenians, 41,000 Greeks and 2,500 Jews.

(A. H. de Groot)

KŌHĀT (P., "mountains"), a directly-administered District of what was the North West Frontier Province of British India and of Pakistan till 1955, covering some 2,694 sq. miles and with its administrative centre at the town of Kōhāt. The District is bounded by the Khyber Agency [see khaybar Pass] on the north, by the Kurram and North Wāziristān Agencies in the west, by the Bannū District [*q.v.*] on the south, and by the Indus River and the ʿĪsā Khēl *taḥṣīl* of the Pandjāb on the east.

The terrain of the District is that of a rugged tableland lying at an average of 2,000 ft., with low ranges of arid hills which rise to 3,000-4,000 ft., and with more fertile valley bottoms in which agriculture, sometimes by irrigation, is possible; the climate shows considerable variations in temperature and rainfall averages only 15 inches per annum. The region is connected with the Kabul River valley and the Khyber region by the Kōhāt Pass, called locally the *Darra* (2,866 ff.), whose control was in British times much disputed by the local Afrīdī tribesmen; the area round the Pass, a strip of unadministered territory, has for long been the site of a flourishing Afrīdī gun-making factory. An important commodity of the Teri village neighbourhood of Kōhāt has always been rock salt, of which there are extensive deposits at Bahādur Khēl; until recent years, these were owned by the *Nawāb* or titular head of the Khaṭak tribes. The Government of India's increase of the tax on Kōhāt salt in 1896 to a level with that on cis-Indus salt was one of the pretexts for the tribal rising along the Frontier in 1897.

The population of the District is essentially Pathan, mainly of the Bangash in the western parts, the Khaṭak [*q.v.*] in the eastern tracts down to the Indus shores, the Orakzay and Ādam Khēl Afrīdīs in the northern parts, and the Niāzīs along the Indus in the south of the district; of these, the Bangash speak the northeastern or "hard" variety of Pashto, and the Khaṭak and Niāzī the southwestern or "soft" one [see afghān, iii. The Pashto language].

The Khaṭak seem to have moved into Kōhāt from the west in the 8th/14th century, whilst the Bangash entered the district in the following century as allies of the Khaṭak against the Orakzay. The Mughal adventurer Bābur [*q.v.*] made his first foray into India in 910/1505 down the Kabul River valley to Peshāwar, then into Kōhāt and Bannū and through the Deradjāat to the Indus; he scattered the local Pathans, and built towers of skulls of the slain in Kōhāt (*Bābur-nāma*, tr. A. S. Beveridge, 230-2). In 1029/1620 the Mughal Emperor Djahāngīr's general Mahābat Khān [*q.v.*] campaigned in Kōhāt against the Rōshaniyya sectaries [*q.v.*] amongst the local Pathans.

In the early 19th century, Peshāwar, Kōhāt, Bannū and the Deradjāt came under the control of the Sikh ruler of the Pandjāb, Randjit Singh, although Sikh authority was contested by the local tribes. The British envoy Mountstuart Elphinstone passed through Kōhāt in early 1809 on his way to the Durrānī court in Kābul, and waxed lyrical about the green valleys and the fruits of "Cohaut" (*An account of the kingdom of Caubul*[2], London 1842, i, 49 ff., ii, 50-1). After the downfall of the Sikh empire

and the annexation of the Pandjāb in 1849, the British penetrated through the low Khaṭak hills and Kōhāt to the Kurram River valley at Thāl. The regions of Peshāwar, Kōhāt and Hazāra were then briefly placed directly under the Board of Administration for the Pandjāb. In 1876 these three northern regions of the Frontier were formed into the Commissionership of Peshāwar. Then after the frontier tribal wars of the late 1890s and in the Viceroyalty of Lord Curzon, the North West Frontier Province was formed in 1901 as an administrative unit separate from the Pandjāb, with Kōhāt as one of its four trans-Indus districts; Kōhāt District itself comprised the three *taḥṣīls* of Kōhāt, Terī and Hangū. A road was made in 1901-2 connecting Peshāwar and Kōhāt via the Pass, and a narrow-gauge railway was also begun to connect Khushḥālgaṛh on the Indus with Kohāt town, Hangū and Thāl, thereby stimulating local trade with Tīrāh and Kābul. Kohāt town had already become an important garrison centre from which control was exercised over the turbulent Pathan tribes, and Sir Louis Cavagnari, who for more than a decade had been Deputy Commissioner in Kōhāt, had built himself a fine official residence there.

During the inter-war period, Kōhāt was, with Peshāwar, Bannū and other parts of the Frontier, the scene of disturbances caused by the political movement of the *Khidmatgārān* or "Redshirts" of ʿAbd al-Ghaffār Khān. The postpartition position has not been greatly altered since British days. The District continues to be divided into three *taḥṣīls*, with the names Kōhāt, Hangū and Karak; Kōhāt town is an important military base for the Pakistan Army and there is also a military airfield. A plan for a barrage across the Toi River, the "Banda Tanda Dam", in order to harness flood waters, has long been mooted. The 1961 census enumerated a total population for the District, including the attached tribal areas in the north, of 627,795, a 45 % increase since 1951, with a population for Kōhāt town and cantonment of 75,000.

AL-**KŌHĒN** AL-**ʿAṬṬĀR**, Abu 'l-Munā (Dāwūd) b. Abī Naṣr b. Ḥaffāẓ al-Isrāʾīlī al-Hārūnī, Jewish pharmacist who in 658/1260 wrote in Cairo "for himself and his son" a pharmacopoeia under the title (changing slightly in the manuscripts) *Minhādj al-dukkān wa-dustūr al-aʿyān fī tarkīb al-adwiya al-nāfiʿa li'l-abdān*, which became very widely spread. About his life almost nothing is known, and his relation to Abū Manṣūr Sulaymān b. Ḥaffāẓ al-Kōhēn, the author of a *muntakhab* from which al-Kōhēn al-ʿAṭṭār quotes, is uncertain (see Steinschneider, *Die arabische Literatur der Juden*, 233 f.; M. Plessner, in *Oriens* xxiii-xxiv [1970-1], 454. The *Minhādj* has the following 25 chapters: 1. The duties of the pharmacist. 2. Drinks (*ca.* 1/6 of the whole work). 3. Concentrated fruit-syrups. 4. Preserved fruits. 5. Pastes. 6. Electuaries. 7. Powder. 8. Lozenges. 9. Remedies to be sucked. 10. Pills. 11. "Hallowed substances" (*iyāradjāt*). 12. Eye-powder. 13. Eye-salves. 14. Pomades. 15. Oils, etc. 16. Plaster. 17. Tooth-powder. 18. Suppositories. 19. Compresses, settings, sternutatories. 20. Substitutive drugs. 21. List of simple drugs. 22. Apothecaries' measures and weights. 23. Admonitions for a sensible way of living. 24. Professional instructions. 25. Test of the usefulness of the simple and the composite drugs. At the end, the author promises a monograph on generally-known simple drugs, which was probably not written.

Thus the work is a typical dispensatorium (*aḳrābādhīn*, from Greek γραφίδιον via Syriac *graphīdhīn*), in which, after the Galenic example, the composite drugs (*al-adwiya al-murakkaba*) are grouped according to classes (κατὰ γένη). In the present work, the simple drugs (*al-adwiya al-adwiya al-mufrada*), usually dealt with in separate works, have equally been treated from certain view-points in chapters 21, 24 and 25. The recipes are partly of the author himself, but the majority come from sources mentioned by name. Most conspicious among the latter are the *Dustūr al-bīmāristānī* of Ibn Abī 'l-Bayān [*q.v.*], teacher and somewhat older contemporary of al-Kōhēn al-ʿAṭṭār, and the *Irshād* of Ibn Djumayʿ al-Isrāʾīlī, another pupil of Ibn Abī 'l-Bayān. In the introduction, al-Kōhēn claims to be the first to compose an extended pharmacopeia especially for chemists; the earlier ones, Ibn Abī 'l-Bayān's book included, are said to have been written for physicians in the traditional manner. This specialisation has possibly been one of the reasons for the wide dissemination of the work, a second one apparently being the very conveniently arranged survey of the current measures and weights (ch. 22), which must have met a generally felt need. For an officially-regulated standard did not exist, and the units of measures, so countlessly varying, were overseen with more or less care by the *muḥtasib* only. A third reason for the popularity of the work may have been its useful indications for the chemist's profession (purchase, efficient storage, cleaning, protection of the drugs against blight etc., chapter 24). Finally, the abundant use of popular Arabo-Egyptian names of drugs made the work easily accessible to every user.

KOMOTEN [see GÜMÜLDJINE in Suppl.].

KONAKRY (usual orthography, Conakry), capital of the Republic of Guinea.

With its site fixed in the tables of latitudes of Ptolemy, Konakry has only been regularly inhabited since the second half of the 18th century. It is situated on the west coast of Africa in lat. 9° 31′ N. and long. 13° 43′ W., and occupies three distinct natural sites: part of the Kaloum peninsula, the island of Tumbo and the archipelago of Loos. Manga Damba, chief of the Susu people, founded Kaporo there in 1780, after having subjugated the Baga and the Mandenyi. The Loos islands, originally occupied by the Portuguese (Los Idolhos), were occupied by Britain in 1848. After the "Mulatto War" of 1865-70, there were four villages, sc. Kaporo, Bulbinet, Tumbo and Camayenne, which were placed together at the time of the first French post's foundation, when the corvette "Goëland" passed there on 26 January 1887. On 1 August 1889, Conakry became the capital of the colony of the Rivières du Sud and Dependencies, and then in 1890 of French Guinea, of which Ballay was the first governor.

It became the departure-point for roads into the interior after 1895, and then for the Conakry-Niger railway completed in 1914, and the town and its port enjoyed a rapid development facilitated by the filling-in of the Tumbo channel. Its vitality was shown by the increases of population: 13,000 in 1899, 78,000 in 1958 and 250,000 in 1975. The Loos islands were attached to it in 1904, and also the convict settlement of Fotoba, where the Wali of Gumba, Tierno Aliou, leader of the revolt of the Houbbous, died in 1912.

It became a Commune Mixte in 1913, with full powers in 1955, and then on 2 October 1958 Conakry became the capital of the Republic of Guinea. It has 1,853 m. of docks, 10 hectares of platforms, a volume of traffic amounting to 2 1/2 million tonnes and an airport with a 3,300 m. runway; it is thus a lively industrial centre. Despite the ending to the mining of Kaloum's iron deposits in 1966 and the slackening of the exploitation of the bauxite of Kassa, it remains the main outlet of the Fria Company, and also possesses many factories, including for tobacco and matches, furniture, tanning, shoes, plastics, brewing, fruit juice, etc. Since 1963 Conakry has had the Gamal Abdel Nasser Polytechnic Institute, with seven faculties, including one for medicine, and it also has several Écoles Nationales (Arts and Crafts, Meteorology, etc.).

The majority of the population is Muslim (71 % in 1955). The conversion of the Baga and Susu was achieved at the beginning of the 19th century by the Yattara family, the Diulas. Christianity came with the Anglican mission at Fotoba in 1864, and the Catholic mission, which built the cathedral of St. Mary, in 1890. On 18 October 1897 Conakry became an Apostolic prefecture, on 18 April 1920 an Apostolic vicariate, and on 15 September 1955 an Archidioces.The diocese contained 13,400 Roman Catholics in 1965, two-thirds of these in the capital. The strength of Islam is easily discernible from these figures. The main *ṭariḳa* there remains that of the Ḳādiriyya, which resisted the penetration of the Tīdjāniyya in the 19th century under the double influence of the *zāwiya* of Touba and of the Senegalese auxiliary troops of the French who adopted Murīdism. These last built a mosque on the island of Tumbo, still called the Senegalese mosque.

Despite the efforts of Malinka scholars, Wahhābism has remained only embryonic. One should further note a certain persistent strain of animism among the Baga population, characterised till 1963 by the cult of the tree of Bassicole, on the isthmus of Tumbo, cut down then to allow the building of the People's Palace at the expense of the People's Republic of China.

(J. P. ALATA)

KONG, corruption of *Kpon*, name of a place in the northern part of the Ivory Coast near to the watershed between the basins of the Comoé and that of the Nzi which flows into the Bandama. Kpon was founded in a very ancient period by the Senoufo of the Falafala tribe who to this day have retained their predominant rights over the land, while playing now only an unobtrusive role.

Kong is an illustration of the advance of the Malinka towards the south and towards the regions producing gold and kola. This immigration took place in the period following the 16th century and these Dioula who supposedly came from Macina founded Bobo Dioulasso on their way. Having established themselves in Kong they were reinforced at the beginning of the 18th century by contingents of Sohondji Malinka pagans, with whose help they were able to police the trade-routes. There can be no doubt that it was at the end of the 18th century that a Malinka chief, Sekou Ouattara, whose family was linked with the inhabitants of Boron on the Bandama, united a group of Malinka families coming from the north. From Macina he passed through Dé near Bandiagara, Téwélé near Bobo Dioulasso, then Teninguera near Kong where he ousted a red-haired chieftain named Lassiré Gombélé, taking his place and establishing Islam. Lassiré Gombélé would no doubt have been a Mandé, ruling over the autochthonous Falafala and the Paralha (Koulango).

Sekou Ouattara established his twelve sons so firmly in the villages that when his brother Famarha attempted to gain power, the resistance offered by the sons forced him to leave and to settle in Bobo Dioulasso, opening a long series of quarrels between the two cities.

From the city of Kong the power of this Dioula aristocracy spread throughout the neighbouring country, largely as a result of the superiority of their cavalry. To assure themselves of a supply of remounts, they founded on the Bani the village of *So fara* (stallions).

While the children of Sekou Ouattara received various appanages, the sixth son, Sambakari, at-

tempted to conquer Lobi and spent several years fighting interminable campaigns against the Léa, the Teguessié and the Dian. The authority of the Dioula over the land of Lobi seems to have been purely nominal.

Among campaigns involving external powers, one was repulsed by the *Tondion* of Biton Kouloubali in 1725. Also, the Ashanti army which, according to Bowdich, had reached as far as Kong, was defeated there and its leader injured by a lance-blow at a place which is still pointed out in the vicinity of the town.

Abo (1720-46), the ruler of the Abron, was pursued by the Ashanti king Opokou Ouaré and took refuge in Kong, where the sovereign's mother handed him over to the Ashanti who put him to death.

With its control over the gold and kola routes, the city of Kong took on greater and greater importance, and the authority of the sovereigns extended over the whole of the land from the Comoé to the Marahoué and, towards the Djimini in the south, where the Dioula had constructed terraced dwellings in the Sudanese style. Five mosques with twin pyramid-shaped minarets dominated the quarters of the city.

The military power of Kong depended on contingents of pagan soldiers. But commercial prosperity induced the more gifted elements to turn away from military pursuits, to such an extent that when the Pallaka pagans rebelled and closed their territory to caravan traffic, the punitive expeditions mounted by Kong came to nothing.

Although Mungo Park had heard tell of Kong, it was Binger who, on 20 February 1888, arrived in the town and stayed there until the 11th March. In December of the same year, Treich-Laplène made the sovereign of that time, Karamoko Oule Wattara, sign a treaty placing Kong under French protection. This treaty was signed on 10 January 1889 in the presence of Binger, who had occasion to return to Kong in 1892.

Two years later, Kong was visited by Captain Marchand, *Kpaki Bo* (= "feller of the forest"), who had heard of the threats made by Samori against Kong. It was then that Lt.-Colonel Monteil was recalled to the area; he had been preparing to attempt a regrouping of forces on the Upper Nile. Mustering at Grand Bassam in August 1894, the column encountered the utmost difficulties in making progress. Joining battle with the armies of Samori in March 1895, it was forced to retreat and on 15 May 1897, Samori razed the city to the ground and massacred those of the inhabitants who had not succeeded in escaping towards Bobo-Dioulasso. Only the houses of the Falafala were spared.

In January 1898, a French detachment established a post there, which was soon laid under siege but was relieved by Commandant Caudrelier. With Samori captured, and peace re-established, the French administration invited the refugees to return. Some accepted, but the majority remained in Bobo Dioulasso. Kong was never to regain its former eminence. It was to remain a mere regional capital with some 3,000 inhabitants, and an important centre of Muslim proselytism.

KONYA (Arabic and Turkish orthography, Ḳūniya), known in antiquity as Iconium, an important town lying on the edge of the Anatolian plateau, on a diagonal line connecting the Dardanelles with the Taurus passes leading into Syria.

1. History.

Konya was, during the centuries of Arab invasion, a Byzantine military base which the attackers seem for this reason to have more or less deliberately avoided and circumvented, in preference either for Tarsus [see ṬARSŪS] to the south or especially for Cappadocia by the northern routes; this would seem to explain the fact that the town is seldom mentioned in military histories. It is probable, however, that Konya, like other towns, had suffered previously in the Persian invasion, and that it occupied only a section of its former territory. It is difficult to describe with certainty its history in a period for which no archaeological investigation has been performed, but the common and widespread re-use of older materials in the Saldjūḳ monuments would seem to indicate that many buildings were in ruins and the town only partially reconstructed. It reappears, however, in a better light at the time of the Turkish invasions of the 5th/11th century and at the time of the Crusaders who passed that away in 1097. The latter found no serviceable fortifications there, but were able to derive benefit from the gardens in the vicinity of the town.

It was the Saldjūḳ régime which marked the zenith of the history of Konya. The site, well irrigated in contrast to the neighbouring desert, commanded the southern route at a time when the Dānishmendids [*q.v.*] denied the Saldjūḳs access to the northern route to the Dardanelles, and it must have found favour with the new masters when they became aware of the need for a secure political and military base as a focus for their still semi-nomadic peoples. The real development of the town dates from the reign of Masʿūd (512-50/1118-55), who resolving to make Konya a capital, built a mosque there and other monuments which his successors must have completed. It was already a city of note when in 1190 the German army raised in Cologne by Frederick Barbarossa passed through it. The progressive unification of Turkish Asia Minor under the rule of the Saldjūḳs evidently contributed to the prosperity of the capital. Besides the principal mosque, from about 1190 onwards the city possessed a number of smaller ones, as well as *madrasas*, *khānḳāhs* [*q.vv.*], flourishing markets and reconstructed ramparts. The development of the power of the sultans in the first half of the 7th/12th century was also reflected in the town, where apparently social hierarchy was judged by the importance and height of houses rather than by the allocation of separate quarters to the various ethnic groups. In Konya there were evidently Greeks (with their monastery, reputedly dedicated to Plato), Armenians and some Jews; the records make few references to Turks, a term reserved in this context for the Turcomans of the plains, but rather speak of Muslims, a designation normally embracing both indigenous Turks, who in a town of this kind were largely Iranised, and Iranian immigrants, arriving especially in the period following the Khwārazmian and Mongol invasions, who, besides their involvement in craftsmanship, were sometimes promoted to the most important civil posts of the régime. Three social groups deserve special attention, the *idgish*, the *akhis* and the

Ṣūfīs or dervishes. The *idgis̲h̲* were a kind of militia recruited among the half-breed sons of indigenous fathers converted to Islam and married to Turkish women; the *ak̲h̲is* [*q.v.*] were a Turkish form of the Muslim *futuwwa* [*q.v.*], and were to play an important role especially in the period of the Mongols and their immediate successors; as for the Ṣūfīs, there were a number of different orders, but, from the middle of the 7th/13th century the prestige of D̲j̲alāl al-Dīn Rūmī must have drawn numerous disciples to him, although this was not an organised order (that of the Mevlevīs or Mawlawiyya, from Mevlānā/Mawlānā) until the 8th/14th century. Naturally, Konya also had a military garrison, composed to a large extent of slaves of Byzantine stock captured on the north-western marches of the kingdom. The sultans lived in the palaces which they had built in Konya and the surrounding area. The ramparts of the town had been extended and strengthened in the time of the great sultan ʿAlāʾ al-Dīn Kay Ḳubād [*q.v.*] with the compulsory co-operation of the senior *amīrs* of the region. The buildings erected in this period are studied below, but the abundance and importance of the mosques, *madrasas*, *k̲h̲ānḳāhs*, hospitals, *k̲h̲āns*/caravanserais, etc. testify to the considerable development of the Sald̲j̲ūḳ capital, which the present-day remains continue to evoke, in an original and compelling style.

The progressive establishment of the Mongol protectorate over Sald̲j̲ūḳ Anatolia in the second half of the 7th/13th century was naturally prejudicial to the importance of Konya, although in a slow and partial fashion. The rivalry between the brother sultans ʿIzz al-Dīn Kayḳāʾūs and Rukn al-Dīn Ḳilid̲j̲ Arslan represented in fact the struggle between the partisans of collaboration with the Mongols, the naturally dominant force in eastern Asia Minor beyond Kayseri, and the partisans of resistance, whose headquarters was at Konya and who relied to a large extent on the Turcomans of the southern and western frontiers. The decline of central authority was accompanied by a boost to the prestige of peripheral Turcoman principalities in such a way that centres of political activity, etc. were transferred to new regions, to the detriment of Konya in particular. The episode which marked this evolution for the first time was the temporary occupation of Konya in 675-7/1277-8 by the Ḳaramānids [see ḲARAMĀN-OG̲H̲ULLARĪ] of the western Taurus, who installed there a bogus Sald̲j̲ūḳ known by the name of D̲j̲imrī. Their independent government survived however until 713/1313; but in that year it was definitively annexed, although the Ḳaramānids did not lose their capital, henceforward to be situated at Laranda/Ḳaramān [see LARANDA]. The cultural and religious importance of the town and the relative importance of its population ensured, however, that it retained a certain vitality, as is attested by a number of buildings and pious foundations erected by Ḳaramānid princes and dignitaries. Once occupied by Bāyezīd Yildirim, the town was definitively annexed to the Ottoman state, together with the remainder of the Ḳaramānid state, in 880/1475, and Ottoman documentary archives give evidence that *waḳfs* and Sald̲j̲ūḳ and Ḳaramānid institutions were in general maintained there. Naturally in this vast empire, far removed from all the important areas, Konya could no longer be more than a provincial centre. The fact that it was under its walls that the Ottoman army of Res̲h̲īd Pas̲h̲a was crushed by the Egyptian army of Ibrāhīm Pas̲h̲a, the son of Muḥammad ʿAlī, at the end of 1832, proves that the town could still occasionally play a strategic role.

A number of travellers have visited and briefly described Konya. One of the most valuable accounts is that of Henri de Laborde, who has left us plans of the town as it was in 1828, a period in which many buildings today in ruins were still standing. The population of the town, which in the time of Cuinet (end of the 19th century), was about 50,000, passed the 100,000 mark in the middle of this century (119,841 in 1960) and has continued to increase slowly since then.

Bibliography: An exhaustive bibliography of the geographers, travellers and historians was given in 1954 by Besim Darkot in his *İA* art. s.v. The most recent works include especially those of İsmail Hakki Konyalı, *Konya tarihi*, Konya 1963, and Mehmet Önder, *Mevlana şehri Konya*, Konya 1971. See also Cl. Cahen, *Pre-Ottoman Turkey*, London 1968; Osman Turan, *Selçuklular zamanında Türkiye*, 1971; S. Vryonis Jr., *The decline of medieval Hellenism in Asia Minor*, Berkeley and Los Angeles 1971; E. Eickhoff, *Friederich Barbarossa im Orient*, 1977; Faruk Sümer, art. ḲARAMĀN-OG̲H̲ULLARĪ. (CL. CAHEN)

2. Monuments.

There are some eighty monuments surviving in Konya, but many are so heavily restored that only fragments of decoration survive of the first foundation. An example is the Hoca Hasan Mescid, *ca.* 1200. Major buildings lost but recorded include the *bedesten*. The number of houses and *konaks* dating from the 18th to the 20th centuries is declining rapidly, but the private Koyunoğlu Museum survives. A study of relative documents was made by İ. H. Konyalı, *Konya tarihi*, Konya 1963, and of ceramics by M. Meinecke, *Fayencedekorationen seldschukischer Sakralbauten in Kleinasien*, Tübingen 1976. His datings are here accepted unless otherwise stated, while an asterisk indicates buildings dated by inscriptions.

Walls and palaces. The walls were destroyed within living memory. C. Texier, *Asie Mineure*, Paris 1882, and others recorded the wealth of antique and Sald̲j̲ūḳ decoration incorporated in them, especially in the vicinity of the 108 towers, including fabulous beasts, a decapitated Hercules and extensive verses, all of which were gilded. The grandeur of the city is confirmed by the ruined kiosk of Ḳilid̲j̲ Arslān II (1155-92), which was once a square chamber clad in ceramics with balconies carried on large consoles above a vaulted hall. Illustrated in F. Sarre, *Der Kiosk von Konya*, Berlin 1936, it is situated in the citadel area which has yet to be excavated in depth and where such remains of the *kale* as exist are attributed by Konyalı to 618/1221, although it was founded in 569/1173.

Mosques and complexes. Adjacent is the Alaeddin Cami begun by Kaykāʾūs I [*q.v.*]. The consequences of frequent repairs are as important as the damage they mask. The area immediately round the *miḥrāb* is the oldest dated by the inscription to Sulṭān Masʿūd on the outstanding *miḥrāb*, *ca.* 1155. The west half of the prayer hall was completed in 617/1220* and the east pillared hall was added in 1235 when the *miḥrāb* (its heart mutilated irreparably) in the typical Anatolia ceramic manner was added. Among inscribed names are those of Ustād Ḥād̲j̲d̲j̲ī Mengubirti (reading provisional) al-K̲h̲ilāṭī (on the *minbar*), Muḥammad b. K̲h̲awlān of Damascus, an overseer, and of Atabeg Ayāz, the official in charge of work 1219-20.

Contiguous with the enlarged mosque and now entered from it is the duodecagonal *türbe* named after Ḳılıdj Arslān and dated 616-17/1219-21g. The cenotaphs are covered in white inscriptions on deep cobalt blue grounds. Except for Kaykā'ūs I, buried at Sivas, from 1192 onwards this was the mausoleum of the dynasty.

Externally, the courtyard wall is monumental, with two marble portals in a style developed from that of 12th century Zangid Damascus. The İplikçi Cami, 1220-30, was first rebuilt in 733/1332*, but the *miḥrāb* survived. The central aisle has three domes, and the three on each side are vaulted. The mosque is now the museum. The Larende or Sahip Ata Cami, 656/1258*, has lost its second brick minaret in the Iranian or Central Asian style. The stalactite porch, incorporating detritus from Christian monuments, is 13th century workmanship at its apogee, which was increasingly heavy and flamboyant. The fine faience *miḥrāb* and semi-domed *īwān* survived rebuilding. It is united with the *khānagāh* (of the four-*īwān* type retaining some original decoration) by the family tomb in a manner suggestive of ancestor worship. This mausoleum is of the domed *īwān* type with a crypt, where the cenotaphs retain some of their faiencework. The inscription on the mosque to the master Kalūk b. ʿAbd Allāh (reading provisional) makes this his only dated building. The Sadreddin Konevi Cami, 673/1274-5*, has lost two deeply-carved shutters to the Türk ve Islâm Eserleri Museum, Istanbul.

Kayḳubād I [*q.v.*], as patron of Djalāl al-Dīn Rūmī [*q.v.*], created Konya's greatest spiritual memorial, which is expressed materially as the Mevlevi complex and museum, to which the mosque of Selīm II is related. The *tekke* originated in 628/1231 (Meinecke, 342; Konyalı, 630), but the earliest *īwān* which contains the cenotaph of the poet is dated 672/1273-4. Its scalloped dome was-recovered in Kütahya tiles externally in 1818, 1909 and 1949 (Konyali, 654) and the wooden cenotaph, 674/1277, completely covered in inscriptions, is hidden under the gold embroidered velvet cloth donated by ʿAbd Ḥamīd II. A second dome was built over the tombs of the successors of the Mewlānā, but the complex is largely 16th century in date. Bāyazīd II restored the mausoleums and added three domed units together with a typical Ottoman minaret in 910/1504, while Selīm I installed the garden fountain, 918/1512. Süleymān I rebuilt the *masdjid* and *samāʿ-khāna*, 973/1565, and Selīm II the *ʿimāret*, now destroyed. The cells of Murād III were transformed in the 19th century. Important repairs were effected by Murād IV, 1044/1634 and 1048/1650, and by Meḥemmed IV, 1060/1650. Four typical Ottoman *türbe*s in the garden court are dated *934/1527, Khürrem Pasha; 981-2/1573-4, Sinān Pasha; 994/1585, daughters of Küčük Murād Pasha; 1006/1597, Shaykh Khalīl. The museum houses textiles and other treasures of the order which is active again. The Selimiye Cami, begun by Süleymān I and completed by Selīm II, has a seven-domed portico carried on six Byzantine limestone columns. Its plan is based on that of the Fatih mosque in Istanbul, but without a *miḥrāb* apse. Erroneously attributed to Sinān, it is typical of the stark style that preceded his appointment as *miʿmār bashī*. Beside the mosque is the library of Yūsuf Agha, 1209/1794. Pir Paşa Cami, *ca.* 926/1519, is a typical Ottoman mosque, but with a *türbe* incorporated into a corner of the portico. Şerefeddin Cami was founded 1220-30, rebuilt by the Ḳaramānoghlu Ibrāhīm II, 848/1445, and transformed in 1046/1636 into an imitation of Ḳılıdj ʿAlī Pasha mosque, Tophane, Istanbul. Fragments of 13th century ceramic can be seen in the mortar, and there are patches of brickwork amid the ashlar. Heavily restored, 1299/1881, the interior painting is in the 19th century fairground manner and includes a typical folk art representation of the Süleymaniye Cami, Istanbul, over the *miḥrāb*. Kapı Cami, 1060/1650 (Konyalı, 429), owes its light, open style to the repairs in 1226/1811*. Abdülaziz Cami, *minbar* 1293/1876; also replaces an older building, and its florid École des Beaux-Arts appearance is likely to be the work of Sarkis Balyan of the 19th century dynasty of court architects.

Colleges or medreses. The Sırçalı Medrese, 640/1242-3, is a partially-ruined two-*īwān* type. The outstanding faience *miḥrāb* is set in an *īwān* which retains a quantity of its décor. The carving of the portal is also notable. Inscriptions include those to the founder Badr al-Dīn Muṣliḥ and the master Muḥammad b. Muḥammad b. ʿUthmān al-Ṭūsī.

The Karatay Medrese, 649/1251-2*, ruined, but retaining its famous marble portal, which was an Anatolian variant of the Damascus style (see Alaeddin Cami), and also the starscape dome with an oculus over the pool of the court-hall supported by deep fan-shaped tiled pendentives. This monument now houses a collection of Saldjūḳ ceramics. Only the *īwān* remains of the Küčük Karatay Medrese nearby, 646/1248-9.

The İnce Minareli Medrese, *ca.* 663/1264-5, built by Kalūk (Kölüg) b. ʿAbd Allāh, heavily-restored, lost two-thirds of its brick minaret in 1317/1899. It was a foil to the portal's giant inscriptive bands developed out of simple established decorative forms more appropriate to wood. Overweighted decoration which masks structure was the Achilles heel of later Saldjūḳ architecture.

Masdjids. These include Beşarebey Mescid, 610/1213 (inscription disputed), and Abdülaziz Mescid, 611/1214-5, both rebuilt with fragments of original ceramics remaining, as with Şekerfurus Mescid, 617/1220*. The Taş (Stone) or Haci Ferruh Mescid, 612/1215 (Konyalı, 364), has an inscription to the master Ramaḍān and idiosyncratic carved stone porch and *miḥrāb*. The Hatuniye Mescid, 627/1229-30*, retains most of its thick Güdük Minaret, built of glazed brick. The Bulgur Tekke Mescid 1240-50, still has its plain, hexagonal dado tiles, as does the Karatay Mescid, 646/1248-9, but the Sirçalı Mescid of the same date retains its brick minaret and its renowned *miḥrāb*. The *miḥrāb* of the Beyhekim Mescid, 1270-80, is now in the Staatliche Museum (Islamische Museum, Cat. No. 81), Berlin. Both the Kararslan and the Tahir ile Zühre Mescids, *ca.* 1280, have restored *miḥrāb*s.

Of many later examples, the Kadı Mürsel Mescid, 812/1409, has lost its dependencies which once were distinctively Ḳaramanīd in style, including the *miḥrāb*.

Lesser monuments. The Hasbey Darülhuffaz, 824/1421* built by Ḳaramānoghlu Meḥmed Bey, has a traditional ceramic *miḥrāb*. The marble panels have fallen from the façade below the sixteen-ribbed dome. A rare, extant *namazgāh* is the Musalla, 948/1541.

Among several, a typical *īwān* type *türbe* is the Gömeç Hatun, 674-84/1275-85, built of brick above ashlar with an ornamental tile façade and crenellations. It has two triangular buttresses and double stairs raised over the sepulchral vault. Fakidede Türbe, 824-60/1471-56, built of stone is transitional in style.

Of the fountains, Kapu Çeşme rebuilt in Ottoman times has claim to Saldjūḳ origins. A standard Ottoman example is the Akçeşme, 936/1555*. The Balıklı Çeşme incorporates a Byzantine plaque depicting two fishes.

Monuments in the vicinity. The large, pillared mosque at Meram of Ḳaramānoghlu Meḥmed Bey, 805/1402*, stands beside the *ḥammām* of Ibrāhīm Bey, 837/1424*, which is fed by the lime springs.

Local mid-13th century caravanserais each with portal, court and hall and all partially ruined, are Kandemir (Yazıönü) Han, 603/1206*; Kızıl Ören Han, *ca.* 604/1207; Dokuzun Han, 607/1210*; Altunba (Altunapa) Han, early 13th century. The Zazadin (Sadaddin) Han, 633/1235-6*, is in better repair and noteworthy for the extensive re-use of classical material and early Christian tombstones.

KOPAK [see SIKKA].

KÖPRÜ [see VEZĪR KÖPRÜ].

KÖPRÜ ḤIṢĀRĪ "fortress of the bridge", a village in the Ottoman province of Khudāwendigār [*q.v.*] in northwestern Anatolia, and situated on the Čürük Ṣū river near Yeñishehir. It owes its historical fame to its being the site of a Byzantine fortress taken in 688/1289 by ʿOthmān b. Ertoghrul, chief of the ʿOthmānlī group of Türkmens based on Eskishehir, after the previous capture of Biledjik and during the course of the extension of Ottoman influence within the province towards Bursa [*q.v.*]; cf. H. A. Gibbons, *The foundation of the Ottoman empire*, Oxford 1916, 32-3.

Bibliography: Sāmī Bey, *Ḳāmūs al-aʿlām*, v, 3906; Von Hammer, *Histoire*, i, 87-9; Huart, *Konia, la ville des derviches tourneurs*, Paris 1897, 18 (illustr. of bridge). (Cl. Huart)

KÖPRÜLÜ, a family of Ottoman viziers who rose to prominence in the latter half of the 11th/17th century and dominated Ottoman life for much of that period, bringing a halt for some time to the decline of the empire, instituting internal reforms and gaining new conquests. The name derives from the close association of the founder of the family, Köprülü Meḥmed Pasha, with the town of Köprü [*q.v.*] (then in the *sandjaḳ* of Amasya), which, in turn, was later called Vezīr-Köprü through its association with the family (and to distinguish it from the near-by Tash Köprü). That Meḥmed Pasha was born in Albania, however, is clearly shown by his *waḳfiyya*, drawn up in Edirne in Radjab 1070/March 1660, in his own lifetime, in which it is stated that his homeland was the village called Rudnik, attached to the *ḳaḍā*ʾ of Arnawut Belgrade (Berat). His first visit to Köprü appears to have occurred only when he departed the palace service to go there as a *sipāhi*, but he thereafter settled there, marrying and establishing a home to which he repaired when out of office.

The leading members of the Köprülü family are the following:

I. Köprülü Meḥmed Pasha (?986-1072/?1578-1661), the Ottoman Grand Vizier who gave his name to the family. If, as his contemporary, Fīndīḳlīlī Meḥmed Agha asserts (Silāḥdār, *Taʾrīkh*, Istanbul 1928, i, 226), he died at the age of 86, he must have been born in *ca.* 986/1578 (for other estimates of Meḥmed Pasha's age, see Defterdār Ṣarī Meḥmed Pasha, *Zubdat al-waḳāʾiʿ al-ʿOthmāniyya*, Süleymaniye-Esad Efendi 2382; Rāshid, *Taʾrīkh*, Istanbul 1282/1865, i, 6; ʿAṭāʾ, *Taʾrīkh*, Istanbul 1291-3/1874-6, ii, 69; Aḥmed Refīḳ, *Köprülüler*, Istanbul 1331/1914, 19; Uzunçarşılı, *Osmanlı tarihi*, iii/1, Ankara 1951, 410) in Albania (see above). Brought to Istanbul in his youth, he was taken into the palace and by 1623 was a cook in the palace kitchens. He secured the backing of Khosrew Agha [see KHOSREW PASHA, BOSNIAK], then in the *khāṣṣ-oda* [*q.v.*], and entered first the *büyük oda*, then the *khazine-odasī*. His quarrelsomeness and disobedience led to the termination of his career within the palace, and he went out to the provinces as a *sipāhī*: it was thus that he first went to the town of Köprü in Anatolia where he settled and married ʿĀʾisha Khānim, the daughter of the vaivode of Köprü, Yūsuf Agha, from the Ḳayadjiḳ *čiftlik* in Havza. During Khosrew Agha's tenure as *agha* of the Janissaries, Köprülü again entered his service, and when Khosrew became Grand Vizier (1037/1628) Köprülü became his treasurer (*khazīnedār*). Following Khosrew's execution (1041/1632), Köprülü served in certain provincial posts, as vaivode or *agha*, probably in or near Köprü: according to Ḥüseyn Ḥusām al-Dīn, for example, he was *sandjaḳ begi* of Amasya for some eight months in 1044/1634-5 (*Amasya taʾrīkhi*, iv, Istanbul 1928, 61). He subsequently came again to Istanbul where he held a variety of posts such as those of Inspector of the Guilds (*Iḥtisāb aghasī*), Inspector of the Arsenal (*Ṭopkhāne nāẓirī*), Commander of the *Sipāhī*s (of the *altī bölük*: *Sipāhīler aghasī*) and Commander of the Armourers (*Djebedji-bashī*). Taking part as *sandjāḳ begi* of Čorum in the siege of Baghdād (1048/1638), in which he was wounded, be became attached to the Grand Vizier Kemānkesh Ḳara Muṣṭafā Pasha and was appointed *Ḳapīdjīlar-ketkhudāsī* and, later, *Mīr-ākhūr*. In 1053/1643-4 he held the post of *sandjaḳ-begi* of Amasya a second time, for some five months. Ḳara Muṣṭafā Pasha's successor, Sulṭān-zāde Meḥmed Pasha, gave Köprülü the governorship of Trabzon with two *ṭugh*s. How long he remained in that post is unknown, but he later resided for a time in Köprü and then, in 1057/1647, became *mütesellim* for the *eyālet* of Damascus when that province was given to the seventh *khāṣṣekī* as a *bashmaḳlīḳ* by Sultan Ibrāhīm (Naʿīmā, *Taʾrīkh*, Istanbul 1281-3/1864-7, iv, 243; Silāḥdār, i, 225). While in this post, he was ordered to campaign, acting as *beglerbegi* of Ḳaramān, against the rebellious

wālī of Sivas, Warwar ʿAlī Pas̲h̲a, who was advancing on Istanbul. Having fallen prisoner to ʿAlī Pas̲h̲a in the battle which ensued near Čankiri, he was rescued by Ips̲h̲ir Muṣṭafā Pas̲h̲a [*q.v.*], who had also been deputed to deal with ʿAlī Pas̲h̲a (1058/1648; cf. Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1314-8/1896-1900, ii, 452). The following year Köprülü was sent against Boynu-Yarall (Boynu-Eğri) Meḥmed Pas̲h̲a, for whose execution an imperial rescript had been issued because of his oppression of the peasants. Köprülü avoided bloodshed by sending him a letter recommending that he immediately seek pardon from the Wālide Sulṭān, which advice Boynu-Yarall Meḥmed Pas̲h̲a took and thus was forgiven and spared (Naʿīmā, iv, 459-60).

During the Grand Vizierate of Gurd̲j̲u Meḥmed Pas̲h̲a (1061-2/1651-2), the architect Ḳāsim Ag̲h̲a [*q.v.*], *ketk̲h̲udā* to the Wālide Sulṭān, knowing of her dissatisfaction with the Grand Vizier, recommended Köprülü to her, but the initiative led only to Köprülü's holding the office of *ḳubbe altī* vizier for a week or so before the jealous Grand Vizier brought about his virtual banishment as *sand̲j̲aḳ begi* of Köstendil (Ḳara Čelebi-zāde ʿAbd al-ʿAzīz, *Rawḍat al-abrār d̲h̲ayli*, Istanbul University TY3272, fol. 63; Naʿīmā, v, 178). He was later dismissed and, according to Silāḥdār (i, 225-6), scraped a living during this period in certain minor posts, suffering imprisonment for debt. While spending some time in Köprü, he met in Kütahya (February 1655) with Ips̲h̲ir Pas̲h̲a, who was on his way to take up his appointment as Grand Vizier and who appointed him governor of Ṭarabulūs al-S̲h̲ām. Before Köprülü could take up his post, however, Ips̲h̲ir had fallen; and Köprülü, dismissed, returned to Köprü (Naʿīmā, vi, 22, 125). Although Ḳāsim Ag̲h̲a advised the Grand Vizier Süleymān Pas̲h̲a to seek Köprülü's help (February 1656), Süleymān Pas̲h̲a did not heed the recommendation (Naʿīmā, vi, 142), Köprülü met with the newly-appointed Grand Vizier Boynu-Yarall Meḥmed Pas̲h̲a in Eskis̲h̲ehir a few months later and came with him to Istanbul: some time afterward he was once more appointed governor of Ṭarabulūs al-S̲h̲ām. But as the result of efforts made on his behalf with the Wālide Sulṭān by such as Ḳāsim Ag̲h̲a and the *re'is al-kuttāb* S̲h̲āmī-zāde Meḥmed Efendi, Köprülü was himself proposed for the Grand Vizierate, which post he agreed to accept on four conditions, which were such as to guarantee him absolute independence and freedom from interference. The Wālide Sulṭān accepted these conditions on oath, and the sultan appointed him the next day (26 D̲h̲u 'l-Ḳaʿda 1066/15 September 1656).

Köprülü's appointment to the Grand Vizierate aroused great astonishment at first, since his career thus far had not been characterised by any great success (Meḥmed K̲h̲alīfe, *Ta'rīk̲h̲-i G̲h̲ilmānī*, ed. A. Refīḳ in *TOEM*, supp. [1340], 44), but before long his considerable abilities came to be widely recognised. Among his first acts was to deal with the Ḳāḍī-zādeler, who, since the time of Murād IV, had been engaging in troublesome sectarian quarrels in Istanbul and who attempted to provoke such a quarrel after Köprülü had been in office only eight days. Having tried persuasion, Köprülü caused their ringleaders to be banished to Cyprus (see Kātib Čelebi, *The balance of truth*, tr. G. L. Lewis, London 1957, 132-4; Naʿīmā, vi, 227 ff.; Silāḥdār, i, 57-9). Köprülü continued his efforts to bring peace and order to Istanbul. Along with causing the executions of certain individuals, among them Ābāza Aḥmed Pas̲h̲a, accused of laxity in the defence of Bozd̲j̲a-ada which he had surrendered to the Venetians, and the Orthodox Patriarch Parthenius III, who was accused of seditious activities, he succeeded in quelling a rebellion of the *sipāhī* dissidents (*zorba*s) and purging their number (18 Rabīʿ I 1067/4 January 1657: for details, see *Ta'rīk̲h̲-i G̲h̲ilmānī*, 44; Naʿīmā, vi, 246 ff.; Silāḥdār, i, 62 ff.).

Köprülü then set about preparations for a campaign to end the Venetian threat to the Straits and in particular to recover Bozd̲j̲a-ada and Limnos. Having sent the fleet out first, under the Ḳapudan Pas̲h̲a Ṭopal Meḥmed Pas̲h̲a, he himself set out, as commander-in-chief, on 1 Ramaḍān 1067/13 June 1657. The Ottomans fared badly at first in the clashes at sea, but their fortunes changed when, on 19 July, a ball fired from the Anatolian shore struck the powder magazine of the flagship of the Venetian admiral Mocenigo, destroying it and throwing the Venetian fleet into confusion (*Ta'rīk̲h̲-i G̲h̲ilmānī*, 44 ff.; Naʿīmā, vi, 279 ff.; P. Rycaut, *The history of the Turkish empire from the year 1677*, London 1680, 54 [Meḥemmed IV]. Köprülü rewarded the successful gunner and others who had fought bravely but executed a number of high-ranking commanders held responsible for the earlier failures. This action disquieted even his supporters in Istanbul and led to agitation for Köprülü's removal by Ḳara Ḥasan-zāde Ḥüseyn Ag̲h̲a, an influential member of the Janissary corps: his efforts were in vain, however (Naʿīmā, vi, 295 ff.). The Grand Vizier meanwhile continued his efforts to take Bozd̲j̲a-ada, which goal his forces achieved on 21 D̲h̲u 'l-Ḳaʿda 1067/31 August 1657 (for a letter sent by Köprülü to the Ḳizlar-ag̲h̲asī Meḥmed Ag̲h̲a, see *Ta'rīk̲h̲-i G̲h̲ilmānī*, 47; for other details, see Naʿīmā, vi, 289 ff.; Silāḥdār, i, 69 ff.), an event which caused great joy in Istanbul. In an imperial rescript sent to Köprülü, the sultan ordered him to remain until Limnos was taken, and Köprülü's existing forces were strengthened by timariots from Bursa and other *sand̲j̲aḳ*s. Having repaired, supplied and garrisoned Bozd̲j̲a-ada, Köprülü dispatched Ṭopal Meḥmed Pas̲h̲a to Limnos. After a 60-day siege from both sea and land, the defenders surrendered the fortress on 8 Ṣafar 1068/15 November 1657 on condition that those in the fortress be allowed to leave with their goods.

Having countered one danger to the state by opening the Straits and recovering the two islands lost to the Venetians in his predecessor's time, Köprülü went to Edirne (25 November 1657) where he had been summoned by the sultan on account of pressing problems in Transylvania [see ERDEL]. The ambitious George Rákoczy II, prince of Transylvania since 1648, had, as a result of an agreement made with the King of Sweden in December 1656, marched against Poland with Transylvanian forces; and when he incited the *beg*s of Wallachia and Moldavia to act with him, in defiance of the Ottomans, the imperial *dīwān* felt it necessary to take measures against him, deciding that a campaign should be undertaken, first by the K̲h̲ān of the Crimea, and later under the command of the Grand Vizier (for details, see Szilágyi Sándor, *Erdély es as eszakkeleti hábará*, Budapest 1891, ii, 244 ff.). The *beg*s of Wallachia and Moldavia were also replaced (N. Iorga, *Histoire des Romains et de la romanité orientale*, Bucharest 1940, vi, 226 f.; Naʿīmā, vi, 321 ff.). Köprülü left Edirne on 22 Ramaḍān 1068/23 June 1658 and went to Belgrade. His army was strengthened by Crimean and Cossack forces, by the provincial forces from Buda and Silistria, and

by a force of 12,000 men sent by the King of Poland. Entering Transylvania, he moved first against Yanova (Kis Jenö), a key point taken in Ḳānūnī Süleymān's time but subsequently lost, and received the surrender of the fortress on 31 August. Rákoczy, who, under Ottoman pressure, had been replaced at the end of 1657, had returned and driven out the Ottoman-backed prince and re-established himself (see Szilády Áron and Szilágyi Sándor, *Török-Magyarkori állam-okmánytár*, Pest 1870, iii, 442 ff.; Hóman Balint and Szekfü Gyula, *Magyar történet*, Budapest 1935-6, iv, 80; Decei-Gökbilgin, *İA* art. *Erdel*). After the taking of Yanova, Köprülü caused the Crimean and Cossack forces to plunder Erdel Belgrad (Fehérvár), the centre of government, in order to seize Rákoczy, but the latter was understood to have escaped to a fortress on the Austrian frontier. Köprülü's desire to pursue him was thwarted by a summons from the sultan because of a revolt in Anatolia. He therefore appointed Akos Barcsay as prince on condition that he pay *kharādj* and that he hand over the areas (*mulḥaḳāt*) of the fortresses of Sebeş and Lugoj, together with the cannon and munitions within them; and at the same time he charged the *beglerbegi* of Buda, Ken'ān Pasha, with the oversight of that area (for the appointment of Akos Barcsay, see Uzunçarşılı, *Ekoş Barçkay'ın Erdel krallığına tayini hakkında bir kac vesika*, in *Belleten*, vii [1943]; idem, *Barçsay Akoş'un Erdel kırallığına âid bazı orijinal vesikalar*, in *Tarih Dergisi*, iv [1952-3]; Naʿīmā, vi, 354 ff.; Silāḥdār, i, 126 ff.).

For some time a revolt of serious proportions had been building up in Anatolia. To the long-standing causes of unrest there were added the uncertainty and fear inspired in many *sipāhī*s and commanders by Köprülü's harsh behaviour. The leader of the dissidents was the *beglerbegi* of Aleppo, Ābāza Ḥasan Pasha [*q.v.*], who realised that his past actions constituted a cause for the sort of punishment which Köprülü had meted out to the *zorba*s in the capital. With him, in Konya, gathered a number of commanders, among them the *wālī* of Damascus, the vizier Ṭayyār Pasha-zāde Aḥmed Pasha; the *beglerbegi* of Anatolia; and some fifteen other active or retired *beglerbegi*s who, fearing for their fates, sought to replace Köprülü with Ṭayyār Pasha-zāde Aḥmed Pasha. At first replying to the summonses from the capital to join the Transylvanian campaign with excuses, they subsequently openly declared their rebellion, saying that they could not join a campaign with Köprülü, who had caused the deaths of so many Janissaries and *sipāhī*s (Naʿīmā, vi, 344 ff.). Ignoring an imperial command that they should either disperse to their several places or engage in the defence of Baghdād, the rebels came as far as the vicinity of Bursa. Summoned by the sultan, Köprülü arrived in Edirne on 14 Muḥarram 1069/12 October 1658 and was present at an *ayaḳ dīwānī* three days later in the sultan's presence at which the *fatwā* given by the *Shaykh al-Islām* for the punishment of Ābāza Ḥasan was read out. Though a punitive force under the *beglerbegi* of Diyār Bakr, Murtaḍā Pasha, was already in the field, it was decided that Köprülü himself should campaign; and, accompanied by the sultan, he crossed to Üsküdar on 13 November 1658. Ābāza Ḥasan, meanwhile, using the pretext of the distribution of pay to the army in Istanbul, dispatched some 5000 *sipāhī*s to Üsküdar, ostensibly to collect their pay but in fact to assassinate Köprülü. The latter, however, apprised of the plot, removed the names of 7000 *sipāhī*s from the rolls and executed about 1000 who were caught. The unrest caused in the army by this fresh show of force led him to abandon the campaign and leave the matter to Murtaḍā Pasha. Although Ābāza Ḥasan defeated the latter near Ilgın (15 Rabīʿ I 1069/11 December 1658), he was compelled to winter in ʿAyntāb. Murtaḍā Pasha, having received reinforcements, pressed the rebels closely from Aleppo, depriving them of provisions and other necessaries. When Ābāza Ḥasan's forces began gradually to desert to Murtaḍā Pasha, the rebel leaders went to Aleppo to submit to the government, only to be deceived and executed (23 Djumādā I 1069/16 February 1659: *Taʾrīkh-i Ghilmānī*, 54 ff.; Naʿīmā, vi, 378 ff.; Silāḥdār, i, 132 ff.).

Following this outcome, Köprülü busied himself with the solution of internal problems like the local *ḳul* soldiery in Damascus who had been acting disruptively for some time, whom he struck from the rolls and replaced with five *oda*s of garrison Janissaries from Istanbul; and the revolts of Čerkes Meḥmed Beg in Egypt and of Muṣṭafā Pasha, known as Kör Beg, in Antalya. Coming to Bursa with the sultan (19 July 1659), Köprülü instituted a sweeping attempt to bring order to Anatolia by summoning Ismāʿīl Pasha, who had been left as *ḳāʾim-maḳām* in Istanbul, and charging him with carrying out investigations (*taftīsh*) throughout Anatolia, "from Üsküdar to ʿArabistān", specifically to seize and punish any whom he found to have been involved in the Djalālī revolts [see DJALĀLĪ in Suppl.], whatever their rank or station; to restore to *reʿāyā* status those falsely claiming to be *ʿaskerī*; to deprive those unable to prove their claim to be *sayyid*s of their distinctive turbans; and to seize and send to the imperial arsenal any arms or weapons found in the possession of the *reʿāyā* (Naʿīmā, vi, 415-6). But during these years he was also guilty of certain injustices such as bringing about the execution of the famous Deli Ḥüseyn Pasha [see ḤUSAYN PASHA DELI], in spite of the opposition of the *Shaykh al-Islām*, by concocting false complaints (Rabīʿ II 1069/December 1658); and of Seydī Aḥmed Pasha (1071/1660-1), long in state service and most recently active in the continuing struggle in Transylvania (for the defeat and death of Rákoczy in this period and for the conquest of Oradea by Köse ʿAlī Pasha (Dhu 'l-Ḥidjdja 1070/August 1660), see *İA*, art. *Erdel*).

Köprülü divided the remaining months of his life between Edirne, to which he returned with the sultan in November 1659, and Istanbul. Age and illness greatly weakened him, and while journeying with Meḥemmed IV to Edirne in July 1661, Köprülü recommended, and the sultan agreed, that his son, Fāḍil Aḥmed Pasha, should succeed him on his death. Aḥmed (Köprülü-zāde) was immediately brought from Damascus and made *ḳāʾim-maḳām* in Istanbul. When his father's condition worsened, he was summoned to Edirne and acted as *ḳāʾim-maḳām* for his father for 48 days until Köprülü's death on 7 Rabīʿ I 1072/31 October 1661. His body was brought to Istanbul and buried in the mausoleum near the *dār al-ḥadīth* which he had built near Čenberli Tash (Silāḥdār, i, 219 ff.).

During his five years in power, in a period when confusion reigned in all the institutions of state, Köprülü succeeded in crushing the prevailing spirit of rebellion and disorder through harsh and merciless acts. On this latter count, certain historians have characterised him as cruel and bloodthirsty (Silāḥdār, i, 226; ʿOthmān-zāde Tāʾib, *Ḥadīḳat al-wuzarāʾ*, Istanbul 1271/1854, 166); but while he was not

guiltless of unjust acts, such judgements must be tempered by the recognition of the disabling turmoil which had afflicted the state since the death of Murād IV and of the great services which he performed in office (ʿAṭā', ii, 69 ff.). In fact, historians like Meḥmed Khalīfe, ʿAbdī Pasha, Naʿīmā and Rāshid are united in praising Köprülü. When Köprülü came to the Grand Vizierate, he said to those around him that the state expected service, not show from him, and he remained true to this principle to the end of his life (cf. the relation of Durmush Efendi, the *kātib* of the *Dār al-saʿāde aghasi*, in Rāshid, i, 18).

Köprülü caused the straits at Čanaḳ-ḳale to be strongly fortified [see ČANAḲ-ḲALʿE BOGHAZĪ]. His benefactions, estates, and endowments are to be found in a great many places: for example, a mosque, a school and shops in Yanova; a mosque and school in Rudnik; and a mosque and a school in the town of Taraklī in the *sandjaḳ* of Bolu (see further the listing in *IA*, art. *Köprülüler* (Gökbilgin), vi, 897b). His sons-in-law, Ḳībleli Muṣṭafā Pasha, Ḳaplan Muṣṭafā Pasha, Ḳara Muṣṭafā Pasha (Merzifonlu) [*q.v.*] and Siyāwush Pasha, all held high positions during his own and his son's Grand Vizierate.

II. Fāḍīl Aḥmed Pasha (Abu 'l-ʿAbbās) (1045-87/1635-76), the elder son and successor of Köprülü Meḥmed Pasha, was born in Köprü in 1635. Brought to Istanbul at the age of 7 by his father, he studied under the leading learned men of the period, first under ʿOthmān Efendi, later under Ḳara Čelebi-zāde ʿAbd al-ʿAzīz Efendi [see ḲARA-ČELEBI-ZĀDE (4)]. Through the influence of his father he was, while only 16, appointed a *müderris*, first at *khāridj*, then at *dākhil* level. Now known as Pasha-zāde, his lessons proved popular, and in 1657 he was raised to the *Ṣaḥn-i thamān*. Shortly after, however, upset by gossip amongst the *ʿulamā'*, he abandoned the learned profession and took up an administrative post. In 1069/1659 he was, at the request of his father, appointed to the governorship of the *eyālet* of Erzurum with a vizierate. One year later he was transferred to Damascus. There he won great popularity by causing an imperial rescript to be issued removing two taxes, called *dashisha* and *ḳariba*, which his predecessors had levied on the people of Damascus and which had sometimes risen as high as 3-4 million *akčas*. Under orders from the central government he moved against the Durūz [*q.v.*] and defeated the Maʿnids and Shihābids, thereby securing the payment of a tribute of 500 purses and the abandonment of the brigandage in which they had been engaging for some time. He also caused to be made into a *beglerbegilik* the region where the Maʿnids and Shihābids lived together with the areas of Ṣaydā, Bayrūt and Ṣafad which till then had been governed by a vaivode (1660: for details, see *Djawāhir al-tawārīkh der aḥwāl-i Fāḍīl Aḥmed Pasha*, Süleymaniye-Esad Efendi 2242, fol. 4; Silāḥdār, i, 214-16). Although he was later appointed *beglerbegi* of Aleppo, he was summoned to Istanbul as *ḳā'im-maḳām* before he could take up the post and subsequently succeeded his father as Grand Vizier (see above).

Amongst the new Grand Vizier's first concerns was the continuing unsettled situation in Transylvania. Some measure of order was established there, however, without Köprülü-zāde's direct intervention, by the victory in January 1662, near Sighisoara, of the *beglerbegi* of Yanova over Rákoczy's successor, János Kemény, which ensured the control of the Ottoman-supported Mihály Apafi. Though a campaign against Venice was mooted for 1663, this was abandoned in favour of a campaign against Austria, which had constantly been attacking Ottoman frontier forts and outposts and which was seen as the more dangerous enemy. The army moved out from Edirne on 5 Ramaḍān 1073/13 April 1663. During discussions in Belgrade and Osijek with Austrian ambassadors, Köprülü-zāde demanded the destruction of a newly-built Austrian fortress (Zerinvár) facing Nagykanizsa in western Hungary; the withdrawal of Austrian troops from Transylvania; and the restoration of the annual 30,000 florin tribute which the Austrians had paid from the time of Süleymān I until 1606 (later, in Buda, modified to a demand for a single 200,000 *ghurūsh* payment like that agreed at Zsitva-Torok in 1606). The Austrians were unable to accept the last of these conditions, and Köprülü-zāde set off from Buda against the fortress of Nové Zámky (24 Dhu 'l-Ḥidjdja 1073/ 30 July 1663; see Kātib Muṣṭafā Zuhdī, *Ta'rīkh-i Uyvar*, Istanbul University TY2488; Rāshid, i, 25 ff.; *Djawāhir al-tawārīkh*), to which he laid siege on 17 August and which finally surrendered on terms on 21 Ṣafar 1074/24 September 1663 (22 September in Montecuculi, *Mémoires de Montecuculi*, Paris 1712, 332 ff.). Having deputed subordinates to take several near-by fortresses, among them Neugrad and Nitra, Köprülü-zāde returned with the army to winter quarters in Belgrade, intending to move out from there against the Austrians in the spring. The campaign by the Hungarian commander Zrínyi and General Hohenlohe in January 1664, during which Berzence, Babócsa and Pecs were occupied (*Magyar történet*, iv, 168), led the Grand Vizier to move toward Osijek; but on hearing that the local commanders had gained control of the situation, he returned to Belgrade (21 February 1664).

The fall of Nové Zámky, regarded as the last major block to the Turkish advance into Europe, had aroused great anxiety in Europe and led to contributions of men and money to the Habsburg cause from the Papacy, Spain, some of the German princes and even France and to the formation of a sizeable force under the command of Montecuculi. A Christian force laid siege to Nagykanizsa, in response to which Köprülü-zāde advanced on that fortress. The siege having been lefted at his advance, he took and destroyed Zerinvár (6 Dhu 'l-Ḥidjdja 1074/30 June 1664), the building of which had been one of the ostensible causes of the present campaigns, and then moved northward, his forces taking Kiskomárom (14 July), Egerseg, Egervár and Kemendvár (*Djawāhir al-tawārīkh*, fols. 82 ff.) and advancing to the river Rába (Raab). Here, near the village of St. Gotthard, they came face to face with the imperial forces under Montecuculi. Though Köprülü-zāde was actively engaged in peace negotiations with the Austrian ambassador, he decided to cross the river and engage the enemy. The bridge proved inadequate, however, and only a part of the Ottoman forces got across. In the battle which ensued (8 Muḥarram 1075/1 August 1664), these at first had some success but were ultimately driven back, both sides suffering heavy losses (for details, see Montecuculi, 416; Hammer-Purgstall, *Histoire*, xi, 181 ff.; Aḥmed Mukhtār, *Sen Gotar'da ʿOthmānlī ordusu*, Istanbul 1326/1908).

This defeat, though by no means decisive, forced a more defensive policy on the Ottoman army, which had previously moved as it willed (*Djawāhir al-tawārīkh*, fols. 90 ff.). But within ten days the two sides had signed the Treaty of Vasvár (17 Muḥarram 1075/ 10 August 1664) which largely satisfied Ottoman

aims and, in particular, left them in possession of Nové Zámky and assured their influence in Transylvania (for a Hungarian view of the treaty, see *Magyar történet*, iv, 169; for the treaty, see Baron de Testa, *Recueil des traités de la Porte Ottoman*, ix, Paris 1898, 50 ff.; *Taʾrīkh-i Ghilmānī*, 90 ff.; Silāḥdār, i, 361; Rāshid, i, 78 ff.). After advancing to the area of Nové Zámky, which he had heard was to be besieged, Köprülü-zāde received there the confirmed copy of the peace treaty from Vienna and therefore returned to Belgrade where he wintered in order to oversee the implementation of the treaty. He returned to Edirne only in July 1665, and from there to Istanbul, inspecting the fortifications of the Dardanelles in company with the sultan on the way.

At a consultative assembly in December 1665, Köprülü-zāde proposed a major effort to take Ḳandiya [*q.v.*] in Crete, the siege of which had for years been the cause of heavy losses; and it was agreed that preparations for such a campaign should be put in hand. Departing from Edirne in Dhu 'l-Ḳaʿda 1076/May 1666, Köprülü-zāde crossed from Monemvasia, chosen as the mainland base for the campaign, to Canea in early November. The fleet was strengthened during the course of the winter and spring, and on 1 Dhu 'l-Ḥidjdja 1077/25 May 1667 Köprülü-zāde convened an assembly of the leading commanders in which the plans for the conduct of the siege were laid (*Djawāhir al-tawārīkh*, fol. 112; Defterdār Ṣarī Meḥmed Pasha, *Zubdat al-waḳāʾiʿ*, Süleymaniye-Esad Efendi 2382, fols. 4 ff.; Rāshid, i, 164 ff.). The siege was pressed vigorously, with varying fortunes, until mid-November when Köprülü-zāde, who had lived in the trenches from the beginning of the siege in order to encourage the troops, suspended operations for the winter. During this period Köprülü-zāde received Venetian commissioners and was in correspondence with both the Doge of Venice and the Venetian captain-general Morosini with regard to negotiations about the fate of the fortress (*Djawāhir al-tawārīkh*, Köprülü Fazıl Ahmet Paşa, 231; Rāshid, i, 185 ff.). Both sides gathered reinforcements in the spring and, with Köprülü-zāde entering the trenches once more on 12 Muḥarram 1079/22 June 1668, the issue was again hotly contested through the summer (for details, see *Djawāhir al-tawārīkh*; Rāshid, i, 208 ff.; Hammer-Purgstall, *Histoire*, xi, 311 ff.). Knowing that Köprülü-zāde would accept only the surrender of Ḳandiya, the Venetians approached the sultan, then in Yeñishehir (Lárissa), in Thessaly, for more favourable terms, as a result of which Meḥemmed IV demanded to know of the Grand Vizier the situation, warning that it would be impossible to raise men and supplies were the siege to last another year. At an assembly convened by Köprülü-zāde on 8 Radjab 1079/12 December 1668, it was agreed that the fall of Ḳandiya seemed close at hand, and arrangements were made to winter in the trenches (Rāshid, i, 218 ff.). Friction amongst the Venetians and their allies led to the withdrawal of the allied fleet at the end of August 1669, which act left the Venetians little choice but to surrender. After six days of discussion, terms were agreed on 8 Rabīʿ II 1080/5 September 1669 (see Rāshid, i, 240 ff.; *Muʿāhadāt Medjmūʿasī*, ii, 141 ff.; Noradounghian, *Receuil d'actes internationaux de l'empire Ottoman*, i, Paris 1897, 132 ff.). Köprülü-zāde received the 80 keys of the evacuated city and fortress of Ḳandiya on 27 September. He remained through the winter to repair the fortress and to have a new land survey (*taḥrīr*) made in the Mediterranean islands. He also pacified the Mainotes with a letter which he sent, and he forgave their outstanding taxes (for details, see *Djawāhir al-tawārīkh*, fols. 122 ff.; Köprülü-Mehmed Asım Bey 724, fols. 231-6; Başvekalet arşivi, tahrir defterleri; Ewliyā Čelebi, *Seyāḥat-nāme*, viii 498 ff.; Silāḥdārı i, 538). Returning by way of Tekirdagh, he arrived in Edirne in mid-Ṣafar 1081/early July 1670 and surrendered the sacred standard to the sultan.

(For diplomatic relations with France in the early 1670s, leading to a renewal of the capitulations on 5 June 1673 (19 Ṣafar 1084), see J. Chardin, *Voyages en Perse et autres lieux de l'Orient*, Paris 1811, i; A. Vandal, *L'odysée d'un ambassadeur. Les voyages du Marquis de Nointel (1670-80)*, Paris 1900; Saint-Priest (ed. Schefer), *Mémoires sur l'ambassade de France en Turquie*, Paris 1877; A. Galland, *Journal d'A. Galland pendant son séjour à Constantinople (1672-1673)*, Paris 1881; L. d'Arvieux, *Mémoires du chevalier d'Arvieux*, Paris 1735, iv; Hammer-Purgstall, *Histoire*, xi, 341 ff. See also IMTIYĀZĀT ii. The Ottoman empire, esp. at p. 1185a).

In 1672 a campaign was undertaken against Poland on behalf of Peter Doroshenko, hetman of a group of Ukrainian Cossacks, who had accepted Ottoman suzerainty in 1669; and on 7 Ṣafar 1083/4 June 1672, Köprülü-zāde left Edirne with the army, accompanied by Meḥemmed IV, who was to take an active interest in the campaign (for correspondence between Köprülü-zāde and the King of Poland in May 1672, see Rāshid, i, 261 ff.). The principal object of the campaign, the fortress of Kamenets Podolskiy [see ḲAMĀNIČA], was taken on 3 Djumādā I 1083/27 August 1672 after a nine-day siege (Nābī Yūsuf, *Taʾrīkh-i Ḳamāniča*, Istanbul University TY2418; al-Ḥādjdjī (Ḥādjdjī) ʿAlī, *Taʾrīkh-i Ḳamāniča*, Süleymaniye-Lala Ismail Efendi 308; ʿAbdī Pasha, *Waḳāʾiʿ-nāme*, Süleymaniye-Halet Efendi 615, Topkapı Sarayı-Bağdat köşkü 217). The rapid Ottoman advance in Poland, and particularly the siege of Lwow, compelled the Polish King, Michael Wiśnowiecki, to sue for peace; and terms were agreed at the recently-taken fort (*palanka*) of Buchach (18 October 1672: ʿAbdī Pasha; Rāshid, i, 284 ff.; Noradounghian, i, 52). The harsh terms of the treaty, which included the loss of Podolia and the Ukraine and the payment of tribute, made it unacceptable to the Polish Diet. Their refusal to ratify it and implement its terms led to further Ottoman campaigns in the following years, of which Köprülü-zāde, once again accompanied by Meḥemmed IV, directed those in 1673 and 1674. In the main action of the former year, Köprülü-zāde was appointed commander to save Khotin [*q.v.*] from the attack of John Sobieski, but the fortress was lost before he could arrive. The latter year saw a successful campaign into the Ukraine (Khotin having been retaken by the Khān of the Crimea) in response to Russian incursions. Köprülü-zāde, now in poor health, returned to Edirne with the sultan on 22 Shaʿbān 1085/21 November 1674 (see Rāshid, i, 317 ff.), and the campaigns of 1675 and 1676 against the Poles were left to others.

In his last years, Köprülü-zāde's illness worsened through his addiction to drink. Although he followed the sultan when the latter left Istanbul for Edirne with the army in early Shaʿbān 1087/mid-October 1676, he was too ill to get even as far as Edirne and died on the Kara Biber *čiftlik*, near Ergene köprüsü (between Čorlu and Karishtiran), on 26 Shaʿbān 1087/3 November 1676 at the age of 41 (ʿAbdī Pasha), his death resulting from acute

dropsy brought on by drink (Silāḥdār, i, 659). His body was brought to Istanbul and buried in his father's mausoleum near Čenberli Tash.

Köprülü-zāde's tenure in the Grand Vizierate was one of the two or three longest in Ottoman history. Tall and stout, with a round face and large eyes, he is described as dignified and inspiring respect. Especially significant is the high praise accorded his virtues by Silāḥdār (i, 659) in view of that historian's harsh judgements on Köprülü Meḥmed Pasha. Köprülü-zāde saw to the completion of pious foundations begun by his father, such as a half-finished *khān* and mosque in Rumeli, and also of his foundations in Čenberli Tash in Istanbul (*Djawāhir al-tawārikh*, fol. 14); and, as evidence of the great value which he himself placed on learning, one may cite the library which he established near his residence (formerly that of ʿĀʾisha Sulṭān, daughter of Sultan Ibrāhīm and wife of Ipshir Pasha) in the vicinity of Aya Ṣofya (Uzunçarsılı, *Osmanlı tarihi*, iii/1, 438) and which he enriched with many very valuable books acquired both while as *müderris* and in later times. The *waḳfiyya* for the library, which was drawn up two years after his death, in 1089/1678, and which makes provision for students and the teaching of certain subjects there, is now in the Köprülü library (no. 4 of the *waḳfiyya*s of the Köprülü family; M. Gökmen, *Kütüphânelerimizden notlar*, Istanbul 1952, 52; Shaykhī, *Waḳāʾiʿ al-fuḍalāʾ*, Istanbul University TY81, fol. 691). His other foundations include a mosque in Ḳandiya (for a copy of the imperial grant of the land (*mulk-nāme*) given him in Ḳandiya, dated Rabīʿ II 1081/August-September 1670, as well as other documents demarcating boundaries, see the above collection of *waḳfiyya*s in the Köprülü library); mosques in Nové Zámky and Kamenets; and an uncompleted *khān* (later completed) in Izmir (Silāḥdār, i, 659).

Fāḍil Aḥmed Pasha was also the patron of a number of men of learning and the arts, among them his private secretary (*mühürdār*), Ḥasan Agha, author of the *Djawāhir al-tawārikh*, which is based on the documents committed to his charge (there exists in the Nationalbibliothek, Vienna, a Latin translation of this work, made in 1680 and entitled *Annalium gemma, authore Hasanaga* .... Cf. A. Galland, *Journal*, tr. N. S. Örik, *Hatıralar*, Ankara 1949, 197, n; Babinger, 216-17); Mazāḳī, who was with him throughout the siege of Ḳandiya; Nābī; Zuhdī, the author of the *Taʾrīkh-i Uyvar*; the *reʾis al-kuttāb* Ṭālib Aḥmed Efendi; the poet Fennī; and Ḥuseyn Hezārfenn [*q.v.*] (cf. Ṣafāʾī, *Tadhkira*, Istanbul University TY3215, fols. 189 ff., 242 ff.; Shaykhī, fols. 680-786).

III. Fāḍil Muṣṭafā Pasha (1047-1102/1637-91), Ottoman Grand Vizier, the younger brother of Fāḍil Aḥmed Pasha. Born in Köprü in 1047/1637, he began *medrese* education together with his elder brother. Whether he received a *medrese* appointment is not known, but in 1070/1659 he is seen to have received a *zeʿāmet* and to have entered the ranks of the sultan's guards as a *müteferriḳa* (Uzunçarsılı, *Osmanlı tarihi*, iii/2, Ankara 1954, 431). In view of the facts that he was in Crete, together with his mother, for the whole of the final siege of Ḳandiya (1667-9), that he was at Fāḍil Aḥmed's side when the latter died and that he bore the Grand Vizier's signet ring to the sultan (for the *berāt* granting him a *zeʿāmet* at this time, see Başvekalet arşivi, Ali Emiri tasnifi, period of Meḥemmed IV, 229), one may suppose that he spent most of his time with his elder brother, on campaign. On 1 Djumādā II 1090/29 June 1680 he became seventh vizier at the instigation of his brother-in-law, the Grand Vizier Merzifonlu Ḳara Muṣṭafā Pasha [see KARA MUṢṬAFĀ PASHA, MERZIFONLU]. In November of the same year he served as guard (*muḥāfiẓ*) to the Wālide Sulṭān and the princes Süleymān and Aḥmed when they went to Edirne; and he performed the same function the following year, now as sixth vizier, when they remained in Edirne after the departure of the army for Istanbul (Rabīʿ I 1092/March 1681) following the conclusion of peace with Russia. At the time of the army's departure on the Austrian campaign of 1683 (Rabīʿ II 1094/April 1683) he remained in Edirne as guard to the Wālide Sulṭān, with the posts of fifth vizier and *ḳāʾim-maḳām* of Edirne. He was later appointed to the governorship of the *eyālet* of Silistria with the addition of Nicopolis (i.e. the Özü *muḥāfıẓlıghı*) and became commander at Babadaghı [*q.v.*]. With Ḳara Muṣṭafā Pasha's dismissal and execution (December 1683) following the failure of the second siege of Vienna, and on the report that John Sobieski, King of Poland, was making preparations against Kamenets and Moldavia, it was decided to replace Fāḍil Muṣṭafā with a more experienced commander: he was summoned to the capital as *ḳubbe altı* vizier, but kept the estates (*khāṣṣ*) he then possessed (Rabīʿ II 1095/March-April 1684; Silāḥdār, ii, 127). Reaching Edirne in mid-May, Fāḍil Muṣṭafā occupied the position of third vizier in the *dīwān*; but before long he chose retirement, no doubt grieved by the enmity of the new Grand Vizier toward the Köprülü family. One year later, as the war with the Venetians in the Morea intensified, he was appointed commander (*muḥāfiẓ*) of Chios (according to Silāḥdār, ii, 222, transferred there from the command of Boghaz [Ḥiṣārı] = Sedd al-baḥr), subsequently being transferred to the command of Boghaz Ḥiṣārı on 4 Rabīʿ II 1097/28 February 1686 (Silāḥdār, ii, 230).

On 30 Dhu 'l-Ḳaʿda 1098/7 October 1687, shortly after a rebellious army had made his brother-in-law, Siyāwush Pasha, Grand Vizier and begun a march on the capital, Fāḍil Muṣṭafā was summoned to Istanbul as second vizier and *ḳāʾim-maḳām*. Though Meḥemmed IV had some hope that Fāḍil Muṣṭafā might help him save his throne, past slights by the sultan made Fāḍil Muṣṭafā unsympathetic, and the latter was in fact closely involved in the deposition of Meḥemmed IV (2 Muḥarram 1099/8 November 1687). He soon fell out of favour with the army, the instruments of the deposition, however, through resisting their demands for donatives and attempting to establish discipline; and though his position was once saved by the new sultan, Süleymān II, he was subsequently effectively exiled by being appointed again to the command of Boghaz Ḥiṣārı (7 Rabīʿ II 1099/10 February 1688: Silāḥdār, ii, 318 ff.; *Zubdat al-waḳāʾiʿ*, fols. 87 ff.; Rāshid, ii, 25). He was spared a worse fate by the refusal of the *Shaykh al-Islām* to sanction his execution. A little later he was moved to the command of Canea, then to that of Ḳandiya, then, in Ṣafar 1100/December 1688, to that of Chios.

With the war against the Holy League going badly for the Ottomans in 1688-9, particularly on the Austrian front, it was agreed by the *ʿulamāʾ* to recommend to the sultan the appointment of Fāḍil Muṣṭafā Pasha to the Grand Vizierate, and he was accordingly summoned to Edirne (11 Muḥarram 1101/25 October 1689). His first act was to issue a declaration (*beyān-nāme*) designed to restore morale and to encourage the willing performance of military service. He also took steps to ease the lot of the tax-paying

subjects (*reʿāyā*) by removing a number of onerous extraordinary taxes such as the *resm-i khamr ve ʿaraḳ*, a recently-imposed tax on drink which had led many Christian subjects in Rumeli to make common cause with the enemy (cf. *Zubdat al-waḳāʾiʿ*, fol. 122). During the winter he was engaged in preparations for a campaign which he himself was to lead; and on 6 Shawwāl 1101/13 July 1690 he left Edirne. He succeeded in recovering Pirot (10 August), the fort (*palanka*) of Mūsā Pasha, and, after a 23-day siege, the important stronghold of Nish (9 September). Despite the lateness of the season and the opposition of his commanders, Fāḍīl Muṣṭafā determined to march to Belgrade. Semendria fell after a three-day siege, on 23 Dhu 'l-Ḥidjdja 1101/27 September 1690, and Belgrade after an eight-day siege, on 4 Muḥarram 1102/8 October 1690 (Silāḥdār, ii, 501 ff.; *Zubdat al-waḳāʾiʿ*, fols. 169, 171, 173; Rāshid, ii, 123 ff.; cf. İ. H. Danişmend, *İzahlı Osmanlı tarihi kronolojisi*, Istanbul 1947-55, iii, 470). Detachments sent out from Belgrade succeeded in taking Boghur-delen (Šabac) and re-establishing control over the Danube at Orşova but failed to recover Osijek. Having seen to the repairing and supplying of Belgrade, Fāḍīl Muṣṭafā set out for Istanbul (4 November 1690). During his return he was mindful of the *reʿāyā*, sending prisoners to their homes at the treasury's expense and also restoring lands and goods and providing the means of agriculture to those who had lived between Nish and Belgrade but had been moved across the Danube by the Austrians and now wished to return. He spent the winter of 1690-1 dealing with matters such as uprisings in Egypt (by Ibn Wānī) and Cyprus (*Zubdat al-waḳāʾiʿ*, fol. 182) and instituting reforms in the Janissary Corps, the imperial stables and the imperial larder whereby expediture was cut (Silāḥdār, ii, 559-60).

Though Fāḍīl Muṣṭafā proposed that he remain in Istanbul in 1691 in order to oversee all fronts during the year and that another commander be sent to Hungary, it was thought best that he lead the campaign. By the time the army was ready to move (Shaʿbān 1102/May 1691), Süleymān II was near death, and a faction opposed to Fāḍīl Muṣṭafā was making efforts to restore Meḥemmed IV to the throne. Having taken measures to forestall these, Fāḍīl Muṣṭafā left strict instructions, on departing from Edirne (18 Ramaḍān/15 June), that, in the event of the sultan's death, his brother, Aḥmed, should be placed on the throne. When, on 25 Ramaḍān 1102/22 June 1691, Süleymān II died, Aḥmed II ascended the throne without incident and confirmed Fāḍīl Muṣṭafā Pasha in the Grand Vizierate.

Having reached Belgrade on 23 Shawwāl/20 July, Fāḍīl Muṣṭafā bridged the river Sava; and when the Austrians, encamped at Varadin (Petrovaradin), advanced and then retreated, the Grand Vizier set off in pursuit, overriding the advice of his commanders that he should await the arrival of the Crimean Tatars and the provincial forces. When the Ottomans took up a position before the fort of Slankamen, the Austrian commander, his road to Varadin threatened and fearing being caught between the Ottomans and the Tatars, engaged the Ottomans in battle (24 Dhu 'l-Ḳaʿda 1102/19 August 1691). The Ottoman right wing having been broken, Fāḍīl Muṣṭafā himself led the attack to restore the position; but just as this was about to be achieved, he was struck in the forehead by a bullet and killed: the confusion consequent on his death led to the defeat and withdrawal of the Ottoman forces. The battle of Slankamen thus saw not only a serious military reverse but also the death of an able Grand Vizier from whom much might have been expected. Despite a thorough search, Fāḍīl Muṣṭafā's body was not found. (For details, see Silāḥdār, ii, 583 ff.; *Zubdat al-waḳāʾiʿ*, fols. 184 ff.; Rāshid, ii, 161 ff.; Hammer-Purgstall, *Histoire*, xii, 319 ff.).

Fāḍīl Muṣṭafā Pasha, though Grand Vizier for less than two years, grasped the true needs of the state and demonstrated the ability to implement necessary reforms. He appreciated the political necessity of countering European hopes of defections from amongst the Christian subjects by taking account of their interests and by making reforms in connection with the *djizya* and other obligations laid upon them [for the effects of the *djizya* reforms, however, cf. DJIZYA ii—Ottoman, especially 565b]. To ensure the independence of the Grand Vizierate, he took steps to limit the number and influence of the *ḳubbe altı* viziers. The practice of giving gifts (*ʿīdiyya*) to the sultans at *bayrams* by state officials was ended. In every provincial city he created councils of notables (*medjlis-i aʿyān*), modelled on the imperial *dīwān*, to prevent the growth of local despotisms and to check abuses by keeping an eye on the judgements and procedures of *ḳāḍī*s and *nāʾib*s. In Istanbul, however, his failure to enforce the *narkh*, or fixed prices, on the grounds that the practice was not justified in the *sharʿ* and that trade should rest on the consent of the two parties, resulted in an increase in profiteering in his time of office. His learning, particularly in the fields of *ḥadīth* and lexicography, his devotion to the *sharʿ*, his dignity and his sense of justice are widely attested. He had three sons: Nuʿmān, ʿAbd Allāh and Esʿad (Silāḥdār, ii, 286, 587 ff.; *Zubdat al-waḳāʾiʿ*, fols. 187 ff.; Rāshid, i, 530; ii, 115, 148 ff.; Hammer-Purgstall, *Histoire*, xii, 307; Saint-Priest, *Mémoires*, 242 ff.; Shaykhī, ii, 3216 ff.; *Amasya taʾrīkhi*, iv, 212 ff.; U. Heyd (ed. Ménage), *Studies in old Ottoman criminal law*, Oxford 1973, 155).

IV. ʿAmdja-zāde Ḥusayn Pasha (nephew of Köprülü Meḥmed Pasha)—see ʿAMŪDJA-ZĀDE ḤUSAYN PASHA.

V. Nuʿmān Pasha (?1081-1131/?1670-1719), Ottoman Grand Vizier, the eldest son of Fāḍīl Muṣṭafā Pasha. Born in Istanbul, he studied under Demir-Ḳapılı Fāḍīl Süleymān and Ḳayserili Ḥāfiẓ al-Sayyid Aḥmed Efendi, among others, and became *mutawallī* of the Köprülü *awḳāf* after his father's death. While Muṣṭafā II was preparing for his second campaign against the Austrians, in 1696, he decreed that Nuʿmān, like the administrators of other rich foundations, should take part in the campaign, providing 150 infantry. In Muḥarram 1112/July 1700, Nuʿmān Beg became sixth vizier and was betrothed to ʿĀʾisha Sulṭān, a daughter of Muṣṭafā II (*Silāḥdār dhayli*). He became *beglerbegi* of Erzurum in Ramaḍān 1112/March 1701 and then, in Djumādā I 1114/October 1702, of Anatolia. His marriage to ʿĀʾisha Sulṭān, set for the spring of 1703, was delayed in the confusion surrounding the uprising known as the *Edirne waḳʿasi* which led to the deposition of Muṣṭafā II (9 Rabīʿ II 1115/22 August 1703), who was replaced by Aḥmed III. Following this event, Nuʿmān Pasha was appointed commander (*muḥāfiẓ*) of Eğriboz (Euboea), and by June 1704 he had become *muḥāfiẓ* of Crete, being charged with making a land survey (*taḥrīr*) of the fiefs on the island (Rāshid, iii, 137). Transferred to the command of Boghaz Ḥiṣārī on 26 Shawwāl 1117/10 February 1706, he was shortly after returned again to Crete. Though

the marriage ceremony with ʿĀʾis̲h̲a Sulṭān was celebrated in Muḥarram 1120/April 1708, it was still to be several years before the marriage was consummated.

Appointed again to Eğriboz in D̲j̲umādā II 1121/August 1709, he was summoned to Istanbul four months later (Ramaḍān 1121/December 1709) to consummate his marriage (Rās̲h̲id, iii, 311-2; cf. *ibid.*, iii, 317-8, however, where the consummation is said to have occurred in Muḥarram 1122/March 1710). He was made *beglerbegi* of Bosnia on 8 S̲h̲awwāl 1121/11 December 1709 but was then appointed to the command of Belgrade on 3 D̲h̲u 'l-Ḳaʿda 1121/4 January 1710 (Rās̲h̲id, iii, 313; cf. Uzunçarşılı, *Osmanlı tarihi*, iv/2, Ankara 1959, 291, who dates this appointment on 17 Rabīʿ I 1122/16 May 1710). On 18 Rabīʿ II 1122/16 June 1710, Nuʿmān Pas̲h̲a was elevated to the Grand Vizierate in the hope that he would be more resolute against the Russians and better able to handle the problem of the suppliant Swedish king, Charles XII, than his predecessor, Čorlulu ʿAlī Pas̲h̲a, had been (see ʿALĪ PAS̲H̲A ČORLULU; Akdes Nimet Kurat, *Isveç Kıralı Karl XII.'ın Türkiye'de kalışı ...*, Istanbul 1943, 227, 229); his appointment was met with general satisfaction. Despite a strong movement in the government to concentrate attention on the Black Sea and the Polish question, Nuʿmān Pas̲h̲a, trying to maintain peace with Russia, contented himself with announcing simply that a large army would see the Swedish king to his own country in the spring (see Rās̲h̲id, iii, 327; Aḥmed Refīḳ, *Memālik-i ʿOt̲h̲māniyye'de Demirbas̲h̲ S̲h̲arl*, Istanbul 1332/1913-14, 30 ff.; A. N. Kurat, *op. cit.*, 232 ff.; idem, *XVIII. yüz yılbası Avrupa umumı harbinde Türkiye'nin tarafsızlığı*, in *Belleten*, vii, 1943, 268 ff.; Saint-Priest, *Mémoires*, 120-1).

Disappointed in his handling of both external and internal affairs, Aḥmed III removed Nuʿmān Pas̲h̲a from the Grand Vizierate on 21 D̲j̲umādā II 1122/17 August 1710; he was subsequently appointed *muḥāfiẓ* of Eğriboz (*Silāḥdār d̲h̲ayli*; Rās̲h̲id, iii, 330-1. For a relation concerning his wish to resign from the Grand Vizierate, see Behd̲j̲etī, *Taʾrīk̲h̲-i sülāle-i Köprülü*). In the nine years before his death he held administrative and military positions continuously in various parts of the empire. He became *muḥāfiẓ* of Canea in S̲h̲awwāl 1122/December 1710, and of Ḳandiya in D̲h̲u 'l-Ḳaʿda 1123/December 1711, while on 19 S̲h̲awwāl 1125/8 November 1713 he was given the *sand̲j̲aḳ* of Yanya (Ioánnina) as an *arpalïk* (*Silāḥdār d̲h̲ayli*). The next year he was given the *eyālet* of Bosnia together with the military command of the Ḳaradag̲h̲ [*q.v.*] area. While in this post he moved against the rebels of Ḳaradag̲h̲, who were receiving aid from the Venetians, hunted them down and drove those who escaped to take refuge with the Venetians (S̲h̲awwāl 1126/October 1714: Rās̲h̲id, iv, 22-3. For the decree sent to him about this problem, see Başvekalet arşivi, Ibnülemin, dâhiliye, 2411).

Following this success, he was moved to the command of Belgrade (January 1715: *Silāḥdār d̲h̲ayli*), where affairs were at a delicate stage; but under him, as in his predecessor's time, disorder in this frontier fortress increased, as did desertions from the local levies and the *ḳapïḳulu* soldiery. Dismissed because of this in Rabīʿ II 1127/April 1715, he was transferred to the governorship (*mutaṣarrïflïḳ*) of the *sand̲j̲aḳ*s of Ičil and Mentes̲h̲e and given the task of following the activities of the bandits who were profiting from the absence on campaign of the viziers and *beglerbegis* of Anatolia (Rās̲h̲id, iv, 237, 240 ff.). In S̲h̲awwāl 1128/September 1716 he was made *beglerbegi* and *muḥāfiẓ* of Cyprus (*Silāḥdār d̲h̲ayli*); and three months later he became commander (*serdār*) in Bosnia while retaining the governorship of Cyprus (for part of the firman of appointment, see Uzunçarşılı, *Osmanlı tarihi*, iv/2, 294, n. 1). During the period when the Austrians gained Belgrade (Ramaḍān 1129/August 1717), Nuʿmān Pas̲h̲a beat back the enemy attack on Bosnia and forced the raising of the siege of Izvornik (October 1717). He remained active in the defense of Bosnia until after the signing of the Treaty of Passarowitz (22 S̲h̲aʿbān 1130/21 July 1718) (see Rās̲h̲id, iv, 383; and for a copy of a decree sent to him in mid-Ramaḍān 1130/August 1718, see Başvekalet arşivi, Ibnülemin, dâhiliye, 2436) and was then transferred at his own request to the governorship of Crete in Ramaḍān 1130/August 1718. Falling ill as soon as he reached the island, however, he died in Ḳandiya on 16 Rabīʿ I 1131/6 February 1719 and was buried beside the mosque of Fāḍïl Aḥmed Pas̲h̲a.

Nuʿmān Pas̲h̲a was accounted an honest and pious man of whom one author remarks that he would have been better suited to the office of *S̲h̲ayk̲h̲ al-Islām* than to that of Grand Vizier (Charles de Ferriol, *Correspondance du Marquis de Ferriol*, Antwerp 1870, 120). He is said to have taking nothing from the estates attached to the various offices he held, but rather to have met his expenses exclusively from the income of the estates which he had inherited from his father (Behd̲j̲etī).

Both his younger brothers and, of his sons, particularly Ḥāfiẓ Aḥmed Pas̲h̲a (d. 1183/1769) made a mark in public life, as have other descendents of the family down to the present day [see KÖPRÜLÜ MEHMED FUAD].

(M. TAYYIB GÖKBILGIN - R. C. REPP)

KÖPRÜLÜ, MEHMED FUAD, until 1934 KÖPRÜLÜZĀDE MEḤMED FUʾĀD (1890-1966), prominent Turkish scholar and the pioneer of Turkish studies in the modern sense in Turkey. Born in Istanbul, he was the son of Ismāʿīl Fāʾiz Bey, a civil servant, a descendant of the sister of the famous Ottoman grand vizier Köprülü Meḥmed Pas̲h̲a [*q.v.*] who married Ḳïbleli Muṣṭafā Pas̲h̲a, one-time vizier of Meḥemmed IV. His mother K̲h̲adīd̲j̲a K̲h̲ānïm was the daughter of ʿĀrif Ḥikmet Efendi, a member of the *ʿulamāʾ* of Islimye in Rumeli (Sliven in present day Bulgaria). He was educated at Ayāspas̲h̲a junior high school (*rüs̲h̲diyye*) and at Merd̲j̲ān high school (*iʿdādī*) in Istanbul. Later, for two years he attended the School of Law (*Mekteb-i Ḥuḳūḳ*), which he left in 1909, but he was mainly self-taught. After teaching in various schools, he was appointed in 1913, with Ḍiyāʾ (Ziya) Gökalp's support, to the chair of Turkish literature in the University of Istanbul, vacant upon the resignation of K̲h̲ālid Ḍiyāʾ [*q.v.*], a position which he kept until 1939. He also taught at the School (later Faculty) of Political Science (*Siyasal Bilgiler*) and in the Ankara Faculty of Arts (*Dil ve Tarih-Coğrafya Fakültesi*) (where he covered Ottoman history and institutions). He served for eight months as under-secretary at the Ministry of Education in 1924 and was elected deputy from Kars in 1936. After 1939 he settled in Ankara and joined political life. In January 1946 he became one of the four

founders of the Democratic Party [see DEMOKRAT PARTİ]. Following the 1950 elections he became Foreign Minister (1950-5) and Minister of State in 1956, but resigned from the party on account of a rift with the other leaders. Following the revolution of 27 May 1960, he was arrested and briefly detained on Yassıada (in the Sea of Marmara) where all Democratic Party leaders were being tried, but he was acquitted on all charges. In 1961 he founded the short-lived Yeni Demokrat Parti ("The New Democratic Party") and soon afterwards retired from political life. He died in Istanbul on 28 June 1966 as a consequence of an earlier traffic accident in Ankara.

Fu'ād Köprülü started his career as a poet and literary critic. His name began to appear towards the end of 1908 in various papers and periodicals particularly in the *Therwet-i Fünūn* [*q.v.*]. As a poet he belonged to the *Fedjr-i Ātī* group [*q.v.*], an extension of the *Therwet-i Fünūn* school. In 1912 he mainly contributed to the daily *Ḥaḳḳ* and its literary supplement. He gradually switched to research and in 1913 he published in *Bilgi Medjmū'asi* (i, 3-52) his "Method in the history of Turkish literature" (*Türk edebiyyātī ta'rīkhinde uṣūl*). Like many young talents of his generation he came under the impact of Ḍiyā' (Ziya) Gökalp [*q.v.*] and of the Turkist movement which he led [see TÜRKČÜLÜK, and contributed many articles to *Türk yurdu* (1913), the organ of the movement and to the daily *Iḳdām* where he serialised a study on folk poetry (February-June 1914). In 1915 he founded the journal *Millī tetebbü'ler medjmū'asi* ("Journal of National Research"), where he published some of his early important study on *'āshiḳ* poetry (i, 5-46). In July 1917 Ḍiyā' Gökalp founded the famous *Yeñi Medjmū'a* ("the New Review") which gathered together all the leading young writers of the period and where Fu'ād Köprülü published his new-style poems (in spoken Turkish, syllabic metre and on "national" topics as required by the new *Millī edebiyyāt* trend) and his articles of literary criticism and research. After the publication in 1918 of his epoch-making monograph on "Early mystics in Turkish literature" i.e. Aḥmed Yesewī and Yūnus Emre (*Türk edebiyyātında ilk müteṣawwiflar*) and of the first two parts of his history of Turkish literature (*Türk edebiyyātī ta'rīkhi*, i, 1920 and ii, 1921), Köprülü concentrated his research on the origins and development of classical Turkish literature and culture in Anatolia; the evolution of Turkish Islam and Ottoman institutions; the Turkish legal system; and the development of Turkish literature in other literary dialects e.g. Azerī and Chaghatay. His work shed new light on the formative period of Turkish literature in Anatolia; very little research had been carried out in this field before him. But his greatest contribution is to have treated the evolution of the many branches of Turkish literature and culture as one unit and to have studied its development as a whole. In 1924 he founded in Istanbul University the Institute of Turcology (*Türkiyyāt Enstitüsü*) and its organ the *Türkiyyāt Medjmū'asi*. Apart from his many articles (some of which are independent monographs) published in various scholarly journals, particularly *Ḥayāt, Türkiyyat Medjmū'asi, Edebiyyāt Fakültesi Medjmū'asi, Belleten, Türk hukuk ve iktisat tarihi mecmuası*, and the Turkish edition of the *Encyclopaedia of Islām* (*İslâm Ansiklopedisi*), Köprülü is the author of the following major works: *Türkiyye Ta'rīkhi*, i ("History of Turkey"), Istanbul 1923 (covers the period up to the settlement of the Turks in Anatolia); *Bugünkü edebiyyāt* ("Literature of today"), Istanbul 1924 (collection of early articles on literary criticism and book reviews); *Türk edebiyyātī ta'rīkhi*, i, Istanbul 1926 (revised and enlarged edition of the two parts published in 1920-1); *Millī edebiyyāt djereyānīnīñ ilk mübeshshirleri* ... ("Forerunners of the national literature movement"), Istanbul 1928 (contains selections from the 10th/16th century poet Edirneli Naẓmī who experimented with "pure Turkish"); *Türk dili ve edebiyati üzerinde araştırmalar*, Istanbul 1934 (a collection of research articles and book reviews); *Les origines de l'empire ottoman*, Paris 1935; and *Türk saz şairleri*[2], in 3 volumes, the first of which is published for the first time (Istanbul 1962).

ḲOPUZ [see 'ŪD]

KŌŔĀ or **KŌŔĀ DJAHĀNĀBĀD**, an ancient town of northern India in the Khadjuhā *taḥṣīl* of Fatḥpūr District in the former British United Provinces, now Uttar Pradesh. It lies in lat. 26° 7′ N. and long. 80° 22′ E. on the Rind River some 12 miles/20 km. from the Djamnā (Jumna) River between Kānpūr (Cawnpore) and Fatḥpūr.

In early times it was apparently held by the Rādjput line of the Rādjās of Argal, and the fortress there may have been their ancestral centre. Under the Mughals, Kōŕā (sometimes spelt in Marāṭhī and Persian sources as Kurrah, and to be distinguished from Kārā Mānikpūr, an adjacent but separate *sarkār*) formed a *sarkār* or district of Allāhābād *ṣūba* or province, with a revenue of 17,400,000 *dams* (Abu 'l-Faḍl, *Ā'īn-i Akbarī*, ii, tr. Jarrett and Sarkar, Calcutta 1949, 178). The great Mughal highway connecting Allāhābād with Āgra ran through Kōŕā, and a bridge was built in *ca.* 1770 to carry the road over the Rind. During the fighting of the middle decades of the 18th century between the Marāṭhā invaders and the troops of the titular Mughal emperors and the Nawwāb-Wazīrs of Awadh or Oudh, Kōŕā played a considerable rôle. A copper coin of Akbar's is known from the Kōŕā mint, and it was a mint town of the later Mughals from Shams al-Dīn Rafī' al-Daradjāt (1131/1719) onwards.

During the 19th century, the population of both Kōŕā proper and of Djahānābād, the township adjoining it to the north-west declined (populations of 2,806 and 4,379 respectively on 1901, the proportion of Muslim to Hindus being then 44% and 27%.

KORČA, modern Turkish Korçe, Greek Korytsa, Ottoman Görridje, all from the Slavic toponym "Gorica."), the only urban centre of importance in southeastern Albania, situated at the edge of the homonymous plain at the foot of the Moravë Mountains, which constitute the natural barrier

between the Korča plain and Macedonia. Korča was one of the most important towns founded by the Ottomans in Albania. Throughout the Ottoman period (late 14th century till 1912), Korča was a local administrative centre (*nāḥiye*, *ḳāḍilliḳ*), and latterly the capital of a *sandjaḳ* in the *vilāyet* of Manastir (Bitola) and a small Islamic centre.

The Ottomans annexed the eastern part of the present-day Albania in the last decade of the 8th/14th century and established their regular administration there, with the castles of "Göridje" and Premedi (Përmet) as bases. A *terminus ad quem* for the conquest, not recorded it seems by the Ottoman chroniclers (ʿĀshıḳpashazāde, Orūč, Anonymus-Giese, Neshrī, Saʿd al-Dīn), is the church of the village of Mborje 3 km. east of Korča on the first spur of the Moravë, which church was, according to its well-preserved inscription, built by Bishop Niphon in the year 1390. Throughout the entire 15th century the name "Göridje" seems to have been used for a castle on the spur or the Moravç between the village of Mborje and the place where the town of Korča lies today. The Ottoman documents from the early period use "Enborye" (from Emporion) and "Göridje" indiscriminately. A fragment of a *tīmār* register from Ṣafar 886/April 1481 mentions a *tīmār* of an "Isḥāḳ the Albanian" situated in the "*nāḥiye* of Göridje". This *tīmār* included eight small villages (mostly with Slavic names), of which one numbered six Muslim households and two households of Christians. (Sofia, National Library, Orient. Dep., No D 649, p. 26). The document is an indication for the early start of the Islamisation of the district of Korča, an Islamisation which was not solely restricted to members of the old native nobility. The castle of Göridje was maintained throughout the 15th and the first half of the 16th century. When it disappeared is apparently not recorded. A *tapu defter* (Başbakanlık arşivi [= BBA] T. D 70, p. 257) from 925/1519 (mentions a *djemāʿat* of Christian *müsellems* of the castle. The village of "Enborye, dependent on Göridje" numbered, according to the same document, 18 households of Muslims, 7 Muslim bachelors, and 88 households of Christians as well as 10 Christian bachelors and 11 widows. According to a *tapu defter* of 936/1529-30, the same village numbered 15 Muslim households, 4 Muslim bachelors, 4 people with a *berāt*, 1 *sipāhīzāde*, and 101 Christian households and 25 Christian bachelors (BBA. T. D. 167, p. 172). The same document states that there was a *djemāʿat* of Christian *müsellems* in the castle of Göridje consisting of 22 households and 9 bachelors. These *müsellems* were freed from *ispenče*, *ʿawāriḍ* and *teḳālīfat* in exchange for the fulfilment of the duties of repair and maintenance of the castle. Besides these privileged Christians, there was a *djemāʿat* of 5 Christian families in the castle who had to deliver yearly 1,500 arrows, for which service the state freed them from paying the *ʿawāriḍ* and the various *tekālīfats*, but they had to pay *ʿöshr*, *djizye* and *ispenče*. The *dhimmī* Aydin, son of Dimitri, thus a recent convert, was freed from *kharādj*, *ispenče*, *ʿawāriḍ* and *tekālīfat-ı ʿörfiyye* for the service of keeping the water supply of the castle in good order.

The actual town of Korča is an Ottoman foundation, intentionally founded in order to form a Muslim urban centre in the district. The history of the foundation of Korča can be reconstructed with help of some Ottoman documents. In 891/1486 the Master of the Imperial Stables (*Mīrākhor*), Ilyās Beg, received from Bāyezīd II the village of Bosotinče (Boboštice, 7 km. south of Korča), dependent on Göriče, as full possession (Gökbilgin, *Edirne ve Paşa livâsı*, 426). In 901/1495-6 the same person constructed a mosque and some other buildings in the village of Pisḳopiye near Göridje. In 910/1504-5 Ilyās Beg drew up the *waḳf-nāme* for his mosque in Istanbul, (the former Studion Basilica near Yedi Kule) and for his foundations in Piskopiye: a mosque, an *ʿimāret* (in the sense of a building for the distribution of food to the poor), and a *muʿallimkhāne*. For the upkeep of these foundations, he allotted the tax revenue of four villages in the district of Korča (including Bosotinče and Pisḳopiye), the revenue of a village near Premedi, a *ḥammām* and seven shops in Istanbul, and another *ḥammām* and a mill in Jannina (Yanya) in Epirus (extract of the *waḳfiyye* by Gökbilgin, *Paşa livâsı*, 427-8). The full extent of the foundations of Ilyās are not known, with certainty. According to a late 18th-century source, the *Ḥadīḳat al-djewāmiʿ*, Istanbul 1281/1864-5, i, 196, Ilyās Beg founded "benevolent works like an *ʿimāret*, a mosque, a *medrese*, and a *mekteb*" in Korča. The *Ḳāmūs al-aʿlām*, (v, 3919) mentions: "a blessed mosque, a *medrese*, an *ʿimāret* and a *tekke*." Local tradition also attributes a *ḥammām* to Ilyās Beg. The *Ḳāmūs* states explicitly that the Beg "laid the foundations of the town" by building the above-mentioned objects. It is possible that Ilyās Beg, or his sons, added to the foundations of 910/1504-5 at a later date.

The *Ḳāmūs* further states that Ilyās was one of the dignitaries of the time of Meḥemmed Fātiḥ and tutor and *mīrākhor* of Bāyezīd II. The *Ḥadīḳat* noted that he was an Albanian by birth and that he was buried in Göridje. In a *waḳfiyye* of 915/1509-10 (see Gökbilgin, *Paşa livâsı*, ii, 212), he styles himself "Ilyās Beg b. ʿAbd Allāh". He was thus of local Christian origin. Ilyās Beg was married to the Ottoman princess Ḥundī Khātūn, daughter of Murād II and Umm Kulthūm Khātūn. The place where he erected his buildings, Piskopiye, explicitly styled a "village" in the 910 *waḳfiyye*, must have been the seat of a local bishopric in pre-Ottoman times. The *Ḳāmūs* states that Ilyās Beg constructed his buildings on the site of a destroyed old monastery. The name "Göridje", sc. Korča, came to be used for the new urban settlement which developed around the nucleus formed by Ilyās's buildings. In the Istanbul *Taḥrīr* of 953/1546, edited by Barkan and Ayverdi (Istanbul 1970, 375), the buildings of Ilyās are situated in the "*ḳaṣaba* of Göridje." The new settlement thus supplanted the old one and probably absorbed its population, as it did with that of Mborje or Enborye 3 km. away from the new centre. The latter sank down to a hamlet of a few houses around the preserved Byzantine church of 1390.

The development of Korča in the 16th and 17th centuries cannot have been a spectacular one. Ḥādjdjī Khalīfa (tr. Von Hammer, *Rumeli und Bosna*, 141) mentions it in the first half of the 17th century as an administrative subdivision of the *sandjaḳ* of Ohrid. Ottoman lists of the *ḳāḍiliḳs* of Rumeli from 1078/1667-8 and 1203/1788 mention Göridje as the seat of a *ḳāḍilıḳ* of one of the lowest orders (Özergin in *Uzunçarşılı armağan*, Ankara 1976, 265, 300). Neither Muḥammed-i ʿĀshıḳ nor Ewliyā Čelebi describes Korča, nor does Mario Bizzi or other travellers, without doubt because it lies almost 60 km. off the Via Egnatia, the main road through the country.

In the second half of the 18th century, the development of the town received a strong impetus from the immigration of inhabitants of the Walachian trade metropolis of Voskopoje (Moschopolis), 20 km. due west in the mountains. Between 1768 and 1779 this

large urban settlement fell prey to the disorder which at that time reigned supreme. The French consul of Thessaloniki, Félix Beaujour, and the British traveller Colonel Leake, both writing in the first decade of the 19th century, describe Korča as a place with 450 houses and a population of 3,000 souls. After that time the development of the town increased in speed. J. G. von Hahn (*Albanische Studien*, Jena 1854, 55) spoke of "dem rasch aufblühenden Gjortscha." Other sources mention 10,000 inhabitants in 1859. In the eighties of the last century, Sāmī Bey describes the town in his *Ḳāmūs al-aʿlām* as a place with 18,000 inhabitants, 757 shops, 23 *khāns*, two mosques, one *medrese*, one *tekke*, one *ʿimāret*, two *ḥammāms*, a clock tower and four churches. At the end of the century the town was burnt down in a general conflagration. It was rebuilt under Aḥmed Eyyūb Pasha according to a new and modern plan with wide and straight streets which crossed at a right angle, a plan which still characterises the place. Between 1887 and 1902 Korča possessed a special Albanian school, the very first school where lessons were given in the Albanian language. As such, the place played a role of first importance in the development of Albanian nationalism.

From the sixties of the 19th century, Korča was the capital of a sizeable *sandjaḳ* which comprised much of south-eastern Albania and a part of present day Greek Macedonia. Around 1900, Heinrich Gelzer numbered 2,027 houses in Korča, of which 1,420 were inhabited by Albanian Orthodox Christians, 102 by Vlachs and 505 by Muslim Albanians (*Vom Heiligen Berge und aus Makedonien*, Leipzig 1904, 200). Other sources also mention population two-thirds Christian and one-third Muslim. During the upheavals of the Balkan Wars (1912-13), the town suffered particularly from the struggle between pro-Greek Albanian-speaking Christians and Albanian nationalists, both Muslim and Orthodox. During the French occupation, in 1916, a short lived "Republic of Korča" was proclaimed. After the First World War, Korča remained within the frontiers of the new Albanian state. According to a French census of 1916 it numbered 22-23,000 inhabitants, of whom 17,779 were Orthodox and 5,464 were Muslim, all Albanian-speaking (Justin Godart, *L'Albanie en 1921*, Paris 1922, 94). The total number in the district of Korča was 39,533 Muslims and 17,671 others. At present, the number of inhabitants of the town has passed the 50,000 mark.

Korča is the native town of the "Ottoman Montesquieu", Koči Beg [*q.v.*]. His family lies buried in the yard of the Mīrākhor Mosque. The famous man himself rests, according to Bursalı Meḥmed Ṭāhir's *ʿOthmānlı müʾellifleri*, in the graveyard along the Manastir Road, but according to Babinger (*Geschichtschreiber*, 185), in the yard of the Korča mosque itself. The family of the famous viceroy of Egypt, Muḥammad ʿAlī [*q.v.*] also came from Korča.

Korča is today a modern industrial centre, manufacturing textiles. The mosque of Mīrākhor Ilyās Beg remains standing and is, together with the *türbe* of the Beg, an officially-recognised Monument of Culture. It lost its tall minaret during the fury of the Albanian Cultural Revolution of the spring of 1967. The mosque is one of the best examples of early classical Ottoman architecture in the country, a building which contributed considerably to the formation of Islamic architectural forms in Albania in the succeeding centuries.

Bibliography: Given in the text, but see also A. Birken, *Die Provinzen des osmanischen Reiches*, Wiesbaden 1976, 71. (The *Tapu defters*, preserved in Istanbul and Sofia, have not yet been published).

(M. Kiel)

KORDOFĀN (Kurdufān) a region of the Democratic Republic of the Sudan lying west of the White Nile roughly between lats. 16° and 10° N. and longs. 32° and 27° E.; it is now divided into two provinces, Northern and Southern Kordofān, with a population of 3,103,000 (1973 census). The name, often pronounced locally and earlier written as Kordofāl, is said to come from a small hill some ten miles south-east of al-Ubayyiḍ (lat. 13° 11′ N., long. 30° 14′ E.); before the present century the name referred to the central settled area rather than to the whole region.

1. Geography and ethnology

A vast (about 147,000 square miles) open plain, forming a segment of Africa's Sudanic Belt, Kordofān may be divided into a number of ecological zones; the semi-desert in the north, a central *ḳoz* (stabilised sand dune) zone and the Nuba Mountains of the south-east. The mean annual rainfall ranges from less than 100 mm. in the far north to between 6 to 800 mm. in the south; the human ecology reflects this transition from camel and sheep nomadism in the northern zone which itself merges into the Bayūḍa Desert, to mixed hoe agriculture and pastoralism in the central zone and cattle nomadism in the south. Only in the Khayrān depression north of Bāra is irrigated agriculture practised.

The ethnography of Kordofān is complex, being historically the result of an Arab or Arabised component immigrating and intermingling with a discrete indigenous population; Arab nomads and semi-nomads, predominantly Kabābīsh, Dār Ḥāmid, Ḥamar and Bidayriyya live in the north and centre, while in the south the cattle nomads (*Baḳḳāra*), Misīriyya, Ḥumr and Hawazma, form but a part of the "Baḳḳāra belt" that stretches west to Lake Chad and east across the White Nile. The towns, established in the 18th century mainly by Djaʿaliyyūn and Danāḳla immigrants from the Nile Valley, are found in the central zone, al-Ubayyiḍ, Bāra, Umm Ruwāba and al-Rahad, an area of rain-fed agriculture which produces Kordofān's main export, gum arabic from the *hashab* tree (*Acacia senegal*). The Nuba Mountains are inhabited by a medley of ethnic groups, whose generic name, Nuba, conceals a linguistic and ethnic diversity which defies generalisations; at least thirty languages belonging to several different language groups are spoken. In the 20th century, partly because of colonial policies, the Nuba have increasingly moved their settlements down from the mountains onto the plains below.

2. History

Neither the name nor any certain information about the region appear in the mediaeval Arabic geographical literature; nor can anything very certain be said of the early peopling of Kordofān or of the course or chronology of the Arab immigration. A letter from the ruler of Bornū dated 794/1391 to Sultan al-Ẓāhir Barḳūḳ of Egypt may imply the penetration of Djudhām and other Arab nomads through Kordofān and beyond to the Lake Chad region (al-Ḳalḳashandī, *Ṣubḥ al-aʿsha*, viii, 116-18; Yūsuf Faḍl Ḥasan, *The Arabs and the Sudan*, 163), but of the two possible directions from which the original Arab nuclei of the modern Baḳḳāra tribes might have come, North Africa seems more likely than the Nile. The Baḳḳāra tribes in their present formation probably do not go

back beyond the 17th century. Oral traditions remember the existence of an Arab nomad confederation, the Fazāra, in Northern Kordofān in the 10th-11th/16th-17th centuries; recent research has discovered references to Egyptian merchants trading with merchants from *barr al-sūdān fazāra ca.* 1530. The Kābābīsh of Kordofān and the Zayyādiyya of Dār Fūr [*q.v.*] appear to have emerged out of the débris of this confederation. In sum, it would appear that the earliest Arab penetration cannot be dated much before the 8th/14th century, probably following the collapse of the Christian Nubian kingdoms of the Nile Valley.

Fundj, Musabbaʿāt and Fūr rule. Following the emergence of the Islamised Fundj [*q.v.*] sultanate of Sinnār at the beginning of the 10th/16th century, Kordofān experienced a secondary wave of Arabisation and Islamisation through commercial and political influences from the Nile Valley and the missionary activities of itinerant *faḳīhs*. The spread of Islam among the indigenous inhabitants is illustrated by the emergence of Taḳalī, a small Islamised kingdom, whose foundation at least as a Muslim state is traditionally ascribed to Muḥammad al-Djaʿalī, a *faḳīh* who came from the north in about 936/1530. Occasional glimpses of this spread of Islam may be found in the biographical dictionary of Wad Ḍayf Allāh; in the early 11th/17th century Tādj al-Dīn al-Bahārī from Baghdād visited Taḳalī. Later in the century the *faḳīh* Ibn al-Kaddāl visited Kordofān; he taught a local *faḳīh*, Djawdat Allāh, whose son Mukhtār was killed by Djanḳal (see below) (Muḥammad al-Nūr b. Ḍayf Allāh, *Kitāb al-Ṭabaḳāt*, ed. Yūsuf Faḍl Ḥasan, Khartoum 1971, 127-9, 87-8, 130, 345-6).

In historic times Kordofān became a "buffer territory, now the prey of its eastern, now of its western neighbours" (MacMichael, *Kordofán*, 5), that is, between Sinnār and the rising Dār Fūr sultanate (established *ca.* 1650). Bādī II of Sinnār (1054-92/1644-5 to 1681) invaded and subdued Taḳalī, and Sinnār and occasionally recruited Nūba as mercenaries. Thereafter Sinnār exercised an informal hegemony over central and eastern Kordofān through their protégés, the Ghudiyyāt, living to the south of al-Ubayyiḍ, some of whose chiefs appear in Fundj documents with the title *shaykh Kurḍufān*.

Sinnār's overlordship was disputed in the late 17th and 18th centuries by three generations of Musabbaʿāt (sing. Musabbaʿāwī) chiefs, who attempted to carve out a kingdom for themselves in Kordofān. By origin from Dār Fūr, Djanḳal, ʿĪsāwī and Hāshim, grandfather, father and son, attempted to play off Sinnār and Dār Fūr against each other.

Although the Musabbaʿāt succeeded in ousting the Fundj, in about 1200/1785-6 Hāshim's activities provoked an invasion by Sultan Muḥammad Tayrāb (*ca.* 1166-1200/1752-3 to 1785-6) from Dār Fūr. Thereafter, despite Hāshim's attempts at resistance, Kordofān was ruled by Dār Fūr. Among Dār Fūr's governors (*maḳdūm* pl. *maḳādīm*) in Kordofān, Muḥammad Kurra and Musallim al-Tardjāwī encouraged trade in gum, ostrich feathers and slaves, granted land to *faḳīhs* and others around al-Ubayyiḍ and Bārā, and curbed the nomads.

Turco-Egyptian rule 1821-85. In 1821, as part of a wider invasion of the Northern Sudan, Muḥammad ʿAlī Pasha [*q.v.*], *wālī* of Egypt, sent an expedition of 3 to 4,000 troops and an artillery battery under his son-in-law, the *daftardār* Muḥammad Bey Khusraw, to conquer Dār Fūr and Kordofān (al-Djabartī, *ʿAdjāʾib al-āthār*, iv, 318). After successfully crossing the desert, the *daftardār*'s army destroyed the Dār Fūr garrison and killed the *maḳdūm* Musallim at Bārā on 20 August 1821; Khusraw was prevented from invading Dār Fūr by a fierce revolt along the Nile. Al-Ubayyiḍ continued as the capital of what was now a province of the Turco-Egyptian Sudan, although the actual administrative arrangements fluctuated greatly (the governors are listed in R. L. Hill, *Rulers of Sudan, 1820-1885*, in *Sudan Notes and Records*, xxxii/1 [1951], 85-95).

Muḥammad ʿAlī had conquered the Northern Sudan to obtain slaves and gold; Kordofān yielded both, some alluvial gold from Djabal Shaybūn in the Nuba Mountains and slaves from those owned within Kordofān or captured by Baḳḳāra raids upon the Nūba and other southern peoples. As in other parts of the Sudan, the authorities themselves organised slave raids to the south; Rustum Bey (governor 1828-33) on one raid in 1830 seized 1,400 captives. Despite prospecting by W. P. E. S. Rüppell, J. von Russegger and others, the hopes of substantial gold deposits proved largely chimerical. For most of the Turco-Egyptian period neither the Baḳḳāra nor the Nūba were ever brought under an effective administration; Djabal Taḳalī put up a particularly prolonged resistance.

The Mahdiyya 1885-98. Kordofān was the scene of the first and final acts of the Mahdiyya [see KHALĪFA. iv. In the Sudanese Mahdiyya]. Although its history belongs to the wider history of the Mahdist Sudan, events in Kordofān contributed decisively to the success of the Mahdist Revolution. Thus, among the Djaʿaliyyūn settled in the province, a bitter conflict had developed between two factions led by Ilyās Pasha Umm Birayr and Aḥmad Bey Dafaʿ Allāh al-ʿAwaḍī. The former was appointed Governor of Kordofān by C. G. Gordon, but was dismissed following a revolt by the Ghudiyyāt instigated by his rivals. It was with Ilyās and others, embittered with the Turco-Egyptian régime, that Muḥammad Aḥmad, the future Mahdī, made contact on a visit to al-Ubayyiḍ, probably in 1879.

Following his manifestation (*ẓuhūr*) on 29 June 1881 and initial successes against the Turco-Egyptian authorities, the Mahdī, following prophetic precedent, made his withdrawal (*hidjra*) into Kordofān to Djabal Ḳadīr in the Nuba Mountains. It was in Kordofān that the Mahdī found the support and won the victories that firmly established his rule; on 19 January 1883 al-Ubayyiḍ finally capitulated and the destruction of the Hicks Pasha relief expedition at Shaykān, south of al-Ubayyiḍ, on 5 November 1883 gave the Mahdī complete control over Kordofān. In the context of these victories, Gordon's proposal that the Mahdī be made "Sultan of Kordofān" was derisory.

During the Mahdist period, Kordofān was basically administered from al-Ubayyiḍ by a deputy-governor (*wakīl*), but for most of the period was combined with Dār Fūr to form one great province of the West (*ʿimālat al-gharb*) under ʿUthmān Ādam (1888-91) and Maḥmūd Aḥmad (1891-96). Not everyone in Kordofān accepted the Mahdiyya; the Kabābīsh under their Shaykh, Ṣāliḥ Faḍl Allāh Sālim, who was in touch with the Anglo-Egyptian authorities, resisted until he was killed in May 1887. A revolt of a different nature was the mutiny of the *djihādiyya*, slave troops armed with rifles, at al-Ubayyiḍ in 1885; they marched off to the Nuba Mountains killing the provincial governor, Maḥmūd ʿAbd al-Ḳādir, when he attempted to stop them.

In late 1896, under the threat of the Anglo-Egyp-

tian advance, the Khalifa ʿAbdallāhi ordered Maḥmūd Aḥmad to march east with the bulk of the forces of Kordofān and Dār Fūr. After the defeat at Karrarī (Omdurman) on 2 September 1898, the Khalifa withdrew into eastern Kordofān to Shirkayla; he was hunted down and killed at Umm Dibaykarāt, near Kostī, on 24 November 1899.

Condominium rule 1898-1956 and independence. At the outset of Anglo-Egyptian Condominium rule in the Sudan, Kordofān was in a state of chaos; bands of Mahdist supporters roamed unchecked and the tribal order had largely disintegrated both as a result of the deliberate policy of the Khalifa and through the loss of herds and slaves. Order was gradually imposed by punitive patrols, the Nūba under their *makks* (chiefs) and *kudjūrs* (ritual experts) forming particularly strong pockets of resistance until the 1920s. By 1911 the railway joined al-Ubayyiḍ to Khartoum and the gum trade was revived.

In the 1920s direct military administration gave way to "Indirect rule", and local administration came to be largely committed to the tribal chiefs. Tribes like the Kabābīsh under a strong leader, Sir ʿAlī al-Tūm Faḍl Allāh Sālim (1874-1938), prospered; others, such as the Ḥamar, were re-assembled from the fragments left by the Mahdiyya. Al-Ubayyiḍ grew rapidly as the centre for the gum trade.

Since independence (1 January 1956) Kordofān has been one of the most prosperous and peaceful regions of the Sudan, although the rapid encroachment of the desert has become a major threat. Provincial and local government reorgans:ation in the early 1970s has largely transferred power from the tribal leadership to the administrators and locally-elected committees of the Sudanese Socialist Union.

ḲORDOS, the Ottoman Turkish name of the ancient Greek city of Corinth in the Morea [*q.v.*]. It has a naturally fortified citadel (Ἀκροκόρινθος) overlooking a fertile plain (whose main product is currants) and dominating the isthmus between continental Greece and the Moreot peninsula as well as the two adjacent ports on either side. Corinth remained under Byzantine rule up to 1210, when it was conquered by the Crusaders; it passed to the Florentine family of the Acciaiuoli (1358), to the Greek despot of the Morea (1395), to the Hospitallers of Rhodes (1400) and again to the Greeks (1404). The region of Corinth was attacked by the Turks of Aydīn in 1327, and in 1361 it is reported to have been deserted owing to Turkish raids. The city was attacked by the Ottomans under Ewrenos in 1395 and conquered after a siege by Meḥemmed II in 1458. In 1488-9 Corinth had a Christian population of approximately 18,000; after *ca.* 1400 the existence of Albanian settlements was signalled for the region. According to Ewliyā Čelebi, it formed a *sandjaḳ* of the *eyālet* of the Morea (*Seyāḥat-nāme*, i, 185). In 1614 it was temporarily conquered by the Hospitallers of Rhodes; in 1682 it passed to the Venetians and again to the Ottomans in 1715. Finally, in 1822 (the second year of the Greek War of Independence) it was taken by the Greeks.

(E. A. Zachariadou)

KÖRFÜZ, KÖRFÜS (the first spelling in e.g. Pīrī Reʾīs and Rāshid, the second in Pečewī), the Turkish name for the island of Corfu off the coast of Epirus. Pīrī Reʾīs gives a full account of the island, together with a map, in his *Baḥriyye* (ed. Kahle, Berlin and Leipzig 1926-7, i, 113-16, No. 54). The Ottomans never succeeded in dislodging from Corfu the Venetians, who controlled it from the opening of the 15th century until 1797, but there were two major Turkish attempts to occupy the island.

The first took place in Rabīʿ I 944/August 1537 in the reign of Süleymān the Magnificent. The fleet assembled in spring of that year at Awlonya under the great corsair captain Khayr al-Dīn Barbarossa and Luṭfī Pasha, then third vizier [*q.vv.*], with the sultan in charge of the land forces. The town of Corfu was besieged for 43 days, but with the approach of winter, the Turks withdrew, the sultan returning to

Edirne whilst the fleet attacked and plundered Cephalonia (see Pečewī, *Ta'rīkh*, Istanbul 1283/1866-7, i, 194-200; Ḥādjdjī Khalīfa, *Tuḥfat al-kibār*, tr. J. Mitchell, *History of the maritime wars of the Turks*, London 1831, 55-8, drawing on the *Ghazawāt-nāma* of Sayyid Murād, see Bibl. to KHAYR AL-DĪN PASHA, BARBAROSSA). The second and last attempt took place in 1128/1716 under Aḥmed III, towards the end of the Ottoman reconquest of the Morea [*q.v.*] from Venice, when the attack was led from the land by the Serʿasker Ḳara Muṣṭafā Pasha and from the sea by the Ḳapudan-i Deryā Meḥmed Pasha, and was again unsuccessful (Rāshid, *Ta'rīkh*, Istanbul 1282/1865-6, iv, 186, 189, 246).

Bibliography: given in the article; for a good general account of Corfu's history, see *Enciclopedia Italiana*, art. *Corfù*, and for the two Ottoman campaigns, Danışmend, *İzahlı osmanlı tarihi kronolojisi*, ii, 195-6, iv, 9. (ED.)

KORITZA [see KORČA].

ḲORḲUD B. BĀYAZĪD, ABU 'L-KHAYR MUḤAMMAD (874-919/1470-1513), Ottoman prince and eldest of the eight sons of Sultan Bāyazīd II [*q.v.*]. He was born in Amasya where his father was governor (Laṭīfī, *Tadhkira*, 66; Nishāndjī Meḥmed Pasha, *Ta'rīkh*, 181; Cf. Kemāl-pasha-zāde, *Tawārīkh-i āl-i ʿOthmān*, Millet ms. 32, f. 23 etc., and Hüseyin Hüsameddin, *Amasya tarihi*, iii, 226). He spent his childhood and had his early education in the Old Palace at Istanbul in the care of his grandfather Meḥemmed II, after whose death in 886/1481 he was briefly placed on the throne, for some 17 days, by the Janissaries until his father returned from Amasya to assume power. Later, Ḳorḳud returned to Amasya and in 896/1491 was appointed governor of Sarukhān. His request to have the governorship of Bergama instead of Manisa was refused by his father, and perhaps upon the suggestion of his brother Aḥmad, governor of Amasya now, he was transferred to the governorship of Tekke and Antalya in 907/1502. Shortly afterwards, the *sandjaḳ* of Ḥamīd with a *khāṣṣ* of 843,363 *aḳčes* and the *zeʿāmet* of Lāzkiyye, amounting to 100, 721 *aḳčes*, were added to his personal *khāṣṣ* of 837,091 *aḳčes* (see the *fermān* of Dhu 'l-Ḳaʿda 908/May 1503 in Topkapu Saray arşivi E. 6356).

The fact that his father and the leading state dignitaries, headed by the Grand Vizier Khādim ʿAlī Pasha, favoured Aḥmad as heir to the throne offended Ḳorḳud, and cause him to withdraw into seclusion on Antalyan coast (Muḥarram 914/May 1508; see ʿĀlī, *Kunh al-akhbār*, Istanbul Univ. Libr., Tkish. ms. 5959, ii, f. 152), despite his *khāṣṣ* being increased to 2,502,755 *aḳčes* (for the *fermān* dated 5 Shaʿbān 914/29 November 1508 and sent to Ḳorḳud, see TKSA E. 6357). He obtained permission to go on the Pilgrimage, and left for Egypt with 50 men and 87 slaves in Muḥarram 915/May 1509, sailing with five ships under the *Ra'īs* Aḳ-bash. He landed at Damietta after five days and arrived in Cairo on 9 Safar/29 May (for details, see ʿĀlī, f. 153), but did not feel that he was wholly welcome (details in TKSA, various letters in dossier No. 6684). However, it is clear from the Mamlūk sultan's letters to Bāyazīd II that he was pleased to welcome Ḳorḳud, but after a month was able to convince the latter to return, in the light of "a son's obedience due to his father". Ḳorḳud received the promise of restoration to his governorship, and set sail back to Turkey.

Despite an attack by the Knights of Rhodes on his Egyptian escort off the shores of Tekke at the end of 916/beginning of 511, Ḳorḳud was able to get through to Antalya and to send a warning letter to Sayyidī Yūnus, who was coming on later from Egypt with baggage, to postpone sailing in order to avoid attacks by the Knights (TKSA, letter in dossier No. 6684). It is recorded that his health deteriorated on his return and that he asked for treatment from the physician ʿAlā' al-Dīn (letter to the Viziers in ibid.). Meanwhile, he was dismayed to hear of the appointment of his younger full brother Selīm to Sarukhān (TKSA E 5587 in ibid.), and he immediately left Antalya for that province (Dhu'l-Ḥidjdja 916/March 1511). His sudden departure from Tekke brought about the outbreak of a Shīʿī-inspired rising under Shāh Ḳulī in that province, and the Grand Vizier Khādim ʿAlī Pasha had to be sent to suppress it.

Meanwhile, Ḳorḳud was being informed of Selīm's movements, and sent a letter to the latter adjuring him not to act precipitately (TKSA dossier 6684). At the same time, he was aware of Aḥmad's ambitions for the throne. Certain of the court officials, aware of Bāyazīd's intention to proclaim Selīm the heir, invited Ḳorḳud to the capital. He travelled to Istanbul in disguise and went to the mosque of the Janissaries, seeking their support in a bid for the throne. Although they held him in respect, they considered him less capable as a potential ruler than Selīm. Selīm arrived at Istanbul on 22 Muḥarram 918/19 April 1512 in order to forestall Aḥmad [for details, see BĀYAZĪD II], and ascended the throne on the abdication of his father. He then gave Ḳorḳud the governorship of the island of Midilli, together with Sarukhān again (Saʿd al-Dīn, *Tādj al-tawārīkh*, ii 204). But Ḳorḳud also demanded the *sandjaḳs* of Aydīn, Manisa and Tekke, so that Selīm, considering him a threat to the throne's stability, marched secretly to Manisa and surrounded Ḳorḳud's palace there. Ḳorḳud managed to escape with his confidant Piyāle, disguised, but was betrayed by the governor of Tekke Ḳāsim Beg and caught near Antalya. He was strangled in his sleep by the *Ḳapîdjî-bashî* Sinān Beg's men at Egrigöz on the way back to Bursa, and was buried near Orkhān Ghāzī's tomb in Bursa (Muḥarram 919/March 1513; Saʿd al-Dīn, ii, 230 ff.).

Ḳorḳud was highly educated, and skilled as a poet and musician, being able to play many types of musical instrument (Sehī, *Tadhkira*, 18). His verses, written under the pen-name or *takhalluṣ* of Ḥarīmī, were collected into a *dīwān*. He wrote several works in Arabic, including commentaries and *ḥāshiyas*. His extant works include: (1) *Waṣīlat al-aḥbāb* (dated 15 Ṣafar 915/4 June 1509, autograph in Aya Sofya 3529); (2) *Ḥall ishkāl al-afkār fī ḥill amwāl al-kuffār* (Aya Sofya 1142); (3) *Daʿwat al-nafs al-ṭāliḥa ila 'l-aʿmāl al-ṣāliḥa* or *Kitāb al-Ḥarīmī fi 'l-taṣawwuf* (thus in the ms. copy of R. Yelkenci; in Aya Sofya 1763, this is simply called *Kitāb fi 'l-taṣawwuf*); (4) *Sharḥ alfāẓ kufr* or *Ḥāfiẓ al-insān ʿan lāfiẓ al-aymān* (Aya Sofya 2289); (5) *Ḳorḳudiyya* or *Fatāwā-yi Ḳorḳudkhāniyya* (see *Kashf al-ẓunun*, ii, 1228); and (6) *Dīwān* (Millet 104).

ḲORḲUD DEDE [see DEDE ḲORḲUD].

KÖROGHLU, a rebel of the Anatolian Djelālī movement [*q.v.* in Suppl.] in the 10th/16th century and the hero of a popular romance. The real Köroghlu came from the region of Bolu, and is probably the same person as the soldier-bard of that name who is said to have taken part in the campaigns in the Caucasus and Ādharbāydjān of Özdemiroghlu Pasha in the years 992-3/1584-5.

Until fairly recent times, Köroghlu remained a legendary personality, whose exploits were chanted by bards and story-tellers in Anatolia, Ādharbāydjān, Turkmenistān and Uzbekistān. Manuscript versions, and later on, lithographs and prints, circulated in Turkish-speaking lands, and more or less extensive episodes of this great epic-romantic cycle even passed into the story-telling répertoire of peripheral Turkish-speaking communities like the Kirgiz, the Kazaks and the Tatars of Tobol, as into that of non-Turkish peoples like the Armenians, Kurds, Georgians and Tādjīks.

The historicity of the figure of Köroghlu was nevertheless asserted by writers as far back as the 11th/17th century. Ewliyā Čelebi speaks of him—without giving a precise date—as an honourable bandit whose exploits were still remembered in the mountainous parts of northwestern Anatolia; and Arakel of Tabrīz cites him as a Djelālī chief whose adventures, together with those of his companions, formed the core around the early 11th/17th century of a "romance" chanted by the ministrels of the lands bordering on the Ottoman empire and Persia. Towards the end of the 19th century and at the beginning of the present one several attempts at identifying him were made, some people basing themselves on contradictory local traditions, and others putting forth hypotheses about the hero's historical prototype or about the origin of some feature or other or some legendary motif of the romance concerning him.

The discovery in 1942 of Ottoman archival documents has firstly confirmed Ewliyā Čelebi's information, and secondly allowed us to date his exploits as a Djelālī rebel. We have here a series of imperial orders from the years 988-90/1580-2 addressed to the Bey of Bolu and the *ḳāḍī* of Gerede concerning a Djelālī called Köroghlu Rūshen. Now Rūshen is also the forename of Köroghlu in several oral versions, Anatolian and Ādharbāydjānī, of the legend of our hero. Moreover, even in the cultural environments most distant from Ottoman territory, tradition has retained, in versions deformed in varying degrees, the name of Bolu Beyi as one of the hero's opponents, as well as allusions to the Ottoman sultan. Finally, several of Köroghlu's companions are mentioned with the same names in the Ottoman archival documents as in the different versions of the romance.

The ideas evoked by the name Kör-oghlu "son of the blind one" have contributed to the attracting around the genuine exploits of the bandit-hero legends of diverse origin, some of them going back to a long way in time, on the theme of the "hero, son of a blind father", who rises up against the masters who had mutilated his father.

(P. N. Boratav)

ḲORON (Ottoman Turkish Ḳorōn; Venetian Coron; in modern Greek Κορώνη), a fortress in the south-west Peloponnesus [see MOREA] and on the west coast of the gulf of Ḳoron, situated some 15 miles by land from the fortress of Modon [*q.v.*; modern Greek Μεθώνη], with which, in the period of Venetian and Ottoman rule, its history was linked and which, to some degree, overshadowed it. The Byzantine fortress of Ḳoron, "un luogo di maggior difesa ... di forma triangolare, posta in mezzo d'una lingua di terre" (P. Garzoni, *Istoria della Repubblica di Venezia in tempo della Sacra Lega*, Venice 1705, 100-1) passed, with much of the Morea, under Frankish rule in 1204, but was seized by Venice two years later and was ceded to her in 1209. Ḳoron remained a Venetian colony for nearly two centuries, serving as a vital provisioning station for the Venetian fleet and becoming, with Modon, "the chief eyes of the Republic" (W. Miller, *The Latins in the Levant*, London 1908, 59, 152).

As early as 1428 Ḳoron was attacked from the sea and pillaged by the Ottomans, and after 1469, when Meḥemmed II completed the conquest of the Greek principalities of the Morea, its territories were contiguous with those of the sulṭān. It was not, however, until the Ottoman-Venetian war of 905/1499 to 909/1503 that Ḳoron fell to the Ottomans: in 906/1500, after Modon had been taken by storm and its defenders massacred, Ḳoron and Navarino "yeelded themselves by composition"—i.e. *vire ile*—to Bāyazīd II (Knolles, *Generall Historie of the Turkes*[1], London 1603, 460). This event took place on 15 August 1500; 17 August according to Bāyazīd II's *fetḥ-nāme* for Modon and Ḳoron, addressed to the inhabitants of Chios, and written at Ḳoron on 21 August (M. Sanuto, *I diarii*, iii, Venice 1880, 827-8). Bāyazīd II installed in Ḳoron a garrison of 500 Janissaries and 1000 *ʿazab* troops (*ibid.*, 810-1).

In 938/1532 Ḳoron was retaken by the Genoese admiral Andrea Doria while Sulaymān I was engaged in the Güns campaign. In the spring of 939/1533 Ḳoron was besieged by the Ottomans by land and sea, but without success, and was once more relieved by Doria. It was this setback which precipitated the sulṭān's summoning the North African corsair chief Khayr al-Dīn Barbarossa [*q.v.*] to Istanbul, from where, having kissed the hand of the sulṭān and received an appointment as *deryā beglerbegi*, he was sent with a naval force against Ḳoron in mid-Dhu'l-Ḳaʿda 940 (Luṭfī Pasha, *Tewārīkh-i āl-i ʿOthmān*, Istanbul 1341, 343-4). Khayr al-Dīn Pasha's approach, an outbreak of plague amongst the defenders, and the hardships of the winter of 1533-4, all caused the Spanish garrison under Mendoza, which Doria had installed there, to abandon the fortress and withdraw to Naples; Ḳoron, accordingly, was once more reoccupied in an uncontested way by the Ottomans (cf. further on the events of 1532-4, Paulo Giovio, *Historiae sui temporis*, Paris 1553, ii, 114v. ff., *passim*).

In the reign of Sulaymān I, according to a *taḥrīr defteri* utilised by M. T. Gökbilgin (*Belleten*, xx, 280, 327), Ḳoron was the seat of a *ḳāḍī* with a revenue of 150 *akčes per annum*, in the *sandjaḳ* of Modon, *liwā* of Mora. The fortress and its dependent territories formed an imperial fief (*k͟hāṣṣ-i hümāyūn*) which yielded 162,081 *akčes* of revenue *per annum*: these revenues, according to Th. Spandugino, *Commentarii*, 78, were bestowed with those of Modon by Bāyazīd II on Mecca.

Later in the 11th/16th century (by 991/1582: cf. Gökbilgin, *loc. cit.*) the *ḳaḍā'* of Ḳoron was annexed to the *sandjak* of Mezestre (Mistra). At this time the town contained 300 Christian and 10 Jewish households; the entire Muslim population of garrison officials and some 300 *ḳal'e neferāti* must have been what it appears to have remained in succeeding centuries (cf. the testimony of Evliyā Čelebī for the late 17th century and Leake for the early 19th), i.e. of *'askerī* status.

Western travellers apart, Ḳoron was visited in 1040/1630-1 by the Ottoman historian Pečewī (*Ta'rīk͟h*, Istanbul 1283, i, 172) who recalls the events of a century previously, and, later in the century (1668) by Ewliyā Čelebī, who has left a description of the fortress and its inhabitants (*Seyāḥat-nāme*, Istanbul 1314/1896-7 to 1938, viii, 326-33; cf. Ulrich Wolfart, *Die Reisen des Evliya Čelebi durch die Morea*, Inaug.-Diss., Munich 1970, 59-66).

In the Sacra Liga War of 1095/1684 to 1110/1699, Ḳoron was the first fortified place to fall to Venice in the course of her reconquest of the Morea, despite a vigorous defence and attempts to relieve the garrison by land. (D͟jumādā 'l-āk͟hir 1086/25 June to 7 August 1685; cf. Silaḥdār, *Ta'rīk͟h*, Istanbul 1928, ii, 218 ff.; Pietro Garzoni, *op. cit.*, 101, 107-17; Alessandro Locatelli, *Racconto historico della Veneta guerra in Levante* . . . 1684-1690, Colonia 1691, 124-38, 158.

Ḳoron was recovered for the Ottomans by the Grand Vizier Čorlulu 'Alī Pas͟ha in S͟ha'bān 1127/ August 1715. In this last phase, the town and its trade insensibly declined. Leake, in 1805, found that the export of silk and olive-oil, which down to the 1770s had supported four French merchant houses, was no longer flourishing: the harbour, blocked and ruinous already at the time of Bernard Randolph's visit in the late 17th century, offered only an insecure anchorage, while the town itself was much affected by the depredations of the "Janissaries of Koroni" (W. M. Leake, *Travels in the Morea*, London 1830, i, 485). Ḳoron finally passed from Ottoman, and Islamic, rule in the course of the Greek War of Independence.

Bibliography (apart from works already cited in the text): Plans and perspective views of the fortress and town of Ḳoron as it appeared at the time of the Venetian reconquest (1685) are given by P. M. Coronelli, *Memorie istoriographiche de' Regni della Morea*[2], Venice n.d., 56-77; cf. O. Dapper, *Nauwkeurige Beschryving van Morea*, Amsterdam 1688, 23-30. The most accessible recent description of the fortress is by Kevin Andrews, *Castles of the Morea*, Princeton, N.J. 1955 (= Gennadeion Monographs, iv), 11-23, with extensive further bibliography of western sources. Cf. also Pīrī Re'īs, *Kitāb-i Baḥriyye*, Istanbul 1935, 300-6; Silāḥdār Fīndīḳlīlī Meḥmed Ag͟ha, *Nüṣret-nāme*, ed. Parmaksızoğlu, Istanbul 1960-9, ii/2, 334; Rās͟hid, *Ta'rīk͟h*, Istanbul 1282/1865, iv, 126-7.

(C. J. Heywood)

ḲORYÜREK, Enīs Behīd͟j, modern Turkish orthography Enis Behiç Koryürek, Turkish poet (1891-1949). Born in Istanbul, the son of an army doctor, he attended schools in Salonica, Üsküb (Skopje) and Istanbul and graduated from the School of Political Science (*Mekteb-i mülkiyye*) in 1913. He served as a diplomat in Bucarest (1915) and Budapest (1916-22) and as a civil servant in various ministries. He died in Ankara on 18 October 1949. Like most poets of his generation, Enīs Behīd͟j wrote poems in the style and manner of the *T͟herwet-i fünūn* school [*q.v.*] and of its extension, the *Fed͟jr-i ātī* [*q.v.*] one, in *'arūḍ* metre and with an artificial language loaded with Arabic and Persian elements, and published them mainly in the periodical *S͟hehbāl* (1912-14) until he came under the influence of Ḍiyā' (Ziya) Gökalp [*q.v.*], who was leading the "national literature" trend (*Millī edebiyyāt d͟jereyānī*). Under Gökalp's guidance, he switched to syllabic metre (*hed͟je wezni*), spoken Turkish and "national" themes, and soon became one of the five leading young exponents of syllabic metre known as *hed͟jeniñ bes͟h s͟hā'iri* (the others being K͟hālid Fak͟hrī (Ozansoy), Ork͟han Seyfī (Orhon), Yūsuf Ḍiyā' (Ortaç) and Fārūḳ Nāfid͟h (Çamlıbel)). Ḳoryürek was particularly successful, with an original approach and style, in his epic poems (e.g. *Millī nes͟hīde*, *Süwāriler*) and in his evocative tales of the exploits of Turkish seamen in the Mediterranean (e.g. *Gemid͟jiler*, *Wenedikli ḳorṣān ḳizi*, *Ug͟hursuz basḳin*). He published his collected poems in *Mīrāt͟h* ("The legacy", Istanbul 1927). His *Güneşin ölümü* ("The death of the sun"), containing his later, less interesting, poems, was posthumously published, with a new edition of *Mīrāt͟h*, by F. Tevetoğlu as *Enis Behiç Koryürek'ten, Miras ve Güneşin ölümü*[2], Ankara 1971. During the last years of his life he was subject to depression and wrote old style pseudo-mystic poems of mediocre quality supposedly inspired by a 11th/17th century *s͟heyk͟h*, *Varidat-i Süleyman*, Ankara 1949.

(Fahir İz)

KÖSE DAG͟H, a land-corridor some 50 miles/ 80 km. to the north-west of Sīwās where there took place in 641/1243, probably on 6 S͟hawwāl/26 June, the decisive battle which opened up Asia Minor to the Mongols and sounded the knell for the Sald͟jūḳ sultanate of Rūm. The first contacts of the Mongols and Sald͟jūḳs went back to the last years of 'Alā' al-Dīn Kayḳubād I [*q.v.*], but at that time Anatolia was too well-protected in relation to the conquests already effected by the Mongols for the latter really to have any plans for conquering it. It was only under Kayk͟husraw II [*q.v.*] that the threat took definite shape, without one being able to ascertain how far the invaders intended to advance. However, after the Great K͟hān Ögedey's death, the new Mongol head of the Caucasian region, Bayd͟ju, seized Erzerum in the midst of the winter of 1242, and thus opened up the way into Asia Minor for the following spring.

The sources give few details about the campaign and the battle. Kayk͟husraw seems only very late to have fully realised the seriousness and imminence of the danger. He summoned forces together, comprising his allies or vassals, even including Armenians, Greeks and "Franks", ending up with what was certainly a force numerically superior to Bayd͟ju's.

But the impatience of his young commanders prevented him from awaiting the complete grouping of the Saldjūḳ forces. The Mongols, almost all cavalrymen, had recourse to their customary and invariably successful tactic of a simulated flight and then an unforeseen return to the attack against disorganised pursuers. The sultan lost his head and fled, and only the initiative of his vizier Muhadhdhab al-Dīn, combined probably with the Mongols' own prudence, allowed him to keep his throne as a vassal. In reality, the process now began which led to a *de facto* Mongol protectorate.

The weaknesses of the Saldjūḳ state at the time have often been stressed, this was true, but the Mongols, partly by the terror which they inspired, had overcome many other powers. It is hard to maintain that, even without these weaknesses, the course of history would have been any different.

Bibliography: Cl. Cahen, *Pre-Ottoman Turkey*, London 1968; J. Matuz, *Der Niedergang der anatolischen Seldschuken bei Kösch-Dagh*, in *Central Asiatic Jnal.*, xvii (1973), 180-99.

(CL. CAHEN)

KÖSE MĪKHĀL [see MIKHALOGHLU].

KÖSEM WĀLIDE or **KÖSEM SULṬĀN**, called MĀHPAYKAR (*ca.* 1589-1651), wife of the Ottoman sultan Aḥmad I and mother of the sultans Murād IV and Ibrāhīm I [*q.vv.*]. She was Greek by birth, and achieved power in the first place through the harem, exercising a decisive influence in the state during the reigns of her two sons and of her grandson Meḥemmed IV.

The views put forward concerning her origin and her first name—Nasya being derived from Anastasia (Aḥmed Refīḳ, *Ḳadinlar salṭanati*, Istanbul 1332, 47-8, deriving information from Guer, *Mœurs et usages des Turcs*, Paris 1747, ii, 474, see also Pétis de la Croix, *Abrégé chronologique de l'empire ottomane*, Paris 1768, ii, 74)—do not seem to be reliable. According to Pietro della Valle, *Voyages*, Rouen 1645, i, 94, she was given the nickname Kösem because of her smooth and hairless skin (*köse* = "hairless, beardless"). However, the epithet *kösem/kösemen* could also have been given to her on account of her ability as a leader and virtual ruler (for the meanings of *kösem* in Ottoman, see Hüseyin Kâzim, *Türk lûgati*, Istanbul 1940; iv, 181; B. Kerestedjian, *Quelques matériaux pour un dictionnaire etymologique de la langue turque*, London 1912, s.v. *keusemen* and *keusen*; Radloff, *Versuch eines Wörterbuches der Türk-dialecte*, ii/2, 1294: "ram, bell-wether, leader; free, without a care, independent").

Through her beauty and intelligence, Kösem Wālide was especially attractive to Aḥmad I, and drew ahead of more senior wives in the palace. She bore the sultan four sons—Murād, Sülaymān, Ibrāhīm and Ḳāsim—and three daughters—ʿĀʾisha, Fāṭima and Djawharkhān (Von Hammer, *GOR*; cf. Naʿīmā, *Taʾrīkh*, Istanbul 1280, iii, 67 ff.). These daughters she subsequently used to consolidate her political influence by strategic marriages to different viziers.

After Aḥmad I's death on 22 Dhu 'l-Ḳaʿda 1026/23 November 1617, she supported the succession of his brother Muṣṭafā I, under whose feeble rule she was able to exercise effective power in the state. Muṣṭafā's deposition three months later was a set-back for her, and she was relegated to the Old Palace (Eski Sarāy) at Bāyezīd under Aḥmad's young son ʿOthmān II, but she came to the fore again when ʿOthmān was deposed and executed and Muṣṭafā briefly restored (9 Radjab 1031/20 May 1622). Her full influence now became apparent when her minor son Murād IV ascended the throne in 1032/1623 and she thus became officially the Wālide Sulṭān, ruling as regent for five years till her son was old enough to take up the reins of power himself (Kātib Čelebi, *Fedhleke*, Istanbul 1287, ii, 220; Von Hammer, *GOR*, quoting a Venetian report). Even thereafter, Murād greatly respected his mother's opinions, and she took a close interest in state affairs when he was away from the capital. Thus the *Shaykh al-Islām* Akhīzāde Ḥüsayn Efendi's disapproval of Murād's hanging the *ḳāḍī* of Iznik was communicated by her to the sultan, then on his way to Bursa; he immediately returned to Istanbul and hanged Akhī-zāde Ḥüsayn—an act which had taken place only three times in Ottoman history (Kātib Čelebi, *op. cit.*, ii, 160; Naʿīmā, iii, 183). She saved the Ottoman dynasty from extinction by preventing Murād, who had executed his other brothers, including Sülaymān and Ḳāsim, from killing Ibrāhīm also (Sagredo, *Histoire de l'empire ottoman*, Amsterdam 1732, vi, 417; Vanel, *Abrégé nouveau de l'histoire générale des Turcs*, Paris 1689, ii, 545; *Histoire des grands vizirs*, Paris 1676, 34; Du Loir, *Voyages*, Paris 1654, 117; von Hammer, *GOR*).

Together with the Grand Vizier Ḳara Muṣṭafā Pasha [*q.v.*] she became most active in affairs when Ibrāhīm succeeded to the throne after Murād's death on 16 Shawwāl 1049/9 February 1640 (Naʿīmā, iii, 429), especially as her son gradually became more and more involved with his concubines, the expenditure involved having disastrous repercussions on the treasury (Kātib Čelebi, *op. cit.*, ii, 309 ff.). He subsequently came under the influence of other Palace women, and Kösem Wālide therefore lost her ascendancy and left the *Sarāy-i Djedīd-i ʿĀmire* to live in a summer house outside Ṭopkapī. When Ibrāhīm learnt that his mother was plotting with the Grand Vizier Ṣāliḥ Pasha do dethrone him, he moved her to the Iskanda Čelebi garden in Florya and hanged Ṣāliḥ (Wedjīhī, *Taʾrīkh*, Istanbul Univ. Library Turkish ms. 2543, fols. 29b, 32b). Ibrāhīm's weak rule caused a deterioration in affairs, whilst the Cretan war was dragging on and creating feeling against him. The chiefs of the Janissary corps, under Ḳara Murād Agha, Muṣliḥ al-Dīn and Bektāsh Agha, killed the Grand Vizier Aḥmad Pasha Hazārpāre and decided to depose Ibrāhīm. The new Grand Vizier, Ṣofu (or Ḳodja) Meḥmed Pasha and the *Shaykh al-Islām* ʿAbd al-Raḥīm Efendi, together with other leading officials, obtained Kösem Wālide's consent after a meeting with her at Ṭopḳapī, dethroned Ibrāhīm and put in his place his eldest son, the seven-years old prince Meḥemmed on 18 Radjab 1058/8 August 1648 (Naʿīmā, iv, 314, 319; Ḳara Čelebi-zāde ʿAbd al-ʿAzīz Efendi, *Rawḍat al-abrār dhayli*, Istanbul Univ. Library Turkish ms. 2635, pp. 9 ff.; Meḥmed Khalīfe, *Taʾrikh-i-Ghilmānī*, Istanbul 1340, 21 ff.; Murād Bey, *Taʾrīkh-i-Abu 'l-Fārūḳ*, Istanbul 1329, iv, 48). Ten days later, Ibrāhīm was strangled by the executioner Ḳara ʿAlī, for fear that his partisans might attempt a restoration, with the consent of his mother and with a *fatwā* from the *Shaykh al-Islām* (Ḳara Čelebi-zāde, *op. cit.*, 27-30, 57 ff.).

With Meḥemmed IV's accession, Kösem Wālide's power started to revive, and she was given exalted titles like Büyük Wālide "Grandmother of the Sultan", Wālide-yi Muʿaẓẓama, Umm al-Muʾminīn, Ṣāḥibat al-Maḳām, Wālide-yi ʿAtīḳa, etc. (see Wedjīhī, fol. 44b; Kātib Čelebi, ii, 367, 376; Naʿīmā, iv, 279, 290, 315, 317-19, 415, 418, 450, v, 108). However, her influence was not unbounded. The

authority of the Janissary *ag͟ha*s was wrong, and Turk͟hān Sulṭān, Meḥemmed's mother and Ibrāhīm's widow, became her rival; this rivalry, and misunderstandings between the state officials and the Janissaries (Naʿīmā, v, 7), caused disturbances in Istanbul and Anatolia. Kösem Wālide and her supporters therefore decided to replace Meḥemmed with his brother Sülaymān, whose mother Dilās͟hūb Sulṭān was regarded as unlikely to interfere in state matters. But Turk͟hān Sulṭān learnt of these intentions (Naʿīmā, v, 108), took the initiative, and had Kösem Wālide strangled with a curtain-string by the Palace Janissaries (Naʿīmā, v, 111; her executioner was someone called Küčük or Ḳus͟hču Meḥmed, see Rycaut, *Histoire de l'état présent de l'empire ottomane*, Paris 1670, 63; Naʿīmā, v, 109, 112, 137; von Hammer, *GOR*). Her body was taken from Topḳapī to the Eski Sarāy and then buried in the mausoleum of her husband Aḥmad I (Wed͟jīhī, fol. 45a).

Kösem Wālide had exercised power in public affairs for nearly 30 years. She left much wealth and estates (Naʿīmā, v, 112; Ḳara Čelebi-zāde, 20), and much of her income was devoted to charitable and other humanitarian works, such as a Friday mosque at Üsküdar, completed in 1060/1650 (Ayvānsarāyi Ḥusayn, *Ḥadīḳat al-d͟jawāmiʿ*, Istanbul 1281, ii, 184-5) and the Wālide K͟hān in Istanbul, built in 1056/1646 (Ewliyāʾ Celebi, *Seyāḥat-nāme*, Istanbul 1314, i, 325; Thévenot, *Relation d'un voyage fait au Levant*, Paris 1664, 49) (this latter building collapsed in March 1926). Also from these revenues she financed irrigation works in Egypt and provided relief for the poor in Mecca. In fact, she left behind in the popular Turkish mind a reputation for magnanimity, generosity and high intelligence.

Bibliography: Largely given in the article, but see the general histories of Von Hammer and Zinkeisen, which utilise both Turkish and European sources, e.g. the reports of the Venetian *baili*; Uzunçarşılı, *Osmanlı tarihi*; S. J. Shaw, *History of the Ottoman empire and modern Turkey*, Cambridge 1976, i, 190 ff. There is a detailed article in *İA* by M. Cavid Baysun, of which the above is a shortened version. (M. Cavid Baysun)

ḲOS͟H-BEGI, preferable to Ḳus͟h-Begi, title of high officials in the Central Asian khanates in the 16th to 19th centuries. There are two different etymologies and explanations of the term: (1) from Turkish *ḳus͟h* "bird" and *beg* [*q.v.*], thus *ḳus͟h-begi* meaning, presumably, "commander of falconers"; (2) from Turkish *ḳos͟h* "detachment of nomads or troops, esp. on the march", "nomadic and military camp" (cf. Radloff, *Wörterbuch*, ii, 635b), thus *ḳos͟h-begi* meaning "commander of the [royal] camp", "quartermaster". The first explanation is found in an administrative manual *Mad͟jmaʿ al-arḳām* compiled in Buk͟hārā in 1212/1798, where it is stated that the *ḳush-begi-yi kalān* (see below) in Buk͟hārā was chief of the royal hunt (see facsimile in *Pis'mennïye pamyatniki vostoka 1968*, Moscow 1970, 56). The etymology, however, remains dubious, because in this case one should rather expect *ḳus͟hči-begi* (or *ḳus͟hči-bas͟hi*), from *ḳus͟hči* "falconer" (the latter post actually existed at the Central Asian courts, as well as in Iran, but the chief of the hunt had the title *mīr-s͟hikār*). Significantly, Iskandar Muns͟hī [*q.v.*] in his *Taʾrīk͟h-i ʿālam-ārā-yi ʿAbbāsī* (ed. Ī. Afs͟hār, i, 486) mentions the post of *ḳos͟h-begi* (*manṣab-i ḳos͟h-begi-garī*) and, in another place (ii, 1040), the post of a falconer (*k͟hidmat-i ḳus͟hči-garī*), who became later the head of the royal hunt (*ba-manṣab-i mīr-s͟hikārī sar-afrāz s͟hud*) On the other hand, many historical references to *ḳos͟h-begi*s in the Uzbek period show them as high military commanders, mentioned among the most high-ranking Uzbek *amīr*s, which, apparently, makes the second etymology and explanation of the term more plausible. The European Turkologists who visited Central Asia in the middle of the 19th century also transcribe the term as *ḳos͟h-begi* and explain it, in the first place, as "Chef des Dieners oder des Beamtenzirkels der Fürsten" (H. Vámberi, *Čagataische Sprachstudien*, Leipzig 1867, 318), or "Lord of the household" (R. B. Shaw, *A sketch of the Turki language as spoken in Eastern Turkistan*, Calcutta 1878, 156); see also Radloff, *loc. cit.*

The title *ḳos͟h-begi* is not attested in the Golden Horde and its immediate successors in the Eurasian steppes in the 15th century. The *Bābur-nāma* (ed. Beveridge, 174b) mentions a Turkish *amīr* as a *ḳos͟h-begi* of Sulṭān Ḥusayn Mīrzā [*q.v.*], but nothing is said about his duties. Frequent references to *ḳos͟h-begi*s in historical sources appear only in the late 16th century. The *ʿAbd Allāh-nāma* (MS of the Leningrad Branch of the Institute of Oriental Studies, D 88, ff. 322a, 338a, 339b, 340b etc.) mentions a *ḳos͟h-begi* among the chief commanders of the army of Buk͟hārā. In the 17th century *ḳos͟h-begi*s did not apparently play an important role in the khanate of Buk͟hārā. The *Baḥr al-asrār* by Maḥmūd b. Walī (second quarter of the 17th century), in a description of the ceremonial at the court of the As͟htark͟hānids, only mentions the *ḳos͟h-begi* among the servants closest to the *k͟hān*, and his place was the second after that of *ḳurči-bas͟hi*, commander of the body-guards (see V. V. Bartol'd, *Sočineniya*, ii/2, 391, 396). The rise of power of the *ḳos͟h-begi* in Buk͟hārā took place at the beginning of the 18th century, with the decline of the As͟htark͟hānids. In 1121/1709 ʿUbayd Allāh K͟hān established the rank of "the great *ḳos͟h-begi*" (*ḳos͟h-begi-yi kull*), who became first minister. *Ḳos͟h-begi* remained the head of the Buk͟hārā administration also under the Mangīts [*q.v.*], when his official title was *kull-i ḳos͟h-begi* [*sic*], or *ḳos͟h-begi-yi bālā* "the upper Ḳ.", because he had to live in the residence of the *amīr*, the *ark* (citadel), situated on a hilltop; there was also "the lower Ḳ.", *ḳos͟h-begi-yi pāyān*, whose residence was at the foot of the *ark* and who held the post of *zakātči-yi kalān* (head of the collectors of *zakāt* [*q.v.*]). The "great *ḳos͟h-begis*" under the late As͟htark͟hanids and the Mangīts were usually of mean origin, mostly former Kalmuk and Persian slaves. Besides the general supervision of the state affairs and, especially, the administration of finance, they were also governors of one or more *wilāyat*s (provinces), especially that of Buk͟hārā itself.

Different development took place in K͟hīwa [*q.v.*], where the local historian Muʾnis (early 19th century) mentions for the first time the title *ḳos͟h-begi*, without defining his duties, when he tells about the administrative reforms of Abu 'l-G͟hāzī K͟hān (died in 1074/1664 [*q.v.*]). It seems, however, that *ḳos͟h-begis* did not play any important role in K͟hīwa in the 17th century. Only under the Ḳungrat [*q.v.*] dynasty (from the last third of the 18th century) did the *ḳos͟h-begi* become one of the highest officials in the k͟hānate, but he shared power with the *mehter* (Pers. *mihtar*) [*q.v.*]. The latter was the head of the civil administration, had the title *wazīr-i aʿẓam* and belonged to the hereditary bureaucracy recruited from among the Sarts [*q.v.*], while the *ḳos͟h-begi* always belonged to the Uzbek nobility, the *amīr*s (and sometimes was a relative of the k͟hān), and was in charge,

mainly, of military affairs. Besides that, the *ḳosh-begi* governed the northern part of the khānate of Khīwa inhabited by nomadic and semi-nomadic Uzbeks, Karakalpaks and Turkmens (that is, he mainly supervised the collection of taxes in this region), while the *mehter* governed the southern part inhabited by sedentary Sarts. This division of authority seems to be a continuation of the administrative practice of the Tīmūrid period.

In the khānate of Khoḳand [*q.v.*] in the 19th century, the title *ḳosh-begi* is also attested by the local sources, but evidence about his duties is still unavailable; in any case, he had a lower status than in Bukhārā (the highest official in Khoḳand in the 19th century was the *ming-bashi*); according to V. V. Vel'yaminov-Zernov (in *Trudi Vostočnogo Otdeleniya Imp. Russkogo Arkheologičeskogo Obshčestva*, ii [1856], 331), *ḳosh-begi* was here a honorary title given to the governors of main towns and provinces. In the Čaghatāyid state of Eastern Turkestan, at least in the 17th century, the *ḳosh-begi* was supreme military commander or commander of the right wing (*ūdj-i burānghār*), and had the rank of the senior *amīr* (*amīr al-umarā'*), but the civil administration, apparently, was in the hands of a *wazīr* (see Shāh Maḥmūd b. Mīrzā Fāḍil Čurās, *Ta'rīkh*, ed. O. F. Akimushkin, Moscow 1976, text, 24, 32, 53, 70, Russian tr. 170, 178, 200, 218). Thus this system was probably similar to that which existed in Khīwa.

Doerfer, *Türkische und mongolische Elemente im Neupersischen*, iii, 363, No. 1361. (Yu. Bregel)

KÖSHK, from Pers. *kūshk*, a pavilion in a pleasance which could be merely a modest shelter or have several rooms. The *djawsak*s of the rulers of Sāmarrā were much larger, and were country houses in the manner of the *ḳonaḳ*s of Anatolia and the Balkans. The word *ḳaṣir* (*ḳaṣr*) could be synonymous, but came also to mean castle and always implied more than one chamber, whereas *köshk* rarely suggested a substantial building, and in naval terminology was even the name given to the after-deck or poop cabin.

Although the Ottomans developed the *köshk* as a pavilion consisting of a single hall, it did occasionally take the form of a suite of rooms. Meḥemmad II Fātiḥ modelled the Činili Köshk in the outer court of Ṭopkapïsarāyï on Tīmūrid pavilions. It included two floors of apartments for himself and his officers, for it served as a lodging when he did not wish to return to his residence in the centre of the city. It was a *köshk* in the sense of being a pied-à-terre. Later examples such as the Sand Pavilion at Edirne (*Ḳum Ḳaṣïr*) were designated *ḳaṣir*. But the essential characteristic which governed the transliteration of *köshk* into English as "kiosk" was that of a chamber under a dome with three sofas and a hooded open grate, forming the four arms of a cross with a balcony or terrace overlooking a garden and a pool or other expanse of water. There a day might be passed at any season of the year, enjoying a partly-indoor and a partly-outdoor life. The pavilion was, in a sense, a permanent tent and its portico the uplifted awning on poles common to nomadic life. However, a royal *köshk* was tiled, its woodwork gilded, ceilings elabborately painted, doors inlaid with ivory and mother-of-pearl and the sofas covered with silks and velvet rocades, the floor with rugs. In this form, they were ideal and intimate drawing rooms, the antithesis of the Napoleonic concept of the Piazza at Venice.

They also served as hunting lodges, like that of Siyāwush outside the walls of Istanbul, which is elevated above its own pool in a park. Originally it was a single domed chamber with a vestibule and closet. Similar *köshk*s or *ḳaṣïr*s were built as royal retiring-rooms from which access could be gained to the mosque or *djāmi'*. Less wealthy citizens built examples so modest that they were little more than bowers with shutters that served as walls in winter but which could be dismantled in the spring. These, rather than the ornate *köshk*s of the rich, inspired newspaper stands and the like in 19th century Paris and other cities in Western Europe.

Bibliography: References to kiosks appear in the descriptive works of travellers, more particularly of Ṭopkapïsarāyï, by pages who escaped from there. Among these are D. Hierosolimitano, Harley mss. 3408, British Museum; O. Bon mss., Biblioteca Marciana, Venice, Cl. vii, cod. 578, 923; (the last in English by R. Withers, ed. Greaves, *A description of the Grand Signor's seraglio*, London 1650); also in R. G. Clavijo, *Embassy to Tamerlaine, 1463-6*, tr. G. Le Strange, London 1928. Engravings of examples are illustrated in R. Walsh and T. Allom, *Constantinople*, London 1838 and J. Pardoe, *The city of the sultan*, 3 vols., London 1838. Wilber, *Persian gardens and pavilions*, Rutland, Vermont 1962.

(G. Goodwin)

ḲOSHMA is originally a general term for poetry among the Turkish peoples. In the later usage of the word, it was applied to the native Turkish popular poetry, in contrast to the classical poetry taken from the Persian and based on the laws of the Arabic *'arūḍ* [*q.v.*]. The term corresponding in Eastern Turkī to the Western Turkī *ḳoshma* is *ḳoshuḳ* or *ḳoshugh*.

In the oldest source, e.g. in the *Ḳuṭadghu bilik* (composed in 462/1069-70 [see YŪSUF KHĀṢṢ ḤĀDJIB]), *ḳoshuḳ* still has the quite general meaning of "poem, verse", e.g. in Radloff's edition, St. Petersburg 1891, 1, l. 2 from below: *bu kitābni ḳoshuḳnï aymïsh* "has composed this book, this poem"; *ibid.*, 5, l. 4, *bu türkčä ḳoshuḳlar tüzättim saña* "I have polished (i.e. composed) these Turkish verses for thee". In Maḥmūd al-Kāshgharī [*q.v.*] also, *Dīwān lughāt al-turk* (begun in 464/1072), ed. Kilisli Rifʿat Bey, i, 314, *ḳoshugh* is equated with the Arabic *shiʿr*, *radjaz* and *ḳaṣāʾid*. The Persian musician and scholar ʿAbd al-Ḳādir of Marāgha (8th-9th/14th-15th centuries, cf. E. G. Browne, *Literary history of Persia*, iii, Cambridge 1920, index s.v.), in his work entitled *Maḳāṣid al-alḥān* does not yet discriminate between *ḳoshuḳ* and the quantitative quatrain *tuyugh* (see Raʾūf Yektā, *Eski türk musiḳîsina dāʾir tetebbüʿler*, in *Millî tetebbüʿler medjmūʿasî*, i, 461). On the other hand, in a verse by ʿAlī Shēr Nawāʾī (d. 906/1501 [*q.v.*]) quoted in Pavet de Courteille, *Dictionnaire Turc-Oriental*, 432, s.v., and in Radloff, *Versuch eines Wörterbuchs der Türk-Dialecte*, ii, col. 640, the *ḳoshuḳ* is definitely contrasted with the *tuyuḳ*.

Later, we find poems and songs composed according to the rules of Turkish popular poetry expressly called *ḳoshma*, *ḳoshuḳ*. The characteristic features of this poetry are the following: 1. Strophic structure. The strophes are usually quatrains. The *ḳoshma* poems contain at least two strophes. 2. Syllabic or accented syllable rhythm, i.e. the lines of the strophe have the same number of syllables and the value of the syllables as regards stress is either a matter of indifference or stronger and weaker syllables follow one another in definite order, which is repeated. In the latter case, after a definite number of syllables, we always have of necessity a caesura in the middle of the line. In the later *ḳoshma* strophes the most popular lines are hendecasyllabic divided into 6-5 with one caesura or 4-4-3 (with two caesuras). 3. There is rhyme or assonance of at least two endings in the strophe. The rhyme is usually grammatical and may extend to several final syllables according to its nature. It usually arises as a result of strict parallelism in the syntactical structure of the two halves of the verse. The rhyming in the *ḳoshma* strophe is usually *abcb* or *aaba*. 4. Alliteration of the initial syllables of the lines is not maintained among all Turkish people (cf. T. Kowalski, *Études sur la forme de la poésie des peuples turcs*, in *Mémoires de la Comm. Orient. de l'Acad. Polonaise*, No. 5, Cracow 1922: in Polish with a French résumé, 157 ff.).

In earlier times, the *ḳoshma* songs were usually sung by the bards (*uzan*) to the accompaniment of a musical instrument, especially by the *ḳobuz* beloved of the Turks, at court festivities or in the camp of the army. The *ḳoshma* poetry was always industriously cultivated among the people, in spite of the increasing popularity of the classical quantitative poetry. The popular forms like *ḳaya bashî*, *deyish*, *ezgi*, *ïr*, *türkü*, *warsaghî* and *türkmäni*, some cultivated among the Ādharbāydjān and some among the Ottoman Turks, all belong to the *ḳoshma*. The songs of popular mystics called *ilāhî* and *nefes* from the time of Yūnus Emre (7th-8th/13th-14th centuries) are composed according to the rules of the *ḳoshma* (see Köprülüzāde Meḥmed Fuʾād, *Türk edebiyyātînda ilk mütaṣawwiflar*, Istanbul 1918, 334-6). The *ḳoshma* popular poetry, which sometimes produces really beautiful lyrics, was mainly cultivated by wandering singers (*ʿāshîḳ*, also called *sāz shāʿiri* or *čöyürdjü*). Many of them, like ʿĀshîḳ ʿÖmer, ʿĀshîḳ Kerem, ʿĀshîḳ Gharīb, Derdlī and Djewherī, attained great fame, and the collections of their songs or life stories are among the most popular books among the Turks (cf. Köprülüzāde Meḥmed Fuʾād, *Türk edebiyyātînda ʿāshîḳ ṭarzînîñ mensheʾ we-tekāmülü*, in *Millî tetebbüʿler medjmūʿasî*, i; idem, ʿĀshîḳ *Djewheriyye ʿāʾid iki wethîḳa* in the periodical *Yeñi Medjmūʿa*, No. 84; G. Jacob, *Türkische Volksliteratur*, Berlin 1901, 17-18). There were even singers of popular songs in the corps of Janissaries; cf. J. Deny, *Chansons des Janissaires turcs d'Alger*, in *Mélanges René Basset*, Paris 1925, ii, 33-175.

The term *ḳoshma* (but not the kind of poetry to which it was applied) seems to have fallen out of use, and if the Ādharbāydjāni poet Djawād, who died in the first decades of this century, called his collection of songs *Ḳoshma*, this is probably simply to be explained by an archaicising popular movement in modern literature. The name has survived in the form *ḳožoñ* (*ḳoshoñ*) among the Altai Turks (Tatars). The Altai *ḳožoñ* (on them, cf. W. Radloff, *Über die Formen der gebundenen Rede bei den altaischen Tataren*, in *Zeitschr. f. Völkerpsychologie und Sprachwissenschaft* [1866], iv, 85-114, and Kowalski, *Études*, etc., 140-51) are very important in so far as from their structure and name we can make a definite deduction regarding the original meaning of the words *ḳoshma*, *ḳoshuḳ*, etc. They are pairs of strophes connected by a close parallelism between the two in form and content. From this we see that *ḳožoñ*, from *ḳosh-* "to join together", *ḳožo* "two and two", etc., refers to the parallelism in thought and syntactical structure, which originally formed the essential feature of Turkish popular poetry.

The *ḳoshma* poetry has not been without influence on more artistic forms of literature. The modern Turkish poets, for example, have taken many of their forms from popular poetry.

Finally, one should note that the term *ḳoshma* applies also to a folk-musical form, which varies in different parts of Anatolia and Ādharbāydjān, but which contains typically an instrumental introduction, followed by a vocal recitative and melody. This would be the normal setting for the *ḳoshma* as a literary form.

Bibliography: (dealing particularly with *ḳoshma*): Köprüzāde Meḥmed Fuʾād, *Ḳoshma ṭarzi*, a comprehensive article in *Yeñi Medjmūʿa*, No. 78, 1923 (with references to the literature); idem, *Türkiyye taʾrīkhi*, Istanbul 1923, i. 51-2; idem, *Türk edebiyyātî taʾrīkhi*, Istanbul 1920, i, 93; Kowalski in the above-quoted *Études*, etc., 140; Tâhir-ül Mevlevî, *Edebiyat lügatı*, Istanbul 1973, 89-90; P. N. Boratav, *İA* art. *Ḳoşma* (with many details about the regional forms of the *ḳoshma*). R. R. Korš, *Drevnieyshiy narodniy stikh turečkikh plemion*, in *ZVOIRAO*, xix/2-3 (1909), 139-67. (T. KOWALSKI)

ḲOṢOWA, KOSOVO, the name of an upland plain of the Balkans, in upper Macedonia or southern Serbia, and the scene of two significant battles in the struggles of the Ottomans and the Christian powers of the Balkans for hegemony there. In the last quarter of the 19th century, it also became the name of an Ottoman *wilāyet* or province.

The South Slavonic expression *Kosovo polie* means "plain of the blackbirds" from *kos* "blackbird" in Old Slavonic, Czech and Bulgar. Ottoman Turkish

sources give various less convincing etymologies. For those sources which derive the *Ḳoṣowa* from Turkish *kosa* or *köse owa* "bare, treeless plain", etc., see ʿAlī Ḥaydar, *Ḳoṣowa maydān muḥārebesi*, Istanbul 1328, Bursalī Meḥmed Ṭāhir's preface. The name is spelt as Kūs owasī in ʿĀs̲h̲ıḳpas̲h̲azāde, *Taʾrīk̲h̲*, Istanbul 1332, 62, 134, Nes̲h̲rī, *Dj̲ihānnümā*, ed. F. Taeschner, Leipzig 1951, 70, 139, 174, and Saʿd al-Dīn, *Tād̲j̲ al-tawārīk̲h̲*, i, 117, and as *Kūs owasī* in ʿOrūd̲j̲ b. ʿĀdil, *Tawārīk̲h̲-i āl-i ʿOt̲h̲mān*, Hanover 1925, 25. Saʿd al-Dīn's explanation that the name means "plain of the kettle-drums" is, of course, yet another folk etymology.

The Ḳoṣowa plain lies at an altitude of some 500-600 km., and is 14 km. wide and 84 km. long, covering an area of 502 km.[2] It is surrounded by high mountains, and has a north-west to south-east orientation. From this region, streams flow westwards to the Adriatic via the Drina, southwards to the Aegean via the Vardar, and northwards to the Danube via the Ibar and Morava. During mediaeval times, it was a meeting-point of several trade routes; today it forms part of the Novo Brdo-Kopavnik mining region of Yugoslavia.

The Ḳoṣowa plain originally formed part of the Byzantine dominions, and Slav peoples were settled there at the beginning of the 7th century. During the 10th century it changed hands between Serbs, Byzantines and Bulgars (for the names of the Serbian *bans* who were active in the Ḳoṣowa region, see V. Radovanović, *Kosovo Polje*, in *Narodna Enc. Srpsko-Hrvatsko-Slovenacka*, Zagreb 1926, ii, 434-8). After the victory gained over the Byzantines in 1168 by Stephen Nemanja, prince of eastern Serbia, Ḳoṣowa passed under Serbian control, and the name became applied to the whole plains region. It now remained within the resurgent Serbian empire, with its zenith under Stephen Dus̲h̲an (d. 1355), but Serbian grasp on the region became relaxed under his weaker son and successor Uros̲h̲ V (1355-71), and thereafter, the Serbian princes were unable to offer any united opposition to the increasing Ottoman Turkish pressure.

The defeat of Serbia at the hands of the Ottomans at Ḳoṣowa took place according to the Serbian and the western sources on 15 June 1389 and according to the Ottoman ones, on 4 Ramaḍān 791/27 August 1389. The Turkish army was commanded by Sultan Murād I b. Ork̲h̲ān, and included his two sons Bāyezīd from Kütahya and Yaʿḳūb from Ḳarasī and contingents from the vassal *beg*s of Ṣārūk̲h̲ān, Mentes̲h̲e, Aydīn and Ḥamīd. They were opposed by the Serbian prince Lazar Gresljanović, with contingents from the Bosnian King Tvrtko I. On the dawn of the battle, a Serbian noble, Milos̲h̲ Kobilić, Lazar's son-in-law, gained access to the Ottoman camp by posing as a deserter and stabbed Murād to death. But Bāyezīd immediately assumed command, and in the ensuing fighting—the details of which are little known—the Turks gained the eventual victory. Lazar was taken prisoner and executed after the battle; a mausoleum was built on the spot where Murād had died, but his body was buried at Bursa. The death of Murād and the withdrawal of the Turkish army immediately after its victory caused false rumours to spread in Christian Europe of a Serbian victory; in fact, the consequence of the battle was that Serbia became an Ottoman vassal state, and Lazar's successor, his son Stephan Lazarević, had to pay tribute and supply an army under his personal command to the Ottomans. Ḳoṣowa also gave rise to a great cycle of popular ballads among the Serbs, expressive of national feeling. For the Turkish sources on the battle, see Saʿd al-Dīn, i, 113; ʿOrūd̲j̲, 25; ʿAlī Ḥaydar, 27-32; ʿĀs̲h̲ıḳpas̲h̲azāde, 63; Nes̲h̲rī, 82 ff.; Solaḳzāde, 50; and also Von Hammer, *GOR*, i. After this first battle of Ḳoṣowa, Bāyezīd I appointed Yigit Pas̲h̲a as *ud̲j̲ begi* of Üsküp/Skopje and the southern district of Ḳoṣowa, and this region was now settled by Turks from Menemen and Tatars from Anatolia.

The second battle of Ḳoṣowa took place on 17-19 October 1448, when a Hungarian army under John Hunyadi, and including also Wallachians and German Bohemian arquebusiers, met an Ottoman army under Murād II; the struggle was at first indecisive, but was gained by the Turks through the treachery of the Wallachians and the flight of the Hungarian king. During the reign of Meḥemmed the Conqueror, the northern part of the Ḳoṣowa plain also came under Ottoman control. In the 10th/16th century the town of Vučitrn became the administrative centre of the sand̲j̲aḳ of Ḳoṣowa in the *eyālet* of Rumeli. When Ewliyā Čelebi passed through the Ḳoṣowa plain in 1070/1659-60, he found that Vučitrn had a Turkish and Albanian population and contained 2,000 households (*Seyāḥat-nāme*, Istanbul 1315, v, 550). In 1688-9 the region was invaded by an Austrian army under Piccolomini, but driven out in the following year by Ḳod̲j̲a K̲h̲alīl Pas̲h̲a and Selīm Girāy K̲h̲ān (Fîndîḳlîlî Meḥmed Ag̲h̲a, *Silaḥdār taʾrīk̲h̲i*, Istanbul 1928, ii, 269-70, 351-2, 423 ff.; Rās̲h̲id, *Taʾrīk̲h̲*, Istanbul 1282, ii, 95-112; V. Corović, art. *Kosovo*, in *Narodna Enc. Srpsko-Hrvatsko-Slovenacka*, ii, 433-4).

During the last quarter of the 18th century and the first decades of the 19th, the Ḳoṣowa district was involved in various attempts by local governors, such as the Bus̲h̲atlī governors of Scutari or Is̲h̲ḳodra, Meḥmed Pas̲h̲a and his son Ḳara Maḥmūd Pas̲h̲a, to break away from control by the Porte; the region was only firmly reattached to Istanbul after the defeat of the last Bus̲h̲atlī, Muṣṭafā Pas̲h̲a, by Maḥmūd II's new western-style army [see ARANAWUTLU. 6. History]. After the Russo-Turkish War of 1877 a new *wilāyet*, called specifically that of Ḳoṣowa, was formed consisting of the regions of Nis̲h̲ and Pris̲h̲tina and with Sofia as its centre (see Samī Bey, *Ḳāmūs al-aʿlām*, Istanbul 1314, v, 3746-8; ʿAlī Ḥaydar, *Midḥat Pas̲h̲a*, Istanbul 1325, 13-24). In 1888 its centre was moved to Üsküb/Skopje, and in 1896 its boundaries widened to include six *sand̲j̲aḳ*s, sc. Üsküb, Pris̲h̲tina, Senitsa, Ipek, Tas̲h̲lid̲j̲a/Plevlie and Prizren (see M. Rüs̲h̲dī and M. Es̲h̲ref, *Mükemmel we mufaṣṣal aṭlas*, Istanbul 1325, 21-4; *Sālnāme-yi wilāyet-i Ḳoṣowa*, year 1314). The region was meanwhile considerably disturbed, for in 1878 a congress had been formed to protect the rights of the Albanians and to establish an autonomous *wilāyet* of Ḳoṣowa, with its centre at Monastir. Albanian volunteers under the leadership of Süleyman Voks̲h̲i captured Üsküb, Pris̲h̲tina and Mitrovitsa early in 1881, but in April of that year, were defeated by an army sent out from Istanbul under Derwīs̲h̲ Pas̲h̲a. However, the Albanians subsequently took advantage of the erratic policies of repression alternating with indulgence practised by ʿAbd al-Ḥamīd II, and gradually captured all the villages extending up to the Ḳoṣowa plain, until the restoration of the Constitution in 1908. Eventually, a Serbian army under General Janković captured Lab during the Balkan War of 1912, and by 23 October of that year the whole of the Ḳoṣowa region passed into Serbian hands permanently, a state of affairs confirmed by the Treaty of London of 30 May 1913 which ended

the war. It was estimated that the population of the province at that time was one million, three-quarters of this being Muslim Turks and Albanians, and the rest Christian Serbs and Bulgars.

After the First World War, the region came of course within the new Yugoslavian state, and a policy of slavicisation was followed, so that the Muslim population shrank with the exodus to Albania and to Turkey. Today it is an autonomous unit of the Yugoslavian People's Republic under the name of Kosovo-Metohija and with its centre at Pri<u>sh</u>tina.

Huart, and for the first battle of Ḳoṣowa, *The Cambridge Mediaeval History*. iv. *The Byzantine Empire*. Part 1, Cambridge 1966, 550-1. (M. Münir Aktepe)

KÖSTEN<u>DJ</u>E (in Rumanian, Constanța), a port on the Rumanian shore of the Black Sea, situated on the ruins of the Milesian colony of Tomes (Ovid, *Tristia*, i, 10, 41; iii, 9, 5) founded at the beginning of the 6th century B.C., and the place of exile of the Roman poet Ovid (9-18 A.D.). Mentioned in 260 A.D. (Memnon, *Fragmenta historicorum graecorum*, ed. C. Muller, iii, Paris 1849, 537), Tomes enjoyed great prosperity in the Greek and Roman period and earned, under the Antonines, the title of metropolis of Western Pontus (μητρόπολις τοῦ Εὐωνύμου Πόντου). Under the later Roman Empire, Tomis became the capital of Scythia Minor, being designated in the epigraphic and literary sources by the name Constantia or Constantiana after the emperor Constantine II (337-61 A.D.), who contributed to its development. Sacked by the Huns (456 A.D.), the town was fortified by the Byzantine emperors Anastasus (491-518) and Justinian (527-65) (Procopius, *De aedificiis*, Bonn, iii/2, 307) and resisted attacks by the Avars. In 679 it was destroyed by the Bul<u>gh</u>ārs of the *<u>kh</u>ān* Asparu<u>kh</u>.

The fishing station set on the ruins of the ancient city continued to bear the name Κωνσταντία, in the writings of Byzantine authors of the 9th and 10th centuries, while the map drawn up in 548/1154 by al-Idrīsī [*q.v.*] calls it Ṭamṭānā (P. A. Joubert, *Géographie d'Edrisi*, ii, Paris 1840, 382). In the 14th century, Italian nautical maps give the name Costanza—derived from the Rumanian *Constanța*, Turkish Kösten<u>dj</u>e—to the Genoan trading mission used as a harbour by Genoese ships. When Dobru<u>dj</u>a was joined to Wallachia (Eflāḳ) by Mirčea the Old (1386-1418), the town followed the same destiny as the rest of the province. According to Ewliyā Čelebi, Kösten<u>dj</u>e was reportedly conquered by Bāyazīd I [*q.v.*], who ordered the dismantling of its walls. This event seems to have taken place during the reign of Vlad the Usurper (1394-6) in the province of Wallachia. Taking advantage of the fact that Bāyazīd was detained in Anatolia, Mirčea recaptured Kösten<u>dj</u>e, which he retained after the Ottoman defeat of Ankara (28 July 1402) under the reigns of the *amīr* Süleymān (1403-10) and of his protégé Mūsā Čelebi (1410-13) in Thrace and Macedonia. But in the course of the expediton of Meḥemmed I (1413-21) dated by N. Iorga to 820/1417 (*GOR*, i, 375), and more plausibly by H. Inalcık to 822/1419 (*Ibn Hacer'de Osmanlılara dair haberler*, in *AÜDTCF Dergisi* vi, 525; O. Turan, *Tarihi takvimler*, Ankara 1954, 20, 56), the town was once again captured by the Ottomans. Its annexation did not become definitive until after 1445, since the captain of the Burgundian fleet, Walerand de Wavrin, met no Ottomans at Mangalya, on the coast of the Black Sea to the south of Kösten<u>dj</u>e, when he landed there. In the 16th century, it was a fairly prosperous town, leased to a *ṣuba<u>sh</u>ī* and with a harbour and a market which, dealing in the major products of Dobru<u>dj</u>a (Ankara, *Tapu ve Kadastre* collection, 483, 30-31), played an important role in the supplying of cereals, fish and timber to Istanbul. The harbour was also used for the exporting of Wallachian products (hides, wax, honey, salt) which were much in demand by the merchants of Ragusa and Ancona.

At the beginning of the 17th century, Kösten<u>dj</u>e suffered devastation at the hands of Polish cossacks (1602, 1616). Although this port was not included in the list of towns (M. Tayyib Gökbilgin, *Kanuni Sultan Süleyman devri başlarında Rumeli eyaleti, livaları, şehir ve kasabaları*, in *Belleten*, xx, (1956), 254-5, 266-7), the Ragusan traveller Paolo Giorgi regarded it as such. According to Ewliyā Čelebi, it was a town of small prosperity belonging to the *eyālet* of Silistria (Istanbul, *Başbakanlık Arşivi* D-BMK-SLM, *Silistre ve Rusçuk mukataasi*), comprising one hundred and fifty houses, between forty and fifty granaries, some shops, a *<u>kh</u>ān* and a mosque, and serving as the residence of a *ḳāḍī*. Though possessing the status of a *ḳaḍā'*, in the 18th century Kösten<u>dj</u>e had the appearance of a large market-town whose *iḥtisāb a<u>gh</u>asī* (i.e. *muḥtesib*) was in charge of the supplying of grain to Istanbul. Devastated and depopulated during the Russo-Turkish wars (1711, 1718-39, 1768-74 and 1787-92), Kösten<u>dj</u>e was fortified by the Ottomans, who considered its port one of the most important in Dobru<u>dj</u>a for the purpose of supplying their capital with cereals, cattle, sheep, hides and wool.

During the Russo-Turkish war of 1806-12, Kösten<u>dj</u>e was captured by the Cossacks (1809), who destroyed the fortress and the town, reducing it to the status of a village. Returned to the Ottoman Empire by the Treaty of Bucharest (1812), Kösten<u>dj</u>e was surrounded by a line of fortifications. In 1829 the town surrendered to the Russians without a struggle and its defences were dismantled. During the Crimean War the French troops of General Canrobert, in alliance with the Ottomans, disembarked at Kösten<u>dj</u>e (July 1854) but remained there only for a short time. In 1857, a British company, The Danube and Black Sea Railways Company, obtained from the Ottoman government a concession for the reconstruction and development of the port and of a new railway linking Boğaz-köy (Cernavoda) with Kösten<u>dj</u>e, which as a result of this enjoyed a new period of prosperity. In 1877 the troops of the Russian general Orlov Denisov occupied the town, which was ceded to Rumania on 23 March 1878. At this time it was a *ḳaḍā'* of the *wilāyet* of Tuna, created in 1281/1864. The Treaty of Berlin (13 Ra<u>dj</u>ab 1295/13 July 1878) recognised this union. Kösten<u>dj</u>e then possessed two *<u>dj</u>āmi'*s: the Maḥmūdiyya (1822) and the ʿAzīziyya (1822). It was at Constanța that the first newspaper of the Dobru<u>dj</u>a was published, the *Dobru<u>dj</u>a gazetesi* (1888-94), as well as the newspapers *Dobru<u>dj</u>a* (1901) and *Dobru<u>dj</u>a ṣadāsī* (1910-14) published by Meḥmed Niyāzī.

KOTA KOTA, An Arabic corruption of the Chi-Hiyao place-name Ngotangota, a town in East Africa, situated in lat. 14° S. on the west side of Lake Malawi (Lake Nyasa). It was the seat of four Jumbes, or Walis, subject to Zanzibar between *ca.* 1845 and 1895. The first Jumbe, Salīm b. ʿAbd Allāh, came to Lake Malawi via the Arab settlement of Tabora in the present Tanzania, and built up an ivory and slave-trading state, and at the same time made Kota Kota an effective centre for the dissemination of Islam. He was succeeded by another Swahili, Mwinyi Mguzo (? Nguzo), who ruled from after 1860 to *ca.* 1875-6. Under his successor, Mwinyi Kisutu, a member "of a good Zanzibar family", the town was visited by H. B. Cotterill in 1876. It had many handsome square houses and numerous oil palms; the Zanzibar flag flew over the Jumbe's house. Although a slave-trader, when the British took power in Nyasaland in 1891, he co-operated with them until his death in 1894. His successor, Mwinyi Kheiri, the son of his predecessor, ruled from 7 September 1894 until May 1895, when he was deposed for conspiring to overthrow the British administration. Kota Kota remains an important Islamic centre in Malawi.

Bibliography: H. B. Cotterill, *On the Nyassa and a journey from the north end to Zanzibar*, in *Procs. Royal Geogr. Soc. London*, xxii (1878); G. Shepperson, *The Jumbe of Kota Kota and some aspects of the history of Islam in British Central Africa*, in I. M. Lewis, ed., *Islam in Tropical Africa*, 1966, 193-207, gives a detailed bibliography and references to public records.

(G. S. P. Freeman-Grenville)

KOTOKO, a people of Black Africa. The Kotoko live south of Lake Chad on the lower Shari and Logone rivers. Most of their territory is presently in the Republic of Cameroun, but there are villages of the Kotoko also in Chad to the east and in Nigeria to the west.
